Maier, *C. G.*, vapour pressures of common metallic chlorides and a static method for high temperatures, ii, 850.
Maige, *A.*, regeneration of amylogenous excitability of plastids during hydrolysis, i, 486.
carbohydrate utilisation by the cell and variations in the nucleus and nucleolus, i, 1493.
Maignon, *F.*, electrolysis of enzymes and their phosphoric acid and silica content, i, 1116.
Maiho, *P.* See *E.* **Rupp**.
Mailhe, *A.*, decomposition of acids in the presence of metallic chlorides, i, 503.
catalytic decomposition of acid chlorides, i, 629.

Mailhe, *A.*, separation of carbon monoxide in organic molecules, i, 1232.
Main, *E. R.*, and *A. P.* **Locke**, determination of small amounts of protein nitrogen, i, 997.
Majima, *R.*, and *T.* **Hoshino**, synthetic experiments in the indole group. VI. New synthesis of 3-aminoalkylindoles, i, 1450.
Majima, *R.*, and *M.* **Kotake**, synthetic experiments in the indole group. V. Synthesis of 3-β-amino-α-hydroxyethylindole, i, 1450.
Majima, *R.*, and *H.* **Suginome**, aconite alkaloids. IV. Oxonitin and some new derivatives thereof, i, 1447.
Major, *R. H.*, and *R. C.* **Davis**, high blood-sugar with absence of sugar in the urine in diabetes treated with insulin, i, 1491.
Major, *R. T.* See *C. S.* **Hamilton**.
Majumder, *K.*, and *N. K.* **Swe**, absorption spectrum of aluminium, ii, 338.
Makamiya, *Z.* See *K.* **Takahashi**.
Maki, *S.*, skin secretion of *Triton tæniatus* (small water newt), i, 327.
Malandkar, *M. A.*, chemical constitution of the gum from *Boswellia serrata*, i, 1438.
Malandkar, *M. A.* See also *G. J.* **Fowler**.
Malchow, *W.* See *H.* **Freundlich**.
Malcolm, *A. M.*, magnetic quality of pure nickel, ii, 371.
Mali, *S.*, and *J.* **Ghosh**, vapour pressure and chemical constant of formaldehyde, i, 116.
Mali, *S. B.*, calculation of the vapour pressure of a solution of a non-volatile solute, ii, 850.
Malik, *K. S.* See *N. A.* **Yajnik**.
Malinowski, *A. E.*, ionisation in the wave of propagation of explosions, ii, 182.
Malischeva, *V. T.* See *A.* **Kablukov**.
Malkin, *T.*, and *R.* **Robinson**, phenyl benzyl diketone and some derivatives, i, 559.
synthesis of pyrylium salts of anthocyanidin type. VIII. Synthesis of pelargonidin chloride and of galanginidin chloride, i, 827.
Mallemann, *R. de*, electrical birefringence of limonene, ii, 642.
calculation of rotatory power from molecular structure, ii, 840.
calculation of rotatory power of a tetrahedral molecule, ii, 935.
theory of rotatory polarisation, ii, 1029.
diffusion of light by active and inactive molecules, ii, 1030.
Malm, *I. L.* See *F. B.* **Dains**.
Malquori, *G.*, electrolytic preparation of ozone with an alternating superposed on a continuous current, ii, 62.
mixed basic silver–copper salts, ii, 696.
thermal behaviour of hydrated barium aluminate, ii, 813.
Malquori, *G.* See also *N.* **Parravano**.
Malyoth, *G.* See *E.* **Schmidt**.
Mameli, *E.*, and *E.* **Filippi**, hyperthermic action of the phenoxyacetic acids, i, 466.
Manchot, *W.*, method of determining the solubility of gases in liquids, ii, 233.
Manchot, *W.* [with *H.* **Haunschild**], dissociation equilibria of compounds of ferrous salts with nitric oxide, ii, 298.
Manchot, *W.* [with *M.* **Jahrstorper**, and *H.* **Zepter**], gas solubility and hydration, ii, 282.
Manchot, *W.*, and *H.* **Gall**, dehydrogenation and autoxidation and their mutual relationship, i, 561.
metal–carbon monoxide salts. IX. Compound of carbon monoxide with iridium chloride, ii, 232.
compounds of gold with carbon monoxide, ii, 1182.
Manchot, *W.*, and *K.* **König**, compounds of carbon monoxide with ruthenium salts, ii, 149.
compounds of carbon monoxide with osmium chloride, ii, 232.
compound of rhodium with carbon monoxide, ii, 1193.
Manchot, *W.*, and *E.* **Linckh**, preparation of crystalline compounds of ferrous salts and nitric oxide. III., ii, 317.
Manchot, *W.*, and *F.* **Oberhauser** [with *H.* **Wettstein**], bromometric determinations, ii, 161.
Manchot, *W.*, and *A.* **Wirzmüller**, preparation of selenic acid, ii, 319.
Manchot, *W.* See also *H.* **Gall**.
Mandell, *W.*, and *J.* **West**, temperature gradient in gases at various pressures, ii, 99.
Manegold, *E.*, electrolyte threads. I. Behaviour of electrolyte threads and their deflection in a magnetic field, ii, 873.
Maneval, *R. V.* See *F. B.* **Dains**.
Manfredi, *M.* See *M.* **Francesconi**.
Mange, *C. E.*, and *O.* **Ehler**, solubilities of vanillin, ii, 119.
Mangold, *E.*, digestion of carbohydrates and proteins in pigeons and hens, and the penetration of digestive enzymes through plant cell membranes, i, 615.

Manière, (*Mme.*) *Y.* See *A.* **Boutaric.**
Manley, *J. J.*, mercury and helium, ii, 57.
mercury helide, ii, 314, 696.
Mann, *A.*, and *P. M.* **Paulson**, electrochemical oxidation of toluene to benzaldehyde, i, 556.
Mann, *C. E. T.*, antagonism between dyes and inorganic salts in their absorption by storage tissue, ii, 35.
Mann, *F. C.* See *J. L.* **Bollmann.**
Mann, *F. G.*, and (*Sir*) *W. J.* **Pope**, $\alpha\beta\gamma$-triaminopropane and its complex metallic compounds, i, 373.
Mannich, *C.*, preparation of β-ketobases, i, 374.
Mannich, *C.*, and *K.* **Sutter**, lactone formation and intramolecular alkylation with brominated aminomethylallylmalonic acids, i, 1037.
Manning, *A. B.*, gelatin. V. Properties of a gelatin purified by flocculation in an electric field, i, 90.
Manojev, *D. P.* See *N. W.* **Kondyrev.**
Mansfield, *G.*, and *E.* **Geiger**, mechanism of action of insulin, i, 1016.
Maplethorpe, *C. W.*, and *N.* **Evers**, picrates of the opium alkaloids, i, 1166.
Maracineanu, (*Mlle.*) *S.*, effect of the sun on radioactivity, ii, 348.

Zwikker, *C.*, characteristics of tungsten and the candle power of a black body, ii, 1041.
Zyl, *G. van*. See *A. L.* **Ferguson**.

INDEX OF SUBJECTS.

ABSTRACTS, 1925.

A.

Abietic acid, constitution of (FREJKA and BALAŠ), i, 669.
pyrogenic decomposition of (VESTERBERG and BORGE), i, 252.
oxidation and anhydride formation of (RUZICKA and PFEIFFER; RUZICKA, MEYER, and PFEIFFER), i, 1419.
hydrochlorides of, and hydroxy-, and its silver salt and methyl ester (RAO and SIMONSEN), i, 687.
sodium salt, oxidation of (FREJKA and BALAŠ), i, 1422.
methyl ester, oxidation of, and its ozonide (RUZICKA, MEYER, and PFEIFFER), i, 1420.
Abietic acids, salts and derivatives of (KNECHT and HIBBERT), i, 1421.
Absorption coefficients, estimation of (TOLMAN), ii, 1112.
Absorption spectra. See under Spectra.
Acacetin, and its derivatives (HATTORI), i, 1443.
Acaciin, and its derivatives, from the leaves of *Robinia pseudacacia* (HATTORI), i, 1443.
Acanthias vulgaris (dog-fish), action of pancreatic extract of (DUCLOUX and CORDIER), i, 1364.
Acatenango in Guatemala, volcanic ash from (GUTBIER, BRINTZINGER, and BUBAM), ii, 1195.
Accumulator, lead, reactions in (LOTTERMOSER and GRÜTZNER), ii, 312.
α-Acenaphthaquinoline, and its salts (STEWART), i, 975.
Acenaphthaquinone, oxidation of (WHISTON), i, 140.
Acenaphthene, hydrogenation of (GOSWAMI), i, 127.
derivatives of (LORRIMAN), i, 672.
Acenaphthene, 1-amino-, and its salts and derivatives, and 1-nitro- (MORGAN and SHEASBY), i, 1144.
2- and 3-amino-, 2-nitro-3-amino-, iodonitro-, and their derivatives (MORGAN and STANLEY), i, 133.
Acenaphthene series (MORGAN and STANLEY), i, 133; (MORGAN and SHEASBY), i, 1144.
Acenaphthenquinoneanil (SANDER), i, 982.
4-Acenaphthoic acid, ethyl and methyl esters (LORRIMAN), i, 673.
o-(**4-Acenaphthoyl**)-**benzoic acid**, acetyl derivative (LORRIMAN), i, 672.
4-Acenaphthylphthalide (LORRIMAN), i, 673.
Acetals, catalytic preparation of (ADAMS and ADKINS), i, 784, 785.
acyclic, and their azeotropic properties (BÉDOWÉ), i, 513.
Acetaldehyde, occurrence of, in plants (GRIEBEL), i, 763.
formation of, in animal organs (NEUBERG and GOTTSCHALK), i, 199.
formation of, in frog's muscle (NEUBERG and GOTTSCHALK), i, 859.
oxidation of (REINER), ii, 213.
use of nickel in catalytic reduction of (NEGOSHI), i, 1375.
action of sodium nitroprusside on (VAN URK), ii, 162.
as an intermediate in carbohydrate metabolism (GOTTSCHALK), i, 191.
determination of, together with lactic acid (LEONE and TAFURI), ii, 907.
determination of, in blood (FABRE), i, 852.
Acetaldehyde, bromo-, derivatives of (STEPANOV, PREOBRASCHENSKI, and SCHTSCHUKINA), i, 1240.
bromonitro-, phenylhydrazone (WIELAND and JUNG), i, 1374.
α- and β-*tri*thio-, and their derivatives (FROMM and ENGLER), i, 1231.
Acetaldol, heat of formation of (SHAW), ii, 644.
Acetaldoxime, thermochemistry of (DORABIALSKA), ii, 1140.
Acetamide, cyano-, *C*-*di*sulphide (NAIK and PATEL), i, 121.
Acetanilide, influence of acetyl chloride on nitration of (CHRZASZCZEWSKA and BIATA), i, 1058.

Acetanilide, 2:4-*di*nitro-5-chloro- (KEHRMANN and STANOYÉVITCH), i, 1331.
Acetanilides, oximino-, preparation and reactions of (KARRER, DIECHMANN, and HAEBLER), i, 243.
Acetanilide-*p*-sulphinic acid (BERE and SMILES), i, 22.
2-Acetanilido-1:4-naphthaquinone, 3-amino-, and 3-chloro- (FRIES and BILLIG), i, 939.
α-2-Acetanilido-1:4-naphthaquinonyl-3-acetic acid, ethyl ester (FRIES and BILLIG), i, 940.
Acethydroxamic acid, hydroxy-, and its salts and derivatives (JONES and POWERS), i, 13.
Acetic acid, latent and specific heats of (PARKS and KELLEY), ii, 949.
adsorption of, from solution by silica (JONES), ii, 382.
sorption of the vapour of, by sugar charcoal (BAKR and MCBAIN), ii, 193.
viscosity of solutions of (DE KOLOSOVSKI), ii, 859.
molecular film of, between water and benzene (HARKINS and MCLAUGHLIN), ii, 771.
equilibrium of acetic anhydride and (POVARNIN and MARKOV), ii, 851.
equilibrium of aniline, water, and (ANGELESCU and MOTZOC), ii, 854.
equilibrium in the system, water and (POVARNIN and MARKOV), ii, 851.
oxidation of (KNOOP and GEHRKE), i, 1131.
and its derivatives, reduction of (POVARNIN and KALJE), i, 1034.
catalytic decomposition of, by charcoal (KULTASCHEV and KUDRJASCHEVA), ii, 881.
action of benzoyl peroxide on (GELISSEN and HERMANS), i, 664.
and *mono-* and *tri*-chloro-, additive compounds of esters with (KENDALL and BOOGE; KENDALL and KING), ii, 972.
Acetic acid, alkali salts, electrolysis of, in methyl alcohol solution (SALAUZE), i, 504.
alkali copper salts of (BÜTTGENBACH), i, 1035.
ammonia salt, as source of nitrogen for fungi (BACH), i, 216.
double salts of rare earth metals and carbamide or guanidine (CANNERI), i, 525.
mercuric salt, compounds of *o*-chloroaniline with (VECCHIOTTI and MICHETTI), i, 1058.
Acetic acid, mercuric salt, reaction of phenylhydrazine with (VECCHIOTTI and CAPODACQUA), i, 1106.
acid uranyl salt (COLANI), i, 5.
Acetic acid, alkoxymethyl esters (FARREN, FIFE, CLARK, and GARLAND), i, 1230.
p-carboxybenzyl and *o*-cyanobenzyl esters (BARKENBUS and HOLTZCLAW), i, 1148.
cellulose esters (HESS, SCHULTZE, and MESSMER), i, 1245.
cinnamyl ester (ENDOH), i, 1428.
ethyl ester, preparation of (ROBERTS), i, 114.
surface tension of, and its mixtures with *cyclo*hexanol (WEISSENBERGER and SCHUSTER), ii, 648.
effect of, on nitrogen excretion (BYLSMA), i, 1356.
and amino-, ethyl ester, compounds of stannic and titanic chlorides with (FICHTER and REICHART), ii, 193.
4-hydroxy-*tert.*-butylbenzene-3:5-dimercuric ester (WELLCOME FOUNDATION, LTD., HENRY, and SHARP), i, 1154.
substituted derivatives, menthyl esters (RULE and SMITH), ii, 1120.
methyl ester, density and compressibility of solutions of (RICHARDS and CHADWELL), ii, 1049.
4-nitro-2:6-dinitroso-3-acetoxybenzyl ester (SCHULTZ and GANGULY), i, 647.
triarylmethyl esters (SCHOEPFLE), i, 811.
and *tri*bromo-, tribromoethyl esters (NAKAI), i, 360.
Acetic acid, amino-, hydroxylamine salt (OESPER and BALLARD), i, 1233.
bromonitro-, chlorobromonitro-, and chloronitro-derivatives, ethyl esters (MACBETH and TRAILL), i, 629.
chloro-, phenylethyl ester (WEIL), i, 157.
*di*chloro-, preparation and properties of (DOUGHTY and BLACK), i, 628.
amine salts of, and *tri*chloro-, aniline salts of (DOUGHTY), i, 805.
*tri*chloro-, conductivity of, in methyl alcohol (GOLDSCHMIDT and AARFLOT), ii, 976.
equilibria in binary organic systems with (KITRAN), ii, 533.
trichloromethyl ester, mechanism of the synthesis of (GIBSON), ii, 312.

Acetic acid, cyano-, ionisation of, in alcohol–water mixtures (BRADLEY and LEWIS), ii, 868.
ethyl ester, preparation of (STEPHENS), i, 121.
Acetic anhydride, preparation of (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 1233.
interaction of tellurium tetrachloride with (MORGAN and DREW), i, 530.
analysis of (CALCOTT, ENGLISH, and WILBUR), ii, 1007.
***o*-Acetoacetanisidide**, 4-chloro-5-nitro- (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 598.
Acetoacetic acid, effect of carbohydrates on oxidation of, by hydrogen peroxide (ERNST and FORSTER), ii, 684.
action of, on nitrogen metabolism (LABBÉ and LAVAGNA), i, 191.
catalytic decomposition of, by strong acids and bases (v. EULER and OLANDER), ii, 1069.
esters, hydrolysis of (SKRABAL, PFAFF, and AIROLDI), ii, 139.
action of hydrazine on halogen derivatives (HIRST, MACBETH, and TRAILL), i, 1251.
ethyl ester, preparation of (ROBERTS), i, 114.
reactions of, with *o*-hydroxydistyryl ketones (HEILBRON, FORSTER, and WHITWORTH), i, 1284.
sodium derivative, addition of, to substituted aromatic thiocarbimides (WORRALL), i, 244.
determination of, in urine (GOLDBLATT), i, 1204.
6-Acetoacetyl-*o*-cresol, and its semicarbazone (WITTIG), i, 279.
Acetoacetyldehydrothiotoluidide (CHEMISCHE FABRIK GRIESHEIM ELEKTRON), i, 989.
Acetobenzylmethylamide (HOLMES and INGOLD), i, 1144.
Aceto-3:5-*di*bromo-*o*-anisidide and its hydrochloride (ELION and JANSSEN), i, 389.
Acetodibenzylamide (HOLMES and INGOLD), i, 1144.
Acetoethylanilide, action of phosphoryl chloride on (FISCHER, MÜLLER, and VILSMEIER), i, 439.
Acetohexadecylamide (ADAM and DYER), i, 354.
Acetoin, enzymic synthesis of (NEUBERG and SIMON), i, 737.
Acetomesitylene, oxidation of, with permanganate (PERKIN and TAPLEY), i, 42.
Acetomethylanilide, action of phosphoryl chloride on (FISCHER, MÜLLER, and VILSMEIER), i, 439.
Aceto-α-naphthylamide, 4-bromo- and 4-chloro-3-nitro-, and 3-nitro-4-amino- (PANIZZON-FAVRE), i, 145.
Acetone, formation of, from mahua flowers (GOKHALE), i, 1216.
formation of, from sugars (SPEAKMAN), i, 1013; (MOSKOVITS), i, 1511.
production of, by bacilli (FOWLER and SUBRAMANYAN), i, 1216.
latent and specific heats of (PARKS and KELLEY), ii, 949.
latent heat of fusion of (MAASS and WALDBAUER), ii, 492.
surface tension of, and its mixtures with *cyclo*hexanol (WEISSENBERGER and SCHUSTER), ii, 648.
properties of mixtures of water and (SANDONNINI), ii, 765.
action of mixtures of nitric and hydrochloric acids on (BOYD), i, 788.
effect of nitrogen and carbon dioxide dilutions on the explosion of, and its mixtures with methyl alcohol (CROUCH and CARVER), ii, 682.
oxidation of (KNOOP and GEHRKE), i, 1131.
reaction of glycols with (HERMANS), ii, 50.
action of sodium nitroprusside on (VAN URK), ii, 162.
and β-hydroxybutyric acid in urine (LUBLIN), i, 459.
m- and *p*-methoxyphenylhydrazones (SPÄTH and BRUNNER), i, 574.
4-methylthiosemicarbazone (BOSE), i, 1466.
4-phenylthiosemicarbazone (BOSE), i, 1465.
semicarbazones (WILSON and CRAWFORD), i, 318.
4-*p*-tolylsemicarbazone (WHEELER and BOST), i, 318.
detection and determination of (BÜLOW), ii, 1210.
detection and determination of, in urine (ENGFELDT), i, 1490.
determination of, in presence of alcohol (VUILLEUMIER), ii, 246.
determination of, colorimetrically, in urine (SITSEN), i, 855.
Acetone, *di*amino-, acetyl derivative, phenylhydrazone (MANN and POPE), i, 374.
*s-di*chloro-, reduction of, by yeast (SEN), i, 337; (SEN and BARAT), i, 1241.

Acetone, *as-di*chloro-, biochemical conversion of, into αγ-dichloropropan-β-ol (SEN), i, 203.
chloro-oximino-, benzoyl derivative (RHEINBOLDT and SCHMITZ-DUMONT), i, 1132.
*di*hydroxy-, condensation of thiocarbamide and (SJOLLEMA and SEEKLES), i, 1175.
oxidation of, in presence of phosphates (WIND), ii, 1174.
fermentation of (NEUBERG and GOTTSCHALK), i, 337.
effects of administration of (ISAAC and ADLER), i, 343.
effect of ingestion of, on blood-sugar (RABINOVITSCH), i, 1352.
Acetone oil, constituents of (PRINGSHEIM and BONDI), i, 1072.
Acetonitrobenzylmethylamides (HOLMES and INGOLD), i, 1144.
Aceto*di*nitro*di*benzylamides (HOLMES and INGOLD), i, 1144.
Aceto-octadecylamide (ADAM and DYER), i, 354.
Acetophenone, behaviour of, in the body (THIERFELDER and KLENK), i, 193.
δ-anilinosemicarbazone (SUTHERLAND and WILSON), i, 42.
carbethoxyhydrazone (v. AUWERS and DANIEL), i, 1181.
2:4-*di*chlorophenylhydrazone (HUMPHRIES, HUMBLE, and EVANS), i, 989.
p-methoxyphenylhydrazone, and *p*-hydroxy*di*bromo-, *p*-bromophenylhydrazone (KORCZYNSKI and KIERZEK), i, 973.
4-*p*-tolylsemicarbazone (WHEELER and BOST), i, 318.
Acetophenone, *p*-amino-, condensation of formaldehyde with (GRABOWSKA and WEIL), i, 260.
ω-bromo-, condensation of thiosemicarbazide with (BOSE), i, 167, 1465.
o-chloro-, and *o*-iodo-, and its oxime (v. AUWERS, LECHNER, and BUNDESMANN), i, 266.
2:4:6-*tri*nitro-, and its phenylhydrazone (SONN and BÜLOW), i, 1268.
Acetophenoneaminobenzazimide (HELLER, GÖRING, KNOSS, and KÖHLER), i, 1323.
Acetophenones, chloro-oximino-, and their derivatives (RHEINBOLDT and SCHMITZ-DUMONT), i, 1132.
Acetophenone-*p*-arsenious oxide, and its semicarbazone (MARGULIES), i, 447.
Acetophenone-*p*-arsinic acid (OGDEN and ADAMS), i, 707.
derivatives of (MARGULIES), i, 448.
Acetophenoneoxalyldihydrazone (WILSON and PICKERING), i, 935.
Acetopyrocatechol dibenzyl ether, preparation of (MERCK), i, 1431.
o-Aceto-*p*-thiocresol, and its derivatives (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1306.
Aceto-*o*-toluidide, 3:5-*di*bromo- and nitroso- (v. AUWERS and LOHR), i, 75.
Aceto-*p*-toluidide, solubility of, in mixed solvents (PLEUGER), ii, 283.
Acetoxime chlorostannate (SONN and MEYER), i, 932.
Acetoxime, *di*amino-, dihydrochloride (MANN and POPE), i, 373.
7′-Acetoxy-3′-coumaryl-4-α-naphthapyrone (DEY and ROW), i, 149.
Acetoxydihydro-*p*-cymene, bromo- (HENRY and PAGET), i, 1163.
3-Acetoxy-5:5′-dimethyl-2′-aldehydo-2:3′-dipyrrole-4:4′-dicarboxylic acid, ethyl ester, and its *p*-nitrophenylhydrazone (FISCHER and HEYSE), i, 78.
Aceto-*p*-2-xylidide, 5-*mono*- and *di*chloro- (WHEELER and MORSE), i, 22.
Acetoxymercuriethoxychaulmoogric acid, ethyl ester (DEAN, WRENSHALL, and FUJIMOTO), i, 546.
α-Acetoxy-α-methylpropionamide, β-chloro- (LES ÉTABLISSEMENTS POULENC FRÈRES), i, 601.
α-Acetoxy-α-methylpropionyl chloride, β-chloro- (LES ÉTABLISSEMENTS POULENC FRÈRES), i, 601.
***p*-Acetoxyphenyl-3-acetoxyxanthhydrol** (GOMBERG and SNOW), i, 660.
Acetyl groups, determination of (FREUDENBERG and WEBER), ii, 446.
Acetylacetone, decomposition of (HURD and TALLYN), i, 885.
action of phenylsemicarbazide on (WHEELER and BROOKS), i, 1459.
vanadyl salt, and its derivatives (ROSENHEIM and MONG), i, 1412.
Acetylalanine, ethyl ester (KARRER, MIYAMICHI, STORM, and WIDMER), i, 594.
5-Acetyl-2-anisyl-4-methylpyrimidine (MITTER and PALIT), i, 1320.
α-Acetyl-β-benzoyl-2:4-*di*bromophenylhydrazine (CHATTAWAY and WALKER), i, 929.
3-Acetylbornylene. See α-Bornylene methyl ketone.
δ-Acetylbutyl alcohol, δ-hydroxy-, anhydride of a disaccharide from (BERGMANN, MIEKELEY, and STATHER), i, 227.
3-Acetylcamphane. See α-Camphanyl methyl ketone.
5-Acetyl-5:10-dihydrophenarsazine, 10-chloro- (BURTON and GIBSON), i, 84.

3-Acetyl-2:8-dimethylbenzopyrone (WITTIG), i, 279.

β-3-Acetyl-2:2-dimethyl*cyclo*pentyl*iso*propyl alcohol, and its semicarbazone (HALLER and LEGAGNEUR), i, 924.

β-3-Acetyl-2:2-dimethyl*cyclo*pentylpropylene, and its derivatives (HALLER and LEGAGNEUR), i, 925.

3-Acetyl-1:6-dimethylpyridone (MUMM), i, 965.

3-Acetyl-1:6-dimethyl-α-pyridone-5-carboxylic acid, and its ethyl ester, and phenylhydrazone and their derivatives (MUMM), i, 965.

5-Acetyl-2:4-dimethylpyrrole-3-carboxylic acid, ethyl ester (KALLE & Co.), i, 297.

(3-Acetyl-2:4-dimethylpyrrolenyl)-(4-hydroxy-3-carbethoxy-2-methylpyrryl)methene (FISCHER and HEYSE), i, 77.

3-Acetyl-2:4-dimethylpyrryldi-(3-carbethoxy-2:4-dimethylpyrryl)-methane (FISCHER and HEYSE), i, 77.

(3-Acetyl-2:4-dimethylpyrryl)(4-hydroxy-3-carbethoxy-2-methylpyrrolenyl)methene, and its hydrochloride (FISCHER and HEYSE), i, 77.

α-Acetyl-β-diphenylacetylphenylhydrazide (VAN ALPHEN), i, 81.

5-Acetyl-2-β-naphthyl-4-methylpyrimidine (MITTER and PALIT), i, 1320.

Acetylene, solubility of, in electrolytes (MANCHOT, JAHRSTORFER, and ZEPTER), ii, 282.
dielectric constant of (SMITH and ZAHN), ii, 1118.
compressibility of (HOWARTH and BURT), ii, 818.
polymerisation of, by means of radium emanation (MUND and KOCH), ii, 1173.
condensation of (KOVACHE and TRICOT), i, 799.
condensation of, with hydrogen sulphide in presence of catalysts (TOMKINSON), i, 58.
explosion of mixtures of nitrogen and (GARNER and SAUNDERS), ii, 627.
as a narcotic (KNIPPING), i, 176.
*di*chloride. See Ethane, αβ-*di*chloro-.

Acetylene, *di*iodo-, preparation of, electrolytically (DUSSOL), i, 350.

Acetylenic compounds, synthesis of (LESPIEAU), i, 225; (BERT), i, 803.
hydrogenation of (BOURGUEL), i, 883.

α-Acetylhexoic acid, ethyl ester, condensation of aldehydes with (RYAN and SHANNON), i, 558.

Acetylmalonic acid, ethyl ester, thioamides, action of hydrazine and hydroxylamine on (WORRALL), i, 308.

Acetylmethylcarbinol, formation of, in sugar fermentation (KLUYVER and DONKER), i, 1215.
in vinegar (VAN'T HOOFT), i, 772.

1-Acetyl-2-methylindole, 3-cyano- (SEKA), i, 67.

2-Acetyl-α-naphthol, magnesium salt (ZETZSCHE, SILBERMANN, and VIELI), i, 1411.

***N*-Acetylphenarsazinic acid** (BURTON and GIBSON), i, 84.

Acetylphenylarsenious oxides, and hydroxy- and nitrohydroxy-derivatives of (MARGULIES), i, 448.

Acetylphenylarsinic acids, hydroxy-, and nitrohydroxy-, derivatives of (MARGULIES), i, 448.

β-Acetyl-α-phenyl-α-2-diketohydrindenylbutan-γ-one (JONESCU), i, 1154.

Acetylphenylmalonic acid, methyl ester, and its phenylhydrazone (VOORHEES and SKINNER), i, 837.

β-*o*-Acetylphenylpropaldehyde disemicarbazone (SCHROETER, ZADEK, and HOFFMANN), i, 678.

β-*o*-Acetylphenylpropionic acid, and its derivatives (v. AUWERS), i, 241.

1-Acetyl-4-phenylthiosemicarbazide (BOSE), i, 1465.

Acetyl*cyclo*propanecarboxylic acid, derivatives of (KÜSTER), i, 922.

Acetylpyrocatechol, *di*nitro- (KEHRMANN and PRUNIER), i, 304.

2-Acetylpyrrole, 3:4-*di*iodo- (TERENTIEV and TSCHELINCEV), i, 295.
di- and *tri*-iodo- (PIERONI and NOCENTINI), i, 1097.

Acetylsalicyloyl *per*oxide, preparation of (VANINO and HERZER), i, 139.

Acetylsuccinic acid, ethyl ester, bromo- and chloro-derivatives (MACBETH and TRAILL), i, 782.

Acetylsuccinyl *per*oxide, and its thermal decomposition (BRUNNER), i, 1236.

Acetyltaurine, sodium salt (TERAOKA), i, 1390.

Acetyltropic acid, β-piperidinoethyl ester hydrochloride (CHEMISCHE WERKE GRENZACH), i, 31.

Acetylvaline, ethyl ester (KARRER, MIYAMICHI, STORM, and WIDMER), i, 594.

Acid, $C_9H_{14}O_5$, and its salts, from chenopodium oil (HENRY and PAGET), i, 1162.

$C_{10}H_{14}O_4$, from *Pimenta officinalis* oil (KEMP), i, 565.

$C_{10}H_{16}O_3$, and its salts and oxime, from oxidation of sodium abietate (FREJKA and BALAŠ), i, 1422.

Acid, $C_{12}H_{18}O_6$, from action of ozone on methyl abietate (RUZICKA, MEYER, and PFEIFFER), i, 1420.
$C_{13}H_{14}O_4$, from *Pimenta officinalis* oil (KEMP), i, 565.
$C_{13}H_{22}O_2$ (two), from hydrogenation of diphenyl-*o*-carboxylic acid (RANEDO and LEÓN), i, 666.
$C_{14}H_{12}O_6$, and its ethyl ester, from ethyl dibromocinnamate and ethyl sodiomalonate (HAERDI and THORPE), i, 924.
$C_{15}H_{30}O_4$, from oxidation of rottlerin (DUTT), i, 1297.
$C_{15}H_{30}O_2$, from fractionation of chaulmoogra oil (WRENSHALL and DEAN), i, 1414.
$C_{19}H_{36}O_6$, and its derivatives, from plant cuticle (LEGG and WHEELER), i, 1026.
$C_{19}H_{22}O_2N_2$, from strychnos alkaloids, and its derivatives (LEUCHS and TAUBE), i, 1314.
$C_{20}H_{28}O_3$, and its semicarbazone, by action of acetic anhydride on oxidation product of methyl abietate (RUZICKA, MEYER, and PFEIFFER), i, 1420.
$C_{20}H_{33}O_4$, and its semicarbazone, from oxidation product of methyl abietate (RUZICKA, MEYER, and PFEIFFER), i, 1429.
$C_{26}H_{19}O_3N_2S$, from diphenylethylamine hydrochloride and diazotised sulphanilic acid (ELBS), i, 165.
$C_{32}H_{26}O_2$, and its bromo derivative from algæ (TSUJIMOTO), i, 778.
$C_{24}H_{46}O_3$, from nervone and sulphuric acid (KLENK), i, 1347.
$C_{27}H_{44}O_4$, and its methyl ester, from oxidation of 4:7-diacetoxycholestan (WINDAUS and HOSSFELD), i, 1066.
Acids, thermochemistry and constitution of solutions of (KARVE), ii, 633.
adsorption of, by filter paper (MOKRUSCHIN), ii, 957.
displacement of, by diffusion (DEMOUSSY), ii, 654.
osmosis of, in gels (YUMIKURA), i, 735.
dissociation of (v. HALBAN), ii, 511; (HANTZSCH), ii, 512.
liquid-crystalline properties of salts, esters, and (VORLÄNDER), i, 267.
additive compounds of esters and (KENDALL and BOOGE; KENDALL and KING), ii, 972.
electrometric titration of (AUERBACH and SMOLCZYK), ii, 118.
aliphatic, Röntgen ray spectra of (DE BROGLIE and TRILLAT), ii, 640.
Acids, aliphatic, action of bromine on (WATSON), i, 1232.
and their derivatives, chromic acid oxidation of (SIMON), i, 778.
decomposition of, with metallic chlorides (MAILHE), i, 503.
esterification of, in glycerol (KAILAN and RAUPENSTRAUCH), i, 880.
ammonium salts, oxidation of (CLUTTERBUCK and RAPER), i, 882.
carboxylic (PHILIPPI, SEKA, HAGER, and LANDAU), i, 511.
higher, surface tensions of (FRUMKIN), ii, 856.
aromatic, metabolism of. See Metabolism.
glycol esters of (CRETCHER and PITTENGER), i, 1415.
*mono*basic, neutralisation of, by means of viscosity (SIMON), ii, 512.
*di*basic, photolysis of (VOLMAR), i, 1378; ii, 575.
dissociation of (LARSSON), ii, 294.
second dissociation constants of (PAUL), ii, 116.
influence of valency direction on dissociation constants of (SPIERS and THORPE), ii, 895.
carboxylic, dissociation contents of (EBERT), i, 230.
*mono*carboxylic, and their esters, electric moments of (SMYTH), ii, 846.
*di*carboxylic, nephropathic action of (ROSE, WEBER, CORLEY, and JACKSON; ROSE and DIMMETT), i, 733.
fatty, structure of (GIBBS), ii, 269; (FRIEDEL), ii, 272.
from ceresin (MARCUSSON), i, 349.
molecular orientation in films of (TRILLAT), ii, 195.
and their esters, spreading of, on the surface of water (CARY and RIDEAL), ii, 388.
emulsions of, as insecticides (SIEGLER and POPENOE), i, 489.
and *di*basic, *X*-ray study of (TRILLAT), ii, 489.
*mono*basic, change in molecular volume of (GARNER and RYDER), ii, 355.
saturated, anhydrides of, and their stability (HOLDE and GENTNER), i, 1035.
solid, Röntgen ray diffraction of (WYCKOFF, HUNT, and MERWIN), ii, 1129.
unsaturated, constitution of (ARMSTRONG and HILDITCH), i, 355, 778.

Acids, fatty, unsaturated, oxidation of (BAUER and KUTSCHER), i, 630; (GRÜN and WITTKA), i, 1377; (TRILLAT), ii, 1127.
higher, structure of, and their salts (KLIMONE), i, 505.
sulphonation of (POMERANZ), i, 1380.
free, determination of, in presence of aluminium (SABALITSCHKA and REICHEL), ii, 602.
higher saturated, determination of, in mixed acids (LAPWORTH and MOTTRAM), i, 1129.
inactive, and inactive bases, mutual resolution of (INGERSOLL), i, 814.
organic, structure of, and their behaviour on sulphochromic oxidation (ARMSTRONG, ALLAN, and MOORE), i, 505; (SIMON), i, 511.
preparation of, by the Grignard reaction (IVANOV), i, 503.
ultra-violet absorption spectra of (VLÈS and GEX), ii, 472.
conductivity of, in methyl alcohol (GOLDSCHMIDT and AARFLOT), ii, 976.
effect of electrolytes on solubilities of, in water (YAJNIK, JAIN, and NATH), ii, 1147.
adsorption of, from solutions (RUFF and HOHLFELD), ii, 192; (PATRICK and JONES), ii, 193.
and their salts, comparative adsorption of (FROMAGEOT and WURMSER), ii, 384.
velocity of esterification of, with ethyl alcohol (BHIDE and SUDBOROUGH), i, 1127.
action of magnesium phenyl bromide on (PETERS, GRIFFITH, BRIGGS, and FRENCH), i, 543.
displacement of, from their sodium salts (BUREAU), ii, 792.
volatile, determination of (BOHANES), ii, 605.
polycarboxylic, esters, compounds of stannic chloride with (HIEBER and BECKER), i, 1325.
stereoisomeric, transformation of, and their esters (HÜCKEL and GOTH), i, 402.
unsaturated, $\alpha\beta$–$\beta\gamma$ change in (KON and LINSTEAD), i, 506.
α-unsaturated, synthesis of, from malonic acid (DUTT), i, 882.
weak, indicator for determination of (CHABOT), ii, 899.
determination of, volumetrically (HARRIS), ii, 155.
Acid chlorides, catalytic decomposition of (MAILHE), i, 629.
Acid chlorides, action of aluminium organic compounds with (LEONE), i, 937.
decomposition of, with metallic nickel (MAILHE), i, 1232.
aromatic, action of diazomethane on (LEWIS, NIERENSTEIN, and RICH), i, 935.
Acidity, origin of (LOWRY), ii, 15.
Acidosis (HASTINGS, SENDROY, and ROBSON), i, 1490.
production of (BLUM and DELAVILLE; HALDANE), i, 723.
Acipenser sturio (sturgeon), constituents of (FLÖSSNER and KUTSCHER), i, 720.
Acocantherine (MOIR and LEWIS), i, 833.
Acocanthic acid, benzoyl derivative (MOIR and LEWIS), i, 833.
Aconite alkaloids (SCHULZE and BERGER), i, 282; (MAJIMA and SUGINOME), i, 1447.
Aconitine *perchlorate* (SCHULZE and BERGER), i, 283.
Aconitum anthora, alkaloids from (GORIS and MÉTIN), i, 761, 762.
Aconitum napellus, alkaloids from (SCHULZE and BERGER), i, 282; (GORIS and MÉTIN), i, 762.
Acraldehyde (*acrolein*), formation of, from glycerol, by bacilli (HUMPHREYS), i, 340.
activation of, by light, and its deactivation by quinol (MOUREU and DUFRAISSE), i, 362; (MOUREU, DUFRAISSE, and BADOCHE), i, 362, 363.
Acridine, constitution of (v. AUWERS and KRAUL), i, 578.
derivatives, preparation of (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 429.
Acridine, 3:9-*diamino*- (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 430.
Acridone, derivatives of (LINNELL and PERKIN), i, 62.
Acriflavine, effect of, on infusoria (ROBERTSON), i, 1012.
Actinium, mobility of ions in active deposit of (ERIKSON), ii, 79.
Actinometers, electrochemical (ATHANASIU), ii, 1067.
with mercury electrodes, sensitiveness of (ATHANASIU), ii, 415.
Actinoscopic reactions (REYCHLER), ii, 1180.
Activity coefficients (WILKE and KIENIGER), ii, 790.
Acyl chlorides, aromatic, action of diazomethane on (NIERENSTEIN, WANG, and WARR), i, 34.

O-**Acyl compounds**, catalytic isomerisation of, into *C*-alkyl compounds (SCHEIBLER), i, 918.
Acylindazoles, labile and stable, constitution of (V. AUWERS), i, 1460.
O- and *N*-**Acylsalicoylimides**, isomeric (ANSCHÜTZ, ASCHENBERG, KUCKERTZ, KRONE, RIEPENKRÖGER, and ZERBE), i, 666.
Addition to cyclic double linkings (NAMETKIN), i, 250.
Additive reactions and tautomerism (INGOLD), i, 357.
Adenine in lucerne (VICKERY and LEAVENWORTH), i, 873.
nucleotide from blood (HOFFMAN), i, 711, 851.
Adenylic acid, salts of (IZUMI), i, 174.
brucine and strychnine salts (PEISER), i, 1477.
Adhatoda vasica, alkaloid from (SEN and GHOSH), i, 958.
Adipic acid, $\beta\gamma$-*di*hydroxy-, and its ethyl ester (PANKOKE), i, 358.
Adipic acids, *di*bromo-, optically active, and their salts (HOLMBERG and MÜLLER), i, 1236.
Adipocere (TSCHIRCH and GFELLER), i, 1203.
Adipyl chloride, action of triethylamine on (WEDEKIND, MÜLLER, and WEINAND), i, 510.
Adonis vernalis, extraction of (STEPPUHN and PEWSNER), i, 762.
Adrenaline (*suprarenine*; *epinephrine*), secretion of, during starvation (OGAWA), i, 1218.
effect of, on blood and tissues (DRESEL and WOLLHEIM), i, 616.
effect of, on lactic acid in blood and tissues (CORI), i, 753.
effect of, and its derivatives, on blood-sugar (DUBIN, CORBITT, and FREEDMANN), i, 1502.
effect of amino-acids on the action of (ABDERHALDEN and GELLHORN), i, 332.
antagonism of insulin and (GOTTSCHALK; ZONDEK and UCKO), i, 1513.
analysis of (ECHAVE), ii, 248.
detection and determination of, in suprarenal powders (BAILLY), ii, 248.
Adsorption (SCHELTE), ii, 286; (PAVLOV), ii, 287, 507, 958; (LIEPATOV), ii, 385, 957; (GHOSH and DHAR), ii, 386, 511.
theory of (FRENKEL), ii, 194.
chemical theory of (BHATNAGAR, PRASAD, and BAHL), ii, 1155.
electrical theory of (ILJIN), ii, 958, 1149.
Adsorption, hydrolytic, theory of (MUKHERJEE), ii, 1149.
Schulze's law of (WEISER), ii, 855.
at the critical temperature (PATRICK, PRESTON, and OWENS), ii, 508.
S-shaped curves of (FLÖROV; OSTWALD and SCHULZE), ii, 657.
and evolution of mixed gases from an adsorbant (LORENZ and WIEDBRAUCK), ii, 382.
and capillarity (PATRICK and EBERMAN), ii, 284.
and partition, theory of (FRUMKIN), ii, 856.
and surface energy at phase boundaries (ILJIN), ii, 856, 958.
relation between osmotic pressure and (PÓLÁNYI), ii, 290.
and heterogeneous catalysis (ALEKSEEVSKI), ii, 858.
and cataphoresis (FROMAGEOT), ii, 128.
of gases by graphite (LOWRY and MORGAN), ii, 1053.
in gels (TOMITA), ii, 202.
of ions (AUDUBERT and QUINTIN), ii, 384; (MUKHERJEE and RAY), ii, 385.
at liquid-gas interface (IREDALE), ii, 508.
at the surface between air and solutions of aliphatic compounds (FRUMKIN), ii, 109.
of organic acids and their salts (FROMAGEOT and WURMSER), ii, 384; (UNGERER), ii, 658.
from solutions (BERL and WACHENDORFF), ii, 507.
of vapours by metallic oxides (PEARCE and ALVARADO), ii, 381.
by aluminium oxide and hydroxide (MUNRO and JOHNSON), ii, 191; (MILLER), ii, 192.
by charcoal (URBAIN; KROETZ), ii, 191; (RUFF and HOHLFELD), ii, 192; (BAKR and MCBAIN), ii, 193; (RICHARDSON and ROBERTSON; KOLTHOFF), ii, 383.
from viscous media (WEISSENBERGER and WALDMANN), ii, 655.
by various powdered charcoals (KÖNIG), ii, 1054.
by activated sugar charcoal (MILLER), ii, 656.
by lipoid mixtures (SCHÄFER), ii, 1149.
by precipitates (WEISER), ii, 108.
by silica gels (RAY), ii, 191; (PATRICK and JONES), ii, 193; (PATRICK and OPDYCKE), ii, 656.
separation of organic compounds by means of (FODOR and ROSENBERG), ii, 1060.

Adsorption compounds (HALLER), ii, 287.
effect of, on infectious diseases (BERING), i, 858.
Adsorption isotherms, derivation of (GORBATSCHEV), ii, 959.
Aerobacter aerogenes. See *Bacillus lactis aerogenes*.
Ætioporphyrin, formation of, from mesoporphyrin (FISCHER and MÜLLER), i, 845.
Ætiourinoporphyrin (FISCHER and HILGER), i, 307.
Affinity (BILTZ and HOLVERSCHEIT), ii, 268; (DE DONDER), ii, 539; (BILTZ and KEUNECKE), ii, 986; (BILTZ, BRÖHAN, and WEIN; BILTZ and WEIN), ii, 1182; (BILTZ and MESSERKNECHT), ii, 1183; (BILTZ and MAU), ii, 1184; (BILTZ and RAHLFS), ii, 1191.
relation between atomic grouping and (FEIGL), i, 170.
chemical, and atomic structure (WILSDON), ii, 481.
electrical meaning of (BORN), ii, 482.
internal pressures produced by (RICHARDS), ii, 362.
compressibility and internal pressure (SAERENS), ii, 91.
residual, and co-ordination (MORGAN and YARSLEY), i, 378; (MORGAN and SMITH), i, 1457; (MORGAN, CARTER, and HARRISON), ii, 1042.
specific, calculation of (DE DONDER), ii, 790.
Affinity constants of amines (BOURGEAUD and DONDELINGER), ii, 117.
Afwillite (PARRY and WRIGHT), ii, 429.
Agar-agar, physical chemistry of (HARVEY), ii, 965.
absorptive power of (EFFRONT), ii, 201.
swelling of gels of, in water (CLARKE), ii, 868.
physical differences between sols and gels of (HATSCHEK and HUMPHRY), ii, 34.
electro-dialysis of (HARVEY), ii, 293; (HOFFMAN and GORTNER), ii, 1158.
hydration of, by ions (MACDOUGAL and CLARKE), ii, 1156.
Ageratum conyzoides, constituents of oil from (MOUDGILL), i, 945.
Agglutinin, behaviour of, when adsorbed, to its antigen (EISLER), i, 96.
Agmatine, relationship of arginine to (MÜLLER), i, 1496.
putrefaction of (REINWEIN and KOCHINKI), i, 747.
Air. See Alveolar air and Atmospheric air.
Akermanite, constitution of (GOSSNER), ii, 821.
d-**Alanine**, asymmetric cobalt salts of (LIFSCHITZ), i, 522.
dl-**Alanine**, relation between taste and concentration of solutions of (HEIDUSCHKA and KOMM), i, 1389.
d-**Alanyl**-*d*-**alanine anhydride**, action of alkalis on (LEVENE and PFALTZ), i, 795.
Alanylaspartic acid, and its methyl ester (HAVESTADT and FRICKE), i, 162.
Alanylglycine anhydride, diacetyl derivatives (ABDERHALDEN and KOMM), i, 175.
Alanylhistidine (HAVESTADT and FRICKE), i, 162.
Albite in Bengal limestone (SPENCER), ii, 1092.
Albumin, solutions of (KOLTHOFF), ii, 1055; (KRUYT), ii, 1056.
action of acids on (TRENDTEL), i, 91.
precipitation of (THOMAS and NORRIS), i, 603.
egg- (*ovalbumin*), molecular dimensions and weight of (DU NOÜY), ii, 939.
surface tension of (JOHLIN), ii, 857.
osmotic pressure of the chloride of (HAMMARSTEN), ii, 196.
separation of proteoses of (RUDD), i, 320, 321.
cataphoresis in sols of (SCOTT and SVEDBERG), ii, 204.
serum, peptic hydrolysis of (RONA and KLEINMANN), i, 1507.
Albumins, coagulation of (RAKUZIN and ROSENFELD), i, 708.
Alcohol, $C_5H_6OCl_2$, from dichloropropaldehyde, acetylene and magnesium ethyl bromide (LESPIEAU), i, 226.
$C_{32}H_{66}O$, and its derivatives, from American cotton wax (FARGHER and PROBERT), i, 879.
$C_{34}H_{70}O$, and its derivatives, from American cotton wax (FARGHER and PROBERT), i, 879.
Alcohols, synthesis of (TERENTIEV), i, 110.
infra-red absorption spectra of (LECOMTE), ii, 351.
electrolytic oxidation of (KOIDZUMI), ii, 808.
dehydration of, over alumina (ADKINS and PERKINS), i, 626.
catalytic dehydration of mixtures of phenols and (BRINER, PLÜSS, and PAILLARD), i, 248.
catalytic dehydrogenation of (PALMER and CONSTABLE; CONSTABLE), ii, 311.

Alcohols, catalytic dehydrogenation of, apparatus for (WILLIMOTT), ii, 151.
catalytic dehydrogenation and dehydration of, with zinc oxide catalyst (LAZIER and ADAMS), i, 878.
change of, into aldehydes (VERLEY), i, 783.
reactivity of hydroxyl-hydrogen atoms in (NORRIS and ASHDOWN), i, 626.
interchange of groups between ketones and (VERLEY), i, 1034.
from sugars, oxidation of (VOTOČEK and LUKES), i, 773.
acetylenic, preparation of (GUEST), i, 627.
aliphatic, velocity of reaction of substituted benzoic anhydrides with (RULE and PATERSON), i, 29.
aromatic, action of, on aromatic compounds in presence of aluminium chloride (HUSTON), i, 249.
optically active (HEWITT and KENYON), i, 914.
of the hydroaromatic and terpene series (KENYON and PRISTON), i, 941.
polyhydric, solution volumes and refraction constants of (RIIBER, SÖRENSEN, and THORKELSEN), i, 773.
primary, condensation of resorcinol and similar compounds with (SEN and SARKAR), i, 812.
optically active, preparation of (BECHERER), i, 664.
secondary and tertiary, local anæsthesia with (QUIGLEY and HIRSCHFELDER), i, 195.
tertiary, action of hydrobromic acid on (RAMART), i, 250.
asymmetric, preparation of (THOMS and AMBRUS), i, 789.

Aldehydes, synthesis of (STEPHEN), i, 1131.
Friedel and Crafts synthesis with (SCHAARSCHMIDT, HERMANN, and SZEMZÖ), i, 1278.
influence of alkyoxy groups on synthesis of (SONN and PATSCHKE), i, 1279.
absorption spectra of (LECOMTE; PURVIS), ii, 627.
mixed dismutation of (NAKAI), i, 360.
reduction of (MEERWEIN and SCHMIDT), i, 1239.
preparation of acetylenic hydrocarbons from (BOURGUEL), i, 364.
change of, into alcohols (VERLEY), i, 783.
addition of chloroform to (HOWARD), i, 557.

Aldehydes, condensation of, with diindone (RADULESCU and GEORGESCU), i, 1286.
with diketohydrindene (RADULESCU and GEORGESCU), i, 1285.
to esters, in presence of alkoxides (CHILD and ADKINS), i, 632.
with ethyl α-acetylhexoate (RYAN and SHANNON), i, 538.
with methyl ethyl ketone (RYAN and CAHILL), i, 558.
with α-phenyl-β-methyl-Δ^{α}-buten-γ-one (RYAN and LENNON), i, 1282.
action of, on Grignard reagents (MARSHALL), i, 1428.
action of *p*-aminophenylarsinic acid and pyruvic acid on (ADAMS and JOHNSON), i, 319.
in blood (FABRE), i, 324.
aliphatic, condensation of furfuraldehyde with (IVANOV), i, 421.
aromatic, catalytic reduction of (ROSENMUND and JORDAN), i, 257.
condensation of, with hydroxy- and methoxy-2-methylquinolines, and 2-hydroxylepidine (TRÖGER and DUNKER), i, 342.
action of phenanthraquinone on, in presence of ammonia (SIRCAR and RAY), i, 980
reaction of sodium with (BLICKE), i, 37.
determination of, by the action of sulphites on (ROMEO and D'AMICO), i, 1380.

Aldehydesulphoxylates as protective colloids (BINZ and BAUSCH), i, 991.

3-Aldehydo-5-methylindole-2-carboxylic acid, and its ethyl ester (ODDO), i, 298.

***n*-Aldehydo-octoic acid**, ethyl and methyl esters and dimethyl acetal of the latter (HELFERICH and SCHÄFER), i, 7.

***m*-Aldehydophenyl carbonate**, and ethyl carbonate, and 4-nitro- (MASON and JENKINSON), i, 931.

Aldimines, synthesis of (GRIGNARD and ESCOURROU), i, 931.

Aldoximes, action of picryl chloride and of 2:4-dinitrochlorobenzene on (BRADY and KLEIN), i, 674.

Aldoxime peroxides (CIUSA and PARISI), i, 1070.

Alfalfa. See Lucerne.
, calcium requirements of fungi and (LOEW), i, 1218.
nitrogen in (FRED and PETERSON), i, 1122.
unsaturated acids in (TSUJIMOTO), i, 778.

Algæ, marine, chlorophyll in (LUBIMENKO), i, 216.
Aliphatic compounds, adsorption at the surface between air and solutions of (FRUMKIN), ii, 109.
solid crystalline, atomic heats of (SALANT), ii, 1042.
photochlorination of, in carbon tetrachloride (PLOTNIKOV), ii, 220.
higher, synthesis of (G. M. and R. ROBINSON), i, 354.
Aliphatic-aromatic compounds (v. BRAUN and REICH), i, 1405; (v. BRAUN and KAISER), i, 1414.
behaviour of, in the animal organism (THIERFELDER and KLENK), i, 192.
Alizarin, nitro-, colloidal, action of electrolytes on (LIEPATOV), ii, 1059.
Alkali alkyls (HEIN, PETZCHNER, WAGLER, and SEGITZ), ii, 217.
amides, displacement of metals in (BERGSTROM), ii, 885.
ortho-arsenites (VANZETTI), ii, 421.
borates (AUGER), ii, 697.
bromates, chlorates, and nitrates, viscosities of (SIMON), ii, 512.
*poly*bromides and *poly*chlorides (HÜTTIG and SCHLIESSMANN), ii, 1181.
carbonates, action of arsenious anhydride on (VANZETTI), ii, 421.
chlorides, circulation of, in diaphragm electrolysers (GIORDANI), ii, 550, 551.
cyanides, reduction of metallic oxides by (HACKSPILL and GRANDADAM), ii, 419.
halides, coloration of, by Röntgen rays (BAYLEY), ii, 21.
reflection of Röntgen rays by crystals of (ARMSTRONG, DUANE, and HAVIGHURST; KULENKAMPFF), ii, 1033.
thermal expansion of (HENGLEIN), ii, 375, 935, 951.
heats of hydration and solution and lattice energies of (LANGE), ii, 847.
heats of solution of (WÜST and LANGE), ii, 38.
heats of solution and dilution of (WÜST and LANGE), ii, 791.
solid solutions of ammonium halides and (HAVIGHURST, MACK, and BLAKE), ii, 502.
crystal measurements of (HAVIGHURST, MACK, and BLAKE), ii, 17.
hydroxides, activity of hydroxyl ions in (FRICKE), ii, 539.
hypochlorites (DIETZEL and SCHLEMMER), ii, 892.
metals, spectra of (DE WISNIEWSKI), ii, 77.
Alkali metals, band spectra of mixtures of (BARRATT), ii, 19.
spark spectra of (MOHLER), ii, 615.
ultra-violet spectra of (SHAVER), ii, 451.
spectra of mixed vapours of magnesium and (BARRATT), ii, 927.
and their alloys, photo-electric properties of (IVES; IVES and JOHNSRUD), ii, 344.
photo-electric thresholds and thermionic work functions of (RICHARDSON and YOUNG), ii, 343.
potentials of (NEUMANN and RICHTER), ii, 797.
thermionic effects caused by vapours of (LANGMUIR and KINGDON), ii, 254.
reactions between molten alloys of, and their molten chlorides (JELLINEK and WOLFF), ii, 974; (JELLINEK), ii, 1160.
and their halides, value of $\sqrt{a}$ for (VAN LAAR), ii, 1141.
transition probabilities in atoms of (BARTELS), ii, 624.
explosions with (STAUDINGER), ii, 1181.
displacement of, by iron (HACKSPILL and GRANDADAM), ii, 233.
ammoniation of ions of, in aqueous solutions (LOŠAN), ii, 654.
electrolytic separation of alkaline earths and (SAXON), ii, 984.
double salts of rare earths with (ZAMBONINI and CAROBBI), ii, 222; (ZAMBONINI and CAGLIOTI), ii, 222, 315; (CAROBBI), ii, 315.
determination and separation of (SMITH), ii, 486; (SMITH and ROSS), ii, 437, 601.
*di*sulphides, action of, on organic halides (THOMAS and RIDING), i, 113.
*poly*sulphides (THOMAS and JONES), ii, 58.
Alkali-cellulose (VIEWEG; HEUSER), i, 119.
Alkaline earth amides, displacement of metals in (BERGSTROM), ii, 885.
chlorides, activity coefficients and transference numbers of (LUCASSE), ii, 399.
metals, spectra of (LANDÉ), ii, 249; (GREEN and PETERSEN), ii, 451; (RUSSELL and SAUNDERS), ii, 911.
spark spectra of (DORGELO), ii, 724.
potentials of (NEUMANN and RICHTER), ii, 797.

Alkaline earth metals, reactions between molten alloys of, and their molten chlorides (JELLINEK and WOLFF), ii, 974; (JELLINEK), ii, 1160.
equilibrium between sodium and, and their fused chlorides (JELLINEK and OZERWINSKI), ii, 123.
electrolytic separation of alkalis and (SAXON), ii, 984.
molybdates, isomorphism of, with rare earth molybdates (ZAMBONINI and LEVI), ii, 1133.
phosphors, rare earths in (TOMASCHEK), ii, 354.
salts, biochemistry of (HODEL), i, 1496.
Alkaloid, $C_{19}H_{24}ON_2$, and its derivatives, from *Chelidonium majus* (GADAMER and WINTERFELD), i, 288.
Alkaloids from aconite. See Aconite.
of the aporphine series, conversion of, into those of the chelidonine series (OSADA), i, 283.
from the calabar bean. See Calabar bean.
from calumba root (FEIST and DSCHU), i, 830; (SPÄTH and DUSCHINSKY), i, 1313.
from cinchona. See Cinchona.
of the hellebore group (KELLER), i, 830.
from hygrine. See Hygrine.
jaborandi (SPÄTH and KUNZ), i, 575.
from morphine. See Morphine.
from opium. See Opium.
in germinating seeds (SABALITSCHKA and JUNGERMANN), i, 1223.
from strychnos. See Strychnos.
of the tropan group, amine-oxides of (POLONOVSKI and POLONOVSKI), i, 828.
device for extraction of (PALKIN, MURRAY, and WATKINS), ii, 708.
extraction of, from organs (FABRE), i, 719.
hydroferri- and hydroferro-cyanides of (CUMMING and BROWN), i, 572.
determination of (NORTH and BEAL; MÜLLER), ii, 607.
determination of, volumetrically (RASMUSSEN and SCHON), ii, 247.
Alkatan, chemistry of (HEPBURN and STROH), i, 108.
Alkoxides, potential of concentrated solutions of (KONTNÍKOVÁ and SHIKATA), ii, 672.
magnesium, preparation of, and their use in syntheses (TERENTIEV), i, 110.
Alkyl ethers, hydroxy-, derivatives of (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 374.
Alkyl hypochlorites (BACKEBERG), i, 775.
phosphites, neutral, preparation of (JANCZAK), i, 1051.
sulphides, preparation of (WOOD), i, 1034.
Alkylbarbituric acids, preparation of soluble compounds of (HOFFMANN, LA ROCHE & Co.), i, 300.
Alkylglutaric acids, dianilides of (V. AUWERS), i, 892.
Alkylglyoxalines, amino- (GERNGROSS), i, 440.
1-Alkylcyclohexan-3-ones, preparation of (SEIFERT), i, 407.
Alkylindoles, 3-amino-, synthesis of (MAJIMA and HOSHINO), i, 1450.
Alkylmercuric hydroxides, reactions of (KOTEN and ADAMS), i, 236.
Alkyloxy-acids, salts, electrolysis of (FAIRWEATHER), i, 631.
Alkylresorcinols, preparation of (SHARP & DOHME), i, 809.
Alkylsulphonic acids, preparation of barium and calcium salts of (CHEMISCHE FABRIK VORM. SANDOZ), i, 1377.
Allantoin, determination of, in presence of uric acid, creatinine, and amino-acids (LANGFELDT and HOLMSEN), ii, 1010.
Allophanic acid, β-chloro- and β-iodoethyl esters (CHINOIN FABRIK CHEMISCH-PHARMAZEUTISCHER PRODUKTE), i, 13.
Allotropy and metastability (COHEN and HELDERMAN), ii, 23; (COHEN and MOESVELD), ii, 374, 950.
Alloys, structure of (WESTGREN and PHRAGMÉN), ii, 502.
structural composition of (POLUSHKIN), ii, 189.
Röntgen ray structure of (SACKLOVSKI), ii, 939; (WEISS), ii, 940.
preparation of, by the wet method (MAZZUCCHELLI and VERCILLO), ii, 582.
electrical conductivity of (BORELIUS), ii, 749.
effect of a magnetic field on the electrical resistance of (WILLIAMS), ii, 753.
chemical resistance of (GUERTLER and LIEPUS), ii, 1147.
hydrogen overvoltage for (FISCHER), ii, 44.
depression of freezing points of (HONDA and ISHIGAKI), ii, 1050.
change in volume of, during solidification (ENDO), ii, 281.
inverse segregation in (MASING), ii, 1146.
colloidal separations in (ANDREW and HAY), ii, 954.

Alloys, examination of, by radio-detector action (CZOCHRALSKI), ii, 642.
X-ray apparatus for examination of (LANGE), ii, 482.
molten, electrolysis of (KREMANN, KIENZL, and MARKE; KREMANN, MÜLLER, and KIENZL; KREMANN, MÜLLER, and ORTNER), ii, 132; (KREMANN, and GRUBER-REHENBURG), ii, 678; (KREMANN and BENDA; KREMANN and BAUKOVAC; KREMANN and DELLACHER), ii, 679.
ternary, equilibria of (IWASE), ii, 535.
Allyl compounds, synthesis of (BERT), i, 803, 1052.
Allyl bromide, 9-bromo-, derivatives of (v. BRAUN and KÜHN), i, 1374.
*βγ-di*bromo-, compounds formed by action of trimethylamine and of pyridine on (v. BRAUN and KÜHN), i, 1375.
chloride, γ-chloro-, compound from trimethylamine and (v. BRAUN and KÜHN), i, 1375.
halides, halogenated, use of, in synthetic reactions (v. BRAUN and KÜHN), i, 1374.
iodide, action of potassium pentasulphide on (THOMAS and RIDING), i, 4.
2-Allylamino-5-phenyl-1:3:4-thiodiazine, and its hydrobromide (BOSE), i, 1466.
Allylanisole, *p*-β-bromo- (v. BRAUN and KÜHN), i, 1375.
Allylbarbituric acid, *di*-β-bromo- (RIEDEL), i, 1454.
Allylbenzene, γ-bromo-, and γ-chloro- (v. BRAUN and KÜHN), i, 1375.
p-bromo-γ-chloro-, γ-chloro-, and their *di*bromides (BERT), i, 804.
Allyl*iso*butyrone (HALLER, BAUER, and RAMART), i, 261.
α-Allylbutyrophenone, and its oxime (HALLER, BAUER, and RAMART), i, 261.
3-Allyl-*p*-cresol (CLAISEN), i, 1410.
Allylcrotylbarbituric acid (TAUB, SCHÜTZ, and MEISENBURG), i, 435.
2-Allyl-*p*-cymene, γ-chloro-, and its dibromide (BERT), i, 804.
γ-Allyldextrose, and its di*iso*propylidene ether and osazone (FREUDENBERG, v. HOCHSTETTER, and ENGELS), i, 635.
2-Allyldiketohydrindene-2-carboxylic acid, ethyl ester, spiran from (RADULESCU), i, 1159.
2-Allyl*cyclo*hexanone, 2-cyano- (v. AUWERS, BAHR, and FRESE), i, 312.
Allylmalonic acid, β-bromo-, and *di*-β-bromo-, ethyl esters (RIEDEL), i, 1454.
Allylnaphthalene, 1-β-bromo (v. BRAUN and KÜHN), i, 1375.
4-Allyloxyphenylmalonamic acid, and its ethyl ester (AKTIEN-GESELLSCHAFT FÜR ANILIN FABRIKATION), i, 402.
α-Allylpropiophenone (HALLER, BAUER, and RAMART), i, 261.
Allyltoluenes, γ-chloro-, and their dibromides (BERT), i, 804.
4-Allylveratrole, 5-amino-, acetyl derivative, and 5-nitro- (LIONS, PERKIN, and ROBINSON), i, 832.
Altitudes, high, effect of, on alcohol concentration in blood and its excretion (BIEHLER), i, 1115.
Alumen, in Pliny's Natural History (BAILEY), ii, 591.
Alumina. See Aluminium oxide.
Aluminium, atomic weight of (KREPELKA and NIKOLIĆ), ii, 620.
spectrum of (MCQUARRIE), ii, 1013.
absorption spectrum of (MAJUMDER and SWE), ii, 338.
spark spectrum of (v. WISNIEWSKI), ii, 451.
spectral frequencies of (HOLWECK), ii, 336.
photographic action of H-particles from (BLAU), ii, 1111.
absorption of cathode rays by (TERRILL), ii, 79; (SCHONLAND), ii, 459.
transmission of electrons through (HARTIG), ii, 921.
conductivities of (SCHOFIELD), ii, 273.
critical potential of (HOLWECK), ii, 729.
current-potential curves for (LIEBREICH and WIEDERHOLT), ii, 404.
electromotive behaviour of (SMITS), ii, 130; (SMITS and GERDING), ii, 794.
sizes of electron-kernels of magnesium, silicon, sodium, and (TURNER), ii, 349.
and its alloys, thermal expansion of (HIDNERT), ii, 375.
distortion and fracture of crystals of (TAYLOR and ELAM), ii, 488.
recrystallisation of (RÖHRIG), ii, 282.
corrosion of (MAASS and WIEDERHOLT), ii, 560.
solution of, in hydrochloric acid (WACHÉ and CHAUDRON), ii, 687.
testing of, by density (PASCAL), ii, 646.
strained, Röntgen ray analysis of (ONO), ii, 746.
Aluminium alloys, conductivity of (MASUMOTO), ii, 503.
expansion coefficients for (HONDA and ÔKUBO), ii, 104.

Aluminium alloys, with cadmium and magnesium (VALENTIN and CHAUDRON), ii, 205.
with chromium (SISCO and WHITMORE), ii, 1051.
with copper (MASING and KOCH), ii, 787.
dilatation of (CHEVENARD), ii, 768.
with copper and zinc (HANSON and GAYLER), ii, 974.
with iron, temper colours of (TAMMANN and SIEBEL), ii, 1169.
with magnesium (DANIELS), ii, 103; (URAZOV), ii, 786.
with mercury, reduction of sugars by (NANJI and PATON), i, 117.
with molybdenum and nickel (PFAUTSCH), ii, 536.
with silicon, fusion of (PARRAVANO and SCORTECCI), ii, 281.
with tin, electrolysis of (KREMANN and DELLACHER), ii, 679.
with zinc (TANABE), ii, 204; (ISIHARA), ii, 293, 786.
tensile tests of (ELAM), ii, 954.
decomposition of (FRAENKEL and GOEZ), ii, 314.
Aluminium salts, effect of, on soil acidity (NIKLAS and HOCK), i, 1525.
in soils, and their relation to plant growth (MAGISTAD), i, 1371.
determination of acidity, basicity, and aluminium content of solutions of (FEIGL and KRAUSS), ii, 329.
Aluminium antimonide, atomic structure of (OWEN and PRESTON), ii, 93.
boride, formation of (FUNK), ii, 705.
bromide, decomposition potential of (TREADWELL and STERN), ii, 41.
thermal analysis of binary systems of halides with (ISBEKOV), ii, 417.
chloride, conductivity of carbonyl chloride solutions of (GERMANN), ii, 1066.
density of carbonyl chloride solutions of (GERMANN), ii, 288.
vapour pressure of solutions of, in carbonyl chloride (GERMANN and MCINTYRE), ii, 196.
syntheses and degradations by means of (SCHROETER, VAN HULLE, GLUSCHKE, STIER, and MÜLLER), i, 125.
action of, on heptanaphthene (ZELINSKI and SMIRNOV), i, 1125.
*di*chromate, basic (CALCAGNI), ii, 891.
hydroxide, adsorption by (MILLER), ii, 192.
Aluminium hydroxide, adsorption of arsenious acid by (YOE), ii, 107.
adsorption of dyes by (WOOD and WOOLLER), ii, 285.
sols, mixtures of ferric hydroxide and (KÜHNL and PAULI), ii, 776.
precipitated (SHIDEI), ii, 1185.
precipitation of, electrometrically (BRITTON), ii, 1203.
precipitation of magnesium hydroxide with (PARISELLE and LAUDE), ii, 903.
oxide (*alumina*), solubility of, in water (REMY and KUHLMANN), ii, 119.
effect of temperature on hygroscopicity of (AARNIO), ii, 1157.
adsorption of gases by (MUNRO and JOHNSON), ii, 191.
β-form, use of, as crystal in measurements of Röntgen rays (PAULING and BJÖRKESON), ii, 895.
equilibrium of cryolite and (ROUSH and MIYAKE), ii, 974.
dehydration of hydrates of (GUICHARD), ii, 558.
dehydration of alcohols over (ADKINS and PERKINS), i, 626.
catalytic action of (ROSENMUND and JOITHE), i, 1403.
effect of impurities on (CHARRIOU), ii, 216.
catalysis by, of the reaction between ethyl alcohol and ammonia (DORRELL), ii, 1174.
solid solutions of, in ferric oxide (FORESTIER and CHAUDRON), ii, 534.
interaction of sodium chloride and (CLEWS), ii, 577.
silicates (NEUMANN), ii, 849.
sodium silicate, crystalline forms of (BOWEN and GREIG), ii, 997.
hydrosilicates, natural, origin of (SCHWARZ and WALCKER), ii, 887.
sulphate, equilibria of, with copper sulphate and manganese sulphate (CAVEN and MITCHELL), ii, 396.
sulphide (BILTZ), ii, 986.
Chloroaluminates, compounds of carbonyl chloride and (GERMANN and TIMPANY), ii, 1085.
Aluminium organic compounds, action of acid chlorides with (LEONE), i, 937.
action of ketones with (LEONE and BRAICOVIC), i, 677.
alkyl and aryl halides, and their compounds with ammonia and amines (LEONE), i, 530.
benzoylcamphor, and its mutarotation (FAULKNER and LOWRY), ii, 632.
Aluminates, compounds of mannitol with (HERASYMENKO), i, 774.

Aluminium detection, determination, and separation :—
detection of (SCHANTL), ii, 440; (HAMMETT and SOTTERY), ii, 601.
determination of, in presence of free acids (SABALITSCHKA and REICHEL), ii, 602.
determination of, gravimetrically, and its separation from manganese (SOLAJÁ), ii, 602.
determination of sodium in (FAIRLIE and BROOK), ii, 241.
separation of calcium and (KOLLÓ and GEORGIAN), ii, 330.
separation of, from manganese and magnesium and from phosphoric acid (MOSER, BRUKL, and VÉN), ii, 329.
Alveolar air, carbon dioxide tension in (KNIPPING), i, 176.
carbon dioxide in arterial blood and (BOOK and FIELD), i, 93.
Alvite, analysis of (BEDE-CHAN), ii, 710.
Amalgams. See Mercury alloys.
Ambergris, constitution of (SUZUKI), i, 1348.
Ambrain (SUZUKI), i, 1349.
Amides, acid organic, action of sulphur monochloride on (NAIK and PATEL), i, 121.
Δ^{α}-unsaturated acid, hydrolysis of (YATHIRAJA and SUDBOROUGH), i, 1134.
Amidines, tautomerism of (FORSYTH and PYMAN), i, 699.
condensations of, with ethoxymethylene derivatives of β-ketonic esters, β-diketones and cyanoacetic esters (MITTER and PALIT), i, 1319.
Amidoanilidocitric acid, ethyl ester (NAU, BROWN, and BAILEY), i, 1379.
Amidopersulphuric acid. See Hydroxylamine*iso*sulphonic acid.
Amines (JOHNSON and DASCHAVSKY), i, 540.
infra-red absorption spectra of (BELL), ii, 928.
affinity constants of (BOURGEAUD and DONDELINGER), ii, 117.
velocity of benzylation of (PEACOCK), i, 1399.
molecular compounds of, with 4:4'-dipyridylium dialkyl halides (EMMERT and ROH), i, 587.
dissociation constants of compounds of trinitrobenzene and (LEY, GRAU, and EMMERICH), ii, 1159.
action of, on semicarbazones (WILSON and CRAWFORD), i, 317.
alicyclic primary, preparation of (MAZOUREVITCH), i, 1247.
Amines, aliphatic, additive compounds of quinol with (HARGER), i, 23.
separation of, from ammonia (LEONE), ii, 907.
primary, action of nitrous acid on (BEEK and HERMANS), i, 794.
aromatic, preparation of (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 132.
fluorescence spectra of (NUNAN and MARSH), ii, 353.
action of thiosemicarbazide on (MAZOUREVITSCH), i, 984.
halogen-alkylated (WOLFF), i, 428.
secondary, reactions of diazo compounds with (LEVI and FALDINO), i, 171.
primary, secondary, and tertiary, preparation of (KINDLER), i, 387.
secondary, preparation of (ROSENMUND and JORDAN), i, 245.
identification of (MARVEL, KINGSBURY, and SMITH), i, 244.
Aminoacetals, condensation of aminoaldehydes with (RÄTH), i, 437.
Amino-acid, $C_4H_{11}O_3N$, and its phenylcarbimide derivative, from proteins (GORTNER and HOFFMAN), i, 602.
Amino-acids (KARRER and WIDMER), i, 593.
optical properties of (KEENAN), ii, 94.
action of Grignard reagents on (THOMAS and BETTZIECHE), i, 250, 251, 257; (BETTZIECHE), i, 251, 1147.
conversion of, into tertiary aminoalcohols (MCKENZIE and WILLS), i, 395.
combination of, with acids and alkalis (HARRIS), i, 450.
aldehydic derivatives of (BERGMANN, EUSSLIN, and ZERVAS), i, 890.
dipeptides of (HAVESTADT and FRICKE), i, 162.
molecular compounds of (PFEIFFER and ANGERN), i, 794.
decomposition of, by microbes (WAKSMAN and LOMANITZ), i, 867.
in nutrition (SEUFFERT, ITO, and YOKOYAMA; SEUFFERT and MARKS), i, 730.
oxidation of, in germinating seeds (OPARIN), i, 1518.
synthesis of, in the organism (MCGINTY, LEWIS, and MARVEL), i, 100; (KNOOP and OESTERLIN), i, 1493.
acetylation of, in the animal body (KNOOP and BLANCO), i, 1208.
deamination and transformation of, in the organism (KOTAKE), i, 730.

Amino-acids, hydrolytic deamination of (BERGMANN, MIEKELEY, WEINMANN, and KANN), i, 795.
action of, in blood (ROSENBAUM), i, 464.
specific dynamic action of, in relation to their metabolism (SETH and LUCK), i, 1002.
from hydrolysis of proteins, determination of (CHERBULIEZ and WAHL), ii, 1211.
determination of, in tryptic digests (ELLINGHAUS), i, 865.
α-Amino-acids, constitution and taste of (HEIDUSCHKA and KOMM), i, 522, 1389.
anhydrides of *N*-carboxylic derivatives of (WESSELY), i, 1151.
Amino-alcohols, wandering of acyl groups in (BETTZIECHE), i, 1147.
action of nitrous acid on (BETTZIECHE), i, 251.
semipinacolic deamination of (ORÉKHOV and ROGER), i, 261.
tertiary, elimination of the amino group from (MCKENZIE and DENNLER), i, 26.
β-Amino-alcohols, primary (BILLON), i, 120.
Amino-aldehydes, condensation of amino-acetals with (RÄTH), i, 437.
Amino-compounds, aromatic, action of sulphites on (BUCHERER and STICHEL), i, 1338.
Amino-ketones, aromatic, halochromism of (PFEIFFER), i, 408.
molecular compounds of (PFEIFFER, GOEBEL, and ANGERN), i, 262.
Aminosulphonic acid, use of, as a standard in volumetric analysis (HERBOTH), ii, 155.
Ammines, lattice energy of (BILTZ and GRIMM), ii, 842.
Ammonia, formation of, in the oxy-hydrogen flame (TOMINAGA), ii, 48.
synthesis of, at high pressures (MOLDENHAUER), ii, 215.
absorption of light by (LANDSBERG and PREDVODITELEV), ii, 352.
infra-red absorption spectrum of (SCHIERKOLK), ii, 180.
gaseous, rotation spectrum of (SPENCE), ii, 350.
liquid, electrolysis in, and its physical constants (CADY and TAFT), ii, 1073.
ionisation of (WALDIE), ii, 1106.
liquid, potentials in (BERGSTROM), ii, 794.
vapour, superheated, specific heat of (OSBORNE, STIMSON, SLIGH, and CRAGOE), ii, 643.
Ammonia, specific heat of aqueous solutions of (VREVSKI and KAIGORODOV), ii, 125; (VREVSKI; VREVSKI and SAVARITZKI), ii, 126.
thermal decomposition of, on varying surfaces (HINSHELWOOD and BURK), ii, 691.
liquid, molecular weight determinations in (SCHMID and BECKER), i, 1386.
solid, crystal structure of (MARK), ii, 1130.
concentration of, in mixtures of hydrogen and nitrogen over liquid ammonia (LARSON and BLACK), ii, 501.
solubility of, in water (SHERWOOD), ii, 852.
absorption of, in water and in hydrochloric acid (WHITMAN and DAVIS), ii, 106.
sorption of, by glass (BANGHAM and BURT), ii, 284.
equilibria in solutions of (VREVSKI), ii, 102; (SCHEFFER and DE WIJS), ii, 783.
scrubber for distillates of (MURRAY), ii, 236.
combustion of, in oxygen (RASCHIG), ii, 224.
explosion of carbon monoxide and oxygen with (BEESON and PARTINGTON), ii, 682.
catalytic oxidation of (KASSNER), ii, 413; (PASCAL and DECARRIÈRE; DECARRIÈRE), ii, 565; (SCHLŒSING), ii, 566.
action of, on bisimmonium bromides (v. BRAUN and ZOBEL), i, 1455.
action of, on carbohydrates (SHMOOK), i, 577.
catalysis by alumina of the reaction between ethyl alcohol and (DORRELL), ii, 1174.
action of, on ferrous salts (WEITZ and MÜLLER), ii, 317.
action of, on phosphorus chlorides (PERPÉROT), ii, 1186.
hormonal action of (PRÁWDICZ-NEMINSKI), i, 481.
in blood (PARNAS and HELLER), i, 323, 454; (PARNAS), i, 454; (PARNAS and TAUBENHAUS), i, 1484.
excretion of, after administration of acid (FISKE and SOKHEY), i, 723.
determination of, in soils (MCLEAN and ROBINSON; HARPER), i, 224.
determination of, in urine (YOVANOVITCH), i, 1114, 1204.
determination of, colorimetrically, in urine (ORR), i, 184.

Ammonia, determination of, in blood and urine (MURRAY), i, 710.
separation of aliphatic amines from (LEONE), ii, 907.
Ammonification in soils (GIBBS, BATCHELOR, and MAGNUSON), i, 1030.
Ammonium bases, quaternary, activation of nitrogen in (WEDEKIND), i, 678.
Ammonium compounds, heats of formation of (TSCHELINCEV), ii, 480.
Ammonium salts, acid properties of, in liquid ammonia (BERGSTROM), ii, 315.
solubility of, in presence of ammonia (WEITZ), ii, 1147.
compounds of, with mercury salts (RAY and BANDOPADHYAY), ii, 813.
hæmolytic action of (JACOBS), i, 1345.
determination of, with hypobromite (POHORECKA-LELESZ), ii, 76.
Ammonium borate, double decomposition of sodium sulphate and (SBORGI and BOVALINI), ii, 206; (SBORGI, BOVALINI, and MEDICI; SBORGI), ii, 207.
chloride, deposition of crystals of (MULLALY), ii, 801.
equilibrium of potassium and mercuric chlorides, water, and (OSAKA and ANDO), ii, 123.
vapour, action of, on metals (HOFMANN, HARTMANN, and NAGEL), ii, 685.
adsorption of, by soils (PAVLOV), ii, 287.
chromate, equilibria of, with ammonium sulphate and water and with ammonium chromate and water (ARAKI), ii, 786.
magnesium chromate, optical properties of mixed crystals of, with ammonium magnesium sulphate and rubidium magnesium chromate (PORTER), ii, 945.
fluoaluminate, fluoferrate, and oxyfluomolybdate, crystal structure of (PAULING), ii, 185.
halides, crystal measurements of (HAVIGHURST, MACK, and BLAKE), ii, 17.
solid solutions of alkali halides and (HAVIGHURST, MACK, and BLAKE), ii, 502.
iodide, orientation of, on mica (ROYER), ii, 270.
orientation of, on the surface of muscovite (ROYER), ii, 110.
nitrate, specific heat of aqueous solutions of (COHEN, HELDERMAN, and MOESVELD), ii, 126.
solubility and heat of solution of, at the transition point (COHEN and BREDÉE), ii, 976.
Ammonium nitrate, velocity of transformation of (SIEVERTS), ii, 558.
dehydration of (DAVIS and ABRAMS), ii, 581.
equilibrium of copper nitrate, water, and (MEIJER; SCHREINEMAKERS, BERKHOFF, and POSTHUMUS), ii, 123.
utilisation of, by plants (PRIANISCHNIKOV), i, 757.
dihydrogen phosphate, crystal structure of (HASSEL), ii, 1130.
hexachlororuthenate (AOYAMA), ii, 816.
sulphate, equilibrium of ammonium chromate, water, and (ARAKI), ii, 786.
miscibility of iron sulphate and magnesium sulphate with (ZWEIGLÓWNA), ii, 189.
magnesium sulphate, optical properties of mixed crystals of ammonium magnesium chromate and (PORTER), ii, 945.
pyrosulphite, absorption spectrum of (DIETZEL and GALANOS), ii, 1115.
Amniotic fluid, constituents of (REINWEIN and HEINLEIN), i, 721.
Amphibolites from Austria (MARCHET), ii, 997.
Ampholytes, solubility of (v. EULER and RUDBERG), ii, 853.
Amygdalin, hydrolysis of (HATANO), i, 201.
Amyl alcohol, surface tension of aqueous solutions of (EDWARDS), ii, 387.
catalytic dehydrogenation of, and its mixtures with ethyl alcohol (CONSTABLE), ii, 881.
iso-**Amyl alcohol**, mutual solubilities of aqueous mixtures of (KABLUKOV and MALISCHEVA), ii, 768.
tert.-**Amyl alcohol**, detection of, colorimetrically (EKKERT), ii, 1006.
n-**Amylacetylacetone** semicarbazone (v. AUWERS and DANIEL), i, 1180.
iso-**Amylallylbarbituric acid** (VOLWILER), i, 1174.
n-**Amylamine**, salts of (MAZOUREVITCH), i, 1241.
δ-(ε-**Amylamino**)**butylamine** dihydrochloride, ε-chloro- (v. BRAUN and ZOBEL), i, 1456.
Amylase (SJÖBERG and ERIKSSON), i, 736.
mode of action of (KUHN), i, 11, 636.
effect of solvent for, on saccharification of starch (PETIT and RICHARD), i, 1504.
complement of (SJÖBERG), i, 1504.
excretion of, in urine (AMBARD and VAUCHER), i, 609.
malt (SABALITSCHKA and SCHULTZE), i, 1358.

Amylase, malt, purification of (LÜERS and SELLNER), i, 737.
malt and pancreatic, destruction of, by heat (COOK), i, 1358.
pancreatic, adsorption of (WILLSTÄTTER, WALDSCHMIDT-LEITZ, and HESSE), i, 736.
effect of tryptophan and amino-acids on (SHERMAN, CALDWELL, and NAYLOR), i, 1007.
Amylases (PRINGSHEIM and LEIBOWITZ), i, 1043.
Amylbenzenes, 2:4-*di*hydroxy- (SHARP & DOHME, and DOHME), i, 541.
*iso***Amylbenzoyloximidocarbonic acid**, ethyl ester (OESPER and COOK), i, 523.
Amyleoniine, ε-amino-, and its benzoyl derivative (v. BRAUN and ZOBEL), i, 1456.
Amyldihydro*iso***indole**, ε-amino-, and its derivatives (v. BRAUN and ZOBEL), i, 1457.
Amylodextrin, oxidation of (SYNIEWSKI), i, 369.
Amylodextrinic acid, and its salts and hydrazide (SYNIEWSKI), i, 369.
Amylohemicellulose, nature of (LING and NANJI), i, 517.
Amylopectin, constitution of (LING and NANJI), i, 516.
action of α-diastase on (SYNIEWSKI), i, 470.
Amylophosphates, hydrolysis of, by enzymes (SAMEC), i, 1504.
Amylose, polymerised, constitution of (LING and NANJI), i, 516.
Amylpiperidine, ε-amino- (v. BRAUN and ZOBEL), i, 1456.
N-**Amylpyrrolidine**, ε-amino-, and its salts (v. BRAUN and ZOBEL), i, 1456.
*iso***Amyl-***m***-toluidine**, 4:6-*di*nitro- (GIUA and PETRONIO), i, 1397.
β-**Amyrin** from Manila elemi resin (ROLLETT and SCHMIDT), i, 945.
Anacardol, and its picrate (NAIDU), i, 1224.
Anæmia, distribution of cholesterol and unsaturated fatty acids (BODANSKY), i, 724.
lipoids of plasma in (BLOOR), i, 609.
on whole milk diet (HART, STEENBOCK, ELVEHJEM, and WADDELL), i, 1354.
pernicious, and vitamin deficiency (DHAR), i, 1221.
Anæsthesia, acidosis in (KOEHLER), i, 195.
ethylene (OBERHELMAN and DYNIEWICZ; LEAKE), i, 862.
local, with secondary and tertiary alcohols (QUIGLEY and HIRSCHFELDER), i, 195.
Anæsthetics, osmosis, of, in gels (YUMIKURA), i, 735.
local (WEIL), i, 157.
constitution and physiological action of (GILMAN and PICKENS), i, 333.
Analysis, methods of (CONGDON, CRABTREE, COLES, SMITH, and VEHALGO), ii, 65; (CONGDON and VANDERHOOK), ii, 601; (CONGDON, GUSS, and WINTER), ii, 1002.
errors in (HAHN and SCHEIDERER), ii, 69; (HAHN and JAEGER), ii, 1199.
specifications for reagents used in (COLLINS, FAIR, ROSIN, SPENCER, and WICHERS), ii, 899.
preparation of standard solutions for (PREGL), ii, 998.
combustion, of gases (ŠVÉDA), ii, 154, 432.
of organic compounds (ŠVÉDA and PROČKE), ii, 719.
electrolytic, by means of graded potentials (LASSIEUR), ii, 711.
electrometric, with electrodes of platinum or its alloys (VAN NAME and FENWICK), ii, 594.
with three-electrode valves (TREADWELL and PAOLONI), ii, 595.
electro-volumetric, theory of (EASTMAN), ii, 594.
differential (COX), ii, 999.
elementary organic (VORTMANN), ii, 827.
determination of carbon and hydrogen in (LINDNER), ii, 901.
inorganic qualitative, spot tests on filter-paper in (FEIGL), ii, 509.
of metals in Groups I to III (TANANAEV), ii, 324.
of metals of Group III (JÄRVINEN), ii, 602.
separation of phosphoric acid in (KESCHAN), ii, 328.
iodometric, formation of cyanogen iodide in (LANG), ii, 597, 713.
microchemical qualitative (FEIGL), ii, 435.
quantitative, apparatus for (POLLAK), ii, 431.
micro-combustion, apparatus for (FUNK and KON), ii, 998.
organic qualitative, use of sodium hyposulphite in (CLARK), ii, 332.
quantitative, by means of Röntgen ray spectra (GÜNTHER and WILCKE), ii, 237; (COSTER and NISHINA), ii, 324; (DELAUNEY), ii, 822.
of mixtures of two salts (COMELLA), ii, 714.
in biochemistry, use of electrical conductivity in (DEMJANOVSKI), i, 1113.

Analysis, toxicological, putrefaction products in (VAN ITALLIE and STEENHAUER), i, 719.
volumetric, use of amalgams in (SOMEYA), ii, 904, 1201.
use of bromine in (MANCHOT and OBERHAUSER), ii, 161.
logarithm tables for (KRAUS), ii, 323.
Anatoxins (RAMON), i, 339.
Andalusite, crystal structure of (NORTON), ii, 1127.
formation of mullite from (GREIG), ii, 987.
Andropogon, oil from new species of (SIMONSEN), i, 1164.
Androsin, synthesis of (MAUTHNER), i, 950.
Anethole, electrochemical oxidation of (FICHTER and CHRISTEN), i, 813.
nitrosochloride, reduction of, by stannous chloride (SHOESMITH and SLATER), i, 908.
Anhydride, $C_6H_8O_2N_2$, and its derivatives, from alanylserine (BERGMANN, MIEKELEY, and KANN), i, 1134.
Anhydrite, hydration of (FARNSWORTH), ii, 980.
Anhydro-3-acetamido-2-methylcinchoninic acid (GULLAND and ROBINSON), i, 1187.
Anhydro-2′-aminodiphenylamine-6-carboxylic acid, derivatives of (LINNELL and PERKIN), i, 63.
Anhydrobisdi-indandionylmethane (RADULESCU and GEORGESCU), i, 1288.
Anhydrobromochelidonine (GADAMER and WINTERFELD), i, 285.
Anhydrocotarnine-methylamine, and its salts (HAWORTH and PERKIN), i, 969.
Anhydrocotarnine-6-nitro-4:5-dimethoxyphthalide (RÂY and ROBINSON), i, 1153.
Anhydrocyanilic acid (WIELAND), i, 1049.
Anhydro-7-demethylomethyl-ψ-corydaline, and its salts (HAWORTH and PERKIN), i, 972.
Anhydro-7-demethylomethylpapaverinol, and its *per*chlorate (HAWORTH and PERKIN), i, 971.
Anhydrodidehydrobromochelidonine (GADAMER and WINTERFELD), i, 285.
Anhydrodidehydrochelidonine (GADAMER and WINTERFELD), i, 285.
Anhydro-α-diphenylacetyl-α(or β)-carboxy-β(or α)-carbethoxyhydrazine-β-diphenylacetic acid (INGOLD and WEAVER), i, 581.
Anhydroepicatechin tetramethyl ether (FREUDENBERG, FIKENTSCHER, and HARDER), i, 419.
Anhydrohydroxybenzoic acids, and their salts and derivatives (ANSCHÜTZ, STOLTENHOFF, and VOELLER), i, 1273.
αδ-Anhydro*tetra*hydroxyadipic acids, stereoisomerism of (LEVENE and SIMMS), i, 782.
Anhydro-7:8-methylenedioxy-11-phenylindenoquinoline methohydroxide, and its salts (ARMIT and ROBINSON), i, 1171.
10:11-Anhydro-7:8-methylenedioxyquinindoline 10-methohydroxide (ARMIT and ROBINSON), i, 1172.
Anhydronium bases (ARMIT and ROBINSON), i, 1170.
Anils, reaction of ethyl malonate with (WAYNE and COHEN), i, 550.
Anilidocitroamic acid (NAU, BROWN, and BAILEY), i, 1379.
Aniline and its aqueous solutions, physical properties of (APPLEBEY and DAVIES), ii, 948.
and its alkyl derivatives, infra-red absorption spectra of (BELL), ii, 928.
equilibrium of acetic acid, water, and (ANGELESCU and MOTZOC), ii, 854.
reaction of calcium hypochlorite with (RASCHIG), i, 243.
action of ethylene oxide on (GABEL), i, 535.
effect of ammonia on the hypochlorite reaction for (WEST), ii, 163.
*tri*chloroacetates (DOUGHTY), i, 805.
hydroferricyanide (CUMMING), i, 122.
hydrogen malate, malonate, oxalate, succinate, and tartrate (RAMBECH), i, 385.
*p-di*sulphoxide, and its derivatives (BERE and SMILES), i, 21.
derivatives, partial bromination of (FRANCIS), i, 1399.
detection of, colorimetrically (MURRAY), ii, 163.
determination of, in aqueous solutions (CARSON), ii, 447.
Aniline, bromo- and chloro-, *m*-nitrobenzenesulphonamides (MARVEL, KINGSBURY, and SMITH), i, 245.
o-chloro-, compounds of mercuric acetate with (VECCHIOTTI and MICHETTI), i, 1058.
4-chloro-3:5-*di*nitro-, and its acetyl derivative (LINDEMANN and WESSEL), i, 1099.
o-nitro-, action of, on nitrosobenzene (CHARRIER and BERETTA), i, 21.
*oo′-di*thio-, action of lead monoxide on (HODGSON), i, 596.
Anilines, nitro-, mutual solubility of (KOHMAN), ii, 1052.
vapour pressure of (BERLINER and MAY), ii, 1045.
action of alkali sulphate in kjeldahlisation of (MARGOSCHES and SCHEINOST), ii, 1200.

Aniline-black, vapour pressure and adsorption power of (KASAKEVITSCH), ii, 287; (STADNIKOV), ii, 771.
Aniline-*p*-sulphonic acid (*sulphanilic acid*), solubility of, in water (YAJNIK, JAIN, and NATH), ii, 1147.
4-Anilinoacetanilide, 3:5-*di*nitro- (LINDEMANN and WESSEL), i, 1099.
2-Anilino-3-acetanilido-1:4-naphthaquinone (FRIES and BILLIG), i, 939.
ω-Anilinoacetophenone, and *p*-chloro-, *o*-tolylhydrazones (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 41.
Anilino-*p*-aminoanilino-1:4-naphthaquinone (FRIES and BILLIG), i, 940.
2-Anilino-3-*p*-anisidino-1:4-naphthaquinone (FRIES and BILLIG), i, 940.
β-Anilinoanisylmalonic acid, ethyl ester (WAYNE and COHEN), i, 551.
9-Anilinoanthrone, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 819.
4-Anilinobenzazide, 3:5-*di*nitro- (LINDEMANN and WESSEL), i, 1099.
4-Anilinobenzoic acid, 5-nitro-3-amino- (LINDEMANN and WESSEL), i, 1099.
4-Anilinobenzoyl chloride, 3:5-dinitro- (LINDEMANN and WESSEL), i, 1099.
5-Anilino-4-benzoyl-2-phenyl-1:3:4-thiodiazole (FROMM and TRUKA), i, 704.
β-Anilinobenzylmalonic acid, and *p*-bromo-, *p*-chloro-, and *m*-nitro-, esters of (WAYNE and COHEN), i, 550.
1-Anilinobenzthiazole, and its derivatives (HUNTER), i, 1335.
δ-Anilino-Δ$^{\alpha\gamma}$-butadienealdehydeanil, γ-iodo- (BAUMGARTEN), i, 1381.
β-Anilinobutaldehyde diethylacetal, and its picrate (MASON), i, 834.
Anilino-*m*-chlorophenylacetonitrile (HELLER and SPIELMEYER), i, 814.
1-Aniline-1-cyanocyclopentane (PLANT and FACER), i, 1271.
2-Anilino-4:6-di-*p*-hydroxynaphthyl-1:3:5-triazine (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 441.
2-Anilino-3:3′-diketo-6:7:6′:7′-dibenz-2:2′-dicoumaran (FRIES and PUSCH), i, 569.
2-Anilino-3:3′-diketo-4:6:4′:6′-tetramethyl-2:2′-dicoumaran (FRIES and BARTENS), i, 568.
4-Aniline-2:6-dimethylpyridine, 4-*o*-nitro- (SEKA), i, 587.
8-Anilino-3:7-diphenylphenosafranine, 2-amino- (KEHRMANN and STANOYÉVITCH), i, 1335.
Anilinodiphenylquinoxaline, amino- (KEHRMANN and STANOYÉVITCH), i, 1332.
2-Anilino-5-ethoxy-4-methyl-4:5-dihydrothiazole, and its picrate (BURTLES, PYMAN, and ROYLANCE), i, 697.
β-Anilinoethyl alcohol, *p*-bromo-. See Ethyl *p*-bromoaniline, *N*-hydroxy-.
4-α-Anilinoethylideneaminobenzoic acid, ethyl ester (WEIL), i, 157.
3-Anilinohydroxymethylindole hydrochloride, and its acetyl derivative (MAJIMA and KOTAKE), i, 1450.
2-Anilino-3-hydroxy-1:4-naphthaquinone (FRIES and BILLIG), i, 939.
3-Anilino-7-hydroxy*apo*safranone, 2-amino-, and its hydrochloride (KEHRMANN and SCHEDLER), i, 442.
3-Anilino-5-keto*iso*oxazole, *p*-chloro- and *p*-iodo- (WORRALL), i, 308.
4-Anilino-1-keto-3-oxindolidene-3:4-dihydronaphthalene, and 4-*p*-chloro- (FRIEDLÄNDER), i, 958.
3-Anilino-5-ketopyrazole, *m*-bromo-, *p*-chloro-, and *p*-iodo- (WORRALL), i, 308.
5-Anilino-6-methoxy-*m*-cresol, 2:4-*di*nitro- (KOHN and MARBERGER), i, 1265.
2-Anilino-6-methoxy-2-thiol-3-ketocoumaran, and 2-*p*-amino- (FRIES and SAFTIEN), i, 571.
4-Anilino-1-methyl-2-methylene-1:2-dihydroquinoline picrate (FISCHER, DIEPOLDER, and WÖLFEL), i, 439.
3-Anilino-2-methyl-4-quinazolone, 3-*p*-acetyl derivative (HELLER, GÖRING, KLOSS, and KÖHLER), i, 1323.
4-Anilino-2-methylquinoline, and its derivatives (FISCHER, DIEPOLDER, and WÖLFEL), i, 438.
1-Anilinonaphthalene-8-sulphonic acid, amino and nitro derivatives (FINZI), i, 654.
Anilino-1:4-naphthaquinones, amino-, and aminonitroso-, and their acetyl derivatives (FRIES and BILLIG), i, 939.
4-Anilino-α-naphthol, and 4-*p*-chloro-, and their *O*-methyl ethers (FRIEDLÄNDER), i, 957.
1-Anilino-β-naphthol-4-sulphonic acid (LANTZ and WAHL), i, 910.
Anilino-*m*-nitrophenylacetonitriles, isomeric, and their derivatives (HELLER and SPIELMEYER), i, 814.
Anilino-*o*′-nitrotoluene-*p*′-sulpho-*p*-phenetidide, 2-nitro-, and 3:5-*di*nitro- (REVERDIN), i, 1409.
Anilino-oximinopinacolin (RHEINBOLDT and SCHMITZ-DUMONT), i, 1132.
Anilino-*P*-oxodihydrobenzodiazphospholium (AUTENRIETH and BÖLLI), i, 1469.
Anilino-*P*-oxotetrahydrodiazphospholium (AUTENRIETH and BÖLLI), i, 1469.
1-Anilino*cyclo*pentane-1-carboxylic acid, and its derivatives (PLANT and FACER), i, 1271.

11-Anilinophenanthraphenazine, 10-amino- (KEHRMANN and STANOYÉVITCH), i, 1332.

Anilinophenylacetonitrile (CHRISTIAEN), i, 28.
action of ethyl ethylidenemalonate with (HIGGINBOTHAM, LAPWORTH, and SIMPSON), i, 35.

2-*p*-Anilinophenylbenztriazole, and *p'*-amino- (ELBS), i, 164.

3-Anilino-5-phenylfluorindine, 2-amino-, and its nitrate (KEHRMANN and SCHEDLER), i, 443.

2-Anilino-5-phenyl-1:3:4-thiodiazine, and its hydrobromide and acetyl derivative (BOSE), i, 1465.

δ-Anilinosemicarbazide, and its derivatives (SUTHERLAND and WILSON), i, 42.

2-Anilino-2-thiol-3-ketocoumaran (FRIES and SAFTIEN), i, 571.

β-Anilino-*p*-tolylmalonic acid, ethyl ester (WAYNE and COHEN), i, 551.

Anilino-3:4:5-trimethoxyphenylcarbinol, and its hydrochloride (SONN and MEYER), i, 932.

Anilodimethylterephthalonic acid, aniline salt (PERKIN and TAPLEY), i, 42.

Animals, fasting and poisoned with phosphorus, lipin and fat metabolism of (SACCHETTO), i, 1357.
marine, shell-growth of (ORTON), i, 1002.
warm-blooded, synthesis of carbohydrates in muscle of (JANSSON and JOST), i, 1354.

Animal tissues, staining of (GICKLHORN and KELLER), i, 468.
argon in (PICTET, SCHERRER, and HELFER), i, 1202.
fixation of calcium by (BREHME and GYÖRGY), i, 717; (BUDDE), i, 718.
cobalt in (BERTRAND and MÂCHEBŒUF), i, 996.
occurrence of metals in (MCHARGUE), i, 1023.
plant nucleotides in (JONES and PERKINS), i, 182.
determination of arsenic in (LAWSON and SCOTT), i, 996.
determination of chlorides in (VLĂDESCU), i, 1113.
determination of lead in (BERNHARDT), ii, 1003; (NAKASEKO and NAKANO), ii, 1205.
determination of nucleic acid phosphorus in (JAVILLIER and ALLAIRE), i, 996.
determination of water in (THOENES), i, 718.

Anisaldehyde, preparation of (BRINER v. TSCHARNER, and PAILLARD), i, 1069.
compound of aminomalononitrile with (GRISCHKEVITSCH-TROCHIMOVSKI and SEMENCOV), i, 1069.

Anisaldehydediphenylene-4:4'-dihydrazone (CHATTAWAY, IRELAND, and WALKER), i, 1195.

Anisaldoxime, *N*-aryl ethers of (BAMBERGER), i, 142.

***o*-Anisidine** hydroferricyanide (CUMMING), i, 122.

***o*-Anisidine,** 3:5-*di*bromo-, diazotisation and nitration of (ELION and JANSSEN), i, 389.

***m*-Anisidine,** 5-bromo-, and its benzoyl derivative (GRIFFITH and HOPE), i, 827.
4-chloro-6-nitro-, preparation of (WHISTON), i, 136.

ω-*o*- and -*p*-Anisidinoacetophenone-*o*-tolylhydrazones (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 41.

β-*o*-and-*p*-Anisidinobenzylmalonic acids, ethyl esters (WAYNE and COHEN), i, 551.

3-Anisidino-5-keto*iso*oxazoles (WORRALL), i, 308.

3-Anisidino-5-ketopyrazoles (WORRALL), i, 308.

2-*p*-Anisidino-1:4-naphthaquinone, 3 chloro-2-*N*-nitroso- (FRIES and BILLIG), i, 939.

***p*-Anisidino-3:4:5-trimethoxyphenylcarbinol,** and its hydrochloride (SONN and MEYER), i, 932.

Anisilic acid, action of, on thiophenol (BISTRZYCKI and RISI), i, 1426.

Anisole (*phenyl methyl ether*), *tetra-* and *penta*-bromo- (KOHN and FINK), i, 134.
*tri*bromohydroxy- and *di*bromonitrohydroxy- (KOHN and GRÜN), i, 1265.
bromonitro derivatives (KOHN and STRASSMANN), i, 1264.
2:6-*di*bromo-4-nitro-3-hydroxy-, and its salts (KOHN and LÖFF), i, 1264.
2:4:5-*tri*chloro- (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 1145.
2:3:5:6-*tetra*chloro-*p*-nitro- (BERCKMANS and HOLLEMAN), i, 1136.
*tri*nitro-, and *tri*nitrophenetole, alcoholysis of (BRADY and HORTON), i, 1409.
3:4:5-*tri*nitro-2-hydroxy-, salts of (KOHN and LÖFF), i, 1265.

***p*-Anisolesulphonylacetone,** and its derivatives (TRÖGER and BROHM), i, 1453.

3-*o*- and -*p*-Anisolesulphonyl-2-methylquinolines, and their salts and derivatives (TRÖGER and BROHM), i, 1453.
Anisotropy of molecules (RAMANATHAN), ii, 478.
streaming (FREUNDLICH, STAPELFELDT, and ZOCHER), ii, 199.
β-Anisoxypropionic acid (PFEIFFER, OBERLIN, and KONERMANN), i, 1304.
p-Anisyl groups, migration of phenyl and (TIFFENEAU and ORÉKHOV), i, 679.
p-Anisyl aminostyryl ketones, and their salts (PFEIFFER), i, 410.
β-Anisylbutan-γ-one, and its semicarbazone (TIFFENEAU, ORÉKHOV, and LÉVY), i, 544.
p-Anisylcamphene (LEDUC), i, 821.
p-Anisyl *p*-dimethylaminostyryl ketone, and its salts (PFEIFFER), i, 410.
4-*p*-Anisyl-2:6-dimethyl-2:3-dihydropyridine-3:5-dicarboxylic acid, ethyl ester, ψ-cyanide (MUMM), i, 965.
4-*p*-Anisyl-1:6-dimethylmethylenedihydropyridine, and its derivatives (MUMM), i, 967.
Anisylideneacetohexoic acid (RYAN and SHANNON), i, 558.
Anisylidene-*p*-aminobenzoic acid (WAYNE and COHEN), i, 551.
Anisylidene-*p*-aminocinnamic acid, ethyl ester (FRIEDEL), i, 664.
p-Anisylidene-*m*-aminocinnamylideneacetone, and its salts (PFEIFFER, PRAHL, FITZ, and STOLL), i, 681.
p-Anisylidene-*p*-anisidine (COGHILL), i, 583.
Anisylideneazine hydrochloride, compounds of stannic chloride and (SHOESMITH and SLATER), i, 908.
p-Anisylideneazophenylpyrroles (PLANCHER and GHIGI), i, 598.
Anisylidene-2-methylquinoline, salts of (PFEIFFER, PRAHL, FITZ, and STOLL), i, 681.
Anisylidene-4-methylthiosemicarbazone (BOSE), i, 1466.
p-Anisylidene-*m*-nitrocinnamylideneacetone (PFEIFFER, PRAHL, FITZ, and STOLL), i, 681.
Anisylidene-4-phenylthiosemicarbazide (BOSE), i, 1465.
Anisyl α-methoxy-β-hydroxyvinyl ketone, and its copper salt (MALKIN and ROBINSON), i, 827.
p-Anisyl *p*-methoxystyryl ketone, derivatives of (STRAUS and HEYN), i, 1430.
4-Anisyl-1-methylhydantoin (HAHN and RENFREW), i, 581.
4-Anisyl-1-methylhydantoin-3-acetic acid, ethyl ester (HAHN and RENFREW), i, 581.
α-Anisyl-α-methylpropaldehyde, and its semicarbazone (TIFFENEAU, ORÉKHOV, and LÉVY), i, 544.
α-Anisyl-β-methylpropylene oxide (TIFFENEAU, ORÉKHOV, and LÉVY), i, 544.
2-Anisyl-4-methylpyrimidine-5-carboxylic acid, and its ethyl ester (MITTER and PALIT), i, 1320.
Anisyl nitrocinnamylidenemethyl ketones (PFEIFFER), i, 409.
β-Anisylpropionic acid, α-cyano- (BAKER and LAPWORTH), i, 30.
Anisyl *iso*propyl ketone, and its semicarbazone (TIFFENEAU, ORÉKHOV, and LÉVY), i, 544.
2-*p*-Anisylquinoline, and its salts (PFEIFFER, PRAHL, FITZ, and STOLL), i, 681.
3-Anisylrhodanylidene-Δ$^{5:3'}$-oxindoles (HANN), i, 987.
p-Anisylsuccinic acid (CHRZASZCZEWSKA), i, 956.
and its anhydride (BAKER and LAPWORTH), i, 671.
3-*p*-Anisylthiophen (CHRZASZCZEWSKA), i, 956.
p-Anisyl-*p*-tolylsulphone (GILMAN, BEABER, and MYERS), i, 1057.
4-Anisyl-1:2:6-trimethyl-1:2:3:6-tetrahydropyridine-3:5-dicarboxylic acid, ethyl ester (MUMM), i, 966.
Anodes, economic (LASSIEUR), ii, 154.
apparatus for processes at (STSCHERBAKOV), ii, 979.
carbon, disintegration of, in nitric acid (CREIGHTON and OGDEN), ii, 1068.
Anode effect in electrolysis (TAYLOR), ii, 548.
Anorthoclase from Mt. Kenya (MOUNTAIN), ii, 819.
Anthocyanidins, synthesis of (WILLSTÄTTER and SCHMIDT), i, 54.
Anthocyanins, reaction for (NIKIFOROVSKI), i, 1224.
Anthorine, and its sulphate (GORIS and MÉTIN), i, 761, 762.
ψ-Anthorine, and its sulphate (GORIS and MÉTIN), i, 761, 762.
Anthracene, boiling point of (FINCK and WILHELM), ii, 759.
hydrogenation of (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 127.
action of aluminium chloride on (SCHAARSCHMIDT, MAYER-BUGSTRÖM, and SEVON), i, 242.
derivatives, action of nitrogen dioxide on (BARNETT), i, 1258.

Anthracene, determination of, by the Höchst test (RHODES, NICHOLS, and MORSE), ii, 1005.
determination of, in anthraquinone (LEWIS), ii, 74.
Anthracene, 9:10-*di*bromo-, action of sodium hydrosulphide on (COOKE, HEILBRON, and WALKER), i, 1410.
chloro-derivatives, *di*bromides, and chloronitro-derivatives (BARNETT and MATTHEWS), i, 18.
1:5:9-*tri*chloro-, *di*chloride, reactions of (BARNETT, COOK, and MATTHEWS), i, 1398.
1:5:9:10-*tetra*chloro-, and 1:5:9-*tri*chloro-9-bromo- (BARNETT, COOK, and MATTHEWS), i, 1398.
1-chloro-9(or 10)-nitro-, and 1:5-*di*chloro-9:10-*di*nitro- (BARNETT), i, 1259.
*meso*thio-, derivatives of (COOKE, HEILBRON, and WALKER), i, 1410.
2:3-Anthraceneoxythionaphthen, and its acetyl derivative (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1312.
Anthracenesulphonic acids, metallic salts, and their solubilities (EPHRAIM and PFISTER), i, 897.
Anthracene-2-thioglycol-3-carboxylic acid (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1150.
2:3:9:10-Anthradiquinone. See Hystazarindiquinone.
Anthragallol 2-methyl ether, and its diacetyl derivative (KUBOTA and PERKIN), i, 1159.
Anthranil, constitution of (LEUCHS), i, 1335.
cyanoformyl derivative (KARRER, DIECHMANN, and HAEBLER), i, 243.
Anthranilic acid, 4- and 5-hydroxy-, 2-acetyl and -benzoyl derivatives of (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 400.
Anthranilorhodamine (SEN and SIRCAR), i, 554.
Anthranol, 1:8-*di*hydroxy- (*cignolin*), detection of, colorimetrically (TORTI), ii, 905.
Anthranyl acetate and ethers, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 818.
alkyl and aryl ethers, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 901.
Anthranylaniline, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 1140.
Anthranyl-*m*-nitroaniline, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 1140.
Anthranylpyridinium bromide, 1:5-*di*chloro- (BARNETT and MATTHEWS), i, 18.
1:5-*di*chloro-9-hydroxy-, and its 9-acetyl derivative (BARNETT, COOK, and MATTHEWS), i, 819.
chloride, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 1140.
salts, 1:5:9-*tri*chloro- (BARNETT, COOK, and MATTHEWS), i, 1399.
Anthranyltoluidines, *di*chloro- (BARNETT, COOK, and MATTHEWS), i, 1140.
Anthraquinone, decomposition of, by heat (LEWIS and SHAFFER), i, 45.
influence of mercury on the sulphonation of (COPPENS), i, 1432.
nitrogen derivatives of (BADISCHE ANILIN- & SODA-FABRIK), i, 414.
azides (BRASS and ZIEGLER), i, 685.
mercurichlorides (COPPENS), i, 1433.
Anthraquinone, 2-amino-, preparation of (PHILLIPS), i, 1076.
*tri*amino-, and its benzoyl derivative and *di*nitro-1-amino- (BECKETT, THOMAS, and SCOTTISH DYES), i, 685.
1:4-*di*bromo-2-hydroxy- (DE DIESBACH and STREBEL), i, 1435.
1-nitro-, effect of administration of (JOHN), i, 465.
Anthraquinones, aminohydroxy-, and their derivatives (BRASS and ZIEGLER), i, 686.
bromo-, reduction of (BARNETT and COOK), i, 940.
chloro*di*nitroamino-, benzoyl derivatives (BARNETT), i, 1288.
hydroxy-, reduction products of (PERKIN and YODA), i, 1160.
Anthraquinone colouring matters (BRITISH DYESTUFFS CORPORATION, LTD., BADDILEY and TATUM), i, 145, 414.
Anthraquinone-2-aldehyde, 5:6:7:8-*tetra*chloro-, 5:6:7:8-*tetra*chloro-1-nitro-, and 1-nitro-, and their derivatives (RUGGLI and BRUNNER), i, 561.
Anthraquinone-2-aldehydeindogenide, and 5-nitro- (MACBETH and CRAIK), i, 1315.
Anthraquinoneanil (SANDER), i, 982.
Anthraquinone-2-carboxylic acid, 3-bromo- (DE DIESBACH and STREBEL), i, 1435.
Anthraquinone-3-carboxylic acid, 2-bromo- (HELLER and MÜLLER-BARDORFF), i, 546.
Anthraquinone 2-diazonium sulphates, nitro- (TANAKA), i, 1434.
α- and **β-Anthraquinonehydrazines**, acyl derivatives of (BATTEGAY and AMUAT), i, 169.

2:3-Anthraquinoneoxythionaphthen, and its acetyl derivative (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1312.
Anthraquinonequinonediazides (TANAKA), i, 1106, 1434.
Anthraquinonesulphonic acids, methyl esters of (COPPENS), i, 1432.
Anthraquinonyl-3-hydrazine, 2-hydroxy- (TANAKA), i, 1434.
Anthraquinyl diacetate, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 819.
Anthrax in the intestines (SANARELLI), i, 477.
Anthrone, 2:3:9-*tri*bromo-9-nitro- (BARNETT), i, 1259.
3-chloro- (MAYER and FISCHBACH), i, 1076.
1:5-*di*chloro-9-bromo- and -9-nitro- (BARNETT, COOK, and MATTHEWS), i, 818.
1:5-*di*chloro-9-hydroxy- (BARNETT and MATTHEWS), i, 18.
Anthrone series (MAYER and FISCHBACH), i, 1076.
Anthronitrile, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 1141.
Anthronyl acetate, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 818.
ethyl ether, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 1398.
Anthropodeoxycholic acid, constitution of (WIELAND and JACOBI), i, 1488.
and its diformyl derivative (WIELAND and REVEREY), i, 181.
Anthroxanic acid, constitution of, and its salts (LEUCHS), i, 1335.
Antigens, composition of (MUELLER, WAYMAN, and ZINSSER), i, 1016.
Wassermann, colloidal properties of (KERMACK and MACCALLUM), i, 197.
Antiglyoxalase (FOSTER), i, 1495.
Antimonoxalic acid, potassium salt (HOLMES and TURNER), i, 1130.
Antimony, atomic weight of (WEATHERILL), ii, 23.
absorption spectrum of the vapour of (NARAYAN and RAO), ii, 927.
electro-deposition of (BAYERLE), ii, 675.
electro-analytical precipitation of (SCHLEICHER and TOUSSAINT), ii, 1004.
Antimony alloys with bismuth (OTANI), ii, 533.
with copper (KURNAKOV and BELOGLAZOV), ii, 787.
with lead and zinc (TAMMANN and DAHL), ii, 535.
Antimony *tri*chloride, distillation of (RÖHRE), ii, 157.
complex salts of (MIYAKE), ii, 815.
halides, reactions of, with benzanilide and with benzylaniline (VANSTONE), i, 662.
hydride (*stibine*), preparation of, electrolytically (WEEKS), ii, 415, 882.
solid (DRUCE; WEEKS and DRUCE), ii, 700.
Antimonates, alkali (JANDER and BRANDT), ii, 988.
Antimony selenide (MOSER and ATYNSKI), ii, 584.
*tri*sulphide, velocity of coagulation of (JABŁCZYŃSKI and PRZEZDZIECKA-JEDRZEJOWSKA), ii, 665, 1060.
sols, adsorption of anions in coagulation of (GHOSH and DHAR), ii, 336.
telluride (BRUKL), ii, 895.
Antimony organic compounds (MATSUMIYA), i, 1472.
monoaryl and diaryl (CHEMISCHE FABRIK VON HEYDEN), i, 86, 87.
secondary and tertiary aromatic (CHEMISCHE FABRIK VON HEYDEN), i, 86.
Antimonyl tartrates of amines (CHRISTIANSEN and NORTON), i, 654.
Antimony determination and separation:—
determination of (AUGER), ii, 604.
determination of, electrometrically (FLEYSHER), ii, 243.
determination of, in the pentasulphide and in stibnite (RUPP, SIEBLER, and BRACHMANN), ii, 244.
separation of arsenic and (HAHN and WOLF), ii, 68.
separation of copper, lead, tin, and (LASSIEUR), ii, 328.
separation of lead and (LASSIEUR), ii, 159.
separation of tin and (SACCARDI), ii, 159.
Anti-oxygens (MOUREU, DUFRAISSE, and BADOCHE), i, 117, 362, 363; (MOUREU and DUFRAISSE), i, 362; (MOUREU, DUFRAISSE, and LOTTE), ii, 561.
Antipyrine (1-*phenyl*-2:3-*dimethyl*-5-*pyrazolone*) methiodide, compound of iodoform with, and its *di*iodide (STEINKOPF and BESSARITSCH), i, 495.
Antipyrine, 4-amino-, glycyl derivative, and its picronolate (KARRER, DIECHMANN, and HAEBLER), i, 243.

Antirachitic properties of irradiated compounds (HESS, WEINSTOCK, and HELMAN; HESS and WEINSTOCK), i, 750.
substances, production of ultra-violet light by (DRUMMOND and WEBSTER), ii, 630.
Apigeninidin *per*chlorate (PRATT and ROBINSON), i, 825.
Aporphine, synthesis of, and its salts and derivatives (GADAMER, OBERLIN, and SCHOELER), i, 576.
Apples, constituents of the skins and leaves of (RIVIÈRE and PICHARD), i, 345.
nitrogen and carbohydrates in the flowers and fruits of (HOWLETT), i, 1121.
pectin content of the leaves of (TUTIN), i, 1028.
pectose and pectin in (CARRÉ), i, 758.
quercetin in peel of (SANDS), i, 216.
sorbitol from (TUTIN), i, 1028.
physiology of (HAYNES; ARCHBOLD), i, 345.
Apple trees, effect of pruning on (HOOKER), i, 1367.
decay of xylem of, from *Polystictus versicolor* (SMITH), i, 1226.
rôle of carbohydrates and nitrogen in the growth of (HARVEY), i, 1367.
Aquopentamminecobaltic dichromate. See under Cobalt.
Aquopentammineferrous sulphate. See under Iron.
Arabinose, constitution of (HIRST and ROBERTSON), i, 364.
formation of starch from, by plants (POLONOVSKI and MORVILLEZ), i, 1222.
halogenacetyl derivatives, rotation of (HUDSON and PHELPS), i, 8.
γ-Arabinose, derivatives of (BAKER and HAWORTH), i, 365.
Arabinosemonodiphenylmethanedimethyldihydrazone (v. BRAUN and BAYER), i, 1383.
Arabonic acid, ethyl ester (SIMON and HASENFRATZ), i, 511.
l-Arabonolactone, derivatives of (SIMON and HASENFRATZ), i, 511.
Arachidic acid, synthesis of (ADAM and DYER), i, 354.
Arachidonic acid as a metabolic product of fatty acids (WESSON), i, 1353.
Arachis oil, lignoceric acid from (HEIDUSCHKA and PYRIKI), i, 229.
Aragonite, structure of (WYCKOFF), ii, 484; (TOMKEIEV), ii, 1035.
thermal properties of (BÄCKSTRÖM), ii, 1162.
Araucaria bidwilli, constituents of seeds of (MORRISON), i, 619.
Arbutia pustulosia, extractives of (HOLTZ and THIELMANN), i, 720.
Arbutin hydrolysis of, by emulsin (JOSEPHSON), i, 1359.
Argemone oil (IYER, SUDBOROUGH, and AYYAR), i, 1128.
Arginase (EDLBACHER and BONEM), i, 863; (EDLBACHER and RÖTHLER), i, 1505.
bacterial (KOSSEL and CURTIUS), i, 1505.
distribution of, in fishes and other animals (HUNTER and DAUPHINEE), i, 104.
detection and determination of (HUNTER and DAUPHINEE), i, 104.
determination of (HUNTER and DAUPHINEE), ii, 247.
Arginine in *Lupinus luteus*, enzymic decomposition of (WALTER), i, 1358.
in the animal organism (STEWART), i, 730.
relationship of agmatine to (MÜLLER), i, 1496.
relation of, to creatine and purine metabolism (ROSE and COOK), i, 1003.
Argon, spectrum of (LOWE and ROSE), ii, 452.
ultra-violet spectrum of (LYMAN and SAUNDERS), ii, 911.
spectral frequencies of (HOLWECK), ii, 336.
critical potential of (HOLWECK), ii, 729.
ionisation of (BARTON), ii, 459.
mobility of ions of, in air (ERIKSON), ii, 1107.
positive ions in (BARTON), ii, 6.
isotherms of (HOLBORN and OTTO), ii, 851.
in gases from fermentation of sugars (PICTET, SCHERRER, and HELFER), i, 865.
in living cells (PICTET, SCHERRER, and HELFER), i, 1202.
Aromatic compounds, constitution of, and their chemical and physical properties (PASTAK), i, 531; ii, 759.
emission band spectra of (MARSH), ii, 470, 675.
ereoisomerism of (KUHN and JACOB), i, 1260, 1404.
substitution in the nucleus in (BARNETT and MATTHEWS; PRINS), i, 18; (BARNETT and COOK), i, 123; (BARNETT, COOK, and MATTHEWS), i, 648, 1140, 1398.

Aromatic compounds, directive influence of nitrogen and oxygen atoms in substitution in (HOLMES and INGOLD), i, 1142.
catalytic hydrogenation of, with nickel and hydrogen (FELDMANN), i, 1263.
nuclear hydrogenation of, with colloidal platinum (SKITA), i, 140.
action of aromatic alcohols on, in presence of aluminium chloride (HUSTON), i, 249.
reaction of bromonitromethane on, in presence of aluminium chloride (SHERRILL), i, 237.
mercuration of (COFFEY), i, 844.
polynuclear heterocyclic (ARMIT and ROBINSON), i, 1170.
in plants (RETI), i, 418.
Arsenic in Cornwall (RUSSELL and HARWOOD), ii, 429.
electro-deposition of (BAYERLE), ii, 675.
colloidal, preparation of (DEDE and WALTHER), ii, 197.
in blood, milk, and cerebrospinal fluid after injection of salvarsan and its derivatives (FORDYCE, ROSEN, and MYERS), i, 189.
Arsenic *tri*chloride, distillation of (RÖHRE), ii, 157.
hydride, solid (DRUCE), ii, 700.
*di*iodide, preparation of (KARANTASSIS), ii, 994.
*tri*oxide (*arsenious oxide*), action of, on alkali carbonates (VANZETTI), ii, 421.
reaction of chlorine with (CAMBI and VOLTOLIN), ii, 148.
action of Grignard reagents on (MATSUMIYA and NAKAL), i, 1339.
reduction of permanganic acid by (TRAVERS), ii, 585.
Arsenious acid, adsorption of, by hydrated aluminium oxide (YOE), ii, 107.
reduction of permanganates by (GELOSO), ii, 661.
Arsenites, catalytic oxidation of (REINDERS and VLÈS), ii, 303.
Ortho-arsenites (VANZETTI), ii, 421.
Arsenic acid, adsorption of, by oxides (KOZAKEVITSCH), ii, 855.
Arsenic selenides (MOSER and ATYNSKI), ii, 584.
Arsenic *tri*sulphide, equilibrium of thallous sulphide and (CANNERI and FERNANDES), ii, 887.
colloidal (BOUTARIC and VUILLAUME), ii, 112.
Arsenic *tri*sulphide sols, stability of, and velocity of their falling particles (DUMANSKI), ii, 290.
adsorption of anions in coagulation of (GHOSH and DHAR), ii, 386.
cataphoresis of, in organic solvents (BIKERMAN), ii, 522.
protective action of soaps on (PAPACONSTANTINOU), ii, 393.
coagulation of, by barium chloride (RABINOVITSCH), ii, 778.
action of silver sols on (FREUNDLICH and MOOR), ii, 198.
Arsenic organic compounds (AESCHLIMANN, LEES, MCCLELAND, and NICKLIN), i, 319; (MARGULIES), i, 447, 448; (HAMILTON and SLY), i, 600; (LEWIS and STIEGLER), i, 1470; (CASSELLA & Co.), i, 1470, 1471; (CHRISTIANSEN, NORTON, and SHOHAN), i, 1471; (MATSUMIYA and NAKAL; MATSUMIYA; ROBERTS and TURNER), i, 1339.
ter- and quinque-valent toxicity of (SCHUMACHER), i, 733.
quinquevalent asymmetric (AESCHLIMANN), i, 706.
inhibition of the toxicity of, in mammals (VOEGTLIN, DYER, and LEONARD), i, 861.
Arsenious oxide, alkaloid compounds of, with tartaric acid (DEBUCQUET), i, 1090.
Arsenic determination and separation:—
determination of, and its occurrence in urine and in fish (COX), ii, 157.
determination of, electrolytically (MOIR and JAMIESON), ii, 1094.
determination of, in organic compounds (NEWBERY), ii, 901.
determination of, in salvarsan (KIRCHER and v. RUPPERT), ii, 240.
determination of, in animal organs (PRIBYL), i, 1500.
determination of, in tissues (LAWSON and SCOTT), i, 996.
separation of antimony and (HAHN and WOLF), ii, 68.
Arsenic-antimony organic compounds (CHEMISCHE FABRIK VON HEYDEN), i, 85, 86.
Arsenic cathodes. See Cathodes.
Arsenobenzene, *o*-, *m*-, and *p*-*di*amino-, and their *N*:*N*′-dimethylenesulphonates (KASHIMA), i, 1195.
3:3′-*di*amino-4:4′-*di*hydroxy-, diglycyl derivative, and its hydrochloride (KARRER, DIECHMANN, and HAEBLER), i, 243.

Arsenobenzenes, detection of (PATTA), i, 1195.
Arseno-metallic compounds (BINZ, BAUSCH, and URBSCHAT), i, 1195.
Arsenostibinobenzene, 3:3′-*di*amino-4-hydroxy-,and3:4′-*di*amino-4-hydroxy-, 4′-acetyl derivative, and 4′-chloro-3:3′-*di*amino-4-hydroxy-, and its hydrochloride (CHEMISCHE FABRIK VON HEYDEN), i, 85.
Arsinic acids, preparation of (BURTON and GIBSON), i, 84.
aliphatic hydroxylated, preparation of (LES ÉTABLISSEMENTS POULENC FRÈRES and OECHSLIN), i, 122.
o-**4-Arsinobenzeneazo*di*bromofluorescein** (CHRISTIANSEN), i, 1193.
o-**4-Arsinobenzeneazofluorescein** (CHRISTIANSEN), i, 1193.
o-**4-Arsinobenzeneazophenol*tetra*chlorophthalein** (CHRISTIANSEN), i, 1193.
o-**4-Arsinobenzeneazophenolphthalein** (CHRISTIANSEN), i, 1192.
5-Arsinobenzenesulphamic acid, 2-hydroxy-, barium salt (CHRISTIANSEN, NORTON, and SHOHAN), i, 1471.
5-Arsinobenzenesulphonic acid, 3-amino-2-hydroxy- (CHRISTIANSEN, NORTON, and SHOHAN), i, 1471.
Arsonium compounds, effect of, on the nervous system (HUNT and RENSHAW), i, 861.
Arsphenamine. See Salvarsan.
Artemisic acid, formation of (BERTOLO), i, 546, 921.
Arthritis, lactic acid in (CAJORI, CROUTER, and PEMBERTON), i, 328.
Artichokes, inulin in (COLIN), i, 620.
Aryl sulphonates, reaction of magnesium organic halides with (GILMAN, BEABER, and MYERS), i, 1057.
***s*-Arylalkylcarbamides**, nitration of (KNIPHORST), i, 905.
Arylaminopropanes, hydroxy-, preparation of alkyl derivatives of (MERCK, WOLFES, and DÜTZMANN), i, 393.
Arylazides (BAMBERGER), i, 843.
Arylazo-β-naphthylamines, oxidation of, by hydrogen peroxide (CHARRIER and CRIPPA), i, 589.
Aryldithiazolylmethanes (BOGERT and CHERTCOFF), i, 80.
Arylhydroxylamines, chemistry of (BAMBERGER), i, 388.
Aryl 4-hydroxynaphthyl ketones, preparation of (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 558.
Arylidenecyanoacetic acids (BAKER and LAPWORTH), i, 30.
Arylmercuric hydroxides, reactions of (KOTEN and ADAMS), i, 236.
1-Arylpyrazolones, halogen-substituted (CHATTAWAY and STROUTS), i, 71.
Ascaris lumbricoides, metabolism of (SLATER), i, 1208.
Ascelpias syriaca (milkweed), constituents of the hairs of (SCHORGER), i, 872.
Asparagine, formation of, in plants (PRIANISCHNIKOV), i, 213.
preparation of (PIUTTI), i, 758.
rotatory power of solutions of (LIQUIER), ii, 743.
formation of rings from, and its formyl derivative (CHERBULIEZ and CHAMBERS), i, 1046.
enzymic deamination of (CLEMENTI and CANTAMESSA), i, 200.
Aspartic acid, deamination of (AHLGREN), i, 235.
Aspergillus niger (*Sterigmatocystis niger*), acid formation by (BERNHAUER), i, 205.
effect of the culture media on growth and formation of acids by (MOLLIARD), i, 480.
phosphorus metabolism of (SCHNÜCKE), i, 204.
polysaccharide produced by (SCHMIDT), i, 868.
Asperula odorata (woodruff), chemical composition of (HÉRISSEY), i, 1165.
glucosides of (HERBOTH), i, 760; (HÉRISSEY), i, 1369.
Asperuligenol (HÉRISSEY), i, 1165, 1369.
Asperuloside (HÉRISSEY), i, 1165, 1369.
Asthma, analysis of blood in (RAMIREZ, ST. GEORGE, and MOSES), i, 999.
Asymmetric compounds, calculation of rotation of (DE MALLEMANN), ii, 935.
Atmospheric air, refractive index of (PÉRARD), ii, 1137.
action of light on, saturated with halogen vapours (JONES), ii, 984.
radioactive content of (BONGARDS), ii, 621.
ionisation of (ERIKSON), ii, 6; (ANSLOW), ii, 459; (LEHMANN and OSGOOD), ii, 832.
potential differences between liquids and (FRUMKIN), ii, 544.
isotherms of (HOLBORN and OTTO), ii, 851.
specific heats of hydrogen and of (BRINKWORTH), ii, 373.
effect of curvature of surface on solubility of, in water (BAYLIS), ii, 980.
rare gases in (JEFFREYS), ii, 83.
iodine in (v. FELLENBERG), ii, 316.
origin of free oxygen in (TAMMANN), ii, 100.

Atmospheric air, altitude of ozone in (CABANNES and DUFAY), ii, 968.
absorption of radiation by ozone in (FABRY), ii, 627.
constant mixtures of carbon dioxide and (JOHNSTON and WALKER), ii, 851.
combustion of gases with (WHITE), ii, 48.
propagation of flame in mixtures of inflammable gases with (WHITE), ii, 408.
ignition of mixtures of paraffins and (WHEELER), ii, 408.
influence of organic vapours on the inflammability of mixtures of gases and (JORISSEN and MEUWISSEN), ii, 53, 307; (JORISSEN and VAN DER VALK), ii, 874; (JORISSEN and ONGKIEHONG), ii, 875.
ignition of mixtures of carbon monoxide and (CROWE and NEWEY), ii, 875.
apparatus for determination of carbon dioxide and oxygen in (PLANTEFOL), ii, 902.
Atoms, structure of (BEDREAG), ii, 363; (JOOS), ii, 736; (JORDAN), ii, 926; (CABRERA), ii, 1107.
and chemical affinity (WILSDON), ii, 481.
Bohr's theory of (TOLMAN), ii, 466; (MILLIKAN and BOWEN), ii, 467, 733; (FOOTE), ii, 624; (THOMSON), ii, 733.
Bohr's model of (EPSTEIN), ii, 1.
theory of emission from (PALACIOS), ii, 835.
vibrations radiated from (CHATURVEDI), ii, 926.
and the quantum theory (SOMMERFELD), ii, 835.
Whittaker's model of (ELDRIDGE), ii, 1112.
influence of arrangement of, on refractive index (BRAGG), ii, 92.
of the same electron structure, spectra of (HARTREE), ii, 2; (BOWEN and MILLIKAN), ii, 916.
polarisability of the core of, in relation to spectra (SCHRÖDINGER), ii. 722.
magnetic properties of (GERLACH), ii, 258; (SEMENOV), ii, 618; (WILSDON), ii, 641.
paramagnetism and electron configuration of (JACKSON), ii, 732.
space quantisation of, in a magnetic field (RUARK and BREIT), ii, 477.
absorption of radiation by the emitting (DE BROGLIE and THIBAUD), ii, 165.
Atoms, distribution of electrons in (STONER), ii, 85; (PAULI), ii, 339; (SMITH), ii, 1023.
transformation of, into radiation (STERN), ii, 1021.
equilibria between electrons, radiation and (DIRAC), ii, 6.
grouping of, and specific affinity (FEIGL), i, 170.
size of, in relation to optical rotation (BRAUNS), ii, 633.
radii of, from magnetic susceptibility (CABRERA), ii, 624.
law of force within (GREEN), ii, 466.
attraction and repulsion in (KORN), ii, 1112.
collisions between (FRANCK), ii, 836; (BOHR), ii, 1022.
disintegration of (RUTHERFORD), ii, 348; (PETTERSSON and KIRSCH), ii, 623.
by α-particles (KIRSCH), ii, 923.
calculation of transition probabilities in (SLATER), ii, 734.
mass variations in (HAM), ii, 734.
chemical properties of (KRAMERS), ii, 835.
Atomic constants in relation to additive properties (SWARTS), ii, 744.
number, relation between crystal structure and (SCOTT), ii, 369.
and optical separations (MENZIES), ii, 2.
and quantum numbers (HARTREE), ii, 467.
force fields (BRACKETT), ii, 2.
Atomic weight of aluminium (KŘEPELKA and NIKOLIĆ), ii, 620.
of antimony (WEATHERILL), ii, 23.
of bismuth (CLASSEN and SCHAPOSCHNIKOW), ii, 175.
of boron (BRISCOE and ROBINSON), ii, 346; (BRISCOE, ROBINSON, and STEPHENSON), ii, 619.
of bromine (MOLES), ii, 346; (ROBINSON and BRISCOE), ii, 620.
of carbon and silver (DEAN), ii, 255.
of chlorine (GLEDITSCH), ii, 174; (MOLES), ii, 346; (HARKINS and STONE), ii, 921, 1108; (MENZIES), ii, 1109.
of copper (RUER and BODE), ii, 620.
of gold obtained from mercury (HÖNIGSCHMID and ZINTL), ii, 924.
of hafnium (HÖNIGSCHMID and ZINTL), ii, 255, 347; (HEVESY), ii, 255.
of holmium (DRIGGS and HOPKINS), ii, 463.
of hydrogen (MOLES), ii, 346.
of lead isotopes (GLEDITSCH, DORENFELDT, and BERG), ii, 732.

Atomic weight of selenium (BRUYLANTS, LAFORTUNE, and VERBRUGGEN), ii, 174.
of silicon (HÖNIGSCHMID and STEINHEIL), ii, 174.
of silver (MOLES), ii, 346.
of zirconium (HÖNIGSCHMID, ZINTL, and GONZÁLEZ), ii, 174; (HEVESY), ii, 255.
Atomic weights, fundamental (MOLES), ii, 346, 1021.
Atriplex, absorption of water and chlorine ions by leaves of (WOOD), i, 1024.
Atrolactinic acid, synthesis of glycols from (ROGER), i, 659.
Atromentin, and its salts and derivatives (KÖGL and POSTOWSKY), i, 50, 1439.
Atropine, action of, on the intestines (JENDRASSIK and TANGL), i, 1502.
n- and *apo*-**Atropine** *N*-oxides, and their derivatives (POLONOVSKI and POLONOVSKI), i, 829.
Aurin, and its derivatives (GOMBERG and SNOW), i, 660.
Aurora, spectrum of (VEGARD, ONNES, and KEESOM), ii, 474; (VEGARD), ii, 630.
green line in spectrum of (MCLENNAN), ii, 249, 339; (MCLENNAN and SHRUM), ii, 723.
Auto-catalysis (QUARTAROLI), ii, 53.
Autohæmolysin, artificial production of (NANBA), i, 1344.
Autolysis (HERTZMAN and BRADLEY), i, 102; (RONA, MISLOWITZER, and SEIDENBERG), i, 335; (STEPPUHN and UTKIN-LJUBOVZOV), i, 864.
Autoxidation (MOUREU, DUFRAISSE, and BADOCHE), i, 117, 362, 363; (MOUREU and DUFRAISSE), i, 362; (TSCHIRCH), i, 356; (MOUREU, DUFRAISSE, and LOTTE), ii, 561; (STAUDINGER, DYCKERHOFF, KLEVER, and RUZICKA), i, 933.
and dehydrogenation (MANCHOT and GALL), i, 561.
of organic compounds (STAUDINGER), i, 897, 898.
Auxoureases (HOSOKAWA), i, 104; (KOCHMANN), i, 200.
combination of, with enzymes (ROSENFELD), i, 336.
Avitaminosis, biochemistry of (PALLADIN and KUDRJAVZEVA; PALLADIN and NORMARK; PALLADIN and SAVRON), i, 461; (PALLADIN and KRATINOVA), i, 1514.
effect of, on gastric digestion (GROEBBELS and SPERFELD), i, 1514.
metabolism in (SHINODA), i, 610.
respiration in (ROCHE), i, 462.
Avogadro's constant, determination of (ALEXANDER), ii, 364.
Azides, action of toluquinone with (CHATTAWAY and PARKES), i, 985.
Azido-carbon *di*sulphide (WILCOXON, MCKINNEY, and BROWNE), i, 1051.
Azido compounds, action of sodium arsenite on (GUTMANN), i, 84.
3-Azidophenanthraphenazine (BRASS and NICKEL), i, 447.
3-Azidophenanthraquinone (BRASS and NICKEL), i, 447.
Azines, preparation of (AKTIEN-GESELLSCHAFT FÜR ANILINFABRIKATION), i, 304.
hydrogenation of, with aluminium amalgam (MAZOUREVITCH), i, 1240.
Azines, amino-, from naphthalene derivatives (KEHRMANN and SAFAR), i, 1331.
Azine colouring matters from oxalyldibenzyl ketone (CHAKRAVARTI), i, 1330.
Azoanilinesulphonic acids, formation of (LEWCOCK), i, 597.
Azobenzene, binary systems of, with phenols (KREMANN, ZECHNER, and WEBER), ii, 650.
reduction of, by organo-magnesium halides (GILMAN and PICKENS), i, 1336.
Azobenzene, *p*-hydroxy. See Benzeneazophenol.
*pp'-di*hydroxy-, salts and green modification of (VORLÄNDER and KUNZE), i, 1106.
p-oximinoamino-, acetyl derivative (KARRER, DIECHMANN, and HAEBLER), i, 243.
Azobenzenes, nitro- (CHARRIER and BERETTA), i, 316.
Azobenzene-4:4'-dicarboxylic acid, 3:3'-*di*bromo-, and its silver salt and glycol ester (FREJKA and VITHA), i, 663.
and its ethylene ester (FREJKA and VITHA), i, 1416.
o-**Azobenzylaniline** (ELBS and GAUMER), i, 167.
o-**Azobenzyl**-*o*- and -*p*-**toluidines** (ELBS and GAUMER), i, 168.
Azo-colouring matters (WHEELER and MORSE), i, 22; (ROWE and TARBETT), i, 317; (FARBENFABRIKEN VORM. F. BAYER & CO.; FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 598; (CHEMISCHE FABRIK GRIESHEIM-ELEKTRON), i, 598, 989.
constitution and fastness of (JOHN), i, 1336.

Azo-colouring matters, stereoisomeric (MORGAN and SKINNER), i, 1191.
influence of methyl and sulphonic acid groups on the colour of (WANNER), i, 841.
from ipecacuanha alkaloids (PALKIN and WALES), i, 1087.
mercury derivatives of (PROSKOURIAKOFF and RAIZISS), i, 1107.
action of phenylhydrazine and sodium hydrogen sulphite on (BUCHERER and STICHEL), i, 1338.
Azo-compounds, halochromism of (BRAND, STALLMANN, GROEBE, and STEIN), i, 397.
cuprohalide compounds of (DIELS and KOLL), i, 988.
addition of, to ethylenes (INGOLD and WEAVER), i, 580.
Azodicarboxylic acid, esters, reactions of, with aromatic hydrocarbons (STOLLÉ and ADAM), i, 1469.
Azodiethylacetonitrile (DOX), i, 797.
Azo-5:5′-di-2-phenyl-1:2:3:4-tetrazole, and the corresponding hydrazo compound (STOLLÉ and ORTH), i, 1464.
Azoimide (*hydrazoic acid; nitrogen hydride*), oxidation of (RASCHIG), ii, 223.
reduction of (RASCHIG), ii, 223.
reactions of, with azido-carbon disulphide and with thiocyanogen (WILCOXON, MCKINNEY, and BROWNE), i, 1051.
additive compounds of (OLIVERI-MANDALÀ), ii, 815.
Azomethane cuprochloride (DIELS and KOLL), i, 988.
Azomethylethylacetonitrile (DOX), i, 796.
2:3-*endo*Azo-7-methyl-4:5:6:7-tetrahydroindazole (v. AUWERS, BAHR, and FRESE), i, 313.
3:3′-Azo-7-methyltetrahydroindazole (v. AUWERS, BAHR, and FRESE), i, 313.
Azo*iso*propane cuprochloride (DIELS and KOLL), i, 988.
Azotobacter, fixation of nitrogen by (LIPMAN and TEAKLE), i, 491.
Azotobacter agile, fixation of nitrogen by (KOSTYTSCHEV and RYSKALTCHOUK), i, 1014.
Azotobacter chroococcum, fixation of nitrogen by mixed cultures of (LIPMAN and TEAKLE), i, 748.
***p*-Azoxyanisole**, diamagnetism of (FOEX and ROYER), ii, 755.
Azoxybenzenebisazodimethylaniline (ELBS), i, 164.
***o*-Azoxybenzylaniline** (ELBS and GAUMER), i, 167.
***o*-Azoxybenzyl-*o*- and -*p*-toluidines** (ELBS and GAUMER), i, 168.
Azoxyphenols, action of nitrous acid on (BIGIAVI and ANGELI), i, 316.
Azoxytetraphenylmethane (GOLDSCHMIDT and CHRISTMANN), i, 649.
Azoxy-2:4:5-triphenyloxazole (TRÖGER and PHILIPPSON), i, 986.

B.

Bacilli, acetone-producing (FOWLER and SUBRAMANYAN), i, 1216.
producing red pigment in acetone-butyl alcohol fermentation (FRED, PETERSON, and CARROLL), i, 1013.
tubercle, nutrition of (KONDO), i, 206.
metabolism of (KONDO), i, 477.
amino-acids of, and their metabolism (CAMPBELL), i, 1511.
distribution of nitrogen in the protein fraction of (JOHNSON and COGHILL), i, 748.
detection of tryptophan in (MME. E. and E. WOLLMAN), i, 205.
Bacillus abortus, effect of, on the proteins of blood (HOWE and SANDERSON), i, 477.
Bacillus acetoethylicum, acetone formation from sugars by (SPEAKMAN), i, 1013.
Bacillus erithrycke, effect of carbohydrates on hydrogen sulphide production by (HEAP and CADNESS), i, 480.
Bacillus botulinus, metabolism of (WAGNER, MEYER, and DOZIER), i, 1510.
Bacillus coli communis, effect of hydrogen-ion concentration on growth of (BLOK), i, 615.
formation of hydrogen sulphide by (MULSOW and PAINE), i, 1510.
action of bismuth on (LEMAY and JALOUSTRE), i, 206.
decomposition of cholic acid by (KAZIRO), i, 1363.
decomposition of dextrose by (AUBEL and SALABARTAN), i, 747.
Bacillus coli aerogenes, Voges-Proskauer reaction for (LINTON), i, 867.
Bacillus diphtheriæ, energy for culture of (ABT), i, 1014.
hydrogen-ion concentration in cultures of (ABT and LOISEAU), i, 479.
Bacillus lactis aerogenes, destruction of uric acid by (ECKER and MORRIS), i, 1118.
Bacillus macerans, fermentation of carbohydrates by (MOSKOVITS), i, 1511.

Bacillus pyocyaneus, blue pigment of (WREDE and STRACK), i, 174, 844.
assimilation and transformation of aromatic compounds by (SUPNIEWSKI), i, 340.
decomposition of carnosine by (HEFTER), i, 1362.
Bacillus tuberculosis, action of chemicals on growth of (KARWACKI), i, 1015.
Bacillus welchii, formation of acraldehyde from glycerol by (HUMPHREYS), i, 340.
Bacteria, conductivity changes for (PARSONS and STURGES), i, 1509.
changes in hydrogen-ion concentration of cultures of (SIERAKOVSKI), i, 204.
anaërobic growth of (QUASTEL and STEPHENSON), i, 1217.
acid agglutination of cells of (WEBSTER), i, 749.
action of water and salt solutions on (PANISSET, VERGE, and CARNEIRO), i, 339.
autolysis of (LEMOIGNE), i, 478.
chemical mechanism of reactions of (E. W. and A. E. STEARN), i, 339.
action of, on bile acids (LICHT), i, 478.
carbon dioxide in cultures of (SIERAKOVSKI and ZAJDEL), i, 338.
effect of dyes on growth of (BURNET), i, 1117.
effect of hydrogen peroxide on (BURNET), i, 1117; (PETROVANU), i, 1362.
production of hydrogen peroxide by (MCLEOD and GORDON), i, 1362.
utilisation of quinic acid by (BUTKEVITSCH), i, 1511.
decomposition of starch by (SIEDICH), , 1510.
decomposition of uric acid by (MORRIS and ECKER), i, 478.
vitamins promoting growth of (DAVIDSOHN), i, 108.
effect of, on buffering and amino-nitrogen increase in nutrient media (BLEYER), i, 746.
fermentation by (DE GRAAFF and LE FÈVRE), i, 478.
isolation of cultures of, and their oxydase activity (FELTON), i, 1509.
symbiosis of seeds and (FOWLER and CHRISTIE), i, 344.
chemical differentiation of (E. W. and A. E. STEARN), i, 1013.
acid-fast, metabolism of (KONDO), i, 206.
producing ethyl butyrate (BIDAULT and BLAIGNAN), i, 1216.
Bacteria, lactic acid, from cereals (FRED, PETERSON, and STILES), i, 1014.
respiration of (KOSTYTSCHEV and AFANASIEVA), i, 1118.
formation of acetylmethylcarbinol and 2:3-butyleneglycol by (KLUYVER and DONKER), i, 1215.
living, hydrogen-ion concentration of (BÁLINT), i, 338.
mannitol-producing, fermentation products of (STILES, PETERSON, and FRED), i, 1216, 1510.
nitrogen-fixing, effect of radioactive substances on (KAYSER and DELAVAL), i, 1116.
action of (GAARDER and HAGEM), i, 480.
activity of, in soils (TRUFFAUT and BEZSSONOFF), i, 1227.
resting, dehydrogenation by (QUASTEL and WHETHAM), i, 1015, 1217; (QUASTEL and WOOLDRIDGE), i, 1217.
reactions of (QUASTEL, STEPHENSON, and WHETHAM), i, 747.
soil, conversion of thiosulphates into sulphates by (GUITTONNEAU), i, 1218.
in moor soils (ARND), i, 490.
sulphur (BAAS-BECKING), i, 1217.
nitroprusside reaction of (CALLOW and ROBINSON), i, 478.
detection of the reducing power of (FELTON), i, 1509.
determination of indole and skatole in (FELLERS and CLOUGH), i, 1015.
Bactericidal action and chemical constitution (ISHIWARA), i, 750.
Baillonia spicata, glucoside from (HÉRISSEY), i, 147.
Balance, ultra. See Ultrabalance.
Balbiano's acid, structure of (ROTHSTEIN, STEVENSON, and THORPE), i, 884.
Balmer law as an equation of motion (PAGE), ii, 468.
Bamboo, growth of shoots of (KOMATSU and TANAKA), i, 1369.
Barbituric acid derivatives (VOORHEES and SKINNER), i, 887.
preparation of (RIEDEL), i, 1453.
narcotic effect of (REDONNET), i, 862.
alkyl derivatives, distinction between (ZAMPARO), ii, 907.
distribution of, in the organism (FREDET and FABRE), i, 467.
*iso*Barbituric acid, oxidation of (DAVIDSON and BAUDISCH), i, 1189.
Barbituric acids, alkylated, localisation and excretion of (FABRE and FREDET), i, 1504.

Barite. See Barytes.
Barium, structure of (COLLINS), ii, 623.
pure, preparation of (DANNER), ii, 62.
pole-effect in spectrum of (MOHR), ii, 612.
equilibrium between lithium and, and their fused chlorides (JELLINEK and CZERWINSKI), ii, 124.
Barium alloys with mercury, electrodes of. See Electrodes.
Barium aluminate, hydrated, effect of heating on (MALQUORI), ii, 813.
uranyl carbonate (HEDVALL), ii, 991.
chloride, conductivity of solutions of, and its mixtures with cobalt chloride (MAZZETTI), ii, 210.
heats of solution of, in aqueous alcohol (DE KOLOSOVSKI), ii, 540.
energy of dilution and activity of ions in aqueous solutions of (PEARCE and GELBACH), ii, 867.
nitrate, periodic crystallisation of (HEDGES and MYERS), ii, 1168.
oxide, action of, on silicates at high temperatures (TAMMANN and GREVEMEYER), ii, 580.
*per*oxide, new (CARLTON), ii, 1183.
selenide, crystal structure of (SLATTERY), ii, 369.
sulphate, solubility and size of grain of crystals of (BALAREFF), ii, 853.
apparatus for precipitation of (MURRAY), ii, 236.
co-precipitation of radium sulphate and (DOERNER and HOSKINS), ii, 381.
Barium detection:—
detection of (KOLTHOFF), ii, 1095.
detection of, in presence of strontium (FEIGL), ii, 435.
Barley, nutrients for culture of (JONES and PEMBER), i, 1080.
culture of, with nitrogen, phosphorus and potassium (PEMBER and MCLEAN), i, 1121.
effect of ethyl and methyl alcohols on growth of (PURI), i, 217.
Barytes, reflection of Röntgen rays by (ALLISON), ii, 18.
crystal structure of (PAULING and EMMETT; WYCKOFF and MERWIN), ii, 485.
Base, $C_6H_{14}O_3N_2$ and its derivatives, from hydrolysis of proteins (SCHRYVER, BUSTON, and MUKHERJEE), i, 794.
$C_7H_{14}O_2N_2$ from *Geodia gigas* (ACKERMANN, HOLTZ, and REINWEIN), i, 720.
$C_{10}H_{15}N$, and its salts, from 5-ethyl-2-vinylpyridine methiodide (KOENIGS and HOFFMANN), i, 299.
Base, $C_{11}H_{15}O_3N_5S$, from yeast (SUZUKI, ODAKE, and MORI), i, 338.
$C_{13}H_{30}O_4N_2$, from amniotic fluid (REINWEIN and HEINLEIN), i, 721.
$C_{14}H_{15}ON$, from *m*-phenoxymethylbenzylamine (v. BRAUN and REICH), i, 1406.
$C_{14}H_{25}ON$, and its methiodide, from *o*-phenoxymethylbenzylamine (v. BRAUN and REICH), i, 1406.
$C_{14}H_{33}ON$, from *p*-phenoxymethylbenzylamine and fuming hydrochloric acid (v. BRAUN and REICH), i, 1405.
$C_{18}H_{17}N$ and its salts, from distillation of chelerythrine and sanguinarine (GADAMER and STICHEL), i, 287.
$C_{22}H_{17}N$, and its hydrochloride, from $C_{28}H_{25}N_3$ and hydrochloric acid (LEUCHS and WINZER), i, 1282.
Bases, action of haemoglobin with (ADAIR), i, 850.
inactive, and inactive acids, mutual resolution of (INGERSOLL), i, 814.
metallo-organic (HEIN and MEININGER), ii, 842.
organic, electrolysis of (PODROUŽEK), ii, 677.
adsorption and basic exchange of salts of (UNGERER), ii, 658.
hydroferri- and hydroferro-cyanides of (CUMMING), i, 122.
preparation of iodomercurates of, from their iodoantimonates (CAILLE and VIEL), i, 68.
weak, indicator for determination of (CHABOT), ii, 899.
weak organic, detection of (ROBINSON), ii, 606.
determination of, volumetrically (HARRIS), ii, 155.
Basedow's disease, fat and cholesterol in blood in (BING and HECKSCHER), i, 999.
Bassia longifolia, variations in constituents of (FOWLER and DINANATH), i, 346.
Bauxite, effect of heating on (HOULDSWORTH and COBB), ii, 671.
Beans, effect of light on etiolated leaves of (PALLADIN), i, 1517.
calabar. See Calabar bean.
French and soya, oxidising enzymes in (NITZESCU and COSMA), i, 471.
jack. See *Canavalia ensiformis.*
kidney, hexamethylenetetramine as a nutrient for (E. and G. NICOLAS), i, 623.
soja. See Soja beans.
Bearing metal, lead-base, microstructure of (ELLIS), ii, 282.

Beckmann transformation (v. AUWERS and JORDAN), i, 264; (v. AUWERS, LECHNER, and BUNDESMANN), i, 265; (LACHMANN), i, 678; (KOMATSU and HIRAIDZUMI), i, 934; (MEISENHEIMER, LANGE, and LAMPARTER), i, 1073; (YAMAGUCHI), i, 1278.
Becquerel effect on copper oxide electrodes (VAN DIJCK), ii, 1083.
Becquerelite, structure and analysis of (SCHOEP), ii, 235.
Beech wood, pectic substance from (O'DWYER), i, 1225.
Beer, bitter principles in (KLEIN), ii, 248.
effect of fermentation of wort of, on water-soluble vitamins (SOUTHGATE), i, 209.
Beet, sugar, phosphatides from the root of (GRAFE and HORVAT), i, 1522.
Behenic acid, bromoiodo-, and iodohydroxy- (HOLDE and GORGAS), i, 883.
Benzaldehyde, preparation of (MANN and PAULSON), ii, 556.
catalytic reduction of (CAROTHERS and ADAMS), ii, 693.
compound of aminomalononitrile and (GRISCHKEVITSCH-TROCHIMOVSKI and SEMENCOV), i, 1069.
and chloro-, chlorophenylhydrazones of (HUMPHRIES, HUMBLE, and EVANS), i, 989.
phenylhydrazone, action of bromine on (CHATTAWAY and WALKER), i, 929.
p-toluenesulphonylhydrazone (FREUDENBERG and BLÜMMEL), i, 52.
determination of chlorine in (BUKSCHNEWSKI; FAUST and SPÄNGLER), ii, 1000.
p-amino-, benzoyl derivative (PFEIFFER), i, 410.
and its derivatives (PFEIFFER, KALCKBRENNER, and BEHR), i, 549.
ω- and *p*-bromo-, *ω*-chloro- and *ω*-cyano-, 2:4-dibromophenylhydrazones (CHATTAWAY and WALKER), i, 929.
bromonitro-, chloronitro-, and nitro-, bromo- and chloro-phenylhydrazones of, and their acetyl derivatives (CHATTAWAY and WALKER), i, 1194.
m-hydroxy-, bromo and nitro derivatives, and their derivatives (HODGSON and BEARD), i, 674.
iodo derivatives, phenylhydrazones of (FICHTER and LOTTER), i, 1055.
o- and *m*-nitro-, condensation of 8-methoxy-2-methylquinoline with (TRÖGER and DANEHL), i, 974.
Benzaldehyde, *m*- and *p*-nitro-, bromo- and chloro-phenylhydrazidines (CHATTAWAY and WALKER), i, 1194.
2:6-*di*nitro-, hydrazones of (v. AUWERS and FRESE), i, 1102.
6-nitro-3-hydroxy-, derivatives of (MASON and JENKINSON), i, 931.
Benzaldehyde-*p*-arsinic acid, hydrazones and semicarbazone of (MARGULIES), i, 448.
Benzaldehyde-2:4-*di*bromophenylhydrazidine (CHATTAWAY and WALKER), i, 930.
Benzaldehyde-2-chloro-5-pyridylhydrazone (PIERONI and HAUPT), i, 1316.
Benzaldehydediphenylene-4:4'-dihydrazone, and *o*-, *m*-, and *p*-nitro- (CHATTAWAY, IRELAND, and WALKER), i, 1195.
Benzaldehydephenylcitronellylhydrazone (RUPE and RINDERKNECHT), i, 658.
Benzaldimine (GRIGNARD and ESCOURROU), i, 931.
Benzaldoxime, and *p*-hydroxy-, *m*- and *p*-nitro-, aryl ethers of (BAMBERGER), i, 142.
Benzaldoxime, *p*-nitro-, benzoyl derivative (NEBER, HARTUNG, and RUOPP), i, 1072.
Benzaldoximes, catalysis of, with reduced copper (YAMAGUCHI), i, 1278.
Benzaldoximes, 2-chloro-5-nitro- (BRADY and BISHOP), i, 930.
Benzamide, solubility of, in mixed solvents (PLEUGER), ii, 283.
Benzamide, 4-chloro-3:5-*di*nitro-, and 3:5-*di*nitro-4-amino- (LINDEMANN and WESSEL), i, 1099.
Benzanilide, reactions of antimony halides with (VANSTONE), i, 662.
p-disulphoxide (BERE and SMILES), i, 22.
1:2-Benzanthracene, 9-(or 10)-nitro- (BARNETT and MATTHEWS), i, 821.
1:2-Benzanthraquinone, reduction of (BARNETT and MATTHEWS), i, 820.
1:2-Benzanthrones, and their benzoates (BARNETT and MATTHEWS), i, 821.
Benzazide, 4-chloro-3:5-*di*nitro- (LINDEMANN and WESSEL), i, 1099.
Benzazimide, acetyl and benzoyl derivatives (HELLER, BUCHWALDT, FUCHS, KLEINICKE, and KLOSS), i, 1325.
Benzazimide, 3-amino-, and its derivatives (HELLER, GÖRING, KLOSS, and KÖHLER), i, 1322.
Benzazimidecarboxylic acid, ethyl ester (HELLER, BUCHWALDT, FUCHS, KLEINICKE, and KLOSS), i, 1325.

Benz-*o*-chloromethylbenzylamide (v. BRAUN and REICH), i, 1407.
6:7-Benzcoumarandiol-2-anil, 5-bromo- (FRIES and PUSCH), i, 570.
4:5-Benzcoumaran-3-one, bromo derivatives and 2-*aci*nitro-, sodium salt (FRIES and PUSCH), i, 569.
6:7-Benzcoumaran-3-one, 2:2:5-*tri*bromo- (FRIES and PUSCH), i, 570.
Benzcoumaran-3-one-2-anils (FRIES and PUSCH), i, 569.
4:5-Benzcoumarophenazine (FRIES and PUSCH), i, 569.
Benz-*m*- and -*p*-cyanomethylbenzylamides (v. BRAUN and REICH), i, 1406.
Benz-β-*o*-cyanomethylphenylethylamide (v. BRAUN and REICH), i, 1407.
***meso*-Benzdianthrone**, 4:5:8:4′:5′:8′-*hexa*-chloro- (ECKERT), i, 414.
Benzeins, preparation of (SEN and SARKAR), i, 812.
Benzene, structure of (VAN LAAR), i, 799, 894; (SCHOORL; PRINS), i, 894; (RAMANATHAN), i, 1255.
molecular structure of (BECKENKAMP), ii, 90.
formula of (BECKENKAMP), ii, 358.
triangular formula for (RICHARD), i, 1054.
nucleus, structure of (DOMINIKIEWICZ), i, 15.
and substitution (GIUA and PETRONIO), i, 1396.
substitution in (PRINS), i, 879; (FRANCIS, HILL, and JOHNSTON), i, 1141; (VORLÄNDER), i, 1255; (FRANCIS), i, 1261, 1399; (SONN and PATSCHKE), i, 1279; (FRANCIS and HILL), ii, 163.
model of (SCHROER), i, 879.
synthesis of, from acetylene (KOVACHE and TRICOT), i, 799.
spectra of (MARSH), ii, 625.
absorption spectrum of (DREISCH), ii, 178.
absorption spectrum of aqueous solutions of (VLÈS and GEX), ii, 1115.
infra-red absorption spectra of (DREISCH), ii, 627.
Tesla-luminescence spectrum of (MCVICKER, MARSH, and STEWART), ii, 86.
fluorescence of the vapour of (PRINGSHEIM and REIMANN), ii, 181.
latent heat of fusion of (STRATTON and PARTINGTON), ii, 25; (MAASS and WALDBAUER), ii, 492.
boiling-points of mixtures of ethyl alcohol, water, and (BARRATT), ii, 766.
Benzene, interfacial tension between potassium and sodium amalgams and (BHATNAGAR, PRASAD, and MUKERJI), ii, 194.
surface tension of (ALI), ii, 763.
and its mixtures with *cyclo*hexanols (WEISSENBERGER and SCHUSTER), ii, 648.
cryoscopy with (JONES and BURY), ii, 1040.
catalytic hydrogenation of, in presence of copper (PEASE and PURDUM), i, 798.
effect of thiophen on catalytic nickel in reduction of (KUBOTA and YOSHIKAWA), ii, 805.
action of benzoyl peroxide on (GELISSEN and HERMANS), i, 545.
action of iodine on (COSTEANU), i, 238.
behaviour of, in the body (THIERFELDER and KLENK), i, 193.
as indicator in iodometry (KANÔ), ii, 1010.
derivatives, ultra-violet absorption spectra of (KLINGSTEDT), ii, 929.
melting points of (PASTAK), ii, 759.
substitution in (SKRAUP and POLLER), i, 143.
ring closure in the meta-position in (v. BRAUN and ENGEL), i, 382.
determination of *m*-isomerides in (FRANCIS and HILL), ii, 163.
vicinal trisubstituted, substitution in (RUBENSTEIN), i, 1428.
Benzene, bromo-, compound of aluminium chloride, nitrogen peroxide, and (SCHAARSCHMIDT, BALZERKIEWICZ, and GANTE), i, 532.
*p-di*chloro-, freezing point of (COOPER), i, 800.
1-chloro-2-bromo-4:6-*di*nitro-, and 1:3-*di*chloro-*di*nitro- (SANÉ and JOSHI), i, 134.
chloronitro derivatives, physical properties of (DESVERGNES), ii, 490.
reactions of, with sodium sulphides (HODGSON and WILSON), i, 532.
m-chloronitro-, nitration of (HODGSON), i, 1397.
chlorothiol- (LECHER, HOLSCHNEIDER, KÖBERLE, SPEER, and STÖCKLIN), i, 390.
and its homologues, fluoro derivatives, rotation of (RIZZI), ii, 357.
hydroxy derivatives, surface tensions of aqueous solutions of (HARKINS and GRAFTON), ii, 658.
iodo-, electrolytic oxidation of (FICHTER and LOTTER), i, 1055.

Benzene, *di*iodo derivatives, compounds of magnesium with (THOMAS), i, 1053.
p-iodoxynitro-, action of alkali hydroxides (VORLÄNDER and BÜCHNER), i, 1055.
nitro-, electrolysis of, with the mercury dropping cathode (SHIKATA), ii, 304.
cryoscopy with (BROWN and BURY), ii, 32; (SIDGWICK and EWBANK), ii, 38; (BROWN), ii, 296.
colloidal solutions of dehydrating agents in (BROWN and BURY), ii, 1055.
action of, on lead in acetic acid solution (PRINS), ii, 1169.
m-*di*nitro-, melting point of (PUSHIN), ii, 277.
*tri*nitro-, dissociation constants of compounds of amines with (LEY, GRAU, and EMMERICH), ii, 1159.
nitroso-, polarisation of (ROBINSON), i, 801.
action of, on *o*-nitroaniline (CHARRIER and BERETTA), i, 21.
Benzenes, chloronitro-, mutual solubility of (KOHMAN), ii, 1052.
o- and *p*-chloronitro-, separation of (MOLINARI), i, 380.
*tetra*chloronitro-, and their reactions with sodium methoxide (BERCKMANS and HOLLEMAN), i, 1136.
*di*nitro-, mutual solubility of (ANDREWS), ii, 1052.
Benzeneazo-*p*-acetamidophenol, *o*-nitro- (ELBS), i, 164.
Benzeneazo-4-amino-β-naphthol, 1-amino- (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 989.
Benzeneazo-2-amino-4-phenylthiazole, *p*-nitro- (BOGERT and CHERTCOFF), i, 315.
Benzeneazoaniline, *o*-nitro- (ELBS), i, 164.
Benzeneazobenzylformaldoxime, and its derivatives (WALKER), i, 1193.
Benzeneazodimethylaniline, *o*-amino-, and *o*-nitro-, hydrochloride (ELBS), i, 164.
2-Benzeneazo-4:5-dimethylglyoxaline, 2-*p*-bromo-, and its hydrochloride (BURTLES and PYMAN), i, 1326.
Benzeneazodiphenylamine, *o*-nitro-, and its derivatives (ELBS), i, 164.
5-Benzeneazo-6-hydroxy-2-methylnaphthalene, and its 4′-sulphonic acid and 4′-nitro- (DZIEWOŃSKI, SCHOENÓWNA, and WALDMANN), i, 1057.
1-Benzeneazo-2:4-*di*hydroxynaphthalene, *p*-amino-, and its 8-sulphonic acid (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i,
3-Benzeneazo-2:6-lutidine, 3-*p*-hydroxy-, and its derivatives (GULLAND and ROBINSON), i, 1186.
Benzeneazomethylglyoxalines, *p*-bromo- (BURTLES and PYMAN), i, 1326.
4-Benzeneazo-1-naphthol, 4-*o*-nitro- (ELBS), i, 165.
Benzeneazo-α-naphthylamine, *o*-nitro- (ELBS), i, 165.
γ-Benzeneaze-Δαβ-pentenoic acid (MACBETH and TRAILL), i, 782.
Benzeneazophenol, oxidation of (BIGIAVI and KINDT), i, 597.
Benzeneazophenylpyrroles (PLANCHER and GHIGI), i, 597.
β-Benzeneazopropane (GOODWIN and BAILEY), i, 843.
Benzeneazoresorcinol, *o*-nitro- (ELBS), i, 164.
Benzenebisazoresorcinol, *o*-nitro- (ELBS), i, 164.
Benzene-*p*-disulphonic acid, electrochemical oxidation of (FICHTER and STOCKER), i, 239.
Benzenepersulphonic acid (FICHTER and STOCKER), i, 240.
Benzenesulphendimethylamide. See Dimethylaminothiolbenzene.
Benzenesulphenic acid, derivatives of (LECHER, HOLSCHNEIDER, KÖBERLE, SPEER, and STÖCKLIN), i, 390.
Benzenesulphinic acid, hydroxylamine salt (WHALEN and JONES), i, 802.
Benzenesulphobulbocapnine methyl ether (OSADA), i, 283.
Benzenesulphocorydine, and its methyl ether (OSADA), i, 284.
3-Benzenesulphonamido-*p*-cresol, 5-chloro-, and its derivatives (RAIFORD and LANKELMA), i, 810.
Benzenesulphonic acid, electrochemical oxidation of (FICHTER and STOCKER), i, 239.
metallic salts, and their solubilities (EPHRAIM and PFISTER), i, 896.
hydroxylamine salt (OESPER and BALLARD), i, 1233.
arylamine salts (KEYWORTH), i, 124.
Benzenesulphonic acid, *p*-amino-. See Aniline-*p*-sulphonic acid.
4-bromo-3:5-*di*nitro-, and 4-chloro-3:5-*di*nitro- (LINDEMANN and WESSEL), i, 1098.
p-hydroxy-, solubility of, in water (YAJNIK, JAIN, and NATH), ii, 1147.
Benzenesulphonyl iodide, 2:5-*di*chloro- (GIBSON, MILLER, and SMILES), i, 1137.
***p*-Benzene-*p*-sulphonylazo-2-amino-4-phenylthiazole** (BOGERT and CHERTCOFF), i, 315.

Benzenethiolsulphonic acid, bromo, chloro, and nitro derivatives, substituted phenyl esters of (MILLER and SMILES), i, 392.
2:5-*di*chloro-, and 3-nitro-, 4-tolyl esters (GIBSON, MILLER, and SMILES), i, 1137.
Benzhydrazide, *o*-amino-, acetyl and benzoyl derivatives (HELLER, GÖRING, KLOSS, and KÖHLER), i, 1322.
Benzhydrazideacetophenone, *o*-amino-, acetyl derivatives (HELLER, GÖRING, KLOSS, and KÖHLER), i, 1323.
Benzhydrol (*diphenylcarbinol*), binary systems of, with amines and phenols (KREMANN and DRAZIL), ii, 649.
Benzhydryl-lactic acid, and its barium salt (SOMMELET), i, 247.
***o*-Benzhydrylphenol** (CLAISEN), i, 1410.
Benzhydryltrimethylammonium bromide (SOMMELET), i, 247.
Benzidine (4:4′-*diaminodiphenyl*), action of acid anhydrides on (SHIMOMURA), i, 981.
action of carbon disulphide on (ROSSI and CECCHETTI), i, 701.
compound of pyridinium methiodide and (EMMERT, ROH, and KOBERNE), i, 588.
Benzil (*dibenzoyl*), conversion of, into benzilic acid (SCHEUING), i, 44.
semicarbazones of (HOPPER), i, 895.
Benzil, 2:4-*di*- and 2:4:6-*tri*-hydroxy-, and their acetyl derivatives (MARSH and STEPHEN), i, 1158.
Benzilam (TRÖGER and PHILIPPSON), i, 986.
Benzilam-azo-β-naphthol (TRÖGER and PHILIPPSON), i, 986.
β-Benzildioxime, electrolytic reduction of (ISHIBASHI), i, 1431.
Benzilic acid (*diphenylglycollic acid*; *hydroxydiphenylacetic acid*), formation of, from benzil (SCHEUING), i, 44.
action of, on thiophenol (BISTRZYCKI and RISI), i, 1426.
Benzilic acid transformation (SCHÖNBERG), i, 254.
Benzilide (STAUDINGER, DYCKERHOFF, KLEVER, and RUZICKA), i, 934.
Benziminazole-2-naphthyl-8′-carboxylic acid (CHAKRAVARTI), i, 162.
Benziminazole-2-trimethyl*cyclo*pentane-carboxylic acids (CHAKRAVARTI and GUPTA), i, 980.
5:6-Benzobenzthiopyrone, 3-bromo- (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1306.
Benzotrichloride, 2:4:6-*tri*nitro- (GANGULY), i, 647.
4:5-Benzocoumarandione-3-anil (SAFTIEN), i, 1318.
Benzoic acid, ultra-violet absorption by phenol and (KEPIANKA and MARCHLEWSKI), ii, 179.
heat of combustion of (JAEGER and STEINWEHR), ii, 127.
solubility of, in benzene and in toluene (CHIPMAN), ii, 30.
partition coefficient of, between carbon tetrachloride and sodium hydroxide (KLEIN), ii, 802.
electrolytic reduction of, at the boiling point (DECANS and DUFOUR), i, 1272.
and its salts, elimination of, from the body (BORDAS, FRANÇOIS-DAINVILLE, and ROUSSEL), i, 1206.
Benzoic acid, salts, diffusion potentials and ionic mobilities of (PRIDEAUX and CROOKS), ii, 42.
and *p*-chloro-, *p*-hydroxy-, and *p*-nitro-, metallic salts of (EPHRAIM and PFISTER), i, 1148.
lead salt, solubilities of (AUERBACH and WEBER), i, 1130.
sodium salt, effect of, on blood and urine (SWANSON), i, 465.
theophylline salt (KNOLL & Co.), i, 828.
Benzoic acid, *o*-cyanobenzyl ester (BARKENBUS and HOLTZCLAW), i, 1148.
and *p*-amino-, β-hydroxyethyl esters, and their derivatives (CRETCHER and PITTENGER), i, 1415.
phenyl ester, reaction of sodium with (BLICKE), i, 662.
Benzoic acid, amino-, bromo-, chloro-, and nitro-, hydroxylamine salts (OESPER and BALLARD), i, 1233.
amino-, and nitro-, γ-dimethylamino-α-β-dimethylpropyl esters, and their hydrochlorides (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 1419.
p-amino-, *n*-butyl ester, picrate (THAYER), i, 467.
2:6-*di*bromo-, electrolytic reduction of (OLIVIER), i, 30.
2-bromo-*p*-amino-, and 2-bromo-*p*-nitro-, salts and esters of (FREJKA and VITHA), i, 663, 1416.
4:5-*di*bromo-2-amino- and 3 nitro-2-amino-, acetyl derivatives (CHAPMAN and STEPHEN), i, 1151.
2-chloro-3:5-*di*nitro-, derivatives of (BARNETT), i, 1288.
hydroxy-derivatives, action of keten on (VAN ALPHEN), i, 1149.
o-hydroxy-. See Salicylic acid.

Benzoic acid, nitro-derivatives, solubilities of, in water (YAJNIK, JAIN, and NATH), ii, 1147.
p-nitro-, use of, as a standard in acidimetry (THORNTON and GETZ), ii, 597.
ethylene ester (CRETCHER and PITTENGER), i, 1416.
trinitro-, metallic salts (KRAUZ and TUREK), i, 647.
2:4:6-*trinitro*-, methylmercuric, and phenylmercuric salts (KHARASCH and GRAFFLIN), i, 1107.
ethyl- and *p*-tolyl-mercuric derivatives (KOTEN and ADAMS), i, 237.
o-thiol-, mercury compounds of (SACHS and BLESSL), i, 1274.
p-thiol-, synthesis of (THOMPSON), i, 815.
Benzoic anhydrides, *o*-, *m*-, and *p*-chloro-, and their reactions with aliphatic alcohols (RULE and PATERSON), i, 29.
o-**Benzoicsulphinide** (*saccharin*), constitution of (TÄUFEL and WAGNER), i, 841.
Benzoin, semicarbazones of (HOPPER), i, 895.
Siam (REINITZER), i, 945.
Benzonitrile, action of organo-magnesium compounds on (ECTORS), i, 138.
Benzonitrile, *p*-nitro- (NEBER, HARTUNG, and RUOPP), i, 1072.
Benzophenone, boiling point of (FINCK and WILHELM), ii, 759.
liquid and solid, vapour pressure of (VOLMER and KIRCHOFF), ii, 494.
adsorption of, at the surface of mercury (VOLMER and MAHNERT), ii, 508.
derivatives, absorption spectra of (TASAKI), ii, 838.
action of nitric acid on (ELION), i, 262.
δ-anilinosemicarbazone (SUTHERLAND and WILSON), i, 42.
2:4-*di*- and 2:4:6-*tri*-chlorophenylhydrazones (HUMPHRIES, HUMBLE, and EVANS), i, 989.
4-*p*-tolylsemicarbazone (WHEELER and BOST), i, 318.
Benzophenone, 2:4:2′:4′-*tetra*amino- (GULLAND and ROBINSON), i, 1187.
2:4-*di*hydroxy- (SHARP & DOHME, and DOHME), i, 541.
Benzophenoneoxime chlorostannate (SONN and MEYER), i, 932.
Benzophenoneoximes, *p*-nitro-, isomeric, and their derivatives (BRADY and MEHTA), i, 43.
Benzopinacol, dissociation of derivatives of (BLICKE), i, 811.
Benzopiperidone (v. BRAUN and REICH), i, 1407.
Benzopyrans (*chromans*), preparation of (CLAISEN), i, 277.
Benzopyrone, 3-bromo- (ARNDT), i, 1309.
7-hydroxy-, acetyl derivative (PFEIFFER, OBERLIN, and KONERMANN), i, 1303.
3:3′-*di*thio- (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.
Benzopyrones (*chromones*), synthesis of (ALLAN and ROBINSON), i, 148.
Benzopyrylium salts, 3-hydroxy, preparation of (RIDGWAY and ROBINSON), i, 54.
o-**Benzoquinone**, 4-amino-, acetyl derivative (KEHRMANN and HOEHN), i, 560.
4:5-*di*amino- (HOEHN), i, 938.
p-**Benzoquinone**, preparation of (CRAVEN and DUNCAN), i, 938.
transformation of, in solution (MEUNIER and QUEROIX), i, 412.
velocity of addition of hydrogen chloride to, in methyl alcohol (EBERT), ii, 408, 556.
4-*p*-tolylsemicarbazone (WHEELER and BOST), i, 318.
determination of (RZYMKOVSKI), ii, 907.
p-**Benzoquinone**, 2:3:6-*tri*bromo-5-nitro- (KOHN and STRASSMANN), i, 1264.
chloro-, preparation of (VAN ERP), i, 685.
o-**Benzoquinone-2-chloroimine**, 4:6-*di*nitro- (BLASZKOVSKA), ii, 1043.
p-**Benzoquinone-4-oxime**, 3-bromo-, and 3-iodo- (HODGSON and MOORE), i, 1408.
4:5-Benzothionaphthen-2-aldehyde, 3-hydroxy- (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1306.
2:3-Benzoxazine, 1-hydroxy- (GRIFFITHS and INGOLD), i, 1190.
Benzoxy-. See Benzoyloxy-.
Benzoyl chloride, influence of phosphorus oxychloride on the catalytic reduction of (ZETZSCHE and ARND), i, 1415.
action of, on phenylthiosemicarbazides (FROMM and TRUKA), i, 703.
Benzoyl chloride, 2-bromo-4-nitro- (FREJKA and VITHA), i, 1416.
4-chloro-3:5-*di*nitro- (LINDEMANN and WESSEL), i, 1099.
m-hydroxy-, and its derivatives (ANSCHÜTZ and KRONE), i, 668.
Benzoyl groups, replacement of, by nitro groups (ELION), i, 44.

Benzoyl *per*oxide (DIETRICH), i, 544.
action of secondary amines on (GAMBARJAN), i, 1260.
action of, with benzene and toluene (GÉLISSEN and HERMANS), i, 545.
action of, on boiling benzene, and *p*-chloro- (GÉLISSEN and HERMANS), i, 379.
action of, on chloroform and on carbon tetrachloride (BOËSEKEN and GÉLISSEN), i, 30.
action of, on diphenyl, on alcohols and on acetic acid (GÉLISSEN and HERMANS), i, 663, 664.
Benzoylacetaldehyde dioxime (v. AUWERS and OTTENS), i, 1460.
phenylhydrazone (v. AUWERS and SCHMIDT), i, 585.
semicarbazones, and oximino- (v. AUWERS and OTTENS), i, 1460.
Benzoylacetone, *O*-alkyl ethers of (WEYGAND and FRIELING), i, 1288.
β-Benzoylacrylic acid, formation of Pechmann dyes from (BOGERT and RITTER), i, 36, 255.
β-Benzoylacrylic acid, β-*p*-hydroxy- and **β-*m*-nitro-** (BOGERT and RITTER), i, 816.
***iso*-β-Benzoylacrylic acid *di*bromide.** See β-Benzoylpropionic acid, **αβ-*di*bromo-**.
Benzoylalanylglycine (GOLDSCHMIDT and STEIGERWALD), i, 1109.
Benzoylallylecgonine, and its salts, and their anæsthetic action (POULSSON and WEIDEMANN), i, 466.
o*-Benzoylbenzoic acid**, 2′:6-di*nitro-** (QUAYLE and REID), i, 1289.
Benzoylbenzylecgonine, and its hydrochloride, and their anæsthetic action (POULSSON and WEIDEMANN), i, 466.
β-Benzoyl-*p*-bromophenylhydrazine, **β-*m*-** and **-*p*-nitro-**, **α-acetyl** derivatives (CHATTAWAY and WALKER), i, 1194.
β-Benzoyl-α-2:4-*di*bromophenylhydrazine (CHATTAWAY and WALKER), i, 930.
β-Benzoyl-2:4-*di*bromophenylhydrazine, **β-*m*-** and **-*p*-nitro-**, and their **α-acetyl** derivatives (CHATTAWAY and WALKER), i, 1194.
β-Benzoyl-2:4:6-*tri*bromophenylhydrazine, **β-*m*-nitro-**, **α-acetyl** derivative (CHATTAWAY and WALKER), i, 1194.
β-Benzoylbutyric acid, and its semicarbazone (HIGGINBOTHAM, LAPWORTH, and SIMPSON), i, 35.
Benzoylchlorodiphenylamines (CHAPMAN), i, 1400.
β-Benzoyl-*p*-chlorophenylhydrazine, **β-*p*-nitro-**, **α-acetyl** derivative (CHATTAWAY and WALKER), i, 1194.
β-Benzoyl-2:4-*di*chlorophenylhydrazine, **β-*m*-** and **-*p*-nitro-**, and their **α-acetyl** derivatives (CHATTAWAY and WALKER), i, 1194.
β-Benzoyl-2:4:6-*tri*chlorophenylhydrazine, **β-*m*-** and **-*p*-nitro-**, and their **α-acetyl** derivatives (CHATTAWAY and WALKER), i, 1194.
***O*-Benzoyldi*iso*butylhydroxylamine**, and its hydrogen sulphate (GAMBARJAN), i, 1260.
***O*-Benzoyldiethylhydroxylamine** hydrogen sulphate (GAMBARJAN), i, 1260.
5-Benzoyl-5:10-dihydrophenarsazine, 10-chloro- (BURTON and GIBSON), i, 85.
Benzoyldi-*p*-tolylamine (CHAPMAN), i, 1401.
Benzoyl-*l*-ecgonine, esters and their derivatives (WELLCOME FOUNDATION, LTD., GRAY and HENRY), i, 1446.
aromatic esters of, and their salts (GRAY), i, 829.
Benzoylenecarbamide, salts and derivatives of (HELLER, BUCHWALDT, FUCHS, KLEINICKE, and KLOSS), i, 1325.
Benzoylethanol, chloro-*o*-bromo-*p*-amino- (FREJKA and VITHA), i, 1416.
Benzoylformhydroxamic acids, oximes of, and their derivatives (GASTALDI and REPOSSI), i, 987.
Benzoylformic acid, and its methyl ester xylylhydrazones (BUSCH and v. BEUST), i, 400.
Benzoylgalactosylamine, and its phenylhydrazone (FREUDENBERG and DOSER), i, 367.
Benzoylhydroperoxide. See Perbenzoic acid.
Benzoylmethylnitrolic acid, benzoyl derivative (RUGGERI), i, 79.
8-Benzoyl-α-naphthoic acid, preparation and properties of, and its derivatives (MASON), i, 33.
γ-Benzoyl-α-*p*-nitrophenylbutyronitriles, α-bromo- (ALLEN), i, 964.
2-Benzoyloxybenzaldehyde, *p*-nitro-, and its phenylhydrazone (ZETZSCHE, SILBERMANN, and VIRLI), i, 1411.
3-Benzoyloxybenzoic acid, *m*-hydroxy- (m-*diplosal*), and its derivatives (ANSCHÜTZ and KRONE), i, 668.
4-Benzoyloxybenzoyl chloride, *p*-hydroxy-, acetyl derivative, and its derivative (ANSCHÜTZ and ZERBE), i, 668.

δ-Benzoyloxy-Δ$^{\alpha\gamma}$-butadienealdehydes, γ-bromo-, γ-chloro-, and γ-iodo-, and their derivatives (BAUMGARTEN), i, 1381.

β-Benzoyloxybutyric acid, γ-amino-, picrate and ethyl ester (BERGMANN, MIEKELEY, WEINMANN, and KANN), i, 795.

2-Benzoyloxy-7-diphenylcarbamyloxynaphthalene (LESSER, KRANEPUHL, and SAD), i, 1426.

ζ-Benzoyloxy-*n*-heptan-γ-ol (HELFERICH and FRIES), i, 1039.

Benzoyloxymethyleneacetone semicarbazone (v. AUWERS and DANIEL), i, 1181.

***d*- and *l*-α-Benzoyloxypropionic acids**, ethyl esters (KENYON, PHILLIPS, and TURLEY), i, 507.

Benzoylphenylbenzylcarbinol. See Benzylbenzoin.

3-Benzoyl-5-phenylhydrazino-1:2:4-oxadiazole (RUGGERI), i, 79.

Benzoylphenylhydrazinoglyoxime (RUGGERI), i, 79.

γ-Benzoyl-β-phenyl-α-*p*-nitrophenylbutyronitrile (ALLEN), i, 964.

3-Benzoyl-2-phenyl-1-*p*-nitrophenyl-*cyclo*propanes, 1-cyano- (ALLEN), i, 964.

α-Benzoyl-γ-phenylpropionic acid, ethyl ester (v. AUWERS and MÖLLER), i, 404.

1-Benzoyl-3-phenyl*iso*quinoline, 4-hydroxy-, and its acetyl derivative (WEISS and SONNENSCHEIN), i, 938.

β-Benzoylpropionic acid, α**β**-*di*bromo- (BOGERT and RITTER), i, 816.

Benzoylpyridines, nitro derivatives (TSCHITSCHIBABIN, KIUNDSHI, and BENEVOLENSKAJA), i, 1316.

2-Benzoylpyrrole, 3:4-*di*- and 3:4:5-*tri*-iodo- (TERENTIEV and TSCHELINCEV), i, 295.

***O*-Benzoylserine**, methyl ester (BERGMANN, MIEKELEY, WEINMANN, and KANN), i, 795.

Benzoyl-*p*-toluidide, *p*-hydroxy-, and its acetyl derivative (ANSCHÜTZ and ZERBE), i, 667.

1-Benzoyl-1:2:2-trimethyl-3-cyanomethyl*cyclo*pentane (HALLER and LEGAGNEUR), i, 683.

1-Benzoyl-1:2:2-trimethyl*cyclo*pentane-3-carboxylic acid, and its amide (HALLER and LEGAGNEUR), i, 683.

1-Benzoyl-1:2:2-trimethyl-3-phenacyl-*cyclo*pentane (HALLER and LEGAGNEUR), i, 683.

δ-Benzoylvaleric acid, *o*-amino-, acetyl and benzoyl derivatives (PATERSON and PLANT), i, 1147.

Benzoylveratroylacetic acid, ethyl ester (GULLAND and ROBINSON), i, 1188.

Benzoylveratroylmethane, and its copper salt (GULLAND and ROBINSON), i, 1188.

Benzthiazole, chloro-, *di*bromide (HUNTER), i, 987.

Benz*iso*thiazole, and its derivatives, and 2-amino- and 2-hydroxy- (STOLLÉ, GIESEL, and BADSTÜBNER), i, 1466.

Benzthiazoles, amino- (HUNTER), i, 1335.

Benzthiazole series (CLARK), i, 841.

Benz*iso*thiazole-2-carboxylic acid, and its derivatives (STOLLÉ, GIESEL, and BADSTÜBNER), i, 1466.

Benzthiopyrans, spectrochemistry of (KROLLPFEIFFER), ii, 1028.

Benzthiopyrone (*thiocoumarin*), and *mono*- and *di*-bromo-, and their derivatives (ARNDT), i, 1309.

Benzthiopyrone, 6-chloro- (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1305.

1:2:3-Benztriazole-2:5′-salicylic acid, and its salts and acetyl derivative (ELBS), i, 163.

1:2:3-Benztriazone-3-phenyl-*p*-arsinic acid (KING and MURCH), i, 320.

Benzyl alcohol, condensation of phenol and (HUSTON), i, 249.

oxidation of, and its esters, in the organism (SNAPPER, GRÜNBAUM, and STURKOP), i, 467.

detection of, as oxalate (PFAU), ii, 905.

Benzyl alcohol, 2:6-*di*bromo-*p*-hydroxy- (KOHN and WEISSBERG), i, 655.

o:*p*-*di*hydroxy- (SEN and SARKAR), i, 812.

Benzyl chloride, *o*-hydroxy-, acetyl derivative (WELLCOME FOUNDATION, LTD., GRAY, and HENRY), i, 1446.

2:3:4-*tri*chloro-6-nitro-, and 2:4:6-*tri*nitro- (GANGULY), i, 647.

ethers, conversion of, into carbinols (SCHORIGIN), i, 1404.

chloro- and β-hydroxy-ethyl ethers (BENNETT), i, 883.

esters, substituted (BARKENBUS and HOLTZCLAW), i, 1148.

iodide, 2:4-*di*nitro- (CONANT, KIRNER, and HUSSEY), i, 494.

β-hydroxyethyl sulphide (FROMM and JÖRG), i, 352.

γ-Benzylacetylacetone (MORGAN and TAYLOR), i, 634.

α-Benzylacrylic acid (v. BRAUN and KÜHN), i, 1375.

Benzylallylbutyrophenone (HALLER, BAUER, and RAMART), i, 261.

Benzylallylpropiophenone (HALLER, BAUER, and RAMART), i, 261.
Benzylamine, salts of (MAZOUREVITCH), i, 1241.
hydroferricyanide (CUMMING), i, 122.
Benzylamines, nitro-, and their salts (HOLMES and INGOLD), i, 1142.
Benzylaniline, preparation of (NOLAN and CLAPHAM), i, 805.
reactions of antimony halides with (VANSTONE), i, 662.
Benzylanilines, nitro-, electrochemical reduction of (ELBS and GAUMER), i, 167.
Benzyl-*o*-benzoic acid, 2':6-*di*nitro- (QUAYLE and REID), i, 1289.
Benzylbenzoin (VILA and CEREZO), i, 557.
urethane of (SCHEUING and HENSLE), i, 27.
Benzylbenzoylacetone (TROTMAN), i, 383.
Benzylbenzoyl-*d*-ψ-ecgonine, and its salts (GRAY), i, 830.
Benzyl-β-benzoyloxyethylsulphone (FROMM and JÖRG), i, 352.
Benzyl-*p*-bromoaniline, *o*-hydroxy- (BAMBERGER), i, 142.
Benzylcarbamide, α-hydroxy-, and its salts (WOOD and LILLEY), i, 401.
β-Benzylcellobioside (HESS and SALZMANN), i, 1383.
Benzyl chloromethyl ketone, acetate of (LEWIS, NIERENSTEIN, and RICH), i, 936.
4-Benzylcoumarin, 7-hydroxy- (BAKER and ROBINSON), i, 1300.
Benzylcreatinines, and their picrates (GREENWALD), i, 840.
6-Benzyl-*o*-cresol (SCHORIGIN), i, 1404.
2-Benzyl-*p*-cresol, and its phenylcarbamate (CLAISEN, KREMERS, ROTH, and TIETZE), i, 656.
3-Benzyl-*p*-cresol (CLAISEN), i, 1410.
Benzyldeoxybenzoin, β-bromo- (PASCUAL VILA), i, 144.
γ-Benzyldextrose, and its di*iso*propylidene ether and osazone (FREUDENBERG, v. HOCHSTETTER, and ENGELS), i, 635.
α-Benzyl-α-diethylaminomethylacetoacetic acid, ethyl ester (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1249.
Benzyl-1:2-dihydrocoumarones, *penta*hydroxy-, and their acetyl derivatives (DEAN and NIERENSTEIN), i, 282.
2-Benzyl-1:5-dimethylpyrazolium iodide, 3-chloro- (v. AUWERS and NIEMEYER), i, 1178.
Benzyldimethyltetrahydroindazoles (v. AUWERS, v. SASS, and WITTEKINDT), i, 1183.
Benzyl-β-ethoxyethylsulphone (FROMM and JÖRG), i, 352.
Benzylethyldi-*m*-propylarsonium iodide, and its compound with iodoform (STEINKOPF and BESSARITSCH), i, 496.
Benzyl-Δ¹-hexahydroanthracenes (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 129.
2-Benzyl*cyclo*hexanone, 2-cyano-, and its semicarbazone (v. AUWERS, BAHR, and FREESE), i, 312.
***iso*Benzylhistamine**. See 4-Ethyl-1-benzylglyoxaline, 4-β-amino-.
Benzylhydrohydrastinine, and its hydrochloride (HAWORTH, PERKIN, and PINK), i, 1170.
Benzyl-*o*-hydroxybenzoyl-*l*-ecgonine, and its picrate (GRAY), i, 830.
Benzyl-β-hydroxyethylsulphone (FROMM and JÖRG), i, 352.
Benzylhydroxymethylbenzoyl-*l*-ecgonines (GRAY), i, 830.
Benzylideneacetohexoic acid (RYAN and SHANNON), i, 553.
Benzylideneacetone. See Styryl methyl ketone.
Benzylideneaminoacetic acid, and *o*-hydroxy-, salts of (BERGMANN, EUSSLIN, and ZERVAS), i, 891.
α-Benzylideneaminoglutaric acid, *o*-hydroxy-, barium and brucine salts (BERGMANN, EUSSLIN, and ZERVAS), i, 891.
5-Benzylideneaminophenanthraquinone (SIRCAR and GUPTA), i, 984.
7-Benzylideneaminophenanthraquinone, 2-amino-7-*o*-*mono*- and -7-*o*:*p*-*di*hydroxy- and -7-*m*-nitro-, and 2- and 4-*m*-nitro- (SIRCAR and GUPTA) i, 984.
***dl*-α-Benzylideneamino-β-phenylpropionic acid**, *o*-hydroxy-, barium salt (BERGMANN, EUSSLIN, and ZERVAS), i, 891.
Benzylideneaminosuccinic acid, *o*-hydroxy- and *p*-nitro-, salts of (BERGMANN, EUSSLIN, and ZERVAS), i, 891.
Benzylideneaniline, reaction of carbon disulphide with (BIGELOW) i, 242.
Benzylideneaniline, *o*-hydroxy-, copper salt (ZETZSCHE, SILBERMANN, and VIELI), i, 1411.
Benzylideneanisylidene-β-methyl*cyclo*hexanone, *p*-hydroxy-, and its salts (VORLÄNDER, HIEMESCH, SCHOENEMANN, SCHADE, and KUNZE), i, 268.
Benzylidenebenzylamine *di*bromide (BERG), i, 817.

Benzylidenebenzylpyridines, and their salts (KOENIGS, KÖHLER, and BLINDOW), i, 834.
Benzylidene*iso*butylamine *di*bromide (BERG), i, 817.
Benzylidenecoumaranone, 2′-chloro-, and its dibromide (RÖTHLISBERGER), i, 572.
Benzylidenecreatinine, picrate and acetyl derivative of (GREENWALD), i, 840.
***iso*Benzylidenedeoxybenzoin**, preparation of (PASCUAL VILA), i, 144.
Benzylidenedibutyl ethers (ADAMS and ADKINS), i, 785.
Benzylidenedicarbamic acid, methyl ester (DATTA and CHATTERJEE), i, 892.
Benzylidenediethylene *tetra*sulphide, compounds of gold chloride with (RÂY), ii, 184.
Benzylidenedi-indone (RADULESCU and GEORGESCU), i, 1287.
Benzylideneglycylaminoacetic acid, and *o*-hydroxy-, barium salts (BERGMANN, EUSSLIN, and ZERVAS), i, 891.
Benzylidene*cyclo*hexanones, 2:6-*di*amino-, and their derivatives (PFEIFFER), i, 411.
2:6-*di*nitro- (PFEIFFER), i, 409.
α-Benzylidenehydrazino-β-aminoethane oxalate, and *α-o*-hydroxy- (SOMMER, SCHULZ, and NASSAU), ii, 990.
Benzylideneimine chlorostannate (SONN and MEYER), i, 932.
Benzylidenemalonic acid, menthyl ester (WAYNE and COHEN), i, 551.
Benzylidenemalonic acid, *p*-hydroxy-, ethyl ester (CHRZASZCZEWSKA), i, 956.
2-Benzylidene-1-methyldihydropyridine, 2-*di*nitro- (TSCHITSCHIBABIN, KUINDSHI, and BENEVOLENSKAJA), i, 1317.
Benzylidene-1-methyldihydropyridines, *p*-nitro- (KOENIGS, KÖHLER, and BLINDOW), i, 833.
Benzylidene-β-phenylethylamine, and its methiodide (OSADA), i, 284.
α-Benzylidene-α′(β-phenylethyl)succinic acid (BOUGAULT), i, 1152.
Benzylidene-*p*-toluidine, *o*-nitro- (HELLER and SPIELMEYER), i, 838.
β-Benzylideneundecane (THOMS and AMBRUS), i, 790.
2-Benzylindazole, *o*- and *p*-chloro-, and their picrates (v. AUWERS and PFUHL), i, 1101.
4-nitro- (v. AUWERS and FRESE), i, 1102.
1-Benzylindole-2-carboxylic acid (BODFORSS), i, 699.
α-Benzylmandelic acid (MALKIN and ROBINSON), i, 559.
1-Benzyl-3-methyl-2-allylpyrazolium iodide (v. AUWERS and DANIEL), i, 1180.
Benzylmethylamine, α-hydroxy-, and its derivatives (WOOD and LILLEY), i, 401.
Benzylmethylamines, nitro-, and their salts (HOLMES and INGOLD), i, 1143.
Benzylmethyl-β-bromoallylamine, and its salts (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1401.
1-Benzyl-2-methyl-1:2-dihydro*iso*quinoline, 1-*o*-nitro- (GADAMER, OBERLIN, and SCHOELER), i, 576.
Benzylmethylindazoles, and their picrates (v. AUWERS and LOHR), i, 74.
Benzyl methyl ketone, 2:4-*di*nitro-, derivatives of (NEBER, HARTUNG, and RUOPP), i, 1073.
Benzyl methyl ketoximes, *o*-nitro-, isomeric, and their derivatives (NEBER, HARTUNG, and RUOPP), i, 1072.
Benzylmethylnonylcarbinol (THOMS and AMBRUS), i, 790.
Benzylmethylpropargylamine, and its salts (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.
1-Benzyl-3-methylpyrazole, 4-bromo-5-chloro-, and 5-chloro-, and its hydrochloride (v. AUWERS and NIEMEYER), i, 1178.
1-Benzyl-5-methyl-3-pyrazolone (v. AUWERS and NIEMEYER), i, 1178.
4-Benzyl-3-methyl-5-pyrazolone (HIRST, MACBETH, and TRAILL), i, 1251.
Benzylmethyltetrahydroindazoles, and their picrates (v. AUWERS, v. SASS, and WITTEKINDT), i, 1183.
1-Benzyl-2-methyltetrahydro*iso*quinoline, 1-*o*-amino-, salts of (GADAMER, OBERLIN, and SCHOELER), i, 576.
5-Benzyl-7-methylxanthen, 3:5-*o*:*p*-*tri*hydroxy- (SEN and SARKAR), i, 813.
Benzylnorhydrohydrastinine, and its salts (HAWORTH, PERKIN, and PINK), i, 1170.
Benzyl-*s*-octahydroanthracenes, and bromo- and hydroxy- (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 129.
3-Benzyloxyanisole (SONN and PATSCHKE), i, 1280.
***p*-Benzyloxybenzoic acid**, ethyl ester (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 1473.
***o*-Benzyloxyphenyldi-α-naphthylcarbinol** (GOMBERG and MCGILL), i, 1270.
***o*-Benzyloxyphenyldi-α-naphthylfluorene** (GOMBERG and MCGILL), i, 1270.

o-**Benzylphenol**, and its phenylurethane (CLAISEN), i, 1410.
6-Benzylphenthiazine (DESAI), i, 388.
1-Benzyl-5-β-phenylethyl-5-ethylbarbituric acid (DOX), i, 301.
Benzyl-β-phenylethylsuccinic acids (BOUGAULT), i, 921, 1152.
Benzylpyridines, and *p*-nitro-, and their salts (KOENIGS, KÖHLER, and BLINDOW), i, 833.
Benzylpyridines, amino, hydroxy, and nitro derivatives, and their derivatives (TSCHITSCHIBABIN, KUINDSHI, and BENEVOLENSKAJA), i, 1316.
2-Benzyl pyrryl ketone, and its derivatives (ODDO), i, 296.
Benzylresorcinol (HIRZEL), i, 393.
N-**Benzylsuccinimide** (CHERBULIEZ and SULZER), i, 1252.
4-Benzyl*cyclo*telluropentane-3:5-dione, and its dioxime (MORGAN and TAYLOR), i, 634.
1-Benzyl-5:6:7:8-tetrahydroanthracene (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 129.
1-Benzyl-1:2:3:4-tetrahydro*iso*quinoline, and its salts (FORSYTH, KELLY, and PYMAN), i, 1167.
3-Benzylthioldiphenyl-1:2:4-triazoles (FROMM and TRUKA), i, 704.
Benzyl-*p*-toluidine, *o*-nitro- (ELBS and GAUMER), i, 168.
Benzyltriethylammonium iodide, and its compound with iodoform (STEINKOPF and BESSARITSCH), i, 495.
Benzyltriethylphosphonium iodide, and its compound with iodoform (STEINKOPF and BESSARITSCH), i, 496.
Benzyltropyl-*l*-ecgonine, and its salts (GRAY), i, 829.
Benzylxanthone (CONANT and SLOAN), i, 955.
Benzylxanthyl *per*chlorate (CONANT and SLOAN), i, 955.
Berberine, imino-, and its hydrochloride (HAWORTH, PERKIN, and PINK), i, 1170.
Beryllium, preparation of (STOCK, PRAETORIUS, and PRIESS), ii, 1090.
Beryllium compounds, isomorphism of magnesium compounds and (ZAMBONINI and CAROBBI), ii, 144.
Beryllium halides, densities of (MESSERKNECHT and BILTZ), ii, 1141.
ammoniates of (BILTZ and MESSERKNECHT), ii, 1183.
hydroxide, adsorption by (KLEEBERG), ii, 956.
precipitation of, electrometrically (BRITTON), ii, 1203.
oxide, various states of (COPAUX and MATIGNON), ii, 1192.
Beryllium oxide, solubility of, in water (REMY and KAUFMANN), ii, 119.
oxide and sulphate, heats of formation and solution of (MARCHAL), ii, 370.
sulphate and its hydrates (KRAUSS and GERLACH), ii, 314.
Beryllates, complex (ROSENHEIM and LEHMANN), ii, 220.
Beryllium organic compounds:—
Beryllium benzoylcamphor, mutarotation of, and its compound with chloroform (BURGESS and LOWRY), i, 46.
chloride, complex compounds of, with organic compounds (FRICKE and RUSCHHAUPT; FRICKE and HAVESTADT), ii, 886.
***iso*Betelphenol**. See 4-Methoxypropenylbenzene, 3-hydroxy-.
Bile, effect of salts of, on substances adsorbed by blood proteins (ROSENTHAL), i, 1203.
action of, on pancreatic digestion of proteins (ROSENOV), i, 1507.
calcium in (DITTRICH; DRURY), i, 325.
excretion of phthaleins in (ROSENTHAL and WHITE), i, 101.
goat's, and a calculus therefrom (SCHENK), i, 854.
human and ox, constituents of (WIELAND and JACOBI), i, 1488.
sheep's, choleic acid in (SCHENCK), i, 1488.
Bile acids (WIELAND and REVEREY), i, 181; (WINDAUS, BOHNE, and SCHWARZKOPF), i, 405; (SCHENK), i, 854, 1488; (WIELAND), i, 1065; (WIELAND and JACOBI), i, 1488.
structure of, in relation to their depressant action (MACHT, GROLLMAN, and HYNDMAN), i, 1355.
action of bacteria on (LICHT), i, 478.
and their salts, compounds of lecithin with (BOEHRINGER SOHN), i, 824.
determination of (HERZFELD and HAEMMERLI), i, 722.
Bile pigments (KÜSTER, HAAS, and MAURER), i, 307; (KÜSTER and HAAS), i, 722; (FISCHER and NIEMANN), i, 1198.
formation of, in surviving organs (ERNST and SZAPPANYOS; ERNST; ERNST and FÖRSTER), i, 732.
formation of hæmoglobin from (RICH), i, 711.
Bile salts, action of, on gelatin (STUCKERT), ii, 392.
determination of, in blood (SZILÁRD), i, 1485.
Bilirubin, formation of, from hæmoglobin (RICH and BUMSTEAD), i, 1482.

Bilirubin, preparation of (KÜSTER and HAAS), i, 722.
identity of hæmatoidin and (RICH and BUMSTEAD), i, 1475.
fluorescent oxidation products of (ADLER), i, 328.
detection of (BARRENSCHEEN and WELTMANN), i, 187.
detection of, in fæces (ADLERSBERG and PORGES), i, 98.
Binary systems, effect of substitution on equilibria in (KREMANN and DRAZIL), ii, 649; (KREMANN, ZECHNER, and WEBER; KREMANN, ZECHNER, and DRAZIL), ii, 650.
investigation of, by addition of a third component (FREETH), ii, 669.
crystallisation in (RUER), ii, 125.
organic, equilibria in (KITRAN), ii, 533.
Bioelectric cells. See under Cells.
Biological oxidation. See Oxidation.
Bios (TANNER), i, 617.
formation of, in infusions of barley and maize (EASTCOTT), i, 1017.
preparation and purification of (SIMS), i, 1017.
Bioses from lichenin, and their acetates (PRINGSHEIM, KNOLL, and KASTON), i, 1386.
Biosterin. See Vitamin-*A*.
Bisabolene, synthesis of (RUZICKA and CAPATO), i, 943.
Bisallylaminobenzoquinone (HARGER), i, 25.
Bis(aminomethyl)-benzenedicarboxylic acids, dilactams (DE DIESBACH and ZURBRIGGEN), i, 1427.
Bisamylaminobenzoquinone (HARGER), i, 25.
Bisazopyrrolenephthalide (ODDO and MINGOIA), i, 978.
Bisazopyrrolephthalein (ODDO and MINGOIA), i, 978.
1:1-Bisbenzthiazole *tetra*bromide (HUNTER), i, 987.
Bisbenzylaminobenzoquinone(HARGER), i, 25.
Bis(bromomethyl)benzenedicarboxylic acids, and their derivatives (DE DIESBACH and ZURBRIGGEN), i, 1427.
Bis(*di*bromomethyl)benzenedicarboxylic acids, and their derivatives (DE DIESBACH and ZURBRIGGEN), i, 1427.
Bis-*iso*- and -*sec.*-butylaminobenzoquinones (HARGER), i, 25.
Bis-(carbethoxy-2:3-dimethylpyrryl)-methanes (FISCHER and BELLER), i, 1334.
Bis-(4-carbethoxy-2:3-dimethylpyrryl)-methene hydrochloride (FISCHER and BELLER), i, 1333.
Bis-1-*p*-chlorophenyl-3-methyl-5-pyrazolone (CHATTAWAY and STROUTS), i, 71.
α-2:3-Bisdeoxyglucose, derivatives of (BERGMANN), i, 887.
4:4′-Bis(dicarbomethoxyhydrazino)diphenyl (STOLLÉ and ADAM), i, 1469.
2:7-Bis(dicarbomethoxyhydrazino)fluorene (STOLLÉ and ADAM), i, 1469.
1:1′-Bisdihydronaphthyl, and its dibromide (SCHROETER, ZADEK, and HOFFMANN), i, 677.
Bisdi-indonylmethane (RADULESCU and GEORGESCU), i, 1287.
Bisdi-α-naphthafluorenyl (MAGIDSON), i, 384.
Bisdi-α-naphthafluorenylene, and *di*bromo- (MAGIDSON), i, 385.
Bis-α-ethoxy-α-ethylbutyrylcarbamide (NEWBERY), i, 376.
Bisethylaminobenzoquinone (HARGER), i, 25.
Bis(hydroxymethyl)benzenedicarboxylic acids, dilactones of (DE DIESBACH and ZURBRIGGEN), i, 1427.
Bis-3-hydroxy-β-naphthoyldianisidine (CHEMISCHE FABRIK GRIESHEIM-ELEKTRON), i, 599.
Bis-3-hydroxy-β-naphthoyldiphenetidine (CHEMISCHE FABRIK GRIESHEIM-ELEKTRON), i, 599.
9:9′-Bis-*p*-hydroxyphenyl-10-keto-9:10-dihydrophenanthrene (GOLDSCHMIDT, VOGT, and BREDIG), i, 1434.
9:9′-Bis-*p*-hydroxy-*m*-tolyl-10-keto-9:10-dihydrophenanthrene (GOLDSCHMIDT, VOGT, and BREDIG), i, 1434.
Bisimmonium bromides, action of ammonia on (v. BRAUN and ZOBEL), i, 1455.
Bismethylaminobenzoquinone (HARGER), i, 24.
2:3:10:11-Bismethylenedioxy-7:8-dihydroprotoberberine, and its picrate (BUCK, PERKIN, and STEVENS), i, 959.
6:7:3′:4′-Bismethylenedioxy-9-hydroxyprotopapaverine (BUCK, PERKIN, and STEVENS), i, 959.
6:7:3′:4′-Bismethylenedioxy-9-keto-3:4-dihydroprotopapaverine, and its derivatives (BUCK, PERKIN, and STEVENS), i, 959.
6:7:3′:4′-Bismethylenedioxy-9-ketoprotopapaverine, and its derivatives (BUCK, PERKIN, and STEVENS), i, 959.
2:3:10:11-Bismethylenedioxyoxyprotoberberine (BUCK, PERKIN, and STEVENS), i, 959.

2:3:10:11-Bismethylenedioxyproto-berberine, and its salts (BUCK, PERKIN, and STEVENS), i, 958.
6:7:3′:4′-Bismethylenedioxyproto-papaverine, synthesis of, and its picrate (BUCK, PERKIN, and STEVENS), i, 958.
6:7:3′:4′-Bismethylenedioxy-1:2:3:4-tetrahydroprotopapaverine, and its salts (BUCK, PERKIN, and STEVENS), i, 958.
Bismuth, atomic weight of (CLASSEN and STRAUCH), ii, 175.
absorption spectrum of the vapour of (NARAYAN and RAO), ii, 927.
absorption and fluorescence spectra of (RAO), ii, 473.
spectral lines of (JOOS), ii, 612.
electro-deposition of (BAYERLE), ii, 675.
thermal expansion of crystals of (ROBERTS), ii, 94.
single crystal rods of, thermo-electric force of (BRIDGMAN), ii, 1136.
effect of *X*-rays on crystallisation of (ADINOLFI), ii, 485.
colloidal (GUTBIER and KAUTTER), ii, 860.
chemistry and physiology of (KÜRTHY and MÜLLER), i, 100; (KÜRTHY), i, 101.
Bismuth alloys with antimony (OTANI), ii, 533.
with cadmium or tin and lead, hardness of (DI CAPUA), ii, 1051.
with mercury, electrolysis of (KREMANN, KAPAUN, and BUDAN), ii, 313.
Bismuth compounds, fixation of, in organs (LISSIEVICI-DRAGANESCO), i, 465.
physiological action of (FRITZ), i, 334.
action of, in syphilis (LEVADITI, NICOLAU, SALGUE, and SCHOEN), i, 463.
Bismuth salts, action of, on red blood corpuscles (SIMON), i, 1500.
action of, on *Staphylococcus*, *Streptococcus*, and *Bacillus coli* (LEMAY and JALOUSTRE), i, 206.
complex (MÜLLER and KÜRTHY), ii, 61.
Bismuth carbonate, physical condition of (JONES), ii, 994.
*di*hydride (WEEKS and DRUCE), ii, 988.
*tri*hydride (WEEKS and DRUCE), ii, 1188.
hydroxide, peptisation of (KUHN and PIESCH), ii, 525.
nitrates, effect of vacuum and of heat on (PICON), ii, 1188.
Bismuth oxychloride, equilibrium of water and (WARIS), ii, 786.
selenide (MOSER and ATYNSKI), ii, 584.
sulphide, reaction between hydrochloric acid and (RAMACHANDRAN), ii, 1208.
precipitation of, from acid solutions (RAMACHANDRAN), ii, 1005.
Bismuth organic compounds (MASCHMANN), i, 527; (SUPNIEWSKI), i, 1473.
with pyrocatechol (ROSENHEIM and BARUTTSCHISKY), i, 808.
cacodyl, existence of (GANASSINI and SANTI), i, 893.
tri- and tri-*m*-nitro-phenyl dinitrates (VORLÄNDER), i, 1255.
Bismuth detection, determination, and separation:—
detection of (FEIGL), ii, 435.
determination of (KÜRTHY and MÜLLER), ii, 73.
determination of, electrometrically (ZINTL and RAUCH), ii, 442.
determination of, electro-volumetrically (ZINTL and RAUCH), ii, 1004.
determination of, in blood, organs, and excreta (AUTENRIETH and MEYER), i, 182.
determination of, in urine (KÜRTHY and MÜLLER), i, 100.
determination and separation of (GIRARD and FOURNEAU), ii, 1207.
determination of, and separation from lead (FEIGL and ORDELT), ii, 442.
separation of lead and (LASSIEUR), ii, 159.
Bis-nitropyrocatecholboric acids, salts of (MEULENHOFF), i, 541.
Bis(1-phenyl-4-methylpyrazolyl)ethane (FISCHER and NIEMANN), i, 1198.
Bistrimethylstibine*di*chloropalladium (MORGAN and YARSLEY), i, 378.
Bistrimethylstibine*di*chloroplatinum (MORGAN and YARSLEY), i, 378.
Blackberry, acids of (NELSON), i, 618.
Blende, crystal structure of diamond and (BECKENKAMP), ii, 271.
Blood, effect of irradiation on (KROETZ), i, 178.
effect of Röntgen rays on (KONRICH and SCHELLER), i, 1356.
effect of Röntgen rays on the acid-base equilibrium in (PAGNIEZ, COSTE, and SOLOMON), i, 1201.
hydrogen-ion concentration in (GIGON), i, 1219; (BIGWOOD), i, 1342; (HOU), i, 1483.
of normal and cancer subjects (CORRAN and LEWIS), i, 188.

Blood, relation between reaction and ionic equilibrium of (GOLLWITZER-MEIER), i, 1482.
effect of ionic equilibria in, on the respiratory centre (GOLLWITZER-MEIER), i, 177.
effect of alkalinity of, on respiration (GOLLWITZER-MEIER), i, 177.
transport of oxidised carbon from tissues to (COLLINGWOOD), i, 451.
capillary exchange in (HENDERSON and MURRAY), i, 1483.
oxygen supply and exchange in (MURRAY and MORGAN), i, 1481.
fresh, putrefied, and frozen, gases in (KOHN-ABREST), i, 604.
eosinophile granule substance of (NEUMANN), i, 94.
ultra-filtration of (BLUM and DELAVILLE), i, 605.
sedimentation of red corpuscles in (BERCZELLER and WASTL), i, 452.
method for taking samples of (FRITZ and PAUL), i, 1486.
replacement of, by gum arabic solutions (UCKI), i, 177.
coagulation of (STUBER and LEE), i, 94; (STUBER and KUHN), i, 452; (WÖHLISCH), i, 452, 1486.
action of potassium salts on (OSAPÓ and v. KLOBUSITZKY), i, 717.
action of zinc salts on (LUMIÈRE and COUTURIER), i, 717.
in cold-blooded animals (ŠAHOVIĆ), i, 716.
anticoagulants for (LUMIÈRE), i, 606.
effect of sunlight on complement in (JACOBY and JACOBY), i, 178.
effect of anaphylactic shock on constituents of (BLUM, DELAVILLE, and CAULAERT), i, 188.
in tropical regions and in avitaminosis, constituents of (VAN BERKHOUT), i, 453.
constituents of, and serum in cancer (THEIS and BENEDICT), i, 724.
chemistry of, during excitation of the digestive glands (ONOHARA), i, 712.
chemistry of, during ingestion of food (ONOHARA), i, 322.
composition of, in labour (WILLIAMS), i, 713.
mineral composition of, in narcosis (BLANCHETIÈRE and CARDOT), i, 455.
mineral constituents of, in rickets (ACKERSON, BLISH, and MUSSEHL), i, 609.
chemistry of, during sleep (GOLLWITZER-MEIER and KROETZ), i, 322.
acetaldehyde in (FABRE), i, 852.
Blood, acetone substances in (HUBBARD and NOBACK), i, 712.
adenine nucleotide from (HOFFMAN), i, 711, 851.
aldehydes in (FABRE), i, 324.
behaviour of amino-acids in (ROSENBAUM), i, 464.
adsorption of amino-acids by (SBARSKY and MUCHAMEDOFF), i, 451.
ammonia in (PARNAS and HELLER), i, 323, 454; (PARNAS), i, 454; (PARNAS and TAUBENHAUS), i, 1484.
arsenic in, after injection of salvarsan (FORDYCE, ROSEN, and MYERS), i, 189.
calcium in (GYÖRGY; JANSEN), i, 324; (KYLIN and SILFVERSVÄRD), i, 852; (CAMERON and MOORHOUSE), i, 857.
effect of removal of endocrine glands on (LEITES), i, 95.
effect of hypnotic suggestion on (GLASER), i, 860.
normal and tuberculous (MATZ), i, 1492.
distribution of calcium and phosphate ions in (GYÖRGY), i, 322.
effect of hæmolysis on the calcium and phosphorus in (WANG and FELSHER), i, 995.
influence of vitamins on phosphates and calcium in (v. EULER and MYRBÄCK), i, 1515.
calcium, potassium, and sodium in, after ovariectomy (BLANCHETIÈRE), i, 1207.
carbon monoxide in (NICLOUX), i, 321.
distribution and exchange of chlorine in (BURGER), i, 710.
dextrose in, in health and in diabetes (LUNDSGAARD and HOLBØLL), i, 1206, 1207, 1494.
action of drugs on (ETS), i, 734.
fat and cholesterol in, in pathological conditions (HECKSCHER; BING and HECKSCHER), i, 999.
fats and lipoids in (IWATSURU), i, 1515.
increase of globulins in, in hæmolysis (REYMANN), i, 1345.
effect of injection of histamine on (HASHIMOTO), i, 1005.
effect of insulin on the composition of (MAZZOCCO and MORERA; SAVINO), i, 482.
iron in, in scurvy (MOURIGNAND, LEULIER, and MICHEL), i, 330.
lactic acid in, at high altitudes (LAQUER), i, 324.

Blood, lactic acid in, effect of adrenaline on (CORI), i, 753.
effect of insulin on (CORI), i, 753; (BEST and RIDOUT), i, 754; (COLLAZO and LEWICKI), i, 870.
effect of insulin on lactic acid and hydrogen-ion concentration in (KUHN, BAUR, and HECKSCHER), i, 343.
effect of aliphatic compounds on lactic acid and sugar in (KNOOP and JOST), i, 180.
effect of injection of urea on non-protein nitrogen of (SCHILL and KUNZE), i, 712.
changes in the phosphorus in (BIERRY and MOQUET), i, 454.
hydrolysis of the phosphoric esters of (MARTLAND), i, 454.
relation of phosphates in, to carbohydrate metabolism (BOLLIGER and HARTMAN), i, 1000.
variations in phosphoric acid during glycolysis in (PIAZZA), i, 1486.
new phosphoric acid derivative from (GREENWALD), i, 712.
propepsin in (GOTTLIEB), i, 742.
proteins of, and their determination (HUECK), i, 1484; (HOLM and TOMASSON), i, 1485.
changes in proteins of plasma in hydration of (PETERS, EISENMAN, and BULGER), i, 1490.
solubility of silver salts in (v. NEERGAARD), i, 1357.
sugar in (VISSCHER; SCOTT and BEST), i, 1343.
distribution of (HÖGLER and UEBERRACK), i, 453; (FOCK and HOLBØLL), i, 1486.
tables for (DREYFUSS), i, 94.
effect of dextrose administration on (ALBRITTON), i, 463.
effect of dihydroxyacetone on (RABINOVITSCH), i, 1352.
relations of, to glycogen (PRINGSHEIM), i, 605.
effect of injection of glucoses on (LIPMANN and PLANELLES), i, 179.
in presence of insulin (HÄUSLER and LOEWI), i, 753.
action of santonin on (STASICK), i, 1501.
after removal of the spleen (BIERRY, RATHERY, and LEVINA), i, 857.
non-protein sulphur of (KAHN and POSTMONTIER), i, 999.
influence of adrenaline on concentration of urea in (DUBOIS and POLONOVSKI), i, 481.
Blood, variations in urea in, due to deficiency of vitamin-*C* (RANDOIN and MICHAUX), i, 751.
urea in, after sarcoma inoculation and exposure to *X*-rays (DODDS, LAWSON, and MOTTRAM), i, 1492.
uric acid in (LENNOX and O'CONNOR), i, 711.
effect of fat diet on (HARDING, ALLIN, EAGLES, and VAN WYCK), i, 604.
influence of sodium chloride on (HARDING, ALLIN, and VAN WYCK), i, 94.
arterial, carbon dioxide in alveolar air and (BOCK and FIELD), i, 93.
and venous, oxygen and carbon dioxide in (STEWART), i, 451.
capillary, carbon dioxide content of (VERZÁR and VÁSÁRHELYI), i, 178.
of lactating cows, sugar in (WIDMARK and CARLENS), i, 608.
of children, calcium and phosphorus content of (ANDERSON), i, 188.
sugar content of (BROWN), i, 994.
dogs', constituents of (HADEN and ORR), i, 1484.
*iso*agglutinins in (MCENERY, IVY, and PECHOUS), i, 1344.
determination of urea in (VARTEJEANU), i, 1113.
of fish, sugar in (MCCORMICK and MACLEOD), i, 856.
goats', sugar in (SCHUHECKER), i, 715.
guinea-pigs', hydrogen carbonate and hydrogen ions in, in scurvy (LEPPER and ZILVA), i, 1208.
human, sugar and fat in (ARNOLDI and COLLAZO), i, 179.
infants', cholesterol in (BANU, NEGRESCO, and HERESCO), i, 452.
of infants and children, amino-acid content of (HOEFFEL and MORIARTY), i, 1484.
insects', hydrogen-ion concentration in (GLASER), i, 853.
of invertebrates, ionic reaction of (DUVAL), i, 325.
of ruminants, phosphorus content of (KAY), i, 994.
seal's (SUZUKI), i, 1345.
whale's (OKAHARA; MASUMIZU), i, 1349.
Blood detection and determination:—
analysis of (LATHAM), i, 1343.
analysis of the "primary ether extract" of (BING and HECKSCHER), i, 995.
analysis of, in asthma, hay fever, etc. (RAMIREZ, ST. GEORGE, and MOSES),

Blood detection and determination :—
detection of bromine in (BERNHARDT and UCKO), i, 454.
detection of poisonous gases in (KOHN-ABREST), i, 451.
determination of, in fæces (VAN ECK), i, 187.
determination of ammonia and urea in (MURRAY), i, 710.
determination of bile salts in (SZILÁRD), i, 1485.
determination of bismuth in (AUTENRIETH and MEYER), i, 182.
determination of calcium in (STANFORD and WHEATLEY), i, 1199.
determination of calcium in, and blood serum (BUDDE and FREUDENBERG; CLARK and COLLIP; SALVESEN), i, 713.
determination of calcium and phosphorus in (MYRBÄCK), i, 1485.
determination of carbon monoxide in (TERVAERT), i, 710.
determination of carbon dioxide in (HOLLÓ and WEISS), i, 95.
determination of chlorides in (BENGUEREL), i, 455; (RODILLON), i, 722; (MISLOWITZER and VOGT), i, 1485.
determination of cholesterol in (TOMINAGA), i, 453; (SACKETT), i, 995.
determination of cyanates in (MONTGOMERY), i, 455.
determination of dextrose in (MILROY), i, 1486.
determination of fat in (STEWART and WHITE), i, 1485.
determination of formic acid in (DE EDS), i, 713.
determination of hydrogen-ion concentration of, with cresol-red (HIRSCH), i, 606.
determination of hydrogen ions, carbon dioxide tension, and hydrogen carbonate in (HOLLÓ and WEISS), i, 709.
determination of lecithin in (GRIGAUT), i, 453.
determination of nitrogen in, by Folin's method (OSBORN), i, 323.
determination of oxygen and carbon dioxide in (BURWELL and ROBINSON), i, 604.
determination of organic substances in (BÁLINT and RUSZCZYNSKI), i, 323.
determination of phenol and cresol in (HAAS and SCHLESINGER), i, 334.
determination of phosphates in (MCCLUSKEY), i, 605.
Blood detection and determination :—
determination of phosphorus compounds in (STANFORD and WHEATLEY), i, 1200.
determination of lipoid phosphorus in (WHITEHORN), i, 95.
determination of reducing substances in (HILLER, LINDER, and VAN SLYKE), i, 1200.
determination of sodium in (HADEN), i, 1112.
determination of sugar in (BIERRY and MOQUET; GILBERT and BOCK; CALVERT), i, 179; (PATON), i, 180; (DINGEMANSE), i, 323; (DIAZ and CUENCA), i, 453; (DRESEL and ROTHMANN; CONDORELLI), i, 714; (LORBER), i, 852; (BENEDICT), i, 994; (TERVAERT), i, 1200.
determination of urea in (KARR), i, 323; (REHBERG; ROIG and HELMHOLTZ), i, 853; (ADDIS; VARTEJEANU), i, 1113; (PATTERSON), i, 1200.
determination of urea and sugar in (GRUSKIN), i, 1113.
determination of uric acid in (BULMER, EAGLES, and HUNTER; GARRY), i, 605; (BENEDICT), i, 995; (DELAVILLE and JONES), i, 1344.
Blood-corpuscles, viscosity of suspensions of (BERCZELLER and WASTL), i, 452.
effect of narcotics on the rate of sinking of (BAUMECKER), i, 321.
acidity of (DESGREZ, BIERRY, and LESCŒUR), i, 604.
sugar in (RICHTER-QUITTNER), i, 95.
mammalian, glutathione in (HOLDEN), i, 1484.
red, rate of sinking of (v. KLOBUSITZKY), i, 710.
valency of cations and anions on (OLIVER and BARNARD), i, 94.
action of bismuth on (SIMON), i, 1500.
naphthol reaction of (LOELE), i, 1342.
Blood pigments (KÜSTER and HEESS), i, 992; (SCHUMM), i, 1347.
constitution of (FRIEDLI), ii, 179.
acid scission products of (FISCHER and KLARER), i, 577.
oxido-reductions by (LIPSCHITZ), ii, 1070.
porphyrins from (PAPENDIECK and BONATH), i, 711.
Blood-plasma, physical properties of (ROFFO and CORREA), ii, 293.
development of (PICKERING and GLADSTONE), i, 1343.
mineral content of (RICHTER-QUITTNER), ii, 178.

Blood-plasma in renal disease, alkali salts in (RABINOVITCH), i, 462.
phosphorus and calcium in, during callus development of a fracture (SATANOVSKI), i, 1208.
determination of bicarbonates in (LEPPER and MARTIN), i, 1201.
determination of uric acid in (DELAVILLE and JONES), i, 1201.
Blood-serum, structure of (HANDOVSKY), i, 715.
refractive index and protein content of (BELTZ and KAUFMANN), i, 1200.
influence of alcohol on viscosity of (HAYASHI), ii, 663.
colloid constituents of (HANDOVSKY), i, 322.
concentration of inorganic constituents of, and cerebro-spinal fluid (HAMILTON), i, 1352.
distribution of ions in (RONA, PETOW, and WITTKOWER), i, 94; (RONA, HAUROWITZ, and PETOW), i, 95.
bone-forming elements in (PETERSON), i, 715.
effect of ultra-violet light on calcium in (MORITZ), i, 995.
porphyrins in (PAPENDIECK), i, 96.
proteins of (GROMELSKI), i, 95.
action of chloral hydrate on (NEŠKOVIĆ), i, 716.
action of formaldehyde on (HENLEY), i, 716.
influence of coagulation time of blood on toxicity of (LUMIÈRE and COURJON), i, 853.
determination of hydrogen ions in (CULLEN and BIILMANN), i, 1201.
determination of lipoids in (MINOVICI and ILIESCO), i, 452.
determination of potassium in (LEBERMANN), i, 96, 714.
determination of sodium in (LEBERMANN), i, 324.
Bodies, black, for use in calibration of pyrometers (ROBERTS), ii, 756.
Boiling, prevention of bumping while (REBBECK), ii, 996.
Boiling point, relation between melting point, critical temperature, and (PRUD'HOMME), ii, 99.
additive properties of (VAN ARKEL and DE BOER), ii, 758, 1141; (VAN LAAR), ii, 1141.
of fused salts (LORENZ and HERZ), ii, 276.
of organic compounds, influence of hydrogen and halogens on (VAN ARKEL and DE BOER), ii, 758.
of paraffin hydrocarbons, chart for (BAHLKE and WILSON), ii, 73.
Boletus granulatus, sterol from (MARSTON), i, 346.
Bomb, calorimetric. See Calorimeter, bomb.
Bone, chemistry of growth of (HAMMETT), i, 1001, 1208.
calcification of (HOLT, LA MER, and CHOWN; HOLT), i, 1209.
effect of excess of calcium on formation of (KORENCHEVSKI), i, 1355.
fixation of calcium and phosphorus in (TELFER), i, 859.
effect of calcium and sodium glycerophosphates and sodium dihydrogen phosphate on the formation of, in rachitic rats (KORENCHEVSKI and CARR), i, 464.
defective formation of, in rickets (ROBISON and SOAMES), i, 462.
hexosephosphoric esters in development of (MARTLAND and ROBISON), i, 201.
effect of yellow phosphorus on (BERNHARDT and RABL), i, 1357.
effect of callus formation in fracture of, on blood plasma (SATANOVSKI), i, 1208.
exhumed, protein in (KERNBACH), i, 326.
determination of calcium and phosphates in (v. EULER and JOHANSSON), i, 1489.
Borates. See under Boron.
Borax. See Sodium borate.
Boric acid. See under Boron.
Borneol, rotatory power of (LOWRY and CUTTER), ii, 356.
l-**Borneol** from spruce turpentine (WHEELER and HARRIS), i, 1437.
*iso***Borneol**, active, preparation of (VAVON and PEIGNIER), i, 1079.
β-**Borneolpropionic acid**, and its isomeride and lactone (RUPE and TSCHOPP), i, 1079.
γ-**Borneolpropyl alcohol**, and its derivatives (RUPE and TSCHOPP), i, 1079.
Bornyl esters, rotation of (KENYON and PRISTON), i, 942.
*iso***Bornylane**, and its derivatives (NAMETKIN), i, 47.
Bornylenecarboxylic acid, esters of (RUPE and VONAESCH), i, 499.
α-**Bornylene ethyl** and **methyl ketones**, and their derivative (RUPE and KOPP), i, 274.
*tert.-iso***Bornylol** (NAMETKIN, ABAKUMOVSKI, and SELIVANOV), i, 48.
*iso***Bornylone** (NAMETKIN, ABAKUMOVSKI, and SELIVANOV), i, 48.
Borodisalicylic acid, salts of (MEULENHOFF), i, 542.
strychnine salt (MEULENHOFF), i, 920.

Boron, atomic weight of (BRISCOE and ROBINSON), ii, 346; (BRISCOE, ROBINSON, and STEPHENSON), ii, 619.
structure and valency of (WAHL), ii, 937, 938.
valency of (RÂY), ii, 267.
and its *sub*oxide, preparation of (KAHLENBERG), ii, 425.
series spectra of (BOWEN and MILLIKAN), ii, 1013.
Boron compounds, valency in (MÜLLER), ii, 841.
Boron chlorides (STOCK, BRANDT, and FISCHER), ii, 571.
nitride, luminescence of (TIEDE and TOMASCHEK), ii, 931.
*mon*oxide, spectrum of (MULLIKEN), ii, 346.
*trio*xide, thermal expansion of (SAMSOEN), ii, 1051.
Boric acid, constitution and derivatives of (HERMANS), i, 500; ii, 697.
equilibrium of chromium trioxide, water, and (GILBERT), ii, 869.
solubility of mixtures of, with mannitol and with *cis*-tetrahydronaphthalene-1:2-diol (HERMANS), i, 501.
phosphors of (MICKWITZ), ii, 476.
osmosis of, through the skin (KAHLENBERG), i, 101.
determination of, with invert-sugar (GILMOUR), ii, 68.
determination of, volumetrically (CIKRTOVÁ and ŠANDERA), ii, 714.
determination of, in presence of aluminium iron or chromium (FUNK and WINTER), ii, 714.
Orthoboric acid, volatility of, in steam (ANSCHÜTZ and RIEPENKRÖGER), ii, 1084.
Borates, absorption spectra of beads of (SCHAUM and FUNCK), ii, 178.
of the alkali metals (AUGER), ii, 697.
complex (ROSENHEIM), i, 31.
Perborates, electrolytic preparation of (BODFORSS and ARSTAL), ii, 414.
Boron organic compounds:—
Boric acid, complex compounds of (MEULENHOFF), i, 541.
compounds of pyrocatechol and (WEIL and ADLER), i, 136; (BÖESEKEN and MIJS), i, 911.
Boron determination:—
determination of, in tungsten (BROPHY), ii, 901.
Boronia safrolifera, oil from (PENFOLD), i, 688.
Boswellia serrata, gum from (FOWLER and MALANDKAR), i, 1437; (MALANDKAR), i, 1438.
Brain, carbohydrate content of (TAKAHASHI), i, 1487.
carbohydrate metabolism of (B. E. and E. G. HOLMES), i, 1001, 1495.
hypoglycæmia and carbohydrate metabolism of (ASHER and TAKAHASHI), i, 331.
phosphatides of (THIERFELDER and KLENK), i, 997.
human, constituents of (LEMATTE and BEAUCHAMP), i, 1487.
hypocerebric acid from (FRÄNKEL and KARPFEN), i, 720.
rabbits', aminogenesis in, during hunger (PALLADIN and BJELJAEVA), i, 190.
determination of lipins in (GORODISSKY), i, 1487.
Brass, corrosion of, in sea-water (BENGOUGH and MAY), ii, 218.
influence of lead and tin on the brittle ranges of (BUNTING), ii, 282.
electrolytic, Röntgen ray analysis of (NAKAMURA), ii, 745.
Brazilin, constitution of, and its derivatives (PFEIFFER, OBERLIN, and KONERMANN), i, 1303.
Bread, brown and white, in the diet of rats (HARTWELL), i, 211.
Brilliant Congo R, preparation of (PALKIN and EVANS), i, 599.
Bromates. See under Bromine.
Bromine, atomic weight of (MOLES), ii, 346; (ROBINSON and BRISCOE), ii, 620.
chemical constants of (WOHL), ii, 98.
and its specific heat at low temperatures (SUHRMANN and V. LÜDE), ii, 96.
photochemical combination of hydrogen and (BODENSTEIN and LÜTKEMEYER), ii, 218.
photochemical combination of unsaturated hydrocarbons with (PLOTNIKOV), ii, 985.
photochemical reaction between tartaric acid and (GHOSH and MUKHERJEE), ii, 1179.
Budde effect in (LUDLAM), ii, 470.
viscosity of (STEACIE and JOHNSON), ii, 376.
reactions of, and its solutions (KAUFMANN and HANSEN-SCHMIDT), ii, 554.
reactions of, with aliphatic acids (WATSON), i, 1232.
action of, on azides (SPENCER), ii, 416.
effect of light on the reaction of potassium oxalate with (BERTHOUD and BELLENOT), ii, 141.

Bromine, use of, in volumetric analysis (MANCHOT and OBERHAUSER), ii, 161.
Hydrobromic acid, velocity of synthesis of (BRAMLEY), ii, 802.
and its sodium salt, conductivities of, in methyl and ethyl alcohols (GOLDSCHMIDT and DAHLL), ii, 128.
dielectric constant of (COMPTON and ZAHN), ii, 1118.
vapour pressure and composition of vapour phases in equilibrium with solutions of (VREVSKI, SAVARITZKI, and SCHARLOV), ii, 101; (VREVSKI), ii, 102.
constant-boiling aqueous solution of (EWING and SHADDUCK), ii, 859.
equilibria of, with ethylene and propylene (MAASS and WRIGHT), ii, 214.
action of, on tertiary alcohols (RAMART), i, 250.
Bromides, detection and determination of, in presence of cyanides (SCHULEK), ii, 432, 712.
determination of, with a mercury electrode (MÜLLER and AARFLOT), ii, 65.
determination of, iodometrically (LANG), ii, 597.
determination of, microchemically, with chlorine and iodine (STREBINGER and POLLAK), ii, 823.
Bromates, determination of, in the presence of hypobromites and iodates (SCHULEK), ii, 1197.
Hypobromites, determination of, in presence of hypoiodites (SCHULEK), ii, 1197.
Bromine detection:—
detection of (SCHERINGA), ii, 326; (LORENZ, GRAU, and BERGHEIMER), ii, 597.
detection of, in blood (BERNHARDT and UCKO), i, 454.
Bromination (FRANCIS), i, 1261, 1399.
of isomeric aromatic compounds (FRANCIS, HILL, and JOHNSTON), i, 1141.
Bromocresol-green, dissociation constant of (HOLMES and SNYDER), ii, 325.
Bromoform, density of, and its use in testing aluminium (PASCAL), ii, 646.
compounds of, with quaternary salts (STEINKOPF and BESSARITSCH), i, 495.
Bromophenol-blue, effect of alcohol and salts on dissociation of (RICHTER), ii, 237.
Brownian movement, theory of (ZEILINGER), ii, 389.
Bracine (LIONS, PERKIN, and ROBINSON), i, 831.
Brucinonic acid, hydrazone of, and its derivatives (LEUCHS and KANAO), i, 61.
Bryophyllum calycinum, diurnal changes in acidity of (GUSTAFSON), i, 1221.
Buccinum undatum (whelk), amphoteric chitins in radula of (PANTIN and ROGERS), i, 720.
Buchu-camphor (*diosphenol*), 8-hydroxy- (CUSMANO and MASSA), i, 686.
Buckthorn. See *Rhamnus cathartica*.
Buds, action of photocatalysers on the bursting of (NEITHAMMER), i, 1023.
Buffer mixtures (KOLTHOFF), ii, 396.
Bulbocapninecarboxylic acid, benzyl ester, methyl ether (OSADA), i, 283.
Bunya-bunya. See *Araucaria bidwilli*.
Burette, automatic, with flask for standard alkali solutions (McMILLAN), ii, 711.
micro- (REHBERG), i, 852.
Butadiene, *di*bromo- (LESPIEAU and PRÉVOST), i, 493.
Δαγ-Butadienealdehyde, γ-iodo-δ-hydroxy- (BAUMGARTEN), i, 1381.
***n*-Butaldehyde**, condensation of, with methyl ethyl ketone (POWELL), i, 7.
***n*-Butaldehyde**, *aaβ-tri*chloro-, phytochemical reduction of (ROSENFELD), i, 615.
γ-hydroxy- (HELFERICH and SCHÄFER), i, 7.
***iso*Butaldehyde**, acetals from (THOMS and KAHRE), i, 788.
Butane, adsorption of, by silica gels (PATRICK and LONG), ii, 382.
***d*-Butane**, β-thiol- (LEVENE and MIKESKA), i, 512.
***trans-cyclo*Butane-1:2-dicarboxylic acid**, resolution of, and its *l*-quinine salt and *d*-ethyl ester (GOLDSWORTHY), i, 33.
***d*-Butane-β-sulphonic acid** (LEVENE and MIKESKA), i, 512.
Butenonitriles, thermochemistry of (BRUYLANTS and CHRISTIAEN), i, 797.
Butesin. See Benzoic acid, *p*-amino-, *n*-butyl ester.
Δγ-Butinene, *aβ-di*hydroxy-, and its derivatives (LESPIEAU), i, 351.
Δβ-Butinen-α-ol, and its acetate (YVON), i, 514.
Butter, oxidation of vitamin-*A* in the preparation of (PLATON), i, 484.
rancidity of (STÄRKLE), i, 205.
murumuru (ANDRÉ and GUICHARD), i, 1124.
Butterfly, lemon. See *Gonypteryx rhamni*.
Buttgenbachite (SCHOEP), ii, 1196.
***n*-Butyl alcohol**, thermal properties of (PARKS), ii, 491.

n-**Butyl alcohol**, equilibrium of ethyl alcohol, water, and (DROUILLON), ii, 651.
*iso***Butyl alcohol**, miscibility of ethyl alcohol, water, and (BRUN), ii, 769.
tert.-**Butyl alcohol**, *tri*chloro-, preparation of, and its esters (TAFFE), i, 2.
Butylacetals (ADAMS and ADKINS), i, 784.
Butylallylbarbituric acids (VOLWILER), i, 1174.
ε-(δ-**Butylamino)amylamine**, δ-chloro-, salts of (v. BRAUN and ZOBEL), i, 1456.
Butylammonium tetrachloroferrate (REMY and KOTHE), ii, 1089.
n-**Butylaniline** *m*-nitrobenzenesulphonamide (MARVEL, KINGSBURY, and SMITH), i, 245.
*iso***Butylbenzene**, 2:4-*di*hydroxy- (SHARP & DOHME and DOHME), i, 541.
n-**Butylbenzoyloximidocarbonic acid**, ethyl ester (OESPER and COOK), i, 523.
4-*iso***Butyl-1:6-dimethylpyridine-3:5-dicarboxylic acid**, ethyl ester, methosulphate (MUMM), i, 964.
Butylene, dielectric constant of (SMITH and ZAHN), ii, 1118.
2:3-Butyleneglycol, formation of, in sugar fermentation (KLUYVER and DONKER), i, 1215.
α-**Butylhexoic acid** (HESS and BAPPERT), i, 349.
*o-iso***Butyl***cyclo***hexylamine**, and its salts and derivatives (v. BRAUN and BAYER), i, 429.
α-*n*-**Butylhydroxylamine**, and its hydrochloride (NEUFFER and HOFFMAN), i, 891.
α-*n*-**Butylhydroxyurethane** (NEUFFER and HOFFMAN), i, 891.
*iso***Butylidenediurethane** (THOMS and KAHRE), i, 789.
1-*n***-Butylindole**, and its picrate (v. BRAUN and BAYER), i, 429.
α-*iso***Butylindole** (VERLEY and BEDUWÉ), i, 578.
*cyclo***Butylmethyl** bromide (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.
*cyclo***Butylmethylamine**, and its benzoyl derivative (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.
*cyclo***Butylmethyl-***n***-butylaniline**, and its salts (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.
*cyclo***Butylmethylmethylaniline**, and its salts (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.
*cyclo***Butylmethyltrimethylammonium** bromide (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.
ε-**Butylnonane** (IVANOV), i, 503.
1-*n***-Butyloctahydroindole**, and its salts (v. BRAUN and BAYER), i, 429.
N-**Butylpiperidine**, δ-amino-, and its benzoyl derivative (v. BRAUN and ZOBEL), i, 1455.
n-**Butylvinylcarbinol**, resolution and rotation of, and its salts and esters (KENYON and SNELLGROVE), i, 771.
n-**Butylxanthydrol** (CONANT and SLOAN), i, 955.
n-**Butylxanthyl** *per*chlorate (CONANT and SLOAN), i, 955.
n-**Butyranilide**, γ-chloro- (LIPP and CASPERS), i, 963.
n-**Butyric acid**, molecular film of, between water and hexane (HARKINS and MCLAUGHLIN), ii, 771.
velocity of esterification of, in glycerol (KAILAN and OBOGI), ii, 49.
alkoxymethyl esters (FARREN, FIFE, CLARK, and GARLAND), i, 1230.
ethyl ester, bacteria producing (BIDAULT and BLAIGNAN), i, 1216.
furfuryl ester (ZANETTI), i, 567.
Butyric acid, α-bromonitro-, and α-chloronitro-, ethyl esters (MACBETH and TRAILL), i, 629.
γγ-*di*chloro-, and its methyl ester (MELDRUM and ALIMCHANDANI), i, 1273.
*tri*chloro-, conductivity of, in methyl alcohol (GOLDSCHMIDT and AARFLOT), ii, 976.
β-hydroxy-, formation of, by bacteria (LEMOIGNE), i, 478, 867.
action of oxygenated yeast on (MARIAN), i, 105.
excretion of, after extirpation of the pancreas (BIERRY and RATHERY), i, 856.
and acetone in urine (LUBLIN), i, 459.
determination of, in urine (GOLDBLATT), i, 1204.
l-**Butyric acid**, β-hydroxy-, degradation of, and its amide (KARRER and KLARER), i, 1036.
*iso***Butyric acid**, hydroxylamine salt (OESPER and BALLARD), i, 1233.
furyl ester (NAKAI), i, 360.
*dl-iso***Butyric acid**, αβ-*di*hydroxy-, and its salts and derivatives (GLATTFELD and SHERMAN), i, 881.
Butyrin (WEATHERBY, MCILVAINE, and MATLIN), i, 1128.
Butyronitrile, β-hydroxy-, and its sodium derivative (DEWAEL), i, 14.
Butyrophenone-5-arsinic acid, 3-nitro-2-hydroxy- (MARGULIES), i, 447.
n-**Butyro-***p***-toluidide**, γ-chloro- (LIPP and CASPERS), i, 963.

β-*iso*Butyryl-*p*-bromophenylhydrazide (VAN ALPHEN), i, 82.
***l*-Butyrylhydrazide, β-hydroxy-** (LEVENE and HALLER), i, 1375.
Butyryl-leucine, ethyl ester (KARRER, MIYAMICHI, STORM, and WIDMER), i, 594.
β-*iso*Butyrylnitrophenylhydrazides (VAN ALPHEN), i, 82.
Butyryl-*N*-phenylaminoacetic acid, β-amino- (LEUCHS and SANDER), i, 1248.
β-*iso*Butyryltolylhydrazides (VAN ALPHEN), i, 82.

C.

Cacao fat, glycerides of (AMBERGER and BAUCH), i, 114.
Cadinylene sulphochloride, crystallography and optically active properties of (KARANDÉEV), i, 1164.
Cadmium, structure of (COLLINS), ii, 1112.
spectrum of (RUARK and CHENAULT), ii, 725.
shifting of lines in (FUKUDA), ii, 1101.
spectral lines of (JOOS), ii, 612.
absorption spectra of neutral and ionised atoms of (STÜCKLEN), ii, 338.
arc spectrum of (RUARK), ii, 1016.
atomic and band spectra of (HULTHÉN), ii, 1113.
infra-red line spectrum of (RANDALL and ST. PETER), ii, 1101.
spark spectrum of (v SALIS), ii, 334; (BROWN and BEAMS), ii, 913.
fluorescence of the vapour of (KAPUSCINSKI), ii, 838.
resonance radiation from vapour of (POWER), ii, 1113.
effect of gelatin on the electro-deposition of (MILLIAU), ii, 680.
polarisation of, in alkaline solution (JIRSA and LORIS), ii, 45.
expansion coefficient of (BORELIUS and JOHANSSON), ii, 27.
thermal expansion of (GRÜNEISEN and GOENS), ii, 488.
absorption coefficient of electrons in vapour of (BRODE), ii, 1020.
velocity of diffusion of, in mercury (COHEN and BRUINS), ii, 648.
physical properties of crystals of (GRÜNEISEN and GOENS), ii, 22.
single crystal rods of, thermo-electric force of (BRIDGMAN), ii, 1136.
Cadmium alloys with aluminium and magnesium (VALENTIN and CHAUDRON), ii, 205.
Cadmium alloys with bismuth and lead, hardness of (DI CAPUA), ii, 1051.
with gold (SALDAU), ii, 872.
with lead, electrolysis of (KREMANN, KIENZL, and MARKL), ii, 132.
with lead and thallium (DI CAPUA), ii, 787.
with mercury, electrolysis of (KREMANN, MÜLLER, and ORTNER), ii, 132.
with silver, electrodeposition of (ATEN and VAN PATTEN), ii, 1166.
Cadmium carbonate, thermal dissociation of (ANDRUSSOV), ii, 538.
chloride, equilibrium of pyridine and (MASON and MATHEWS), ii, 1063.
halides, ammoniates of (BILTZ and MAU), ii, 1184.
additive compounds of 3:5-dibromo-*o*-toluidine with (HANN and SPENCER), i, 653.
hydroxide, precipitation of, electrometrically (BRITTON), ii, 1204.
iodide, specific heat of solutions of (COHEN, HELDERMAN, and MOESVELD), ii, 126.
spectrographic study of complexes of (JOB), ii, 471.
complex compounds of stannous iodide and (AUGER and KARANTASSIS), ii, 1182.
double nitrates with metals of the cerium group (CAROBBI), ii, 222.
oxide, solubility of, in water (REMY and KUHLMANN), ii, 119.
selenide (MOSER and ATYNSKI), ii, 584.
silicates (DUBON), ii, 221.
Cadmium organic compounds:—
diphenylcarbazides (FEIGL and LEDERER), i, 170.
Cadmium determination and separation:—
determination of (LUFF), ii, 826.
determination of, electrolytically (BÜTTGENBACH), ii, 439.
separation of copper and (SACCARDI), ii, 159.
separation of zinc and (LUFF), ii, 159
Cæsium, optical constants of (NATHANSON), ii, 187.
spectrum of (OUDT), ii, 915.
flame spectrum of (BLEEKER and BONGERS), ii, 77.
spark spectrum of (SOMMER), ii, 4.
low-voltage arc in the vapour of (NEWMAN), ii, 829.
photo-electric ionisation of the vapour of (FOOTE and MOHLER), ii, 919.
quantum number of (LINDSAY), ii, 467.

Cæsium *di*bromoiodide and *tri*iodide, crystal structure of (BOZORTH and PAULING), ii, 748.
stannic iodide (AUGER and KARANTASSIS), ii, 814.
chloroplatinate, solubility of, in water (ARCHIBALD and HALLETT), ii, 652.
Cæsium detection :—
detection of (MURMANN), ii, 437.
Calabar beans, alkaloids of (POLONOVSKI and POLONOVSKI), i, 151, 959.
Calamine, optical properties of (SÈVE), ii, 18.
Calantas wood oil, constituents of (BROOKE), i, 418.
Calcification (HOLT, LA MER, and CHOWN; HOLT), i, 1209.
Calcio-ancylite from Russian Lapland (TSCHERNIK), ii, 322.
Calcite, index of refraction of (HATLEY), ii, 21.
luminescence of (HEADDEN), ii, 89.
electrical conductivity of (v. RAUTENFELD), ii, 639.
thermal properties of (BÄCKSTRÖM), ii, 1162.
density of (DEFOE and COMPTON), ii, 646.
rhombohedral angle of (BRAGG and CHAPMAN), ii, 92.
lattice constants of gypsum and (HJALMAR and SIEGBAHN), ii, 92.
Calcium, *K*-absorption spectrum of (ROBINSON), ii, 614.
spark spectra of (DORGELO), ii, 724.
electrolytic deposition of, and its normal potential (EILERT), ii, 547.
thermal ionisation of (SAHA), ii, 1161.
chromosphere, equilibrium of (MILNE), ii, 628.
precipitation of, as oxalate, in presence of ammonium citrate (JAKÓB), ii, 69.
in normal and tuberculous blood (MATZ), i, 1492.
ions, action of, on the heart (HOLZLÖHNER), i, 1500.
Calcium alloys with mercury, electrolysis of (KREMANN, MÜLLER, and ORTNER), ii, 132.
Calcium compounds, effect of heat on the solubility of, in milk (BELL), i, 998.
in the body (SHERMAN and MACLEOD), i, 1001.
fixation of, in bones (TELFER), i, 859.
Calcium salts, perfusion with emanation and (ZWAARDEMAKER, FEENSTRA, and STEYNS), i, 193.
action of, as auxoureases (KOCHMANN), i, 200.
Calcium salts, adsorption of nicotine by (CHAPIN), i, 697.
assimilation of, by animals (HART, STEENBOCK, and ELVEHJEM), i, 108.
fixation of, by animal tissues (BREHME and GYÖRGY), i, 717; (BUDDE), i, 718.
influence of piperidine on deposition of (ÉDERER), i, 869.
effect of, on cats (HEUBNER), i, 613.
in the mothers' diet, effect of, on the young (KORENCHEVSKI and CARR), i, 463.
in bile (DITTRICH; DRURY), i, 325.
in blood (GYÖRGY; JANSEN), i, 324; (KYLIN and SILFVERSVÄRD), i, 852.
effect of hypnotic suggestion on (GLASER), i, 860.
and cerebro-spinal fluid (CAMERON and MOORHOUSE), i, 857.
determination of, in blood (STANFORD and WHEATLEY), i, 1199.
Calcium carbonate, formation of, from calcium oxalate in tissues (LOEPER, SCHULMANN, and TOUNET), i, 1497.
heat of dissociation of (BÄCKSTRÖM), ii, 1140.
thermal dissociation of (ANDRUSSOV), ii, 803.
deposition of crystals of (KOHLSCHÜTTER and EGG), ii, 1036.
hydrates of (HUME), ii, 697.
effects of, in soils (RAMANN; BLANCK and LOHMANN), i, 223; (GEHRING and WEHRMANN), i, 1031.
Röntgen ray analysis of various forms of (ÔSAWA), ii, 745.
μ-Calcium carbonate and vaterite (GIBSON, WYCKOFF, and MERWIN), ii, 1183.
Calcium chloride, electrical conductivity of aqueous solutions of (CROWE), ii, 541.
toxicity and excretion of (BOWLER and WALTERS), i, 723.
fluoride, solubility of, in acetic acid (DUPARC, WENGER, and GRAZ), ii, 652.
solubility of, in hydrochloric acid (SABALITSCHKA and MOSES), ii, 417.
hydride, spectrum of (MULLIKEN), ii, 469.
action of, on methyl ethyl ketone (PORLEZZA and GATTI), i, 788.
reduction of nitro compounds by (DURAND and HOUGHTON), i, 646.

Calcium hypochlorite, heat of formation of (NEUMANN and MÜLLER), ii, 488.
reaction of aniline with (RASCHIG), i, 243.
oxide (*lime*), action of, on silicates at high temperatures (TAMMANN and GREVEMEYER), ii, 580.
requirements of, for soils (ARRHENIUS), i, 766.
effects of, in soils (RAMANN; BLANCK and LOHMANN), i, 223; (SCHEFFER), i, 624.
conversion of, into carbonate in soils (BLANCK and SCHEFFER), i, 491.
Tricalcium phosphate, precipitated, adsorption by (JOLIBOIS and MAZE-SENCIER), ii, 770.
Calcium phosphates, equilibria of, in calcification of bone (HOLT, LA MER, and GHOWN; HOLT), i, 1209.
metasilicate, equilibrium of sodium metasilicate, silica, and (MOREY and BOWEN), ii, 1161.
sulphate, velocity of crystallisation of (CHASSEVENT), ii, 559.
solubility of, in dilute nitric and sulphuric acids (COLSON), ii, 121.
hydrates of (BILTZ), ii, 356.
X-ray investigation of (JUNG), ii, 367.
sulphide, phosphorescent, economy coefficients of (SCHMIEDER), ii, 931.
containing bismuth, photo-electricity and phosphorescence of (CURIE), ii, 355.
Calcium organic compounds:—
cyanamide, pure, preparation of (YASUDA), i, 377.
action of hydrogen on (BOBROVNICKI), i, 526.
phenyl iodide, luminescence of (DUFFORD, NIGHTINGALE, and CULVERT), ii, 474.
Calcium detection, determination, and separation:—
detection of, in presence of barium and strontium (LONGINESCU and CHABORSKI), ii, 1202.
determination of, nephelometrically (KRISS), i, 852.
determination of, in blood (MYRBÄCK), i, 1485.
determination of, in blood and serum (BUDDE and FREUDENBERG; CLARK and COLLIP; SALVESEN), i, 713.
determination of phosphates and, in bone (v. EULER and JOHANSSON), i, 1489.
Calcium detection, determination, and separation:—
separation of aluminium and (KOLLO and GEORGIAN), ii, 330.
separation of, from aluminium, iron, magnesium, and phosphoric acid (JAKÓB), ii, 1095.
separation of magnesium and (RODT and KINDSCHER), ii, 158; (HEILINGÖTTER), ii, 437; (LUFF), ii, 438; (BACH), ii, 825.
Calorimeter for specific heats of gases (OSBORNE, STIMSON, and SLIGH), ii, 995.
bomb (MOUREU), ii, 427.
with platinum lining (MOUREU and LANDRIEU), ii, 995.
electrical (COHEN, MOESVELD, and HELDERMAN), ii, 151, 402.
micro-, combustion (ROTH and LASSÉ), ii, 591.
micro-bomb, use of (PADOA and FORESTI), ii, 847.
oxy- (BENEDICT and FOX), ii, 998.
Calorimetry (VERKADE and COOPS), ii, 39; (VERKADE, COOPS, and HARTMAN), ii, 490.
high-temperature, buffer method in (ROTH), ii, 949.
animal (MELLY and v. RÖTTH), i, 193, 332; (CHAMBERS and DEUEL), i, 1352.
clinical (RICHARDSON and LEVINE), i, 723.
Calumba root, alkaloids of. See under Alkaloids.
Calycanthine from *Calycanthus floridus* (SPÄTH and STROH), i, 1447.
Calycanthus floridus, calycanthine from (SPÄTH and STROH), i, 1447.
Camel, urine of. See Urine.
Campania, radioactivity of gases from the solfataras of (STOKLASA and PENKAVA), ii, 235.
Camphane, *di*chloro- (*tricyclene dichloride*) (BRUS), i, 821.
Camphane series (FORSTER and SHUKLA), i, 1161.
Camphanecarboxylic acid, esters of (RUPE and VONAESCH), i, 499.
3-Camphanecarboxylic acid, ethyl ester (RUPE and KOPP), i, 275.
Camphane-6-nitrosohydroxylamine, 6-cyano-, and its salts and derivatives (PASSERINI), i, 1290.
α-Camphanyl ethyl and **methyl ketones**, and their derivatives (RUPE and KOPP), i, 275.
Camphene, preparation of (KOMATSU and FUJIO), i, 564.
rotatory dispersion of (PARISELLE), ii, 742.

Camphene, *sec.*-*α*-amino- and -*α*-nitro- (NAMETKIN and ZABRODIN), i, 417.
*iso***Camphenilone**, structure of (NAMETKIN), i, 1079.
Campholenic acid, *α*- and *α′*-bromo-, and *α*-hydroxy-, and their salts and derivatives (BURGESS), i, 45.
Campholic acid, esters of (RUPE and VONAESCH), i, 499.
Campholic acid, cyano-, methyl ester, ketones from (HALLER and LEGAGNEUR), i, 683.
Campholytic acid, structure of (CHANDRASENA, INGOLD, and THORPE), i, 1275.
***α*-Camphomethylamine**, and its derivatives (RUPE and HODEL), i, 275.
***α*-Camphomethylaminomethylene-camphor** (RUPE and HODEL), i, 275.
Camphor, preparation of (BRINER, EGGER, and PAILLARD), i, 274.
rotatory power of (LOWRY and CUTTER), ii, 356.
latent heat of fusion of (EFREMOV), ii, 1140.
surface tension of aqueous solutions of (EDWARDS), ii, 387.
equilibria of, with nitrophenols (EFREMOV), ii, 1160.
conversion of, into fenchone (RUZICKA), i, 274.
action of magnesium *p*-anisyl and *p*-tolyl bromides on (LEDUC), i, 821.
pharmacology of (LIPSCHITZ and OSTERROTH), i, 1005.
constitution of substances having similar physiological properties to (WEDEKIND), i, 684.
cyanohydrin (PASSERINI), i, 1290.
4-*p*-tolylsemicarbazone (WHEELER and BOST), i, 318.
rotation of derivatives of (HALLER and LUCAS), ii, 742.
rotation of sulphonic derivatives of (RICHARDS and LOWRY), ii, 934.
determination of, in plants (GORI), ii, 1009.
Camphor, *α*-cyano-, catalytic reduction of (RUPE and HODEL), i, 275.
halogen derivatives of (BURGESS), i, 45; (BURGESS and LOWRY), i, 415.
rotation of (CUTTER, BURGESS, and LOWRY), ii, 743.
hydroxy-, of Manasse, constitution of (FORSTER and SHUKLA), i, 1161.
α- and *β*-hydroxy-, constitution of (KARRER and TAKASHIMA), i, 940.
Camphor oils (ONO), i, 941, 1437.
Camphor seeds, fatty acids from fat of (KOMATSU and YAMADA), i, 881.
Camphor series (KOMATSU and FUJIO), i, 564; (KOMATSU and KURATA), i, 943, 1290.
Camphor-*π*-chlorosulphoxide, *α*-bromo- (BURGESS and LOWRY), i, 416.
Camphoric acid, vanadicamphoryl salt (SCAGLIARINI and AIROLDI), i, 920.
dimethylaminoethylimide of, and its hydrochloride (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 1437.
α-mononitrile, ketones from (HALLER and LEGAGNEUR), i, 683.
esters of, and their action with magnesium methyl iodide (HALLER and LEGAGNEUR), i, 924.
Camphor-*sec.*-*tert.*-nitrilic acid, and its derivatives, and chloro- (BREDT and IVANOV), i, 254; (BREDT), i, 255.
Camphorquinone, rotatory dispersion of (LOWRY and RICHARDS), ii, 265; (LOWRY and CUTTER), ii, 356.
Camphorquinone, *β*-bromo- (BURGESS and LOWRY), i, 416.
Camphor-*α*-sulphonamide, *αβ-di*bromo- (BURGESS and LOWRY), i, 416.
Camphor-*α*-sulphonic acid, *β*-bromo-, and its salts and derivatives (BURGESS and LOWRY), i, 415.
Camphorylacetic acid, esters of (RUPE and VONAESCH), i, 500.
Camphorylideneacetic acid (RUPE and VONAESCH), i, 500.
***β*-Camphorylpropionic acid**, and its derivatives (RUPE and TSCHOPP), i, 1079.
Canadite (MOLENGRAAFF and HALL), ii, 64.
Canarium strictum, oil from resin of (MOUDGIL) i, 823.
Canavalia ensiformis (jack bean), globulins of (SUMNER and GRAHAM), i, 1027.
Canavaline, preparation of (SUMNER and GRAHAM), i, 1027.
Cancer, biochemistry of (BIERICH and ROSENBOHM), i, 328.
constituents of blood and serum in (THEIS and BENEDICT), i, 724.
calcium in plasma in (ROFFO and CORREA), i, 999.
Cannizzarite (ZAMBONINI, DE FIORE, and CAROBBI), ii, 709.
Cannizzaro's reaction, mixed (ENDOH), i, 1428.
Caoutchouc, constitution of (OLIVIER), i, 566.
stretching of, and its Röntgen ray spectrum (KATZ), ii, 667.
and methylcaoutchouc, molecular refraction of (MACALLUM and WHITBY), ii, 478.

Caoutchouc, Joule effect in (HOEK; KATZ), ii, 969.
Capillarity, phenomena of (DUBRISAY), ii, 961.
evaporation and efflorescence (SCHULTZE), ii, 287.
and wetting (SCHULTZE), ii, 856.
Capillary layer, formation of (BAKKER), ii, 789.
Carbamic acid, salts, equilibria of, with carbonates (FAURHOLT), ii, 396.
esters of (OESPER, BROKER, and COOK), i, 1408.
Carbamic acids, iodo-esters of (CHINOIN FABRIK CHEMISCH-PHARMAZEUTISCHER PRODUKTE), i, 18.
Carbamic acids, *di*thio-, salts of (WHITBY and MATHESON), i, 644.
Carbamide (*urea*), formation of, from ammonium hydrogen carbonate (FICHTER and KERN), i, 796.
synthesis of (BAILEY), i, 121.
solubility of, in water (PINCK and KELLY), ii, 955.
equilibrium of methyl alcohol with (WALTON and WILSON), ii, 505.
determination of, with hypobromite (POHORECKA-LELESZ), ii, 76.
See also Urea.
Carbamides, mechanism of reactions of (DAVIS), i, 375.
***p*-β-Carbamido-β-acetoxy-*n*-propylaminophenylarsinic acid** (LES ÉTABLISSEMENTS POULENC FRÈRES), i, 601.
1-Carbamido-3:5-dimethyl-4-β-phenylethylpyrazole (v. AUWERS and MÖLLER), i, 404.
Carbazoles, hydrogenated (v. BRAUN and SCHÖRNIG), i, 1449.
Carbazones. See 5:5-Diphenyldihydroacridones.
β-Carbethoxyaminoacetamidobutyric acid, and its derivatives (LEUCHS and SANDER), i, 1249.
***n*-Carbethoxyaminobenzoic acid**, and its derivatives (KING and MURCH), i, 320.
3-Carbethoxyamino-4-carbethoxyhydroxyphenylarsinic acid (HAMILTON and SLY), i, 600.
3-Carbethoxyamino-8-ethoxy-2-*p*-methoxyphenylbenzopyranyl methyl ether (RIDGWAY and ROBINSON), i, 55.
3-Carbethoxyamino-8-ethoxy-2-*p*-methoxyphenylbenzopyrylium chloride (RIDGWAY and ROBINSON), i, 55.
ω-Carbethoxyamino-*p*-methoxyacetophenone (RIDGWAY and ROBINSON), i, 55.
3-Carbethoxyamino-8-methoxy-2-phenylbenzopyranyl ethyl and methyl ethers (RIDGWAY and ROBINSON), i, 54.
3-Carbethoxyamino-4-methylphenylarsinic acid (HAMILTON and SLY), i, 600.
Carbethoxyaminophenylarsinic acids (HAMILTON and SLY), i, 600
β-Carbethoxy-γ-benzeneazo-Δβ-pentenoic acid, ethyl ester (MACBETH and TRAILL), i, 782.
3-Carbethoxy-2:4-dimethylpyrrole-5-αω-*di*bromoethyl-ω-carboxylic acid (KÜSTER, BRUDI, and KOPPENHÖFER), i, 972.
3-Carbethoxy-2:5-dimethylpyrrole-4-glyoxylic acid, ethyl ester (KALLE & Co.), i, 297.
3-Carbethoxy-2:4-dimethylpyrrole-5-αω-*di*iodoethyl-ωω-dicarboxylic acid, ethyl ester (KÜSTER, BRUDI, and KOPPENHÖFER), i, 972.
3-Carbethoxy-2:4-dimethylpyrrole-5-vinyl-ω-carboxylic acid, and its silver salt and esters (KÜSTER, BRUDI, and KOPPENHÖFER), i, 972.
3-Carbethoxy-2:4-dimethylpyrrole-5-vinyl-ωω-dicarboxylic acid, and its silver salt and esters (KÜSTER, BRUDI, and KOPPENHÖFER), i, 972.
Carbethoxydimethylpyrryldi-(3-acetyl-2:4-dimethylpyrryl)-methanes (FISCHER and HEYSE), i, 77.
Carbethoxydimethylpyrryldi-(3-carbethoxy-2:4-dimethylpyrryl)-methanes (FISCHER and HEYSE), i, 77.
Carbethoxyglycerol carbonate (ALLPRESS and MAW), i, 4.
Carbethoxyhydroxamic acid, *p*-chloro- and nitro-benzoyl esters (OESPER and COOK), i, 523.
5-Carbethoxy-4-methyl-2-ethylpyrrole-3-acrylic acid (FISCHER and KLARER), i, 578.
5-Carbethoxy-4-methyl-2-ethylpyrrole-3-aldehyde, and its derivatives (FISCHER and KLARER), i, 578.
5-Carbethoxy-4-methyl-2-ethylpyrrole-3-α-cyanoacrylic acid (FISCHER and KLARER), i, 578.
5-Carbethoxy-4-methyl-2-ethylpyrrole-3-propionic acid (FISCHER and KLARER), i, 578.
θ-Carbethoxynonanilide (G. M. and R. ROBINSON), i, 354.
4-Carbethoxyphenylpyruvic acid, 2-nitro-, ethyl ester (KERMACK), i, 67.
δ-3-Carbethoxyphenylsemicarbazide (WILSON and CRAWFORD) i, 318.
3-ω-Carbethoxyvinyl-2-methylindole, ω-cyano- (SEKA), i, 67.

Carbides, preparation and properties of (FRIEDERICH and SITTIG), ii, 705.
effect of high temperatures on (RUFF), ii, 579.
Carbimides (SLOTTA and LORENZ), i, 1047.
Carbimides, thio-. See Thiocarbimides.
Carbobutoxyaminocarbobutoxyhydroxyphenylarsinic acids (HAMILTON and SLY), i, 600.
Carbobutoxyaminophenylarsinic acids (HAMILTON and SLY), i, 600.
Carbo-*n*-butoxyhydroxamic acid, *m*- and *p*-nitrobenzoyl esters (OESPER and COOK), i, 523.
Carbo-*o*- and -*p*-chlorophenylhydroxamic acids (OESPER and BROKER), i, 1408.
Carbocyanines, reduction of (HAMER), i, 305.
Carbodimethyldi-imide, and its salts (LECHER), i, 1391.
Carbohydrates, formation of, from proteins and fats in plants (TERROINE, TRAUTMANN, and BONNET), i, 755.
synthesis and degradation of, in the organism (GIGON), i, 463; (GIGON and BRAUCH), i, 611.
enzymic degradation and synthesis of (v. EULER, MYRBÄCK, and KARLSSON), i, 744; (v. EULER, MYRBÄCK, and NILSSON), i, 866.
photosynthesis of (GALWIALO), i, 870.
relative sweetness of (BIESTER, WOOD, and WAHLIN), i, 1498; (WILLAMAN, WAHLIN, and BIESTER), i, 1499.
fermentation of, by *Bacillus macerans* (MOSKOVITS), i, 1511.
utilisation of, by cells (MAIGE; RAYMOND), i, 1493.
induced oxidation of (PALIT and DHAR), i, 1041.
action of ammonia on (SHMOOK), i, 577.
reaction between tannin and (STOCKS and GREENWOOD), i, 1165.
alkali compounds of (SCHMID and BECKER), i, 1386.
in muscle (FURUSAWA), i, 849.
synthesis of (MEYERHOF, LOHMANN, and MEIER), i, 727.
Carboligase (NEUBERG and SIMON), i, 737.
β-Carbomethoxyaminobutyric acid, and its diamide (LEUCHS and SANDER), i, 1248.
β-Carbomethoxyaminobutyryl-*N*-phenylaminoacetic acid, and its ammonium salt and ethyl ester (LEUCHS and SANDER), i, 1248.
3-Carbomethoxyamino-4-carbomethoxyhydroxyphenylarsinic acid (HAMILTON and SLY), i, 600.
3-Carbomethoxyamino-4-methylphenylarsinic acid (HAMILTON and SLY), i, 600.
Carbomethoxyaminophenylarsinic acids (HAMILTON and SLY), i, 600.
β-Carbomethoxybutyrylaminoacetic acid, and its esters and amides (LEUCHS and SANDER), i, 1248.
Carbomethoxyglycerol carbonate (ALLPRESS and MAW), i, 4.
Carbomethoxypropionanilide (G. M. and R. ROBINSON), i, 355.
Carbon, atomic weight of (DEAN), ii, 255.
structure and valency of (WAHL), ii, 937.
spectrum of (LANG and SMITH), ii, 829.
series spectra of (BOWEN and MILLIKAN), ii, 1013.
effect of an electric field on the spark spectrum of (NAKAMURA and FUJIOKA), ii, 910.
spectra associated with (JOHNSON), ii, 723, 1024; (BIRGE), ii, 829, 836, 927.
melting point of (ALTERTHUM, FEHSE, and PIRANI), ii, 759.
vapour pressure of, in the arc (KOHN and GUCKEL), ii, 100.
diffusion of, through tungsten (ANDREWS and DUSHMAN), ii, 500.
significance of electrons in the crystallisation of (BECKENKAMP), ii, 358.
amorphous (RUFF, SCHMIDT, and OLBRICH), ii, 1125.
combustion of (SMITH and EBAUGH), ii, 888; (BILTZ), ii, 987; (SMITH), ii, 1085.
atoms, tetrahedral, stereochemistry of (KUHN and EBEL), i, 780; (KUHN and ZUMSTEIN), i, 1249.
graphitic conduction in conjugated chains of (LOWRY), ii, 299.
chains, alternating effect in (INGOLD), i, 646; (C. H. and E. H. INGOLD), i, 657; (HOLMES and INGOLD), i, 1142.
excretion of, in urine (SCHIMIZU), i, 185.
See also Graphite.
Carbon alloys with iron, equilibria of (DAWES), ii, 401.
with iron and nickel (KASE), ii, 973.
with iron and silicon (BECKER), ii, 973.
with iron and titanium (TAMARU), ii, 787.
Carbon *tetra*chloride, corrosion of metals by (RHODES and CARTY), ii, 1084.
action of benzoyl peroxide on (BÖESEKEN and GELISSEN), i, 30.

Carbon *tetra*chloride, condensation of phenol and (GOMBERG and SNOW), i,
*sub*oxide, compounds of phenylenediamines with (VAN ALPHEN), i, 81.
compounds of phenylhydrazine with (VAN ALPHEN), i, 83.
*mono*xide, formation of, by electrolysis (GERMANN), ii, 568.
from decomposition of acid chlorides (MAILHE), i, 1232.
spectrum of, at low pressures (BALDET), ii, 180, 469.
flame spectra of, and of its mixtures with hydrogen (WESTON), ii, 928.
action of the electric discharge on (OTT), ii, 579.
decomposition of, in the corona (CRESPI and LUNT), ii, 1178.
heat of oxidation of, by manganese dioxide (FRAZER and GREIDER), ii, 1064.
molecular heat of (SCHREINER), ii, 97.
specific heat of (PARTINGTON and CARROLL), ii, 373.
absorption of, in gas analysis (AMBLER; SUTTON and AMBLER), ii, 436.
combustibility of (ARMSTRONG), i, 1009.
explosion of mixtures of air and (BONE, NEWITT, and TOWNEND), ii, 800.
ignition of mixtures of air and (CROWE and NEWEY), ii, 875.
influence of chloroethylenes on inflammability of mixtures of air and (JORISSEN and VAN DER VALK), ii, 874.
explosion of ammonia with oxygen and (BEESON and PARTINGTON), ii, 682.
effect of water and of carbon dioxide on the catalytic oxidation of (LAMB and VAIL), ii, 567.
catalytic reduction of, to methane (FISCHER, TROPSCH, and DILTHEY), ii, 982.
action of, on enolates (SCHEIBLER and SCHMIDT), i, 917.
compound of auric chloride with (MANCHOT and GALL), ii, 1183.
compound of iridium chloride and (MANCHOT and GALL), ii, 232.
compounds of osmium chloride with (MANCHOT and KÖNIG), ii, 232.
compound of rhodium chloride and (MANCHOT and KÖNIG), ii, 1193.
compounds of ruthenium trihalides with (MANCHOT and KÖNIG), ii, 149.
Carbon *mono*xide, poisoning of catalysts by (PEASE and STEWART), ii, 691.
poisonous action of, on plants (WEHMER), i, 1029.
poisoning. See Poisoning.
in blood (NICLOUX), i, 321.
determination of (LEBEAU and MARMASSE), ii, 824.
determination of, by absorption in hæmoglobin (NICLOUX), ii, 824.
determination of, in blood (TERVAERT), i, 710.
*di*oxide, infra-red absorption spectrum of (ELLIS), ii, 1115.
and water vapour, action of ultraviolet light on (PORTER and RAMSPERGER), ii, 573.
scattering of light in mixtures of air and (BANERJI), ii, 1118.
magnetic susceptibility of (GLASER), ii, 82, 642.
ions in (ERIKSON), ii, 6.
equilibrium of, with carbon monoxide and oxygen in the corona discharge (WENDT and FARNSWORTH), ii, 1158.
heat of sublimation of (ANDREWS), ii, 758.
Joule effect for (KEYES and SEARS), ii, 275.
entropy of (BÄCKSTRÖM), ii, 1140.
solid, structure of (DE SMEDT and KEESOM), ii, 484; (MARK), ii, 1130.
absorption and equilibrium of, in alkaline solutions (WILLIAMSON and MATHEWS), ii, 105.
absorption of, by alkalis (LEDIG), ii, 106.
by salt solutions (IPATIEV and ANDRJUSCHTSCHENKO), ii, 956.
by glass (BANGHAM and BURT), ii, 284.
by glass wool (BANGHAM and SEVER), ii, 507.
constant mixtures of air and (JOHNSTON and WALKER), ii, 851.
equilibria of, with carbonic acid and carbonates in aqueous solution (FAURHOLT), ii, 295.
equilibrium of hydrogen and, with carbon monoxide and water vapour (PARTINGTON and SHILLING), ii, 395.
equilibrium of water and (TAMMANN and KRIGE), ii, 869.
explosion potential in, at high pressures (GUYE, MERCIER, and WEIGLÉ), ii, 490.
interaction of hydrogen and, in the electric discharge (LUNT), ii, 579.

Carbon *di*oxide, action of hydrogen with, on platinum (PRICHARD and HINSHELWOOD), ii, 564.
action of hydrogen with, on the surface of tungsten (HINSHELWOOD and PRICHARD), ii, 983.
effect of, on germination of seeds (SCHMIDT), i, 758.
in alveolar air and arterial blood (BOCK and FIELD), i, 93.
equilibrium of hæmoglobin and (ADAIR), i, 850.
equilibrium of, in the body (MURRAY and HASTINGS), i, 1342.
production of, by muscle cells (LIPSCHITZ and MEYER), i, 603.
production of, by nerve (PARKER), i, 849.
determination of (LEBEAU and MARMASSE), ii, 824.
apparatus for determination of (REED), ii, 714; (PLANTEFOL), ii, 902; (WITTIG), ii, 1094.
determination of, in small quantities (NISHI), ii, 1001.
dissolved, determination of (LEGENDRE), ii, 714.
determination of, in alveolar air (KNIPPING), i, 176.
determination of, in blood (HOLLÓ and WEISS), i, 95.
determination of, in capillary blood (VERZÁR and VÁSÁRHELYI), i, 178.
Carbonate ions, infra-red frequencies of (KORNFELD), ii, 12; (CHAPMAN and LUDLAM), ii, 1025.
Carbonates, infra-red absorption spectra of (TAYLOR), ii, 1115.
equilibria of carbamates with (FAURHOLT), ii, 396.
acid, determination of, in blood (HOLLÓ and WEISS), i, 709.
Carbon *di*sulphide, refractive index of, in the ultra-violet (BRUHAT and PAUTHENIER), ii, 478.
extinction coefficients and refractive indices of (BRUHAT and PAUTHENIER), ii, 837.
vapour pressure and specific heat of mixtures of methyl alcohol and (DRUCKER and WEISSBACH), ii, 953.
ignition of the vapour of (DIXON), ii, 683.
action of, on benzidine (ROSSI and CECCHETTI), i, 701.
reaction of benzylideneaniline with (BIGELOW), i, 242.
additive compound of triethylphosphine and (WIBAUT), i, 527.
Carbon determination:—
determination of, in organic compounds (HESLINGA), ii, 65; (WHITE and HOLBEN), ii, 240; (DESGREZ and VIVARIO; SIMON), ii, 436; (WILDE and LOCHTE), ii, 600; (LINDNER), ii, 901.
determination of, in tungsten (KING), ii, 435.
Carbon anodes. See Anodes.
Carbonates. See under Carbon.
Carbonisation, effect of catalysts on (LESSING and BANKS), i, 9.
Carbo-*m*-nitrophenoxyhydroxamic acid, and its benzoyl ester (OESPER and BROKER), i, 1408.
Carbonyl chloride (*phosgene*), formation and thermal decomposition of (BODENSTEIN and PLANT), ii, 135.
specific conductivity of (GERMANN), ii, 568.
thermal decomposition of (STOCK and WUSTROW), ii, 987.
dielectric constant of (SCHLUNDT and GERMANN), ii, 355.
photochemical reaction of hydrogen with (BREDIG and v. GOLDBERGER), ii, 142.
vapour pressure of solutions of aluminium chloride in (GERMANN and MCINTYRE), ii, 196.
compounds of chloroaluminates with (GERMANN and TIMPANY), ii, 1085.
compounds, metallic compounds of the enolic forms of (SCHEIBLER and SCHMIDT), i, 917; (SCHEIBLER, MARBENKEL, and BASSANOFF), i, 918.
Carbonyl-4:4′-*di*aminodiphenylmethane (BUTLER and ADAMS), i, 1458.
Carbophenoxyhydroxamic acid, and its silver salt and derivatives (OESPER and BROKER), i, 1408.
Carbopropoxyaminocarbopropoxyhydroxyphenylarsinic acids (HAMILTON and SLY), i, 600.
Carbopropoxyaminomethylphenylarsinic acids (HAMILTON and SLY), i, 600.
Carbopropoxyaminophenylarsinic acids (HAMILTON and SLY), i, 600.
Carbo-*n*-propoxyhydroxamic acid, *p*-chloro- and nitro-benzoyl esters (OESPER and COOK), i, 523.
Carbotolyloxyhydroxamic acids, and their silver salts and derivatives (OESPER and BROKER), i, 1408.
β-Carboxyanilinobenzylmalonic acids, ethyl esters (WAYNE and COHEN), i, 551.

dl-2′-Carboxybenzene-4-azodiphenyl-βγ-*di*amino-*n*-butanes, stereoisomeric, and their salts (MORGAN and SKINNER), i, 1192.
Carboxybutoxyaminomethylphenyl arsinic acids (HAMILTON and SLY), i, 600.
Carboxycamphoranilic acids (M. and R. SINGH), i, 1276.
5-Carboxy-2-*p*-chlorophenyl-2:1:3-triazole-4-benzoic acid (CHARRIER), i, 76; (CHARRIER, CRIPPA, TOIA, and BIANCHESSI), i, 591.
o-Carboxycinnamic acid (CHEMISCHE FABRIKEN VORM. WEILER-TER MEER), i, 1419.
2-Carboxy-4:5-dimethoxyphenylacetonitrile (HAWORTH and PINK), i, 929.
4-Carboxy-2:6-dimethylmandelic acid (PERKIN and TAPLEY), i, 42.
4-Carboxy-2:6-dimethylphenylacetic acid, and its dimethyl ester (PERKIN and TAPLEY), i, 42.
6-Carboxydiphenylamine-*N*-acetic acid, 2′-amino-, and its acetyl derivative, and 2′-nitro-, ethyl esters (LINNELL and PERKIN), i, 63.
o-Carboxydiphenylmethylarsine, and its oxide (AESCHLIMANN), i, 706.
2-Carboxy*dicyclo*-[3, 1, 0]heptane-1-acetic acid (BAKER), i, 917.
cis- and *trans*-2-Carboxy*cyclo*hexyl-1-butyric acids, and their derivatives (HÜCKEL and GOTH), i, 259.
o-Carboxyhydrocinnamic acid (STRAUS and EKHARD), i, 1139.
Carboxyhydroxamic acid, derivatives of (OESPER and COOK), i, 523.
5-Carboxy-3-hydroxy*spiro*di-1:1′-piperidinium bromide, lactone of (MANNICH and SUTTER), i, 1038.
α-Carboxy-α-hydroxyethylphosphinic acid, and its salts (BERNTON), i, 646.
Carboxylase of yeast, action of, on pyruvic acid (NEUBERG), i, 336.
2-Carboxy-5-methoxyphenylthiolacetic acid, 4-bromo- (GRIFFITH and HOPE), i, 828.
2-Carboxy-4:5-methylenedioxyphenylacetonitrile (HAWORTH and PINK), i, 929.
6-Carboxymethyl-6-ethylphenoxarsonium bromide (AESCHLIMANN), i, 706.
4(6 ?)-Carboxy-6(4 ?)-methylphthalonic acid (PERKIN and TAPLEY), i, 43.
p 4-Carboxy-6-methyl-2-quinolylphenylarsinic acid, and its ethyl and methyl esters (OGDEN and ADAMS), i, 707.
1-Carboxynaphthalene-3-sulphonic acid (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 1426.
4-Carboxyphenoxyacetic acid, 2-*mono*- and 2:6-*di*-nitro- (CHRISTIANSEN), i, 817.
5-Carboxy-2-phenyl-2:1:3-oxytriazole-4-benzoic acid (CHARRIER, CRIPPA, TOIA, and BIANCHESSI), i, 591.
γ-(*o*-Carboxyphenyl)propylnitrolic acid (STRAUS and EKHARD), i, 1139.
5-Carboxy-2-phenyl-2:1:3-triazole-4-benzoic acid (CHARRIER), i, 76.
p-4-Carboxy-2-quinolylphenylarsinic acid, and its derivatives (OGDEN and ADAMS), i, 706.
5-Carboxy-2-*p*-tolyl-2:1:3-triazole-4-benzoic acid (CHARRIER, CRIPPA TOIA, and BIANCHESSI), i, 591.
5-Carboxy-1:2:3-triazole-4-*o*-benzoic acid, and its hydrate and barium salt (CHARRIER and GALLOTTI), i, 589.
Carbylamines (PASSERINI), i, 1298.
Carcinoma, metabolism of cells in (WARBURG), i, 1206.
d-Δ³-Carene, catalytic oxidation of (RAO), i, 565, 687.
Carnaubic acid, gossypyl ester (FARGHER and HIGGINBOTHAM), i, 880.
Carnosine, decomposition of, by bacteria (HEFTER), i, 1362.
in muscle in relation to excretion of iminazole (HUNTER), i, 459.
Carnotite, ionium–thorium ratio in (KAMMER and SILVERMAN), ii, 1186.
determination of uranium in (BRINTON and ELLESTAD), ii, 72.
Carotin, preparation and properties of (SCHERTZ), i, 1024.
Caryophyllaceæ, calcium oxalate crystals in (BOHN), i, 1124.
β-Caryophyllene, formic ester (ROBERTSON, KERR, and HENDERSON), i, 1293.
Casein (*paracasein*) (KONDO), ii, 518.
surface tension of (JOHLIN), ii, 857.
conductivity of solutions of (FISCHENICH and PÓLÁNYI), ii, 662.
solubility of, in hydrochloric acid (LINDERSTRÖM-LANG and KODAMA), ii, 1056.
homogeneity of (LINDERSTRÖM-LANG), ii, 1056.
acid hydrolysis of (DUNN), i, 1477.
compounds of alkalis with (GREENBERG and SCHMIDT), ii, 129.
constitution of the amino-acid from (ABDERHALDEN and SICKEL), i, 846.
compounds of chloral hydrate with (LIEBEN), i 91.
precipitation of, from milk (LINDET), i, 846.
peptic and tryptic digestion of (RONA and KLEINMANN), i, 473.

Casein, bromo- (VANDEVELDE), i, 1477.
Caseinogen, coagulation of, in presence of calcium salts (LINDET), i, 846; (PORCHER), i, 846, 847.
absorption of iodine by (LIEBEN and LÁSZLO), i, 1476.
amino-acid from (ABDERHALDEN and SICKEL), i, 846.
calcium phosphate complexes of, and their coagulation by rennin (PORCHER), i, 846, 847.
fatty compound from (KON and FUNK), i, 230.
Catalase, action of (WIELAND and HAUSSMANN), ii, 1171.
function of (DIXON), i, 1010.
decomposition of hydrogen peroxide by (NORTHROP), i, 469.
precipitation of, from liver extract (MAUBERT, JALOUSTRE, LEMAY, and ANDREOLY), i, 614.
liver, effect of radium on (MAUBERT, JALOUSTRE, and LEMAY), i, 737.
liver and blood (RONA, FIEGEL, and NAKAHARA), i, 1505.
Catalysis (HARA), i, 536; (KOMATSU and KURATA), i, 687, 942; (KOMATSU and TANAKA), i, 905; (KOMATSU and MASUMOTO), ii, 1071.
theories of (TAYLOR), ii, 562; (v. EULER, ÖLANDER, and RUDBERG), ii, 876; (AMBARD), ii, 1170.
electrical nature of (PISARSHEVSKI), ii, 210.
effect of diluents on (CONSTABLE), ii, 983.
promoter action in (ROBERTSON), ii, 690; (BOSWELL and BAYLEY), ii, 805.
of gases with metals of the platinum group (DUPARC, WENGER, and URFER), ii, 1177.
of lactone formation by acids (TAYLOR and CLOSE), ii, 1070.
by finely-divided metals (FORESTI), ii, 692.
at solid surfaces (ARMSTRONG and HILDITCH), ii, 562, 563.
lecture experiments to illustrate (KOLTHOFF), ii, 819.
contact (SWIENTOSLAWSKI), ii, 562; (REMY and SCHAEFFER), ii, 563.
heterogeneous (RICHARDSON, KNUTH, and MILLIGAN), i, 229; (GARNER), ii, 140.
and adsorption (ALEKSEEVSKI), ii, 858.
negative (UNDERWOOD), ii, 808.
of oxidation reactions (DHAR), ii, 690.
Catalysts, physical state of (SMITH; GAUGER), ii, 1072.
reciprocal excitation and inactivation of (QUARTAROLI), ii, 805.
location of the catalytic property in (MOUREU, DUFRAISSE, and LOTTE), ii, 561.
effect of, on carbonisation (LESSING and BANKS), i, 9.
for synthesis of indoles (KORCZYŃSKI and KIERZEK), i, 1097.
effect of, on chlorination of toluene (O. and C. A. SILBERRAD, and PARKE), i, 1137.
poisoning of (PEASE and STEWART), ii, 691; (CONSTABLE), ii, 881.
contact, activity of (REMY and GÖNNINGEN), ii, 1176.
metallic, for reduction of carbon monoxide (FISCHER, TROPSCH, and DILTHEY), ii, 982.
oxidising, poisoning of (MOUREU and DUFRAISSE), ii, 413.
synthetic (CUSMANO), ii, 690.
Catalytic action (HARA and KOMATSU), i, 893.
electromagnetic nature of (DITMAN), ii, 51.
decomposition, mechanism of (CONSTABLE), ii, 804.
dehydrogenation (LAZIER and ADKINS), i, 878.
hydrogenation (ZELINSKI), i, 237.
with noble metals (ZELINSKI and TUROVA-POLLAK), i, 1052.
with nickel and hydrogen (FELDMANN), i, 1263.
with palladium and platinum oxides (KERN, SHRINER, and ADAMS), i, 625.
with platinum (BODENSTEIN), ii, 216; (WALDSCHMIDT-LEITZ and SEITZ), ii, 411.
with platinum black (WASER), i, 584.
with platinum oxide (PIERCE and ADAMS) i, 824; (HECKEL and ADAMS), i, 909; (CAROTHERS and ADAMS), ii, 693.
of inorganic compounds (GALL and MANCHOT), ii, 412.
of unsaturated compounds (LEBEDEV, KOBLIANSKY, and YAKUBCHIK), i, 350.
Cataphoresis and adsorption (FROMAGEOT), ii, 128.
in colloids (SCOTT and SVEDBERG; GERASIMOV), ii, 204.
influence of valency on (FREUNDLICH and ZEY), ii, 115.
Catechin, and its derivatives (FREUDENBERG, FIKENTSCHER, and HARDER), i, 419.

Catechin, constitution of (NIERENSTEIN), i, 279; (DEAN and NIERENSTEIN), i, 280; (FREUDENBERG, FIKENTSCHER, and WENNER), i, 692.
Cathodes, arsenic, hydrogen overvoltage at (GRUBE), ii, 43.
gas, electrolysis with (GÜNTHER-SCHULZE), ii, 549.
lead, overvoltage of (GLASSTONE), ii, 43, 301.
mercury, overvoltage of (GLASSTONE), ii, 133.
mercury dropping, electrolysis with (HEYROVSKÝ), ii, 43, 133, 673, 675; (HEYROVSKÝ and SHIKATA), ii, 674; (HERASYMENKO; BAYERLE), ii, 675; (BREZINA; EMELIANOVA; SANIGAR), ii, 676; (SMRZ; PODROUŽEK), ii, 677; (GOSMAN), ii, 678.
Cathode rays. See under Rays.
Cats, calcium in (HEUBNER), i, 613.
Cell or Cells, electrochemical, electromotive force of (BUTLER), ii, 42.
electrochemical, with liquid junctions, electromotive force of (MICHAELIS and FUJITA), ii, 131.
with zinc–carbon electrodes (NYBERG), ii, 42.
zinc–sulphuric acid–carbon, effect of superposed alternating current on (ALLMAND and PURI), ii, 303.
concentration, in methyl alcohol (GRANT), ii, 301.
Weston standard, reproducibility and constancy of (VOSBURGH), ii, 672.
decrease in electromotive force of (VOSBURGH), ii, 1066.
substitutes for (VOSBURGH), ii, 1164.
Cell or Cells, photoelectric, with fluorescent liquids (GRUMBACH), ii, 549.
silver iodide (GARRISON), ii, 212; (PRICE), ii, 680.
Cell or Cells, physiological, hydrogen-ion concentration of nuclei of (REISS), i, 199.
hydrogen-ion concentration and the oxidation-reduction potential of the interior of (J. and D. M. NEEDHAM), i, 1012.
permeability of (BROOKS), i, 1004; (CHODAT), ii, 521.
differences between the sap of, and the external medium (OSTERHOUT), i, 720.
respiration of (v. SZENT-GYÖRGYI), i, 793.
fission and respiration in (MEYERHOF), i, 993.
utilisation of carbohydrates by (MAIGE; RAYMOND), i, 1493.
Cell or Cells, physiological, bioelectric, theory of (HÖBER), ii, 131.
living, electrical charges in (HEILBRUNN), i, 1492.
argon in (PICTET, SCHERRER, and HELFER), i, 1202.
Cellobiose anhydride, and its acetyl derivatives (BERGMANN and KNEHE), i, 1384.
Celluloid, molecular dimensions of (BARTON and HUNT), ii, 21.
Cellulose (HESS), i, 118; (HESS and WELTZIEN), i, 517; (HESS, WELTZIEN, and SINGER), i, 641; (HESS, SCHULTZE, and MESSMER), i, 1245; (HESS, MESSMER, and LJUBITSCH), i, 1246.
constitution of (PRINGSHEIM, KNOLL, and KASTON), i, 1385.
structure of fibres of (HERZOG), i, 1045.
structure and Röntgen spectra of, and of its hydrated and alkali forms (HERZOG), i, 639; (KATZ), i, 639, 640; (KATZ and MARK), i, 640.
kinetics of the formation of (ARRHENIUS), ii, 560.
Röntgen spectra of lichenin, tunicin, and (HERZOG and GONELL), i, 371.
action of heat on (BAIN and KAY), i, 639.
depolymerisation of (HEUSER), i, 1387.
adsorption by (LIEPATOV), ii, 385.
adsorption and swelling of (SCHWALBE and TESCHER), i, 889.
effect of swelling on the Röntgen ray spectrum of (KATZ and MARK), ii, 660.
adsorption of alkalis by (LIEPATOV), ii, 957.
adsorption of sodium hydroxide by (VIEWEG), i, 12, 119; (HEUSER), i, 119; (D'ANS and JÄGER), i, 1387.
dispersion of, in salt solutions (v. WEIMARN), ii, 515, 782.
effect of catalysts on carbonisation of (LESSING and BANKS), i, 9.
action of formic acid on (HEUSER and SCHOTT), i, 370.
mercerisation of (HESS), ii, 782.
composition of ammoniacal copper oxide solutions of (BAUR; HESS and MESSMER), ii, 662.
and its derivatives, plasticity of (SHEPPARD and CARVER), ii, 1058.
plasticity of ammoniacal copper oxide solutions of (CARVER and FOLTS), i, 662.
saccharification of (KARRER), i, 118.
enzymic decomposition of (KARRER and ILLING), i, 741, 1029.

Cellulose, degradation of, by fungi (WEHMER), i, 521.
relation between age of, and the properties of the nitrate from it (MEUNIER and BREGUET), i, 119.
β-glucosan from (VENN), i, 887.
alkali (HEUSER and NIETHAMMER; HEUSER and BARTUNEK), i, 520.
cotton, viscosity of (SMALL), ii, 499.
action of heat on (KNECHT and MULLER), i, 370.
action of strong alkalis on (DEHNERT and KÖNIG), i, 369; (KNECHT and PLATT), i, 370.
copper number of (CLIBBENS and GEAKE), ii, 906.
jute (LEHNE and SCHEPMANN), i, 518.
wood (OZAWA), i, 234.
action of dilute acids on (SIEBER), i, 519.
determination of the copper value of (BENESCH), ii, 74.
Cellulose esters, stability of (CAILLE), i, 371.
preparation of plastic material from (FARBWERKE VORM MEISTER, LUCIUS, & BRÜNING), i, 544.
acetonitrates (ATSUKI), i, 642.
nitrate, adsorption of gases by (COSTA), ii, 956.
behaviour of, in ethyl alcohol (ATSUKI), i, 1044.
nitrates (ATSUKI), i, 120.
α-Cellulose, determination of (SCHWALBE), ii, 720, 1209.
Celluloses, determination of the reducing power of (HESS, WELTZIEN, and NAKAMURA), ii, 245.
Celtium. See Hafnium.
Cementite, crystalline structure of, in pearlite (BELAIEW), ii, 768.
Cephæline, derivatives of (KELLER and BERNHARD), i, 1086.
Cereals (JODIDI and WANGLER), i, 1224.
iron, sulphur, and chlorine in the grains of (GREAVES and NELSON), i, 757.
lactic acid bacteria from (FRED, PETERSON, and STILES), i, 1014.
physiology of (JODIDI), i, 1027.
determination of lipoid phosphorus in (RASK and PHELPS), ii, 328.
Cerebroside, new (KLENK), i, 1346.
Cerebrospinal fluid, precipitation of colloidal solutions by (SHAFFER), i, 326.
arsenic in, after injection of salvarsan (FORDYCE, ROSEN, and MYERS), i, 189.
calcium in (CAMERON and MOORHOUSE), i, 857.
distribution of carbon in (POLONOVSK and GALBRUN), i, 854.
Cerebrospinal fluid, cholesterol in (LASCH), i, 456.
diastase in (COHEN), i, 721.
pathological enzymes of (DRAGANESCU and LISSIEVICI-DRAGANESCU), i, 611.
concentration of inorganic constituents of, and blood-serum (HAMILTON), i, 1352.
sugar in, in relation to blood-sugar (GOODWIN and SHELLEY), i, 853.
uric acid content of (BERNHARD), i, 326.
determination of proteins in (WUNSCHENDORFF), i, 1346.
determination of sugar in (CSAPÓ), i, 721.
determination of urea in (ROIG and HELMHOLTZ), i, 853.
Ceresin, fatty acids from (MARCUSSON), i, 349.
Cerium, preparation and properties of (KREMERS and BEUKER), ii, 581.
fluorescent *L*-spectrum of (SKINNER), ii, 5.
and its alloys, adsorption of hydrogen by (SIEVERTS and ROELL), ii, 854.
Cerium hydride (WEEKS), ii, 1186.
copper nitrate (CAROBBI), ii, 145.
sulphate, isomorphism of zirconium sulphate and (FERNANDES), ii, 748.
Cerium determination:—
determination of, electrometrically (TOMIČEK), ii, 716.
determination of, volumetrically (ŠTÉRBA-BOEHM and MATULA), ii, 716.
Cerotic acid, melting point of (KIESEL), i, 1035.
Cervix, cow's, mucous secretion of (WOODMAN and HAMMOND), i, 721.
Cetacea (FUSE), i, 1348, 1349; (TAKATA), i, 1348, 1349; (MORIMURA; OKAZAKI), i, 1348; (SUSUKI), i, 1348, 1349, 1350; (OKOHARA; MASUMIZU; OIKAWA), i, 1349.
Cetene, solubility of mixtures of liquid sulphur dioxide and (SEYER and HUGGET), ii, 504.
pyrogenic decomposition of (GAULT and ALTCHIDJIAN), i, 110.
Cetorhinus maximus, liver oil from (ANDRÉ and CANAL), i, 1373.
Cetyl alcohol, preparation of (YOUTZ), i, 1125.
Chalk, formation of flint in (LINCK and BECKER), ii, 820.
Chalkones. See Phenyl styryl ketones.
Charcoal, adsorption by (URBAIN; KROETZ), ii, 191; (RUFF and HOHLFELD), ii, 192; (RICHARDSON and ROBERTSON; KOLTHOFF), ii, 383; (HERBST), ii, 956.
from viscous media (WEISSENBERGER and WALDMANN), ii, 655.

Charcoal, adsorption and evolution of mixed gases by (LORENZ and WIEDBRAUCK), ii, 382.
adsorption of hydrobenzoins by (HERMANS), ii, 31.
adsorption of methylene-blue by (MECKLENBURG), ii, 530.
adsorption of poisons by (DINGEMANSE and LAQUEUR), i, 1500.
adsorption and detoxication by various (KAP-SOO-LEE), i, 101.
negative adsorption and oxidation by (ORYNG), ii, 656.
oxidation on the surfaces of (RIDEAL and WRIGHT), ii, 806.
oxidation of thiocarbamide by (FREUNDLICH and FISCHER), ii, 307.
animal, highly active (FIRTH and WATSON), ii, 310.
"norit," sorption and catalytic activity of (FIRTH and WATSON), ii, 880.
powdered, adsorption by various (KÖNIG), ii, 1054.
sugar, adsorption of vapours of acetic acid and of toluene by (BAKR and MCBAIN), ii, 193.
activated sugar, adsorption by (MILLER), ii, 656.
wood, decomposition of acetic acid by (KULTASCHEV and KUDRJASCHEVA), ii, 881.
new wood, adsorption of poisons by (LAQUEUR and SLUYTERS), i, 736.
Chaulmoogra oil (HASHIMOTO), i, 1234.
fractionation of (WRENSHALL and DEAN; DEAN, WRENSHALL, and FUJIMOTO), i, 1414.
physiological action of (NORD and SCHWEITZER), i, 734.
metabolic studies with (READ), i, 194.
Chaulmoogric acid, 3-hydroxybenzaldehyde-2-mercuric ester (WELLCOME FOUNDATION, LTD., HENRY, and SHARP), i, 1154.
Cheese, Roquefort, odour of (STÄRKLE), i, 205.
ψ-Chelerythrine, and its salts, and bromo- (GADAMER and WINTERFELD), i, 285.
Chelidonic acid, ethyl ester, semicarbazone (ARNDT, SCHOLZ, and NACHTWEY), i, 58.
Chelidonine, bromo-, acetyl derivatives (GADAMER and WINTERFELD), i, 284.
Chelidonium alkaloids (GADAMER), i, 284, 287.
Chemical compounds, properties of, and atomic structure (FAJANS), ii, 623.
constants of elements (EGERTON), ii, 277.
of monatomic gases (SIMON), ii, 98.
Chemical constitution and *K*-absorption spectra (STELLING), ii, 935, 936.
and rotatory power (KENYON, PHILLIPS, and TURLEY), i, 507; (KENYON and SNELLGROVE), i, 771; (HEWITT and KENYON), i, 914.
of optically active compounds (RUPE and KOPP), i, 274; (RUPE and VONAESCH), i, 499; (RUPE and RINDERKNECHT), i, 533.
of sugars (HUDSON and KUNZ), i, 1043.
and magnetic susceptibility of organic compounds (PASCAL), ii, 634.
influence of, on thermal properties of binary mixtures (PASCAL), ii, 953.
and the parachor (SUGDEN, REED, and WILKINS), ii, 936; (SUGDEN and WHITTAKER), ii, 937.
and colour (KEHRMANN), i, 435; (JOHN), i, 1336; (MOIR), ii, 261, 634, 1121.
relation of pungency to (NOMURA and HOTTA), i, 1156.
relation between camphor-like action and (WEDEKIND), i, 684.
and resin-forming capacity (HERZOG), i, 386.
and bactericidal action (ISHIWARA), i, 750.
and physiological action (GILMAN and PICKENS), i, 333; (DUBIN, CORBITT, and FREEDMAN), i, 1502.
and trypanocidal action (KING and MURCH), i, 319.
reactions, production of (BRUTZKUS), ii, 215.
mechanism of (DHAR), ii, 214; (JÜPTNER), ii, 552; (TOLMAN), ii, 799.
temperature coefficients and mechanism of (RICE, FRYLING, and WESOLOWSKI), ii, 48.
calculation of the work of (FRENZEL), ii, 119.
induction periods in (SANYAL and DHAR), ii, 136.
critical increment of (GARNER), ii, 552, 1167; (HINSHELWOOD), ii, 874.
apparatus for carrying out (BUHTZ), ii, 427.
effect of water on (PARSONS), ii, 880.
induced (MITTRA and DHAR), ii, 576.

Chemical reactivity, radiation theory of (Roy), ii, 1167.
and conjugation (Heilbron, Kitchen, Parkes, and Sutton), i, 1320.
Chemiluminescence (Kautsky), ii, 1026.
luminous efficiency of (Adams), ii, 1117.
Chemistry, results of theoretical development of (Haber), ii, 395.
Chenodehydrodeoxycholic acid, and its esters (Windaus, Bohne, and Schwarzkopf), i, 405.
Chenodeoxybilianic acid, trimethyl ester (Windaus and Bohne), i, 554.
Chenodeoxybilianic acids, and their trimethyl esters (Windaus, Bohne, and Schwarzkopf), i, 406.
Chenodeoxycholic acid, and its salts (Windaus, Bohne, and Schwarzkopf), i, 405.
Chenopodium oil (Henry and Paget), i, 1162.
anthelmintic properties of constituents of (Smillie and Pessôa), i, 194.
Chicks, vitamin-*C* in liver of (Carrick and Hauge), i, 617.
embryo, coagulable material in (Pickering and Gladstone), i, 1343.
China wood oil, refractive index of, and its constituents (Böeseken and Ravenswaay), i, 507.
α-elæostearic acid from (Böeseken and Ravenswaay), i, 1129.
Chitin (Karrer, Schnider, and Smirnov), i, 418.
Chloral hydrate, reduction of compounds of (Meldrum and Alimchandani), i, 1272.
compound of casein with (Lieben), i, 91.
action of, on proteins of serum (Nešković), i, 716.
Chloralose (Chevalier and Cherbuliez), i, 467.
Chloralurethylane (Meldrum and Alimchandani), i, 1273.
"**Chloramine** *T*," use of, in analysis (Noll), ii, 66.
Chlorapatite in meteorites (Shannon and Larsen), ii, 321.
Chlorates. See under Chlorine.
Chlorella, synthesis of vitamin-*A* by (Coward), i, 750.
fixation of nitrogen by mixed cultures of *Azotobacter chroococcum* and (Lipman and Teakle), i, 748.
Chloric acid and Chlorides. See under Chlorine.
Chlorination, photochemical (Plotnikov), ii, 220.
by means of selenium (O. and C. A. Silberrad, and Parke), i, 1137; (O. and C. A. Silberrad), ii, 1191.
Chlorine, atomic weight of (Gleditsch), ii, 174; (Moles), ii, 346.
meteoric, atomic weight of (Harkins and Stone), ii, 921.
meteoric and terrestrial, atomic weights of (Harkins and Stone), ii, 1108; (Menzies), ii, 1109.
spectrum of (Lunt), ii, 611.
series spectra of (Bowen and Millikan), ii, 342, 610.
spark spectrum of (L. and E. Bloch), ii, 611.
ultra-violet spectrum of (Hopfield), ii, 1100.
spectral frequencies of (Holweck), ii, 336.
photo-activation of (Taylor), ii, 811, 1079; (Bowen), ii, 1079.
isotopes of (Pilley), ii, 462; (Harkins; Harkins and Stone), ii, 1108; (Menzies), ii, 1109.
and their spectra (Pfund), ii, 255.
critical potential of (Holweck), ii, 729.
activation of, by the electric discharge (Schaum and Feller), ii, 90.
dissociation of (Wohl), ii, 395; (v. Wartenberg and Weigel), ii, 668.
dissociation of, into atoms (Trautz and Geissler), ii, 294.
chemical constants of (Wohl), ii, 98; (Cox), ii, 645.
liquid, viscosity of (Steacie and Johnson), ii, 376.
solubility of, in carbon tetrachloride (Schwab and Hanke), ii, 190.
photochemical reaction between hydrogen and (Marshall), ii, 883; (Kornfeld and Müller), ii, 984; (Norrish), ii, 1080, 1179.
photochemical reaction of hydrogen and, in presence of oxygen (Norrish and Rideal), ii, 572.
effect of water vapour on the photochemical combination of hydrogen and (Coehn and Tung), ii, 142.
as an oxidising and chlorinating agent (Datta and Chatterjee), i, 891.
reaction of arsenic trioxide with (Cambi and Voltolin), ii, 148.
action of, on mercury (Getman), ii, 59.
action of, on potassium bromide or iodide (Parsons), ii, 880.

Chlorine *mon*oxide, photochemical decomposition of (BODENSTEIN and KISTIAKOVSKI), ii, 883.
action of, on organic compounds (GOLDSCHMIDT and SCHÜSSLER), i, 497.
*di*oxide, absorption spectrum and specific heat of (MAYER), ii, 12.
action of light on (BOOTH and BOWEN), ii, 573.
heats of solution and of decomposition of (BOOTH and BOWEN), ii, 299.
*hex*oxide (BODENSTEIN, HARTECK, and PADELT), ii, 991.
Hydrochloric acid, photosynthesis of (CATHALA), ii, 812; (KORNFELD and MÜLLER), ii, 984; (NORRISH), ii, 1080.
absorption spectrum of (COLBY; BECKER), ii, 1114.
ultra-red, rotation spectrum of (CZERNY), ii, 1024.
and its sodium salt, conductivities of, in methyl and ethyl alcohols (GOLDSCHMIDT and DAHLL), ii, 128.
ionisation potential of (BARKER and DUFFENDACK), ii, 1017.
liquid junction potential between potassium chloride solutions and (SCATCHARD), ii, 398.
diffusion potential and transport number of (CARTER and LEA), ii, 300.
activity coefficients of (RANDALL and VANSELOW), ii, 33; (SCATCHARD), ii, 397.
activity coefficients and transport numbers of methyl alcohol solutions of (NONHEBEL and HARTLEY), ii, 1061.
activity coefficients of, in ethyl alcohol solution (HARNED and FLEYSHER), ii, 538.
transference numbers of, in ethyl alcohol (HARNED and FLEYSHER), ii, 542.
influence of gelatin on transport numbers of (SCATCHARD), ii, 41.
dielectric constant of (COMPTON and ZAHN), ii, 1118.
specific heat of aqueous solutions of (VREVSKI and KAIGORODOV), ii, 125; (VREVSKI; VREVSKI and SAVARITZKI), ii, 126.
partial pressures of aqueous solutions of (YANNAKIS), ii, 514.
vapour pressures of aqueous solutions of (VREVSKI, SAVARITZKI, and SCHARLOV), ii, 101; (VREVSKI), ii, 102; (ZEISBERG), ii, 401; (MITSUKURI, ROKKAKU, and WATASE), ii, 1050.

Chlorine:—
Hydrochloric acid, boiling and condensation curves of aqueous mixtures of (CARRIÈRE and ARNAUD), ii, 102.
absorption of, by sulphuric acid (CUPR), ii, 655.
absorption of, in water (WHITMAN and DAVIS), ii, 106.
possible dynamic form of (v. WEIMARN), ii, 395.
reaction between bismuth sulphide and (RAMACHANDRAN), ii, 1208.
Chlorides, transport numbers of (SMITH and MACINNES), ii, 542.
electrical conductivity of, in fused antimony trichloride (KLEMENSIEWICZ), ii, 40.
fused, anode effect in electrolysis of (HEPPENSTALL and SHUTT), ii, 45.
sparingly soluble, solubility of, in chloride solutions (KENDALL and SLOAN), ii, 1052.
excretion of, in urine (TAKANOSU), i, 185.
detection and determination of, in presence of cyanides (SCHULEK), ii, 432, 712.
determination of (DOUGHTY), ii, 238.
determination of, calorimetrically (DEAN and NEWCOMER), ii, 597.
determination of, with a mercury electrode (MÜLLER and AARFLOT), ii, 65.
determination of, micro-chemically, with bromides and iodides (STREBINGER and POLLAK), ii, 823.
determination of, in plant sap (GORTNER and HOFFMAN), ii, 485.
determination of, in animal tissues (VLADESCU), i, 1113.
determination of, in blood (BENGUEREL), i, 455; (RODILLON), i, 722.
determination of, in blood and other body fluids (MISLOWITZER and VOGT; NITSCHKE), i, 1485.
Chloric acid, and its salts, reduction of, by ferrous sulphate (HARVEY), ii, 1197.
neutralisation of, with alkalis (SIMON), ii, 288.
Chlorates, determination of (WAGNER), ii, 1196.
Perchloric acid and its salts, refractivity of (MAZZUCCHELLI and VERCILLO), ii, 963.
conductivity of (LINDE), ii, 39.
use of, in analysis (YOE), ii, 902.

Chlorides:—
Perchlorates, detection of (MARVEL and DU VIGNEAUD), ii, 240.
Chlorous acid, determination of, in presence of hypochlorous acid (SCHLEICHER and WESLY), ii, 433.
Hypochlorous acid, and its alkali salts (DIETZEL and SCHLEMMER), ii, 892.
ionisation constant of (SOPER), ii, 37.
photochemical decomposition of aqueous solutions of (ALLMAND, CUNLIFFE, and MADDISON), ii, 572.
reactions of esters of (DURAND and NAVES), i, 1230.
determination of, electrometrically (SCHLEICHER and TOUSSAINT), ii, 433.
Chlorine detection and determination:—
detection of, in presence of bromine and iodine (DIMITROV), ii, 326.
determination of (CONGDON, CRABTREE, COLES, SMITH, and VEHALGO), ii, 65.
determination of, in benzaldehyde (BUKSCHNEWSKI; FAUST and SPÄNGLER), ii, 1000.
determination of, in cinnamaldehyde (FAUST and SPÄNGLER), ii, 1000.
determination of, in tissues (URBACH and FANTL), i, 1203.
Chlorine water, photochemical decomposition of (ALLMAND, CUNLIFFE, and MADDISON), ii, 572.
reactions between potassium iodide and (MÜLLER and JUNCK), ii, 584.
Chlorite, white, from Madagascar (ORCEL), ii, 821.
Chlorites, constitution of (ISKYUL), ii, 152.
Chloroamine (RASCHIG), ii, 146.
Chloroamines, hydrolysis of acyl derivatives of, in water (SOPER), i, 381.
Chloroauric acid. See under Gold.
Chloro-ethers (FARREN, FIFE, CLARK, and GARLAND), i, 1230.
Chloroferrates. See under Iron organic compounds.
Chloroform, absorption spectrum of (DREISCH), ii, 178.
infra-red absorption spectra of (DREISCH), ii, 627.
surface tension of, and its mixtures with *cyclo*hexanol (WEISSENBERGER and SCHUSTER), ii, 648.
equilibrium of water and (TAMMANN and KRIGE), ii, 869.
parent substance of (MARCHLEWSKI), i, 604.
Chloroform, addition of, to aldehydes (HOWARD), i, 557.
action of benzoyl peroxide on (BÖESEKEN and GELISSEN), i, 30.
compound of tetrapropylammonium iodide and (STEINKOPF and BESSARITSCH), i, 495.
fixation of, by the nervous system (NICLOUX and YOVANOVITCH), i, 195.
Chlorophaerite in dolerites of Edinburgh (CAMPBELL and LUNN), ii, 1093.
Chlorophyll, effect of light on formation of, in leaves (PALLADIN), i, 1518.
development and distribution of, in roots of plants exposed to light (POWELL), i, 1221.
spectrum of, in living leaves (WLODEK), ii, 258.
effect of light on decomposition of, in autumn leaves (COMBES), i, 1120.
complex metallic derivatives of (KUNZ and SEHRBUNDT), i, 1297.
in marine algæ (LUBIMENKO), i, 216.
action of gastric juice on (KORTSCHAGIN), i, 200.
excretion and detection of degradation products of, in urine (HOFSTETTER; KITAHARA), i, 460.
Chloroplatinic acid. See under Platinum.
Chlorosulphonic acid, esters of (TRAUBE, BAUMGARTEN, BAERMANN, LANGE, and JUSTH), i, 775.
Cholesterol, molecular weight of (PARTINGTON and TWEEDY), ii, 273.
action of Röntgen rays on (ROFFO), i, 393.
rotatory power of derivatives of (ROYER), ii, 184.
and its esters, sols of (KEESER), ii, 290, 661.
sols, influence of gelatin on the stability of (KERMACK and MACCALLUM), ii, 525.
dehydrogenation of (DIELS and GÄDKE), i, 1062.
conversion of, into 4-hydroxyhyocholanic acid (WINDAUS and HOSSFELD), i, 1066.
and lecithin in relation to cell membranes (CORRAN and LEWIS), i, 198.
antirachitic properties of irradiated (HESS, WEINSTOCK, and HELMAN), i, 750; (HESS and WEINSTOCK), i, 1020.
vitamin-like properties of (DRUMMOND, ROSENHEIM, and COWARD), i, 617.
synthesis of, in the body (CHANNON), i, 1001.

Cholesterol, origin and fate of, in the organism (FOX and GARDNER), i, 859.
in blood of infants (BANU, NEGRESCO, and HERESCO), i, 452.
in blood serum (HANDOVSKY), i, 322.
in diabetes (NITZESCU, POPESCU-INOTESTI, and CADARIU), i, 462.
in urine (GARDNER and GAINSBOROUGH), i, 1204.
iodine number of (DAM), ii, 444.
serological differentiation of lecithin and (SACHS and KLOPSTOCK), i, 1486.
determination of, in blood (SACKETT), i, 995.
determination of, gravimetrically, in blood (TOMINAGA), i, 453.
and its esters, determination of, in tissues (GARDNER and FOX), i, 182.
Cholic acid, decomposition of, by *Bacillus coli* (KAZIRO), i, 1363.
*apo***Cholic acid**, preparation of (RIEDEL), i, 406.
Choline, origin and function of (GIRNDT), i, 1363.
and its derivatives, permeability and physiological action of (WERTHEIMER and PAFFRATH), i, 1211.
stability of solutions of, in ampoules (LE HEUX), i, 374.
salts of (GUTH), i, 1247.
nitrate and chloroacetyl derivative, action of, on the nervous system (HUNT and RENSHAW), i, 862.
determination of, and its hormonal action (ABDERHALDEN and PAFFRATH), i, 1016.
Cholines, proteinogenous, pharmacology of (GORDONOV), i, 1502.
Chromans. See Benzopyrans.
thio-. See Benzthiopyrans.
Chroman series (KAHIL and NIERENSTEIN), i, 52.
Chromanone chlorostannate (ARNDT and PUSCH), i, 1304.
Chromanone, 7-hydroxy-, and its derivatives (PFEIFFER, OBERLIN, and KONERMANN), i, 1303.
Chromanones, 2:3-*di*bromo-, bromothio-, and thio-, and their derivatives (ARNDT), i, 1309.
thio-, and their derivatives (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1305.
spectrochemistry of (KROLLPFEIFFER), ii, 1028.
Chromates and **Chromatotetramminecobaltic salts**. See under Chromium.
Chrome alum, periodic crystallisation of (HEDGES and MYERS), ii, 1168.
Δ^3-Chromens, thio-, spectrochemistry of (KROLLPFEIFFER), ii, 1028.
Chromic salts. See under Chromium.
Chromium, structure of (COLLINS), ii, 18.
crystal structure of (PATTERSON), ii, 845.
K-doublets in spectrum of (SELJAKOV and KRASNIKOV), ii, 914.
spark spectrum of (L. and E. BLOCH), ii, 829.
ultra-violet spark spectrum of (KING), ii, 453.
electrolytic behaviour of (LIEBREICH and WIEDERHOLT), ii, 44; (BOUMAN), ii, 46.
electrolytic, adsorption of hydrogen by (HÜTTIG and BRODKORB), ii, 702.
Chromium alloys with aluminium (SISCO and WHITMORE), ii, 1051.
with molybdenum and nickel (SIEDSCHLAG), ii, 298.
Chromium bases (*chromium ammines*):—
Chromatopentamminecobaltic chromates (RÂY and SARKAR), ii, 816.
Chromatotetramminecobaltic chromates (RÂY and SARKAR), ii, 815.
Decamminemonoaquotrihydroxydioltrichromium thiosulphate (RÂY and SARKAR), ii, 230.
Enneamminediaquotrihydroxydioltrichromium thiosulphate (RÂY and SARKAR), ii, 230.
Chromium salts, photochemical decomposition of, in presence of gelatin (POPOVICKI), ii, 220.
Chromium chloride, magnetic properties of (WOLTJER; WOLTJER and ONNES), ii, 1038.
effect of sodium chloride on solutions of (GUSTAVSON), ii, 1086.
*di*chromate (CALCAGNI), ii, 891.
potassium fluoride, preparation of (DUBOIN), ii, 995.
hydroxide, solution of, in sodium hydroxide (FRICKE and WINDHAUSEN), ii, 35.
equilibrium of sodium hydroxide, chromite, and (MÜLLER), ii, 124.
coagulation of (SEN and MEHROTRA), ii, 665.
colloidal (BJERRUM), ii, 111.
precipitation of, electrometrically (BRITTON), ii, 1203.
*sesqui*oxide (*chromic oxide*), solid solutions of, in ferric oxide (FORESTIER and CHAUDRON), ii, 534.
*tri*oxide, equilibrium of boric acid, water, and (GILBERT), ii, 869.
Chromic salts, quantitative oxidation of, by silver oxide (HANS), ii, 316.

Chromium :—
Chromous ammonium and potassium fluorides (TRAUBE, BURMEISTER, and STAHN), ii, 990.
Chromates of the cerium group (ZAMBONINI and CAROBBI), ii, 700.
Chromium organic compounds :—
γ-mono- and *αγ-di*-bromoacetylacetones (REIHLEN, ILLEG, and WITTIG), i, 232.
Chromous pyridine chloride (TRAUBE, BURMEISTER, and STAHN), ii, 990.
Chromium detection and determination :—
detection of, without nitric acid (LONGINESCU and PETRESCU), ii, 1206.
determination of, in presence of iron and vanadium (KOLTHOFF and TOMIČEK), ii, 72.
Chromones. See Benzopyrones.
Chromonol, 2-bromothio- (ARNDT), i, 1311.
Chrysanthemum cinerariæfolium, insecticidal principle of (YAMAMOTO), i, 1522.
Chrysarobin, composition of (EDER and HAUSER), i, 948, 1160.
Chrysin, and its dimethyl ether, absorption spectra of (TASAKI), i, 1444.
Chrysinidin salts (PRATT and ROBINSON), i, 825.
Cicer arietinum, γ-galactan in seeds of (CASTORO), i, 1043.
Cicerose (CASTORO), i, 1043.
Cignolin. See Anthranol, 1:8-*di*-hydroxy-.
*iso***Cinchomeronic acid**, phenyl ester (MEYER), i, 836.
Cinchona alkaloids (GIEMSA and BONATH), i, 291.
Cinchoninic acid, derivatives of (MEYER), i, 836.
Cineole, determination of, in essential oils (CASH and FAWSITT), ii, 75.
Cinnamaldehyde benzoylhydrazone (v. AUWERS and DANIEL), i, 1181.
diphenylene-4:4′-dihydrazone (CHATTAWAY, IRELAND, and WALKER), i, 1195.
determination of chlorine in (FAUST and SPÄNGLER), ii, 1000.
Cinnamaldehyde, α-bromo-, derivatives of (v. AUWERS and OTTENS), i, 1429.
Cinnamaldoxime, *N*-aryl ethers of (BAMBERGER), i, 142.
Cinnamic acid, Claisen synthesis of (SCHEIBLER and FRIESE), i, 1417.
equilibrium of, with phenols (KREMANN, ZECHNER, and DRAZIL), ii, 650.
metallic salts of (EPHRAIM and PFISTER), i, 1148.
Cinnamic acid, theophylline salt (KNOLL & Co.), i, 828.
vanadicinnamyl salt (SCAGLIARINI and AIROLDI), i, 920.
ethyl ester, action of ammonia on (STOSIUS and PHILIPPI), i, 918.
Cinnamic acid, *p*-amino-, and *p*-nitro-, γ-dimethylamino-αβ-dimethylpropyl esters (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 1419.
o-cyano-, and its esters (CHEMISCHE FABRIKEN VORM. WEILER-TER MEER), i, 1418.
3:5-*di*hydroxy- (MAUTHNER), i, 926.
Cinnamonitrile, and α-bromo- (v. AUWERS and OTTENS), i, 1430.
Cinnamoyl cyanide (MARSH and STEPHEN), i, 1158.
m-**Cinnamoylaminoanisic acid** (SEKA and SCHRECKENTAL), i, 1316.
n-**Cinnamoylaminobenzoic acid**, and its acetyl derivative (SEKA and SCHRECKENTAL), i, 1316.
m-**Cinnamoylamino-*p*-toluic acid** (SEKA and SCHRECKENTAL), i, 1316.
7-Cinnamoyloxy-2-styryl*iso*flavone (BAKER and ROBINSON), i, 1299.
Cinnamyl alcohol, compound of, with calcium chloride (ENDOH), i, 1428.
Cinnamyl ethyl ether (BERT), i, 804.
Cinnamylideneacetic acid, polymerisation of (STOBBE, HENSEL, and SIMON), i, 1067.
Cinnamylideneacetone, polymerisation of (STOBBE, HENSEL, and SIMON), i, 1067.
Cinnamylideneacetophenone, derivatives of, and their polymerisation (GIUA), i, 1283.
Cinnamylideneacetophenone, *m*-amino- and *m*-nitro- (PFEIFFER, PRAHL, FITZ, and STOLL), i, 680.
Cinnamylideneacetylacetone, polymerisation of (STOBBE, HENSEL, and SIMON), i, 1067.
Cinnamylidenecamphor, absorption spectra of (PURVIS), ii, 627.
Cinnamylidenemalonic acid, polymerisation of (STOBBE, HENSEL, and SIMON), i, 1067.
Cinnamylidene-*p*-methoxyacetophenone, *m*-nitro- (PFEIFFER, PRAHL, FITZ, and STOLL), i, 681.
Citraconic acid, esters, action of ammonia on (STOSIUS and PHILIPPI), i, 892.
derivatives of (GOEBEL), i, 1038.
Citral, oxidation of, with ozone (VERLEY), i, 406.
Citric acid, formation of, from diketoadipic acid (FRANZEN and SCHMIDT), i, 231.

Citric acid, formation of, by moulds (BUTKEWITSCH), i, 341.
condensation of, with phenols (MÜLLER), i, 1442.
phenylhydrazoanilide of, and its phenylhydrazone salt (NAU, BROWN, and BAILEY), i, 1379.
in cow's milk (KIEFERLE, SCHWAIBOLD, and HACKMANN), i, 855.
lead salt, solubilities of (AUERBACH and WEBER), i, 1130.
tribenzyl ester (HEFTI and SCHILT), i, 394.
distinction of tartaric acid from (PARRI), ii, 162.
detection of (RODILLON), ii, 246.
detection of, in tissues (KLEIN and WERNER), i, 871.
determination of (CAMP), ii, 246.
*iso***Citric acid**, salts and derivatives of (NELSON), i, 619.
Citroanilide, salts and esters of (NAU, BROWN, and BAILEY), i, 1379.
Citrodianilidemonoamide (NAU, BROWN, and BAILEY), i, 1379.
Citromyces glaber, effect of calcium salts on growth of (KUSNETZOV), i, 746.
Citronella oil, determination of citronellal in (DUPONT and LABAUNE), ii, 75.
Citronellal, determination of, in citronella oil (DUPONT and LABAUNE), ii, 75.
Citronellol, derivatives of (RUPE and RINDERKNECHT), i, 658.
Citronellyl bromide (RUPE and RINDERKNECHT), i, 658.
Citronellylaniline. See Phenylcitronellylamine.
Citrus, extraction of pectin from (POORE), i, 619.
Claisen condensation (MORGAN, DREW, and PORTER), i, 363.
Clays, effect of heat on (HOULDSWORTH and COBB), ii, 671; (MELLOR and SCOTT), ii, 698.
mechanical composition curves of (ROBINSON), i, 224.
basic exchange in (WIEGNER), ii, 527; (UNGERER), ii, 658.
as soil colloids (JOSEPH), i, 1228.
china, Röntgen-ray investigation of (SHEARER), ii, 698.
quaternary, siliceous matter in (DEMOLON), ii, 1195.
Japanese, action of camphor white oil on (ONO), i, 941.
Coagulation, ultramicroscopy of (ROCASOLANO), ii, 523.
chemicals for prevention of (LUMIÈRE), i, 606.
of colloids (BJERRUM), ii, 111.
Coagulation of colloids, influence of valency on (FREUNDLICH and ZEH), ii, 115.
by electrolytes (RABINOVITSCH), ii, 778.
of colloidal solutions (JABŁCZYŃSKI and LORENTZ-ZIENKOWSKA), ii, 666.
Coal, structure of (MARCUSSON), i, 793.
composition of (TIDESWELL and WHEELER), i, 373; (FRANCIS and WHEELER), i, 373, 389.
effect of catalysts on carbonisation of (LESSING and BANKS), i, 9.
oxidation of (FRANCIS and WHEELER), i, 644; (OSWALD and PINTA), i, 793.
analysis of (KREULEN), ii, 240.
Cobalt, occurrence of, in arable soils (BERTRAND and MOKRAGNATZ), i, 492.
in soils, plants, and animals (MCHARGUE), i, 1023.
spectrum of (CATALÁN), ii, 611.
arc spectrum of (WALTERS), ii, 334.
spark spectrum of (L. and E. BLOCH), ii, 727.
magnetisation of iron, nickel, magnetite, and (ASHWORTH), ii, 944.
films, magnetic properties of (SORENSEN), ii, 82.
magnetostrictive effects in (MCCORKLE), ii, 487.
electro-deposition of (EMELIANOVA), ii, 676.
colloidal, catalysis with (PAAL and BOETERS), ii, 1072.
in animal organs and tissues (BERTRAND and MÂCHEBŒUF), i, 719, 996.
Cobalt alloys with iron (GRENET), ii, 973.
expansion coefficients of (HONDA and OKUBO), ii, 104.
Cobalt bases (*cobaltammines*) (EPHRAIM and FLÜGEL), ii, 61; (EPHRAIM), ii, 992.
photochemistry of (SCHWARZ and WEISS), ii, 576.
complex selenates of (MEYER, DIRSKA, and CLEMENS), ii, 422.
Aquopentamminecobaltic dichromates (RÂY and SARKAR), ii, 816.
Hexamminecobaltictriaquodisulphitosulphatocobaltiate (SCAGLIARINI and TARTARINI), ii, 1193.
Triaquotriamminecobaltictriaquotrisulphatocobaltiate (SCAGLIARINI and TARTARINI), ii, 1193.
Cobalt compounds in vegetables (BERTRAND and MOKRAGNATZ), i, 873.
Cobalt salts, rotatory dispersion of (ROBERTS), ii, 478.

Cobalt amide and nitride (BERGSTROM), ii, 231.
chloride, magnetic properties of (WOLTJER; WOLTJER and ONNES), ii, 1038.
ionisation and conductivity in solutions of, and its mixtures with barium chloride (MAZZETTI), ii, 209, 210.
colour change in solutions of (GRÓH), ii, 963.
ammoniate of (BILTZ and RAHLFS), ii, 1191.
hydroxide, precipitation of, electrometrically (BRITTON), ii, 1203.
selenates, complex (MEYER, DIRSKA, and CLEMENS), ii, 422.
selenide (MOSER and ATYNSKI), ii, 583.
sulphate, anhydrous, magnetic properties of (FOEX), ii, 346.
Cobaltic hydroxide, colloidal (PAAL and BOETERS), ii, 1090.
decomposition of hydrogen peroxide by (TRYHORN and JESSOP), ii, 807.
Cobalt organic compounds (MORGAN and SMITH), i, 1457.
Cobalt detection, determination, and separation:—
detection of (TINDAL), ii, 242; (NICHOLS and COOPER), ii, 715.
detection and determination of (DENIGÈS), ii, 826.
determination of (JÄRVINEN), ii, 602.
determination of, colorimetrically, in presence of nickel (EVANS), ii, 904.
separation of manganese, nickel, zinc, and (LEMARCHANDS), ii, 242.
Cocaine, and its derivatives, influence of sterilisation on hydrogen-ion concentration in solutions of (ROY), i, 1084.
hydrochloride, effect of sterilisation on the anæsthetic value of (LIOB), i, 862.
arsenious tartrate (DEBUCQUET), i, 1090.
Cocaines, isomeric, toxicity of, and their excretion (GRUHN), i, 736.
Coconut oil (ARMSTRONG, ALLAN, and MOORE), i, 353.
rancidity of (STÄRKLE), i, 205.
Cod, muscle of. See Muscle.
Cod-liver oil (DUBIN and FUNK), i, 1120.
anti-rachitic activity of (BILLS), i, 1019; (NELSON and STEENBOCK), i, 1020.
growth-promoting and anti-rachitic value of (SOAMES), i, 210.
Cod-liver oil, effect of heat on vitamins of (SOUTHGATE), i, 1515.
Codeine, and its isomerides, action of thionyl chloride on (SPEYER and ROSENFELD), i, 961.
arsenious tartrate (DEBUCQUET), i, 1090.
Codeine, bromo- and chloro-, preparation and catalytic reduction of (SPEYER and ROSENFELD), i, 961.
Codeinone, bromo-, action of sodium hyposulphite on (SPEYER and ROSENFELD), i, 961.
Coke, determination of nitrogen in (TER MEULEN), ii, 599.
Collagen (HERZOG and GONELL), i, 1488.
thermolability of (THOMAS and KELLY), ii, 520.
nitrogen distribution in hydrolysis products of (SADIKOV), i, 176.
Collisions, termolecular, resulting from bimolecular collisions (TRAUTZ and SCHUETER), ii, 552.
Collodion membranes. See Membranes.
Colloids (SVEDBERG), ii, 196.
structure of (v. WEIMARN), ii, 660.
chemistry of (FRIED and PAULI), ii, 390; (KÜHNL and PAULI), ii, 776.
nomenclature of (ZACHARIAS), ii, 196.
electrical synthesis of (BÖRJESON), ii, 197.
birefringency in (FREY), ii, 200; (NEUBERT), ii, 201.
coagulation of (JABŁCZYŃSKI), ii, 203.
by electrolytes (GHOSH and DHAR), ii, 511; (RABINOVITSCH), ii, 778.
velocity of coagulation of (JABŁCZYŃSKI), ii, 34, 35.
influence of valency on coagulation and cataphoresis of (FREUNDLICH and ZEH), ii, 115.
filtration of (ZAKARIAS), ii, 862.
plasticity of (BINGHAM), ii, 1157.
swelling of (BILTZ), ii, 520; (KATZ and MARK), ii, 666.
electricity produced in (KOPACZEWSKI), ii, 978.
effect of ammonium salts on (FULMER), i, 1508.
osmotic properties and coagulation of (BJERRUM), ii, 111.
crystallisation of aqueous suspensions of (FREUNDLICH and OPPENHEIMER), ii, 203.
basic exchange in (WIEGNER), ii, 527.
increase of imbibition by (POPOV and SEISOV), i, 606.
fixation of water in (KUHN; FISCHER; SCHADE), ii, 36.

Colloids, water-combination in (HÜTTIG), ii, 516.
solution of, in mixed liquids (MARDLES), ii, 34.
effects of dilution on (KOPACZEWSKI), ii, 111.
effect of dielectrics on stability of (DEUTSCH), ii, 525.
action of ions on (MICHAELIS), ii, 1154.
mobility of particles in (GERASIMOV), ii, 204.
purification of (BECHHOLD and ROSENBERG), ii, 668.
protection of, by small quantities of electrolytes (BOUTARIC and PERREAU), ii, 526.
sensitisation and protection of, by lipoids (BECK), ii, 527.
protective action of soaps on (BHATNAGAR, PRASAD, and BAHL), ii, 1155.
decomposition of neutral salts by (HÜMMELCHEN and KAPPEN), i, 218.
of clay, electrical charge on (DAYHUFF and HOAGLAND), i, 219.
in mineralogy and geology (DOELTER), ii, 514.
heat of wetting of, in soils (ANDERSON), i, 219; (BOUYOUCOS), i, 1228.
dispersoid, effect of added salts on the stability of (v. WEIMARN and UTZINO), ii, 664.
quantitative filtration (OSTWALD), ii, 198.
facultative and obligatory, and the electric charge thereon (MICHAELIS and DOKAN), ii, 963.
hydrophilic, effect of agitation on coagulation of (FREUNDLICH and BASU), ii, 522.
inorganic, action of ozone on aqueous solutions of (RIESENFELD and HAASE), ii, 988.
lyophilic, action of electrolytes on (KRUYT and TENDELOO), ii, 1059.
and Poiseuille's law (KRUYT and ROBINSON), ii, 391; (KRUYT), ii, 515.
mixed (JABŁCZYŃSKI and LORENTZ-ZIENKOVSKA), ii, 1060.
protective (SEN), ii, 666.
action of (TRAUBE and RACKWITZ), ii, 968.
suspensoids, therapeutic action of (LOISELEUR), i, 197.
determination of, in soils (BOUYOUCOS), i, 348.
Colloidal colouring matters, electrocapillary analysis of (KOPACZEWSKI), ii, 828.
Colloidal electrolytes, dispersion of (MESTREZAT and JANET), i, 198.
elements, preparation of (DEDE and WALTHER), ii, 197.
metals, conductivity of (ANDRÉ), ii, 976.
sols, cataphoresis of (EVERS), ii, 668.
in non-dissociating liquids (HATSCHEK and THORNE), ii, 197.
colour of suspensions of (JOBST), ii, 777.
particles, size of (SVEDBERG), ii, 528.
properties, development of (ALEXANDER), ii, 779.
reactions, electromagnetic nature of (DITMAN), ii, 51.
solutions, viscosity of (OSTWALD), ii, 291, 663; (MATTHÄUS) ii, 663; (DE WAELE), ii, 777.
viscosity and elasticity of (SZEGVARI), ii, 111; (FREUNDLICH and SCHALEK), ii, 112.
electrophoresis of (SCHAUM and FRIEDERICH), ii, 220.
surface tension of, and of their mixtures with mineral waters (HENRIJEAN and KOPACZEWSKI; D'ARSONVAL and BORDAS), ii, 291.
stability of (SEN), ii, 664; (SEN and MEHROTRA), ii, 665.
effect of added substances on (BOUTARIC and MANIÈRE), ii, 778.
in presence of electrolytes (BOUTARIC and PERREAU), ii, 863.
similarities of true solutions and (BANCROFT), ii, 858.
size and granular distribution of particles in (AUDUBERT and RABATÉ), ii, 775.
orientation of particles in (ZOCHER), ii, 966.
determination of molecular dimensions and Avogadro's number from (DU NOUY), ii, 844.
adsorption of sugars by (PRASAD, SHRIVASTAVA, and GUPTA), ii, 957.
coagulation of (HENRY and MORRIS), ii, 34; (JABŁCZYŃSKI and LORENTZ-ZIENKOWSKA), ii, 666.
effect of low temperatures on (BOTTAZZI and BERGAMI), ii, 965.
by electrolytes (MUKHERJEE and GHOSH), ii, 394.
by hydrogen ions (WEIR), ii, 1155.
by Röntgen rays (DOGNON), ii, 665.

Colloidal solutions, coagulation of, flocculation of (BOUTARIC), ii, 393; (BOUTARIC and MANIÈRE), ii, 394.
effect of addition of stable colloids on (BOUTARIC and PERREAU), ii, 1155.
in nitrobenzene (BROWN and BURY), ii, 1055.
emulsoid, determination of the size of particles in (KRUYT and TENDELOO), ii, 113.
unstable, dialysis of (GUTBIER), ii, 965.
suspensions, stability of (KERMACK and WILLIAMSON), ii, 523.
effect of light on the settling of (MORISON), ii, 774.
distribution of particles in (BARKAS), ii, 289; (COUTTS), ii, 290.
Colophony from the firs of Bucovina (CZERNY), i, 253.
American, pyrogenic decomposition of of (VESTERBERG and BORGE), i, 252.
Colorimeter, modified Duboscq–Pellin, for biochemical work (WU), ii, 899.
Colostrum (HÖLLEN), i, 1490.
bacteriolytic power of (J. and M. BORDET), i, 616.
Colour, theory of (ZINTL and RAUCH), ii, 182; (STIEGLITZ), ii, 840.
and chemical constitution (MOIR), ii, 261; (KEHRMANN), i, 435.
and molecular geometry (MOIR), ii, 634, 1121.
Colours, temper (MASON), ii, 108.
Colouring matter, $C_{14}H_6O_2N_2Br_4$, from 3:5-dibromo-2-aminopyridine (TSCHITSCHIBABIN), i, 159.
$C_{16}H_{14}O_2N_2$, from 2-amino-3-methylpyridine (TSCHITSCHIBABIN), i, 159.
$C_{17}H_{10}O_3NBrS$, from isatin and 4-bromo-2-carboxy-5-methoxyphenylthiolacetic acid (GRIFFITH and HOPE), i, 828.
$C_{20}H_{10}O_4$, from dinaphthyl derivatives and aluminium chloride (BADISCHE ANILIN- & SODA-FABRIK), i, 1290.
$C_{24}H_{15}ON_2$, from 3-hydroxy-4-keto-1-indoxenyl-1:4-dihydronaphthalene and *o*-phenylenediamine (SANDER), i, 982.
$C_{24}H_{24}N_2Cl_2$, and its derivatives, from acetoethylanilide and phosphoryl chloride (FISCHER, MÜLLER, and VILSMEIER), i, 440.
$C_{25}H_{29}N_2I$, from ethyl orthoformate and 2:3:3-trimethyl-ψ-indole methiodide (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 839.
Colouring matter, $C_{26}H_{16}O_2N_2S$, from 5-acetamido-1:4-naphthaquinone-4-anil and oxythionaphthen (SANDER), i, 982.
$C_{27}H_{30}O_3N_2$, from 4-phenyltetrahydro-1:4-oxazine, benzaldehyde, and hydrochloric acid (ADKINS and SIMINGTON), i, 986.
Colouring matters, (AKTIEN-GESELLSCHAFT FÜR ANILIN FABRIKATION), i, 1330.
preparation of (VOSWINCKEL), i, 572.
physical chemistry of (FÜRTH), ii, 1057.
absorption spectra and constitution of (KEHRMANN and SANDOZ), i, 983.
action of ultra-violet light on (HEERMANN), ii, 144.
extinction of fluorescence of (VAVILOV), ii, 474.
polarised fluorescence of (VAVILOV), ii, 739.
from solutions of (LEVSCHIN), ii, 13, 629, 1117; (WEIGERT and KÄPPLER), ii, 1026.
diffusion of (AUERBACH), ii, 28.
adsorption of, by aluminium hydroxide (WOOD and WOOLLER), ii, 285.
by glass (SCHELTE), ii, 286.
effect of hydrogen-ion concentration on, by mordants (MARKER and GORDON), ii, 31.
by soils (WILKINSON and HOFF), i, 1227.
effect of salts on, by tissues (MANN), ii, 35.
by wool and cotton (SPEAKMAN and BATTYE), ii, 284.
insoluble in water (CHEMISCHE FABRIK GRIESHEIM-ELEKTRON), i, 587, 599.
effect of light on, in cotton fabrics (CUNLIFFE), ii, 812.
kinetics of bleaching of (PREDVODITELEV and NETSCHAJEVA), ii, 575.
change in conductivity of films of, on bleaching (SCHTSCHODRO), ii, 1134.
reduction of, by alcoholic sodium hyposulphite (EYMER), ii, 582.
effect of, on growth of bacteria (BURNET), i, 1117.
effect of, on the multiplication of infusoria (ROBERTSON), i, 1012.
staining of the walls of plant cells by (SCHWARZ), i, 755.
colloidal. See Colloidal colouring matters.
of the flavone series, absorption spectra of (TASAKI), i, 1444, 1445.
of flesh and blood (SCHUMM), i, 1347.

Colouring matters of fungi (KÖGL and POSTOWSKY), i, 50, 1083, 1439; (KÖGL and v. TAEUFFENBACH), i, 1440.
mordant, co-ordination theory applied to (MORGAN and SMITH), ii, 841.
from poison gases (BOGERT and CHERTCOFF), i, 80, 315.
sulphide, structure of (HODGSON), i, 1104.
synthetic, diffusion of (KOPACZEWSKI), ii, 529.
vat (KALLE & Co.), i, 1334.
detection of, on cotton (JONES and KILBY), ii, 608.
vegetable, fluorescence of (MEUNIER and BONNET), i, 1439.
detection of, spectrophotometrically (HOLMES), ii, 1212.

sulphates (KRUGER), ii, 58.
Cupric chloride, reaction of magnesium organic halides with (GILMAN and PARKER), i, 237.
antiseptic action of, in various solvents (KLISSIUNIS), i, 1500.
halides, ammoniates of (BILTZ, BRÖHAN, and WEIN), ii, 1182.
hydroxide, catalysis of the dehydration of (QUARTAROLI), ii, 806.
equilibrium of silver nitrate, water, and (MALQUORI), ii, 697.
compounds of quinine with (ERBEN), i, 573.
precipitation of, electrometrically (BRITTON), ii, 1204.
oxide, solubility of, in water (REMY and KUHLMANN), ii, 119.
sulphide, conversion of, to cuprous sulphide (HAHN), ii, 160.
Cuprous salts, reaction of ferrous salts with (WELLS), ii, 148.
bromide, crystalline (BRIGGS), ii, 319.
chloride, vapour pressure of hydrochloric acid solutions of (YANNAKIS), ii, 401.
hydroxide (KLASON), ii, 318.
Cupro-sulphites and **-thiosulphates** of the rare earths (CANNERI and FERNANDES), ii, 888.
Copper organic compounds:—
with diacetyldioxime (PANETH and THILO), i, 1132.
Copper detection, determination, and separation:—
detection of (SCHERINGA), ii, 326; (NICHOLS and COOPER), ii, 715; (SPACU), ii, 1003.
detection of, in distilled water (POIROT), ii, 242.
detection and determination of (HAHN), ii, 1096.
determination of, potentiometrically (ZINTL and RAUCH), ii, 1003.
determination of, volumetrically, with potassium iodide (HERSCHKOVITSCH), ii, 904.
determination of, electrolytically, in presence of antimony, lead, and tin (LUKAS and JÍLEK), ii, 241.
determination of, electrolytically, in presence of lead (BILTZ), ii, 715.
determination of, in tissues (CURRIE), i, 183.
determination of, and its separation from cadmium and zinc (JÍLEK and LUKAS), ii, 903.
Copper detection, determination, and separation:—
separation of antimony, lead, tin, and (LASSIEUR), ii, 328.
separation of cadmium and (SACCARDI), ii, 159.
separation of, from iron (ARDAGH and BROUGHALL), ii, 603.
separation of lead and (LASSIEUR), ii, 159.
separation of mercury and (SPACU), ii, 1004.
Coproporphyrin, synthesis of, by yeast (FISCHER and FINK), i, 105, 866.
absorption coefficient of (NIEMANN), i, 1206.
Coprosterol, iodine value of (DAM), i, 856.
Cordierite from India (KRISHNAN), ii, 322.
Corn offal, nitrogenous constituents of (RANDOIN, ALQUIER, ASSELIN, and CHARLES), i, 210.
Corresponding states, theory of (BOITARD), ii, 865.
Corrosion (MAASS and LIEBREICH), ii, 140; (WHITNEY; SHIPLEY, McHAFFIE, and CLARE), ii, 688; (WHITMAN and RUSSELL), ii, 689; (BEENY; ENOS), ii, 1068; (UTIDA and SAITO), ii, 1069.
report of the Committee on (BENGOUGH and MAY), ii, 218.
water-line (EVANS), ii, 687, 688.
of metals by naphtha solutions of sulphur and its compounds (WOOD, SHEELY, and TRUSTY), ii, 980.
of ferrous metals in electrolysis (THORNTON and HARLE), ii, 303.
device for determination of (FETZER), ii, 996.
Cortex limonis (lemon), vitamin content of (WILLIMOTT and WOKES), i, 1220.
Corundum, crystal structure of (PAULING and HENDRICKS), ii, 368.
n- and *iso*-**Corybulbines**, and their ethyl ethers (SPÄTH and DOBROWSKY), i, 1085.
Corydalis alkaloids (SPÄTH and MOSETTIG), i, 1447.
Corydalis cava, alkaloids from (SPÄTH and DOBROWSKY), i, 1085.
Corydinecarboxylic acid, benzyl ester, and its methyl ether (OSADA), i, 284.
ethyl ester, methyl ether (OSADA), i, 283.
Corypalmine, constitution of, and its ethyl ether (SPÄTH and MOSETTIG), i, 1447.
Cotton, swelling of (COLLINS and WILLIAMS; COLLINS), ii, 781.

Cotton, viscosity of cuprammonium solutions of (FARROW and NEALE), ii, 773.
sorption by (COWARD, SPENCER, and WOOD), ii, 507.
absorption and desorption of water by (URQUHART and WILLIAMS), ii, 780, 781.
adsorption of dyes by (SPEAKMAN and BATTYE), ii, 284.
tendering of, by acids (COWARD, WOOD, and BARRETT), i, 643.
effect of sulphuric acid on the breaking load of (VINCENT), ii, 783.
fading of dyed (CUNLIFFE), ii, 812.
Egyptian and upland, chlorides in the leaf-tissue fluids of (HARRIS; J. V. and Z. W. LAWRENCE), i, 216.
analysis of (BIRTWELL, CLIBBENS, and RIDGE), i, 234; (CLIBBENS and GEAKE), ii, 906.
Cotton cellulose. See under Cellulose.
Cotton plant, odorous constituents of (POWER and CHESNUT), i, 1026.
reaction of (POWER and CHESNUT; HARRIS, HOFFMAN, and JOHNSON), i, 758.
Cotton seed, proteins of (JONES and CSONKA), i, 1225.
Cotton wax, American, constituents of (FARGHER and PROBERT; CLIFFORD and PROBERT), i, 879.
Egyptian, constituents of (FARGHER and HIGGINBOTHAM), i, 879.
Coulometer (FISCHBECK), ii, 1166.
Coumaran, 3-amino-6-hydroxy-, 6-acetyl derivative, and 6-hydroxy- (SONN and PATSCHKE), i, 282.
Coumaranone, 4-amino-, acetyl derivative (DIRKS), i, 148.
*di*bromo- (DEAN and NIERENSTEIN), i, 953.
Coumaran-3-one, 6-hydroxy-, oxime of (SONN and PATSCHKE), i, 282.
Coumarin, determination of (RADCLIFFE and SHARPLES), ii, 1210.
Coumarin, 3-bromo-7-hydroxy- (FRIES and NÖHREN), i, 955.
Coumarin-4-acetic acids, and their esters, reactivity of the methylene group in (DEY and ROW), i, 149, 953.
Coumarincarboxylic acid, *p*-toluidide of (WAYNE and COHEN), i, 551.
Coumarinic acid (DEY and ROW), i, 149.
3(3′-Coumaryl)-6′-methylbenzfuran-2-carboxylic acid, bromo- (DEY and ROW), i, 150.
3′-Coumaryl-4-naphthapyrones, and bromo-, chloro-, and nitro- (DEY and ROW), i, 149.
Cows, origin of lactose and of lactosuria in (CAMPUS), i, 327.
Cows, mineral metabolism of, in reference to diet (MONROE and PERKINS; MILLER, YATES, JONES, and BRANDT), i, 1498.
effect of proteins in diet of (PERKINS and MONROE), i, 1354.
lactating, blood-sugar concentration in (WIDMARK and CARLENS), i, 608.
Co-zymase (v. EULER and NILSSON), i, 1361.
Cream, electrical conductivity of (FRICKE and MORSE), i, 608.
Creatine, equilibrium of creatinine and (EDGAR and SHIVER), ii, 533.
in muscle (REISSER and HAMANN), i, 860.
influence of polyneuritis on (KUDRJAVZEVA), i, 329.
function of, in muscle contraction (TIEGS), i, 1003.
reciprocal conversion of creatinine and (HAHN and FASOLD), i, 1496.
effect of carbohydrate- and protein-free diets on excretion of (PALLADIN), i, 1211; (PALLADIN and KRATINOVA), i, 1514.
excretion of, by sheep (PALLADIN), i, 327.
sodium salt of (HAHN and FASOLD), ii, 653.
Creatinine (KAPFHAMMER), i, 797.
tautomerism of, and its derivatives (GREENWALD), i, 839.
equilibrium of creatine and (EDGAR and SHIVER), ii, 533.
reciprocal conversion of creatine and (HAHN and FASOLD), i, 1496.
effect of carbohydrate- and protein-free diets on excretion of (PALLADIN), i, 1211.
effect of a maize diet on excretion of (PALLADIN and KRATINOVA), i, 1514.
excretion of, by sheep (PALLADIN), i, 327.
Jaffe's reaction for (GREENWALD), ii, 1212.
***o*-Cresaurin.** See 3:3′:3″-Trimethylaurin.
***o*-Cresol**, 4:6-*di*bromo-, and its benzoyl derivative (KOHN and JAWETZ), i, 135.
nitro derivatives, and their salts and derivatives (GIBSON), i, 388.
***m*-Cresol**, 2-amino-, and 2-nitro- (HODGSON and BEARD), i, 540.
***p*-Cresol**, oxidation of (PUMMERER, PUTTFARCKEN, and SCHOPFLOCHER), i, 1262.
determination of, in blood (HAAS and SCHLESINGER), i, 334.
***p*-Cresol**, bromo derivatives (KOHN and WIESEN), i, 539.
5-chloro-3-amino-, derivatives of (RAIFORD and LANKELMA), i, 809.

p-**Cresol**, *o*-iodo-, and its benzoate (PUMMERER, PUTTFARCKEN, and SCHOPFLOCHER), i, 1262.
Cresols, molecular compounds of, with alcohol, ether, acetone, and benzene (WEISSENBERGER and PIATTI), i, 538, 539.
o- and *p*-**Cresols**, equilibrium between (HILL and MOSBACHER), ii, 1161.
o-, *m*-, and *p*-**Cresols**, bromo- and bromonitro-derivatives of, and their derivatives (KOHN and WEISSBERG), i, 655.
n- and *iso*-*o*-**Cresol***tetra***chlorophthaleins**, and their derivatives (ORNDORFF and PATEL), i, 672.
p-**Cresoldisulphonic acid**, action of sodium hypochlorite on (RASCHIG), i, 249.
p-**Cresolisatein anhydride** (SEN and SIRCAR), i, 555.
Cresolmercurisulphonic acid (SACCHARIN-FABRIK AKTIEN-GESELLSCHAFT VORM. FAHLBERG, LIST, & Co.), i, 1197.
Cresol-red, salt error of (RAMAGE and MILLER), ii, 712.
o-**Cresolsulphonephthalein** diethyl and dimethyl ethers (ORNDORFF and SHAPIRO), i, 251.
Cretins, fat and cholesterol in blood of (HECKSCHER), i, 999.
Cristobalite (LONGCHAMBON), ii, 1131.
synthesis of (WEIL), ii, 1193.
crystal structure of (WYCKOFF), ii, 638.
$\alpha\beta$-transformation of (WEIL), ii, 757.
Critical solution temperature of ternary mixtures (BOUTARIC and CORBET), ii, 103.
state, properties of systems near the (GAY and PERRAKIS), ii, 669.
temperature, determination of, from coefficient of expansion of liquids (VAN LAAR), ii, 950.
and melting point (VAN LAAR and LORENZ), ii, 374.
relation between melting point, boiling point, and (PRUD'HOMME), ii, 99.
and expansion of liquids (DE KOLOSOVSKI), ii, 646.
relation between molecular volume and (LORENZ and HERZ), ii, 25, 183.
Crookes' tubes, fluorescence experiments with (DAUVILLIER), ii, 1116.
Crops, yield and mineral content of, influenced by rotation (BURGESS), i, 1519.
Crotin (KARRER, WEBER, and VAN SLOOTEN), i, 1226.
Crotonaldehyde, and *a*-bromo-, benzoylhydrazones (v. AUWERS and DANIEL), i, 1181.
Crotonic acids, isomerism of (GONZÁLEZ), i, 629.
Crucibles, silica, for filtration (HÜTTIG and KÜKENTHAL), ii, 998.
Crustacea, dissociation of oxyhæmoglobin in blood of (STEDMAN and STEDMAN), i, 1199.
Cryogenine, colour reactions of, with metallic salts (BORNET) ii, 164.
Cryolite, equilibrium of alumina and (ROUSH and MIYAKE), ii, 974.
Cryoscopy in mixed solvents (WRIGHT), ii, 1144.
of solutions of gases in various solvents (GARELLI), ii, 1151.
with benzene (JONES and BURY), ii, 1040.
with nitrobenzene (BROWN and BURY), ii, 32; (BROWN), ii, 296.
with sodium sulphate (TURNER and PATTERSON), ii, 273.
Cryostat (WALTERS and LOOMIS), ii, 1091.
and hydrogen liquefier (LATIMER, BUFFINGTON, and HOENSHEL), ii, 818.
Cryptopine, pharmacological action of (HEATHCOTE), i, 734.
Crystals, structure of, and chemical constitution (WEISSENBERG), ii, 1129, 1130.
form and lattice structure of (YAMADA), ii, 94.
structure of, in relation to physical properties (VAN ARKEL), ii, 749.
relation between atomic number and structure of (SCOTT), ii, 369.
structure, dissolution velocity and etched figures on (TAMMANN; TAMMANN and KRINGS), ii, 942.
doubly refracting, refractive index of (PERRIER), ii, 1028.
band spectra of gases and of (KAHLER), ii, 626.
photo-electric properties of (GUDDEN and POHL), ii, 344, 943.
reflection of Röntgen rays by (HARTREE; BRAGG), ii, 735.
powdered, *X*-ray analysis of (BRENTANO), ii, 483.
apparatus for (LANGE), ii, 482.
magnetism of (FORREST), ii, 1133.
passage of electrons through (LENZ), ii, 920, 1019.
electrolysis of (LUKIRSKY, SČUKAREV, and TRAPESNIKOV), ii, 369.
thermal expansion of (HENGLEIN), ii, 935.
dynamics of (WAELSCH), ii, 485.
grating energy of (WESSEL), ii, 640.
deformation of, on hardening (PÓLÁNYI), ii, 370.

Crystals, migration in the lattice of (HÜTTIG), ii, 640.
molecular symmetry in (SMITH), ii, 271.
aggregation and polymorphism of (SCHAUM and RÖRIG), ii, 95.
orientation of, in conglomerates (TAMMANN), ii, 1132.
effect of strain and heat treatment on (ELAM), ii, 945, 946.
measurement of absolute dimensions of (SELJAKOV), ii, 270.
growth of, of different species (ROYER), ii, 749.
growth and diminution in size of (FRIEDEL), ii, 271.
modification of, due to foreign matter (GAUBERT), ii, 271.
molecular volumes of (HENGLEIN), ii, 477.
surface tension of, against saturated solutions (SOEP), ii, 1046.
spreading of films of, on water (CARY and RIDEAL), ii, 1046, 1047, 1048.
plasticity of (DAVEY), ii, 1039.
dynads in (HERZOG and WEISSENBERG), ii, 942.
of complex and pseudo-complex compounds (SCHLEICHER), ii, 22.
formation of, in the organism (HERZOG and GONELL), i, 718.
cubic, effect of cold rolling on the structure of (WEBER), ii, 93.
hydrated, electrical conductivity of (JAKUBSOHN and RABINOVITSCH), ii, 847.
mixed, distribution of atoms in (TAMMANN), ii, 20.
optical properties of (PORTER), ii, 945.
diffusion in (BRAUNE and HELLWEG), ii, 103.
solution of (LE BLANC and RÖSSLER), ii, 365.
binary, thermal expansion of (JOHANSSON), ii, 487.
organic, vapour pressures of (SWAN and MACK), ii, 951.
perfect, reflection of Röntgen rays by (WEBER), ii, 1034.
single, flow of (GEISS), ii, 96.
Crystallisation, van't Hoff's diagram of (BELOGLAZOV), ii, 788.
induced (DENIGÈS), ii, 906.
periodic (HEDGES and MYERS), ii, 1168.
spontaneous (TANCOV), ii, 868.
in binary systems (RUER), ii, 125.
Crystallography, Röntgen ray methods of correcting data of (YARDLEY), ii, 1033.
Culture fluids, hydrogen-ion concentration of (CHRISTENSEN and FULMER), i, 1216.
effect of seeds and plants on reaction and hydrogen-ion concentration of (RUDOLFS; HOAGLAND), i, 1368.
Cumidic acid, derivatives of (DE DIESBACH and ZURBRIGGEN), i, 1427.
3-ψ-Cumylrhodanylidene-$\Delta^{5:3'}$-oxindole (HANN), i, 987.
Cupferron. See Phenylhydroxylamine, nitroso-.
Cupric compounds. See under Copper.
Cuprite, crystal structure of (GREENWOOD), ii, 93.
Cuprous salts. See under Copper.
Cuskhygrine, derivatives of (HESS and BAPPERT), i, 425.
Cutic acid, and its copper salt (LEGG and WHEELER), i, 1025.
Cutinic acid, and its metallic salts (LEGG and WHEELER), i, 1025.
Cyanamide, action of ammonia on (COUDER), i, 525.
as source of plant nitrogen (BIALOSUKNIA), i, 1366.
derivatives of (FROMM, BARRENSCHEEN, FRIEDER, PIRK, and KAPELLER), i, 594.
determination of (PINOK), ii, 607.
determination of, in calcium cyanamide (FOSSE, HAGENE, and DUBOIS), ii, 76.
Cyanamidoacetic acid (FROMM, BARRENSCHEEN, FRIEDER, PIRK, and KAPELLER), i, 596.
Cyanidin, synthesis of (WILLSTÄTTER ZECHMEISTER, and KINDLER), i, 54.
conversion of, into catechin (FREUDENBERG, FIKENTSCHER, HARDER, and SCHMIDT), i, 1165.
chloride, synthesis of, and its pentamethyl ether (PRATT and ROBINSON), i, 422.
and its 3:3′:4′-trimethyl ether (PRATT and ROBINSON), i, 827.
*epi***Cyanilic acid** (WIELAND), i, 1049.
*iso***Cyanilic acid,** and its salts and derivatives (WIELAND), i, 1048.
Cyanine colouring matters, colour of (MOIR), ii, 1121.
Cyanite, crystal structure of (NORTON), ii, 1127.
formation of mullite from (GREIG), ii, 987.
Cyano-compounds (OTT and FINKEN), i, 1251.
catalytic reduction of (RUPE and GISIGER), i, 1095.
Cyanogen, band spectrum of (MULLIKEN), ii, 18.
thio-. See Thiocyanogen.

Cyanogen compounds, determination of, iodometrically (LANG), ii, 1009.
Cyanogen bromide, apparatus for preparation of (STEINKOPF, OHSE, and BUCHHEIM), ii, 590.
action of, on thebaine (SPEYER and ROSENFELD), i, 962.
iodide, formation and determination of, in iodometric analysis (LANG), ii, 713.
Hydrocyanic acid, preparation of (BICHOWSKY), i, 236.
specific heat of (PARTINGTON and CARROLL), ii, 373.
saturated vapour pressure of (HARA and SINOZARI), ii, 279.
critical constants and vapour pressure of (BREDIG and TEICHMANN), ii, 950.
liquid, decomposition of (WALKER and ELDRED), i, 1393.
catalytic oxidation of (HARA and SINOZARI), ii, 983.
stimulation of plants by (GASSNER), i, 1029.
fate of, in the organism (DANCKWORTT and PFAU), i, 196.
alkali salts, hydrolysis of, in aqueous solution (HARMAN and WORLEY), ii, 783.
double molybdenum salts, electrolytic oxidation of (COLLENBERG and ANDERSEN), ii, 1165.
potassium salt, reactions of halogens with (MÜLLER and SCHUCH), ii, 825.
potassium and sodium salts, purification and melting point of (GRANDADAM), ii, 704.
sodium salt, preparation of (HARA and MIURA), i, 645; (GUERNSEY and SHERMAN), ii, 889.
detection of (STAMM), ii, 75, 76; (MAGNIN), ii, 607.
*iso*Hydrocyanic acid (ENKLAAR), i, 1394.
Cyanides, complex, electrolysis of (SANIGAR), ii, 676.
determination of (KANÔ), ii, 1010.
determination of, bromometrically (OBERHAUSER), ii, 828.
determination of, in mixtures with halides (DEAN and NEWCOMER), ii, 597.
Cyanates, determination of, colorimetrically (K. C. and D. F. H. BAILEY), ii, 447.
determination of, in blood (MONTGOMERY), i, 455.
Cyanophyceæ, pigments of the (RICHTER), i, 1218.
Cyanuric compounds (OTT and FINKEN), i, 1251.
Cyanurtriazide, preparation of (OTT), i, 599.
Cyclic compounds, formation of from halogenated open-chain derivatives (INGOLD), i, 357; (HAERDI and THORPE), i, 923.
magneto-chemistry of (PASCAL), ii, 1123.
and unsaturation (MEREJKOVSKI), i, 1291.
with double linkings, order of addition to (NAMETKIN), i, 250.
Cymbopogon caesius (inchi grass), oil from (RAO and SUDBOROUGH), i, 1164; (MOUDGILL), i, 1293.
Cymene, electrochemical oxidation of (FICHTER and MEYER), i, 800.
Cyperus rotundus, essential oil of (RAO, PANICKER, and SUDBOROUGH), i, 1164.
Cypridina, effect of light on luminescence of (HARVEY), i, 1212.
Cysteine, oxidation of, in the organism (ROSE, SHIPLE, and SHERWIN), i, 190.
effect of traces of iron on oxidation of (HARRISON), i, 13.
detection of (SULLIVAN), ii, 1211.
Cystine, specific rotation and oxidation of (ANDREWS), i, 1389.
oxidation of, in the organism (ROSE, SHIPLE, and SHERWIN), i, 190.
content of, in proteins (JONES, GERSDORFF, and MOELLER), i, 98.
effect of, on growth in rats (SHERMAN and MERRILL), i, 730.
effect of, on sulphur metabolism (LEWIS), i, 1354.
detection of (SULLIVAN), ii, 1211.
determination of, in urine (MAGNUS-LEVY), i, 610.
Cytochrome (KEILIN), i, 1112.
Cytolysis, production of acid by (DRZEWINA and BOHN), i, 1512.
Cytosylic acid, brucine salt (PEISER), i, 1477.

D.

Dacrydium cupressinum, constituents of oil from (MCDOWALL and FINLAY), i, 418.
Damourite from Tasmania (DITTLER), ii, 323.
Darapskite (FOOTE), ii, 786.
Datisca cannabina, glucoside from (CHARAUX), i, 823.
Datiscetin, synthesis of, and its derivatives (KALFF and ROBINSON), i, 1302.
Datiscetinidin chloride, and its 3:2′-dimethyl ether (PRATT and ROBINSON), i, 826.

Datiscin (CHARAUX), i, 823.
Decacyclene, hydrogenation of (DZIEWOŃSKI and SUSZKO), i, 242.
Decahydroacridone (PERKIN and SEDGWICK), i, 65.
Decahydroanthracene (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 128.
Decahydronaphthalene (*decalin*), and its derivatives (HÜCKEL), i, 258.
and chloro- (ZELINSKI and GAVEDOVSKAJA), i, 123.
isomerism of (WIGHTMAN), i, 894.
isomerisation and dehydrogenation of (ZELINSKI and TUROVA-POLLAK), i, 1053.
surface tension of (GRUNMACH and SCHWEIKERT), ii, 31.
Decahydronaphthalenes (HÜCKEL and GOTH), i, 260.
heats of combustion of (ROTH and LASSÉ), ii, 275.
stereoisomeric (HÜCKEL), i, 1254.
Decahydro-β-naphthol (ZELINSKI and TUROVA-POLLAK), i, 1053.
5-β-Decahydronaphthoylbenzene-1:2:4-tricarboxylic acid, and its derivatives (PHILIPPI, SEKA, and FUNKE), i, 556.
Decahydronaphthylamines. See Decalylamines.
Decahydro*iso*quinoline, phenylcarbimide derivative (SKITA and REITMEYER), i, 140.
Decalin. See Decahydronaphthalene.
Decalols, and their derivatives (HÜCKEL), i, 258.
Decalones, and their derivatives (HÜCKEL), i, 258.
β-Decalones, heats of combustion of (ROTH and LASSÉ), ii, 275.
***trans*-α-Decalone-β-carboxylic acid**, ethyl ester, and its phenylpyrazolone (HÜCKEL and GOTH), i, 260.
α-Decaloneoxalic acid, ethyl ester, and its pyrrolidone derivative (HÜCKEL and GOTH), i, 260.
Decalylamines, and their derivatives (HÜCKEL), i, 258.
αα′-Decamethylene*di*iminodi*iso*butyric acid (SCHLESINGER), i, 1251.
Decamminemonoaquotrihydroxydioltrichromium thiosulphate. See under Chromium.
Decoic anhydride (HOLDE and GENTNER), i, 1035.
Decomposition apparatus (REMY), ii, 589.
Decomposition processes, transference of hydrogen as a basis of (KLUYVER and DONKER), ii, 1173.
Dehydracetic acid, structure of (RASSWEILER and ADAMS), i, 299.
Dehydrating agents, colloidal solutions of, in nitrobenzene (BROWN and BURY), ii, 1055.
Dehydration, dynamic study of (GUICHARD), ii, 427, 559.
Dehydrobis (*N*-tetramethylthiuronium) *per*chlorate (LECHER), i, 1391.
Dehydrocholane (WIELAND), i, 1066.
Dehydro-ψ-codeinone, and its derivatives (SPEYER and ROSENFELD), i, 961.
Dehydroemodinanthranol methyl ester, and its acetyl derivatives (EDER and HAUSER), i, 1160.
Dehydroeseretholemethine, and its salts (STEDMAN and BARGER), i, 292.
Dehydrofluorocyclene, *αα′-di*bromo-, and *di*bromo*di*hydroxy-, tetrasulphonic acid, and *di*bromo*tetra*nitro- (DZIEWOŃSKI and SUSZKO), i, 649.
Dehydrogenation and autoxidation (MANCHOT and GALL), i, 561.
Dehydroindigotin, 4:4′-*di*chloro-, 4:4′-*di*chloro-5:7:5′:7′-*tetra*iodo-, and 6:6′-*di*iodo-, and their derivatives (KALB and VOGEL), i, 161.
5:7:5′:7′-*tetra*iodo-, potassium and sodium hydrogen sulphites (KALB and BERRER), i, 160.
Dehydrothiotoluidines. See Phenyl methylbenzthiazoles, amino-.
Dehydrothio-*m*-xylidines, constitution of (ANSCHÜTZ and SCHULTZ), i 315.
Deliquescence of salts (SCHERINGA), ii, 296.
Delnoline (MARKWOOD), i, 762.
Delphinicæ, urine of (SUZUKI), i, 1349.
Delphinidin, chloride, synthesis of, and its hexamethyl ether (PRATT and ROBINSON), i, 422.
and its 3:3′:4′:5′-tetramethyl ether (PRATT and ROBINSON), i, 827.
Delphinium, alkaloids from species of (KELLER), i, 830.
Delphinium consolida, constituents of seeds of (MARKWOOD), i, 762.
De-*N*-methyldihydrocodeinone, oxime of (WIELAND and KOTAKE), i, 1092.
De-*N*-methyldihydrothebainone, piperonylidene derivative (WIELAND and KOTAKE), i, 1093.
Demethylechitamine, and its salts and derivatives (GOODSON and HENRY), i, 1166.
7-Demethylo-ψ-corydaline, and its methiodide (HAWORTH and PERKIN), i, 971.
7-Demethylomethylpapaverine (HAWORTH and PERKIN), i, 971.
7-Demethylomethylpapaverinol (HAWORTH and PERKIN), i, 971.

7-Demethylomethyltetrahydropapaverine, and its derivatives (HAWORTH and PERKIN), i, 971.
Density (*specific gravity*), rotation dispersion, and absorption spectra of homologous compounds (KRETHLOW), ii, 1029.
relation of temperature to (HERZ), ii, 494, 1141.
of gases by the interferometer (BARUS), ii, 25.
of liquids (VAN LAAR), ii, 278.
of binary solids (PANICHI), ii, 493.
Deoxybenzoin *p*-bromophenylhydrazone (BODFORSS), i, 699.
Deoxybenzoin, cyano-, aldimine from (RUPE and GISIGER), i, 1096.
Deoxybilianic acids, trimethyl esters (WINDAUS and BOHNE), i, 554.
Deoxyepicatechin tetramethyl ether (FREUDENBERG, FIKENTSCHER, and HARDER), i, 419.
Deoxyglucose, formation of, from glucal in rabbits (KONDO), i, 99.
Deoxytetrahydro-α-methylmorphimethines, and their derivatives (SPEYER and KOULEN), i, 60.
Dermocybe sanguinea, colouring matters from (KÖGL and POSTOWSKY), i, 1083.
Dermocybin, and its derivatives (KÖGL and POSTOWSKY), i, 1083.
Derris root, active principle of (TAKEI), i, 761.
Desmotropy, keto-enolic (KAUFMANN and RICHTER), i, 231.
Detonation of mixed gases (WENDLANDT), ii, 135.
Dextrin, nature of (LING and NANJI), i, 516.
limit I, and its acetyl derivative (SYNIEWSKI), i, 368.
Dextrose, structure of (HAWORTH), i, 1133.
mutarotation of (KUHN and JACOB), ii, 49.
effect of phosphates on the rotation of (v. EULER and NILSSON), i, 1042.
dissociation constant of (BRITTON), ii, 977.
reduction of copper salts by (FLEURY and TAVERNIER), ii, 605.
fermentation of (LEMOIGNE), i, 1361.
argon in (PICTET, SCHERRER, and HELFER), i, 865.
lactic acid fermentation of (VIRTANEN), i, 866.
effect of adrenaline and insulin on the utilisation of, by animals (GOTTSCHALK), i, 481.
action of ammonia on (SHMOOK), i, 577.
Dextrose, decomposition of, by bacilli (AUBEL and SALABARTAN), i, 747.
effect of insulin and muscle tissue on (LUNDSGAARD and HOLBØLL), i, 208.
action of yeast extracts on (KUHN and v. GRUNDHERR), i, 203.
αζ-*di*chlorohydrin, and its derivatives (HELFERICH, SPROCK, and BESLER), i, 792.
phenylhydrazones, structure of (FRÈREJACQUE), i, 635.
p-toluenesulphonylhydrazone (FREUDENBERG and BLÜMMEL), i, 52.
in blood in health and in diabetes (LUNDSGAARD and HOLBØLL), i, 1206, 1207.
in blood and body fluids (LUNDSGAARD and HOLBØLL), i, 1494.
oxidation of, in muscle (AHLGREN), i, 482.
in physiological fluids (LUNDSGAARD and HOLBØLL), i, 1207.
in urine (LUND and WOLF), i, 1205.
clinical detection of, in urine (RUOSS), i, 185.
determination of (IONESCU and SPIRESCU), ii, 331; (FLEURY and TAVERNIER; KNECHT and HIBBERT), ii, 605.
determination of, polarimetrically and by copper reduction (WHITE), ii, 1006.
influence of nitrogenous substances on determination of (ROSENTHALER), ii, 1006.
determination of, in blood (MILROY), i, 1486.
determination of, in presence of sucrose in organic liquids (BUFANO), i, 453.
Dextrosedibenzylmercaptal γδ-*iso*butylidene ether (PACSU), i, 1242.
Diabetes (*glycosuria*), effect of induced oxidation in (MITTRA and DHAR), ii, 576.
cholesterol in (NITZESCU, POPESCU-INOTESTI, and CADARIU), i, 462.
dextrose in blood in (LUNDSGAARD and HOLBØLL), i, 1207, 1494.
glycolysis in blood in (BIERRY, RATHERY, and KOURILSKY), i, 1207.
action of insulin in (LAWN and WOLF), i, 483.
lactic acid metabolism in (COLLAZO and LEWICKI), i, 1364.
mineral metabolism in (MEYER-BISCH and GÜNTHER), i, 328.
purine metabolism in (LE BRETON and KAYSER), i, 610.
sugar in blood and urine in, after insulin treatment (MAJOR and DAVIS), i, 1491.
uricolytic index in (LANGFELDT and HOLMSEN), i, 1207.

Diabetes (*glycosuria*), infection in (RICHARDSON and LEVINE), i, 723.
determination of sugar in urine in (WILLIAMS and CASEY), i, 998.
phloridzin, metabolism of glycerol in (CHAMBERS and DEUEL), i, 1352.
excretion of sugars in (DEUEL and CHAMBERS), i, 1352.
Diacetalmalonic acid, and its ethyl ester (PERKIN and PINK), i, 359.
2:3-Diacetanilido-1:4-diacetoxynaphthalene (FRIES and BILLIG), i, 940.
Diacetoacetylnaphthylenediamines (CHEMISCHE FABRIK GRIESHEIM-ELEKTRON), i, 587.
Diacetoacetyl-*p*-phenylenediamine (CHEMISCHE FABRIK GRIESHEIM-ELEKTRON), i, 587.
Diacetonamine, preparation of (HAESELER), i, 644.
Diacetone alcohol, electrolytic reduction of (READ and FLETCHER), i, 627.
Diacetonemannose. See Mannose di*iso*propylidene ether.
2:4-Diacetoxyacetophenone, ω-chloro- (NIERENSTEIN, WANG, and WARR), i, 34.
***s*-Di(acetoxyformanilidophenyl) *tri*sulphide** (NAIK and PATEL), i, 122.
Diacetyl. See Dimethyl diketone.
Diacetylacetone *cyclodi*sulphide, *tri*thio- (ARNDT, NACHTWEY, and PUSCH), i, 1307.
4:4′-Diacetylarsenobenzene, and **3:3′-*di*hydroxy-**, derivatives of (MARGULIES), i, 448.
Diacetylbenzylamine (HOLMES and INGOLD), i, 1144.
Diacetyldibenzyliminophthalimidine, and its derivatives (WEISS and FREUND), i, 139.
1:3-Diacetyl-2:2-dimethyl*cyclo*pentane, and its disemicarbazone (HALLER and LEGAGNEUR), i, 925.
Diacetyldioxime, copper and nickel compounds of (PANETH and THILO), i, 1152.
Diacetylene, and its silver derivatives (LESPIEAU and PRÉVOST), i, 493.
*hexa*bromide (LESPIEAU and PRÉVOST), i, 626.
Diacetyl-ψ-glucal, acetals from (BERGMANN), i, 887.
Diacetylglyoxime peroxide, peroxide of the dioxime of (PONZIO and BERNARDI), i, 79.
***s*-Diacetylhydrazine**, *s-hexa*chloro- (NAIK and PATEL), i, 121.
Diacetylphenylarsine (JOB, REICH, and VERGNAUD), i, 173.
Diacetylsuccinic acid, ethly ester, azo compounds with (BÜLOW and BAUR), i, 1327.
1:4-Dialanylpiperazine, and its derivatives (ABDERHALDEN and ROSSNER), i, 975.
4:4-Dialdehydoarsenobenzene, and its semicarbazone (MARGULIES), i, 447.
Dialdehydobenzenedicarboxylic acids, and their derivatives (DE DIESBACH and ZURBRIGGEN), i, 1427.
αγ-Dialdehydopropane-β-carboxylic acid, and its di-*p*-nitrophenylhydrazone (PERKIN and PINK), i, 359.
αγ-Dialdehydopropane-ββ-dicarboxylic acid, and its ethyl ester and their di-*p*-nitrophenylhydrazones (PERKIN and PINK), i, 359.
Dialkyl phosphites, tautomerism of (MIŁOBĘDZKI), i, 1051.
Diallyl *penta*sulphide, and its derivatives (THOMAS and RIDING), i, 4.
Diallylacetophenone (HALLER, BAUER, and RAMART), i, 261.
α-Diallylaminomethyl-α-ethylacetoacetic acid, ethyl ester (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1249.
Diallylbarbituric acid (VOLWILER), i, 1174.
diethylamine salt (HOFFMANN, LA ROCHE & Co.), i, 300.
Diallyl*iso*butyrone (HALLER, BAUER, and RAMART), i, 261.
αα-Diallylbutyrophenone (HALLER, BAUER, and RAMART), i, 261.
αα-Diallylpropiophenone (HALLER, BAUER, and RAMART), i, 261.
Dialyser, rotating (ASTRUC and CANALS), ii, 896.
Dialysis, use of tap water in (WILKE-DÖRFURT and DEKER), ii, 528.
electrolytic, laboratory apparatus for (FUCHS and HONSIG), ii, 897.
Diamagnetism of gases (GLASER), ii, 82.
Diamidoacetic acid, *dic*yano-. See Guanidoacetic acid, cyano-.
Diamines, compounds of stannic halides with (HIEBER and WAGNER), i, 1326.
aromatic stereoisomeric, nitration of (MORGAN and HICKINBOTTOM), i, 156.
Di(2-amino-4-methylthiazolyl)-5-phenylmethane (BOGERT and CHERTCOFF), i, 315.
Di(2-amino-4-phenylthiazolyl)-5-*p*-chlorophenylmethane (BOGERT and CHERTCOFF), i, 316.
Di(2-aminophenylthiazolyl)-5-*p*-dimethylaminophenylmethane (BOGERT and CHERTCOFF), i, 316.

Di(2-amino-4-phenylthiazolyl)-5-hydroxyphenylmethanes (BOGERT and CHERTCOFF), i, 316.
Di(2-amino-4-phenylthiazolyl)-5-nitrophenylmethanes (BOGERT and CHERTCOFF), i, 316.
Di(2-amino-4-phenylthiazolyl)-5-phenylmethane, and its derivatives (BOGERT and CHERTCOFF), i, 315.
Diamminoethylenediaminobisacetylacetonocobaltic salts (MORGAN and SMITH), i, 1457.
Diamond, photo-electric properties of (GUDDEN and POHL), ii, 344.
Hall effect with (LENZ), ii, 920.
crystal structure of zinc blende and (BECKENKAMP), ii, 271.
transformation of, into graphite (LEBEAU and PICON), ii, 136.
black and white, heats of combustion of (ROTH and NAESER), ii, 1140.
Di-*n*-amylacetal (BĚDOWÉ), i, 513.
Di*iso*amylamine hydrochloride (RUPE and HODEL), i, 275.
Di*iso*amylammonium iodide (STEINKOPF and BESSARITSCH), i, 495.
***s*-Di*iso*amylhydrazine, salts of** (MAZOUREVITCH), i, 1247.
***α*-Diamylose *hexa*nitrate** (PRINGSHEIM, LEIBOWITZ, and SILMANN), i, 1244.
Dianhydrostrophanthidinic acid (JACOBS and COLLINS), i, 1082.
Dianilino*di*aminostilbene (ELBS, NACKEN, and HOFMANN), i, 168.
9:10-Dianilinoanthracene, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 1399.
Dianilino-*p*-azoxystilbene (ELBS and GAUMER), i, 167.
and its derivatives (ELBS, NACKEN, and HOFMANN), i, 168.
***s*-Di-4-anilinocarbamide, 3:5-*di*nitro-** (LINDEMANN and WESSEL), i, 1099.
2:3-Dianilino-1:4-diacetoxynaphthalene (FRIES and BILLIG), i, 940.
9:10-Dianilino-9:10-dihydroanthracene, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 1140.
1:1-Dianilinodihydro-α-naphthafurandione-2-anil (PASSERINI), i, 1298.
***PP'*-Dianilino-*PP'*-dioxotetrahydrotetrazdiphosphinium** (AUTENRIETH and BÖLLI), i, 1469.
Di-β-anilinoethyl ether (CRETCHER, KOCH, and PITTENGER), i, 627.
3:5-Dianilino-4-methoxyphenol, 2:6-*di*nitro- (KOHN and MARBERGER), i, 1265.
2:3-Dianilino-1:4-naphthaquinone (FRIES and BILLIG), i, 939.
α-Dianisidine hydroferrocyanide (CUMMING), i, 122.
4:6-Di-*p*-anisoyl-1:3-dimethylbenzene (DE DIESBACH and STREBEL), i, 1436.
Dianisyldi-α-naphthylethane (CONANT, SMALL, and TAYLOR), ii, 874.
9:12-Dianisyldiphensuccindanes (BRAND and KREY), i, 904.
9:12-Di-*o*-anisyl-Δ^{10}-diphensuccindene (BRAND and KREY), i, 904.
2:6-Dianisyl*cyclo*hexanone (GARLAND and REID), i, 1281.
2:7-Di-*p*-anisylideneaminophenanthraquinone (SIRCAR and GUPTA), i, 984.
Dianisylidene*cyclo*hexanone, and its hydrochloride (VORLÄNDER, HIEMESCH, SCHOENEMANN, SCHADE, and KUNZE), i, 268.
Dianthranyl oxide and ***tetra*sulphide** (COOKE, HEILBRON, and WALKER), i, 1410.
Dianthraquinone, *di*hydroxy-, and its derivatives (PERKIN and YODA), i, 1160.
1:1-Dianthraquinonyl (ECKERT), i, 414.
***s*-2-Dianthraquinonylethane**, and ***di*-4-chloro-** (ECKERT), i, 413.
Diaquocobaltousethylene*di*aminobisacetylacetone (MORGAN and SMITH), i, 1457.
Diarsinoanilinoformyl-*s*-diphenylcarbamides (HAMILTON and MAJOR), i, 991.
***o:o'*-Di-4-arsinobenzeneazo*di*bromofluorescein** (CHRISTIANSEN), i, 1193.
***o:o'*-Di-4-arsinobenzeneazofluorescein** (CHRISTIANSEN), i, 1193.
***o:o'*-Di-4-arsinobenzeneazophenol*tetra*chlorophthalein** (CHRISTIANSEN), i, 1193.
***o:o'*-Di-4-arsinobenzeneazophenolphthalein** (CHRISTIANSEN), i, 1193.
4:4'-Di-*p*-arsino-*o*-methylanilinoformyl-*s*-diphenylcarbamide (HAMILTON and MAJOR), i, 991.
5:5'-Diarsinosulphonanilide-*N:N'*-disulphonic acid, 2:2'-*di*hydroxy-, barium salts (CHRISTIANSEN, NORTON, and SHOHAN), i, 1471.
Diaryl*di*chlorosilicanes, action of mercuric oxide on (VYLE and KIPPING), i, 172.
ββ-Diarylethyl alcohols, preparation and dehydration of (RAMART and AMAGAT), i, 658.
Diarylthiocarbamides, preparation of (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 133.
Diastase (SYNIEWSKI), i, 469.
malt, optimum temperature for the action of, on starch (LECOQ), i, 470.
determination of (GORE), i, 335.

Diastase, salivary, hydrolysis of glycogen by (PAECHTNER), i, 738.
determination of activity of (SYNIEWSKI), i, 470.
determination of, in fæces (FRANK and DOLESCHALL), i, 461.
α-Diastase, action of, on amylopectin (SYNIEWSKI), i, 470.
Diatoms, silicon metabolism of (BRIEGER), i, 341.
2:7- and 4:5-Diazidophenanthraquinones, and their derivatives (BRASS and NICKEL), i, 273.
Diazoacetic acid, ethyl ester, decomposition of, by copper acetylide (MÜLLER and GOTTFRIED), i, 893.
Diazoamino-conversion (GOLDSCHMIDT, JOHNSEN, and OVERWIEN), ii, 138.
Diazobenzenebismuth chloride (SUPNIEWSKI), i, 1473.
Diazo-compounds, thermochemistry of (SWIENTOSLAWSKI; SWIENTOSLAWSKI and BLASZKOVSKA), ii, 1044.
coupling of aromatic nuclei with (LEVI), i, 436, 1186.
analogies between organic peroxides and (GELISSEN and HERMANS), i, 813.
reactions of secondary aromatic amines with (LEVI and FALDINO), i, 171.
aliphatic, formation of (BERK and HERMANS), i, 794.
Diazoles, complex, colour of (CHAKRAVARTI), i, 162.
Diazomethane, action of, on aromatic acyl chlorides (NIERENSTEIN, WANG, and WARR), i, 34; (LEWIS, NIERENSTEIN, and RICH), i, 935.
action of, on hippuryl chloride (KARRER and WIDMER), i, 593.
4:4′-Di*iso*barbituric acid, and its salts (DAVIDSON and BAUDISCH), i, 1188.
3:4:6:7-Dibenzacridine-5-carboxylic acid. See Dinaphthacridine-14-carboxylic acid.
Dibenzhydroxamic acid, *pp′-di*bromo- (SCHEUING and HENSLE), i, 28.
Dibenzimide, *di-p*-hydroxy-, and its diacetyl derivative (ANSCHÜTZ and ZERBE), i, 667.
Dibenzofulvene (*diphenylene-ethylene*), preparation of, and ω-bromo- and ω-nitro- (WIELAND and KRAUSE), i, 902.
Dibenzohomopyran (SIEGLITZ and KOCH), i, 279.
Dibenzo-Δ⁶-suberen-1-one-2:2′-spiran, preparation of (LEUCHS and SANDER), i, 1432.
Dibenzoylbenzenedicarboxylic acid, bromo- (PHILIPPI, SEKA, and BAUER), i, 555.
2:5-Dibenzoyl-3:4-benzofuran (WEISS and SONNENSCHEIN), i, 938.
βδ-Dibenzoyl-αε-diketo-*n*-pimelic acid. See Methylenebenzoylpyruvic acid.
αβ-Dibenzoylethane, *tetra*bromo- and *di*-4-chloro- (CONANT and LUTZ), i, 682.
αα′-Dibenzoylethylene, *hexa*hydroxy- (BOGERT and RITTER), i, 816.
αβ-Dibenzoylethylene, amino, halogen and hydroxy derivatives of (CONANT and LUTZ), i, 681.
Dibenzoylglyoxime *per*oxide (RUGGERI), i, 79.
dioxime, diacetyl derivative (PONZIO), i, 1075.
peroxide of (PONZIO and BERNARDI), i, 80.
Di-β-benzoyloxyethyl ether (CRETCHER and PITTENGER), i, 228.
3:9-Dibenzoylperylene, 4:10-*di*chloro-3:9-*di-p*-bromo-, and -3:9-*di-p*-chloro- (ZINKE, FUNKE, and PONGRATZ), i, 819.
3:4-Dibenzoyl-1-phenyl-2:5-dimethylpyrrole (SEKA), i, 57.
Dibenzoylterephthalic acid, *tetra*bromo-2:5-*di-p*-hydroxy- (DE DIESBACH and STREBEL), i, 1436.
1:3-Dibenzoyl-1:2:2-trimethyl*cyclo*pentane, and its derivatives (HALLER and LEGAGNEUR), i, 683.
Dibenzoylxylenes (DE DIESBACH and STREBEL), i, 1435.
4:6-Di-2-benztriazolylresorcinol (ELBS), i, 164.
Dibenzyl *penta*sulphide, and its derivatives (THOMAS and RIDING), i, 5.
γγ-Dibenzylacetylacetone, and its salts (MORGAN and TAYLOR), i, 634.
Dibenzylamines, *di*nitro-, and their salts (HOLMES and INGOLD), i, 1143.
4-β-Dibenzylaminoethylglyoxaline, and its hydrobromide (GERNGROSS), i, 441.
Dibenzylcitric acid (HEFTI and SCHILT), i, 394.
2:6-Dibenzyl-*p*-cresol (CLAISEN, KREMERS, ROTH, and TIETZE), i, 656.
3:5-Dibenzyl-*p*-cresol (CLAISEN), i, 1410.
Dibenzyldixanthyl, and its *per*oxide (CONANT and SLOAN), i, 955.
Dibenzyl*cyclo*hexanol, *di-p*-hydroxy-, and its salts (VORLÄNDER, HIEMESCH, SCHOENEMANN, SCHADE, and KUNZE), i, 268.
2:6-Dibenzyl*cyclo*hexanone, 2:6-*di-p*-chloro- (GARLAND and REID), i, 1281.
***N-exo*-Dibenzylhistamine**. See 4-β-Dibenzylaminoethylglyoxaline.
Dibenzylideneacetone. See Distyryl ketone.

2:7-Dibenzylideneaminophenanthraquinone, and 2:7-*di-o*-hydroxy- (SIRCAR and GUPTA), i, 984.
Dibenzylidene*cyclo*hexanone, *di-p*-hydroxy-, and its derivatives (VORLÄNDER, HIEMESCH, SCHOENEMANN, SCHADE, and KUNZE), i, 268.
2:6-Dibenzylidene*cyclo*hexanone, *di-p*-bromo- and *tetra*bromo- (GARLAND and REID), i, 1280.
Dibenzylidenemethyl*cyclo*hexanone, *di-p*-hydroxy-, and its salts (VORLÄNDER, HIEMESCH, SCHOENEMANN, SCHADE, and KUNZE), i, 268.
Dibenzylidene*cyclo*pentanone, *di-p*-hydroxy-, derivatives of (VORLÄNDER, HIEMESCH, SCHOENEMANN, SCHADE, and KUNZE), i, 267.
1:2-Dibenzylindazolium iodide (v. AUWERS and PFUHL), i, 1101.
1:1-Dibenzyl-ψ-*iso*indole, 3-amino-, and its hydrochloride (WEISS and FREUND), i, 139.
Dibenzylmethylamines, *di*nitro-, and their salts (HOLMES and INGOLD), i, 1143.
Dibenzylmethylcarbinol (TROTMAN), i, 382.
ββ-Dibenzyloxydiethylmalonic acid, and its salts (BENNETT), i, 884.
2:5-Dibenzyloxydihydropyrazine, reduction of (KARRER and GRÄNACHER), i, 302.
Di(benzyloxy)phenylmethane, *di*-α-cyano- (STOLLÉ), i, 815.
2:4-Dibenzylphenol (v. BRAUN and REICH), i, 1405.
Dibenzylphthalimidine (WEISS and FREUND), i, 139.
4:4-Dibenzyl*cyclo*telluropentane-3:5-dione (MORGAN and TAYLOR), i, 634.
Di-ββ′-benzylthioldiethyl sulphides (FROMM and JORG), i, 352.
αβ-Dibromo compounds, action of inorganic iodides on (VAN DUIN), i, 802; (CONANT, KIRNER, and HUSSEY), i, 803.
Dibutadiene (ASCHAN and KROHN), i, 49.
Di-β-butoxyethyl ether (CRETCHER and PITTENGER), i, 228.
Di-*n*-butyl sulphide (GILMAN, SMITH, and PARKER), i, 657.
Di-*n*-butylacetal (BÉDOWÉ), i, 513.
Di-*n*-butylacetoacetic acid, ethyl ester (HESS and BAPPERT), i, 349.
Di-*n*-butylamine *m*-nitrobenzenesulphonamide (MARVEL, KINGSBURY, and SMITH), i, 245.
[redacted] salts of (MAZOUREVITCH), i, 1247.
β-Di-*sec.*-butylaminoethyl alcohol, and its benzoates (ADAMS, VOLWILER, and JENKINS), i, 399.
γ-Di-*sec.*-butylaminopropyl *p*-aminobenzoate hydrochloride (ADAMS, VOLWILER, and JENKINS), i, 399.
Di*iso*butylammonium *tri*iodide (STEINKOPF and BESSARITSCH), i, 497.
Dibutyldixanthyl, and its peroxide (CONANT and SLOAN), i, 955.
s-Di*iso*butylhydrazine, salts of (MAZOUREVITCH), i, 1247.
αβ-Di-*n*-butylhydroxylamine, and its hydrochloride (NEUFFER and HOFFMAN), i, 891.
αβ-Di-*m*-butylhydroxyurethane (NEUFFER and HOFFMAN), i, 891.
5:5-Dibutyrylarsenobenzene, 3:3′-*di*nitro-4:4′-*di*hydroxy- (MARGULIES), i, 447.
s-Di*iso*butyrylhydrazine (NAIK and PATEL), i, 121.
Di*iso*butyrylmethane, and its copper salt (MORGAN and TAYLOR), i, 634.
αβ-Di-*iso*butyryl-*o*-nitrophenylhydrazide (VAN ALPHEN), i, 82.
3:4-Dicarbethoxy*di*aminophenylarsinic acid (HAMILTON and SLY), i, 600.
Dicarbethoxyglycerol (ALLPRESS and MAW), i, 4.
Dicarbethoxyglycol (ALLPRESS and MAW), i, 4.
9-Dicarbethoxyhydrazinophenanthrene (STOLLÉ and ADAM), i, 1470.
γδ-Dicarbethoxy-γ-hydroxy-ββ-dimethylbutane-α-carboxylic acid, anhydride and lactone of (ROTHSTEIN, STEVENSON, and THORPE), i, 885.
δε-Dicarbethoxy-δ-hydroxy-γγ-dimethylpentane-β-carboxylic acid, γ-lactone of (ROTHSTEIN, STEVENSON, and THORPE), i, 884.
Dicarbethoxymethyl-*N*-phenylnitrone (BURKHARDT and LAPWORTH), ii, 937.
Dicarbethoxytartaric acid, diethyl ester (ALLPRESS and MAW), i, 4.
dl-Dicarbethoxytyrosine (HAVESTADT and FRICKE), i, 163.
α-Dicarbethoxytyrosylamino-β-glyoxaline-4(or 5)-propionic acid, methyl ester (HAVESTADT and FRICKE), i, 163.
3:4-Dicarbobutoxy*di*aminophenylarsinic acids (HAMILTON and SLY), i, 600.
3:4-Dicarbomethoxy*di*aminophenylarsinic acid (HAMILTON and SLY), i, 600.
Dicarbomethoxyglycol (ALLPRESS and MAW), i, 4.
α-Dicarbomethoxyhydrazinoanthracene (STOLLÉ and ADAM), i, 1469.

9-Dicarbomethoxyhydrazinophenanthrene (STOLLÉ and ADAM), i, 1469.

Dicarbomethoxytyrosine (HAVESTADT and FRICKE), i, 163.

α-Dicarbomethoxytyrosylaminopropionic acid, ethyl ester (HAVESTADT and FRICKE), i, 163.

Dicarbomethoxytyrosylaminosuccinic acid, methyl ester (HAVESTADT and FRICKE), i, 163.

3:4-Dicarbopropoxy*di*aminophenylarsinic acids (HAMILTON and SLY), i, 600.

2:5-Di-*p*-carboxybenzoylterephthalic acid, and its barium salt (DE DIESBACH and STREBEL), i. 1436.

3:3′-Dicarboxydiphenyl *di*sulphoxide, 4:4′-*di*hydroxy- (BERE and SMILES), i, 22.

Dicarboxylamidobenzenedicarboxylic acid, sodium salt (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 130.

Dicarboxymethylmandelic acid (PERKIN and TAPLEY), i, 43

3:4-Dicarboxy-5-methylpyrazole-1-benzeneazoacetoacetic acid, ethyl ester, and its derivatives (BÜLOW and BAUR), i, 1327.

***p*:*p*′-Di-4-carboxy-6-methyl-2-quinolylarsenobenzene** (OGDEN and ADAMS), i. 707.

αα′-Dicellosylsulphone, and its tetradecylacetyl derivative (WREDE and ZIMMERMANN), i, 1384.

***dl*-Dicentrine**, synthesis of, and its derivatives (HAWORTH, PERKIN, and RANKIN), i, 1314.

2:7-Dicinnamylideneaminophenanthraquinone (SIRCAR and GUPTA), i, 984.

4:3′-Dicoumaryl, 6′-bromo-7-hydroxy- and 7-hydroxy-, and their derivatives (DEY and ROW), i, 150.

Di-*o*-cresolisatin, diacyl derivatives of (HOFFMANN, LA ROCHE & Co.), i, 66.

Dicyanodiamide, effect of, on plants (ALLISON, SKINNER, and REID), i, 1030.

Dicyanoimide, and its salts (BURDICK), i, 1048.

Didehydrobromochelidonine, and its salts (GADAMER and WINTERFELD), i, 285.

Didehydrochelidonine, and its salts (GADAMER and WINTERFELD), i, 285.

Di-β-3:4-dimethoxyphenylethyl ketone, and its oxime (NOMURA and HOTTA), i, 1156.

2:6-Di-*p*-dimethylaminobenzylidene-*cyclo*hexanone, and its perchlorates (PFEIFFER), i, 411.

αγ-Di-dimethylaminopropan-β-ol methiodides (CALLSEN), i, 1389.

Di-*p*-dimethylaminostyryl ketone, salts of (PFEIFFER), i, 411.
additive compound of, with resorcinol (PFEIFFER, GOEBEL, and ANGERN), i, 262.

2:6-Di-2′:4′-dimethylbenzyl-*cyclo*hexanone (GARLAND and REID), i, 1281.

2:6-Di-2′:4′-dimethylbenzylidene-*cyclo*hexanone (GARLAND and REID), i, 1280.

***s*-Di(diphenyl) *di*sulphide, *di*amino-**, acetyl derivative (NAIK and PATEL), i, 121.

αβ-Didiphenylacetylmethylhydrazide (VAN ALPHEN), i, 82.

αβ-Didiphenylacetylphenylhydrazide (VAN ALPHEN), i, 82.

Di-(β-diphenylethyl)amine, and its derivatives (RUPE and GISIGER), i, 1095.

***l*-Di-diphenylethylethylene oxide** (MCKENZIE and ROGER), i, 26.

***l*-Di-diphenylmethylethylene oxide** (MCKENZIE and ROGER), i, 26.

Di-di*iso*propylidenegalactosylamine, and its derivatives (FREUDENBERG and DOSER), i, 366.

Dielectric constants, determination of (HELLMANN and ZAHN), ii, 1117.
of good conductors (FÜRTH), ii, 631.
of electrolytes (WALDEN, ULICH, and WERNER), ii, 512, 773; (ULICH), ii, 964.
of liquids (GRÜTZMACHER; SAYCE and BRISCOE), ii, 263; (BELL and POYNTON), ii, 477; (HARRIS), ii, 631.
of organic liquids (GRENACHER; FRANCKE), ii, 741; (LANGE), ii, 840.
of aqueous solutions, effect of temperature on (KOCKEL), ii, 932.

Diet, balance of carbohydrates and mineral salts in (RANDOIN, ALQUIER, ASSELIN, and CHARLES), i, 1002.
importance of iron in (HART, STEENBOCK, ELVEHJEM, and WADDELL), i, 1352.
rich in vitamins, effect of ions on growth on (TSUKAMOTO), i, 210.
required for reproduction (SURE), i, 212, 752.
of cows, protein content of (PERKINS and MONROE), i, 1354.
of parents, influence of, on young (KORENCHEVSKI and CARR), i, 210, 463.

Diet, relation between loss of fur and, in rats (HARTWELL), i, 464.
synthetic, preparation of (HARTWELL), i, 1514.
2:9-Diethoxyacridine (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 429.
2:3-Diethoxybenzaldehyde, nitration of (RUBENSTEIN), i, 1428.
***o*:*o*′-Di(ethoxybenzoyl)benzils**, and their derivatives (BRAND and KREY), i, 904.
Di-β-ethoxyethyl ether (CRETCHER and PITTENGER), i, 228.
Di-*m*-and-*p*-ethoxymethylbenzylamines, and their salts and derivatives (v. BRAUN and REICH), i, 1405.
Di-(β-ethoxymethylphenylethyl)amines and their salts and nitroso-derivatives (v. BRAUN and REICH), i, 1405.
ββ-Diethoxypropionic acid, ethyl ester (INGOLD), i, 779.
Di-*o*-γ-ethoxypropylbenzylamine (v. BRAUN and KAISER), i, 1414.
***d*-Diethoxysuccinic acid**, dissociation constant of (FAIRWEATHER), i, 631.
Diethyl ether. See Ethyl ether.
sodium phosphite (NYLÉN), i, 1135.
selenides, ββ′-*di*bromo- and ββ′-*di*chloro-, and their halides (BELL and GIBSON), i, 1126.
*di*sulphide, compounds of gold chloride with (RÂY), ii, 184.
ββ′-*di*hydroxy-, dibenzoate (FROMM and JÖRG), i, 352.
2:5-Diethylacetophenoneoxime (v. AUWERS, LECHNER, and BUNDESMANN), i, 266.
ββ-Diethylacrylic acid. See β-Ethyl-Δα-pentenoic acid.
Diethylamine, condensation of phenylthiocarbamide with (HUNTER), i, 805.
m-nitrobenzenesulphonamide (MARVEL, KINGSBURY, and SMITH), i, 244.
Diethylaminoacetic acid, phenylethyl ester (WEIL), i, 157.
9-Diethylaminoanthrone, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 1399.
γ-Diethylamino-γ-diethylnonan-η-one, and its derivatives (BLAISE and MONTAGNE), i, 633.
2:2′-Diethylamino-5:5′-dimethyldiphenyl *di*sulphide, 2:2′-diacetyl derivative (CLARK), i, 841.
2:2′-Diethylaminodiphenyl *di*sulphide, 2:2′-diacetyl derivative (CLARK), i, 841.
3-β-Diethylaminoethoxy-4-diallyl-5-hydroxybenzene (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 301.
Diethylaminoethoxyethyl alcohol, and its derivatives (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 374.
3-β-Diethylaminoethoxy-1-phenyl-4-dimethyl-5-pyrazolone (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 301.
Diethylaminoethylcarbamic acid, esters of, and their hydrochlorides (HARTMANN and KÄGI), i, 1046.
Diethylaminoethyliminodicarboxylic acid, phenylethyl ester (HARTMANN and KÄGI), i, 1046.
***N*-Diethylaminoethyl-linoleamide** (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1133.
9-Diethylamino-6-hydroxy-5-keto-7:12-naphthaphenthiazine (HELLER), i, 315.
α-Diethylaminomethyl-α-allylacetoacetic acid, ethyl ester (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1249.
α-Diethylaminomethyl-α-ethylacetoacetic acid, ethyl ester (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1249.
5-Diethylaminophenyl hydrogen thiosulphate, 2-amino-, and its derivatives (HELLER), i, 314.
Diethylaniline, vapour pressure of (NELSON and WALES), ii, 494.
Diethylaniline, *di*-β-hydroxy-, salts of (GABEL), i, 536.
Diethylanthraquinone (QUAYLE and REID), i, 1289.
Diethylbarbituric acid, choline and methylamine salts (HOFFMANN, LA ROCHE & Co.), i, 300.
ββ-Diethylbutan-α-ol, γ-amino-, and its hydrochloride and benzoyl derivative (BILLON), i, 120.
***s*-Diethylcarbamide**, ββ-*di*chloro- (MELDRUM and ALIMCHANDANI), i, 1273.
Diethyldihydroresorcinol. See 3:5-Diketo-1:1-diethyl*cyclo*hexane.
Diethylenediamineplatinous iodide, decomposition of, by acids (SCHLEICHER and SCHMITZ), ii, 704.
αα′-Diethylglutaric acid, dianilide and di-*p*-toluidide of (v. AUWERS), i, 892.

3:3'-Dimethoxydiphenoquinone-4:4'-*di*chlorodi-imine (BLASZKOVSKA), ii, 1043.
2:3'-Dimethoxydiphenyl-5:6'-dicarboxylic acid (PUMMERER, PUTTFARCKEN, and SCHOPFLOCHER), i, 1262.
Dimethoxy-3:3'-diphenyl-5:5'-dimethyl-3:3'-dicoumaranyls, 2:2'-*di*hydroxy- (LÖWENBEIN and FOLBERTH), i, 552.
3:4-Dimethoxydiphenylmethane-2-carboxylic acid, 2'-hydroxy- (JACOBSON and ADAMS), i, 272.
Dimethoxydipropyldiphenyl, *di*hydroxy- (RICHTER and CHRISTEN), i, 813.
3:4'-Dimethoxy-2:4-distyrylbenzopyrylium chloride, 7-hydroxy- (HEILBRON, WALKER, and BUCK), i, 694.
Di-β-methoxyethyl ether (CRETCHER and PITTENGER), i, 228.
3:4'-Dimethoxyflavone, 5:7-*di*hydroxy- (ROBINSON and SHINODA), i, 1302.
3:3'-Dimethoxyflavylium chloride, 5:7-*di*hydroxy- (PRATT and ROBINSON), i, 826.
4:5-Dimethoxyhomophthalamic acid (HAWORTH and PINK), i, 929.
4:5-Dimethoxyhomophthalimide (HAWORTH and PINK), i, 929.
5:6-Dimethoxy-2-(4'-hydroxy-3'-methoxybenzyl)benzoic acid (JACOBSON and ADAMS), i, 1077.
5:6-Dimethoxy-2-(hydroxymethylbenzyl)benzoic acids (JACOBSON and ADAMS), i, 1077.
5:6-Dimethoxy-2-(2'-hydroxy-5'-nitrophenyl)phthalide (JACOBSON and ADAMS), i, 1077.
5:6-Dimethoxy-2(6'-hydroxy-*m*-tolyl)-phthalide (JACOBSON and ADAMS), i, 1077.
5:6-Dimethoxy-2(2'-hydroxy-3':5'-xylyl) phthalide (JACOBSON and ADAMS), i, 1077.
Dimethoxyindenoquinoline, and its hydrochloride (LIONS, PERKIN, and ROBINSON), i, 832.
2:3-Dimethoxyindophenazine, and its salts (ARMIT and ROBINSON), i, 1172.
6:6'-Dimethoxy-3-keto-$\Delta^{2:3'}$-dicoumaran, 5:5'-*di*bromo-, and its derivatives (FRIES and SAFTIEN), i, 571.
6:6'-Dimethoxy-3-keto-2:3-dihydro-2:3'-dicoumaran, and its oxidation product (FRIES and SAFTIEN), i, 570.
1:2-Dimethoxymethoxyanthraquinones, hydroxy- (JACOBSON and ADAMS), i, 1077.
5:7-Dimethoxy-4-*p*-methoxyphenylcoumarin (BARGELLINI), i, 1299.
3:7-Dimethoxy-4-*p*-methoxyphenyl-2-methylbenzopyrylium ferrichloride (ALLAN and ROBINSON), i, 148.
1:2-Dimethoxy-6-methylanthraquinone, 8-bromo-5-hydroxy- and 5-hydroxy- (JACOBSON and ADAMS), i, 272.
1:2-Dimethoxy-6-methyl-9-anthrone, 8-bromo-5-hydroxy- and 5-hydroxy- (JACOBSON and ADAMS), i, 272.
1:2-Dimethoxymethyl-9-anthrones, 5-hydroxy- (JACOBSON and ADAMS), i, 1077.
3:7-Dimethoxy-2-methylbenzopyrone (ALLAN and ROBINSON), i, 148.
Dimethoxymethylenefluorene, bromo- (WIELAND and KRAUSE), i, 902.
2:3-Dimethoxy-6-methylindophenazine methohydroxide (ARMIT and ROBINSON), i, 1173.

2:3-Dimethoxy-5(or 11)-methyl*iso*indophenazine, and its salts (ARMIT and ROBINSON), i, 1173.

4:6-Dimethoxy-2-methylpyridine-5-carboxylic acid (SPÄTH and KOLLER), i, 1446.

β-2:3-Dimethoxyphenoxypropionic acid (PFEIFFER, OBERLIN, and KONERMANN), i, 1304.

β-4:5-Dimethoxyphenylacrylic acid, 3-amino-, and 3-nitro- (SONN, MÜLLER, BÜLOW, and MEYER), i, 933.

3:4-Dimethoxyphenyl-5′-bromo-2′-hydroxy-*m*-tolylmethane-2-carboxylic acid (JACOBSON and ADAMS), i, 272.

β-3:4-Dimethoxyphenylethyl *n*-amyl ketone, and its oxime (MURAI), i, 1157.

β-3:4-Dimethoxyphenylethyl butyl ketones, and their derivatives (NOMURA and HOTTA), i, 1157.

β-3:4-Dimethoxyphenylethyl ethyl ketone, and its derivatives (NOMURA and HOTTA), i, 1157.

Di-3-methoxyphenylethyl ketone, *di*-β-4-hydroxy-, and its dibenzoyl derivative (NOMURA and HOTTA), i, 1156.

β-3:4-Dimethoxyphenylethyl *n*-propyl ketone, and its oxime (NOMURA and HOTTA), i, 1157.

Di(*p*-methoxyphenyl)hydantoins (COGHILL and JOHNSON; COGHILL), i, 583.

3′:4′-Dimethoxyphenyl β-2-hydroxy-4:6-dimethoxyphenylethyl ketone (FREUDENBERG, FIKENTSCHER, and WENNER), i, 692.

2:4-Dimethoxyphenyl 2-hydroxy-4:6-dimethoxystyryl ketone (PRATT and ROBINSON), i, 825.

3:4-Dimethoxyphenyl *o*-hydroxystyryl ketone benzoate (FREUDENBERG, FIKENTSCHER, and HARDER), i, 420.

3:4-Dimethoxyphenyl-2′-hydroxy-*m*-tolylmethane-2-carboxylic acid (JACOBSON and ADAMS), i, 272.

3:7-Dimethoxy-4-phenyl-2-methylbenzopyrylium ferrichloride (ALLAN and ROBINSON), i, 148.

5:7-Dimethoxy-2-phenyl-4-methylbenzopyrylium salts (WALKER and HEILBRON), i, 693.

2:6-Di-*p*-methoxyphenyl-3-methyltetrahydro-4-pyrone (RYAN and CAHILL), i, 558.

3-*mp*-Dimethoxyphenylpyrazoline, and its derivatives (FREUDENBERG and FIKENTSCHER), i, 69.

5:7-Dimethoxy-2-phenyl-4-styrylbenzopyrylium chloride, 2′- and 4′-hydroxy- (WALKER and HEILBRON), i, 693.

Di-(*p*-methoxyphenyl)-2-thiohydantoins (COGHILL and JOHNSON), i, 582.

:4-Dimethoxyphenyl *o*-tolyl ketone (DE DIESBACH and STREBEL), i, 1435.

3:4-Dimethoxyphenyl β-2:4:6-trimethoxyphenylethyl ketone, and its oxime (FREUDENBERG, FIKENTSCHER, and HARDER), i, 421.

4:6-Dimethoxyphenyl 3:4:5-trimethoxyphenylethyl ketone, 2-hydroxy- (DEAN and NIERENSTEIN), i, 952.

3:4-Dimethoxyphenyl 2:4:6-trimethoxystyryl ketone (FREUDENBERG, FIKENTSCHER, and HARDER), i, 421.

4:6-Dimethoxyphenyl 3:4:5-trimethoxystyryl ketone, 2-hydroxy-, and its derivatives (SONN, MÜLLER, BÜLOW, and MEYER), i, 933; (DEAN and NIERENSTEIN), i, 952.

1:4-Dimethoxyphthalazine (RADULESCU and GEORGESCU), i, 1185.

4:5-Dimethoxyphthalide, 6-amino-, 6-bromo-, and 6-nitro- (RÂY and ROBINSON), i, 1153.

3:4-Dimethoxypropylbenzene, 6-amino-, and its derivatives (THOMS and KEMP), i, 789.

3:5-Dimethoxy-*n*-propylbenzene (MAUTHNER), i, 25.

4:6-Dimethoxypyridine-2-carboxylic acid, 5-cyano- (SPÄTH and KOLLER), i, 1446.

6:7-Dimethoxy*iso*quinoline methiodide (FORSYTH, KELLY, and PYMAN), i, 1167.

6:7-Dimethoxy*iso*quinoline-1-carboxylamide (HAWORTH and PERKIN), i, 969.

3:4-Dimethoxystilbene (DEY and ROW), i, 954.

2′:4′-Dimethoxystilbene, 2:4-*di*nitro- (PFEIFFER, KALCKBRENNER, and BEHR), i, 548.

Dimethoxystilbenes, *di*nitro-, *tri*nitro-, and nitroamino- (GULLAND and ROBINSON), i, 1188.

Dimethoxystilbenecarboxylic acids, nitro-, and their salts and derivatives (PFEIFFER, KALCKBRENNER, and BEHR), i, 548.

3:4′-Dimethoxy-2-styrylchromone, 5:7-*di*hydroxy- (ROBINSON and SHINODA), i, 1302.

Dimethoxystyryl ketone, additive compounds of β-naphthol and resorcinol with (PFEIFFER, GOEBEL, and ANGERN), i, 271.

Di-3-methoxystyryl ketone, *di*-4-hydroxy-, and its hydrate (NOMURA and HOTTA), i, 1156.

3:2-β-4′-Dimethoxystyrylquinoline, and its salts (TRÖGER and DUNKER), i, 434.

Dimethoxysuccinic acid, esters, rotation of (PATTERSON and FULTON), ii, 1120.

methyl-*n*-hexylcarbinyl esters (PATTERSON and BUCHANAN), i, 115.

6:7-Dimethoxy-1:2:3:4-tetrahydro*iso*quinoline, and its hydrochloride (FORSYTH, KELLY, and PYMAN), i, 1167.

Dimethoxytetraphenylmethanes (GOMBERG and FORRESTER), i, 1267.

6:6′-Dimethoxy-3:3′-*di*thiochromanol (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1306.

2:5-Dimethoxytoluene, 3-bromo-4:6-*di*nitro- (KOHN and MARBERGER), i, 1265.

3:5-Dimethoxy-*p*-toluic acid, 2:6-*di*bromo-, methyl ester (WAGENHOFER), i, 550.

Dimethoxytriphenylcarbinols, derivatives of (GOMBERG and FORRESTER), i, 1267.

Dimethoxytriphenylmethyls, and their peroxides (GOMBERG and FORRESTER), i, 1267.

2:5-Dimethoxytriphenyl-α-naphthyl methane (GOMBERG and FORRESTER), i, 1267.

Dimethoxy*iso*violanthrone, and chloro- (ZINKE, FUNKE, MATSCHER, WOLFBAUER, and LORBER), i, 1436.

Dimethyl ether. See Methyl ether.

2:5-Dimethyl-4-acetamidomethylpyrrole-3-carboxylic acid, ethyl ester (FISCHER and NENITZESCU), i, 835.

3:5-Dimethylacetophenone, and 2-hydroxy-, and their derivatives (v. AUWERS, LECHNER, and BUNDESMANN), i, 266.

2:3-Dimethyl-5-aldehydopyrrole-4-carboxylic acid, and its derivatives (FISCHER and BELLER), i, 1333.

2:4-Dimethyl-3-aldehydopyrrole-5-carboxylic acid, ethyl ester (KALLE & Co.), i, 297.

αα-Dimethylallyl alcohol. See γ-Methyl-Δ^α^-buten-γ-ol.

αγ-Dimethylallyl alcohol. See Δ^β^-Penten-δ-ol.

2:3-Dimethyl-1-allylpyrazolium iodide (v. AUWERS and DANIEL), i, 1180.

1:3-Dimethyl-9-allyluric acids (GATEWOOD), i, 1189.

9-Dimethylaminoanthrone, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 819.

Dimethylaminoazobenzene hydroferricyanide (CUMMING), i, 122.

***p*-Dimethylaminobenzene-*p*′-azodiphenyl**, and its hydrochloride (VORLÄNDER), i, 1258.

***p*-Dimethylaminobenzoic acid**, phenyl [illegible] (RIVIER and RICHARD), i, 1416.

[illegible]**-dimethylaminobenzophenone** *per*[illegible] (PFEIFFER), i, 410.

[illegible]**-dimethylaminobenzthiazole** (HELLER), i, 314.

***p*-Dimethylaminobenzylidene-*p*-aminobenzoic acid** (WAYNE and COHEN), i, 551.

7-*p*-Dimethylaminobenzylideneaminophenanthraquinone, 2-amino- (SIRCAR and GUPTA), i, 984.

2-*p*-Dimethylaminobenzylidene-6-*p*-anisylidene*cyclo*hexanone, and its *per*chlorates (PFEIFFER), i, 411.

2-*p*-Dimethylaminobenzylidene-6-benzylidene*cyclo*hexanone, and its *per*chlorates (PFEIFFER), i, 411.

2-*p*-Dimethylaminobenzylidene*cyclo*hexanone (PFEIFFER), i, 411.

***p*-Dimethylaminobenzylidenemalonic acid**, ethyl ester (WAYNE and COHEN), i, 551.

Dimethylamino-*o*-bromo-*p*-aminobenzoylethanol (FREJKA and VITHA), i, 1416.

α-Dimethylaminobutan-γ-one (MANNICH), i, 375.

4-Dimethylamino-2′-chloroindophenyl thiosulphates (HELLER), i, 314.

γ-*p*-Dimethylaminocinnamoyl-β-*o*-hydroxyphenylpropane-αα′-dicarboxylic acid (HEILBRON, FORSTER, and WHITWORTH), i, 1285.

4′-Dimethylamino-5:7-dimethoxy-2-phenyl-4-styrylbenzopyrylium salts (WALKER and HEILBRON), i, 694.

α-Dimethylamino-β-dimethylaminomethylbutan-γ-one, and its picrate (MANNICH), i, 375.

2:2′-Dimethylaminodiphenyl *di*sulphide, 2:2′-diacetyl and -dibenzoyl derivatives of (CLARK), i, 841.

***p*-Dimethylaminodiphenyl**, *p*′-amino-, hydrochloride, and derivatives of, and *mono*- and *di*-nitro- (VORLÄNDER), i, 1258.

4′-Dimethylaminodiphenylamine-4-sulphonic acid, 2-nitro-, sodium salt (BATTEGAY and VÉCHOT), i, 1467.

***p*-Dimethylaminodistyryl ketone**, salts of (PFEIFFER), i, 410.

3-β-Dimethylaminoethoxy-4-diethyl-5-pyrazolone (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 301.

Dimethylaminoethoxyethyl alcohol, and its derivatives (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 374.

α-Dimethylamino-β-ethylbutan-γ-one, and its hydrochloride (MANNICH), i, 375.

Dimethylaminoethylcarbamic acid, benzyl ester, and its hydrochloride (HARTMANN and KÄGI), i, 1046.

***N*-Dimethylaminoethylstearamide** (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1133.

Dimethylamino*cyclo*hexanols, and their derivatives (HECKEL and ADAMS), i, 909.
4′-Dimethylamino-3-hydroxyindonaphthyl-7-sulphonic acid hydrogen 2′-thiosulphate, and its potassium salt (HELLER), i, 314.
9-Dimethylamino-6-hydroxy-5-keto-7:12-naphthaphenthiazine, and its hydrochloride (HELLER), i, 314.
9-Dimethylamino-6-hydroxy-5-keto-7:12-naphthaphenthiazine-2-sulphonic acid, potassium salt (HELLER), i, 314.
4′-Dimethylamino-5:7-*di*hydroxy-2-phenyl-4-styrylbenzopyrylium salts (WALKER and HEILBRON), i, 693.
5-Dimethylamino-1-iminobenzthiazole, and its derivatives (HELLER), i, 314.
4-Dimethylaminoindophenyl sodium thiosulphate (HELLER), i, 314.

3:5-Dimethyl-2-ethylcoumaran (CLAISEN, KREMERS, ROTH, and TIETZE), i, 656.

2:6-Dimethyl-4-ethyl-2:3-dihydropyridine-3:5-dicarboxylic acid, ethyl ester, *ψ*-cyanide (MUMM), i, 965.

ββ-Dimethyl-α-ethylglutaric acid, derivatives of (KON, SMITH, and THORPE), i, 509.

3:5-Dimethyl-2-ethyl-7-α-methyl-Δβ-butenylcoumaran (CLAISEN, KREMERS, ROTH, and TIETZE), i, 656.

1:6-Dimethyl-4-ethylmethylenedihydropyridine, and its *per*chlorate (MUMM), i, 965.

3:5-Dimethyl-1-ethylpyrazole, and its picrate (v. AUWERS and DANIEL), i, 1180.

Dimethyl-1-ethylpyrazoles, chloro-, and their *per*chlorates (v. AUWERS and NIEMEYER), i, 1177.

3:5-Dimethyl-1(2)-ethyl-2(1)-propylpyrazole, and its *per*iodide (v. AUWERS and DANIEL), i, 1180.

2:6-Dimethyl-3-ethylpyridine, and its salts (KOENIGS and HOFFMANN), i, 299.

Dimethylethyltetrahydroindazoles, and their picrates (v. AUWERS, v. SASS, and WITTEKINDT), i, 1183.

1:7-Dimethyl-3-ethyluric acid, 8-thio- (BILTZ and PEUKERT), i, 1463.

1:7-Dimethyl-3-ethylxanthine, and its salts, and 8-chloro- (BILTZ and PEUKERT), i, 1463.

2:5-Dimethylfuran-3:4-dicarboxylamide (SEKA), i, 57.

2:5-Dimethylfuro-2:2′:5:5′-tetramethyltetrahydrofuran (SEKA), i, 57.

2:5-Dimethylfuro-2:2′:5:5′-tetraphenyltetrahydrofuran (SEKA), i, 57.

3:7-Dimethyl-5-furyl-5:10-dihydroacridine, 2:8-*di*amino- (MAHOOD and HARRIS), i, 302.

αα-Dimethylglutaric acid, dinaphthylides and di-*p*-toluidide of (v. AUWERS), i, 892.

ββ-Dimethylglutarylfluorescein (DUTT and THORPE), i, 141.

ββ-Dimethylglutarylrhodamine (DUTT and THORPE), i, 142.

4:5-Dimethylglyoxaline, 2-amino-, and its salts and derivatives (BURTLES and PYMAN), i, 1326.

Dimethylglyoxalines, 4- and 5-nitro-, and their salts (BHAGWAT and PYMAN), i, 1174, 1175.

2-thiol- (BURTLES, PYMAN, and ROYLANCE), i, 697.

Dimethylglyoxime, preparation of (SEMON and DAMERELL), i, 1039.

dimethyl ether (AVOGADRO and TAVOLA), i, 1040.

Dimethylhaemin, bromo-, bromide (KÜSTER and HEESS), i, 993.

βζ-Dimethylheptan-ε-ol (THOMS and KAHRE), i, 789.

βζ-Dimethyl-Δγ-hepten-ε-one, and its semicarbazone (THOMS and KAHRE), i, 789.

l-**βε-Dimethylhexan-βε-diol**, γ-amino-, benzoyl derivative (KARRER, JÄGGI, and TAKAHASHI), i, 1046.

βδ-Dimethylhexane-βδ-diol, compound of boric acid and (HERMANS), i, 500.

cis-**1:4-Dimethyl*cyclo*hexane-4:5-diol** (NAMETKIN and BRIUSOVA), i, 1146.

Dimethyl*cyclo*hexanetricarboxylic acid, and its trimethyl ester (RUZICKA, MEYER, and PFEIFFER), i, 1419.

l-**βε-Dimethylhexan-β-ol**, γ-amino-, benzoyl derivative (KARRER, JÄGGI, and TAKAHASHI), i, 1046.

1:3-Dimethyl*cyclo*hexan-4-ol, and its derivatives (GODCHOT and BEDOS), i, 537.

1:3-Dimethyl*cyclo*hexan-4-ones, and their derivatives (GODCHOT and BEDOS), i, 537.

1:4-Dimethyl-Δ¹-*cyclo*hexene, derivatives of (NAMETKIN and BRIUSOVA), i, 1146.

l-**βε-Dimethylhexen-β-ol**, γ-amino-, benzoyl derivative (KARRER, JÄGGI, and TAKAHASHI), i, 1046.

Dimethylhydroxyglyoxime, metallic salts of (PONZIO and RUGGERI), i, 1041.

1:3-Dimethyl-4-hydroxymethylene*cyclo*hexan-5-one, and its derivatives (v. AUWERS, v. SASS, and WITTEKINDT), i, 1182.

Dimethylhydroxymethylpyrrole-3-carboxylic acids, ethyl esters (FISCHER and NENITZESCU), i, 834.

2:5-Dimethylindazole, 3-bromo-, and its picrate (v. AUWERS and LOHR), i, 75.

1:2-Dimethylindazolium bromide and chloride (v. AUWERS and PFUHL), i, 1101.

7:7′-Dimethylindigotin, ferric chloride derivatives (KUNZ and STÜHLINGER), i, 1319.

7:7′-Dimethyl*iso*indigotin (WAHL and FAIVRET), i, 588.

Di(2-methylindolyl)ethane, and its dioxime (ODDO), i, 297.

Di(2-methylindolyl)methane (ODDO), i, 297.

3:3′-Dimethylindophenol, 6:4′:6′-*tri*hydroxy- (HENRICH and GÖTZ), i, 913.

3:5-Di(2-methylindyl)*iso*oxazole (ODDO), i, 297.

Di-2-methylindylphthalide (ODDO), i, 588.

3:5-Di(2-methylindyl)pyrazole (ODDO), i, 297.

Dimethylketen, additive and polymerisation reactions of (STAUDINGER), i, 786.

*per*oxide (STAUDINGER, DYCKERHOFF, KLEVER, and RUZICKA), i, 933.

1:3-Dimethyl-4-methoxymethylene*cyclo*hexan-5-one, and its methylsemicarbazone (v. AUWERS, v. SASS, and WITTEKINDT), i, 1183.

Dimethylmethylenedihydropyridines, and their derivatives (MUMM), i, 965, 967.

1:6-Dimethylmethylenedihydropyridine-3:5-dicarboxylic acid, ethyl ester, and its derivatives (MUMM), i, 966.

Dimethylmethylenestannane (KRAUS and GREER), i, 1394.

3:3-Dimethyl-β-naphthindolenyl-2-formoxime, and its derivatives (PLANCHER, COLACICCHI, and BARBIERI), i, 579.

2:6-Dimethyl*iso*nicotinic acid, 3-amino-, and its salts (GULLAND and ROBINSON), i, 1186.

4:4′-Dimethyl*di*nitroaminobenzophenone, 3:5:3′:5′-*tetra*bromo-(ELION), i, 262.

βδ-Dimethyl-Δ$^{\alpha\epsilon}$-nonadiene (GRIGNARD and DUBIEN), i, 112.

βδ-Dimethyl-Δ$^{\alpha}$-nonen-δ-ol (GRIGNARD and DUBIEN), i, 111.

6:9-Dimethyl-1:2:3:4:5:6:7:8-octahydrocarbazole (v. BRAUN and SCHÖRNIG), i, 1449.

1:3-Dimethyl*cyclo*pentane-3-carboxylic acid, and its copper salt and amide (ZELINSKI and RJACHINA), i, 29.

βδ-Dimethylpentane-βδ-diol, compound of boric acid and (HERMANS), i, 500.

3:6-Dimethyl-2:10-phenoxazone, 7-hydroxy-, and its derivatives (HENRICH and GÖTZ), i, 913.

Di-(β-methylphenylethyl)amines, *o*- and *m*-chloro-, hydrochlorides and derivatives (v. BRAUN and REICH), i, 1407.

γ-2:4- and **γ-3:4-Dimethylphenylpropinenes** (BERT, DORIER, and LAMY), i, 1373.

2.5-Dimethyl-1-phenylpyrrolo-2:2′:5:5′-tetramethyltetrahydrofuran (SEKA), i, 57.

***o*:*p*-Dimethylphenylquinoxaline**, 2:3-*o*-*di*hydroxy- (FRIES and BARTENS), i, 568.

4:6-Dimethylphthalonic acid, and its dimethyl ester (PERKIN and TAPLEY), i, 43.

2:5-Dimethyl-4-*N*-piperidinomethylpyrrole-3-carboxylic acid, ethyl ester, and its *per*chlorate (FISCHER and NENITZESCU), i, 835.

3-*aa*-Dimethylpropionyl-1:2:4-benzoxadiazine, 7-nitro- (KHEINBOLDT and SCHMITZ-DUMONT), i, 1132.

2:4-Dimethylpropiophenone-*p*-nitrophenylhydrazone (v. AUWERS, LECHNER, and BUNDESMANN), i, 266.

3:5-Dimethyl-1-propylpyrazole, and its picrate (v. AUWERS and DANIEL), i, 1180.

3:5-Dimethylpyrazole-1-carboxylic acid, ethyl ester (v. AUWERS and DANIEL), i, 1181.

1:5-Dimethylpyrazol-3-one picrate (v. AUWERS and NIEMEYER), i, 1177.

1:3-Dimethylpyridofluorene, and its hydriodide (MILLS, PALMER, and TOMKINSON), i, 69.

1:3-Dimethylpyridofluorenone, and its 4-carboxylic acid (MILLS, PALMER, and TOMKINSON), i, 69.

1:6-Dimethyl-α-pyridone (MUMM), i, 966.

Dimethylpyrone, action of hydrazine on (KIJNER), i, 1105.

3:4-Dimethylpyrrole, 5-chloroacetyl derivative (KALLE & Co.), i, 297.

Dimethylpyrroles, *mono-* and *di*-iodo-, and the carboxylic acids of the former (PIERONI and NOCENTINI), i, 1096.

2:3-Dimethylpyrrole-5-aldehyde (FISCHER and BELLER), i, 1333.

2:3-Dimethylpyrrole-5-carboxylic acid, ethyl ester (FISCHER and BELLER), i, 1334.

Dimethylstannane, disodium derivative (KRAUS and GREER), i, 1394.

Dimethylstibine, derivatives of (MORGAN and DAVIES), i, 1395.

***as*-Dimethylsuccinylfluorescein** (DUTT and THORPE), i, 141.

***as*-Dimethylsuccinylrhodamine** (DUTT and THORPE), i, 142.

2:6-Dimethyl*cyclo*telluropentane-3:5-dione, and its dioxime (MORGAN and TAYLOR), i, 634.

Dimethylterephthalonic acid, and its derivatives (PERKIN and TAPLEY), i, 42.

Dimethyl-1:2:3:4-tetrahydrocarbazoles (v. BRAUN and SCHÖRNIG), i, 1449.

Dimethyltetrahydroindazoles, and their picrates (v. AUWERS, v. SASS, and WITTEKINDT), i, 1182.

4:6-Dimethyltetrahydroindazole-2-carboxylamide (v. AUWERS, v. SASS, and WITTEKINDT), i, 1182.

4:6-Dimethyl-4:5:6:7-tetrahydroindazole-2-carboxylic acid, esters (v. AUWERS, v. SASS, and WITTEKINDT), i, 1183.

Di(7-methyl-4:5:6:7-tetrahydroindazyls), and their derivatives (v. AUWERS, BAHR, and FREESE), i, 311, 313.

6:6′-Dimethyl*dithio*benzopyrone (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.

Dimethylthiocarbamylmalic acids, and their derivatives (HOLMBERG), i, 1238.

4:6-Dimethylthiochroman-4-ol (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.

6:6′-Dimethyl-3:3′-*dithio*chromanol, and its *di*bromide (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1306.

2:6-Dimethylthiochromanone, and its derivatives (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1305.

4:6-Dimethyl-Δ^3-thiochromene (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.

Dimethyl*dithio*ethylene, metallic halides of (MORGAN, CARTER, and HARRISON), ii, 1042.

4:6-Dimethylthioflavan-4-ol, and its *per*chlorate (ARNDT, PUSCH, and SCHWARZ), i, 1304.

3:4-Dimethylthiophen-2:5-dicarboxylic acid, and its salts (SEKA), i, 1299.

Dimethyltoluene, *di*chloro- (SOMMELET), i, 803.

$\beta\delta$-Dimethyl-$\Delta\delta$-tridecene (THOMS and AMBRUS), i, 790.

***N*:*N*′-Dimethyl-*N*:*N*″:*N*″-triethylguanidine** (LECHER, GRAF, and GNÄDINGER), i, 1393.

1:3-Dimethyluric acid, oxidation of, in alkaline solution (PIAUX), i, 165.

1:1′-Dimethyl*streptovinylene*-2:2′-oxacyanine, and its salts and ethyl ether (KÖNIG and MEIER), i, 705.

1:1′-Dimethyl*streptovinylene*-2:2′-thiocyanine, and its salts (KÖNIG and MEIER), i, 705.

Dimethyl*iso*violanthrones (ZINKE, FUNKE, MATSCHER, WOLFBAUER, and LORBER), i, 1436.

Dimethyl-yellow, effect of salts on the dissociation of (RICHTER), ii, 237.

Dinaphthacridine-14-carboxylic acid (SAFTIEN), i, 1318.

Di-*α*- and -*β*-naphthacylfumarodilactones (BOGERT and RITTER), i, 256.

Dinaphthadiphenazine (KEHRMANN and SCHEDLER), i, 442.

Di-*α*-naphthafluorenone chloride (MAGIDSON), i, 384.

Di-*α*-naphthafluorenyl chloride (MAGIDSON), i, 385.

Dinaphthafluorindine, and its hydrochloride (KEHRMANN and SCHEDLER), i, 442.

Dinaphthalylbenzidine (SHIMOMURA), i, 982.

Dinaphthanthracene series (PHILIPPI, SEKA, and BAUER), i, 555; (PHILIPPI, SEKA, and FUNKE), i, 556.

Dinaphthanthracene-5:7:12:14-diquinone-3:10-dicarboxylic acid (DE DIESBACH and STREBEL), i, 1436.

Dinaphthanthra-5:7:12:14-diquinone, *tetra*bromo-2:9-*di*hydroxy- (DE DIESBACH and STREBEL), i, 1436.

Dinaphthanthradiquinones (DE DIESBACH and STREBEL), i, 1435.

Dinaphthanthradiquinonedisulphonic acid, and its salts (PHILIPPI, SEKA, and FUNKE), i, 556.

2:6-Diphenyl-1-bromophenyl-4-piperidone, 3:5-*di*bromo- (PETRENKO-KRITSCHENKO and BUTMI DE KAZMAN), i, 1094.

αα-Diphenylbutane, *pp'-di*hydroxy- (BAEKELAND and BENDER), i, 689.

αα-Diphenyl-α-butylene oxide (LÉVY and LAGRAVE), i, 679.

αβ-Diphenylcarbamide, α-chloro*di*nitro-, and α-*di*nitro- (KNIPHORST), i, 907.
s-di-4-chloro-3:5-*di*nitro- (LINDEMANN and WESSEL), i, 1099.

***s*-Diphenylcarbamide-4:4'-diarsinic acid** (KING and MURCH), i, 320.

Diphenylcarbazide, compounds of, with metals (FEIGL and LEDERER), i, 170.

Diphenyl-*o*-carboxylic acid, hydrogenation of (RANEDO and LÉON), i, 665.

Diphenyl-2-carboxylic acid, 4-hydroxy- (COURTOT and GEOFFROY), i, 927.

3:4-Diphenylcoumarins, 7-hydroxy-, and *di*hydroxy-, and their acetyl derivatives (BARGELLINI), i, 1442.

αβ-Diphenyl-ββ-di-*p*-anisylethyl alcohol (TIFFENEAU and ORÉKHOV), i, 680.

αδ-Diphenyl-βγ-dibenzyl-βγ-dimethylbutane (TROTMAN), i, 383.

Diphenyl-4:3:4':3'-dicarboxylicsulphinide (HARDING), i, 670.

Diphenyl-4:4'-dicarboxy-3:3'-sulphimide. See Diphenyl-4:3:4':3'-dicarboxylicsulphinide.

Diphenyl-4:4'-di-diphenamic acid (SHIMOMURA), i, 982.

Diphenyldiethylarsonium bromide and iodide (STEINKOPF and BESSARITSCH), i, 496.

5:5-Diphenyl-5:10-dihydro-3-acridone, 7-amino-, 7:9-*di*amino-, 1-amino-7-hydroxy-, and 7-hydroxy-, and their derivatives (KEHRMANN and TSCHUI), i, 430.

1:4-Diphenyldihydronaphthalene, 1:4-*di*hydroxy- (FRANSSEN), i, 1146.

Diphenyldimethylammonium iodide, compound of iodoform with (STEINKOPF and BESSARITSCH), i, 495.

Diphenyldimethylarsonium iodide, compound of iodoform with (STEINKOPF and BESSARITSCH), i, 496.

3:3'-Diphenyl-4:4'-dimethyl-3:3'-dicoumaranyl, 2:2'-*di*hydroxy- (LÖWENBEIN and FOLBERTH), i, 552.

Diphenyldimethylethenylamidinium salts (FISCHER, MÜLLER, and VILSMEIER), i, 440.

1:3-Diphenyldimethylhydrazidouracil (LEVENE), i, 979.

***NN'*-Diphenyl-7:7'-dimethylindigotin**, potassium derivative (KUNZ and STÜHLINGER), i, 1319.

Diphenyldimethyltruxones (DE FAZI), i, 269.

3:6-Diphenyl-1:4-dioxane, and 3:6-*di*bromo-, and their picrates (LEWIS, NIERENSTEIN, and RICH), i, 935.

Diphenyl-4'-diphenamic acid, 4-amino- (SHIMOMURA), i, 982.

9:12-Diphenyldiphensuccindane (BRAND and MÜHL), i, 903.

9:12-Diphenyl-Δ^{10}-diphensuccindene (BRAND and MÜHL), i, 903.

Diphenyldi*iso*propyltetrazine (GOODWIN and BAILEY), i, 843.

Diphenyl-4:4'-disuccinamic acid (SHIMOMURA), i, 982.

Diphenylenedianisylethylene (SCHÖNBERG, ROSENBACH, KRÜLL, and OSTWALD), i, 1300.

Diphenylenedi-*p*-ethoxyphenylethylene (SCHÖNBERG, ROSENBACH, KRÜLL, and OSTWALD), i, 1301.

Diphenylene-ethane, αβ-*di*nitro- (WIELAND and KRAUSE), i, 902.

Diphenylene-ethylene. See Dibenzofulvene.

Diphenylene*di*thiocarbamide (AUTENRIETH and HEFNER), i, 1376.

***s*-Diphenylethane** (*dibenzyl*), *di*thiocyano- (SÖDERBÄCK), i, 899.

αα-Diphenylethan-α-ol, β-amino-, conversion of, into diphenylacetaldehyde, and its benzoyl derivative (THOMAS and BETTZIECHE), i, 257.

Diphenylethylamine hydrochloride (ELBS), i, 163.

β-Diphenylethylamine, and its derivatives (RUPE and GISIGER), i, 1095.

ββ-Diphenylethylamine, β-hydroxy-, action of nitrous acid on (ORÉKHOV and ROGER), i, 261.

Di(β-phenylethylamino)methane, and its diacetyl derivative (SHORT), i, 387.

s-**Diphenylethylene**, *di*thiocyano- (SÖDERBÄCK), i, 899.
as-**Diphenylethylene**, autoxidation of (STAUDINGER), i, 898.
Di-β-phenylethylmethylamine, and its picrate (WIELAND and DRAGENDORFF), i, 1090.
2:6-Di-β-phenylethylpiperidine (SHAW), i, 68.
Diphenylformamidine, condensation of, with phenols (SHOESMITH and HALDANE), i, 39.
2:5-Diphenylfuran, 3:4-*di*chloro- (CONANT and LUTZ), i, 682.
2:5-Diphenylfuran-3:4-dicarboxylic acid, anil and imide of (SEKA), i, 1298.
α-Diphenylglyoxime, absorption spectra of (PURVIS), ii, 627.
βδ-Diphenyl-α-heptylsemicarbazide (MAZOUREVITCH), i, 1247.
6:6-Diphenylhexahydro-1:2:3:4-tetrazine-1:2:3:4-tetracarboxylic acid, ethyl ester (INGOLD and WEAVER), i, 581.
Di-ζ-phenyl-Δ$^{\alpha\gamma\epsilon}$-hexatrienyl ketone, and its derivatives (VORLÄNDER, FISCHER, and KUNZE), i, 1069.
Diphenylhydantoins, *di-p*-hydroxy- (COGHILL and JOHNSON; COGHILL), i, 583.
Diphenylhydrazidouridine (LEVENE), i, 979.
1:3-Diphenylhydrindene (ZIEGLER, GRABBE, and ULRICH), i, 132.
Diphenyl-3-hydroxy-β-naphthylmethyl, and its *per*oxide (GOMBERG and MCGILL), i, 1270.
2:6-Diphenyl-4-*o*-hydroxyphenylpyridine, and its hydrochloride (DILTHEY and FLORET), i, 56.
2:6-Diphenyl-4-*o*-hydroxyphenylpyrylium salts (DILTHEY and FLORET), i, 56.
4:6-Diphenyl-2-hydroxyphenylpyrylium hydroxide, and its salts (DILTHEY and RADMACHER), i, 1442.
NN'-**Diphenylindigotin**, copper and iron derivatives (KUNZ and STÜHLINGER), i, 1318.
5:6-(2:3-Diphenylindolo)(6:7)-quinoline, and its salts (ARMIT and ROBINSON), i, 1172.
1:1-Diphenyl-2-keto-1:2-dihydrothionaphthen (BISTRZYCKI and RISI), i, 1426.
Diphenylmethane, 4:4'-*di*amino-, isomerism of, and its derivatives (BUTLER and ADAMS), i, 1458.
*di*bromo*tri*hydroxy-derivatives, and their benzoyl derivatives (KOHN and JAWETZ), i, 135; (KOHN and WIESEN), i, 540.
Diphenylmethane, *o*-hydroxy-. See *o*-Benzylphenol.
2:4-*di*hydroxy- (SHARP & DOHME and DOHME), i, 541.
Diphenylmethane series (SOMMELET), i, 247.
coloured salts of (MADELUNG), i, 1459.
Diphenylmethane-4'-azonaphthionic acid, 4-hydroxy-, sodium salt (BUTLER and ADAMS), i, 1458.
Diphenylmethane-4:4'-bisazo-β-naphthol (BUTLER and ADAMS), i, 1458.
Diphenylmethane-2:2'-dicarboxylic acid, brucine salts, and 4-nitro- (BUTLER and ADAMS), i, 1459.
Diphenylmethanedimethyldihydrazine, use of, in preparation of sugars (v. BRAUN and BAYER), i, 1382.
Diphenyl-3-methoxy-β-naphthylmethyl, and its *per*oxide (GOMBERG and MCGILL), i, 1270.
2:6-Diphenyl-4-*o*-methoxyphenylpyridine (DILTHEY and FLORET), i, 56.
2:6-Diphenyl-4-*o*-methoxyphenylpyrylium salts (DILTHEY and FLORET), i, 56.
Diphenylmethylallylarsonium iodide, and its compound with iodoform (STEINKOPF and BESSARITSCH), i, 496.
Diphenylmethylcarbazine. See Diphenylmethyldihydroacridine.
2:3-Diphenyl-3-methylcoumaran-2-ol (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 147.
5:5-Diphenyl-10-methyldihydroacridine, and its nitro derivatives (KEHRMANN and TSCHUI), i, 431.
Diphenylmethylethylarsonium bromide (STEINKOPF and BESSARITSCH), i, 496.
3:4-Diphenyl-5-methyl-Δ^2-*cyclo*penten-1-one, and its dibromide (RYAN and LENNON), i, 1282.
N-**Diphenylmethylphenanthraphenfluorindinium** chloride (KEHRMANN and SCHEDLER), i, 442.
dl-**1:4-Diphenyl-2-methylpiperazine**, resolution of, and the *d*-camphorsulphonate of the *l*-compound (KIPPING and POPE), i, 22.
αγ-Diphenyl-β-methylpropane (TROTMAN), i, 383.
1:3-Diphenyl-5-methylpyrazole-4-carboxylic acid, hydroxy- and nitro- (MINUNNI, LAZZARINI, and D'URSO), i, 1176.
1-Diphenyl-5-methylpyrazole-3:4-dicarboxylic acid, 1-*p*-amino-, and its acetyl derivative, and its salts and ethyl ester (BÜLOW and BAUR), i, 1327.

1:4-Diphenylnaphthalene (FRANSSEN), i, 1146.
2:3-Diphenyl-α-naphthaquinone (WEISS and SONNENSCHEIN), i, 938.
2:3-Diphenyl-αβ-naphthaquinoxaline, 7-amino- (FINZI), i, 701.
2:3-Diphenyl-α-naphthol, and its acetyl derivative (WEISS and SONNENSCHEIN), i, 938.
2:4-Diphenyl-α-naphthol, and its acetyl derivative (FRANSSEN), i, 1147.
Diphenyl-α-naphthylcarbinol, anilide of (DILTHEY), i, 653.
Diphenyl-1′-naphthylcarbinol-4′:5′-dicarboxylic acid, and its anhydride (LORRIMAN), i, 673.
αβ-Diphenyl-β-naphthylethylamine, β-hydroxy- (MCKENZIE and DENNLER), i, 26.
Diphenyl-1′-naphthylmethane-2:4′:5′-tricarboxylic acid, and its anhydride (LORRIMAN), i, 672.
Diphenyl-α-naphthylmethyl acetate (SCHOEPFLE), i, 811.
bromide and methyl ether (DILTHEY), i, 652.
Diphenyl-α-naphthylmethylamine (SCHOEPFLE), i, 811.
and its salts (DILTHEY), i, 652.
Diphenyl-*p*-nitrobenzylamine (DESAI), i, 387.
4:5-Diphenyl-2-*m*-nitrophenylglyoxaline (TRÖGER and THOMAS), i, 979.
2:6-Diphenyl-1-*m*-nitrophenyl-4-*p*-hydroxyphenylpyridinium bromide (DILTHEY and SCHAEFER), i, 153.
3:5-Diphenyl-1-*p*-nitrophenylpyrazoline (v. AUWERS and KREUDER), i, 1455.
4:6-Diphenyl-3-*p*-nitrophenylpyridine, 2-bromo- and 2-hydroxy- (ALLEN), i, 964.
Diphenyl-*m*-nitrophenylpyridines, and their salts and derivatives (DILTHEY and RADMACHER), i, 1441.
Diphenyl-*m*-nitrophenylpyrylium hydroxides, and their salts (DILTHEY and RADMACHER), i, 1441.
Diphenylnitrosoamine, action of acids on (MARQUEYROL and MURAOUR), i, 387.
2:3-Diphenyloxazolidine (DAINS, BREWSTER, MALM, MILLER, MANEVAL, and SULTZABERGER), i, 1064.
Di-ε-phenyl-Δ$^{\beta\delta}$-pentadienyl*cyclo*hexanone (VORLÄNDER, FISCHER, and KUNZE), i, 1069.
N-Diphenylphenanthraphenaflavindine (KEHRMANN and SCHEDLER), i, 442.
Diphenylphenylacetylenylcarbinol. See Triphenylpropargyl alcohol.
Diphenyl-*p*-phenylenediamine, *di*bromo-*tetra*nitro- (SANÉ and JOSHI), i, 134.
Diphenyl-4′-phthalamic acid, 4-amino- (SHIMOMURA), i, 981.
Diphenylphthalide, *op-di*hydroxy-. See *iso*Phenolphthalein.
αγ-Diphenylpropan-αβ-dione, derivatives of (DUFRAISSE and MOUREU), i, 937.
αα-Diphenylpropan-α-ol, β-amino-, and its hydrochloride (THOMAS and BETTZIECHE), i, 250.
αδ-Diphenylpropan-α-ol, resolution and rotation of, and its salts and esters (HEWITT and KENYON), i, 915.
αβ-Diphenylpropionylglycine, ethyl ester (GRANÄCHER), i, 594.
αα′-Diphenyl-*n*-propyl alcohol, β-amino- (MCKENZIE and WILLS), i, 395.

Ditolyl. See Dimethyldiphenyl.
Ditolyl carbonates, 3:3′-*di*bromo-, and 3:3′-*di*nitro- (GRIFFITH), i, 135.
2:2′-*di*sulphoxide, 4:4′-*di*amino-, acetyl derivative (BERE and SMILES), i, 22.
Ditolylamines, *di*nitro- and *hexa*nitro-derivatives (BRADY, HEWETSON, and KLEIN), i, 16.
βγ-Di-*p*-tolylaminobutanes, *di*- and *tetra*-nitro- (MORGAN and HICKINBOTTOM), i, 156.
9:10-Di-*o*-tolyldihydroanthracene, 9:10-*di*hydroxy- (BRAND, LUDWIG, and BERLIN), i, 905.
3:6-Ditolyl-4:5-dimethylhexahydro-1:2-diazine (JASPERS), i, 936.
9:12-Ditolyl-$\Delta^{9:11}$-diphensuccindadienes (BRAND, LUDWIG, and BERLIN), i, 904.
9:12-Di-*m*-tolyldiphensuccindan-9:12-diol (BRAND, LUDWIG, and BERLIN), i, 904.
9:12-Ditolyldiphensuccindanes (BRAND and MÜHL), i, 903.
9:12-Ditolyl-Δ^{10}-diphensuccindenes (BRAND and MÜHL), i, 903.
Di-*o*-tolylhydrazo*dithio*dicarbonamide, derivatives of (FROMM and SZENDRÖ), i, 985.
2:7-Di-*p*-tolylideneaminophenanthraquinone (SIRCAR and GUPTA), i, 984.
Di-*p*-tolylmethane (SOMMELET), i, 803.
Ditolylnaphthalide (MASON), i, 33.
Di-*p*-tolyl-α-naphthylmethyl chloride and methyl ether (DILTHEY), i, 653.
2:3-Di-*p*-tolyloxazolidine (DAINS, BREWSTER, MALM, MILLER, MANEVAL, and SULTZABERGER), i, 1064.
***PP*′-Di-*p*-tolyloxy-*PP*′-dioxotetrahydrotetrazdiphosphinium** (AUTENRIETH and BÖLLI), i, 1469.
9:9-Di-*p*-tolyloxy-7-ethoxy-9:10-dihydroacridine, 3-amino- (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 430.
Di-*p*-tolyloxythiophosphoryl amide and chloride (AUTENRIETH and MEYER), i, 807.
Di-*o*-tolylphthalide (WEISS and KOREZYN), i, 560.
2:5-Di-*p*-tolyl-1:3:4-thiodiazole (ISHIKAWA), i, 1149.
3:6-Di(3′:4′:5′-trimethoxybenzyl)-2:5-diketopiperazine (SONN, MÜLLER, BÜLOW, and MEYER), i, 933.
3:6-Di(3′:4′:5′-trimethoxybenzylidene)-2:5-diketopiperazine (SONN, MÜLLER, BÜLOW, and MEYER), i, 933.
αβ-Di-(2:4:6-trimethylbenzoyl)-ethane, αβ-*di*bromo- (CONANT and LUTZ), i, 682.
Di-ααγ-triphenylallyl ether (ZIEGLER, GRABBE, and ULRICH), i, 132.
Ditriphenylmethylcarbamide (HELFERICH, MOOG, and JÜNGER), i, 791.
3:6-Di[triphenylmethyl]-1:4-dioxane, and 3:6-*di*chloro-, and their picrates (LEWIS, NIERENSTEIN, and RICH), i, 936.
Diuracil-4:4′-indigotin (DAVIDSON and BAUDISCH), i, 1188.
Diuresis, loss of bases in (HENDRIX and CALVIN), i, 1350.
Di*iso*valeryl, and its phenylhydrazone (TISTCHENKO), i, 776.
***s*-Divalerylhydrazine** (NAIK and PATEL), i, 121.
Divarinol, synthesis of (MAUTHNER), i, 25.
Divinylarsenious oxide and sulphide, ββ-*di*chloro- (LEWIS and STIEGLER), i, 1470.
Divinylarsine, bromo and chlorobromo derivatives (LEWIS and STIEGLER), i, 1470.
Divinyldimethylarsonium iodide, ββ-*di*chloro- (LEWIS and STIEGLER), i, 1470.
Divinylethylarsine, ββ-*di*chloro- (LEWIS and STIEGLER), i, 1470.
Divinylmethylarsine, ββ-*di*chloro- (LEWIS and STIEGLER), i, 1470.
Divinylmethylethylarsonium iodide, ββ-*di*chloro- (LEWIS and STIEGLER), i, 1470.
Divinyl-α-naphthylarsine, ββ-*di*chloro- (LEWIS and STIEGLER), i, 1470.
Dixanthyls, substituted (CONANT and SLOAN), i, 955.
Dixanthylen, preparation of, from xanthion (SCHÖNBERG and KRÜLL), i, 149.
Dixanthylhydrazone-glyoxylic acid (FOSSE and HIEULLE), i, 1130.

Dixylenol, derivatives of (FICHTER and MEYER), i, 381.
Di-*p*-xylyl 2:2′-*di*sulphide, 6:6′-*di*nitro- (CHOUFOER), i, 896.
Dixylyldihydroanthracenes, 9:10-*di*hydroxy- (BRAND, LUDWIG, and BERLIN), i, 905.
9:12-Di-3′:4′-xylyl-Δ$^{9:11}$-diphensuccindadiene (BRAND, LUDWIG, and BERLIN), i, 905.
9:12-Di-3′:4′-xylyldiphensuccindan-9:12-diol (BRAND, LUDWIG, and BERLIN), i, 905.
Dodecahydrodecacyclene (DZIEWOŃSKI and SUSZKO), i, 242.
Dodecaindene, iodo- (STOBBE and FÄRBER), i, 20.
Dodecamethylpentastannane (KRAUS and GREER), i, 1394.
Dodecaoxymethylene diacetate (STAUDINGER and LÜTHY), i, 361.
***n*-Dodecoylglycine**, ethyl ester (KARRER, MIYAMICHI, STORM, and WIDMER), i, 594.
Döppler effect (KREFFT), ii, 3, 78.
Dogs, blood of. See Blood.
Dog-fish. See *Acanthias vulgaris*.
Dolomite, crystal structure of (WYCKOFF and MERWIN), ii, 94.
hydrogen sulphide in (NENADKEVITSCH; VERNADSKI), ii, 997.
Driers for fatty oils (EIBNER and PALLAUF), i, 777.
Drugs, action of, on blood (ETS), i, 734.
undissociated, action of (KEESER), i, 101.
Drying, effect of, on composition of solids (SMITS), ii, 268.
on inner equilibria (SMITS), ii, 532.
intensive, effect of, on internal change (SMITS), ii, 116.
Duane effect (WOO; JAUNCEY), ii, 368.
Duckweeds, growth of, in mineral nutrient solutions (SAEGER), i, 755.
Dulcin. See *p*-Phenetylcarbamide.
"**Dulcitol**" as a sugar substitute (UGLOW), i, 1356.
Dumontite (SCHOEP), ii, 64.
***n*-Duotriacontanedicarboxylic acid**, and its ethyl ester (FAIRWEATHER), i, 1237.
Dussertite (BARTHOUX), ii, 235.
Dyads, tautomerism of (INGOLD), i, 779; (GRIFFITHS and INGOLD), i, 1190.
Dyes. See Colouring matters.
Dyeing (RUGGLI and FISCHLI), ii, 194.
theory of (ROSSI and BASINI), ii, 286.
of wool (SPEAKMAN), ii, 515.
Dynad, definition of (HERZOG and WEISENBERG), ii, 942.
***photo*Dypnopinacolins** (DELACRE), i, 681.

E.

Earth, composition of the crust of the (CLARKE and WASHINGTON), ii, 63; (WASHINGTON), ii, 234, 591; (VERNADSKI), ii, 996.
Earths, rare (DRIGGS and HOPKINS), ii, 463; (THOMPSON and KREMERS), ii, 580; (KREMERS and BEUKER), ii, 581; (KREMERS), ii, 588.
structure of (SWINNE), ii, 922.
properties and atomic structure of (v. HEVESY), ii, 938.
phosphorence of, in alkaline-earth phosphors (TOMASCHEK), ii, 12.
potentials of (NEUMANN and RICHTER), ii, 797.
magnetic properties of (CABRERA), ii, 358.
magnetic susceptibility of (MEYER), ii, 173.
magnetism of (HUND), ii, 1038.
paramagnetism of (CABRERA), ii, 618.
magnetisation numbers of (MEYER), ii, 944.
periodic position of (FRIEND), ii, 363.
solubilities of salts of (WILLIAMS, FOGG, and JAMES), ii, 504.
in alkaline earth phosphors (TOMASCHEK), ii, 354.
double carbonates of guanidine and (CANNERI), i, 524.
isomorphism of molybdates of, with those of lead and the alkaline earths (ZAMBONINI and LEVI), ii, 1133.
isomorphism of thallium compounds with those of (ZAMBONINI and CAROBBI), ii, 272.
double salts of alkali metals with (CAROBBI; ZAMBONINI and CAGLIOTI), ii, 315.
double sulphates of the alkali metals and (ZAMBONINI and CAROBBI; ZAMBONINI and CAGLIOTI), ii, 222.
complex sulphites and thiosulphites of (CANNERI and FERNANDES), ii, 888.
of the cerium group, chromates of (ZAMBONINI and CAROBBI), ii, 700.
electrometric precipitation of hydroxides of (BRITTON), ii, 1204.
separation of (PRANDTL), ii, 439; (KENDALL and CLARKE), ii, 977.
separation of, from uranium (CANNERI and FERNANDES), ii, 71.
Ebullioscopic apparatus (SWIENTOSLAWSKI and ROMER), ii, 319.
Ebullioscopy in mixed solvents (CARROLL, ROLLEFSON, and MATHEWS), ii, 858.

Ecgonine, acyl derivatives, and their aromatic esters (GRAY), i, 829.
Echinacea angustifolia, oil from (BISCHOFF), i, 760.
Echinococcal fluid (FLÖSSNER), i, 329.
Echitamine, and its salts and derivatives (GOODSON and GOODSON), i, 1166.
Efflorescence, capillarity and evaporation (SCHULTZE), ii, 287.
Eggs, antiscorbutic properties of (HAUGE and CARRICK), i, 1021.
hen's, chemical changes in, during incubation (MURRAY), i, 1353.
effect of calcium carbonate in diet on (BUCKNER, MARTIN, and PETER), i, 1497.
transference of calcium from shells of, during incubation (BUCKNER, MARTIN, and PETER), i, 1497.
changes in the nitrogen of, in incubation (AGGAZZOTTI), i, 457.
Egg-white as nitrogenous diet for rats (BOAS), i, 211.
Egg-yolk, fractionation of (RAKUZIN and PEKARSKAYA), i, 607.
***n*-Eicosoic acid** from Rambutan tallow (MORGAN and HOLMES), i, 777.
mixtures of stearic acid and (MORGAN and BOWEN), i, 114.
Eicosylamine hydrochloride (ADAM and DYER), i, 354.
Eicosylcarbamide (ADAM and DYER), i, 354.
Eka-cæsium (LORING and DRUCE), ii, 1124.
Eka-iodine (LORING and DRUCE), ii, 1124.
α-Elæostearic acid from China wood oil, constitution of (BÖESEKEN and RAVENSWAAY), i, 1129.
α- and β-Elæostearic acids, structure of, and glyceryl ester of the latter (BÖESEKEN and RAVENSWAAY), i, 507.
Elaidic acid, metallic salts (KLIMONE, v. MOLTINI, and BENEDIK), i, 506.
Elastic modulus of metals (WIDDER), ii, 1043.
Elasticity, relation between atomic concentration and (LASAREV), ii, 1134.
of colloidal solutions (SZEGVARI), ii, 111; (FREUNDLICH and SCHALEK), ii, 112.
Electrets, permanent (EGUCHI), ii, 462.
Electric arc, formation of compounds of metallic salts in (PECZALSKI and MOKRZYCKI), ii, 814.
with zinc anode, reduction with (STOCK, BRANDT, and FISCHER), ii, 570.
low voltage (BÄR), ii, 254.
Electric arc, low voltage, in potassium and sodium vapours (NEWMAN), ii, 450.
metallic, Stark effect in (NAGAOKA and SUGIURA), ii, 171.
rotating, between carbon electrodes (PAUTHENIER), ii, 725.
charge on microscopic particles (SEXL; DERIEUX), ii, 832.
discharge through gases, radiation in (THOMSON), ii, 461.
at low pressure (BANERJI), ii, 921.
in mixtures of inert gases (GÜNTHER-SCHULZE), ii, 341.
deficit of condensed substances obtained by (YOVITCHITCH), ii, 406.
corona, decomposition of carbon monoxide in (CRESPI and LUNT), ii, 1178.
equilibrium of carbon oxides in (WENDT and FARNSWORTH), ii, 1158.
creepage corona, active hydrogen in (ANDEREGG and HERR), ii, 1180.
electrodeless, in gases (LASAREV), ii, 1107.
glow, chemical reactions in (GÜNTHER-SCHULZE), ii, 553.
spectrophotometric studies of (SEELIGER and LINDOW), ii, 739.
streamer (LANGMUIR, FOUND, and DITTMER), ii, 341.
striated, light emission from (SEELIGER and ÔKUBO), ii, 78.
vacuum arc, processes in (GÜNTHER-SCHULZE), ii, 341, 342.
moment of dipolar molecules (EBERT), ii, 262.
Electrical conductivity, measurement of (LORENZ and KLAUER), ii, 541.
theory of (REDLICH; DAVIES), ii, 541.
determination of, in non-aqueous solutions (WALDEN, ULICH, and LAUN), ii, 208; (WALDEN and ULICH), ii, 209.
apparatus for direct reading of (TÖDT), ii, 898.
of alloys (BORELIUS), ii, 749.
of fused alloys (KREMANN, KIENZL, and MARKL; KREMANN, MÜLLER, and KIENZL; KREMANN, MÜLLER, and ORTNER), ii, 132.
of fused chlorides (BILTZ and KLEMM), ii, 127.
of chlorides in fused antimony trichloride (KLEMENSIEWICZ), ii, 40.
of metallic colloids (ANDRÉ), ii, 976.

Electrical conductivity of crystal hydrates (JAKUBSOHN and RABINOVITSCH), ii, 847.
of electrolytes (SCARPA), ii, 128; (DAVIES), ii, 871.
of strong electrolytes at infinite dilution (FERGUSON and VOGEL), ii, 1163.
of heated gases (GHOSH), ii, 461.
in hydrogen sulphide solutions (QUAM and WILKINSON), ii, 542.
of metals (SIMON), ii, 94.
and their place in the periodic system (EPSTEIN), ii, 623.
of salt vapours in flames (KALANDYK), ii, 208.
of solid salts at high temperatures (VAILLANT), ii, 40, 165.
of salts in methyl alcohol (FRAZER and HARTLEY), ii, 1163.
of aqueous solutions, effect of temperature on (WIEN), ii, 931.
of very dilute solutions (REMY), ii, 299.
of solid solutions (CUY), ii, 378.
use of, in quantitative biochemical analysis (DEMJANOVSKI), i, 1113.
heating apparatus, laboratory (ATEN), ii, 588.
double layer and polarisation (CLARK), ii, 673.
double refraction of gases (LYON), ii, 266.
of organic liquids (BECKER), ii, 755.
resistance, apparatus for measuring (ULICH), ii, 671.
of metals and alloys (WILLIAMS), ii, 753.
of wires, influence of occluded gases on (SEXL), ii, 642.
Electrification at liquid–gas interfaces (GILBERT and SHAW), ii, 795.
by friction between solids and gases (PERUCCA), ii, 1028.
Electrochemical reactions, periodic (HEDGES and MYERS), ii, 680.
Electrochemistry of non-aqueous solutions (MÜLLER, PINTER, and PRETT), ii, 882.
Electrodes, phenomena at, in electrolysis (CROWTHER and STEPHENSON), ii, 1167.
potentials of (HEYROVSKÝ), ii, 211, 404; (GERKE), ii, 403.
in relation to free energy of solvation (HEYROVSKÝ), ii, 544, 672; (KONTNÍKOVÁ and SHIKATA), ii, 672.
comparison of potential scales and (BIRCHER), ii, 711.
and polarisation (HOLLER), ii, 793.
Electrodes, vessel for use with solutions of different densities in (DAWSON), ii, 978.
for measurement of bioelectric potentials (LUND), ii, 897.
for hydrogen-ion concentration measurements (PARKER), ii, 899.
antimony, potential of, and its use in determining free acid (KOLTHOFF and HARTONG), ii, 325.
barium and strontium amalgam (DANNER), ii, 42.
chlorine and hydrogen, influence of high concentrations of hydrochloric acid and sodium chloride on (WILKE and KIENIGER), ii, 790.
copper oxide, Becquerel effect on (VAN DIJCK), ii, 1083.
gas, measurements with (WÖHLISCH), ii, 301.
glass (GROSS and HALPERN), ii, 405; (HOROVITZ), ii, 673.
use of, in biochemistry (KERRIDGE), i, 1201.
hydrogen (BAUMBERGER), ii, 236; (BEANS and HAMMETT), ii, 694; (VLÈS and VELLINGER), ii, 817.
potential of, in dilute hydrochloric acid (MICHAELIS and MIZUTANI), ii, 130.
for use in solid media (RADSIMOWSKA), i, 338.
hydrogen and oxygen, titration of dibasic acids and dextrose with (BRITTON), ii, 977.
mercurous chloride (EWING), ii, 571; (SCHOLLENBERGER), ii, 711; (PARKER and DANNERTH), ii, 712.
·1*N* and 3·5*N*, potential difference between (GJALDBAEK), ii, 1066.
mercury, mercurous chloride, potentials of (SCATCHARD), ii, 398.
micro-, for hydrogen ions (BODINE and FINK), i, 1201.
non-polarisable, for physiological experiments (STEVENS and KARRER), ii, 1194.
platinum, influence of light and *X*-rays on anodically polarised (GRUBE and BAUMEISTER), ii, 46.
and its alloys, action of, in electrometric analysis (VAN NAME and FENWICK), ii, 594.
polarised, effect of alternating currents on (GLASSTONE; ISGARISCHEV and BERKMANN), ii, 548.
porous, for oxidation or reduction (KNOBEL), ii, 1092.
quinhydrone (SCHAEFER and SCHMIDT), i, 611.
potential of, in methyl alcohol (EBERT), i, 230.

Electrodes, quinhydrone, thermodynamics of (SCHREINER), ii, 978.
measurement of hydrogen-ion concentration with (MISLOWITZER), i, 1483; (KOLTHOFF), ii, 671; (O'SULLIVAN), ii, 822.
use of, for hydrogen-ion determinations in soils (BRIOUX and PIEN), i, 1227.
determination of hydrogen ions in blood-serum with (CULLEN and BIILMANN), i, 1201.
electrometric analysis with (NIKLAS and HOCK), ii, 595.
silver, silver chloride, potential of (SCATCHARD), ii, 398.
solid, electrochemical reduction of (FISCHBECK), ii, 1166.
Electro-dialysis (FREUNDLICH and LOEB), i, 96; (DHÉRÉ), i, 199; (PAULI), ii, 319.
Electro-endosmosis (FAIRBROTHER and MASTIN), ii, 47, 302; (FAIRBROTHER), ii, 129.
through mammalian serous membranes (MUDD), i, 468, 1355.
Electro-kinetic phenomena (LABES), ii, 796.
potentials (FREUNDLICH and ETTISCH), ii, 873.
Electrolysers, diaphragm, and circulation of the alkali chlorides (GIORDANI), ii, 550, 551.
Electrolysis, electrode phenomena in (CROWTHER and STEPHENSON), ii, 1167.
streams of gas bubbles in (COEHN), ii, 1165.
of equimolar mixtures (SAXON), ii, 984.
in liquid ammonia, sulphur dioxide, and phosphorus oxychloride (CADY and TAFT), ii, 1073.
of fused chlorides, anode effect in (HEPPENSTALL and SHUTT), ii, 45.
with gas cathodes (GÜNTHER-SCHULZE), ii, 549.
at mercury dropping cathodes (HEYROVSKÝ), ii, 43, 133.
of molten alloys (KREMANN and GRUBER-REHENBURG), ii, 678; (KREMANN and BENDA; KREMANN and BAUKOVAC; KREMANN and DELLACHER), ii, 679.
Electrolytes, definition of (BLUM), ii, 402.
Debye theory of (GROSS and HALPERN), ii, 866.
absorption of light by solutions of (V. HALBAN), ii, 1083.
electrical conductivity of (DAVIES), ii, 871.
Electrolytes, conductivity and ionisation of (SCARPA), ii, 128.
potential difference between metals and (GUYOT), ii, 402.
transport of (MESTREZAT and GARREAU), ii, 543.
thermo-electricity of (THIELE), ii, 545.
specific heat of (ZWICKY), ii, 1138.
thermodynamics of solutions of (HARNED), ii, 977.
dielectric constants of solutions of (WALDEN, ULICH, and WERNER), ii, 773; (ULICH), ii, 964.
freezing points of dilute solutions of (HOVORKA and RODEBUSH), ii, 772.
adsorption of, by charcoal (KOLTHOFF), ii, 383.
coagulation of colloids by (GHOSH and DHAR), ii, 511; (RABINOVITSCH), ii, 778.
activity of (SCATCHARD), ii, 397, 398.
threads of (MANEGOLD), ii, 873.
in the organism (KRAUS, ZONDEK, ARNOLDI, and WOLLHEIM), i, 198.
binary, dissociation of (SEMENTSCHENKO), ii, 117.
colloidal. See Colloidal electrolytes.
solid, migration of ions in (LE BLANC and KRÖGER), ii, 41, 977; (TUBANDT and REINHOLD), ii, 300.
strong, theories of (VAN LAAR), ii, 152.
theory of aqueous solutions of (HÜCKEL), ii, 513.
equivalent conductivity of (FERGUSON and VOGEL), ii, 1163.
dilution laws and distribution coefficients for (GROSS and HALPERN), ii, 117.
interionic attraction in (PIKE and NONHEBEL), ii, 1061.
activity of (SCATCHARD), ii, 971.
anomalous behaviour of (FRIVOLD), ii, 396.
weak, ionisation of, in aqueous-alcoholic solutions (MIZUTANI), ii, 867.
dissociation of, in aqueous-alcoholic solutions (MICHAELIS and MIZUTANI), ii, 793.
Electrolytic dissociation (V. HALBAN), ii, 511; (HANTZSCH), ii, 512.
of dibasic acids (LARSSON), ii, 294.
of weak electrolytes in aqueous-alcoholic solutions (MICHAELIS and MIZUTANI), ii, 793.
of polyatomic salts (SASAKI), ii, 512.
gas. See Gas.
ions, theory of (LORENZ and KLAUER), ii, 541.

Electrolytic polarisation (GLASSTONE), ii, 979.
solution tension (HEYROVSKÝ), ii, 793.
Electromotive force (BUTLER), ii, 42.
theory of (DENINA), ii, 41.
of cells with liquid junctions (MICHAELIS and FUJITA), ii, 131.
See also Potential.
Electrons, theory of (REISSNER), ii, 349.
theories of emission of (REICHINSTEIN), i, 345.
emission of, by Röntgen rays (SEITZ), ii, 168.
at transition and melting points (GOETZ), ii, 459.
photo-emission of (BURT), ii, 617; (AUGER and PERRIN), ii, 618.
thermionic emission of (v. RASCHEVSKY), ii, 920.
and light-quantum (MILLIKAN), ii, 624.
deflexion of, by radiation (HULBURT and BREIT), ii, 252.
reflection of, in gases (BAERWALD), ii, 731.
ionisation by collision of (FOWLER), ii, 7.
heat of evaporation of (WEIGLE), ii, 253.
orbits of (HOYT), ii, 252.
statics of phenomena involving (ROLLA and PICCARDI), ii, 1018, 1105.
equilibria between atoms, radiation, and (DIRAC), ii, 6.
mechanics of (SCHAPOSCHNIKOV and FEDOROV), ii, 1105.
equation of motion of (PAGE), ii, 80.
vaporisation of (v. RASCHEVSKY), ii, 731.
diffusion of, against an electric field (COMPTON and ECKART), ii, 253.
divisibility of (MILLIKAN), ii, 832.
variation of mass of, with velocity (TRICKER), ii, 1021.
bombardment of metal surfaces by (FARNSWORTH), ii, 169.
displacement of, in organic compounds (LUCAS and JAMESON), i, 2.
free, motion of, in the field of plane electromagnetic waves (FRENKEL), ii, 477.
moving, magnetic field of (GUÉRY), ii, 252.
thermionic, distribution of velocities between (GERMER; DAVISSON), ii, 730.
Electrophoresis, influence of light on (BAUM and FRIEDERICH), ii, 220.
Element of atomic number zero and atomic weight unity (LORING), ii, 842.
Elements, structure of (BEDREAG), ii, 363.
artificial disintegration of (RUTHERFORD and CHADWICK), ii, 83.
colloidal. See Colloidal elements.
light, mass spectra of (COSTA), ii, 1021.
two new, of atomic numbers 43 and 75 (NODDACK, TACKE, and BERG), ii, 939.
of atomic numbers 75 and 93 (DRUCE), ii, 1124.
radioactive. See Radioactive elements.
rare, detection of (NOYES and BRAY), ii, 242.
quantitative determination of, in mixtures and compounds, by means of Röntgen rays (GLOCKER and FROHNMAYER), ii, 270.
Elemi resin, Manila, β-amyrin from (ROLLETT and SCHMIDT), i, 945.
Emanation capacity and surface variation of precipitates (HAHN), ii, 177.
Emetics, arsenical (DEBUCQUET), i, 1090.
Emetine, derivatives of (KELLER and BERNHARD), i, 1086.
Emodic acid, derivatives of (EDER and HAUSER), i, 562.
Emodin from *Frangula*, and its derivatives (EDER and HAUSER), i, 562, 563.
Emulsifiers, polar (HOLMES and WILLIAMS), ii, 1156.
Emulsin, hydrolysis and synthesis of glucosides by (JOSEPHSON), i, 1359, 1360.
primeverosidase and primeverase from (BRIDEL), i, 1438.
hydrolysis of salicin by (BERTRAND and COMPTON), i, 738.
action of, on polymethylated sugars (KUHN and SCHLUBACH), i, 863.
Emulsions (SEIFRIZ), ii, 663, 779, 864.
wedge theory of (HARKINS and BEEMAN), ii, 1154.
size of particles in (KRAEMER and STAMM), ii, 202; (STAMM and SVEDBERG), ii, 774; (STAMM), ii, 1153.
crystallisation of (FREUNDLICH and OPPENHEIMER), ii, 203.

2-Ethoxy-1-*cyclo*hexanol (KÖTZ and HOFFMANN), i, 910.
2-Ethoxy-1-*cyclo*hexanone (KÖTZ and HOFFMANN), i, 910.
2-Ethoxy-Δ^1-*cyclo*hexene, 1-cyano- (v. AUWERS, BAHR, and FRESE), i, 312.
7-Ethoxy-9-hydroxyethylaminoacridine, 3-amino-, and its hydrochloride (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 430.
Ethoxylutidine. See Ethoxy-2:6-dimethylpyridine.
Ethoxymalonic acid, dissociation constant of (FAIRWEATHER), i, 631.
8-Ethoxy-2-*p*-methoxyphenylbenzopyrylium salts, 3-hydroxy- (RIDGWAY and ROBINSON), i, 55.
2-Ethoxy-5-methylacetophenone, and its derivatives (v. AUWERS, LECHNER, and BUNDESMANN), i, 266.
***m*- and *p*-Ethoxymethylbenzonitriles** (v. BRAUN and REICH), i, 1405.
Ethoxymethylbenzyl alcohols (v. BRAUN and REICH), i, 1405.
Ethoxymethylbenzyl bromides (v. BRAUN and REICH), i, 1405.
***m*- and *p*-Ethoxymethylbenzylamines**, and their salts (v. BRAUN and REICH), i, 1405.
Ethoxymethylcarbimide (JONES and POWERS), i, 14.
Ethoxymethylenemalonoguanidic acid ethyl ester (MITTER and PALIT), 1320.
ω-Ethoxymethylfurfuryl-bis-(3-acetyl-2:4-dimethylpyrryl)methane (FISCHER and HEYSE), i, 78.

ω-Ethoxymethylfurfuryl-bis-(3-carbethoxy-2:4-dimethylpyrrylmethane (Fischer and Heyse), i, 78.
m- and *p*-Ethoxymethylphenylacetonitriles (v. Braun and Reich), i, 1405.
β-Ethoxymethylphenylethylamines, and their salts (v. Braun and Reich), i, 1405.
5-Ethoxy-2-methyl-4-*iso*propyloxazole, and its picrate (Karrer, Miyamichi, Storm, and Widmer), i, 594.
4-Ethoxy-2-methylpyridine-6-carboxylic acid, and nitro-, and their derivatives (Collie and Bishop), i, 974.
3-Ethoxy-2-methylquinoline methiodide (Tröger and Dunker), i, 433.
N-Ethoxymethylsuccinimide (Cherbuliez and Sulzer), i, 1252.
Ethoxyoxalacetic acid, ethyl ester, thermal decomposition of (Watson), ii, 556.
8-Ethoxy-2-phenylbenzopyrylium ferrichloride, 3-chloro- (Ridgway and Robinson), i, 693.
3-*p*-Ethoxyphenylhydantoin (Coghill and Johnson), i, 582.
2-Ethoxy-3-phenyl*cyclo*propane-1:2-dicarboxylic acid, and its esters (Haerdi and Thorpe), i, 924.
1-*p*-Ethoxyphenylpyridinium salts (Vorländer), i, 1256.
1-*p*-Ethoxyphenyl-4-pyridone, and its *per*chlorate (Vorländer), i, 1257.
p-Ethoxyphenylthiohydantoic acid, potassium salt (Coghill and Johnson), i, 582.
Ethoxypicoline chloroplatinate (Collie and Bishop), i, 974.
4-Ethoxypropenylbenzene, 3-hydroxy-, and its derivatives, preparation of, from *iso*safrole (Kafuku), i, 1413.
β-Ethoxypropylbenzene, γ-bromo- (Schmidt, Bartholomé, and Asmas), i, 136.
4-Ethoxypropylbenzene, 3-hydroxy-, and its phenylurethane (Kafuku), i, 1413.
o-γ-Ethoxypropylbenzonitrile (v. Braun and Kaiser), i, 1414.
o-γ-Ethoxypropylbenzyl alcohol (v. Braun and Kaiser), i, 1414.
o-γ-Ethoxypropylbenzylamine, and its hydrochloride (v. Braun and Kaiser), i, 1414.
5-Ethoxy-2-*n*-propyl-4-*iso*butyloxazole (Karrer, Miyamichi, Storm, and Widmer), i, 594.
5-Ethoxy-4-*iso*propyl-2-*sec.*-butyloxazole (Karrer, Miyamichi, Storm, and Widmer), i, 594.
4-Ethoxypyridine, and its 2:6-dicarboxylic acid, and their salts (Collie and Bishop), i, 974.
2-Ethoxy-1:2:3:4-tetrahydronaphthalene (v. Braun and Kaiser), i, 1414.
5-Ethoxy-2-αββγ-tetramethyl*cyclo*pentyl-4-*iso*butyloxazole (Granacher), i, 594.
Ethyl alcohol, preparation of, by catalytic reduction of acetaldehyde (Negoshi), i, 1375.
by dehydration of rectified spirit with anhydrous calcium chloride (Sudborough and Ayyar), i, 1125.
formation of, by carbohydrate fermentation (Moskovits), i, 1511.
refractive index of (Bennett and Garratt), i, 498.
thermal properties of (Parks), ii, 491.
density and compressibility of solutions of (Richards and Chadwell), ii, 1049.
boiling points of mixtures of benzene, water, and (Barbaudy), ii, 766.
distillation of aqueous mixtures of (Öman and Gunnelius), ii, 953.
surface tension of (Ali), ii, 763.
equilibrium of *n*-butyl alcohol, water, and (Drouillon), ii, 651.
miscibility of *iso*butyl alcohol, water, and (Brun), ii, 769.
equilibrium of ethyl ether, water, and (Pease and Yung), ii, 37.
properties of mixtures of *iso*propyl alcohol and (Parks and Kelley), ii, 764.
apparatus for dehydration of (Guinot), i, 1229.
contraction of, on dilution (Foran), ii, 101.
effect of, in promoting swelling (Loebenstein), ii, 520.
polymerisation of, by heating with aluminium oxide and iron (Ipatiev and Kijukwin), i, 226.
catalytic dehydrogenation of, and its mixtures with amyl alcohol (Constable), ii, 881.
electrolytic chlorination of (Koidzumi), ii, 808.
catalysis by alumina of the reaction between ammonia and (Dorrell), ii, 1174.
effect and fate of, in the body (Southgate), i, 1503.
concentration in blood and excretion of, at high altitudes (Biehler), i, 1115.
tolerance of, in man (Hansen), i, 1503.
detection of ethyl phthalate in (Raleigh and Marie), ii, 605.
determination of (Astruc and Radet), ii, 443; (Martini and Nourisson), ii, 719; (Wimmer), ii, 1006.

Ethyl alcohol, determination of, volumetrically (JEROME and PEPIN), ii, 905.
determination of water in mixtures of ethyl ether, water, and (NEWMAN), ii, 156.
Ethyl alcohol, *tri*bromo-, behaviour of, in the body (ENDOH), i, 332.
β-bromo-β-nitro-, potassium salt, and β-chloro-β-bromo-β-nitro-, and chloronitro-, sodium salt (TRÉNEL and WILKENDORF), i, 112.
Ethyl orthocarbonate, hydrolysis of (SKRABAL and BALTADSCHIEVA), ii, 139.
β-benzoxy- and β-methoxy-ethyl ethers, β-chloro- (CRETCHER and PITTENGER), i, 228.
chloride, inhalation of (DAVIDSON), i, 1503.
determination of Avogadro's number from the diffusion of light by (DAURE), ii, 753.
Ethyl ether, density and compressibility of (RICHARDS and CHADWELL), ii, 1049.
viscosity of (CLARK), ii, 499.
mobilities of ions in (LOEB), ii, 832.
mutual solubilities of aqueous mixtures of (KABLUKOV and MALISCHEVA), ii, 768.
equilibrium of ethyl alcohol, water, and (PEASE and YUNG), ii, 37.
pharmacology of the oxidation products of (MITA), i, 195.
determination of water in mixtures of alcohol, water, and (NEWMAN), ii, 156.
Ethyl ether, ββ′-*di*chloro-, syntheses with (CRETCHER and PITTENGER), i, 228; (CRETCHER, KOCH, and PITTENGER), i, 627.
*octa*chloro- (GOLDSCHMIDT and SCHÜSSLER), i, 497.
Ethyl 3-hydroxy-5-methoxyphenyl ether, β-hydroxy-, and its phenylurethane (SONN and PATSCHKE), i, 282.
hypochlorite, and its reactions (TAYLOR, MCMILLAN, and GAMMAL), i, 501; (GOLDSCHMIDT, ENDRES, and DIRSCH), i, 502; (DURAND and NAVES), i, 1054, 1230.
p-methylaminophenyl sulphide, and its picrate (RIVIER and RICHARD), i, 1416.
sulphide, compounds of platinic chloride and (P. C. and K. C. B. RÂY), ii, 1121.
vinyl ether, β-chloro- (CRETCHER, KOCH, and PITTENGER), i, 628.
Ethylacetylurethane, β-chloro- and β-iodo- (CHINOIN FABRIK CHEMISCH-PHARMAZEUTISCHER PRODUKTE), i, 13.
Ethyl alkyl ketones, formation of, from vinylalkylcarbinols (DELABY and DUMOULIN), i, 632.
Ethylallylbarbituric acid (VOLWILER), i, 1174.
Ethylallyldi*iso*butylarsonium iodide, and its compound with iodoform (STEINKOPF and BESSARITSCH), i, 496.
α-**Ethylallylbutyrophenone** (HALLER, BAUER, and RAMART), i, 261.
Ethylallylindazolium iodides (v. AUWERS and PFUHL), i, 1101.
9-**Ethylamino-7-ethoxyacridine**, 3-amino- (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 430.
2-**Ethylamino-5-phenyl-1:3:4-thiodiazine** (BOSE), i, 1466.
2-**Ethylamino-*p*-toluic acid**, 3:5-*di*nitro- (GIUA and PETRONIO), i, 1397.
2-**Ethylamino-*p*-tolyl** hydrogen 4-thiosulphate, 5-amino- (HELLER), i, 315.
Ethylammonium chloroferrates (REMY and ROTHE), ii, 1089.
Ethylaniline, vapour pressure of (NELSON and WALES), ii, 494.
m-nitrobenzenesulphonamide (MARVEL, KINGSBURY, and SMITH), i, 245.
Ethylanthraquinones, fluoro- (QUAYLE and REID), i, 1289.
Ethylbenzene, *o*- and *p*-fluoro- (QUAYLE and REID), i, 1289.
Ethylbenzoyl-*o*-benzoic acids, chloro- and fluoro- (QUAYLE and REID), i, 1289.
4-**Ethyl-1-benzylglyoxaline**, 4-β-amino- (GERNGROSS), i, 441.
β-**Ethylbenzyltetrahydro*iso*quinoline**, *o*-amino-, and its derivatives (v. BRAUN and ZOBEL), i, 1456.
Ethyl-*p*-bromoaniline, *N*-hydroxy- (DAINS, BREWSTER, MALM, MILLER, MANEVAL, and SULTZABERGER), i, 1063.
β-**Ethylbutan-γ-ol**, δ-amino-, benzoyl derivative (THOMAS and BETTZIECHE), i, 250.
Ethylbutylals (ADAMS and ADKINS), i, 785.
Ethyl-*n*-butylhydroxylamines, and their hydrochlorides (NEUFFER and HOFFMAN), i, 891.
Ethyl-*n*-butylhydroxyurethanes (NEUFFER and HOFFMAN), i, 891.
α-**Ethylbutyronitrile**, α-bromo- (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 377.

α-Ethylbutyrylcarbamide, α- and β-bromo-, action of alkali hydroxides on, and αβ-*di*bromo- (NEWBERY), i, 375.
ω′-Ethylcarbamide, ω-cyanoacetyl derivative (BILTZ and PEUKERT), i, 1462.
Ethylcarbonato-3-methyl-2-coumarilic acid (FRIES and NÖHREN), i, 954.
7-Ethylcarbonatocoumarin, and 3-bromo- (FRIES and NÖHREN), i, 954.
6-Ethylcarbonato-4-methylcoumarin (FRIES and NÖHREN), i, 954.
7-Ethylcarbonato-4-methylcoumarin, and 3-bromo- (FRIES and NÖHREN), i, 954.
β-Ethylcarbonatopropionic acid, ethyl ester and nitrile (CHAPMAN and STEPHEN), i, 669.
Ethyl-β-chloroethylmalonic acid, ethyl ester (VOORHEES and SKINNER), i, 837.
Ethyl-γ-chloropropylaniline (WOLFF), i, 428.
α-Ethylcrotonylcarbamide (NEWBERY), i, 375.
5-Ethyl-5-β-diethylaminoethylbarbituric acid, and its hydrochloride (VOORHEES and SKINNER), i, 837.
Ethyl-β-diethylaminoethylmalonic acid, ethyl ester (VOORHEES and SKINNER), i, 837.
Ethyldihydrochelerythrine (GADAMER and STICHEL), i, 287.
5-Ethyl-5-β-dimethylaminoethylbarbituric acid, and its hydrochloride (VOORHEES and SKINNER), i, 837.
Ethyl-β-dimethylaminoethylmalonic acid, ethyl ester (VOORHEES and SKINNER), i, 837.
4-Ethyl-1:6-dimethylmethylenedihydropyridine, and its derivatives (MUMM), i, 967.
4-Ethyl-1:6-dimethylpyridine-3:5-dicarboxylic acid, ethyl ester, methosulphate (MUMM), i, 964.
N-Ethyldiphenylamine-6-carboxylic acid, 2′-amino-, and its acetyl derivative and their silver salts, and 2′-nitro- (BURTON and GIBSON), i, 154.
Ethyldi-*n*-propylsulphonium iodide, and its compound with iodoform (STEINKOPF and BESSARITSCH), i, 496.
Ethylene, preparation of, and its dibromide (KESTING), i, 625.
dielectric constant of (SMITH and ZAHN), ii, 1118.
compressibility of (BATUECAS), ii, 497.
absorption of, by phosphoric acids (GILLIAN), i, 1373.
[illegible] of hydrogen bromide with (MAKIN and WRIGHT), ii, 214.
Ethylene, spontaneous combustion of, during preparation of ethylene dichloride (SHARMA), i, 109.
catalytic combination of hydrogen and, in presence of copper (PEASE and STEWART), ii, 691.
catalytic addition of halogen acids to (WIBAUT, DIEKMANN, and RUTGERS), i, 494.
as an anæsthetic (OBERHELMAN and DYNIEWICZ; LEAKE), i, 862; (DAVIDSON), i, 1503.
substituted derivatives, action of silicates on (LEBEDEV and FILONENKO), i, 225.
Ethylene, *di*bromonitro- (WIELAND and JUNG), i, 1374.
β-bromo-α-thiocyano-, and *s-di*thiocyano- (SÖDERBÄCK), i, 899.
*tetra*iodo-, preparation of, electrolytically (DUSSOL), i, 350.
Ethylenes, addition of azo compounds to (INGOLD and WEAVER), i, 580.
Ethylenes, *di*chloro-, ultra-violet absorption spectra of (ERRERA and HENRI), ii, 738.
Ethylenediamines, substituted, *N*-carboxylic esters of (HARTMANN and KÄGI), i, 1045.
Ethylene glycol, latent and specific heats of (PARKS and KELLEY), ii, 949.
Ethylene glycol, thio-, derivatives of (FROMM and JÖRG), i, 352.
*di*thio-, compounds of gold chloride with (RÂY,) ii, 184.
Ethylene oxide, Friedel and Crafts' synthesis with (SCHAARSCHMIDT, HERMANN, and SZEMZÖ), i, 1278.
action of aniline on (GABEL), i, 535.
pharmacological action of (STEHLE, BOURNE, and LOZINSKY), i, 333.
Ethylene oxides, substituted, isomerism of (TIFFENEAU, ORÉKHOV, and LÉVY), i, 544.
Ethylenic compounds, addition of iodine to (ANDRÉ and FRANÇOIS), i, 356.
isomeric, optical properties of (ERRERA and HENRI), ii, 1137.
aliphatic, rate of catalytic hydrogenation of (LEBEDEV, KOBLIANSKY, and YAKUBCHIK), i, 350.
aromatic, velocity of oxidation of (BÖESEKEN and BLUMBERGER), i, 240.
Ethylenic *per*oxides (FERNÁNDEZ), i, 769.
δ-Ethylhexenones, isomeric, and their semicarbazone (KON and LINSTEAD), i, 633.
1-Ethyl-2-*cyclo*hexyl*cyclo*hexane (GARLAND and REID), i, 1281.

1-Ethyl-2-*cyclo*hexyl*cyclo*hexanol (GARLAND and REID), i, 1281.
1-Ethyl-6-*cyclo*hexyl-Δ^1-*cyclo*hexene (GARLAND and REID), i, 1281.
1-Ethyl-2-*cyclo*hexylidene*cyclo*hexanol (GARLAND and REID), i, 1281.
1-Ethyl-6-*cyclo*hexylidene-Δ^1-*cyclo*hexene (GARLAND and REID), i, 1281.
Ethylideneaminosuccinic acid, *tri*chloro-, brucine salt (BERGMANN, EUSSLIN, and ZERVAS), i, 891.
Ethylideneaniline, bromonitro- (WIELAND and JUNG), i, 1374.
Ethylidenemalonic acid, ethyl ester, action of anilinophenylacetonitrile with (HIGGINBOTHAM, LAPWORTH, and SIMPSON), i, 35.
α-Ethylindole (VERLEY and BEDUWÉ), i, 578.
α-Ethylindole, 3-β-amino-, salts of (MAJIMA and HOSHINO), i, 1451.
3-β-amino-α-hydroxy-, synthesis of, and its picrate and acetyl derivatives, and 3-*p*-nitro-α-hydroxy-, acetyl derivative (MAJIMA and KOTAKE), i, 1450.
5-Ethylindolylhydantoin (ODDO), i, 298.
Ethylglycuronic acid, *tri*bromo- (ENDOH), i, 332.
γ-Ethyl-$\Delta^{\alpha\gamma}$-heptadiene (GRIGNARD and VESTERMAN), i, 514.
γ-Ethylheptane-βδ-diol (GRIGNARD and VESTERMAN), i, 513.
γ-Ethyl-Δ^{γ}-hepten-α-ol (GRIGNARD and VESTERMAN), i, 513.
β-Ethylhexaldehyde, γ-hydroxy-, preparation of (GRIGNARD and VESTERMAN), i, 513.
and its semicarbazone (GRIGNARD and DUBIEN), i, 111.
γ-Ethylhexan-δ-one, γ-hydroxy-, semicarbazone of (BRUYLANTS), i, 15.
2-Ethyl*cyclo*hexanone, 2-cyano-, and its derivatives (v. AUWERS, BAHR, and FRESE), i, 312.
β-Ethyl-Δ^{β}-hexenaldehyde (GRIGNARD and VESTERMAN), i, 513.
Ethylhydrobenzoins, optically active, dehydration of (MCKENZIE and ROGER), i, 25.
Ethylmaltoside, and its hepta-acetyl derivative (FREUDENBERG, v. HOCHSTETTER, and ENGELS), i, 635.
Ethylmercuric mercaptan (KOTEN and ADAMS), i, 236.
Ethylmercuric-2:4:6-*tri*nitrophenyl (KOTEN and ADAMS), i, 237.
ε-Ethylnonane (HESS and BAPPERT), i, 349.
δ-Ethyl-$\Delta^{\alpha\delta}$-octadiene (GRIGNARD and VESTERMAN), i, 514.
δ-Ethyloctane-γε-diol (GRIGNARD and VESTERMAN), i, 513.
δ-Ethyl-Δ^{δ}-octen-γ-ol (GRIGNARD and VESTERMAN), i, 514.
Ethyloleamide, *N*-amino- (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1133.
γ-Ethylpentan-γ-ol, δ-amino-, benzoyl derivative (THOMAS and BETTZIECHE), i, 250.
β-Ethyl-Δα- and **-Δβ-pentenoic acids**, and their derivatives (KON and LINSTEAD), i, 506.
α-Ethyl-Δ^1-*cyclo*pentenylacetone, and its semicarbazone (KON and LINSTEAD), i, 633.
6-Ethylphenoxarsine, and its oxide (AESCHLIMANN), i, 706.
Ethylphenylacetic acids, amino-, and their derivatives (v. BRAUN and REICH), i, 1406.
2-Ethyl-3-phenyl*iso*indolinone, 3-hydroxy-2-β-bromo-, and its derivatives (KOHN and LAKNER), i, 1276.
Ethylphthalimide, β-bromo-, action of magnesium phenyl bromide on (KOHN and LAKNER), i, 1276.
Ethylpiperidinoethylcarbamic acid, phenyl ester, and its hydrochloride (HARTMANN and KÄGI), i, 1046.
Ethylpropylindazolium iodides (v. AUWERS and PFUHL), i, 1101.
2-Ethyl-1-propyl*cyclo*propane-1-glyoxylic acid, and its salts and oxime (FREJKA and BALAŠ), i, 669.
Ethylpyridine picrate (THOMS and BERGERHOFF), i, 575.
4-Ethylpyridine (CHEMISCHE FABRIK AUF AKTIEN VORM. E. SCHERING), i, 431.
4-Ethylpyridine, 2-amino- (CHEMISCHE FABRIK AUF AKTIEN VORM. E. SCHERING), i, 301.
1-Ethyl-2-pyridylnitroimine (TSCHITSCHIBABIN and MENSCHIKOV), i, 438.
2-Ethyl-4-quinazolone, 3-amino-, and its acetyl derivative (HELLER, GÖHRING, KLOSS, and KÖHLER), i, 1323.
Ethylstearamide, *N*-amino- (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1133.
Ethylsulphonic acid, calcium salt (CHEMISCHE FABRIK VORM. SANDOZ), i, 1377.
2-Ethyl-1:2:3:4-tetrahydro*iso*quinoline, 2-β-hydroxy-, and its derivatives (SKITA and REITMEYER), i, 140.
α-Ethylthiocarbamides, αβ-hydroxy-, substituted, and their derivatives (DAINS, BREWSTER, MALM, MILLER, MANEVAL, and SULTZABERGER), i, 1063.

Ethyl*di*thiocarbomalic acids, and their salts (HOLMBERG), i, 1238.
α-Ethyl-αα′-thiodilactic acids, and their salts (AHLBERG), i, 885.
2-Ethylthiol-1:4-dimethylglyoxaline, and its salts (BURTLES, PYMAN, and ROYLANCE), i, 697.
2-Ethylthiol-1-phenylglyoxaline, and its picrate (BURTLES, PYMAN, and ROYLANCE), i, 697.
***o*-Ethylthiophenol**, and its salts and methyl ether (FRICKE and SPILKER), i, 249.
2-Ethylthiouracil xyloside and triacetylxyloside (LEVENE and SOBOTKA), i, 1464.
Ethyl-*m*-toluidine, 2:4- and 4:6-*di*nitro-, (GIUA and PETRONIO), i, 1397.
1-Ethyluracil, 6-amino-, 5:6-*di*amino-, and 5-nitroso-6-amino-, and its ammonium salt (BILTZ and PEUKERT), i, 1462.
1-Ethyluracil-5-ethylurethane, 6-amino- (BILTZ and PEUKERT), i, 1462.
Ethylurethane, β-chloro- and β-iodo- (CHINOIN FABRIK CHEMISCH-PHARMAZEUTISCHER PRODUKTE), i, 13.
*di*chloro- (MELDRUM and ALIMCHANDANI), i, 1273.
Ethylurethylane, *di*chloro- (MELDRUM and ALIMCHANDANI), i, 1273.
3-Ethyluric acid, derivatives of, and 8-thio- (BILTZ and PEUKERT), i, 1462.
3-Ethyl*iso*uric acid, 5(4)-chloro- (BILTZ and PEUKERT), i, 1463.
Ethylvinylcarbinol, resolution and rotation of, and its esters (KENYON and SNELLGROVE,), i, 771.
3-Ethylxanthine, and 8-chloro- (BILTZ and PEUKERT), i, 1463.
4-Ethyl-*o*-xylene, *tri*bromo- and *tri*nitro- (KRUBER), i, 1137.
4-Ethyl-*o*-xylenesulphonic acid, sodium salt and amide (KRUBER), i, 1138.
Ethyl-*p*-xylidine, *N*-hydroxy- (DAINS, BREWSTER, MALM, MILLER, MANEVAL, and SULTZABERGER), i, 1063.
Eucalyptus oil (PENFOLD and MORRISON), i, 688.
Sicilian (INVIDIATO), i, 688.
Eucalyptus piperita, oils from (PENFOLD and MORRISON), i, 688.
Eugenol, oxidation of, with ozone (VERLEY), i, 406.
derivatives of (THOMS and KEMP), i, 789.
iso-Eugenol, electrochemical oxidation of (FICHTER and CHRISTEN), i, [illegible].
Euphorbiaceæ, oil from species of [illegible], i, 760.
Evaporation, capillarity and efflorescence (SCHULTZE), ii, 287.
of liquids, kinetic theory of (MACLEOD), ii, 784.
Evaporation apparatus for bumping liquids (SCHMALFUSS and WERNER), ii, 590.
Excreta of rats, vitamin-*B* in (SALMON), i, 1516.
Expansion coefficient of liquids (SASLAWSKY), ii, 26.
Explosions, theory of waves of (JOUGUET), ii, 1169.
wave of maximum energy in the sound spectrum of (DUFOUR), ii, 183.
propagation of (LAFFITTE), ii, 135.
ionisation in propagation of (MALINOWSKI), ii, 182.
gaseous (BROWN, LESLIE, and HUNN), ii, 682.
of electrolytic gas, safety devices against (NORMANN), ii, 996.
of mixed gases (BERL and FISCHER), ii, 413; (WENDLANDT), ii, 801.
Explosives, theoretical force of (BURLOT; LE CHATELIER), ii, 558.
force and co-volume of (BURLOT), ii, 1170.
test for the stability of (POLLARD), ii, 803.
rates of explosion of (SMITH), ii, 804.
pressure developed by combustion of (BURLOT), ii, 1170.
equilibrium of gases in combustion of (YAMAGA), ii, 294.
determination of nitrogen in (MARQUEYROL, CHENEL, FRIEDERICH, FLORENTIN, KOEHLER, and LORIETTE), ii, 599.
Extraction, theory of (FRENC), ii, 506.
Extraction apparatus (PATTERSON), ii, 151.
for solids (SCHMALFUSS and WERNER), ii, 234; (STRUENSEE), ii, 996.
with heavy solvents (SCHMALFUSS and WERNER), ii, 897.
modified Soxhlet (KÖHLER), ii, 708.
Eye, chemical constitution of the lens of (LABBÉ and LAVAGNA), i, 724.
effect of magnesium on pressure in the (KANEKO), i, 333.

F.

Fæces, porphyrin of (PAPENDIECK), i, 98.
human, new porphyrin from (KÉMERI), i, 188.

Fæces, detection of bilirubin and urobilin in (ADLERSBERG and PORGES), i, 98.
determination of blood in (VAN ECK), i, 187.
determination of diastase in (FRANK and DOLESCHALL), i, 461.
determination of urobilin in (VAN SPENGLER; TERWEN), i, 1351.
determination of urobilinogen in (TERWEN), i, 1351.
Fagopyrum esculentum, water-soluble proteins of (SAWAMURA and SASAKI), i, 346.
Fats, Röntgen-ray structure of (TRILLAT), ii, 752.
chemistry of (MARGOSCHES, FRIEDMANN, and TSCHÖRNER), i, 629; (MARGOSCHES, FRIEDMANN, SCHEINOST, and TSCHÖRNER), i, 883.
spreading of lenses of, on water (CARY and RIDEAL), ii, 1046, 1047, 1048.
biochemistry of (BLOOR), i, 1346.
specific dynamic action of (MELLY and v. RÖTTH), i, 332.
autoxidation of (TSCHIRCH), i, 356.
oxidation of, by fungi (DERX), i, 1119.
influence of glutathione on oxidation of (HOPKINS), i, 1499.
animal, calorific value and analysis of (KRZYWANIK), i, 1496.
colloidal, interaction of colloidal lipoids with (EICHHOLTZ), i, 199.
human subcutaneous, fatty acid in (ECKSTEIN), i, 1203.
natural, fatty acid constituents of (ARMSTRONG, ALLAN, and MOORE), i, 353, 504.
in blood. See Blood.
determination of the acetyl value of (ANDRÉ), ii, 446.
determination of iodine-bromine numbers of (KÖPKE), ii, 246; (WINKLER), ii, 446, 1009.
determination of the iodine value of, by Winkler's method (SCHEFFLER), ii, 1008.
Fehling's solution (PÉGURIER), ii, 1208.
Fenchane-6-nitrosohydroxylamine, 6-cyano-, and its salts and derivatives (PASSERINI), i, 1290.
Fenchone cyanohydrin (PASSERINI), i, 1290.
α- and β-Fenchyl alcohols, and their esters, and their rotatory power (KENYON and PRISTON), i, 941.
Fermentation as a unimolecular reaction (AMBARD), ii, 1170.
action of iron salts in (HODEL and (NEUENSCHWANDER), i, 615.
in the organism, effect of quinine on (SMORODINCEV and ADOVA), i, 335.
Fermentation with zymase (JENSEN), i, 337.
alcoholic (LEBEDEV), i, 204; (KOSTYTSCHEV and FREY), i, 1214.
effect of radioactive substances on (KAYSER and DELAVAL), i, 1118.
action of ultra-violet light on (ROMOLO and REMO DE FAZI), i, 475.
relation of hydrogen-ion concentration to (HÄGGLUND and AUGUSTSON), i, 476.
bacterial (DE GRAAFF and LE FÈVRE), i, 478.
of carbohydrates by *Bacillus macerans* (MOSKOVITS), i, 1511.
lactic acid (VIRTANEN), i, 866.
in presence of mercuric chloride (LUMIÈRE), i, 108.
effect of insulin on (NOYES and ESTILL), i, 107.
Ferric hydroxide. See under Iron.
Ferric acid. See under Iron.
Ferricyanides, oxidation of iodides by (WAGNER), ii, 49.
Ferrite, crystalline structure of, in pearlite (BELAIEW), ii, 768.
Ferrocyanides, action of halogens on (DEL FRESNO), ii, 1192.
Ferromagnetism, theory of (MCKEEHAN), ii, 944.
Ferrous salts. See under Iron.
Fibres, vegetable, *d*-glycuronic acid in (SCHWALBE and FELDTMANN), i, 1238.
Fibrin, bromo- (VANDERVELDE), i, 707.
Fibrinogen, physical chemistry of (WÖHLISCH), i, 452.
precipitin reactions of (HEKTOEN and WELKER), i, 1487.
determination of (STARLINGER and HARTL), i, 716.
Ficus carica, enzymes in latex of (VISCO), i, 471.
Films, formation of, on water (CARY and RIDEAL), ii, 1046, 1047, 1048.
on water, structure of (ADAM), ii, 195.
between liquids (HARKINS and MCLAUGHLIN), ii, 771.
surface tension of, in relation to temperature (MARCELIN and DELAPLACE), ii, 772.
thin, molecular structure of (ADAM and DYER), ii, 32.
unimolecular, electrical properties of (FRUMKIN), ii, 873.
uni- and multi-molecular, on surfaces of liquids (HARKINS and MORGAN), ii, 1148.
Filters, air-binding of (BAYLIS), ii, 980.
light, for interferometry (FERGUSON), ii, 839.

Filters, glass, in qualitative analysis (HÜTTIG and NETTE), ii, 431.
Filter-paper, adsorption of acids by (MOKRUSCHIN), ii, 957.
Filter tube, Shimer (BINGHAM), ii, 432.
Filtration, effect of, on potential (RIETY), ii, 796.
Filtration apparatus, glass (PRAUSNITZ), ii, 996.
Fisetin, fluorescence of, in ultra-violet light (MEUNIER and BONNET), ii, 738.
Fisetinidin chloride trimethyl ether (PRATT and ROBINSON), i, 422.
Fish, arsenic in (COX), ii, 157.
blood-sugar in, under various conditions (MCCORMICK and MACLEOD), i, 856.
insulin from (MCCORMICK and NOBLE; MCCORMICK), i, 754.
marine, effect of hydrogen-ion concentration on oxygen consumption in (PEREIRA), i, 177.
Pacific Coast, analyses of (DILL), i, 855.
Flame, propagation of, in inflammable mixtures of gases (WHITE), ii, 48, 408, 553.
propagation of, in closed vessels (ELLIS and WHEELER), ii, 554.
photography of (ELLIS and ROBINSON), ii, 590.
effect of nitrogen dilution on speed of (ELLIS), ii, 135.
Flames, mobility of negative ions in (WATT), ii, 170.
monochromatic illuminator for (GORDON), ii, 588.
ozone in (v. WARTENBURG), ii, 147; (RIESENFELD), ii, 148.
chlor- and oxy-hydrogen, conductivity of salt vapours in (KALANDYK), ii, 208.
non-luminous, radiation from (HASLAM, LOVELL, and HUNNEMAN), ii, 475.
oxy-hydrogen, hydrogen peroxide in (RIESENFELD), ii, 148.
Flavan, 4:5:7:3′:4′-*penta*hydroxy-, and its acetyl derivative (NIERENSTEIN), i, 280.
Flavanols, influence of methoxy-substitution on the absorption spectra of (TASAKI), i, 1444.
Flavanone, 2′-chloro-, and *iso*nitroso- (RÖTHLISBERGER), i, 572.
Flavanones, bromothio- (ARNDT), i, 1309.
Flavone glucosides, absorption spectra of (TASAKI), i, 1445.
Flavones, 3-bromo-1-thio-, and thio- (ARNDT), i, 1309.
Flavone, 2′-chloro- (RÖTHLISBERGER), i, 571.
*di*thio- (ARNDT, NACHTWEY, and PUSCH), i, 1312.
Flavones, influence of methoxy-substitution on the absorption spectra of (TASAKI), i, 1444, 1445.
physiology and distribution of, in plants (KLEIN and WERNER), i, 870.
***iso*Flavone group**, syntheses in the (BAKER and ROBINSON), i, 1299.
Flavonol, 2′-chloro-, and its acetyl derivative (RÖTHLISBERGER), i, 571.
Flavouring materials in foods (BYLSMA), i, 1356.
Flavylium chloride, 3:5:7:3′-*tetra*hydroxy- (PRATT and ROBINSON), i, 826.
Flesh, pigments of (SCHUMM), i, 341, 721, 1347.
Flint, formation of, in chalk (LINCK and BECKER), ii, 820.
Flores primulæ, green colouring matter from (v. LINGELSHEIM), i, 601.
Florida earth, polymerisation of unsaturated compounds by means of (LEBEDEV and FILONENKO), i, 225.
Florideæ, pigments of (RODIO), i, 621.
Flowers, extraction of essential oils from (v. SODEN), i, 1123.
Fluoflavine, 3-*mono*- and 3:8-*di*-chloro- (KEHRMANN and BENER), i, 443.
Fluoran derivatives, structure of (DOMINIKIEWICZ), i, 53.
Fluorene, 2:7-*di*amino-, derivatives of (STOLLÉ and ADAM), i, 1469.
2:7:9:9-*tetra*hydroxy-, true nature of (COURTOT and GEOFFROY), i, 926.
Fluorenes, 9-amino-, stereoisomeric, and their derivatives (KUHN and JACOB), i, 1260, 1404.
Fluorenone hydrate, constitution of (KUHN and WASSERMANN), i, 1398.
Fluorenone, 2-hydroxy-, and 2:7-*di*hydroxy-, and its derivatives (COURTOT and GEOFFROY), i, 927.
Fluorenylamines, synthesis of (COURTOT and PETITCOLAS), i, 247.
Fluorenyl-α-naphthylamine (COURTOT and PETITCOLAS), i, 248.
Fluorenyl-*p*-nitroaniline (COURTOT and PETITCOLAS), i, 248.
Fluorenyl-*p*-tolylamine (COURTOT and PETITCOLAS), i, 248.
Fluoresceïn, phosphorescence of (BATSCHA), ii, 181.
halogen derivatives, absorption and stability to hydrogen ions of (HOLMES), i, 255.
determination of, spectro-photometrically (FABRE), ii, 1212.
Fluoresceins (DUTT and THORPE), i, 140.

Fluorescence (PERRIN and CHOUCROUN), ii, 55; (BAYLÉ, FABRE, and GEORGE), ii, 260.
theory of diminution of (PREDVODITELEV), ii, 738.
and chemical change (CHAKRAVARTI and DHAR), ii, 629.
of colouring matters, extinction of (VAVILOV), ii, 474.
and phosphorescence (LEVSCHIN), ii, 629.
polarisation of (LEVSCHIN), ii, 13, 1117; (VAVILOV), ii, 739; (WEIGERT and KÄPPLER), ii, 1026.
of liquids (ASTERBLUM), ii, 1026.
of organic compounds (MOIR), ii, 261.
as a test of purity (BAYLÉ and FABRE), ii, 604.
of photographic developers (A. and L. LUMIÈRE and SEYEWETZ), i, 1060.
of solids (GYEMANT), ii, 13.
polarised, theory of (PERRIN), ii, 353.
resonance (STUART; HANLE), ii, 629.
Fluorescent substances, absorption of light by (PIENKOVSKI and JABLONSKI), ii, 1031.
Fluorescin, detection of hydrocyanic acid with (STAMM), ii, 76.
Fluorides. See under Fluorine.
Fluorindines, and their salts (KEHRMANN and SCHEDLER), i, 441.
Fluorine, potential of (NEUMANN and RICHTER), ii, 1164.
Hydrofluoric acid, ionisation potential of (GLOCKLER), ii, 1105.
freezing point of (ANTHONY and HUDLESTON), ii, 644.
determination of (WAETZEL), ii, 433.
Fluorides, effect of, in diet on the teeth of rats (MCCOLLUM, SIMMONDS, BECKER, and BUNTING), i, 861.
determination of, electrometrically (TREADWELL), ii, 1197.
Fluorine detection and determination:—
detection and determination of (MEYER and SCHULZ), ii, 598.
Fluorite, effect of heating on the cathode luminescence of (WICK and GLEASON), ii, 262.
Fluorocyclene, and its bromo and nitro derivatives (DZIEWOŃSKI and SUSZKO), i, 649.
Fluorocyclenetetrasulphonic acid, *di*-hydroxy-, and its salts (DZIEWOŃSKI and SUSZKO), i, 650.
α-9-Fluoryldimethylcarbamide (KUHN and JACOB), i, 1261.
Foaming power, relation between surface tension and (OSTWALD and STEINER), ii, 771.
Fœtus, calcium in the growing (SCHMITZ), i, 456.
rôle of calcium and potassium in development of the (MENDELÉEV and GLOSSE), i, 456.
Foods, perfumes and flavourings in (BYLSMA), i, 1356.
marine, iodine in (TRESSLER and WELLS), i, 183.
Foodstuffs, specific dynamic action of (MIYAZAKI and ABELIN; ABELIN), i, 332.
effect of treatment of, on value for growth (MILLER and YATES), i, 108.
iodine in (v. FELLENBERG), i, 347.
Formaldehyde (*methanal*; *formalin*), formation of, by action of ultra-violet light on carbon dioxide and water (PORTER and RAMSPERGER), ii, 573.
preparation of, with lead carbonate containing radium-Ω (STOLFI), ii, 1111.
heat of formation of (v. WARTENBERG and LERNER-STEINBERG), ii, 745.
vapour pressure and chemical constant of (MALI and GHOSH), i, 116.
vapour pressure of aqueous solutions of (BLAIR and LEDBURY), ii, 400.
effect of inorganic substances on polymerisation of (K. and W. F. SHORT), i, 232.
catalytic decomposition of (E. and F. MÜLLER), ii, 414.
electrolytic oxidation of (DEL FRESNO), ii, 267.
kinetics of the oxidation reduction of (v. EULER and LÖVGREN), ii, 981.
oxidation of *p*-phenylenediamine with hydrogen peroxide and (LÄTT), i, 1457.
condensations of (SCHMALFUSS and KALLE), i, 116.
condensation of, with *p*-aminoacetophenone (GRABOWSKA and WEIL), i, 260.
compounds of glycine with (BERGMANN and ENSSLIN), i, 1046.
action of, on methyluracils (SCHMEDES), i, 435.
action of, on proteins of serum (HENLEY), i, 716.
detection of (GHIGLIOTTO), ii, 445.
determination of (SCHULEK), ii, 606; (ROMEO), ii, 1009.

Formazylbenzene, *di*bromo- (CHATTAWAY and WALKER), i, 930.
Formic acid, oxidation of, by hydrogen peroxide (HATCHER and HOLDEN), ii, 684.
action of, on sesquiterpenes (ROBERTSON, KERR, and HENDERSON), i, 1293.
calcium salt, crystal structure of (YARDLEY), ii, 430.
chromous salts (TRAUBE, BURMEISTER, and STAHN), ii, 990.
sodium salt, reduction of mercuric bromide by (BOURION and PICARD), ii, 685.
alkoxymethyl esters (FARREN, FIFE, CLARK, and GARLAND), i, 1230.
*iso*bornyl ester (PARISELLE), ii, 742.
methyl ester, pyrogenic decomposition of (MULLER and PEYTRAL), i, 353; (PEYTRAL), i, 777.
determination of, in blood and urine (DE EDS), i, 713.
Formic acid, chloro-, esters of (OESPER, BROKER, and COOK), i, 1408.
cyano-, ethyl ester, action of magnesium ethyl bromide on (BRUYLANTS), i, 15.
methyl ester, action of, on magnesium organic compounds (FINGER and GAUL), i, 1431.
α-Formiminoacetoacetic acid, ethyl ester hydrochloride (WIELAND and DORER), i, 779.
Formyltrimethylarsonium bromide, action of, on the nervous system (HUNT and RENSHAW), i, 861.
Fourmarierite, constitution of (SCHOEP), ii, 236.
Foyaite (MOLENGRAAFF and HALL), ii, 64.
Fractionation apparatus, Fischer vacuum (SATTLER), ii, 708.
Free-space numbers (LORENZ and HERZ), ii, 185.
Freezing points of binary mixtures (ANDREWS, KOHMAN, and JOHNSTON), ii, 852.
of dilute solutions of electrolytes (HOVORKA and RODEBUSH), ii, 772.
Friction, internal, of aqueous solutions, effect of temperature on (WIEN), ii, 931.
internal relative (HERZ and WEGNER), ii, 482.
Friedel and Crafts reaction with aldehydes and ethylene oxide (SCHAARSCHMIDT; HERMANN and SZEMZI), i, 1278.
[illegible] of. See Heart.
[illegible] of. See Metabolism.
[illegible] of. See Nerves.
Fruits, constituents of (TUTIN), i, 1028.
effect of storage on the anti-scurvy value of (DELF), i, 484.
lead salts of acids from (AUERBACH and WEBER), i, 1130.
Fruit juices, detection of lactic acid in (BORNTRÄGER), ii, 1007.
Fulgides, halochromism of (DIETZEL and NATON), i, 1067.
Fulminic acid (WIELAND), i, 1048.
Fumaric acid, formation of, from maleic acid (TERRY and EICHELBERGER), i, 780.
crystal structure of (YARDLEY), ii, 1126.
halogenation of (TERRY and EICHELBERGER), i, 631.
oxidation of, to tartaric acid (MILAS and TERRY), i, 780.
sodium salt, surface tension of solutions of (RIBAS), ii, 647.
Fungi, staling of cultures of (PRATT), i, 106.
calcium requirements of algæ and (LOEW), i, 1218.
colouring matters of (KÖGL and POSTOWSKY), i, 50, 1033, 1439; (KÖGL and v. TAEUFFENBACH), i, 1440.
ammonium acetate as source of nitrogen for (BACH), i, 216.
oxidation of fats by (DERX), i, 1119.
excretion of urea by (IVANOV), i, 344, 746.
higher (GUTH), i, 1247.
Furfuraldehyde, molecular association of (GETMAN), ii, 511.
condensation of, with aliphatic aldehydes (IVANOV), i, 421.
Furfuraldoxime *N*-phenyl ether (BAMBERGER), i, 142.
Furfuroic acid, furfuryl ester (ZANETTI), i, 953.
Furfuryl alcohol, esters of (ZANETTI), i, 567.
Furfuryl bromide (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.
Furfurylbenzylmethylamine, and its salts (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.
α-Furfurylideneacetaldehyde, and its derivatives (IVANOV), i, 421.
Furfurylideneaminoacetic acid, barium salt (BERGMANN, ENSSLIN, and ZERVAS), i, 891.
α-Furfurylidenebutaldehyde, and its derivatives (IVANOV), i, 421.
α-Furfurylideneheptaldehyde, and its derivatives (IVANOV), i, 421.
2-Furfurylidene-6-*cyclo*hexylidene*cyclo*hexanone (GARLAND and REID), i, 1281.

α-Furfurylidenepropaldehyde, and its derivatives (IVANOV), i, 421.
α-Furfurylidenevaleraldehyde, and its derivatives (IVANOV), i, 421.
Furnace, micro-, for high magnifications (ROBERTS and STADNICHENKO), ii, 707.
Furoxane, *di*cyano- (WIELAND), i, 1050.
Furyl-*n*-butylcarbinol (PIERCE and ADAMS), i, 824.
4-Furyl-1:6-dimethylmethylenedihydropyridine, and its salts and derivatives (MUMM), i, 965.
4-Furyl-1:6-dimethylpyridine-3:5-dicarboxylic acid, ethyl ester, methosulphate (MUMM), i, 964.
4-Furyl-1:6-dimethyl-α-pyridone (MUMM), i, 966.
Furyltrichloromethylcarbinol (HOWARD), i, 557.
4-Furyl-1:2:6-trimethyldihydropyridine-3:5-dicarboxylic acids, ethyl esters (MUMM), i, 966.
Fusain, oxidation of (TIDESWELL and WHEELER), i, 373.
Fusarium, development of pigment in species of (SIDERIS), i, 1363.
Fusarium cromyophthoron, effect of hydrogen-ion concentration on the pectinase in (SIDERIS), i, 1117.
Fusarium lini, growth of (ANDERSON), i, 1522.

G.

*iso*Gadoleic acid, and its silver salt (HASHIMOTO), i, 1234.
Galactosamic acid, and its phenylhydrazide (FREUDENBERG and DOSER), i, 367.
Galactose, fermentation of, by yeast (v. EULER and NILSSON), i, 866; (v. EULER and LÖVGREN), i, 1214; (ABDERHALDEN), i, 1362.
metabolism of. See Metabolism.
*iso*propylidene ether (LEVENE and MEYER), i, 1043.
Galactosemonodiphenylmethanedimethyldihydrazone (v. BRAUN and BAYER), i, 1383.
Galactosidoglucose (SCHLUBACH and RAUCHENBERGER), i, 888.
Galanginidin chloride 3-methyl ether (MALKIN and ROBINSON), i, 827.
iodide (PRATT and ROBINSON), i, 826.
Galangin 3-methyl ether, and its diacetyl derivative (KALFF and ROBINSON), i, 423.
trimethyl ether (TASAKI), i, 1444.
Galegine, and its salts (MÜLLER), i, 1520.
Gallium (FRICKE and BLENCKE) ii, 417.
spark spectrum of (WEINBERG), ii, 249; (CARROLL), ii, 1101.
hydroxide (FRICKE), ii, 578.
Gallium separation:—
separation of (SWIFT), ii, 71.
separation of, from aluminium and iron (FRICKE), ii, 717.
Gallotannin (NIERENSTEIN, SPIERS, and HATCHER), i, 692.
action of yeast on (NIERENSTEIN, SPIERS, and HADLEY), i, 951.
Gamboge suspensions, specific volume of (COUTTS), ii, 290.
Gardenia turgida, *d*-mannitol from (FORSTER and RAO), i, 1295.
Gas, electrolytic, safety devices against explosions of (NORMANN), ii, 996.
Gases, electrical double refraction of (LYON), ii, 266.
reflection of electrons in (BAERWALD), ii, 731.
diamagnetism of (GLASER), ii, 82.
dispersion formula for (HERZFELD and WOLF), ii, 182, 478.
electric discharge through (THOMSON), ii, 461; (BANERJI), ii, 921.
electrodeless discharge in (LASAREV), ii, 1107.
apparatus for studying passage of sparks through (JOLIBOIS), ii, 1194.
electrification by friction between solids and (PERUCCA), ii, 1028.
ionisation in (LANGMUIR and JONES), ii, 169.
by impacts (COMPTON and VAN VOORHIS; TUVE; TATE; WALDIE), ii, 1106.
by slow-moving electrons (JESSE), ii, 919.
by α-particles (GURNEY), ii, 256.
ionisation and vapour pressure of (BECKER), ii, 342.
mobility of ions in (LOEB), ii, 461; (WAHLIN), ii, 615.
liberation of ions in reactions between (BREWER), ii, 919.
critical potentials of (DYMOND), ii, 6, 253.
potential at interfaces of liquids with (FRUMKIN), ii, 873.
attachment of electrons to molecules of (BAILEY), ii, 1019.
molecular heats of, at low temperatures (GIACOMINI), ii, 757.
specific heat of (BRINKWORTH), ii, 373.
thermodynamic temperature of (WERTHEIMER), ii, 784.
thermal study of systems of (PICCARDI), ii, 540.

Gases, kinetic theory of (DE KOLOSOVSKI), ii, 531.
in relation to the quantum theory (SCHIDLOF), ii, 843.
equations for (LEDUC), ii, 376; (HERZ), ii, 496.
mass-action law for (GILLESPIE), ii, 532.
quantum methods applied to (PLANCK; EINSTEIN), ii, 495.
compressibility of (BATUECAS; BATUECAS, MAVERICK, and SCHLATTER), ii, 497.
apparatus for measuring (HOWARTH and BURT), ii, 818.
effect of molecular attraction on the pressure of (MAASS and MORRISON), ii, 500.
pressure and radiation in relation to intermolecular forces in (STEWART), ii, 1112.
equilibrium pressure of hydrates of (TAMMANN and KRIGE), ii, 869.
temperature and pressure variations in (MANDELL and WEST), ii, 99.
sudden cooling of, in a quartz tube (STAUDINGER and KREIS), ii, 316.
critical pressure of, under varying specific heat (WALKER), ii, 100.
cryoscopy of solutions of, in various solvents (GARELLI), ii, 1151.
density and diffusion of (BARUS), ii, 25.
viscosity of, at low temperatures (GÜNTHER), ii, 100.
interfacial properties of, in contact with liquids (GILBERT and SHAW), ii, 795.
movements of small bubbles of, in water (McTAGGART), ii, 509.
determination of solubility of, in liquids (MANCHOT), ii, 233.
supersaturation of, in liquids (KENRICK, WISMER, and WYATT), ii, 105; (WYATT), ii, 504.
absorption coefficients for electrons in (BRODE), ii, 617.
adsorption of (URBAIN; MUNRO and JOHNSON; RAY), ii, 191; (RUFF and HOHLFELD), ii, 192.
equation for (BANGHAM and SEVER), ii, 507.
influence of rate of flow on (LORENZ and WIEDBRAUCK), ii, 507.
by cellulose nitrate (COSTA), ii, 956.
by graphite (LOWRY and MORGAN), ii, 1051.
by liquids (LEWIS and WHITMAN), ii, 106.
by titania (BISCHOFF and ADKINS), ii, 563.
by [illegible] (WHITMAN and DAVIS; ii, 106.
Gases, catalysis of, with metals of the platinum group (DUPARC, WENGER, and URFER), ii, 1177.
combustion of, with air (WHITE), ii, 48.
at high pressures (BONE, NEWITT, and TOWNEND), ii, 800.
electrification in (DICKINSON), ii, 740.
electrical ignition of (MORGAN), ii, 553.
influence of vapours on the inflammability of mixtures of air and (JORISSEN and MEUWISSEN), ii, 307; (JORISSEN and VAN DER VALK), ii, 874; (JORISSEN and ONGKIEHONG), ii, 875.
explosion of (BROWN, LESLIE, and HUNN), ii, 682.
apparatus for preparation of constant mixtures of air and (YANT and FREY), ii, 897.
circulation pump for (MENZIES, COLLINS, and TYSON), ii, 818.
complex, band spectra of crystals and of (KAHLER), ii, 626.
condensed, entropy of, at absolute zero (EUCKEN and FRIED), ii, 97.
degraded, theory of (BENNEWITZ), ii, 97.
diatomic, molecular heat and thermal conductivity of (SCHREINER), ii, 97.
heated, electrical conductivity of (GHOSH), ii, 461.
ideal, quantum theory of (EINSTEIN), ii, 624.
entropy of (v. HAUER), ii, 495; (DE KOLOSOVSKI), ii, 496.
inert, cathode fall, current density, and dark space in mixtures of (GÜNTHER-SCHULZE), ii, 341.
calculation of atomic frequencies of (NARBUTT), ii, 948.
rarity of (ASTON), ii, 18.
inflammable, propagation of flame in mixtures of air and (WHITE), ii, 408.
mixed, action of radiation on (SENFTLEBEN), ii, 883.
mobility of ions in (LOEB and ASHLEY), ii, 7.
adsorption and evolution of, from charcoal (LORENZ and WIEDBRAUCK), ii, 382.
effect of infra-red radiation on combustion of (DAVID), ii, 980.
ignition of (WHEELER), ii, 408; (WHITE), ii, 553.
explosion of (BERL and FISCHER), ii, 413; (WENDLANDT), ii, 135, 801.

Gases, mixed, separation of, by diffusion (LORENZ and MAGNUS), ii, 501.
thermal separation of (ELLIOTT and MASSON), ii, 763.
monatomic, chemical constants of (SIMON), ii, 98.
perfect, definition of (CLARK), ii, 495.
rare, in the atmosphere (JEFFREYS), ii, 83.
from volcanoes (PIUTTI and BOGGIO-LERA), ii, 1092.
excitation and ionisation potentials of (HERTZ and KLOPPERS), ii, 342.
ionisation and resonance potentials of (HERTZ and KLOPPERS), ii, 730.
relationship of pseudo- and non-electrolytes to (CARLSOHN), ii, 1044.
determination of, by combustion with cupric oxide (SVÉDA), ii, 432.
Gas absorption apparatus (PATTERSON), ii, 151.
Geissler bulbs (ODDO), ii, 431.
pipette (JONES), ii, 431.
Gas analysis, absorption of oxygen in (FIESER), ii, 238.
by combustion with copper oxide (SVÉDA), ii, 154.
automatic (LÖWENSTEIN), ii, 154.
Gas analysis apparatus (MURRAY), ii, 593; (CHAMBERLAIN and NEWITT), ii, 710.
burette for electrochemical processes (JOFINOV), ii, 898.
burette for micro-analysis (CHRISTIANSEN), ii, 593.
multiple (DIRKEN), ii, 154.
for determining oxygen and carbon dioxide in respiratory exchange (HAGEDORN), i, 177.
Gas circulation apparatus (PEARSON and THOMAS), ii, 1194.
Gas interferometer, Haber-Löwe, calibration of (WERNER), ii, 1091.
Gastric juice, action of, on chlorophyll (KORTSCHAGIN), i, 200.
determination of the free acid of (SAHLI), i, 458.
determination of pepsin in (ROSTOCK), i, 1009; (BOAS; HIRSCH-MAMROTH and RINDFLEISCH), i, 1213.
Gastropods, intestines of. See Intestines.
Gaucher's disease, kerasin in (LIEB), i, 189.
Gay-Lussac's law applied to liquid films (MARCELIN; DELAPLACE), ii, 772.
Gehlenite, constitution of (GOSSNER), ii, 821.
Gein, extraction and properties of (HÉRISSEY and CHEYMOL), i, 487.
sugars from (HÉRISSEY and CHEYMOL), i, 1383.
Gels, character and electrical properties of (MICHAUD), ii, 292.
velocity of hydrogen ions in (ISGARISCHEV and POMERANZEVA), ii, 300.
kinetics of swelling and shrinking of (LIEPATOV), ii, 685, 968.
replacement of (LINDGREN), ii, 392.
adsorption and osmosis in (TOMITA), ii, 202.
effect of hydrogen-ion concentration on adsorption of colouring matters by (MARKER and GORDON), ii, 31.
rhythmic precipitation in (FISCHER), ii, 853.
microtome for cutting sections of (FRICKE), ii, 965.
deformed, effect of drying on (HATSCHEK), ii, 667.
dyed, birefringency and dichroism in (NEUBERT), ii, 201.
Gelatin (KINGSTON and SCHRYVER), i, 89; (KNAGGS and SCHRYVER; MANNING), i, 90; (HORNE), i, 91.
optical activity of (KRAEMER and FANSELOW), ii, 1057.
ultra-violet absorption spectrum of (BAKER and DAVIDSON), ii, 838.
rotatory power of (VLÈS and VELLINGER), ii, 292.
effect of hydrogen-ion concentration on (BOGUE and O'CONNELL), ii, 744.
photographically active (SHEPPARD), ii, 966.
second isoelectric point of (KRAEMER), ii, 519.
density and hydration of (SVEDBERG), ii, 202.
swelling of, in carbamide (CHODAT), ii, 521.
effect of hydrogen-ion concentration on (OSTWALD, KUHN, and BÖHME), ii, 777.
elasticity of (SCARTH), ii, 862.
electro-ultrafiltration of (BECHHOLD and ROSENBERG), ii, 668.
surface tension of (JOHLIN), ii, 388; (JOHNSTON and PEARD), ii, 659; (DE CARO), ii, 857.
distribution of hydrogen ions between water and (SHUKOV and STSCHOUKAREV), ii, 386.
influence of, on transport numbers (SCATCHARD), ii, 41.
gels, elasticity of (POOLE; SAUER and KINKEL), ii, 519.

Gelatin gels, formation of Liesegang's rings in (SCOTT-BLAIR), ii, 519.
action of sodium aminoacetate and tungstate on, in test tubes (STUCKERT), ii, 1061.
solutions, plasticity and structure of (SHEPPARD; BOGUE), ii, 1058.
influence of neutral salts on (STIASNY and GUPTA), i, 707; ii, 392; (STIASNY, GUPTA, and TRESSER), ii, 393; (STIASNY), ii, 524; (CSAPÓ), ii, 1157.
action of bile salts on (STUCKERT), ii, 392.
protective action of, on gold sols (TARTAR and LORAH), ii, 864.
action of ferric hydroxide sols on aqueous solutions of (WINTGEN and MEYER), ii, 524.
precipitation of, by tannin (SMORODINCEV and ADOVA), i, 847.
titration curve of (ATKIN and DOUGLAS), ii, 113.
sensitisation of Congo-red by (ETTISCH and RUNGE), ii, 864.
Gelatinase, formation of, by *Proteus* (CLARK and MERRILL), i, 1511.
Geneserine hydriodide (POLONOVSKI and POLONOVSKI), i, 960.
ψ-Geneserolimethine hydrochloride (POLONOVSKI and POLONOVSKI), i, 293.
ψ-Geneseroline (POLONOVSKI and POLONOVSKI), i, 293.
Gentiacaulin, hydrolysis of (BRIDEL), i, 336.
Gentiobiase (KARRER and STAUB), i, 336.
Geodia gigas, constituents of (ACKERMANN, HOLTZ, and REINWEIN), i, 720.
Geraniol, hydrogenation of (GRIGNARD and ESCOURROU), i, 772.
Germane. See Germanium hydride.
Germanibenzoic acid. See Phenylgermanoic acid.
Germanite, analysis of (KRIESEL), ii, 153.
Germanium (DENNIS and HANCE), i, 798; (COREY, LAUBENGAYER, and DENNIS), ii, 493; (DENNIS and LAUBENGAYER), ii, 888.
spectrum of (LUNT), ii, 611.
ultra-violet spark spectrum of (IRETON), ii, 453.
Germanium hydride, physical properties of (COREY, LAUBENGAYER, and DENNIS), ii, 493.
vapour pressure of (SCHENCK and IMKER), ii, 279.
pharmacology of (PANETH and JOACHIMOGLU), i, 197.
dioxide, allotropy of (MÜLLER and BLANK), ii, 145.
Germanium organic compounds, aromatic (MORGAN and DREW), i, 1197.
tetra-alkyls and -aryls, and tetraethoxide (TABERN, ORNDORFF, and DENNIS), i, 1108.
tetraethyl (DENNIS and HANCE), i, 798.
Germanium determination:—
determination of (JOHNSON and DENNIS), ii, 442.
Germicides, properties of, in relation to structure (ISHIWARA), i, 750.
determination of power of (COOPER, WOODHOUSE, and FORSTNER), i, 749.
Geum urbanum, extraction of gein from (HÉRISSEY and CHEYMOL), i, 487.
Gitogenin in digitalis leaves (WINDAUS and BRUNKEN), i, 873.
Gitonin, and its degradation products (WINDAUS and LINSERT), i, 1438.
Gitoxigenin, and its derivatives (WINDAUS and SCHWARTE), i, 1295.
Gitoxin from digitalis leaves (WINDAUS and SCHWARTE), i, 1295.
Glands, physiology of (ASHER and TAKAHASHI), i, 331.
sexual, influence of, on metabolism (KORENCHEVSKY and CARR), i, 1513.
Glands. See also Prostate, Salivary, Thymus, and Thyroid glands.
Glass, structure of (SELJAKOV, STRUTINSKI, and KRASNIKOV), ii, 849.
constitution and properties of (TURNER), ii, 1144; (ECKERT; TOOL and HILL; TAMMANN), ii, 1145.
physico-chemical composition of (BARY), ii, 380.
transparency of, in the infra-red (LIANA), ii, 357.
allotropy of (LE CHATELIER), ii, 190.
viscosity of (STOTT, IRVINE, and TURNER), ii, 503; (STOTT), ii, 1146.
influence of composition on (ENGLISH), ii, 954.
viscosity and allotropy of (LE CHATELIER), ii, 280.
fusibility and viscosity of (LACRENIER and GILARD), ii, 379.
vapour pressure of the volatile constituents of (BORN), ii, 785.
sorption of ammonia and carbon dioxide by (BANGHAM and BURT), ii, 284.
adsorption of colouring matters by (SCHELTE), ii, 286.
adsorption of water on (MCHAFFIE and LENHER), ii, 854.
adsorption of water and vapours by (D'HUART; BANGHAM and BURT), ii, 657.

Glass, effect of chemicals on (KLAMER), ii, 427.
blue, substitute for (MEYER), ii, 601.
germanium (DENNIS and LAUBENGAYER), ii, 888.
molten, surface tension of (LACRENIER and GILARD), ii, 387.
silicate, physical properties of (TURNER), ii, 767.
soda–lime–silica, *X*-ray diffraction of (WYCKOFF and MOREY), ii, 1146.
Gliadin (TROENSEGAARD and FISCHER), i, 848.
isoelectric point of (TAGUE), ii, 391.
from wheat, preparation and properties of (DILL and ALSBERG), i, 1478.
Globulins, physical chemistry of (ADOLF), ii, 199.
heat changes of (ADOLF), ii, 520.
increase in, in blood, from decomposition of hæmoglobin (REYMANN), i, 1345.
Glucal, change of, to deoxyglucose, in rabbits (KONDO), i, 99.
Gluconic acid, formation of, by moulds (BUTKEWITSCH), i, 341.
p-toluenesulphonylhydrazide (FREUDENBERG and BLÜMMEL), i, 52.
Glucoproteins, carbohydrate group in (IZUMI), i, 848.
Glucosamine, configuration of (KARRER, SCHNIDER, and SMIRNOV), i, 418.
β-Glucosan from cellulose (VENN), i, 887.
Glucosans (KERB and KERB-ETZDORF), i, 233.
***d*-Glucose**. See Dextrose.
β-Glucose, mutarotation of (LUNDSGAARD and HOLBØLL), i, 1494.
α- and β-Glucosephosphoric acids, barium salts (KOMATSU and NODZU), i, 515.
Glucoside, $C_{21}H_{36}O_{12}$, from *Helianthus annuus* (SANDO), i, 1026.
Glucosides (CRAIK and MACBETH), i, 1296.
enzymic hydrolysis of (JOSEPHSON), i, 1359, 1360.
synthesis of alkyl derivatives of (PACSU), i, 515.
standardisation of, affecting the heart (LENDLE), i, 1501.
Glucosides. See also:—
Acaciin.
Amygdalin.
Arbutin.
Asperuloside.
Datiscin.
Diosmin.
Gein.
Gitogenin.
Gitonin.
Gitoxin.
Glucosides. See also:—
Helicin.
Irisin.
Loroglossin.
β-Methylglucoside.
Rhamnicoside.
Salicin.
6(?)-[β-*d*-Glucosido]-α-methyl-*d*-glucoside (HELFERICH and BECKER), i, 11.
Glue, velocity of swelling of (LIEPATOV), ii, 968.
electro-ultrafiltration of (BECHHOLD and ROSENBERG), ii, 668.
Glutaconic acids (GOSS, INGOLD, and THORPE), i, 549.
Glutardialdoxime, preparation of (SHAW), i, 299.
Glutarylfluorescein (DUTT and THORPE), i, 141.
Glutarylrhodamine (DUTT and THORPE), i, 142.
Glutathione (TUNNICLIFFE), i, 752; (HOPKINS), i, 1499.
synthesis of (STEWART and TUNNICLIFFE), i, 795.
effect of traces of iron on oxidation of (HARRISON), i, 13.
in mammalian blood (HOLDEN), i, 1484.
as an arsenic receptor in mammals (VOEGTLIN, DYER, and LEONARD), i, 861.
Glutelin from cotton seed (JONES and CSONKA), i, 1225.
Gluten, constituents of (DILL), i, 622.
Gluten, bromo- (VANDEVELDE), i, 91.
Glutenin, isoelectric point of (TAGUE), ii, 391.
Glyceraldehyde, oxidation of, in presence of phosphates (WIND), ii, 1174.
***l*-Glyceric acid**, effect of substitution on rotation of (GREENWALD), i, 712.
Glycerol, preparation of, by fermentation (TOMODA), i, 227.
heat of solution of (DE KOLOSOVSKI), ii, 540.
and its aqueous solutions, freezing points of (LANE), ii, 971.
dielectric constant and absorption coefficient of (BOCK), ii, 355.
vapour pressure of aqueous solutions of (IYER and USHER), ii, 501.
and its mixtures with sodium chloride (CARR, TOWNSEND, and BADGER), ii, 767.
purification of (KAILAN and OBIGI), i, 501.
assimilation of, by oxygenated yeast (MARIAN), i, 105.
acetylenic derivatives of (LESPIEAU), i, 1375.
metabolism of. See Metabolism.

Glycerol, detection of, colorimetrically (KOLTHOFF), ii, 161.
Glycine, possible synthesis of, in the body (SWANSON), i, 465.
relation between taste and concentration of solutions of (HEIDUSCHKA and KOMM), i, 1389.
compounds of formaldehyde with (BERGMANN and ENSSLIN), i, 1046.
Glycine-*p*-allyloxyanilide (KARRER, DIECHMANN, and HAEBLER), i, 243.
Glycine anhydride, oxidation of, by hydrogen peroxide (LÜDTKE), i, 837.
diacetyl and dibenzoyl derivatives (ABDERHALDEN and KOMM), i, 175.
Glycogen (LING, NANJI, and PATON), i, 1011.
molecular weight of (FEARON), i, 12.
heat of combustion of (MEIER and MEYERHOF), ii, 92.
effect of sugar administration on formation of (GIGON), i, 192.
hexose from fermentation of (v. EULER and NILSSON), i, 1496.
hydrolysis of, by salivary diastase (PAECHTNER), i, 738.
content of, in liver (FRANK and FÖRSTER), i, 1503.
decomposition of, in muscle (WEBER), i, 1004.
determination of small quantities of (DE JONGH and PLANELLES), i, 325.
Glycol, $C_{29}H_{60}O_2$, and its derivatives, from American cotton wax (FARGHER and PROBERT), i, 879.
Glycols, synthesis of, from atrolactinic acid (ROGER), i, 659.
wandering of acyl groups in (BETTZIECHE), i, 1147.
reaction of, with acetone (HERMANS), ii, 50.
Glycolysis (NEGELEIN), i, 856.
measurement of (WARBURG), i, 321.
in vitro (MORGULIS and BARKUS; JOHN), i, 1344.
effect of insulin on (NITZESCU and CADARIU), i, 1352.
Glycosuria. See Diabetes.
Glycuronic acid in plants (PALLADIN and LEVTSCHENKO), i, 1369.
d-**Glycuronic acid** (EHRLICH and REHORST), i, 1379.
in vegetable fibres (SCHWALBE and FELDTMANN), i, 1238.
d-**Glycuronolactone**, structure and rotation of (HUDSON), i, 515.
Glycyl-*dl*-serine, hydrochloride and anhydrides of (BERGMANN and MIEKELEY), i, 235.
Glycyltriphenylmethylaminoacetic acid, and its sodium salt and ethyl ester (HELFERICH, MOOG, and JÜNGER), i, 792.
Glycyrrhizin, reactions of (BERTOLO), ii, 1212.
Glyoxaline (*iminazole*), excretion of, in urine (HUNTER), i, 459.
Glyoxalines, methylation of (FORSYTH and PYMAN), i, 699.
metabolism of. See Metabolism.
determination of, colorimetrically (HUNTER), ii, 332.
Glyoxaline compounds, crystallography of (GREENWOOD), ii, 1037.
Glyoxaline-4:5-dicarboxylic acid, dissociation constants of (PAULY), i, 1327.
salts of (LEHMSTEDT), i, 1103.
l-**Glyoxalinelactic acid**, fate of, in the animal body (KONISHI and TANI), i, 731.
Glyoxalinepropionic acid, fate of, in the animal body (KONISHI and TANI), i, 731.
Glyoxime dimethyl ether, *di*amino-, and its tetra-acetyl derivative (AVOGADRO and TAVOLA), i, 1041.
Glyoximes, hydroxy- (PONZIO), i, 8.
Glyoxylic acid, isomeric hydrazones of (BUSCH and v. BEUST), i, 400.
colour reaction of, with Schryver's reaction (FOSSE and HIEULLE), ii, 162.
identification of, by its reaction with hydrazine and xanthhydrol (FOSSE and HIEULLE), i, 1130.
Goats, protein substitutes in diet of (PAASCH), i, 1498.
bile of. See Bile.
blood of. See Blood.
thyroid of. See Thyroid.
Goitre, relation between iodine content of environment and (v. FELLENBERG), i, 329.
Gold obtained from mercury, atomic weight of (HÖNIGSCHMID and ZINTL), ii, 924.
formation of, from mercury (KAUL), ii, 177; (NAGAOKA), ii, 835, 1111; (STAMMREICH), ii, 1208.
arc spectrum of (LOWERY), ii, 4.
series spectrum of (MCLENNAN and MCLAY), ii, 913.
spark spectrum of (L. and E. BLOCH), ii, 829.
ultra-violet absorption spectrum of (ZUMSTEIN), ii, 453.
X-ray absorption coefficient of (WARBURTON and RICHTMYER), ii, 1103.
photo-electric sensitivity of (SUHRMANN), ii, 831.
physical state and catalytic activity of (SMITH), ii, 1072.

Gold, catalysis of hydriodic acid on the surface of (HINSHELWOOD and PRICHARD), ii, 981.
anodic oxidation of (JIRSA and JELINEK), ii, 54, 141.
anodic solution of, in hydrochloric acid (ALLMAND and PURI), ii, 302.
behaviour of, with fused silicates (JANDER), ii, 416.
colloidal, preparation of (ZSIGMONDY and HÜCKEL), ii, 775; (HADEN), ii, 895.
effect of proteins on (ZSIGMONDY and JOËL), ii, 35; (KREBS), ii, 1155.
films, emission of electrons from, exposed to Röntgen rays (SIMONS), ii, 81.
sols (v. WEIMARN), ii, 196; (GALECKI), ii, 516.
mobility of particles in (THIESSEN), ii, 1157.
protective action of gelatin on (TARTAR and LORAH), ii, 864.
action of proteins on (REINDERS), ii, 1059.
action of salts on (KERMACK and VOGE), ii, 523.
protective action of soaps on (PAPACONSTANTINOU), ii, 393, 526.
"explosive," nature of (RASCHIG), ii, 144.
Gold alloys with cadmium (SALDAU), ii, 872.
with copper (SEDSTRÖM), ii, 104.
gold–copper compound in (STERNER-RAINER), ii, 651.
with palladium, structure of (HOLGERSSON and SEDSTRÖM), ii, 20.
with zinc (SALDAU), ii, 205.
Röntgen-ray analysis of (WESTGREN and PHRAGMÉN), ii, 746.
Gold salts, toxic action of, on protoplasm (VOEGTLIN, JOHNSON, and DYER), i, 1116.
trypanocidal action of (LEVADITI, GIRARD, and NICOLAU), i, 1117.
Gold amidine and iminochloride (RASCHIG), ii, 144.
selenides (MOSER and ATYNSKI), ii, 584.
Auric chloride, preparation of (PETIT), ii, 1089.
dissociation of (PETIT), ii, 668.
compound of carbon monoxide and (MANCHOT and GALL), ii, 1182.
compounds of, with mercaptans (RÂY), ii, 184.
telluride (BRUKL), ii, 895.
Aurous halides, ammoniates of (BILTZ and WEIN), ii, 1182.
Gold:—
Chloroauric acid, compounds of acid amides with (FRICKE and RUSCHHAUPT), ii, 894.
Gold detection and determination:—
detection of (STEIGMANN), ii, 719.
detection of, spectrographically (JOLIBOIS and BOSSUET), ii, 1208.
determination of, electrometrically (ZINTL and RAUCH), ii, 1005.
Gonepteryx rhamni, dye from the wing of (WIELAND and SCHÖPF), i, 1464.
Goose, catalytic hydrolysis of proteins from the feathers of (SADIKOV), i, 175.
Goppelsroeder's reaction (SCHANTL), ii, 440.
Gossypic acid, gossypyl ester (FARGHER and HIGGINBOTHAM), i, 880.
Granite, weathering of, under peat (BLANCK and RIESER), ii, 820.
Grapes, American, effect of seasons on constituents of the juice of (CALDWELL), i, 1368.
Concord, non-volatile acids of (NELSON), i, 762.
Grape fruit, insulin-like substances in (FISHER and MCKINLEY), i, 1016.
Graphite, structure of (BERNAL), ii, 17.
crystal structure of wurtzite and (BECKENKAMP), ii, 271.
heats of combustion of (ROTH and NAESER), ii, 1140.
melting point and vaporisation of (RYSCHKEVITSCH), ii, 276, 374; (FAJANS), ii, 277.
adsorption of gases by (LOWRY and MORGAN), ii, 1053.
"activated," sorption of oxygen by (BANGHAM and STAFFORD), ii, 655.
"**Graphites**" (CIUSA), ii, 1083.
Grass, Appa. See *Ageratum conyzoides*.
inchi. See *Cymbopogon cæsius*.
Grignard reaction, mechanism of (RHEINBOLDT and ROLEFF), i, 6.
in presence of water (SCHMALFUSS and WETZEL), i, 395.
Grignard reagents, constitution of (MEISENHEIMER), i, 527.
luminescence spectra of (DUFFORD, NIGHTINGALE, and CALVERT), ii, 89, 474.
action of aldehydes on (MARSHALL), i, 1428.
action of, on amino-acids (THOMAS and BETTZIECHE), i, 250, 251, 257; (BETTZIECHE), i, 251, 1147.
detection of, colorimetrically (GILMAN and SCHULZE), ii, 1011.
Growth, effect of ultra-violet light on, of rats (HUME and SMITH), i, 211.
effect of radium emanation on, of rats (CHICK and TAZELAAR), i, 211.

Growth, factors promoting (v. EULER, WIDELL, and ERIKSON; v. EULER and WIDELL), i, 869; (v. EULER and ERIKSON), i, 1220.
influence of fluorides and iodides on (MAZÉ), i, 870.
on a vitamin-rich diet, action of ions on (TSUKAMOTO), i, 210.
Guaiacol, melting point of (PUSHIN), ii, 277.
Guaiacol, 4-amino-, acetyl derivative, acetate, and benzoyl derivative (KEHRMANN and HOEHN), i, 561.
Guanidine (PELLIZZARI), i, 1047.
and its methyl derivatives, distinction between (MARSTON), i, 1047.
double carbonates of rare earth metals and (CANNERI), i, 524.
Guanidine, nitro-, isomeric forms of (DAVIS, ASHDOWN, and COUCH), i, 644.
Guanidines, alkylated (LECHER, GRAF, and GNÄDINGER), i, 1392.
methylated, pharmacological action of (v. GRAEVENITZ), i, 734.
determination of, in urine (SHARPE), i, 722.
Guanidine bases, detection of, colorimetrically (TIEGS), i, 97.
determination of, colorimetrically (MARSTON), i, 97.
Guanidoacetic acid, cyano-, and its salts and derivatives (FROMM, BARRENSCHEEN, FRIEDER, PIRK, and KAPELLER), i, 595.
Guanylic acid, salts of (IZUMI), i, 174.
brucine and strychnine salts (PEISER), i, 1477.
d-**Gulose**, preparation of, by oxidation of *d*-sorbitol (TALEN), i, 1382.
Gums, enzymes of (FOWLER and MALANDKAR), i, 1437.
Gum arabic, replacement of blood by solutions of (UEKI), i, 177.
Gum benzoin sols, action of salts on (KERMACK and VOGE), ii, 523.
Gypsum, lattice constants of calcite and (HJALMAR and SIEGBAHN), ii, 92.
solubility of (COLSON), ii, 37.

H.

iso-**Hæmagglutinin**, physical chemistry of (WÖHLISCH and SCHÜTZ), i, 717.
Hæmatin, natural pigments resembling (SCHUMM), i, 854.
Hæmatite, crystal structure of (PAULING and HENDRICKS), ii, 368.
transformation of magnetite into (WELO and BAUDISCH), ii, 845.
Hæmatoidin, identity of bilirubin and (RICH and BUMSTEAD), i, 1475.
Hæmatoporphyrin, fluorescence of (FABRE), ii, 1116.
metallic derivatives, absorption spectra of (HILL), i, 994.
fluorescence of (DHÉRÉ, SCHNEIDER, and VAN DER BOM), ii, 88.
detection of, in urine (POLICARD and LEULIER), i, 1351.
Hæmin, formation of porphyrin from (KÜSTER and HUTTENLOCHER), i, 845.
esterification of (ZALESKI and LINDENFELD), i, 89.
derivatives of (KÜSTER and HEESS), i, 992.
Hæmin, hydroxy- (HAMSIK), i, 1476.
Hæmochromogen (ANSON and MIRSKY), i, 1475.
carbon monoxide dissociation curve of (ANSON and MIRSKY), i, 456.
Hæmocyanin (STEDMAN and STEDMAN), i, 1199.
Hæmoglobin, osmotic pressure of (WILSON), ii, 292; (ADAIR), ii, 965.
ionic nature of (TAYLOR), i, 93.
surface tension of (JOHLIN), ii, 857.
kinetics of reactions of (HARTRIDGE and ROUGHTON), ii, 557.
parent substance of (MARCHLEWSKI), i, 604.
oxidation-reduction of (NEILL), i, 868, 993.
influence of tension of oxygen on oxidation of (NEILL and HASTINGS), i, 709.
oxygen-combining capacity of (MASUDA), i, 604.
oxygen dissociation curve of (ADAIR), i, 851.
and its derivatives, hydrolysis of starch by (BIEDERMANN and JERNAKOFF), i, 11.
formation of bilirubin from (RICH), i, 711; (RICH and BUMSTEAD), i, 1482.
formation of porphyrin from (SCHUMM), i, 88.
action of digestive enzymes on the iron of (LINTZEL; BARKAN), i, 1482.
ultra-violet absorption spectra of derivatives of (FRIEDLI), ii, 179.
nitric oxide compound of (ANSON and MIRSKY), i, 1475.
non-protein component of (ANSON and MIRSKY), i, 1475, 1476.
storage and excretion of, in the organism (SHIMURA), i, 1342.
reactions of (ADAIR), i, 849, 850, 851.
determination of (NEWHAM, WILTSHIRE, and SCHARFF), i, 711.

Hæmoglobin, determination of, colorimetrically (KÄMMERER and SCHAULIN), i, 851.
use of acetylene in determination of (MILLER), i, 1112.
Hæmoglobinometer, new (BÜRKER), i, 177.
Hæmoleucolysin from the pancreas (BELFANTI), i, 326.
Hæmolysis, effect of blood serum and of sugars on (KENNEDY), i, 717.
specific (KLOPSTOCK), i, 1345.
Hæmolysis, colloidal theory of (HERRMANN and ROHNER), i, 1202.
conductivity of red blood corpuscles during (PONDER and TAYLOR), i, 1202.
Hæmometer, Sahli's, standard solution for (KOUMANS), i, 851.
Hæmoporphyrin, conversion of into mesoporphyrin and ætioporphyrin (FISCHER and MÜLLER), i, 845.
Hafnium, discovery and properties of (v. HEVESY), ii, 708.
atomic weight of (HÖNIGSCHMID and ZINTL), ii, 255, 347; (v. HEVESY), ii, 255.
preparation of (VAN ARKEL and DE BOER), ii, 1193.
content of, in zirconium ores (v. HEVESY and JANTZEN), ii, 430.
Hafnium double fluorides, solubility of (v. HEVESY, CHRISTIANSEN, and BERGLUND), ii, 505.
oxide, density of (v. HEVESY and BERGLUND), ii, 25.
in tungsten filaments (VAN LIEMPT), ii, 233.
phosphate (v. HEVESY and KIMURA), ii, 1085.
solubility of zirconium phosphate and (v. HEVESY and KIMURA), ii, 1147.
Hafnium separation:—
separation of, and its arc spectrum (BARDET and TOUSSAINT), ii, 826.
separation of, from cerium, thorium, and titanium (MOSER and LESSING), ii, 718.
separation of zirconium and (NAAMLOOZE VENOOTSCHAP PHILIPS' GLOEILAMPENFABRIKEN), ii, 62, 63; (DE BOER and VAN ARKEL), ii, 243; (v. HEVESY and MADSEN), ii, 425; (MARQUIS, P. and G. URBAIN), ii, 699.
Hair, hydrolysis of (MERRILL), i, 92; (HOFFMAN), i, 1480.
substance giving the nitroprusside reaction in (KAYE), i, 180.
Halides, action of water on (SIDGWICK), ii, 102.
Halides of elements of the fourth group, melting points of (HANTZSCH and CARLSOHN), ii, 1043.
inorganic, reduction of (RUFF and THOMAS), ii, 1157.
organic, structure of, and their reactions with inorganic iodides (CONANT and HUSSEY), i, 493; (CONANT, KIRNER, and HUSSEY), i, 494.
Hall coefficient, relation of, to thermoelectric power (HEAPS), ii, 1135.
Hall effect in crystals (LENZ), ii, 920.
Halochromic salts, electrochemistry of, in relation to free radicals (CONANT, SMALL, and TAYLOR), ii, 874.
Halogens, photochemistry of (BERTHOUD and BELLENOT), ii, 141.
spectra of (STEUBING), ii, 452.
ultra-violet emission spectra of (LUDLAM and WEST), ii, 350.
action of light on air saturated with vapour of (JONES), ii, 984.
electron affinity of (LUDLAM), ii, 1018; (v. ANGERER and MÜLLER), ii, 1025.
lability of, in organic compounds (MACBETH and TRAILL), i, 628, 782.
reaction of saturated aliphatic ketones with (RICE and FRYLING), ii, 556.
reaction of potassium cyanide with (MÜLLER and SCHUCH), ii, 825.
determination of, in organic compounds (BUSCH), ii, 823.
ψ-Halogens (BIRCKENBACH and KELLERMANN), ii, 568.
Halogen compounds, partial dehalogenation of (MEREJKOVSKI), i, 878.
reaction of siloxen with (KAUTSKY and THIELE), ii, 698.
Halogen hydrides, structure and nature of (HANTZSCH), ii, 359; (v. WISNIEWSKI), ii, 361.
Halogen organic compounds, action of alkali disulphides and of sodium tetrasulphide on (THOMAS and RIDING), i, 113.
reactions of sodium arsenite with (GUTMANN), ii, 238.
Halogenation (DATTA and CHATTERJEE), i, 891.
Hamamelitannin, and its derivatives (FREUDENBERG and BLÜMMEL), i, 51.
Hay fever, analysis of blood in (RAMIREZ, ST. GEORGE, and MOSES), i, 999.
Heart, frog's, action of calcium and sodium ions on (HOLZLÖHNER), i, 1500.
action of potassium cyanide and copper on (FUJIMAKI), i, 333.

Heat, atomic, of solid aliphatic crystals (SALANT), ii, 1042.
latent, determination of (SMITH), ii, 756.
molecular, of gases, at low temperatures (GIACOMINI), ii, 757.
of diatomic gases at low temperatures (SCHREINER), ii, 97.
specific (WIESNER), ii, 275, 737.
at low temperatures (LANGE), ii, 96.
and viscosity (DE KOLOSOVSKI), ii, 870.
of electrolytes (ZWICKY), ii, 1138.
of gases (BRINKWORTH), ii, 373.
of liquids (GHOSH), ii, 275; (SCHULZE), ii, 491; (FOA), ii, 1138.
of binary mixed liquids (WILLIAMS and DANIELS), ii, 765.
of organic liquids (BUSSE), ii, 373.
of metals (BEHRENS and DRUCKER), ii, 24.
of solutions (DE KOLOSOVSKI), ii, 653, 791.
of aqueous solutions (RICHARDS and GUCKER), ii, 848.
Heat of combustion (JAEGER and v. STEINWEHR), ii, 126.
standard values for (VERKADE), ii, 871.
of members of homologous series (VERKADE, HARTMAN, and COOPS), ii, 364.
of organic compounds (VERKADE, COOPS, and HARTMAN), ii, 490.
in relation to valency of organic compounds (KHARASCH and SHER), ii, 636.
Heat of dilution and solution of salts (WÜST and LANGE), ii, 791, 976.
Heat of evaporation of electrons (WEIGLE), ii, 253.
Heat of formation of alloys (BILTZ and HOLVERSCHEIT), ii, 268.
of onium compounds (TSCHELINCEV), ii, 480.
Heat of fusion, latent (STRATTON and PARTINGTON), ii, 25.
Heat of hydration of alkali halides (LANGE), ii, 847.
Heat of mixture of condensed systems (VAN LAAR and LORENZ), ii, 870.
Heat of oxidation of pure metals (MOOSE and PARR), ii, 208.
Heat of reaction, incomplete (BÉRENGER and TIAN), ii, 791.
dissipation of (BORN and FRANCK), ii, 365.
Heat of solution (BÉRENGER and TIAN), ii, 790; (WÜST and LANGE), ii, 791.
Heat of solution, determination of (COHEN, MOESVELD, and HELDERMAN), ii, 402.
calorimeter for (COHEN, MOESVELD, and HELDERMAN), ii, 151.
solubility and lattice energy of salts (BUTLER), ii, 39.
of alkali halides (LANGE), ii, 847.
partial, relation between, and the deviation from Raoult's law (BUTLER), ii, 539.
Heat of vaporisation (BYK), ii, 97.
molecular (PRUD'HOMME), ii, 188; (NARBUTT), ii, 1140.
relation between surface tension and (PLÁCINTEANU), ii, 39.
of liquids in relation to the velocity of sound (IONESCU), ii, 644.
Hederagic acid, and its methyl esters (JACOBS), i, 948.
Hederagenic acid, methyl ester, and its derivatives (JACOBS), i, 948.
Hederagenin, structure of (VAN DER HAAR), i, 946.
and its derivatives (JACOBS), i, 948.
Hederagenolic acid, and its sodium salt (VAN DER HAAR), i, 946.
Hederagenone (VAN DER HAAR), i, 946.
Hederagenonic acid, and its salts and derivatives (VAN DER HAAR), i, 947.
Helianthin. See Methyl orange.
Helianthus annuus, anthocyanins in (SANDO), i, 1026.
green pigment of (OPARIN), i, 1517.
Helianthrone. See *meso*Benzdianthrone.
Helicin, hydrolysis of (JOSEPHSON), i, 1359.
Helicorubin, and its relation to hæmoglobin (ANSON and MIRSKY), i, 1476.
Helium in petroleum gases (CLAY), ii, 1195.
in vacuum tubes (RIDING and BALY), ii, 925.
atom, and molecule models of (ALLEN), ii, 349.
spectrum of (ORNSTEIN and BURGER), ii, 4; (BRUNETTI), ii, 249; (FOSTER), ii, 1099.
band spectrum of (CURTIS and LONG), ii, 722; (MERTON and PILLEY), ii, 1024.
structure of lines in spectrum of (HAM; GEHRCKE), ii, 1098.
Stark effect in (FOSTER), ii, 831.
Zeeman effect in (CURTIS and JEVONS), ii, 1103.
impacts of electrons in (GLOCKLER; DYMOND), ii, 617.
mobility of positive ions in (WAHLIN), ii, 170.

Helium, atomic field of (JONES), ii, 253.
life of metastable atoms of (KANNENSTINE; DEMPSTER), ii, 171.
rectilinear diameter of (MATHIAS, CROMMELIN, ONNES, and SWALLOW), ii, 468.
density of (BAXTER and STARKWEATHER), ii, 1045.
liquefaction of (MEISSNER), ii, 1135.
liquid, dielectric constant of (WOLFKE and ONNES), ii, 631.
experiments with (WOLTJER and ONNES), ii, 1038.
isotherms of (HOLBORN and OTTO), ii, 851.
diffusion of, through crystalline septa (PIUTTI and BOGGIO-LERA), ii, 500.
through glass (VAN VOORHIS), ii, 1143.
viscosity of (GÜNTHER), ii, 100.
metastable (ECKART), ii, 1104.
chemical activity of (BOOMER), ii, 925.
compounds of (BOOMER), ii, 144.
combination of mercury and (MANLEY), ii, 57; (LIND and BARDWELL), ii, 1181.
Hemicellulose, electrolysis of colloidal solutions of (LENOBLE), i, 793.
Hemicelluloses (PRINGSHEIM and GENIN), i, 214.
Hemipyocyanine, and its derivatives (WREDE and STRACK), i, 174.
Hemp-seed, vitamin-*E* in (SURE), i, 212.
Hens, digestion in (MANGOLD), i, 615.
chemistry of the oviduct of (BUCKNER, MARTIN, and PETER), i, 1347.
laying, calcium metabolism in (BUCKNER, MARTIN, and PETER), i, 190.
eggs. See Eggs.
Heparin, purification of, and its presence in blood (HOWELL), i, 1346.
***n*-Heptadecane**, 1-amino-2-hydroxy-, synthesis of (LEVENE and HALLER), i, 890.
Heptadecaoxymethylene diacetate (STAUDINGER and LÜTHY), i, 361.
Heptadecylcarbamide, β-hydroxy- (LEVENE and HALLER), i, 890.
Heptaethyl-β-ethylcellobioside (HESS and SALZMANN), i, 1383.
Heptamethyl-β-benzylcellobioside (HESS and SALZMANN), i, 1383.
αα′-Heptamethylene*dii*iminodi*iso*butyric acid, and its derivatives (SCHLESINGER), i, 1250.
αα′-Heptamethylene*dii*iminodiphenyldiacetic acid, and its derivatives (SCHLESINGER), i, 1250.
Heptanaphthene, action of aluminium chloride on (ZELINSKI and SMIRNOV), i, 1125.
Heptane, δ-amino-, oxalate (MAZOUREVITCH), i, 1241.
γδ-*di*chloro- (BOURGUEL), i, 770.
Heptanediols, and their di-*p*-nitrobenzoates (PIERCE and ADAMS), i, 824.
***cyclo*Heptane*spiro*-1-methoxy*cyclo*propane-1:2-dicarboxylic acid**, and its derivatives (BAKER), i, 1277.
Heptane-βγδ-triol (DELABY and MOREL), i, 773.
Heptan-β-one, δ-hydroxy- (GRIGNARD and DUBIEN), i, 111.
Heptaoxymethylene diacetate (STAUDINGER and LÜTHY), i, 361.
Δγ-Heptene (BOURGUEL), i, 770.
Δγ-Hepten-β-one, action of organomagnesium compounds on (GRIGNARD and DUBIEN), i, 111.
Δγ-Heptinene (BOURGUEL), i, 364.
Heptodilactone (BENNETT), i, 883.
2-*n*-Heptyl*cyclo*telluripentane-3:5-dione, 1:1-*di*chloride (MORGAN and TAYLOR), i, 634.
2-*n*-Heptyl*cyclo*telluropentane-3:5-dione (MORGAN and TAYLOR), i, 634.
Hesperidine, occurrence of, in plants (OESTERLE and WANDER), i, 1438.
Heterocyclic compounds (SEKA), i, 57, 1298.
tautomerism of (HELLER, BUCHWALDT, FUCHS, KLEINICKE, and KLOSS), i, 1328.
decomposition of (PETRENKO-KRITSCHENKO and BUTMI DE KAZMAN), i, 1094.
nuclear hydrogenation of, with colloidal platinum (SKITA), i, 140.
Heterositostanone, and its derivatives (WINDAUS and BRUNKEN), i, 394.
Hevea, constituents of latex of (SPOON), i, 621; (GORTER), i, 622.
Hevea brasiliensis, hydrogen-ion concentration in latex of (BOBILIOV), i, 622.
quebrachitol in latex of (CONTARDI), i, 277.
tannin from (ARISZ and SCHWEIZER), i, 873.
Hexachlororuthenic acid. See under Ruthenium.
Hexadecahydrodecacyclene (DZIEWOŃSKI and SUSZKO), i, 242.
Hexadecane, pyrogenic dissociation of (GAULT and HESSEL), i, 109.
Hexadecanedicarboxylic acid, ethyl hydrogen ester (FAIRWEATHER), i, 1237.
Hexadecene. See Cetene.
Hexahydrobenzoic acid, phenyl ester (BLICKE), i, 662.

Hexahydrocadalene, synthesis of (RUZICKA and CAPATO), i, 943.
Hexahydrodecacyclene (DZIEWOŃSKI and SUSZKO), i, 242.
Hexahydromandelic acid, and its derivatives, methyl esters of (FREUDENBERG and MARKERT), i, 1275.
alkyl esters, rotatory dispersion of (WOOD and COMLEY), ii, 264.
Hexahydromethylmorphimethines, and their derivatives (SPEYER and KOULEN), i, 61.
α- and β-Hexahydrotrianhydrostrophanthidins (JACOBS and COLLINS), i, 567.
Hexaicosihydrodecacyclene (DZIEWOŃSKI and SUSZKO), i, 242.
Hexametaphosphates. See under Phosphorus.
Hexamethylbenzene, formation of (BRINER, PLÜSS, and PAILLARD), i, 248.
Hexamethyldiethyltristannane (KRAUS and GREER), i, 1394.
Hexamethyldipyridyl-blue iodide (EMMERT, JUNGCK, and HAFFNER), i, 72.
2:2′:3:3′:5:5′-Hexamethyl-4:4′-dipyrrylmethane (FISCHER and NENITZESCU), i, 835.
Hexamethylenetetramine (*hexamethyleneamine*; *urotropine*) as a plant nutrient (E. and G. NICOLAS), i, 623.
as source of plant nitrogen (BIALOSUKNIA), i, 1366.
fate of, in the body (DE EDS), i, 461.
hydroferricyanide (CUMMING), i, 122.
additive compounds of stannic iodide and (SCAGLIARINI), i, 890.
Hexamethylguanidinium salts (LECHER, GRAF, and GNÄDINGER), i, 1393.
Hexamethylrottlerin, and its derivatives (DUTT), i, 1296.
Hexamethyltristannane, disodium derivative (KRAUS and GREER), i, 1394.
Hexamminecobaltictriaquodisulphitosulphatocobaltiate. See under Cobalt.
***n*-Hexane**, solubility of mixtures of liquid sulphur dioxide and (SEYER and GILL), ii, 504.
***cyclo*Hexane**, structure of, and benzene (RAMANATHAN), i, 1255.
physical constants of (NAGORNOV and ROTINJANC), ii, 646.
***cyclo*Hexane series**, physico-chemical properties of derivatives of (HERZ and BLOCH), ii, 98.
***cyclo*Hexane-1-acetic acid**, 1:2-*di*bromo-, ethyl ester (BAKER), i, 916.
***cyclo*Hexane-1-acetic-2-propionic acid**, and its dianilide (HÜCKEL and GOTH), i, 402.
***cyclo*Hexane-1:2-diacetic acid**, 1:2-*di*hydroxy-, lactone (BAKER), i, 916.
***cyclo*Hexane-1:3-dicarboxylic acids**, isomeric, and their optically active components (BÖESEKEN and PEEK), i, 1150.
β-*cyclo*Hexaneglutarylfluorescein (DUTT and THORPE), i, 141.
β-*cyclo*Hexaneglutarylrhodamine (DUTT and THORPE), i, 142.
***as-cyclo*Hexanesuccinylfluorescein** (DUTT and THORPE), i, 141.
***as-cyclo*Hexanesuccinylrhodamine** (DUTT and THORPE), i, 142.
***cyclo*Hexanesulphonic acid**, salts and derivatives of (KOLKER and LAPWORTH), i, 353.
***cyclo*Hexanol**, surface tension and vapour pressure of, and its mixtures (WEISSENBERGER and SCHUSTER), ii, 648.
***cyclo*Hexanol**, 1-amino-2-cyano- (v. AUWERS, BAHR, and FRESE), i, 312.
1-*cyclo*Hexanol-2-malonic acid, ethyl ester lactone (KÖTZ and HOFFMANN), i, 911.
***cyclo*Hexanone** 2-phenylsemicarbazone (GOODWIN and BAILEY), i, 318.
derivatives of (GARLAND and REID), i, 1280.
***cyclo*Hexanones**, cyano-, and their derivatives (v. AUWERS, BAHR, and FRESE), i, 310.
2:6-*di*bromo-, action of alkalis on (CUSMANO), i, 818.
***cyclo*Hexanoxide**, sodium (CAUQUIL), i, 657.
***d*-Hexan-αδε*ζ*-tetrol.** See Tetrahydro-ψ-glucal.
Hexaphenyldigermane (MORGAN and DREW), i, 1197.
***cyclo*Hexene**, catalytic hydrogenation of (ZELINSKI), i, 237.
nitrates of (HAINES and ADKINS), i, 801.
Δ¹-*cyclo*Hexene, 2-amino-1-cyano-, and its hydrochloride (v. AUWERS, BAHR, and FRESE), i, 312.
***cyclo*Hexenes**, catalytic decomposition of (ZELINSKI), i, 122.
Δ¹-*cyclo*Hexeneacetic acid, 2-bromo-, ethyl ester (BAKER), i, 916.
Δ¹-*cyclo*Hexene-1-acetic-2-malonic acid, and its ethyl ester (BAKER), i, 916.
Δ¹-*cyclo*Hexene-1:2-diacetic acid (BAKER), i, 917.
Δ¹-*cyclo*Hexene-4:5-dione, 1:2:3:3:6:6-*hexa*chloro-, and its hydrates (ELLER and LORENZ), i, 537.
***cyclo*Hexenols**, preparation and derivatives of (SENDERENS), i, 537.
***n*-Hexoic acid**, 3-hydroxybenzaldehyde 2-mercuric ester (WELLCOME FOUNDATION, LTD., HENRY, and SHARP), i 1154.

Hexoic acid, ϵ-bromo- (MARVEL, MACCORQUODALE, KENDALL, and LAZIER), i, 234.
ϵ-cyano- (v. AUWERS, BAHR, and FRESE), i, 312.
Hexonic acids, α-amino-, configuration of (LEVENE), i, 523.
Hexophosphatases in organs and body fluids (DEMUTH), i, 1497.
Hexoses, amino-, synthesis of, from galactose (FREUDENBERG and DOSER), i, 366.
α-amino-, configuration of (LEVENE), i, 523.
Hexosephosphates, formation of (NEUBERG and KOBEL), i, 476.
Hexosephosphoric acid, esters, in development of bone (MARTLAND and ROBISON), i, 201.
n-**Hexoylglycine**, ethyl ester (KARRER, MIYAMICHI, STORM, and WIDMER), i, 594.
*cyclo***Hexyl** chloromethyl ether (FARREN, FIFE, CLARK, and GARLAND), i, 1230.
*cyclo***Hexylamine**, catalytic decomposition of (KOMATSU and TANAKA), i, 905.
n-**Hexylbenzene**, 2:4-*di*hydroxy- (SHARP & DOHME and DOHME), i, 541.
*p-cyclo***Hexylbenzoyl-***o*-**benzoic acid** (QUAYLE and REID), i, 1289.
*cyclo***Hexylbenzyl** ether (SCHORIGIN), i, 1404.
*cyclo***Hexylbutinenes** (BOURGUEL), i, 1, 770.
*cyclo***Hexylbutinoic acid** (BOURGUEL), i, 770.
γδ-**Hexylene oxide**, heat of combustion of (ZUBOV and SWIENTOSLAWSKI), ii, 364.
*cyclo***Hexylheptinoic acid** (BOURGUEL), i, 770.
*cyclo***Hexylhexinenes** (BOURGUEL), i, 1, 770.
*cyclo***Hexylhexinoic acid** (BOURGUEL), i, 770.
*cyclo***Hexylhydroxylamine** (VAVON and BERTON), i, 807.
*cyclo***Hexylideneazine**, action of hydrochloric acid on (PERKIN and PLANT), i, 842.
*cyclo***Hexylidenenitroanthranilic acids** (PERKIN and SEDGWICK), i, 64.
*cyclo***Hexylidene***cyclo***pentylideneazine** (PERKIN and PLANT), i, 843.
*cyclo***Hexylpentinenes** (BOURGUEL), i, 1, 770.
*cyclo***Hexylpentinoic acid** (BOURGUEL), i, 770.
γ-*cyclo***Hexylpropyl alcohol**, and its derivatives (WASER), i, 584.
2-*n*-**Hexyl***cyclo***telluripentane-3:5-dione** 1:1-*di*chloride (MORGAN and TAYLOR), i, 634.
2-*n*-**Hexyl***cyclo***telluropentane-3:5-dione** (MORGAN and TAYLOR), i, 634.
Hippuric acid, effect of diet on synthesis of (GRIFFITH), i, 1002.
effect of carbohydrate metabolism on synthesis of (WIDMARK and JENSEN-CARLEN), i, 331.
hydroxylamine salt (OESPER and BALLARD), i, 1233.
Hippuric diethylamide (GRANÄCHER), i, 594.
Hippuryl chloride, action of diazomethane on (KARRER and WIDMER), i, 593.
Histamine, effect of injection of, on blood (HASHIMOTO), i, 1005.
influence of, on nitrogenous metabolism (IWATSURU), i, 1502.
detection of, microchemically (VAN ITALLIE and STEENHAUER), ii, 608.
Histidine in the animal organism (STEWART), i, 730.
degradation of, to *l*-aspartic acid (LANGENBECK), i, 306.
relation of, to creatine and purine metabolism (ROSE and COOK), i, 1003.
Holmium, atomic weight of (DRIGGS and HOPKINS), ii, 463.
Homatropine *N*-oxide, and its derivatives (POLONOVSKI and POLONOVSKI), i, 829.
Homoaspartimide (STOSIUS and PHILIPPI), i, 892.
Homobenz*iso***thiopyran**, and its derivatives (v. BRAUN, BAYER, and KAISER), i, 1446.
Homologous compounds, rotation dispersion, density, and absorption spectra of (KRETHLOW), ii, 1029.
n- and *iso*-**Homopilopic acids**, methylamides of (LANGENBECK), i, 151.
N-**Homopiperonyl-4:5-dimethoxyhomophthalamic acid**, and its methyl ester (HAWORTH, PERKIN, and PINK), i, 1169.
2-Homopiperonyl-6:7-dimethoxyhomophthalimide, and its dimethyl derivative (HAWORTH, PERKIN, and PINK), i, 1169.
2-Homopiperonyl-6:7-dimethoxy-1-*iso***quinolone**, 3-chloro- (HAWORTH, PERKIN, and PINK), i, 1169.
2-Homopiperonyl-4:4-dimethylhomophthalimide (HAWORTH, PERKIN, and PINK), i, 1168.
N-**Homopiperonylhomophthalamic acid**, and its amide and methyl ester (HAWORTH, PERKIN, and PINK), i, 1169.

2-Homopiperonylhomophthalimide (HAWORTH, PERKIN, and PINK), i, 1168.
3-Homopiperonyl-2-methylchromone, 7-hydroxy-, and its derivatives (BAKER and ROBINSON), i, 926.
2-Homopiperonyl-1-*iso*quinolone, 3-chloro- (HAWORTH, PERKIN, and PINK), i, 1168.
Homopiperonylresacetophenone (BAKER and ROBINSON), i, 925.
***as*-Homotetrahydro*iso*quinoline** methobromide (v. BRAUN and KAISER), i, 1414.
Homoveratroylhomopiperonylamine, 6′-bromo- (HAWORTH and PERKIN), i, 970.
3-Homoveratryl-2-methylchromone, 7-hydroxy-, and its acetyl derivative (BAKER and ROBINSON), i, 926.
Homoveratrylresacetophenone (BAKER and ROBINSON), i, 926.
Hops, bitter principles of (WÖLLMER), i, 690.
preservative principles of (WALKER), i, 1479.
resin acids of (WIELAND, SCHNEIDER, and MARTZ), i, 276; (WIELAND, MARTZ, and HOEK), i, 1422.
determination of humulone in (KLEIN), ii, 248.
Hormones, action of (GOTTSCHALK; ZONDEK and UCKO), i, 1513.
Horn, solubility of, in alkali sulphides (PULEVKA), i, 1341.
Horse, vitamins in flesh of (SCHEUNERT and HERMERSDÖRFER), i, 617.
Humic acids (ELLER, HELMRICH, KLEMM, HAUBOLD, and SCHÖPPACH), i, 521.
constitution of (BURIAN; ELLER), i, 372; (MARCUSSON), i, 793.
formation of, from cellulose, lignin, and wood (WEHMER), i, 521.
Humins, properties and reactions of (ELLER, HELMRICH, KLEMM, HAUBOLD, and SCHÖPPACH), i, 521.
Humulic acid, constitution of (WIELAND, MARTZ, and HOEK), i, 1422.
***iso*Humulic acid**, and its derivatives (WIELAND, SCHNEIDER, and MARTZ), i, 276.
Humulon, structure of (WIELAND, SCHNEIDER, and MARTZ), i, 276; (WIELAND, MARTZ, and HOEK), i, 1422.
Humuloquinone, semicarbazone of (WIELAND, SCHNEIDER, and MARTZ), i, 276.
Humus, nature of (WAKSMAN), i, 1528.
soils, foaming power and surface tension of (OSTWALD and STEINER), ii, 771.
Hydantoic acid, cyano- (FROMM, BARRENSCHEEN, FRIEDER, PIRK, and KAPELLER), i, 596.
Hydantoins (COGHILL and JOHNSON), i, 582; (COGHILL, JOHNSON, and RENFREW; DAVIDSON), i, 583; (DAVIDSON and JOHNSON), i, 584; (DAVIDSON), i, 975.
substituted, preparation of (THOMPSON, BEDELL, and BUFFETT), i, 699.
Hydantoin-3-acetic acid, and 2-thio- (JOHNSON and RENFREW), i, 583.
Hydantoin-[$\Delta^{5:2'}$]-ψ-indoxyl (HILL and HENZE), i, 306.
Hydantoin-[$\Delta^{5:3'}$]-oxindole (HILL and HENZE), i, 305.
Hydnora americana. See *Prosopanche Burmeisteri*.
Hydrangea paniculata, composition of (KOMATSU and UEDA), i, 762.
Hydrargyrum salicylicum, constitution of (BOEDECKER and WUNSTORF), i, 1107.
Hydrastine, excretion of, in urine (BAYLE and FABRE), i, 609.
Hydrato*iso*cyanilic acid (WIELAND), i, 1049.
***r*-Hydratropic acid**, β-chloro-, resolution of (MCKENZIE and STRATHERN), i, 401.
Hydrazidoanthraquinones, acyl derivatives of (BATTEGAY and AMUAT), i, 169.
Hydrazine, oxidation of, and its sulphonic acids (RASCHIG), ii, 224.
action of, on cyanotetrazole (OLIVERI-MANDALÀ), i, 78.
action of, on dimethylpyrone (KIJNER), i, 1105.
sulphate, use of, in iodometry (CATTELAIN), ii, 1197.
and its salts, electrometric determination of (GILBERT), ii, 239.
Hydrazines, action of ketens on (VAN ALPHEN), i, 80.
action of, on semicarbazones (SUTHERLAND and WILSON), i, 42.
aromatic halogenated (VOTOČEK and JIRŮ), i, 317.
α-Hydrazino-β-aminoethane, and its salts (SOMMER, SCHULZ, and NASSAU), ii, 990.
2-Hydrazinoanthraquinone, 3-hydroxy- (TANAKA), i, 1106.
4-Hydrazinobenzoic acid, 3:5-*di*nitro-, ethyl ester (LINDEMANN and WESSEL), i, 1099.
2-Hydrazino-9:10-dihydroanthracene hydrochloride (SCHROETER, GLUSCHKE VAN HULLE, and GÖTZKY), i, 128.
2-Hydrazino-5-keto-2:3:4:5-tetrahydro-1:3:4-thiodiazine (GUHA and DE), i, 600.

Hydrazobenzene hydroferricyanide (CUMMING), i, 122.
o-**Hydrazobenzyl**-*o*-**toluidine** (ELBS and GAUMER), i, 168.
Hydrazones, isomeric (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 40.
coloured sulphuric acid solutions of (CHATTAWAY, IRELAND, and WALKER), i, 1194.
o-**Hydrazotoluene** hydroferricyanide (CUMMING), i, 122.
Hydrides, non-metallic, structure of (GRIMM), ii, 1123.
volatile (PANETH and RABINOVITSCH), ii, 760.
"**Hydrindine**," identity of hydroxydihydro*iso*indigotin and (SANDER), i, 977.
1-Hydrindone, influence of substituents on formation of derivatives of, from β-phenylpropionic acids (SPEIGHT, STEVENSON, and THORPE), i, 32.
1-Hydrindones, 2-oximino-, action of phosphorus pentachloride on (HAWORTH and PINK), i, 929.
Hydrobenzoins, stereoisomeric, adsorption of, by charcoal (HERMANS), ii, 31.
dibenzoates of (MEERWEIN and SCHMIDT), i, 1240.
Hydrobromic acid. See under Bromine.
Hydrocarbon, $C_{10}H_{16}$, from *tert.*-amino-*iso*bornylane and nitrous acid (NAMETKIN, ABAKUMOWSKI, and SELIVANOV), i, 48.
$C_{10}H_{16}$, from lupanine (THOMS and BERGERHOFF), i, 575.
$C_{10}H_{18}$, from hydrogenation of $C_{10}H_{16}$ from *tert.*-amino*iso*bornylane (NAMETKIN, ABAKUMOWSKI, and SELIVANOV), i, 48.
$C_{11}H_{12}$, from 5-methylphenylene-1:3-diacetonitrile (v. BRAUN and ENGEL), i, 382.
$C_{15}H_{22}$, from reduction of humulic acid (WIELAND, SCHNEIDER, and MARTZ), i, 276.
$C_{18}H_{34}$, from abietic acid (VESTERBERG and BORGE), i, 252.
$C_{20}H_{32}$, from the action of metallic chlorides on pinene hydrochloride (KOMATSU and FUJIO), i, 564.
Hydrocarbons, preparation of (GILMAN and BEABER), i, 802.
X-ray investigation of (MÜLLER and SAVILLE), ii, 367.
action of bromine on (MERESHKOVSKI), i, 1033.
action of nitrogen peroxide on (SCHAARSCHMIDT,) ii, 227.
action of radium emanation on (MUND and KOCH), i, 625.
Hydrocarbons, halogen derivatives, ultra-red absorption spectra of (BONINO), ii, 838.
acetylenic, preparation of (BOURGUEL), i, 1, 770.
disubstituted, reaction of Grignard reagents with (GILMAN and SHUMAKER), i, 493.
aromatic, Tesla-luminescence spectra of (MCVICKER, MARSH, and STEWART), ii, 12.
photochemical oxidation of (SUDBOROUGH, WATSON, and NARAYANAN), i, 1136.
condensation of, with nitrosyl chlorine (SCHAARSCHMIDT and RAECK), i, 380.
polynuclear, spectrochemistry and structure of (v. AUWERS and KRAUL), i, 900.
benzenoid, optical constants of (EISENLOHR and SCHULZ), i, 17.
cyclic unsaturated, catalytic transformation of (ZELINSKI), i, 122, 146, 821.
ethylenic, action of iodine in chloroform on (BÖESEKEN and BLUMBERGER), i, 225.
combination of hydrogen sulphites with (KOLKER and LAPWORTH), i, 353.
higher, synthesis of, from lower hydrocarbons (LIND and BARDWELL), i, 493.
olefine, action of nitrogen tetroxide on (SCHAARSCHMIDT and HOFMEIER), i, 877.
paraffin, boiling point chart for (BAHLKE and WILSON), ii, 73.
cracking of (WILLIAMS-GARDNER), i, 1229.
polynuclear, Tesla-luminescence spectra of (MCVICKER, MARSH, and STEWART), ii, 630.
quaternary, preparation of (TROTMAN), i, 382.
unsaturated, photochemical combination of bromine with (PLOTNIKOV), ii, 985.
Hydrocarbons, chloro-, toxic action of (DOUGAL), i, 334.
Hydrocellulose (HESS), i, 519.
nitrates (ATSUKI), i, 120.
Hydrochloric acid. See under Chlorine.
Hydrocinnamic acid, electrolytic preparation of (NORRIS and CUMMINGS), i, 668.
hydroxylamine salt (OESPER and BALLARD), i, 1233.
Hydrocupreidine hydrochloride (GIEMSA and BONATH), i, 291.

Hydrocupreidinesulphonic acid, and its sulphate (GIEMSA and BONATH), i, 291.
Hydrocupreine, salts of (GIEMSA and BONATH), i, 291.
Hydrocupreinesulphonic acid, and its salts (GIEMSA and BONATH), i, 291.
Hydrocyanic acid. See under Cyanogen.
Hydroferricyanic acid, preparation of, and its alkaloidal salts (CUMMING and BROWN), i, 572.
salts of, with organic bases (CUMMING), i, 122.
Hydroferricyanocarboxylic acid, salts of (PASCAL), i, 984.
Hydroferrocyanic acid, alkaloidal salts of (CUMMING and BROWN), i, 572.
copper salt, permeability of membranes of, to acids (COLLANDER), ii, 201.
coagulation of sols of (SEN), ii, 664; (SEN and MEHROTRA), ii, 665.
double salts of, with hydrazine and metals (RÂY and GUPTA), i, 377.
potassium salt, preparation of (DOMINIK), i, 526.
sensitiveness of, to light (BAUR), ii, 884.
use of, in analysis (LUFF), ii, 826.
salts of, with organic bases (CUMMING), i, 122.
Hydroferrocyanocarboxylic acid, salts of (PASCAL), i, 984.
Hydrofluoric acid. See under Fluorine.
Hydrogen, atomic weight of (MOLES), ii, 346.
atoms, structure of (REICHENBÄCHER), ii, 734.
electron orbits in (REICHENBÄCHER), ii, 624.
molecules, ionised, structure of (UREY), ii, 1105.
pure, preparation of (BAYERLE and TAMELE), ii, 233.
refractive index and electron velocity of (SCHÜLER and WOLF), ii, 1118.
spectrum of (DIEKE), ii, 450; (GEHRCKE and LAU), ii, 609; (SCHÜLER and WOLF), ii, 829; (VAN CITTERT), ii, 909.
Balmer lines in (HANOT), ii, 170; (JANICKI), ii, 449; (HANSEN), ii, 1097; (HAM; GEHRCKE), ii, 1098; (JOLOWICZ), ii, 1097.
Fulcher lines in spectrum of (CURTIS), ii, 351; (BURY), ii, 1113.
excitation of (BLACKETT and FRANCE), ii, 1097.
spectrohelio grams of (ROYDS), ii, 456.
band spectrum of (DIEKE), ii, 737.
Hydrogen, continuous spectrum of (CARST), ii, 333; (LAU), ii, 721.
infra-red emission spectrum of (PFUND), ii, 11.
secondary spectrum of (RICHARDSON and TANAKA), ii, 11, 469; (DUFFENDACK), ii, 333; (NICHOLSON), ii, 468, 721; (MCLENNAN and SHRUM), ii, 468; (DIEKE), ii, 625; (RICHARDSON), ii, 909, 1013; (TANAKA; SANDEMAN), ii, 909.
dry, effect of ultra-violet light on (BAKER and CARLTON), ii, 1180.
particles, photographic action of (BLAU), ii, 1111.
passage of canal rays through (DEMPSTER), ii, 1020.
Döppler effect in canal rays of (KREFFT), ii, 78.
Paschen-Back effect in (FALKENHAGEN), ii, 79.
stopping power of, for α-particles (FOWLER), ii, 834.
magnetic susceptibility of (GLASER), ii, 82, 642.
active (BONHOEFFER), ii, 52; (PANETH), ii, 57; (COPAUX, PERPEROT, and HOCART), ii, 587; (COLLINS), ii, 842; (BACH), ii, 885.
formation of, in the creepage corona discharge (ANDEREGG and HERR), ii, 1180.
by excited mercury atoms, and its reactions (MITCHELL), ii, 1077; (TAYLOR and MARSHALL), ii, 1078.
luminescence with (BONHOEFFER), ii, 839.
electronegative (VAN ARKEL and DE BOER), ii, 734.
electrical properties of (MCCALLUM and FOCKEN), ii, 641.
ionisation of (SMYTH), ii, 459; (LUNT), ii, 616.
by electron impact (HOGNESS and LUNN), ii, 839.
potentials for discharge of electrons in (RICHARDSON and TANAKA), ii, 13.
overvoltage of (HARKINS and ADAMS), ii, 301.
influence of colloids on cathodic overvoltage of (MARIE and LEJEUNE), ii, 115.
chemical constants of (SCHREINER), ii, 978.
specific heat of (PARTINGTON and HOWE), ii, 1041.
specific heats of air and (BRINKWORTH), ii, 372.
specific heat of molecules of (PREDVODITELEV), ii, 1041; (VAN VLECK), ii, 1138.

Hydrogen, isotherms of (HOLBORN and OTTO), ii, 851.
heat of adsorption of, on nickel (FORESTI), ii, 692.
heat of oxidation of, by manganese dioxide (FRAZER and GREIDER), ii, 1064.
mass of particles of (STETTER), ii, 1021.
liquid and solid, dielectric constants of (WOLFKE and ONNES), ii, 630; (BREIT and ONNES), ii, 631.
liquefier for, and cryostat (LATIMER, BUFFINGTON, and HOENSHEL), ii, 818.
viscosity of (GÜNTHER), ii, 100.
diffusion of, into air (BARUS), ii, 27.
solubility of, in liquid ammonia (LARSON and BLACK), ii, 852.
adsorption of, by cerium and its alloys (SIEVERTS and ROELL), ii, 854.
by electrolytic chromium (HÜTTIG and BRODKORB), ii, 702.
by palladium (LAMBERT and GATES), ii, 785.
by palladium–silver alloys (KRUGER and SACKLOVSKY), ii, 1125.
adsorbed in silica gels, reduction by (LATSHAW and REVERSON), ii, 412.
equilibrium of carbon dioxide and, with carbon monoxide and water vapour (PARTINGTON and SHILLING), ii, 395.
explosion of mixtures of air and (BONE, NEWITT, and TOWNEND), ii, 800.
influence of trichloroethylene on inflammability of mixtures of air and (JORISSEN and ONGKIEHONG), ii, 875.
photochemical combination of bromine and (BODENSTEIN and LÜTKEMEYER), ii, 218.
interaction of carbon dioxide and, in the electric discharge (LUNT), ii, 579.
action of carbon dioxide with, on platinum (PRICHARD and HINSHELWOOD), ii, 564.
action of carbon dioxide with, on the surface of tungsten (HINSHELWOOD and PRICHARD), ii, 983.
photochemical reaction of carbonyl chloride with (BREDIG and v. GOLDBERGER), ii, 142.
photochemical reaction between chlorine and (MARSHALL), ii, 883; (KORNFELD and MÜLLER), ii, 984; (NORRISH), ii, 1080, 1179.
in presence of oxygen (NORRISH and RIDEAL), ii, 572.
effect of water vapour (COEHN and JUNG), ii, 142.
Hydrogen, catalytic combination of ethylene and, in presence of copper (PEASE and STEWART), ii, 691.
reaction of nitrogen with, in presence of mercury vapour (NOYES), ii, 573.
catalysis of the formation of water from oxygen and (HOFMANN and DOLDE), ii, 139.
combination of oxygen and, in presence of silver and gold (CHAPMAN, RAMSBOTTOM, and TROTMAN), ii, 310.
effect of water and of carbon dioxide on the catalytic oxidation of (LAMB and VAIL), ii, 567.
oxidation of, by potassium permanganate (WILKE and KUHN), ii, 51.
reduction of metallic halides by (DE CARLI), ii, 51.
Hydrogen chloride. See Hydrochloric acid under Chlorine.
cyanide. See Hydrocyanic acid under Cyanogen.
halides. See Halogen hydrides.
iodide. See Hydriodic acid under Iodine.
*per*oxide, formation of, by bacteria (MCLEOD and GORDON), i, 1362.
vapour pressure of (MAASS and HIEBERT), ii, 188.
partition of, between water and ethyl ether (DE KOLOSOVSKI), ii, 506.
in the oxy-hydrogen flame (RIESENFELD), ii, 148.
decomposition of (DAVEY), ii, 1181.
by catalase (NORTHROP), i, 469.
by cobaltic hydroxide (TRYHORN and JESSOP), ii, 807.
in presence of nickel hydroxide (VEIL), ii, 412.
catalytic decomposition of (QUARTAROLI; SPITALSKY and PETIN), ii, 53.
by animal charcoal (FIRTH and WATSON), ii, 310.
by "Norit" charcoals (FIRTH and WATSON), ii, 880.
in chlorine–chloride solutions (LIVINGSTON and BRAY), ii, 981.
promotion of copper salts in the decomposition of, by ferric salts (ROBERTSON), ii, 690.
mode of reaction of (WIELAND, HAUSSMANN, and LÖVENSKIOLD), ii, 1173.
oxidising action of (HATCHER and HOLDEN; ERNST and FORSTER), ii, 684.
destruction of organic matter by (MAGNIN), ii, 594.

Hydrogen *per*oxide, action of, on bacteria (BURNET), i, 1117; (PETROVANU), i, 1362.
titration of, with potassium permanganate in presence of ammonium sulphate (TANANAEV), ii, 440.
determination of (RUPP and SIEBLER), ii, 432.
phosphide. See Phosphorus *tri*hydride.
sulphide in minerals (NENADKEVITSCH; VERNADSKI), ii, 997.
formation of, by bacteria (MULSOW and PAINE), i, 1510.
electrolytic preparation of (FISCHER), ii, 807.
generation of (HENWOOD, GAREY, GOLDBERG, and FIELD), ii, 705.
pure liquid, preparation of, and reactions therein (QUAM), ii, 582.
liquid, as a source of supply of the gas (MOORE), ii, 1195.
conductivities in (QUAM and WILKINSON), ii, 542.
condensation of acetylene and, in presence of catalysts (TOMKINSON), i, 58.
action of iodine on (PARSONS), ii, 880.
action of, on mercuric salts (PÉLABON), ii, 986.
toxicity of (HAGGARD), i, 1357.
*per*sulphide (v. DIENES), ii, 228.
Hydrogen determination:—
determination of, in organic compounds (HESLINGA), ii, 65; (LINDNER), ii, 901.
Hydrogen electrodes. See Electrodes.
Hydrogen ions, adsorption of, by charcoal (KROETZ), ii, 191.
mobility of (DAVIES), ii, 871.
in air (ERIKSON), ii, 1107.
velocity of, in gels (ISGARISCHEV and POMERANZEVA), ii, 300.
concentration of, in culture fluids (CHRISTENSEN and FULMER), i, 1216.
in soils (ARRHENIUS), i, 1525; (PIERRE; NIKLAS and HOCK), i, 1526.
in blood (BIGWOOD), i, 1342.
of normal and cancer subjects (CORRAN and LEWIS), i, 188.
in tissues and cells (SCHMIDTMANN), i, 99.
determination of concentration of (MISLOWITZER), i, 1483; (TRÉNEL), ii, 64.
colorimetrically (RICHARD), ii, 596.
electrometrically (GLASSTONE), ii, 822.
Hydrogen ions, determination of concentration of, with the quinhydrone electrode (SCHAEFER and SCHMIDT), i, 611; (KOLTHOFF), ii, 671; (O'SULLIVAN), ii, 822.
from potentials of hydrogen and quinhydrone electrodes (KOLTHOFF), ii, 794.
spectrophotometrically (VLÈS), ii, 595; (HOLMES and SNYDER), ii, 999.
in blood (HOLLO and WEISS), i, 709.
in soils (ATKINS; BARNETTE, HISSINK, and VAN DER SPEK), i, 220; (TRÉNEL), i, 874; (CROWTHER), i, 875; (NIKLAS and HOCK), ii, 325.
in distilled water (DAWSON), ii, 680.
electrodes for (CULLEN and BIILMANN; BODINE and FINK), i, 1201; (PARKER), ii, 899.
continuous reading meter for (GOODE), ii, 1196.
Hydrogenase, action of, in the cell (GRÜSS), i, 738.
Hydrogenation, kinetics of (LUSH), ii, 411.
Hydrolysis, electrometric study of (JOB), ii, 117.
Hydroxides, amphoteric (JANDER and BRANDT), ii, 988.
Hydroxy-acids, $C_{11}H_{10}O_3$, from atromentin (KÖGL and POSTOWSKY), i, 51.
α- and β-Hydroxy-acids, configurational relationship between (LEVENE and HALLER), i, 1375.
Hydroxy-aldehydes (HELFERICH and SCHÄFER), i, 7; (HELFERICH and FRIES), i, 1039.
Hydroxy-compounds, aromatic, action of sulphites on (BUCHERER and STICKEL), i, 1338.
α-Hydroxy-ketones, synthesis of (SCHMIDT and ASCHERL), i, 364.
Hydroxyl groups, valency of (REIHLEN, SAPPER, and KALL), i, 912.
co-ordination valency of (FERNANDES), i, 912.
mobility of, and tautomerism (FARROW and INGOLD), i, 155.
determination of, microchemically (FLASCHENTRÄGER), ii, 999.
Hydroxyl ions, adsorption of, by charcoal (KROETZ), ii, 191.
Hydroxylamine, preparation of (HURD and BROWNSTEIN), ii, 587.
oxidation of (RASCHIG; KURTENACKER and WENGEFELD), ii, 224.
catalytic decomposition of (KURTENACKER and WENGEFELD), ii, 308.

Hydroxylamine, action of sulphurous acid and sulphites on (RASCHIG), ii, 226.
salts of, with organic acid (OESPER and BALLARD), i, 1233.
alkyl derivatives of (NEUFFER and HOFFMAN), i, 891.
benzenesulphinate (WHALEN and JONES), i, 802.
sulphonic acids of (RASCHIG), ii, 225, 226.
β-Hydroxylamines, formation of (DURAND and NAVES), i, 535.
Hydroxylamine*iso*sulphonic acid (SOMMER, SCHULZ, and NASSAU), ii, 989.
3-Hydroxylaminopyridine. See β-3-Pyridylhydroxylamine.
Hydroxylaminotetraphenylmethane, and nitroso- (GOLDSCHMIDT and CHRISTMANN), i, 649.
Hydroxymethyleneacetophenone. See Phenyl β-hydroxyvinyl ketone.
Hydroxynitrilese, purification and properties of (NORDEFELDT), i, 1506.
Hygrine alkaloids (HESS and BAPPERT), i, 424.
***l*-Hygrinic acid** (KARRER and WIDMER), i, 1084.
Hyocholanic acid, 4-chloro- and 4-hydroxy-, derivatives of (WINDAUS and HOSSFELD), i, 1066.
Hyodeoxybilianic acid, derivatives of (WINDAUS and BOHNE), i, 553.
Hyoscyamine *N*-oxide, and its derivatives (POLONOVSKI and POLONOVSKI), i, 829.
Hyperglycæmia, production of, by glycerol (VOEGTLIN, THOMPSON, and DUNN), i, 1211.
Hypericum perforatum, constituents of (ZELLNER), i, 764.
Hypobromites. See under Bromine.
Hypocerebric acid (FRÄNKEL and KARPFEN), i, 720.
Δ$^{\alpha}$-Hypogæic anhydride (GABEL), i, 504.
Hypoglycæmia (FISCHLER and OTTENSOOSER), i, 715.
Hypoiodites. See under Iodine.
Hyponitritoferropentacyanic acid, sodium salt (UNGARELLI), i, 526.
Hyssopin. See Diosmin.
Hystazarindiquinone (TANAKA), i, 1077.

Ice, infra-red absorption spectrum of (PLYLER), ii, 87.
specific heat and latent heat of fusion of (MAASS and WALDBAUER), ii, 492.
Ice, velocity of crystallisation of, through gelatin gels (CALLOW), ii, 777.
Ignition of gases (WHEELER), ii, 408.
by electric sparks (MORGAN), ii, 553.
influence of non-inflammable vapours on (JORISSEN and VAN DER VALK), ii, 874 ; (JORISSEN and ONGKIEHONG), ii, 875.
Imbibition, application of Röntgen ray methods to (KATZ), ii, 771.
Iminazole. See Glyoxaline.
Iminazoles, complex, colour of (CHAKRAVARTI and GUPTA), i, 980.
4-Iminazole-2(1′)-naphthyl-8′-carboxylic acid (CHAKRAVARTI), i, 162.
Imines, halochromism of, and their compounds (PFEIFFER, RHEINBOLDT, and WOLF), i, 411.
2:5-Imino-1:2:3-triazole (CARNELLEY and DUTT), i, 165.
Immunisation by injection of invertase (BACH, ENGELHARDT, and SAMYSSLOV), i, 1506.
Inchi grass. See *Cymbopogon cæsius*.
Indacene, *di*hydroxy-, diacetyl derivative (JONESCU), i, 1154.
Indandione. See Diketohydrindene.
Indandionyldi-indonylmethane (RADULESCU and GEORGESCU), i, 1287.
Indane, α-halides of (COURTOT and DONDELINGER), i, 654.
***cis*-1:2-Indanediol**, potassium borate of (HERMANS), i, 501.
Indanylamines, optical constants of (COURTOT and DONDELINGER), ii, 274.
Indazole *o*-toluenesulphonate (v. AUWERS), i, 1461.
Indazole, 3-bromo-, nitrobenzoyl derivative, 5:7-*di*- and 3:5:7-*tri*-bromo- (v. AUWERS and LOHR), i, 74.
Indazoles (v. AUWERS and LOHR), i, 73 ; (v. AUWERS and FRESE), i, 1101.
Indazolium salts, quaternary, thermal decomposition of (v. AUWERS and PFUHL), i, 1100.
Indene, polymerides of (STOBBE and FÄRBER), i, 19.
polymerisation and oxidation of the vapour of (BROWN), i, 1258.
bisnitrosochloride (STRAUS and EKHARD), i, 1139.
oxide, chloro- (GOLDSCHMIDT and SCHÜSSLER), i, 498.
Indican, detection and determination of, in urine (GORE), i, 186.
Indicators, influence of alcohol, salts, and temperature on (RICHTER), ii, 237.

Indicators, determination of dissociation constants of (HOLMES and SNYDER), ii, 999.
hydrogen-ion concentration and dissociation constants of (HOLMES and SNYDER), ii, 325.
for use with weak acids and bases (CHABOT), ii, 899.
for determination of hydrogen ions in soils (NIKLAS and HOCK), i, 348.
salt errors of (KOLTHOFF), ii, 596.
Indigo colouring matters (FINGER and KRAFT), i, 73; (REINDEL and RAUCH), i, 438; (SANDER), i, 982.
with a hydrogenated six-membered ring (ARNDT and PUSCH), i, 1312.
of the naphthalene series (FRIEDLÄNDER), i, 956.
Indigotin, action of chromic acid on (EYMER), i, 1174.
metallic derivatives of (KUNZ and STÜHLINGER), i, 1318.
Indigotin, 4:4′-*di*chloro-5:7:5′:7′-*tetra*iodo-, and 5:6:7:5′:6′:7′-*hexa*iodo- (KALB and VOGEL), i, 161.
5:7:5′:7′-*tetra*iodo- (KALB and BERRER), i, 160.
7:7′-*iso*Indigotindisulphonic acid, and its salts (WAHL and FAIVRET), i, 588.
"**Indine**," identity of *iso*indigotin and (SANDER), i, 977.
Indium, spark spectrum of (WEINBERG), ii, 249; (RAO), ii, 610; (CARROLL), ii, 1101.
analysis of (HEYROVSKÝ), ii, 717.
Indole, synthesis of (NENITZESCU), i, 973.
hydrogenation of (WILLSTÄTTER, SEITZ, and V. BRAUN), i, 428.
derivatives, substituted (SEKA), i, 67.
detection of (KOSER and GALT), i, 1510.
determination of, in bacterial cultures (FELLERS and CLOUGH), i, 1015.
Indole, 3-cyano- (GAVRILOV), i, 578.
6-cyano- (KERMACK), i, 68.
Indoles, catalytic synthesis of (KORCZYŃSKI and KIERZEK), i, 973, 1097.
mechanism of Fischer's synthesis of (BODFORSS), i, 698.
catalytic hydrogenation of (V. BRAUN and BAYER), i, 428.
substituted, preparation of (VERLEY and BEDUWÉ), i, 578.
Indole-colouring matters (KÖNIG), i, 1184.
Indole series, syntheses in the (KERMACK), i, 67; (MAJIMA and KOTAKE; MAJIMA and HOSHINO), i, 1450.
Indole-3-aldehyde, derivatives of (MAJIMA and KOTAKE), i, 1450.
Indole-2-carboxydimethylacetalylamide, 6-cyano- (KERMACK), i, 68.
Indole-2-carboxylic acid, 6-cyano-, and its ethyl ester (KERMACK), i, 67.
Indole-6-carboxylic acid (KERMACK), i, 68.
Indole-2:6-dicarboxylic acid, and its ethyl ester (KERMACK), i, 67.
*iso*Indole-2-oxide, 1(or 3)-hydroxy- (GRIFFITHS and INGOLD), i, 1191.
"**3-Indole-2-thionaphthenindigo**," 5′:7′-*di*iodo- (KALB and BERRER), i, 160.
Indolyl-3-acetic acid, and its picrate and derivatives (MAJIMA and HOSHINO), i, 1451.
3-β-Indolylpropionic acid, and its picrate (MAJIMA and HOSHINO), i, 1451.
3-β-Indolylpropionitrile, and its picrate (MAJIMA and HOSHINO), i, 1451.
Indone, *per*chloro-, additive compounds of acenaphthene, durene, fluorene, scatole, and α- and β-naphthols (PFEIFFER, GOEBEL, and ANGERN), i, 271.
Indones (DE FAZI), i, 263, 269.
Indophenols, preparation of (CASSELLA & Co.), i, 397.
oxidation-reduction potentials of (COHEN, GIBBS, and CLARK), i, 25.
Indophenol-α-naphthol-2-sulphonic acid, sodium salt, dissociation constant of (HOLMES and SNYDER), ii, 999.
Indorhodin (KÖNIG), i, 1184.
ψ-**Indoxyl***spirocyclo*pentane, alkali derivatives of (SIDGWICK and PLANT), i, 298.
Induline-6B, synthesis of (KEHRMANN and STANOYÉVITCH), i, 1334.
Infusoria, effect of dyes on the multiplication of (ROBERTSON), i, 1012.
effect of oxycholesterol and cholesterol on growth of (ROBERTSON), i, 1119.
Inosic acid, brucine salt (PEISER), i, 1477.
Inositol (NEEDHAM), i, 192.
Insects, metabolism and development of (FINK), i, 726.
blood of. See Blood.
Insecticides, fatty acids as (SIEGLER and POPENOE), i, 489.
Insulators, liquid, breakdown of (GYEMANT), ii, 1028.
Insulin (CHEADLE), i, 106; (COLLAZO, HÄNDEL, and RUBINO), i, 343; (RENSHAW), i, 617; (ABEL and GEILING), i, 1218; (ABEL, GEILING, ALLES, and RAYMOND), i, 1512.
from fish (MCCORMICK and NOBLE; MCCORMICK), i, 754.
preparation of (SCOTT and BEST), i, 617.
testing preparations of (HÁRI), i, 617.

Insulin, mechanism of the action of (BISSINGER, LESSER, and ZIPF), i, 209; (ISAAC and ADLER; KUHN, BAUR, and HECKSCHER), i, 343; (BAUR and KÜHN), i, 482; (MANSFELD and GEIGER), i, 1016.
co-zymase function of (VIRTÁNEN), i, 753.
distribution of, in normal and depancreatised dogs (NOTHMANN), i, 1219.
antagonism of adrenaline and (GOTTSCHALK; ZONDEK and UCKO), i, 1513.
action of pepsin on (EPSTEIN), i, 1513.
effect of phosphates on action of (DESGREZ, BIERRY, and RATHERY), i, 1016.
and secretin (PENAU and SIMONNET), i, 482.
action of trypsin on (SCOTT), i, 870.
physiological action of (SERONO, TROCELLO, and CRUTO), i, 208.
effect of, on the composition of blood (MAZZOCCO and MORERA; SAVINO), i, 482.
on lactic acid in blood (COLLAZO and LEWICKI), i, 870.
on sugar in blood (HÄUSLER and LOEWI), i, 753.
on lactic acid in blood and tissues (CORI), i, 753; (BEST and RIDOUT), i, 754.
on intermediate carbohydrate metabolism (BRUGSCH and HORSTERS), i, 208.
on cholesterol metabolism (NITZESCU and CADARIU), i, 1364.
muscle tissue and, on dextrose (LUNDSGAARD and HOLBØLL), i, 208.
in diabetes (LAWN and WOLF), i, 483.
on liver glycogen (CORI), i, 753.
on glycolysis (NITZESCU and CADARIU), i, 1352.
on hydrogen-ion concentration in (GIGON), i, 1219.
on lactic fermentation (NOYES and ESTILL), i, 107.
on lactic acid metabolism (COLLAZO and SUPNIEWSKI), i, 342.
on oxidation in muscle (AHLGREN; NITZESCU and COSMA), i, 482.
on functions of oxygenated yeast (FÜRTH), i, 107.
reactions of (STIX), i, 1218; (BENEDICT; EADIE, MACLEOD, and NOBLE), i, 1512.
ninhydrin reaction with (ABDERHALDEN), i, 753.
Insulin, detection of enzymes in (GLASER and WITTNER), i, 209.
biochemical determination of (WYSS), i, 1220.
Interferometric studies (BELTZ and KAUFMANN), i, 1200.
Interferometry, light filter for (FERGUSON), ii, 839.
Intestines, reduction in (BERGEIM), i, 99.
action of atropine and of organic acids on (JENDRASSIK and TANGL), i, 1502.
of lamellibranchs and gastropods, hydrogen-ion concentration in (YONGE), i, 1489.
analyses of gases in cysts of (PASCUAL VILA), i, 329.
Intoxication (DAVIDSON), i, 1503.
Inulin, determination of molecular weight of, in liquid ammonia (SCHMID and BECKER), i, 1386.
Invertase (WILLSTÄTTER, KRAUT, and WENZEL; WILLSTÄTTER and SCHNEIDER), i, 739; (WILLSTÄTTER, SCHNEIDER, and BAMANN), i, 1359.
constitution of (v. EULER and JOSEPHSON), i, 1008.
absorption of the specific radiation of (BARENDRECHT), i, 203.
in leaves (BLAGOVESCHENSKI and SOSSIEDOV), i, 1007.
hydrolysis of sucrose by, in presence of α-methylglucoside (NELSON and FREEMAN), i, 739.
action of, on γ-methylfructoside (SCHLUBACH and RAUCHALLES), i, 1243.
increased content of, in yeast (WILLSTÄTTER, LOWRY, and SCHNEIDER), i, 1214.
immunisation by injection of (BACH, ENGELHARDT, and SAMYSSLOV), i, 1506.
Invert-sugar, mutarotation of (NELSON and BODANSKY), i, 1008.
specific rotation of (ZERBAN), ii, 479.
sweetness of (WILLAMAN, WAHLIN, and BIESTER), i, 1499.
determination of (DE WOLFF), ii, 245.
determination of, in liquids containing sucrose (VAN DEN HOUT, NEETESON, and VAN SCHERPENBERG), ii, 74, 445; (SCHOORL), ii, 445, 828.
determination of boric acid with (GILMOUR), ii, 68.
Iodates. See under Iodine.
Iodine, in atmospheric air (v. FELLENBERG), ii, 316.
occurrence of, in nature (v. FELLENBERG), i, 329, 347; (v. FELLENBERG and GEILINGER), i, 339.

Iodine in rocks and earths (v. FELLENBERG; v. FELLENBERG, GEILINGER, and SCHWEIZER), ii, 321.
in sea foods (TRESSLER and WELLS), i, 183.
evolution of, from sea water (v. FELLENBERG), ii, 306.
intensity of the spectrum of (STEUBING), ii, 330.
absorption spectrum of (FÜCHTBAUER, WAIBEL, and HOLM), ii, 338.
effect of density on the absorption spectrum of (PEROT and COLLINET), ii, 737.
band and line spectra of (CARIO and OLDENBERG), ii, 470.
line spectrum of (FÜCHTBAUER and HOLM), ii, 626.
resonance spectrum of (TURNER and COMPTON), ii, 725; (KRATZER and SUDHOLT), ii, 839.
ultra-violet fluorescence of (OLDENBERG), ii, 88.
vapour, ionisation of, by ultra-violet light (WEST and LUDLAM), ii, 476.
hydrolysis of, measured by the iodine electrode (MURRAY), ii, 555.
liquid, viscosity of (STEACIE and JOHNSON), ii, 376.
adsorption of, by charcoal (WEISSENBERGER and WALDMANN), ii, 655.
by "norit" charcoals (FIRTH and WATSON), ii, 880.
by starch (ANGELESCU and MIRCESCU), ii, 1149.
compound of starch with (MURRAY), i, 889.
blue adsorption compounds with (BARGER and EATON), i, 44.
diffusion of, in pure and mixed solvents (GRÓH and KELP), ii, 1049.
vapour, diffusion of, through nitrogen (MULLALY and JACQUES), ii, 27.
chemical constants of (WOHL), ii, 98.
formation of emulsions by (HOLMES and WILLIAMS), ii, 531.
addition of, to ethylenic compounds (ANDRÉ and FRANÇOIS), i, 356.
catalytic action of, in elimination of hydrogen halides (DESAI), i, 387.
action of, on benzene (COSTEANU), i, 238.
photochemical action of, on *p*-chlorotoluene (SILBERRAD), i, 16.
action of light on the reaction of ferrous salts with (RIDEAL and WILLIAMS), ii, 416.
action of hydrogen sulphide on (PARSONS), ii, 880.
catalysis of the reaction between [illegible] and (ROBERT), ii, 52.
action on metals (PARSONS), ii, 880.

Iodine, action of red phosphorus on carbon disulphide solutions of (TRAXLER and GERMANN), ii, 1087.
effect of light on the reaction of potassium oxalate with (BERTHOUD and BELLENOT), ii, 141.
action of, on pyrrole (G. E. K. and H. E. H. BRANCH), i, 66.
oxidation of uric acid with (FÜRTH), i, 1462.
antilipolytic action of (VOLLMER, SCHMIDT, and SEREBRIJSKI), i, 335.
keeping properties of tincture of (COLLARD), ii, 1168.
absorption, distribution, and determination of, in the thyroid gland (RABINOVITSCH and FRITH), i, 1488; (ABELLES and POPPER; PICKWORTH), i, 1489.
Hydriodic acid, and its sodium salt, conductivities of, in methyl and ethyl alcohols (GOLDSCHMIDT and DAHLL), ii, 128.
oxidation of (WINTHER), ii, 56.
catalytic decomposition of, on the surface of gold (HINSHELWOOD and PRICHARD), ii, 981.
reduction of halogenated malonyl derivatives by (WEST), i, 524.
Iodides, electrolytic preparation of (FISCHER), ii, 808.
reactions between chlorine water and (MÜLLER and JUNCK), ii, 584.
oxidation of, by ferric salts and ferricyanides (WAGNER), ii, 49.
reactions between iodates and (MÜLLER and JUNCK), ii, 585.
reduction of permanganates by (MÜLLER and MÖLLERING), ii, 305.
reaction between persulphates and, in gelatin (RAWLING and GLASSETT), ii, 561.
detection of traces of (WADE), ii, 598.
determination of (SCHULEK) ii, 712.
determination of, microchemically, with bromine and chlorine (STREBINGER and POLLAK), ii, 823.
determination of, volumetrically (SASAKI), ii, 433.
determination of, volumetrically, with iodates (KOLTHOFF), ii, 1000.
determination of, in urine (v. BODÓ), i, 1490.
Iodic acid, use of, in volumetric determination of thiosulphate (RUSZKOWSKI), ii, 156.

Iodine:—
Iodates, presence of in surface waters (HICKETHIER and JACOBUCCI), ii, 1197.
catalysis of the reaction between iodine and (EGGERT), ii, 52.
reactions between iodides and (MÜLLER and JUNCK), ii, 585.
determination of, in the presence of hypoiodites, and bromates (SCHULEK), ii, 1197.
Hypoiodites, determination of, in the presence of iodates (SCHULEK), ii, 1197.
Iodine determination:—
determination of small quantities of (LANGE and WARD), ii, 598.
determination of, in natural products (v. FELLENBERG), i, 329.
determination of, in biological material (KELLY and HUSBAND), i, 183.
Iodoform, compounds of, with quaternary salts (STEINKOPF and BESSARITSCH), i, 495.
Iodomercurates, organic, preparation of, from iodoantimonates (CAILLE and VIEL), i, 68.
Iodometry, standardisation of solutions in (POPOV and WHITMAN), ii, 1093.
benzene as indicator in (KANÔ), ii, 1010.
Ions, refraction and electron constraint in (SMYTH), ii, 843, 1019.
magnetic properties of (FOEX), ii, 345.
emission of, from heated metals (ROY), ii, 731.
liberation of, in gaseous reactions (BREWER), ii, 919.
electric field of, and neutral salt action (DEBYE and MCAULAY), ii, 171.
determination of the charge on (HULL and WILLIAMS), ii, 253.
dimensions of, in aqueous solutions (JABŁCZYŃSKI), ii, 33.
theory of diffusion of, in discharge tubes (SCHOTTKY), ii, 79.
adsorption of (AUDUBERT and QUINTIN), ii, 384; (MUKHERJEE and RAY), ii, 385.
ammoniation of, in aqueous solutions (LOŠAN), ii, 654.
antagonism of (MINAKAMI), ii, 860.
hydration of (FRICKE), ii, 36; (BABOROVSKY), ii, 1151.
mobility of (MESTREZAT and GARREAU), ii, 543.
in air (GRINDLEY and TYNDALL), ii, 80.
in ethyl ether (LOEB), ii, 832.
in gases (LOEB and ASHLEY), ii, 7; (LOEB), ii, 461; (WAHLIN), ii, 615.
in liquids (LINDEMANN), ii, 127.
Ions, diffusible (NORTHROP), i, 864.
electrolytic. See Electrolytic ions.
isotropic, in relation to molecular and crystal structure (HUND), ii, 1132.
negative, mobility of, in flames (WATT), ii, 170.
triatomic, stability and heats of formation of (HEISENBERG), ii, 16.
Ionisation, Bohr's theory of (ANSLOW), ii, 343.
formula for (MILNE), ii, 920.
influence of radiation on (SAHA and SWE), ii, 254; (WOLTJER), ii, 343.
and vapour pressure of gases (BECKER), ii, 342.
energy absorbed by (GREBE), ii, 615.
in air (LEHMANN and OSGOOD), ii, 832.
of electrolytes (SCARPA), ii, 128.
of binary electrolytes (SEMENTSCHENKO), ii, 117.
of weak electrolytes in aqueous-alcoholic solutions (MIZUTANI), ii, 867.
of gases (LANGMUIR and JONES), ii, 169.
by α-particles (GURNEY), ii, 256.
by slow-moving electrons (JESSE), ii, 919.
by collision of electrons (FOWLER), ii, 7; (COMPTON and VAN VOORHIS; TUVE; TATE; WALDIE), ii, 1106.
of salt vapours (KONDRATÉEV), ii, 615.
lecture experiments to illustrate (KOLTHOFF), ii, 819.
thermal, of metallic salts (ROLLA and PICCARDI), ii, 1018.
Ionisation potential, method of estimating (HARTREE), ii, 5.
of rare gases (HERTZ and KLOPPERS), ii, 342.
Ionium (KAMMER and SILVERMAN), ii, 1186.
Ionogens (BLUM), ii, 402.
Ipecacuanha alkaloids (KELLER and BERNHARD), i, 1086.
azo colouring matters of (PALKIN and WALES), i, 1087.
Iridium chloride, compound of carbon monoxide and (MANCHOT and GALL), ii, 232.
halides (KRAUSS and GERLACH), ii, 1089.
*tetr*oxide (KRAUSS and GERLACH), ii, 424.
Irisin, and its derivatives (v. EULER and ERDTMAN), i, 1369.
Iron, pure, structure and thermo-electric power of (GOETZ), ii, 485.
spectrum of (LAPORTE), ii, 4; (CATALÁN), ii, 167; (GOUDSMIT), ii, 611.

Iron, spark spectrum of (L. and E. Bloch), ii, 78, 727.
soft *X*-rays from (Thomas), ii, 336.
magnetic properties of crystals of (Webster), ii, 369.
films, magnetic properties of (Sorensen), ii, 82.
magnetic permeability of (Nikitin), ii, 173.
magnetostrictive effects in (McCorkle), ii, 487.
magnetisation of cobalt, nickel, magnetite, and (Ashworth), ii, 944.
magnetisation of nickel and (de Waard; Peschard), ii, 751.
magnetic, constitution of (Gross), ii, 1134.
magneton numbers of, in complex salts (Welo), ii, 943; (Jackson), ii, 944.
electrolytic behaviour of (Liebreich and Wiederholt), ii, 44.
critical potential in electron emission from (Petry), ii, 1017.
quantitative deposition of, from oxalate electrolytes (Frölich), ii, 604.
thermoelectric behaviour of, at its transition points (Goetz), ii, 187.
atomic heat of (Rodebush and Michalek), ii, 949.
lattice constant of (Blake), ii, 844.
orientation of crystals of, on heating under strain (Elam), ii, 946.
tensile strength of crystals of (Edwards and Pfeil), ii, 946.
corrosion of (Evans), ii, 687; (Whitney; Shipley, McHaffie, and Clare), ii, 688.
tests on (Beeny), ii, 1068.
effect of metals on (Utida and Saitô), ii, 1069.
by salt solutions (Evans), ii, 140.
composition of the rust of (Stumper), ii, 702.
passivity of (Russell), ii, 406.
pyrophoric phenomena in (Smits and Wallach), ii, 276.
as an oxidative catalyst (Warburg), i, 471.
effect of alkaloids on the solution of, in hydrochloric acid (Rane and Prasad), ii, 410.
and its alloys, action of dilute acids on (Girard), ii, 879.
displacement of alkali metals by (Hackspill and Grandadam), ii, 286.
and its oxides, dissociation equilibrium with water vapour and of carbon dioxide over (Hofmann), ii, 537.
Iron, action of, on copper (Siebe; Hanson and Ford), ii, 317.
oxygen in (Tritton and Hanson), ii, 316.
action of sodium chloride on (Girard), ii, 1192.
commercial, constitution of (Wever), ii, 503.
ferrous, equilibrium of, with silver ions (Tananaev), ii, 121.
physiological effects of zinc and (Bertrand and Nakamura), i, 1114.
as oxygen carrier in respiration (Ellinger), i, 1342; (Warburg), i, 1481.
in blood in scurvy (Mourignand, Leulier, and Michel), i, 330.
from hæmoglobin, and its action with digestive ferments (Lintzel; Barkan), i, 1482.
Iron alloys, electrolytic corrosion of (Thornton and Harle), ii, 303.
with carbon, temper-colours of (Tammann and Siebel), ii, 1169.
equilibria of (Daeves), ii, 401.
ternary (v. Vegesack), ii, 535.
with carbon and nickel (Kase), ii, 973.
with carbon and silicon (Becker), ii, 973.
with carbon and titanium (Tamaru), ii, 787.
with cobalt and nickel, expansion coefficients of (Honda and Okubo), ii, 104.
with cobalt and with nickel (Grenet), ii, 973.
with copper and manganese (Ostermann), ii, 1050.
with nickel (Deloraine), ii, 639.
magnetic properties of (Yensen), ii, 372.
thermomagnetic properties of (Peschard), ii, 651.
effect of tension on magnetic properties of (Buckley and McKeehan), ii, 945.
Iron bases (*iron ammines*):—
Aquopentamminoferrous sulphate (Weitz and Müller), ii, 318.
Iron compounds, importance of, in nutrition (Hart, Steenbock, Elvehjem, and Waddell), i, 1354.
pharmacology of (Sabbatani), i, 196.
Iron salts, catalysis of hydrogen peroxide by (Spitalsky and Petin), ii, 53.
action of, on fermentation (Hodel and Neuenschwander), i, 615.

Iron carbonyls (FREUNDLICH and MALCHOW), ii, 231.
oxide, catalytic properties of (BAUDISCH and WELO), ii, 881.
oxides (SIMON and SCHMIDT), ii, 534.
reduction of (HOFMANN), ii, 991.
Ferric salts, oxidation of iodides by (WAGNER), ii, 49.
reduction of, by thiosulphates (HOLLUTA and MARTINI), ii, 305, 702.
precipitation of, by ammonium sulphide (KŘEPELKA and PODROUZEK), ii, 703.
promotion by copper salts in the decomposition of hydrogen peroxide by (ROBERTSON), ii, 690.
detection of, with alloxantin (DENIGÈS), ii, 441.
determination of, in silicates (HACKL), ii, 1004.
chloride, effect of a magnetic field on the reduction of (PARKER and ARMES), ii, 683.
effect of neutral salts on the reaction of stannous chloride with (TIMOFEEV, MUCHIN, and GUREVITSCH), ii, 586.
reaction of potassium thiocyanate with (BAILEY; BAILEY and KIDD), ii, 422.
catalysis of the reaction of sodium thiosulphate with (HOLLUTA and MARTINI), ii, 215.
hydroxide, colloidal, preparation of solutions of (GAVRILOV), ii, 860; (STADNIKOV and GAVRILOV), ii, 861.
sols, coagulation of (GHOSH and DHAR), ii, 778.
and their mixtures with aluminium hydroxide (KÜHNL and PAULI), ii, 776.
action of, on aqueous solutions of gelatin (WINTGEN and MEYER), ii, 524.
precipitation of, electrometrically (BRITTON), ii, 1204.
oxide, effect of temperature on hygroscopicity of (AARNIO), ii, 1157.
equilibrium of magnesia and (FORESTIER and CHAUDRON), ii, 1159.
catalytic activity of (WELO and BAUDISCH), ii, 1071.
hydrosols, electric transport in (PUIGGARI), ii, 129, 792.
sol-gel transformation of (FREUNDLICH and ROSENTHAL), ii, 967.

Iron:—
Ferric oxide, solid solutions of aluminium and chromic oxides in (FORESTIER and CHAUDRON), ii, 534.
reduction of, by hydrogen (BENTON and EMMETT), ii, 216; (KAMURA), ii, 981.
magnetic (ABRAHAM and PLANIOL), ii, 587; (CHEVALLIER), ii, 639; (SOSMAN and POSNJAK), ii, 944.
sulphate, action of alkalis on (KRAUSE), ii, 1192.
Ferrous salts, action of ammonia on aqueous solutions of (WEITZ and MÜLLER), ii, 317.
reaction of cuprous salts with (WELLS), ii, 148.
action of light on the reaction of iodine with (RIDEAL and WILLIAMS), ii, 416.
dissociation equilibria of nitric oxide compounds of (MANCHOT and HAUNSCHILD), ii, 298; (MANCHOT and LINCKH), ii, 317.
reduction of permanganates by (MÜLLER and MÖLLERING), ii, 305.
carbonate and hydroxide, ageing of (BAUDISCH and WELO), ii, 992.
chloride, ammoniate of (BILTZ and RAHLFS), ii, 1191.
hydroxide, solubility of, and its influence on corrosion (WHITMAN, RUSSELL, and DAVIES), ii, 505.
precipitation of, electrometrically (BRITTON), ii, 1203.
nitride (BERGSTROM), ii, 231.
oxide, magnetic form of (FERGUSON), ii, 846.
apparatus for determination of (MEYER), ii, 898.
selenide (MOSER and ATYNSKI), ii, 583.
sulphate, miscibility of ammonium sulphate and (ZWEIGLÓWNA), ii, 189.
reduction of chloric acid and its salts by (HARVEY), ii, 1197.
ammonium sulphate, magnetic properties of (FOEX), ii, 346.
sulphide, colloidal, toxicity of (SABBATANI), i, 196.
telluride (BRUKL), ii, 895.
Ferric acid, and its salts (LOSANA), ii, 1088.

Iron organic compounds:—
Ferrous tetramminethiocyanate (BERGSTROM), ii, 231.
Chloroferrates of ammonium bases (REMY and ROTHE), ii, 1088.
Iron:—
Cast iron, definition of (HONDA), ii, 378.
Steel, definition of (HONDA), ii, 378.
martensitic structure of (SAUERWALD and JACKWIRTH), ii, 22.
secondary crystallisation of (SCHEIL), ii, 122.
recrystallisation of, after hot deformation (HANEMANN), ii, 1134.
specific volume of (ANDREW and HONEYMAN), ii, 278.
temper-brittleness of (GREAVES and JONES), ii, 487.
temper colours of (GALE), ii, 109.
corrosion of (EVANS), ii, 637; (ENOS), ii, 1068.
tests on (BEENY), ii, 1068.
effect of metals on (UTIDA and SAITÔ), ii, 1069.
by salt solutions (EVANS), ii, 140.
effect of carbon and carbides in, on its properties (CAMPBELL and WHITNEY), ii, 274.
action of sodium chloride on (GIRARD), ii, 1192.
carbon, formation of martensite in (HONDA), ii, 972.
quenched carbon, structure of (ENLUND), ii, 486.
determination of chromium and vanadium in (KOLTHOFF and TOMIČEK), ii, 72.
Iron detection, determination, and separation:—
detection of (NICHOLS and COOPER), ii, 715.
detection of, without nitric acid (LONGINESCU and PETRESCU), ii, 1206.
determination of, colorimetrically (WALKER), ii, 717.
determination of, gravimetrically (TANANAEV), ii, 603.
determination of, volumetrically (RUPP), ii, 71; (ASMUS), ii, 1206.
determination of, in presence of chromium and vanadium (KOLTHOFF and TOMIČEK), ii, 72.
determination of, in biological material (MURRAY), i, 183.
determination of, in tissues and in tumours (YABUSOE), i, 724.
determination of, in water (HOPKINS), ii, 1096.
Iron detection, determination, and separation:—
ferric and ferrous, determination of, in magnetites (ADAM), ii, 717.
determination of oxygen in (ROONEY), ii, 327.
separation of, from copper and nickel (ARDAGH and BROUGHALL), ii, 603.
separation of, from manganese and magnesium and from phosphoric acid (MOSER, BRUKL, and VÉN), ii, 329.
separation of, from mercury (SPACU), ii, 1206.
separation of nickel and, in presence of chromium (ROUSSEAU), ii, 441.
separation of zirconium from (WENGER and MÜLLER), ii, 1207.
Iron ores, reduction of, by hydrogen (KAMURA), ii, 981.
analysis of (MCMILLAN and FERGUSON), ii, 441.
Iron wire, magnetic spectrum of (ARKADIEV), ii, 82.
effect of absorption of gas on resistance of (KLEINE), ii, 947.
Irradiation, biochemistry of (KROETZ), i, 178.
Isaria virescens, formation of pigments by (DANILOV), i, 1013.
Isatin, action of, and its α-chloride on hydantoins (HILL and HENZE), i, 305.
condensation of, with rhodanic acids (HANN), i, 987.
mercuric derivative, and 5-bromo-, silver and benzoyl derivatives (HANTZSCH), i, 701.
Isatin, 4-chloro-5:7-*di*iodo- and 5:6:7-*tri*iodo- (KALB and VOGEL), i, 161.
5:7-*di*iodo-, and its derivatives (KALB and BERRER), i, 160.
Isatin series, isomerism of (HELLER and FUCHS), i, 1166.
Isatin-*N*-chloroanilide (RUPE and GUGGENBÜHL), i, 1100.
Isatinrhodamine (SEN and SIRCAR), i, 555.
Isatoic acid, 5:6:7-*tri*iodo-, sodium derivative (KALB and VOGEL), i, 161.
Isatoid, and its silver derivative (HANTZSCH), i, 700.
Isatole, so-called (HANTZSCH), i, 700.
Isoagglutinins in dogs' blood (MCENERY, IVY, and PECHOUS), i, 1344.
Isoelectric point, theory of (KUHN), ii, 117.
Isomeric transformations (NAMETKIN and JARCEVA), i, 1081.
Isomerides, molecular diameters and volumes of (WÖHLISCH), ii, 269.
solubility of (JOHNSTON; ANDREWS, KOHMAN, and JOHNSTON), ii, 852.

Isomerism, influence of the solvent on (DIMROTH), ii, 36; (VIXSEBOXSE), ii, 396.
and polymorphism (PFEIFFER, KALCKBRENNER, and BEHR), i, 547.
dynamic (BURGESS and LOWRY), i, 46; (FAULKNER and LOWRY), ii, 632; (LOWRY; LOWRY and RICHARDS), i, 886.
electron (SWINNE), ii, 922.
geometric (SUGDEN and WHITTAKER), ii, 937.
Isomorphism (WINCHELL), ii, 1122.
Isotopes, band spectra of (MULLIKEN), ii, 833.
and mass spectra of elements (ASTON), ii, 618.
mass ratio of (JAEGER and DIJKSTRA), ii, 83.
in relation to periodic classification of elements (SCHTSCHUKAREV), ii, 462.
separation of (KENDALL and WHITE), ii, 83.
Itaconic acid, esters, action of ammonia on (STOSIUS and PHILIPPI), i, 892.

J.

Jaborandi leaf oil, constituents of (SCHIMMEL & Co.), i, 417.
Jasmine, Spanish. See *Jasminium grandiflorum*.
Jasminium grandiflorum, indole in flowers of (CERIGHELLI), i, 621.
Jatrorrhizine, constitution of (SPÄTH and DUSCHINSKY), i, 1313.
Jaundice, determination of phenolsulphonephthalein in urine in (ABRAMSON), i, 329.
Jellies (v. WEIMARN), ii, 390.
Juglans regia (walnut), phosphorus compounds in (BIELECKI and SZTENCEL), i, 215.
Juline chloroaurate (REINWEIN), i, 189.
Juniper oil, constituents of (PALAZZO and ALINARI), i, 565.
Juniperus communis, constituents of oil from (SIMONSEN), i, 565.
Jute, cellulose of (LEHNE and SCHEPMANN), i, 518.

K.

Kachi-grass oil (RAO and SUDBOROUGH), i, 1164.
Kaempferide trimethyl ether (TASAKI), i, 1444.
Kaki-fruit, ripening of (KOMATSU and ISHIMASA), i, 759.
Kakishibu (KOMATSU, MATSUNAMI, and ISHIMASA), i, 759; (KOMATSU and MATSUNAMI), i, 950.
Kamala, Indian, constitution of (DUTT), i, 1296.
Kaolinite (*kaolin*), structure of (DOMINIKIEWICZ), ii, 1036.
action of heat on (MELLOR and SCOTT), ii, 698.
colloidal (POPE and HAINES), ii, 1152.
sedimentation of suspensions of (KERMACK and WILLIAMSON), ii, 523.
dehydration of (SAMOILOV), ii, 698.
Kerasin in the spleen in Gaucher's disease (LIEB), i, 189.
Keratin, action of alkalis on (BERGMANN and STATHER), i, 847.
bromination of (STARY), i, 847.
Kerosene, from kubiki oil, naphthenic acids from (TANAKA and NAGAI), i, 252.
Kerr effect in gases (SZIVESSY), ii, 15.
Keten, preparation of (HURD and TALLYN), i, 785, 885.
polymeride of (STAUDINGER and STIRNEMANN), i, 787.
action of, on hydroxybenzoic acids (VAN ALPHEN), i, 1149.
Ketens (STAUDINGER), i, 786.
ultra-violet absorption spectra of, and their dimerides (LARDY), ii, 87, 181.
autoxidation of (STAUDINGER, DYCKERHOFF, KLEVER, and RUZICKA), i, 933.
action of, on hydrazine derivatives (VAN ALPHEN), i, 80.
Ketipinic acid. See Diketoadipic acid.
1-Keto-6-acetamido-4-anilino-2-oxythionaphthenylidene-1:2-dihydronaphthalene (SANDER), i, 982.
Keto-alcohol, $C_{10}H_{16}O_2$, and its derivatives, from chenopodium oil (HENRY and PAGET), i, 1163.
1-Keto-4-anilino-2-indoxenyl-1:2-dihydronaphthalene (SANDER), i, 982.
4-Keto-2-anisyl-1:4-dihydropyrimidine, 5-cyano- (MITTER and PALIT), i, 1320.
2-Keto-2-anisyl-1:4-dihydropyrimidine-5-carboxylic acid, ethyl ester (MITTER and PALIT), i, 1320.
β-Keto-bases, preparation of (MANNICH), i, 374.
1-Keto-2-benzylideneoctahydroanthracene (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 129.
trans-**2-Ketodecahydronaphthalene-3-carboxylic acid**, ethyl ester (HÜCKEL and GOTH), i, 402.
Keto-7-demethylo-ψ-corydaline (HAWORTH and PERKIN), i, 971.

3-Keto-4:5:4′:5′-dibenz-2:3′-dicoumaran (FRIES and PUSCH), i, 569.
2-Keto-2:3-dihydropyriminazole, and 5:7-*di*bromo-, and 3-oximino-, and their salts (TSCHITSCHIBABIN), i, 158.
α-Keto-ββ-dimethylglutaric acid, ethyl ester (ROTHSTEIN, STEVENSON, and THORPE), i, 884.
α-Keto-ββ-dimethylpentane-αγ-dicarboxylic acid, and its diethyl ester (ROTHSTEIN, STEVENSON, and THORPE), i, 884.
2-Keto-3:6-di-*o*-nitrophenyl-1:2-dihydro-1:4-diazine (HELLER and SPIELMEYER), i, 838.
2-Keto-3:4-diphenyl-2:3-dihydro-1:3-thiazoleacetylhydrazone, and its hydrobromide (BOSE), i, 1465.
2-Keto-3:4-diphenyl-3:3-dihydro-1:3-thiazoleanisylidenehydrazone (BOSE), i, 1465.
2-Keto-3:4-diphenyl-2:3-dihydro-1:3-thiazolebenzylidenehydrazone (BOSE), i, 1465.
2-Keto-3:4-diphenyl-2:3-dihydro-1:3-thiazolehydrazone, and its derivatives (BOSE), i, 1465.
2-Keto-3:4-diphenyl-2:3-dihydro-1:3-thiazole*iso*propylidenehydrazone (BOSE), i, 1465.
2-Keto-1:5-diphenyl-4-methylpyrrolidine, 5-cyano-, and its 3-carboxylic acid, ethyl ester (HIGGINBOTHAM, LAPWORTH, and SIMPSON), i, 35.
2-Keto-1:5-diphenyl-4-methylpyrrolidine-5-carboxylamide (HIGGINBOTHAM, LAPWORTH, and SIMPSON), i, 35.
2-Keto-4:6-diphenyl-3-*p*-nitrophenyltetrahydropyridine (ALLEN), i, 964.
3-Keto-2:2-diphenyltetrahydroquinoxaline-4-carboxylic acid, ethyl ester, and its acetyl derivative (INGOLD and WEAVER), i, 580.
β-Keto-esters, structure of enolic forms of (SIDGWICK), i, 630.
1-Keto-2-ethylhydrindene, and its semicarbazone (SPEIGHT, STEVENSON, and THORPE), i, 32.
δ-Ketoheptdiethylamide, and its semicarbazone (BLAISE and MONTAGNE), i, 633.
δ- and γ-Ketoheptoic acids, semicarbazones of (CLUTTERBUCK and RAPER), i, 882.
1-Ketohydrindene-3-acetic acid, and its semicarbazone (SPEIGHT, STEVENSON, and THORPE), i, 32.
1-Ketohydrindene-3-carboxylic acid, and its derivatives (SPEIGHT, STEVENSON, and THORPE), i, 32.
Ketohydroxybutyric acid (GOEBEL), i, 1038.
Ketohydroxymethylsuccinic acid (GOEBEL), i, 1038.
1:4-*endo*-Keto-2-keto-3:3-diphenyltetrahydroquinoxaline, and its chloro-derivatives (INGOLD and WEAVER), i, 580.
3-Keto-Δ¹-*p*-menthene oxide (KÖTZ and HOFFMANN), i, 911.
2-Keto-7-methyldihydropyriminazole, salts of (TSCHITSCHIBABIN), i, 159.
4-Keto-2-β-naphthyl-1:4-dihydropyrimidine, 5-cyano- (MITTER and PALIT), i, 1320.
4-Keto-2-naphthyl-1:4-dihydropyrimidine-5-carboxylic acid, ethyl ester (MITTER and PALIT), i, 1320.
Ketone, $C_9H_{14}O$, and its semicarbazone (HENRY and PAGET), i, 1163.
Ketones, absorption spectra of (LECOMTE; PURVIS), ii, 627; (PLOTNIKOV), ii, 837; (LANGEDIJK), ii, 1116.
and their alcoholic solutions (BÖESEKEN, COHEN, and LANGEDIJK), i, 408.
ultra-red absorption spectra of (BONINO), ii, 838.
decomposition of (HURD and TALLYN), i, 885.
reduction of (MEERWEIN and SCHMIDT), i, 1239.
interchange of groups between alcohols and (VERLEY), i, 1034.
preparation of acetylenic hydrocarbons from (BOURGUEL), i, 364.
action of, with aluminium organic compounds (LEONE and BRAICOVIC), i, 677.
and their semicarbazones from naphthenic acids (ZELINSKI and RJACHINA), i, 39.
excretion of, after extirpation of the pancreas (BIERRY and RATHERY), i, 856.
cyclic, preparation of (RIEDEL), i, 407.
condensations of (HILL and HENZE) i, 305.
fatty-aromatic, condensation of 2-aminopyridine with (SCHMID and BANGLER), i, 1459.
saturated aliphatic, *X*-ray investigation of (SAVILLE and SHEARER), ii, 366.
reaction of halogens with (RICE and FRYLING), ii, 556.
unsaturated, absorption spectra and halochromism of (SCHEIBE, RÖSSLER, and BACKENKÖHLER), ii, 352.
α-unsaturated phenolic (VORLÄNDER, HIEMESCH, SCHOENEMANN, SCHADE, and KUNZE), i, 267.
determination of, by action of sulphites on (ROMEO and D'AMICO), i, 1380.

Ketonic acids, unsaturated (BOGERT and RITTER), i, 255, 816.
γ- and δ-Ketonic acids, and their esters, thermal decomposition of (WINDAUS and BOHNE), i, 552.
δ-Keto-nitriles, reactions of (ALLEN), i, 963.
β-Keto-α-*o*-nitrophenylpropane, α-oximino-, and its derivatives (NEBER, HARTUNG, and RUOPP), i, 1073.
4-Keto-*s*-octahydroanthracene, derivatives of (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 129.
1-Keto-*s*-octahydrophenanthrene, and its derivatives (RIEDEL), i, 407.
Keto-octahydrophenanthrenes, and their derivatives (SCHROETER, VAN HULLE, and MÜLLER), i, 130.
δ- and γ-Keto-octoic acids, semicarbazones of (CLUTTERBUCK and RAPER), i, 882.
4-Keto-oxythionaphthenylidenedihydronaphthalenes, amino- and hydroxy- (FRIEDLÄNDER), i, 957.
γ-Ketopalmitic acid, oxime of (G. M. and R. ROBINSON), i, 355.
γ-Ketopentadienes, photodimerides of derivatives of (STOBBE, FÄRBER, and RAU), i, 1282.
γ-Ketopentadienedicarboxylic acid, methyl ester, dimeride of (STOBBE, FÄRBER, and RAU), i, 1283.
4-Keto-6-phenyldihydropyrimidine (SEIDE), i, 437.
4-Keto-2-phenyl-1:4-dihydropyrimidine, 5-cyano-, and its derivatives (MITTER and PALIT), i, 1319.
2-Keto-4-phenyl-2:3-dihydro-1:3-thiazole, hydrazones of (BOSE), i, 167.
1-Keto-2-phenyl-3:5-dimethyl-1:2-dihydro-2:4:3-naphtha*iso*triazine (GULLAND and ROBINSON), i, 1187.
4-Keto-6-phenyl-1:2-divinylenedihydropyrimidine, and its salts (SEIDE), i, 437.
2-Keto-3-phenyl-5-methylcoumaranyl-3-acetic acid, and its ethyl ester (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 147.
2-Keto-4-phenyl-3-methyl-2:3-dihydro-1:3-thiazoleanisylidenehydrazone, and its hydrobromide (BOSE), i, 1466.
2-Keto-4-phenyl-3-methyl-2:3-dihydro-1:3-thiazole*iso*propylidenehydrazone, and its hydrobromide (BOSE), i, 1466.
2-Keto-4-phenyl-3-α-naphthyl-2:3-dihydro-1:3-thiazolehydrazone, and its hydrobromide (BOSE), i, 1466.
2-Keto-4-phenyl-3-*o*-tolyl-2:3-dihydro-1:3-thiazolehydrazone, and its hydrobromide (BOSE), i, 1466.
α-Ketopimelic acid, and its derivatives (ADICKES), i, 230.
Ketopiperazines, action of alkalis on (LEVENE and PFALTZ), i, 1474.
3-Keto-4:5-pyrido-2:3-dihydrothiophen, and its phenylhydrazone, and 2:2-*di*-bromo-, and its salts (KOENIGS and GEISSLER), i, 167.
2-Ketopyrrolidine-4-carbamide (STOSIUS and PHILIPPI), i, 892.
δ-Ketosebacic acid, semicarbazone of (HÜCKEL and BRINKMANN), i, 259.
Ketosis (WIGGLESWORTH), i, 191.
α-Ketosuberic acid, and its derivatives (ADICKES), i, 230.
3-Keto-1:2:3:4-tetrahydro-1:2:4-benztriazine (GUHA and RAY), i, 1462.
1-Keto-1:2:3:4-tetrahydronaphthalene, transformations of (SCHROETER, ZADEK, and HOFFMANN), i, 677.
1-Ketotetrahydronaphthalene, β-bromo- (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1306.
2-hydroxy-, and its acetyl derivative (STRAUS, BERNOULLY, and MAUTNER), i, 1155.
2-nitro-, and 2-oximino-, and their potassium salts (STRAUS and EKHARD), i, 1139.
Ketotetrahydronaphthalenes, nitro-, and their semicarbazones (RIEDEL), i, 407.
4-Keto-*s*-tetrahydrophenanthrene, derivatives of (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 129.
5-Keto-1:2:3:4-tetrahydro*iso*tetrazole, 5-thio- (GUHA and DE), i, 600.
3-Keto-4:6:4′:6′-tetramethyl-2:3-dihydro-2:3′-dicoumaran (FRIES and BARTENS), i, 568.
β-Keto-αα′γγ′-tetramethylglutaric anhydride (STAUDINGER, FELIX, and HARDER), i, 786.
β-Keto-γ-thiol-α-benzoyl-αγγ-triphenyl-*di*thiobutanoic acid, γ-thiolactone of (MEYER), i, 424.
4-Keto-2-tolyl-1:4-dihydropyrimidine, 5-cyano- (MITTER and PALIT), i, 1320.
4-Keto-2:3:3-triphenyldimethylene-1:2-di-imine-1-carboxylic acid, ethyl ester (INGOLD and WEAVER), i, 580.
Ketoximes, acid nature of (PFEIFFER ARMBRUSTER, BACKES, and OBERLIN), i, 270; (PFEIFFER), i, 677.
Kidneys, ratio of alkali salts in blood in disease of (RABINOVITCH), i, 462.
isolated, effect of inorganic salts on the secretion of (EICHHOLTZ and STARLING), i, 860.
Kinetics of chemical reactions (TOLMAN), ii, 799.

Kinetic salt effect, secondary (BRÖNSTED and KING), ii, 1171.
Konyaku sols, action of alkalis on (DOKAN), ii, 967.
Kubiki oil, naphthenic acids from (TANAKA and NAGAI), i, 252.
Kynurenic acid, formation of, in the animal body (MATSUOKA, TAKEMURA, and YOSHIMATSU), i, 731.

L.

Laboratory apparatus (WIGGERS), ii, 319; (STEINKOPF, OHSE, and BUCHHEIM), ii, 590.
Laccase (FLEURY), i, 471, 614.
action of hydrocyanic acid on (FLEURY), i, 1360.
Lactacidogen, formation of, in muscle (EMMRICH and LANGE; EMBDEN, KAHLERT, and LANGE; ABRAHAM and KAHN), i, 728; (DEUTICKE; EMBDEN and ZIMMERMANN), i, 729.
Lactarinic acid, synthesis of (G. M. and R. ROBINSON), i, 354.
Lactation, effect of ultra-violet light on mineral metabolism in (ORR, MAGEE, and HENDERSON), i, 1210.
Lactic acid (*i-ethylidenelactic acid; α-hydroxypropionic acid*), formation of, in muscular exercise (FURUSAWA, HILL, LONG, and LUPTON), i, 92; (HENTSCHEL), i, 728; (FURUSAWA), i, 849; (LYTHGOE and PEREIRA; PEREIRA), i, 1341.
and its anhydrides, equilibrium of, in aqueous solution (DIETZEL and KRUG), i, 1036.
and its calcium salt, bromination of, in presence of light (GHOSH and BASU), i, 1234.
oxidation of, in muscle (v. SZENT-GYÖRGYI), i, 708.
metabolism of. See Metabolism.
destruction of, by yeast (MYRBÄCK and EVERITT), i, 105.
in arthritis and rheumatism (CAJORI, CROUTER, and PEMBERTON), i, 328.
in blood at high altitudes (LAQUER), i, 324.
effect of aliphatic compounds on (KNOOP and JOST), i, 180.
effect of insulin on (COLLAZO and LEWICKI), i, 870.
and tissues, effect of insulin and adrenaline on (CORI), i, 753; (BEST and RIDOUT), i, 754.
in urine after muscular exercise (LILJESTRAND and WILSON), i, 1115.
detection of, colorimetrically (EKKERT), ii, 1007; (KUTTER), ii, 1210.
Lactic acid (*i-ethylidenelactic acid; α-hydroxypropionic acid*), detection of, in fruit juices (BORNTRÄGER), ii, 1007.
determination of, in animal organs (HIRSCH-KAUFFMANN), i, 96; (EMBDEN; MEYERHOF), i, 719.
d-**Lactic acid**, transformation of, into *l*-alanine (FREUDENBERG and HUBER), i, 229.
Lactoisocitric acid (NELSON), i, 619.
Lactone, $C_9H_{14}O_3$, and its derivatives, from *Alstonia* bark (GOODSON and HENRY), i, 1166.
Lactones, catalysis by acids of the formation of (TAYLOR and CLOSE), ii, 1070.
Lactose (*milk-sugar*) (WHITTIER), i, 792.
origin of, in cows (CAMPUS), i, 327.
bromo-, chloro-, and iodo-acetyl derivatives of (HUDSON and KUNZ), i, 1043.
determination of (BIERMAN and DOAN), ii, 245.
Lævulic acid, α-alkyl derivatives of (GAULT and SALOMON), i, 115.
esters, hydrolysis of (SKRABAL, PFAFF, and AIROLDI), ii, 139.
Lævulic acid, chloro-oximino-, and its ethyl ester (RHEINBOLDT and SCHMITZ-DUMONT), i, 1132.
Lævulosans in plants (COLIN), i, 618.
Lævulose (*d-fructose*; *fruit-sugar*), solution volume and refraction constants of (RIIBER, ESP, and BERNER), i, 635.
effect of phosphates on rotation of (v. EULER and NILSSON), i, 1042.
Lake water. See under Water.
Lamellibranchs, intestines of. See Intestines.
Laminaria flexicaulis, combustion analysis of (LELIÈVRE and MÉNAGER), i, 619.
Lamps, mercury, energy distribution in (FRANKLIN, MADDISON, and REEVE), ii, 809.
gold in (RETSCHINSKY), ii, 465.
constricted mercury arc, for photochemistry (FORBES and HARRISON), ii, 1194.
quartz mercury (REEVE), ii, 234.
Landolt reaction (EGGERT), ii, 52; (EGGERT and PFEFFERMANN), ii, 407.
Lantana camara, constituents of oil from leaves of (MOUDGILL), i, 565.
Lanthanum, spectrum of (GOUDSMIT), ii, 454.
arc spectrum of (PINA DE RUBIES), ii, 612.
Lanthanum alloys with cerium, adsorption of hydrogen by (SIEVERTS and ROELL), ii, 854.

Lanthanum, potassium chromates (CAROBBI), ii, 315.
copper nitrate (CAROBBI), ii, 145.
potassium sulphates (ZAMBONINI and CAROBBI), ii, 222.
thallous sulphates (ZAMBONINI and CAROBBI), ii, 579.
Larkspur. See *Delphinium consolida*.
Lathyrism (ANDERSON, HOWARD, and SIMONSEN), i, 1000.
Laudanidine (SPÄTH and BERNHAUER), i, 294.
l-**Laudanosine** (SPÄTH and BERNHAUER), i, 294.
Laue effect, quantum theory of (ORNSTEIN), ii, 733.
Lauric acid, calcium salt (KLIMONE, v. MOLTINI, and BENEDIK), i, 506.
thallous salt (HOLDE and TAKEHARA), i, 1233.
3-hydroxybenzaldehyde-2-mercuric and 4-hydroxy-*tert*.-butylbenzene-dimercuric esters (WELLCOME FOUNDATION, LTD., HENRY, and SHARP), i, 1154.
Lead, absorption spectrum of the vapour of (NARAYAN and RAO), ii, 927.
arc spectrum of (SPONER), ii, 454; (MCLENNAN, YOUNG, and MCLAY), ii, 455; (GIESELER and GROTRIAN), ii, 1103.
ultra-violet absorption spectrum of (ZUMSTEIN), ii, 914.
X-ray absorption coefficient of (WARBURTON and RICHTMYER), ii, 1103.
isotopes of (BRENNEN), ii, 174, 1109; (PERRETTE), ii, 646.
in Norwegian clevite, atomic weight of (GLEDITSCH, DORENFELDT, and BERG), ii, 732.
band spectra of (BIELER), ii, 732.
vapour pressure and entropy of (RODEBUSH and DIXON), ii, 492.
adsorption of, by platinum (MAXTED), ii, 884.
containing radium-Ω for the preparation of formaldehyde (STOLFI), ii, 1111.
effect of colloids in the displacement of, by zinc (GRAY), ii, 578.
possible transformation of, into thallium (RUSSELL), ii, 924.
Lead alloys with antimony and zinc (TAMMANN and DAHL), ii, 535.
with bismuth and cadmium or tin, hardness of (DI CAPUA), ii, 1051.
with cadmium and with sodium, electrolysis of (KREMANN, KIENZL, and MARKL), ii, 132.
with cadmium and thallium (DI CAPUA), ii, 787.
Lead alloys with mercury, electrolysis of (KREMANN, KAPAUN, and BUDAN), ii, 313.
with silver, electrolysis of (KREMANN and BENDA), ii, 679.
Lead compounds, condition of, in the organism (SCREMIN), i, 465.
Lead bromate (GÜNZEL and MARCUS), ii, 1086.
carbonate, heat of formation of (MARSHALL and BRUŽS), ii, 1040.
dissociation of (CENTNERSZWER, FALK, and AWERBUCH), ii, 400.
chloride, solubility of, in acetic acid (HERZ and MARTIN), ii, 283.
solubility of, in chloride solutions (KENDALL and SLOAN), ii, 1052.
chromate, adsorption of ions by (MUKHERJEE and RAY), ii, 385.
hydroxide, equilibrium of sodium hydroxide, plumbite, and (MÜLLER, REISSMANN, and BALLIN), ii, 125.
precipitation of, electrometrically (BRITTON), ii, 1204.
iodide, action of, with zinc sulphate (STOFFELLA), ii, 1064.
nitrate, activity coefficient of aqueous solutions of (RANDALL and VANSELOW), ii, 33.
ageing of dilute solutions of (BERNHARDT), ii, 1003.
nitrite (THIEL and STOLL), ii, 419.
*sub*oxide (VAN ARKEL), ii, 815.
*mon*oxide, structure of (DICKINSON and FRIAUF), ii, 18.
additive compounds of, with lead salts of nitro compounds (AKTIEN-GESELLSCHAFT LIGNOSE), i, 1145.
*di*oxide, crystal structure of (FERRARI), ii, 1125.
colloidal, preparation of, from lead tetra-acetate (GUTBIER and MEYER), ii, 290.
solubility of, in water (REMY and KUHLMANN), ii, 119.
selenide (MOSER and ATYNSKI), ii, 583.
sulphide, equilibria in roasting of (SCHENCK and BORKENSTEIN), ii, 419; (SCHENCK), ii, 1160.
equilibrium of thallous sulphide and (CANNERI and FERNANDES), ii, 887.
*di*sulphide, attempted preparation of (STĚRBA-BÖHM and AUERSPERGROVA), ii, 699.
sulphobismuthite, volcanic (ZAMBONINI, DE FIORE, and CAROBBI), ii, 709.

Lead organic compounds (CALINGAERT), i, 798.
diacetato-diplumbo-bromate (GÜNZEL and MARCUS), ii, 1086.
di-*m*-nitrophenyl *di*nitrate (VORLÄNDER), i, 1255.
di- and tri-phenyl methyls, *cyclo*hexyls, and xylyls (KRAUSE and SCHLÖTTIG), i, 449.
resinates (COFFIGNIER), i, 1294; (UZAC), i, 1295.
tetraethyl, preparation of (MEYER), i, 893.
Lead detection, determination, and separation :—
detection of (KOLTHOFF), ii, 1095.
determination of (RICHARDS; SCOTT), ii, 903.
determination of, electrolytically, in presence of copper (BILTZ), ii, 715.
determination of, in animal tissues (BERNHARDT), ii, 1003; (NAKASEKO and NAKANO), ii, 1205.
separation of antimony, bismuth, and copper from (LASSIEUR), ii, 159.
separation of antimony, copper, tin, and (LASSIEUR), ii, 328.
separation of, from bismuth (FEIGL and ORDELT), ii, 442.
Lead accumulator. See Accumulator.
Lead cathodes. See Cathodes.
Leaves, carbohydrates in, in relation to water content (HORN), i, 1121.
effect of light on the growth and formation of chlorophyll in (PALLADIN), i, 1518.
invertase in (BLAGOVESCHENSKI and SOSSIEDOV), i, 1007.
peptase in (BLAGOVESCHENSKI and BIELOZEVSKI), i, 1009.
autumn, effect of light on decomposition of chlorophyll in (COMBES), i, 1120.
chlorotic and green, mineral matter in (COLIN and GRANDSIRE), i, 1123.
etiolated, effect of light on growth of (PALLADIN), i, 1517.
Lecitiburin (PONCE), i, 97.
Lecithin, synthesis of, in the organism (ECKSTEIN), i, 458.
natural crystalline (ESCHER), i, 1232.
spontaneous decomposition of (KATO and SHINODA), i, 773.
in fatty oils (BOEDTKER), i, 1114.
compounds of, with bile acids and their salts (BOEHRINGER SOHN), i, 824.
and cholesterol in relation to cell membranes (CORRAN and LEWIS), i, 198.
serological differentiation of cholesterol and (SACHS and KLOPSTOCK), i, 1486.
Lecithin, determination of, in blood (GRIGAUT), i, 453.
Lecithins, synthetic (LEVENE and ROLF), i, 92.
Lecithins, bromo- (LEVENE and ROLF), i, 1520.
Lecture experiments to illustrate catalysis and ionisation (KOLTHOFF), ii, 819.
Lemons, insulin-like substances in (FISHER and MCKINLEY), i, 1016.
See also *Cortex limonis*.
Lemon juice, effects of orange juice and of, on calcification (KORENCHEVSKY and CARR), i, 211.
antiscorbutic factor of (ZILVA), i, 1220; (LIOTTA), i, 1365.
Lemon oil, new constituent of (ROMEO), i, 1293.
Lepidine, 2-hydroxy-, condensation of, with aromatic aldehydes (TRÖGER and DUNKER), i, 432.
Leprosy (WRENSHALL and DEAN; DEAN, WRENSHALL, and FUJIMOTO), i, 1414.
Leucine, esters, hydrolysis of, by pancreatic enzymes (RONA and SPEIDEL), i, 103.
ethyl esters of its campholyl and chloroacetyl derivatives, and its amide, acetyl derivative (GRÄNACHER), i, 594.
l-**Leucine,** naturally-occurring, configuration of (KARRER, JÄGGI, and TAKAHASHI), i, 1046.
Leverrierite, schists formed of (CORBETT), ii, 997.
Lichenase, saccharification of cellulose by (KARRER), i, 118.
Lichenin, constitution of (PRINGSHEIM, KNOLL, and KASTON), i, 1385.
Röntgen spectra of cellulose and (HERZOG and GONELL), i, 371.
*iso***Lichenin** (KARRER and JOOS), i, 1028; (PRINGSHEIM), i, 1029; (KARRER), i, 1370.
Lichosan, and its triacetate (PRINGSHEIM, KNOLL, and KASTON), i, 1385.
Lichotriose (KARRER and LIER), i, 793.
Liesegang's rings, theory of (OSTWALD), ii, 530; (DHAR and CHATTERJI), ii, 865.
formation of (DHAR and CHATTERJI; v. WEIMARN), ii, 959.
phenomena of (STEOPOE), ii, 1158.
in gelatin gels (SCOTT-BLAIR), ii, 519.
Light, absorption of, by fluorescent substances (PIENKOVSKI and JABLONSKI), ii, 1031.
absorption of, by electrolytes (v. HALBAN), ii, 1083.

Light, diffusion of, by active and inactive molecules (DE MALLEMANN), ii, 1030.
in liquids (ROCARD), ii, 265.
by methane and its homologues (CABANNES and GAUZIT), ii, 1030.
scattering of, in mixtures of air and carbon dioxide (BANERJI), ii, 1118.
by liquids (RAMAN and RAMDAS), ii, 952, 1046; (KRISHNAN), ii, 1030.
by salt solutions (SWEITZER), ii, 512.
chemical action of (JOHN), i, 1258.
biological action of (HARRIS), i, 1021.
oxidation in (ECKERT), i, 413.
action of, on dibasic acids (VOLMAR), ii, 575.
influence of, on enzymes (PINCUSSEN), i, 468; (PINCUSSEN and KLISSIUNIS), i, 469.
fluorescent, absorption of, by the emitting substance (DUSEBERG), ii, 262.
polarised, photochemical action of (BALY and SEMMENS), i, 12.
in organic vapours (GANESAN), ii, 643.
ultra-violet, measurement of (WEBSTER, HILL, and EIDINOV), i, 750.
irradiation by (HESS, WEINSTOCK, and HELMAN; HESS and WEINSTOCK), i, 750.
growth-promoting properties of air irradiated by (NELSON and STEENBOCK), i, 484.
absorption of, in dilute solutions (GRIEVESON), ii, 472.
absorption of, by organic compounds (KEPIANKA and MARCHLEWSKI; DE LÁSZLÓ), ii, 179.
quantity required to develop a grain of silver bromide (HELMICK), ii, 143.
action of, on dyes and textiles (HEERMANN), ii, 144.
action of, on oils and green vegetables (HESS and WEINSTOCK), i, 212.
action of, on vitamins (ŠPINKA), i, 212.
action of, on alcoholic fermentation (ROMOLO and REMO DE FAZI), i, 475.
germicidal action of (COBLENTZ and FULTON), i, 616.
effect of, on growth and calcification of rats (HUME and SMITH), i, 211.
Lignin (KÜRSCHNER), i, 1387.
chemistry of (POWELL and WHITTAKER), i, 372.
Lignin, sublimation of (KÜRSCHNER), i, 890.
degradation of, by fungi (WEHMER), i, 521.
pine (KLASON), i, 371, 1246.
determination of (SCHWALBE), i, 643.
α-Lignin, homogeneity of (HÄGGLUND), i, 1026.
aldehyde structure of (HÄGGLUND), i, 643.
Lignite, constituents of (CIUSA and GALIZZI), i, 1045.
Lignoceric acid from arachis oil (HEIDUSCHKA and PYRIKI), i, 229.
Ligulin, and its salts (PFAU), i, 572.
Lilium, phytosterol from bulb scales (MIRANDE), i, 872.
Lilium candidum, optical properties of plastids and phytosterol from (MIRANDE), i, 618.
Limestone, hydrogen sulphide in (NENADKEVITSCH; VERNADSKI), ii, 997.
Limit dextrin I. See Dextrin.
Limonene, electrical birefringence of (DE MALLEMAN), ii, 642.
catalytic transformation of (ZELINSKI), i, 146.
action of hydrogen peroxide on (SWORD), i, 1163.
Linamarase (ROSENTHALER), i, 1008.
Linoleic acid, and its anhydride (HOLDE and GENTNER), i, 882.
Linolenic acid, calcium salt (KLIMONT, v. MOLTINI, and BENEDIK), i, 506.
Linoxyn (EIBNER and RIED), i, 1377.
Linseed oil, colloid chemistry of (VOLLMANN), ii, 517.
catalytic oxidation of (SLANSKY), i, 114, 115.
Lipase (CAPPELLI), i, 725.
from papain (SANDBERG and BRAND), i, 1009.
action of, from rats of various ages (FALK, NOYES, and SUGIURA), i, 1360.
activity of, in tissues of different animals (NOYES and FALK; FALK, NOYES, and SUGIURA), i, 471.
gastric (WILLSTÄTTER, HAUROWITZ, and MEMMEN), i, 201.
favourable hydrogen-ion concentration for (WILLSTÄTTER, HAUROWITZ, and PETROU), i, 742.
pancreatic, conditions for action of (PLATT and DAWSON), i, 1506.
from the thyroid (HERZFELD and ENGEL), i, 201.
determination of, stalagmometrically (DEMUTH), i, 103.
determination of, in body fluids and tissues (RONA and LASNITZKI), i, 471.

Lipases, specificity of (WILLSTÄTTER), i, 1008.
Lipins, action of paraldehyde on (COOPER), i, 91.
in liver (SACCHETTO), i, 1357.
Lipoids (FRÄNKEL and KARPFEN), i, 720.
effect of, on osmosis in gels (YUMIKURA; TRAUBE and YUMIKURA), i, 735.
extraction and determination of, in cereals (RASK and PHELPS), ii, 448.
adsorption by mixtures of (SCHÄFER), ii, 1149.
protection of colloids by (BECK), ii, 527.
colloidal, interaction of colloidal fats and (EICHHOLTZ), i, 199.
determination of, in blood-serum (MINOVICI and ILIESCO), i, 452.
determination of the phosphorus of, in cereals (RASK and PHELPS), ii, 328.
Liquids, diffusion of light in (ROCARD), ii, 265.
molecular scattering of light in (KRISHNAN), ii, 1030.
Kerr effect in, in relation to the depolarisation of scattered light (MARTIN), ii, 90.
scattering of light by, and their surface tension (RAMAN and RAMDAS), ii, 952, 1046.
electrical dispersion of (COFMAN), ii, 1060.
potential differences at the junction of (VOSNESSENSKI), ii, 673.
potential differences between air and (FRUMKIN), ii, 544.
fall of potential in, produced by small bubbles of air (KLEEMAN and PITTS), ii, 659.
potential at interfaces of gases with (FRUMKIN), ii, 873.
action of charged particles in (BURTON and CURRIE), ii, 531.
dielectric constants of (SAYCE and BRISCOE), ii, 263; (BELL and POYNTON), ii, 477; (HARRIS), ii, 631.
heat of vaporisation and surface tension of (PLĂCINTEANU), ii, 39.
superheating of (KENRICK, GILBERT, and WISMER), ii, 99.
specific heat of (GHOSH), ii, 275; (SCHULZE), ii, 491; (FOA), ii, 1138.
mutual solubilities of (KABLUKOV and MALISCHEVA), ii, 768.
relation between critical temperature and expansion of (DE KOLOSOVSKI), ii, 646.
coefficient of expansion of (SASLAWSKI), ii, 26.
Liquids, viscosity of, at the boiling point (MACLEOD), ii, 1049.
under pressure (BRIDGMAN), ii, 1143.
containing dissolved gases (LEWIS), ii, 377.
molecular weight and viscosity of (MACLEOD), ii, 498.
absorption of gases by (LEWIS and WHITMAN), ii, 106.
density of (VAN LAAR), ii, 278.
velocity of sound in, and their heat of vaporisation (IONESCU), ii, 644.
kinetic theory of evaporation of (MACLEOD), ii, 784.
vaporisation and changes at contact surface of (SANO), ii, 681.
apparatus for volatilisation of (YANT and FREY), ii, 897.
separated by a membrane, equilibria of (SCHREINEMAKERS), ii, 399.
orientation of molecules on the surfaces of (HARKINS), ii, 1148.
surface tension at the interface of (DU NOÜY), ii, 647.
interfacial properties of, in contact with gases (GILBERT and SHAW), ii, 795.
kinetic theory of surface films of (SCHOFIELD and RIDEAL), ii, 960.
velocity of reaction of two (JABŁCZYŃSKI, WIECKOWSKI, and KLEIN), ii, 410.
saturation pressure of (HERZ), ii, 850.
influence of indifferent gases on the saturated vapour concentration of (POLLITZER and STREBEL), ii, 104.
supersaturation of gases in (KENRICK, WISMER, and WYATT), ii, 105; (WYATT), ii, 504.
molecular interaction in (ANTONOV), ii, 865.
anisotropic, Born's theory of (SZIVESSY), ii, 1123.
binary mixed (FAUST), ii, 29.
composition of (FRANK), ii, 188.
physical properties of, near the critical point (PERRAKIS), ii, 764.
refractive index of (LICHTENECKER), ii, 632.
specific heats of (WILLIAMS and DANIELS), ii, 765.
opalescence of (RAO), ii, 739.
compressibility of (KAR), ii, 970.
effect of a non-volatile solute on the boiling point and partial pressure of (CARROLL, ROLLEFSON, and MATHEWS), ii, 858, 859.

Liquids, binary mixed, vapour pressure and miscibility of (HERZFELD), ii, 1143.
pressure curves of (FRANK), ii, 648.
viscosity of (MACLEOD), ii, 280.
corrosive, distillation flask for (BROWN), ii, 897.
dust-free, preparation of (GARRARD), ii, 704.
fluorescent, modifications of (ASTERBLUM), ii, 1026.
inorganic, surface potential of (WESSEL), ii, 795.
mixed, dielectric constants of (GRÜTZMACHER), ii, 263.
evaporation of (KING and SMEDLEY), ii, 101.
volume of (LORENZ and HERZ), ii, 101.
influence of proximity to critical solution temperature on volume of (FERRAKIS), ii, 29.
organic, refractive index of (EISELE), ii, 264.
double refraction of (VORLÄNDER and WALTER), ii, 183.
electrical double refraction of (BECKER), ii, 755.
electrical resistance of films of (BHATNAGAR, PRASAD, MITRA, and SHRIVASTAVA), ii, 948.
velocity of sound and ratio of ...c heats of (BUSSE), ii, 373.
compressibility of (SCHMIDT), ii, 497; (HEBEISEN), ii, 763.
dielectric constants of (GRENACHER; FRANCKE), ii, 741.
dielectric constant and molecular association of (LANGE), ii, 840.
molecular volume, viscosity, and ionic mobility of (WÖHLISCH), ii, 277.
temperatures of equal viscosity of (HERZ), ii, 1049.
mixed, vapour pressure of (LESLIE and CARR), ii, 1050.
polymerised, diffraction of Röntgen rays by (DE SMEDT), i, 6.
supercooled, entropy of (PAULING and TOLMAN), ii, 952.
ternary mixed, critical solution temperature of (BOUTARIC and CORBET), ii, 103.
determination of solid matter in (v. BÖRNEGG), ii, 324.
Listera ovata, loroglossin in (CHARAUX and DELAUNEY), i, 874.
Lithium (HÜTTIG and SCHLIESSMANN), ii, 1181.
arc spectrum of (AUSTIN), ii, 995.
Lithium, red line in spectrum of (AINSLIE), ii, 450; (GREEN), ii, 1013.
spark spectrum of (SCHÜLER), ii, 339; (WERNER), ii, 1013.
isotope of (COSTA), ii, 619.
radiation and ionisation potentials of (ROLLEFSON), ii, 722.
vapour pressure of, in liquid ammonia (KRAUS and JOHNSON), ii, 389.
equilibrium between barium and, and their fused chlorides (JELLINEK and CZERWINSKI), ii, 124.
Lithium salts, density and refractivity of solutions of (HÜTTIG and KELLER), ii, 963.
Lithium chloride, activity coefficient of (SCATCHARD), ii, 397.
vapour pressure of hydrochloric acid solutions of (YANNAKIS), ii, 401.
fluoride, crystal structure of, and isomorphism of, with magnesium fluoride (FERRARI), ii, 845.
equilibrium of magnesium fluoride and (TACCHINI), ii, 122; (BRUNI and LEVI), ii, 281.
hydride (HÜTTIG and KRAJEWSKI), ii, 296.
potassium sulphate, crystal structure of (BRADLEY), ii, 638.
*mono*sulphide, crystal structure of (CLAASSEN), ii, 845.
mono- and *di*-sulphides (THOMAS and JONES), ii, 58.
tungstate, equilibria of, with alkali tungstates and tungsten trioxide (VAN LIEMPT), ii, 421.
Lithium organic compounds:—
Lithium benzyl (HEIN, PETZCHNER, WAGLER, and SEGITZ), ii, 217.
Lithium determination and separation:—
determination and separation of (SMITH and ROSS), ii, 601.
Lithium minerals, analysis of (GUNTZ and BENOIT), ii, 1202.
Liver, physiology of (BOLLMANN, MANN, and MAGATH), i, 1496.
autolysis of the pulp of (STEPPUHN and UTKIN-LJUBOVZOV), i, 864.
production of urea in autolysis of (MCCANCE), i, 472.
intermediate carbohydrate metabolism in (BRUGSCH and HORSTERS), i, 483.
carbohydrate metabolism and gaseous exchange of (BRUGSCH, HORSTERS, and SHINODA), i, 192.
proteolytic enzymes of (ZACHRISSON), i, 335; (UTKIN-LJUBOVZOV), ii, 864.

Liver, glycogen content of (FRANK and FÖRSTER), i, 1503.
effect of insulin on (CORI), i, 753.
lipins and fats in, during fasting and phosphorus poisoning (SACCHETTO), i, 1357.
metabolism in diseases of (v. FEJÉR and HETÉNYI), i, 725.
influence of, on protein metabolism (ROSENBAUM), i, 464.
effect of alcohols on sugar in (LESSER), i, 613.
detoxicating function of (HÄNDEL), i, 610.
Lobelane, and *di*chloro-, and their salts (WIELAND and HERMSEN), i, 1089.
n- and *iso*-**Lobelanidines**, and their salts and derivatives (WIELAND, SCHÖPF, and HERMSEN), i, 1087, 1089.
Lobelanine (WIELAND, SCHÖPF, and HERMSEN), i, 1087.
n- and *iso*-**Lobelanines**, and their salts (WIELAND, SCHÖPF, and HERMSEN), i, 1088.
Lobelia, alkaloids from (WIELAND, SCHÖPF, and HERMSEN), i, 1087.
Lobelia inflata, alkaloids of (STENZL), i, 347.
Lobelide, chloro-, and its hydrochloride (WIELAND and HERMSEN), i, 1089.
Lobeline, and its benzoate hydrochloride (WIELAND and HERMSEN), i, 1089.
α-**Lobeline**, preparation of (BOEHRINGER SOHN), i, 425.
Locust tree. See *Robinia pseudocacia*.
Loroglossin, occurrence of, in plants (CHARAUX and DELAUNEY), i, 874.
from orchids (DELAUNEY), i, 487.
Lucerne (*alfalfa*), nitrogenous constituents of the juice of (VICKERY; VICKERY and VINSON), i, 1370; (VICKERY and LEAVENWORTH), i, 873.
non-volatile organic acids of (TURNER and HARTMAN), i, 1124.
proteins from leaves of (CHIBNALL and NOLAN), i, 215.
Luminescence, decay and regeneration of (VIOL, KAMMER, and MILLER), ii, 474.
from α-rays, decay of (WITMER), ii, 89.
Lungs, extractives of the (KAPLANSKY), i, 97.
Lupanine, constitution and derivatives of (THOMS and BERGERHOFF), i, 575.
d-**Lupanine**, isolation of, from *Lupinus kingii* (CROUCH), i, 1447.
Lupeose, constitution of (CASTORO), i, 1244.
Lupinane, and its picrate (KALLE & Co.), i, 294.
Lupines, studies on (CROUCH), i, 1447.
Lupinus kingii, isolation of *d*-lupanine from (CROUCH), i, 1447.
Lupinus luteus, enzymic decomposition of arginine in (WALTER), i, 1358.
Lupinus spathulatus, alkaloid from (COUCH), i, 61.
Lupulon, and its derivatives (WÖLLMER), i, 690.
Luteolin acetate (OESTERLE and WANDER), i, 1439.
2:6-Lutidine, 3-amino-, and its hydrochloride (GULLAND and ROBINSON), i, 1186.
Lutidinic acid, phenyl ester (MEYER), i, 836.
4-Lutidone-3-carboxylic acid, ethyl ester (RASSWEILER and ADAMS), i, 299.
4-Lutidone-3:5-dicarboxylic acid, ethyl ester (RASSWEILER and ADAMS), i, 299.
Lycopin, determination of, colorimetrically (CONNELL), i, 214.
Lymph, changes in, in anaphylactic shock (PETERSEN and HUGHES), i, 724.
Lysine, synthesis of, in the organism (MCGINTY, LEWIS, and MARVEL), i, 100.
synthesis of precursors of (MARVEL, MACCORQUODALE, KENDALL, and LAZIER), i, 234.
behaviour of, in the liver (FELIX and ROTHLER), i, 859.
Lysolecithin, acyl derivatives of (LEVENE and ROLF), i, 92.

M.

Magnesium, structure of (COLLINS), ii, 1023.
electrolytic preparation of (RUFF and BUSCH), ii, 569; (HARVEY), ii, 570.
spectrum of (GREEN and PETERSEN), ii, 451.
K-absorption spectrum of (ROBINSON), ii, 614.
vapour, absorption spectrum of (NARAYAN, GUNNAIYA, and RAO), ii, 337; (NARAYAN and RAO), ii, 927.
arc spectrum of (RUARK), ii, 1016.
spark spectrum of (BROWN and BEAMS), ii, 913.
spectra of mixed vapours of the alkali metals and (BARRATT), ii, 927.
optical constants of crystals of (GRABER), ii, 1041.
conductivities of (SCHOFIELD), ii, 273.
potential of (SMITS), ii, 544.

Magnesium, polarisation of, in alkaline solution (JIRSA and LORIS), ii, 45.
isotopes of (PILLEY), ii, 464.
sizes of electron-kernels of aluminium, silicon, sodium, and (TURNER), ii, 349.
influence of, on pressure in the eye (KANEKO), i, 333.
Magnesium alloys with aluminium (DANIELS), ii, 103; (WARIS), ii, 786.
with aluminium and cadmium (VALENTIN and CHAUDRON), ii, 205.
with cerium, adsorption of hydrogen by (SIEVERTS and ROELL), ii, 854.
Magnesium compounds, isomorphism of beryllium compounds and (ZAMBONINI and CAROBBI), ii, 144.
Magnesium boride, action of water and acids on (RAY), ii, 417.
carbonate, dissociation of (CENTNERSZWER and BRUŽS), ii, 206, 685.
equilibrium of, in ammoniacal solutions (LAFONTAINE), ii, 785.
chloride, hydrolysis of aqueous solutions of, in presence of textile fibres (SCHWALBE and SCHEPP), i, 1045.
fluoride, crystal structure of (BUCKLEY and VERNON), ii, 484.
crystal structure and isomorphism of, with lithium fluoride (FERRARI), ii, 845.
equilibrium of lithium fluoride and (TACCHINI), ii, 122; (BRUNI and LEVI), ii, 281.
hydroxide, solubility of (GJALDBAEK), i, 652, 653.
precipitation of, electrometrically (BRITTON), ii, 1203.
rhythmic precipitation of (POPP), ii, 667.
precipitation of aluminium hydroxide with (PARISELLE and LANDE), ii, 903.
oxide (*magnesia*), solubility of, in water (REMY and KUHLMANN), ii, 30.
equilibrium of ferric oxide and (FORESTIER and CHAUDRON), ii, 1159.
condensation of formaldehyde with (SCHMALFUSS and KALLE), i, 116.
action of, on silicates at high temperatures (TAMMANN and GREVEMEYER), ii, 580.
ammonium phosphate, precipitation of, in presence of aluminium (HAHN and SCHEIDERER), ii, 69.
silicate, artificial (DAMIENS), ii, 812.
silicide, atomic structure of (OWEN and PRESTON), ii, 93.
Magnesium sulphate, miscibility of ammonium sulphate and (ZWEIGLÓWNA), ii, 189.
equilibrium of sodium chloride with (KURNAKOV and SHEMTSCHUSHNI), ii, 299.
reduction of (ALTHAMMER), ii, 145.
Magnesium organic compounds, luminescence spectra of (DUFFORD, NIGHTINGALE, and CALVERT), ii, 89.
electrolytic properties of (KONDYREV; KONDYREV and MANOJEV), i, 529.
Grignard's, constitution of (MEISENHEIMER), i, 527.
reducing action of (STAS), i, 1052.
reduction of azobenzene by (GILMAN and PICKENS), i, 1336.
reaction of cupric chloride with (GILMAN and PARKER), i, 237.
action of ethyl hypochlorite on (DURAND and NAVES), i, 1054.
action of methyl cyanoformate on (FINGER and GAUL), i, 1431.
action of, on naphthaquinones (FRANSSEN), i, 1146.
action of, on nitriles (BRECKPOT), i, 14; (BRUYLANTS), i, 15; (CHRISTIAEN), i, 23; (ECTORS), i, 138; (JASPERS), i, 936.
reactions of, with alkyl sulphonates (GILMAN and BEABER), i, 802.
with acyl halides (TISTOHENKO), i, 775.
with di-iodobenzenes (THOMAS), i, 1055.
alkoxides (TERENTIEV), i, 110.
p-anisyl and *p*-tolyl bromides, action of, on camphor (LEDUC), i, 821.
arsines (JOB, REICH, and VERGNAUD), i, 173.
arylamines, action of hydrogen peroxide on (DURAND and NAVES), i, 535.
ethyl bromide, electrical conductivity of (KONDYREV and MANOJEV), i, 529.
compound of diphenylcarbazide and (FEIGL and LEDERER), i, 171.
halides, etherates of (MEISENHEIMER, PIPER, and LANGE), i, 1252.
alkyl halides, reaction of aryl sulphonates with (GILMAN, BEABER, and MYERS), i, 1057.
alkyl and aryl halides, reducing action of (RHEINBOLDT and ROLEFF), i, 542.
aryl halides, luminescence of (DUFFORD, NIGHTINGALE, and CULVERT), ii, 474.
mercapto-halides, reactions of (GILMAN and KING), i, 810.

Magnesium organic compounds:—
α-naphthyl bromide, reactions between inorganic antimony compounds and (MATSUMIYA), i, 1472.
action of methyl cyanoformate on (FINGER and GAUL), i, 1431.
phenyl bromide, action of, on organic acids (PETERS, GRIFFITH, BRIGGS, and FRENCH), i, 543.
action of, on *β*-bromoethylphthalimide and *γ*-bromopropylphthalimide (KOHN and LAKNER), i, 1276.
Magnesium detection, determination, and separation:—
detection of (FEIGL), ii, 435; (MURMANN), ii, 437.
detection of, in small quantities (HAHN), ii, 1095.
determination of (CONGDON and VANDERHOOK), ii, 601; (STEWART and ARCHIBALD), ii, 824.
determination of, nephelometrically (KRISS), i, 852.
determination of, in presence of aluminium (HAHN), ii, 601; JANDER, WENDEHORST, and WEBER), ii, 715.
determination of, in copper alloys with zinc (SCHÜRMANN and SCHOB), ii, 902.
separation of calcium and (RODT and KINDSCHER), ii, 158; (LUFF), ii, 438.
Magnesylpyrrole, syntheses with (ODDO), i, 295, 978; (ODDO and MINGOIA), i, 978.
netic permeability, effect of an alternating field on (SPOONER), ii, 487.
susceptibility and radii of atoms (CABRERA), ii, 624.
and constitution of organic compounds (PASCAL), ii, 624.
Magnetism, researches on (WOLTJER; WOLTJER and ONNES), ii, 1038.
of polymerides (PASCAL), ii, 371.
and valency of complex salts (WELO and BAUDISCH), ii, 1031.
See also Ferromagnetism and Paramagnetism.
Magnetite, transformation of, into hæmatite (WELO and BAUDISCH), ii, 845.
magnetisation of iron cobalt, nickel, and (ASHWÖRTH), ii, 944.
Magnetochemistry (SCHUKAREV), ii, 47, 264.
of cyclic compounds (PASCAL), ii, 1123.
Magneton numbers, spectroscopic (STONER), ii, 618.
Ma Huang, ephedrine from (CHEN and SCHMIDT), i, 194.
Mahua flowers, production of acetone from (GOKHALE), i, 1216.
Mahua oil, bio-genesis of (FOWLER and DINANATH), i, 346.
Maize, influence of soil temperature and moisture on (ECKERSON and DICKSON), i, 217.
electrosilage of (BRAHM), i, 623.
proteins of (ARBUCKLE and THIES), i, 1518.
vitamin-*E* in extracts of (SURE), i, 212.
effect of a diet of, on creatine and creatinine excretion (PALLADIN and KRATINOVA), i, 1514.
effect of nitrogen nutrition on growth of (RIPPEL and LUDWIG), i, 485.
Maize kernels, constituents of (JODIDI), i, 1027.
Malachite, formation of, from basic copper carbonate (HEPBURN), ii, 696.
Malacon, zirconium and hafnium from (MARQUIS, P. and G. URBAIN), ii, 699.
Maleic acid, crystal structure of (YARDLEY), ii, 1126.
conversion of, into fumaric acid (TERRY and EICHELBERGER), i, 780.
halogenation of (TERRY and EICHELBERGER), i, 631.
oxidation of, to tartaric acid (MILAS and TERRY), i, 780.
sodium salt, surface tension of solutions of (RIBAS), ii, 647.
esters, transformation of, into fumaric esters (MEERWEIN and WEBER), i, 1038.
Maleic acid, *di*hydroxy-, decomposition of (GOEBEL), i, 1038.
Maleinimide, *di*iodo- (TERENTIEV and TSCHELINCEV), i, 295.
Malic acid, and its salts, action of boric acid on the rotation of (DARMOIS), ii, 357.
decomposition of, by sulphuric acid (WHITFORD), ii, 559.
and its salts, pharmacology of (UNDERHILL and PACK), i, 1211.
copper salts, optical activity of (DARMOIS), ii, 15.
lead salt, solubilities of (AUERBACH and WEBER), i, 1130.
detection of, in tissues (KLEIN and WEINER), i, 871.
Malic acid, bromo- and chloro- (KUHN and EBEL), i, 781.
d- and *l*-chloro-, and their salts (SONN and ROSINSKY), i, 1237.
Malol (RIVIÈRE and PICHARD), i, 345.
Maloloic acid, and its salts (RIVIÈRE and PICHARD), i, 345.

Malonamides, action of hydrazine on halogen derivatives of (HIRST, MACBETH, and TRAILL), i, 1251.
Malonbenzyl-*p*-tolylamide, and bromo- (WEST), i, 524.
Malon-*p*-bromophenylethylamide, bromo- (WEST), i, 524.
Malon-*p*-bromophenylmethylamide, bromo- (WEST), i, 524.
Malon*iso*butylamide, and bromo- (WEST), i, 524.
Malondi*iso*propylamide, and bromo- (WEST), i, 524.
Malondi-*p*-tolylamide, bromo- (WEST), i, 524.
Malonethylamide, and bromo- (WEST), i, 524.
Malonethyl*iso*propylamide, and bromo- (WEST), i, 524.
Malonhydrazide (HIRST, MACBETH, and TRAILL), i, 1251.
Malonic acid, dissociation constants of (BRITTON), ii, 977.
alkaline earth salts, solubilities of (WALKER), ii, 769.
aniline trihydrogen salt (RAMBECH), i, 385.
esters, velocity of hydrolysis of (SKRABAL and MATIEVIC), ii, 36.
di-β-chloroethyl esters (BENNETT), i, 884.
ethyl ester, addition of, to anils (WAYNE and COHEN), i, 550.
potassium ethyl ester, electrolysis of (ROBERTSON), ii, 1178.
Malonic acid, halogen derivatives, quantitative reduction of, by hydriodic acid (WEST), i, 524.
chloronitro-, ethyl ester (MACBETH and TRAILL), i, 782.
Malonoguanidic acid (MITTER and PALIT), i, 1320.
Malononitrile, halogenation of (OTT and FINKEN), i, 1251.
Malononitrile, amino-, action of nitrous acid on (GRISCHKEVITSCH-TROCHIMOVSKI), i, 1104.
benzoyl derivative and compounds with aldehydes (GRISCHKEVITSCH-TROCHIMOVSKI and SEMENCOV), i, 1069.
Malonphenylmethylamide (WEST), i, 524.
Malon*iso*propylamide, and bromo- (WEST), i, 524.
Malon-*p*-tolylamide, bromo- (WEST), i, 524.
Malon-*p*-tolyl*iso*butylamide, and bromo- (WEST), i, 524.
Malon-*p*-tolylethylamide, and bromo- (WEST), i, 524.
Malon-*p*-tolylmethylamide, and bromo- (WEST), i, 524.
Malon-*p*-tolyl*iso*propylamide, and bromo- (WEST), i, 524.
Maltodextrins, nature of (LING and NANJI), i, 516.
Maltose, octa-acetyl derivative and chloro-, hepta-acetyl derivative (FREUDENBERG, v. HOCHSTETTER, and ENGELS), i, 635.
Mandelic acid, configuration of, and its acetyl, benzoyl, and cinnamoyl derivatives, esters of (FREUDENBERG and MARKERT), i, 1275.
hydroxylamine salt (OESPER and BALLARD), i, 1233.
Mandelonitrile, transformation of, to the *iso*-form (WOOD and LILLEY), i, 400.
Manganese, occurrence of, in soils, plants, and animals (MCHARGUE), i, 1023.
atomic volume of (CAMPBELL), ii, 762.
crystal structure of (WESTGREN and PHRAGMÉN), ii, 1035.
K doublets in spectrum of (SELJAKOV and KRASNIKOV), ii, 914.
spark spectrum of (L. and E. BLOCH), ii, 829.
electro-deposition of (ALLMAND and CAMPBELL), ii, 305; (BŘEZINA), ii, 676.
ionised, ionisation potential of (HARTREE), ii, 918.
allotropy of (BRADLEY), ii, 1124.
Manganese alloys with copper, crystal structure of (PATTERSON), ii, 1130.
with copper and iron (OSTERMANN), ii, 1050.
Manganese compounds in arable soils (BERTRAND), i, 223.
Manganese arsenates (DEISS), ii, 893.
halides, ammoniates of (BILTZ and RAHLFS), ii, 1191.
oxide, colloidal (ANARGYROS), ii, 1152.
*di*oxide, colloidal, formation of, in reduction of permanganates (GELOSO), ii, 661.
oxidation of carbon monoxide and of hydrogen by (FRAZER and GREIDER), ii, 1064.
hydrated, adsorption of silver by (PAVLOV), ii, 507.
phosphates, equilibria of formation of (GRUBE and STAESCHE), ii, 893.
selenide (MOSER and ATYNSKI), ii, 583.
sulphate, equilibrium of aluminium sulphate, water, and (CAVEN and MITCHELL), ii, 396.
Manganic fluoride, orthoarsenate and phosphates (TRAVERS), ii, 586.

Manganese:—
Manganous salts, oxidation of, to permanganic acid (TRAVERS), ii, 585.
hydroxide, precipitation of, electrometrically (BRITTON), ii, 1203.
Permanganates, thermal decomposition of (MOLES and CRESPI), ii, 877.
mechanism of reduction of (HOLLUTA), ii, 49, 407.
effect of a magnetic field on the reduction of (PARKER and ARMES), ii, 683.
reduction of, by arsenious acid (TRAVERS), ii, 585; (GELOSO), ii, 661.
reduction of, by ferrous salts and by iodides (MÜLLER and MÖLLERING), ii, 305.
spectrophotometric determination of the oxidising power of (GOMBOS), ii, 237.
oxidation of unsaturated compounds with (NAMETKIN), i, 1145.
catalysis of the reaction of oxalic acid with (RIDLEY), ii, 689.
Manganese detection, determination, and separation:—
detection of, without nitric acid (LONGINESCU and PETRESCU), ii, 1206.
determination of (JÄRVINEN), ii, 602.
determination of, volumetrically (ANGELESCU), ii, 330; (HECZKO; HACKL), ii, 440.
determination of, in hydrofluoric acid solution (HOLLUTA and OBRIST), ii, 160.
separation of cobalt, nickel, zinc, and (LEMARCHANDS), ii, 242.
Manganese steel, hardness of (BENEDICKS), ii, 188.
Manganolangbeinite from Vesuvius (ZAMBONINI and CAROBBI), ii, 898.
Mannito-aluminates (HERASYMENKO), i, 774.
Mannitol, formation of, by bacterial fermentation of sugars (STILES, PETERSON, and FRED), i, 1216.
solubility of mixtures of boric acid and (HERMANS), i, 501.
fermentation of, by yeast (LVOV), i, 1509.
d-**Mannitol** from *Gardenia turgida* (FORSTER and RAO), i, 1295.
Mannobiose, and its phenylhydrazone (PRINGSHEIM and GENIN), i, 214.
Mannose di*iso*propylidene ether, constitution of (FREUNDENBERG and WOLF), i, 367.
Manometer, glass, for gases attacking mercury (KLEMENC), ii, 995.
lever (FRANK), ii, 995.
mercury (SWAN), ii, 707.
filling of (WEATHERILL), ii, 896.
Manures, iodine in (V. FELLENBERG), i, 347.
artificial, physiological reactions of salts used as (KAPPEN and LUKACS), i, 1523.
determination of urea oxalates in (SABALITSCHKA and KUBISCH), i, 347.
stable, nitrogen in (SANI and GRILLI), i, 218.
Margosa oil, physiological action of (NORD and SCHWEITZER), i, 734.
Marking nut. See *Semecarpus anacardium*.
Marmite, effects of yeast and of, on calcification (KORENCHEVSKY and CARR), i, 211.
Martensite (WHEATLEY), ii, 488.
formation of, in carbon steel (HONDA), ii, 972.
heat of transformation of (SCHNEIDER), ii, 95.
Mass action, constant of (KLEEMAN), ii, 1170.
Mass action law for gases (GILLESPIE), ii, 532.
Masurium (NODDACK, TACKE, and BERG), ii, 939.
Matter, theory of state of (SCHUSTER), ii, 951, 1142.
properties of (WEISSENBERG), ii, 1129.
optical constants of (DARWIN), ii, 2.
and radiation (STERN; WESTPHAL), ii, 926.
living, chemical processes in (CROZIER), i, 101.
representation of analyses of (VERNADSKI), i, 606.
Matteuchia orientalis, constituents of (MUNESADA), i, 620.
Matteucinol (MUNESADA), i, 620.
Mauveine, preparation of (COBENZL), i, 436.
Meat, effect of cooking on (RICHET and MONCEAUX), i, 859.
Meconic acid, manganous salts (VERKADE), i, 421.
m-**Meconine**, nitration of (RÂY and ROBINSON), i, 1153.
Meconines, synthesis of (EDWARDS, PERKIN, and STOYLE), i, 404.
Melaleuca erubescens and *hypericifolia*, oils from (PENFOLD), i, 688.
Melamine, *tricyano-*, and its salts (BURDICK), i, 1048.

Melampyrum arvense and *pratense*, changes in, during growth (BRAECKE), i, 619.
Melanin in urine, and its detection (AUFRECHT), i, 1350.
Melanins (HEINLEIN), i, 449.
absorption spectrum of (GALLERANI), ii, 266.
Melibiose octamethyl ether (SCHLUBACH and RAUCHENBERGER), i, 889.
Melilite, composition of (WINCHELL), ii, 152; (GOSSNER), ii, 821.
Melonic acid, silver and sodium salts (BURDICK), i, 1048.
Melting point and critical temperature (VAN LAAR and LORENZ), ii, 374.
relation between boiling point, critical temperature, and (PRUD'HOMME), ii, 99.
of benzene derivatives (PASTAK), ii, 759.
of halides of the fourth group (HANTZSCH and CARLSOHN), ii, 1044.
of inorganic compounds and of elements (FRIEDERICH and SITTIG), ii, 848.
Membranes, equilibria with (HÜCKEL), ii, 528, 668.
permeability of (BANCROFT and GURCHOT), ii, 110.
permeability and electrical properties of (MICHAELIS), ii, 1150; (FUJITA), ii, 1151.
collodion, diffusion of water through (ADOLPH), ii, 859.
protein films on (HITCHCOCK), ii, 1054.
for physico-chemical analysis (FOUARD), ii, 324.
mammalian serous, electro-endosmosis through (MUDD), i, 468, 1355.
semi-permeable, equilibria with (KAMEYAMA), ii, 1062; (SCHREINEMAKERS), ii, 1062, 1063.
Men, calcium and phosphorus metabolism in (HEINELT), i, 1497.
Mentha pulegium, Δ^1-menthen-3-one in oil from (MORANI), i, 146.
Δ^3-**Menthene** nitrosochloride (MEREJKOVSKI), i, 1291.
Menthol, surface tension of aqueous solutions of (EDWARDS), ii, 387.
l-**Menthol**, catalytic oxidation of (KOMATSU and KURATA), i, 687.
Menthols, and their derivatives, from 2-chloro-5-methyl*cyclo*hexanols (BEDOS), i, 1078.
Menthone, and its derivatives (BEDOS), i, 1078.
condensation of, with *p*-tolualdehyde (SAMDAHL), i, 414.
l-**Menthone**, catalysis of inversion of (KOMATSU and KURATA), i, 1290.
Menthones, catalytic formation of, from *l*-menthol (KOMATSU and KURATA), i, 943.
Menthyl compounds, crystallography of (GREENWOOD), ii, 1037.
l-**Menthyl** sodium *di*thiocarbonate (HOLMBERG and ROSEN), i, 1291.
l-O-**Menthyl-*N*-dimethylthiourethane** (HOLMBERG and ROSEN), i, 1291.
l-O-**Menthyl-*N*-methylthiourethane** (HOLMBERG and ROSEN), i, 1291.
δ-**Menthylsemicarbazide**, and its derivatives (WILSON and CRAWFORD), i, 318.
l-O-**Menthylthiourethane**, and its derivatives (HOLMBERG and ROSEN), i, 1291.
Menyanthes trifoliata, constituents of (ZELLNER), i, 763.
Mercaptans, alkylation of (GILMAN and BEABER), i, 811.
Mercapturic acid, synthesis of, in dogs (COOMBS and HELE), i, 1496.
Mercellulose (DEHNERT and KÖNIG), i, 370.
Mercuration of aromatic compounds (COFFEY), i, 844.
Mercurialis (HAAS and HILL), i, 759.
seeds of (GILLOT), i, 1224.
Mercurialis perennis, extraction of maltose from tubers of (GILLOT), i, 487.
Mercuric salts. See under Mercury.
Mercury, spectrum of (WOOD), ii, 339, 1015; (TURNER and COMPTON; FUKUDA), ii, 613.
shifting of lines in the spectrum of (FUKUDA), ii, 1101.
spectrum of illuminated vapour of (GROSS and TERENIN), ii, 915.
arc spectrum of (TAKAMINE and FUKUDA), ii, 166, 725; (RAYLEIGH), ii, 738; (NICHOLS and TEAR), ii, 917.
and its excitation (ELDRIDGE; HAYNER; MCCURDY, TURNER, and COMPTON), ii, 1102.
atomic and band spectra of (HULTHÈN), ii, 1113.
band spectrum of (HULTHÈN), ii, 11, 470.
resonance spectrum of, in a magnetic field (FERMI and RASETTI), ii, 839.
vapour, resonance fluorescence spectrum of (RUMP), ii, 473.
spark spectrum of (BAYEN), ii, 168; (CARROLL), ii, 1101.
ultra-red spark spectrum of (LAFFAY), ii, 334.

Mercury vapour, fluorescence of (WOOD), ii, 3; (GHOSH), ii, 1026.
resonance fluorescence of (STUART; HANLE), ii, 629.
radiation excited in (HAYNER), ii, 1017.
resonance radiation of (NOYES), ii, 573.
polarisation of the resonance radiation of (FERMI and RASETTI), ii, 473; (RAMANATHAN), ii, 729.
glow discharge in (COMPTON, TURNER, and MCCURDY), ii, 86.
ionisation of (TUVE; TATE), ii, 1106.
by ultra-violet light (ROUSE and GIDDINGS), ii, 919.
photo-electric effect of small drops of (WASSER), ii, 80.
electrolytic behaviour of (LIEBREICH and WIEDERHOLT), ii, 44.
electrolytic purification of (BRUMMER and V. NÁRAY-SZABÓ), ii, 303.
capillary and photo-electric properties of (POPESCO), ii, 952.
influence of colloidal solutions on the electrocapillarity of (ŠANDERA), ii, 659.
electrical resistance of, in magnetic fields (JONES), ii, 754.
polarisation of, in alkaline solution (JIRSA and LORIS), ii, 45.
isotopes of (METCALFE and VENKATESACHAR), ii, 82; (STUMPF), ii, 619; (ASTON), ii, 833.
saturation pressure of (BERNHARDT), ii, 492.
molecular weight of, at varying temperatures (JOUNIAUX), ii, 23.
atoms, metastable forms of (MARSHALL), ii, 339; (RASETTI), ii, 340.
life of excited atoms of (GERLACH and SCHÜTZ), ii, 171.
heat of dissociation of, calculated from the band spectrum (KOERNICKE), ii, 848.
vapour, diffusion of, through nitrogen (MULLALY and JACQUES), ii, 27.
velocity of diffusion of metals in (COHEN and BRUINS), ii, 648.
adsorption of vapours at the surface of (IREDALE), ii, 508.
adsorption coefficient of electrons in vapour of (BRODE), ii, 1020.
adsorption of, by platinum (MAXTED), ii, 384.
vapour, trapping of, with potassium (HUGHES and POINDEXTER), ii, 895.
colloidal, colour of (FEICK), ii, 1153.
action of chlorine on (GETMAN), ii, 59.

Mercury, conversion of, into gold (KAUL), ii, 177; (NAGAOKA), ii, 835, 1111; (STAMMREICH), ii, 1208.
combination of helium and (MANLEY), ii, 57, 314, 696; (LIND and BARDWELL), ii, 1181.
photochemical reactions of, with oxygen and nitrogen dioxide (NOYES), ii, 1081.
purification of (RUSSELL and EVANS), ii, 1205.
distillation apparatus for (ŠVÉDA), ii, 428; (WETZEL), ii, 589.
Mercury alloys (*amalgams*), dilute, electrical conductivity of (WILLIAMS), ii, 946.
velocity of reaction of, with aqueous solutions (KLEIN), ii, 802.
use of, in volumetric analysis (SOMEYA), ii, 904, 1201.
with aluminium, reduction of sugars by (NANJI and PATON), i, 117.
with bismuth, lead, and tin, electrolysis of (KREMANN, KAPAUN, and BUDAN), ii, 313.
with cadmium, with calcium, and with potassium, electrolysis of (KREMANN, MÜLLER, and ORTNER), ii, 132.
with copper and silver (TAMMANN and STASSFURTH), ii, 377.
with potassium and sodium, effect of light on the action of water with (BHATNAGAR, PRASAD, and MUKERJI), ii, 811.
with silver and tin (TAMMANN and DAHL), ii, 502.
with sodium, preparation of (READ and LUCARINI), ii, 587.
electrolysis of (KREMANN, MÜLLER, and KIENZL), ii, 132.
Mercury compounds, antiseptic action of (JOACHIMOGLU and KLISSIUNIS), i, 466.
with ammonia salts (RAY and BANDOPADHYAY), ii, 813.
complex, spectrographic study of (JOB), ii, 887.
Mercury halides, solubilities of, in aqueous glycerol (MOLES and MARQUINA), ii, 283.
ammoniates of (BILTZ and MAU), ii, 1184.
helide (MANLEY), ii, 314, 696.
hydride, band spectrum of (LUDLOFF), ii, 1113.
sulphides, crystal structure of (BUCKLEY and VERNON), ii, 1037.
Mercuric salts, action of hydrogen sulphide on (PÉLABON), ii, 986.
complex halides of (NAIK and AVASARE), ii, 221.

Mercury:—
Mercuric salts, determination of, volumetrically (ELLMAN), ii, 1205.
Mercuric bromide, reduction of, by sodium formate (BOURION and PICARD), ii, 685.
oxybromides, formation of (PÉLABON), ii, 697.
chloride, equilibrium of ammonium and potassium chlorides, water, and (OSAKA and ANDO), ii, 123.
antiseptic action of, in various solvents (HELLENBRAND and JOACHIMOGLU), i, 466.
additive compound of 3:5-dibromo-*o*-toluidine and (HANN and SPENCER), i, 653.
oxychlorides (PÉLABON), ii, 222.
halides, double salts of, with corresponding halides of potassium and sodium (TOURNEUX and PERNOT), ii, 380.
hydroxide, precipitation of, electrometrically (BRITTON), ii, 1204.
iodide, allotropy of (BOKHORST and VAN DER ZEE; DAMIENS), ii, 490.
selenide (MOSER and ATYNSKI), ii, 583.
sulphide, crystal structure of (KOLKMEIJER, BIJVOET, and KARSSEN), ii, 93, 145, 484.
sols, formation of (MOROSOV), ii, 197.
telluride (BRUKL), ii, 895.
Mercurous salts, potentiometric determinations with (MÜLLER and AARFLOT), ii, 65.
action of ammonia on (FEIGL and SUCHARIPA), ii, 1184.
Mercurous chloride, preparation of, in saturated potassium chloride for use in the calomel electrode (EWING), ii, 571.
halides, crystal structure of (HAVIGHURST), ii, 748.
Mercury organic compounds (ALBERT), i, 844.
colloidal (ROSSI and BOCCHI), i, 601.
bactericidal action of (HENRY, SHARP, and BROWN), i, 1006.
unsymmetrical, preparation and decomposition of (KHARASCH and GRAFFLIN), i, 1107.
with 1-phenylpyrrole (PLANCHER and ROSSI), i, 601.
Mercury diaryls, compounds of, with diphenylcarbazide (FEIGL and LEDERER), i, 170.
mercaptide, compounds of mercury sulphide and (SACHS and BALASSA), i, 1034.
Mercury α-naphthyl compounds, reactions of arsenic trichloride with (MATSUMIYA), i, 1339.
di-bromo-, -chloro-, and -nitro-phenyls (HEIN, WAGLER, and RETTER), i, 1341.
di-*m*-chloro-*p*-aminophenyl (VECCHIOTTI and MICHETTI), i, 1058.
Mercuric methyl carbylamine and cyanide (ENKLAAR), i, 1394.
Mercuri-*p*-benzyloxybenzoic anhydride, hydroxy- (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 1473.
Mercuribis(hydroxymercuri-β-naphtholazobenzenesulphonic acid) (PROSKOURIAKOFF and RAIZISS), i, 1108.
Mercuribis(nitrobenzeneazosàlicylic acid) (PROSKOURIAKOFF and RAIZISS), i, 1108.
Mercuribis-*o*-thiolbenzoic acid, and its salts and derivatives (SACHS and BLESSL), i, 1274.
Mercuri-2-chloroanilines (VECCHIOTTI and MICHETTI), i, 1058.
Mercuridihydroxyazobenzenesulphonic acid, *di*hydroxy-, and its potassium salt (PROSKOURIAKOFF and RAIZISS), i, 1107.
Mercurisethoxychaulmoögric anhydride, hydroxy- (DEAN, WRENSHALL, and FUJIMOTO), i, 545.
Mercurihydroxyazobenzenesulphonic acid, *di*hydroxy-, and its sodium salt (PROSKOURIAKOFF and RAIZISS), i, 1108.
Mercuri-β-naphtholazobenzenesulphonic acid, *di*hydroxy- (PROSKOURIAKOFF and RAIZISS), i, 1108.
Mercuri-*o*-phenoxybenzoic anhydride, hydroxy- (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 1473.
Mercurisalicylic acids, 3- and 5-cyano-, and their salts (BOEDECKER and WUNSTORF), i, 1107.
Mercurisulphophenoxide, sodium salt (SACCHARIN-FABRIK AKTIEN-GESELLSCHAFT VORM. FAHLBERG, LIST & Co.), i, 1197.
Mercurisulphotolyloxide, sodium salts (SACCHARIN-FABRIK AKTIEN-GESELLSCHAFT VORM. FAHLBERG, LIST & Co.), i, 1197.
Mercury determination and separation:—
determination of, volumetrically, with potassium cyanide (RUPP, WEGNER, and MAIHS), ii, 716.
separation of copper and (SPACU), ii, 1004.
separation of iron from (SPACU), ii, 1206.

Mercury cathode. See Cathodes.
Mercury lamp. See Lamp.
Meriandra benghalensis, constituents of oil of (PALAZZO and ALINARI), i, 418.
Merrillite in meteorites (SHANNON and LARSEN), ii, 321.
Mesaconic acid, esters, action of ammonia on (STOSIUS and PHILIPPI), i, 892.
Mesitylene, *ωω'-di*bromo-, preparation of (v. BRAUN and ENGEL), i, 382.
Mesityl oxide, *p*-nitrophenylhydrazone of (v. AUWERS and KREUDER), i, 1454.
Mesobilirubin and its copper salt, and bromo- (FISCHER and NIEMANN), i, 1198.
Mesobilirubinogen, absorption coefficient of (NIEMANN), i, 1206.
Mesoporphyrin, conversion of, into ætioporphyrin (FISCHER and MÜLLER), i, 845.
Mesothorium, β-ray spectrum of (BLACK; THIBAUD), ii, 10.
Mesothorium-2, magnetic spectrum of β-rays from (YOVANOVITCH and D'ESPINE), ii, 85.
γ-ray spectrum from (THIBAUD), ii, 85.
period of (WIDDOWSON and RUSSELL), ii, 468.
Metabolism in avitaminosis (SHINODA), i, 610.
influence of sexual glands on (KORENCHEVSKY and CARR), i, 1513.
of aromatic acids (CERECEDO and SHERWIN), i, 100.
human, of ammonium salt and urea (ADOLPH), i, 1353.
calcium, in laying hens (BUCKNER, MARTIN, and PETER), i, 190.
in man (JANSEN), i, 190.
calcium and creatine, effect of parathyroid feeding on (WOODMAN), i, 1210.
calcium and phosphorus, effect of irradiation and diet on (HENDERSON), i, 485.
in men (HEINELT), i, 1497.
carbohydrate (LUNDSGAARD and HOLBØLL), i, 1494.
in relation to blood phosphates (BOLLIGER and HARTMAN), i, 1000.
hormone regulation of (GOTTSCHALK), i, 481.
in the liver (BRUGSCH and HORSTERS), i, 483.
in liver diseases (v. FEJÉR and HETÉNYI), i, 725.
of tumours (C. F. and G. T. CORI), i, 999.
Metabolism, intermediate carbohydrate, effect of insulin on (BRUGSCH and HORSTERS), i, 208.
cholesterol, effect of insulin on (NITZESCU and CADARIU), i, 1364.
creatine and purine, relation of histidine and arginine (ROSE and COOK), i, 1003.
cystine, in children (LIGNAC), i, 610.
of frogs (HSÜ), i, 1208.
of galactose (ROWE and CHANDLER), i, 1354.
of glycerol in diabetes (CHAMBERS and DEUEL), i, 1352.
of glyoxalines (LEITER), i, 1003.
lactic acid, in the animal organism (MEVERHOF and MEIER), i, 612.
effect of insulin and other substances on (COLLAZO and SUPNIEWSKI), i, 342.
in diabetes (COLLAZO and LEWICKI), i, 1364.
mineral, in the animal organism (SASAKI), i, 331.
in lactation, effect of ultra-violet light on (ORR, MAGEE, and HENDERSON), i, 1210.
of cows (MONROE and PERKINS; MILLER, YATES, JONES, and BRANDT), i, 1498.
nitrogen, action of acetoacetic acid on (LABBÉ and LAVAGNA), i, 191.
of ruminants, effect of asparagine and ammonium nitrate on (STARZEWSKA), i, 1115.
and sulphur, relation between (WILSON), i, 729; (SEUFFERT, ITO, and YOKOYAMA), i, 730.
human, effect of iodides on (GRABFIELD and PRENTISS), i, 1002.
of isolated organs, effect of amino-acids on (MÉLON), i, 190.
phosphate (DEMUTH), i, 1497.
phosphoric acid, in the submaxillary gland (CAMIS), i, 191.
phosphorus, of moulds (SCHNÜCKE), i, 204.
of pigments (KORTSCHAGIN), i, 200.
protein, effect of ultra-violet light on (YOSHINE), i, 1356.
influence of liver on (ROSENBAUM), i, 464.
purine, in diabetes (LE BRETON and KAYSER), i, 610.
in man (HARPUDER), i, 613.
of sulphur (LEWIS), i, 1354.
tryptophan (ROBSON), i, 297.
Metacyanilic acid, and its salts and derivatives (WIELAND), i, 1048.
Metaindene (STOBBE and FÄRBER), i, 20.

Metals, structure of (CZOCHRALSKI), ii, 186.
theory of (FRENKEL), ii, 479.
mixed vapours of, absorption spectra of (BARRATT), ii, 927.
and their salts, cathode spectra of (KIMURA and NAKAMURA), ii, 166, 167.
reflective power of (EBELING), ii, 643.
electron theory of (ORNSTEIN), ii, 733.
kinetic theory of conduction of (DAVIES and LIVENS), ii, 630.
theory of conductivity of (CASSEL; WOLF), ii, 942.
electrical conductivity of (SIMON), ii, 94.
and their place in the periodic system (EPSTEIN), ii, 623.
electrical conductivity of films on (TAMMANN and BREDEMEIER), ii, 541.
effect of a magnetic field on the electrical resistance of (WILLIAMS), ii, 753.
photo-electric resistance of, at low temperatures (BARTLETT), ii, 943.
photo-electric effect on films of (GROSS), ii, 344.
used as electrodes, polarisation of (DRESBACH and HOSMER), ii, 1068.
electrodeposition of, from non-aqueous solutions (MÜLLER, PINTER, and PRETT), ii, 882.
deposition of, by molecular radiation (ESTERMANN), ii, 1053.
from pyridine (MÜLLER, HOLZL, KNAUS, PLANISZIG, and PRETT), ii, 133; (MÜLLER, HÖNIG, and KONETSCHNISS), ii, 134.
emission of electrons by (BECKER), ii, 616; (KOLLER), ii, 617.
electrode potential of (HEYROVSKÝ), ii, 404.
potentials of, against pure water (SMITS, GERDING, and KROON), ii, 795.
potential difference between electrolytes and (GUYOT), ii, 402.
potential changes in (DOWLING), i, 796.
fall of potential in the gas emitted from glowing (v. LAUE and SEN), ii, 7.
lattice constants of (DAVEY), ii, 747.
passivity of (BECKER and HILBERG), ii, 405; (RUSSELL), ii, 406.
influence of anions on (ROTHMUND, EISENKOLB, and STEINHERZ), ii, 131.
anodic behaviour and passivity of (SBORGI), ii, 550.
Metals, influence of colloids on cathodic overvoltage of (MARIE and LEJEUNE), ii, 115.
Hall and other effects in (HALL), ii, 846.
ionisation of (PISARSHEVSKI), ii, 210.
escape of positive ions from (GÜNTHER-SCHULZE), ii, 342.
free electrons with (HALL), ii, 252.
emission of electrons from films of, exposed to Röntgen rays (SIMONS), ii, 81.
bombardment of, by electrons (FARNSWORTH), ii, 169.
specific heat of (BEHRENS and DRUCKER), ii, 24.
heats of oxidation of (MOOSE and PARR), ii, 208.
relation between density and temperature of condensation of vapours of (ESTERMANN), ii, 962.
elastic modulus of (WIDDER), ii, 1043.
corrosion of (MAASS and LIEBREICH), ii, 140; (EVANS), ii, 688; (WHITMAN and RUSSELL), ii, 689.
by acids in capillaries (MCCULLOCH), ii, 879.
by carbon tetrachloride (RHODES and CARTY), ii, 1084.
by naphtha solutions of sulphur and its compounds (WOOD, SHEELY, and TRUSTY), ii, 980.
self-diffusion in (HEVESY and OBRUTSHEVA), ii, 500.
velocity of diffusion of, in mercury (COHEN and BRUINS), ii, 648.
hardening of (SCHIEBOLD), ii, 186; (PÓLÁNYI; SACHS), ii, 370.
effect of temperature on hardness of (SAUERWALD and KNEHANS), ii, 279.
adhesion between surfaces of (SAUERWALD and JAENICHEN), ii, 387.
fusion of (JOUNIAUX), ii, 645.
effect of alloying and cold-drawing on crystals of (ROSBAND and SCHMIDT), ii, 488.
cold working of (GEISS and VAN LIEMPT), ii, 372.
tensile strength of, in relation to temperature and cold work (INGALL), ii, 190.
temper colours of (MASON), ii, 108; (BANGHAM and STAFFORD), ii, 138; (EVANS), ii, 288.
transparent films on (MÜLLER), ii, 1039.
deformation and recrystallisation of (GLOCKER), ii, 272.
volume of channels to the surface of (TAMMANN and BREDEMEIER), ii, 388.

Metals, change in volume of, during solidification (ENDO), ii, 281.
periodic dissolution of (HEDGES and MYERS), ii, 309.
equilibrium in systems of, in relation to the ideal solubility curve (ANDREWS and JOHNSTON), ii, 206.
equilibria of fused salts with (LORENZ), ii, 536, 537.
action of ammonium chloride vapour on (HOFMANN, HARTMANN, and NAGEL), ii, 685.
action of iodine on (PARSONS), ii, 880.
action of nitric acid on (DHAR), ii, 315.
affinity of, for sulphur (JELLINEK and ZAKOVSKI), ii, 401.
replacement of, from solutions of their salts (BERGSTROM), ii, 885.
precipitation of, from their salts, by metals in liquid ammonia (KRAUS and KURTZ), ii, 577.
of the cerium group, double nitrates of copper and cadmium with (CAROBBI), ii, 222.
colloidal. See Colloidal metals.
crystalline (GRÜNEISEN and GOENS), ii, 22, 488.
finely-divided, catalysis by (FORESTI), ii, 692.
of Group III, separation of, and phosphoric acid (JÄRVINEN), ii, 602.
heated, emission of ions from (ROY), ii, 731.
of the iron group and their alloys as catalysts (REMY and GÖNNINGEN), ii, 1176.
noble, catalytic action of (ZELINSKI and TUROVA-POLLAK), i, 1052.
of the platinum group, arc spectra of (MEGGERS), ii, 454.
colloidal, catalytic action of (PAAL and BOETERS), ii, 1072; (REMY and GÖNNINGEN), ii, 1176; (DUPARC, WENGER, and URFER), ii, 1177.
and their alloys, synthesis of water with (REMY and SCHAEFFER), ii, 563.
rare, fusion of ores of (SEARS and QUILL), ii, 580.
determination and separation of (MOSER and LESSING), ii, 718.
strained, Röntgen ray analysis of (ONO), ii, 746.
determination of, in amalgams (RUSSELL and EVANS), ii, 1205.
Metal ammines, composition of ions of (DE WIJS), ii, 889.
Metal ammoniums (KRAUS and JOHNSON), ii, 389.
Metal wires, influence of occluded gas on the electrical resistance of (SEXL), ii, 642.
exploded, spectra of (SMITH), ii, 1017.
heated, emission of electrons by (ROLLA and PICCARDI), ii, 1018.
Metallic bromides, decomposition potentials of, in molten aluminium bromide (ISBEKOV), ii, 796.
chlorides, vapour pressure of (MAIER), ii, 850.
use of, in decomposition of aliphatic acids (MAILHE), i, 503.
fused, electrical conductivity of (BILTZ and KLEMM), ii, 127.
couples, decomposition of water by (HEDGES and MYERS), ii, 306.
halides, ultra-violet absorption spectra of (GETMAN), ii, 837.
reduction of, by hydrogen (DE CARLI), ii, 51.
dithiolated, heats of chelation of (MORGAN, CARTER, and HARRISON), ii, 1042.
hydroxides, electrometric precipitation of (BRITTON), ii, 1203, 1204.
ageing of (FRICKE), ii, 578.
amphoteric (JANDER and SCHULZ), ii, 701.
iodides, action of $\alpha\beta$-dibromo-compounds on (VAN DUIN), i, 802; (CONANT, KIRNER, and HUSSEY), i, 803.
and selenides, preparation of (FISCHER), ii, 808.
lustre (BANCROFT and ALLEN), ii, 658.
oxides, adsorption of vapours by (PEARCE and ALVARADO), ii, 381.
dissociation of (BORN), ii, 785.
reduction of, by alkali cyanides (HACKSPILL and GRANDADAM), ii, 419.
lower, preparation of (FRIEDRICH and SITTIG), ii, 889.
solid, reactions between (BALAREFF), ii, 893.
salts, scattering of light by solutions of (SWEITZER), ii, 512.
electrical conductivity as an indicator in titration of, with alkali hydroxides (DEMJANOVSKI), i, 1113.
temperature of vapours above boiling solutions of (BAHLKE and WILSON), ii, 514.
thermal ionisation of (ROLLA and PICCARDI), ii, 1018.
vapour pressure of (LORENZ and HERZ), ii, 493.
molecular volumes of, at the melting point (LORENZ and HERZ), ii, 840.

Metallic salts, solubilities of, in organic solvents (MÜLLER), ii, 380.
solvolysis of, in sulphuric acid (DAVIDSON), ii, 505.
compounds of, formed in the electric arc (PECZALSKI and MOKRZYCKI), ii, 814.
oxidation of, by oxygen (REINDERS and VLES), ii, 308.
polyatomic, dissociation of (SASAKI), ii, 512.
solid, electrical conductivity of, in relation to their spectra (VAILLANT), ii, 165.
separation of, by fractional precipitation (RUFF and HIRSCH), ii, 992.
See also Salts.
sulphates, thermal decomposition of (MARCHAL), ii, 870, 1162.
sulphides, electrolytic preparation of (FISCHER), ii, 807.
of the heavy metals, analysis of (FEIGL, PAVELKA, and SCHACHERL), ii, 70.
tellurides, preparation of (BRUKL), ii, 895.
Metallography, modified reflexion in (CZOCHRALSKI), ii, 487.
Metastability, in relation to physical constants (COHEN), ii, 1138.
and allotropy (COHEN and HELDERMAN), ii, 23; (COHEN and MOESVELD), ii, 374, 950.
Meta-stationary states (SMEKAL), ii, 1022.
Meteorites, merrillite and chlorapatite in (SHANNON and LARSEN), ii, 321.
iron–nickel, structure of (VOGEL), ii, 709.
Methæmoglobin (CONANT and FIESER), i, 455.
formation of (NEILL and HASTINGS; KLEIN), i, 709; (MEIER), i, 1476.
re-formation of (SAKURAI), i, 1199.
oxidation-reduction of (NEILL), i, 868, 993.
oxygen content of (QUAGLIARIELLO), i, 89; (NICLOUX and ROCHE), i, 993.
determination of (CONANT and FIESER), i, 456.
Methane, catalytic formation of (CHAKRAVARTY and GHOSH), ii, 1175.
equilibria in formation of (NEUMANN and JACOB), ii, 532.
and its homologues, diffusion of light by (CABANNES and GAUZIT), ii, 1030.
critical potential of, and its ultra-violet absorption (GLOCKER), ii, 262.
influence of vapours of organic liquids on the inflammability of mixtures of air and (JORISSEN and MEUWISSEN), ii, 53.
Methane, halogen derivatives, reactivities of, with various reagents (PETRENKO-KRITSCHENKO, TALMUD, BUTMI DE KATZMAN, and GANDELMAN), ii, 802.
bromonitro-, reaction of aromatic compounds with, in presence of aluminium chloride (SHERRILL), i, 237.
bromo*di*nitro-, potassium salt (TRÉNEL and WILKENDORF), i, 112.
bromo*tri*nitro- (SCHMIDT, BARTHOLOMÉ, and ASMAS), i, 136.
Methanedisulphonic acid, barium salt (KOLKER and LAPWORTH), i, 353.
Methanesulphonic acid, chlorobromo-, optical activity of (READ and MCMANUS), i, 1126.
Methanesulphonyl groups, directing influence of (TWIST and SMILES), i, 894.
Methazonic acid, cyano-. See Propionitrile, β-nitro-α-oximino-.
Methenyl-5′-(5′-methyl)hydantoin-5-hydantoic acid, bromo- (DAVIDSON and JOHNSON), i, 584.
Methiodo-*o*-methyl-ψ-geneserolimethine (POLONOVSKI and POLONOVSKI), i, 293.
Methoxyacethydroxamic acid, and its potassium salt and derivatives (JONES and POWERS), i, 14.
2-Methoxyacetophenone, 4:6-*di*hydroxy- (SONN and BÜLOW), i, 1268.
***p*-Methoxyacetophenone**, phenylhydrazones of (KORCZYŃSKI and KIERZEK), i, 973.
Methoxyacetophenoneoximes (v. AUWERS, LECHNER, and BUNDESMANN), i, 266.
4(5′-Methoxy-4′-acetoxybenzylidene)-2-phenyl-5-oxazolone, 3′-nitro- (SONN, MÜLLER, BÜLOW, and MEYER), i, 933.
Methoxyacetylanthranils (HEILBRON, KITCHEN, PARKES, and SUTTON), i, 1321.
γ-Methoxyallene (BOURGUEL), i, 770.
Methoxyallyloxybenzaldehydes (SONN and PATSCHKE), i, 1280.
6-Methoxyanthraquinone, 8-amino-1:8-*di*hydroxy-, 1:8-*di*hydroxy-, and 1:3:8-*tri*hydroxy- (EDER and HAUSER), i, 563.
3-Methoxyatophan. See 3-Methoxy-2-phenylquinoline-4-carboxylic acid.
3-Methoxybenzaldehyde, bromo and nitro derivatives, and their derivatives (HODGSON and BEARD), i, 675.
4-Methoxybenzaldehyde, 5-nitro-2-hydroxy-, and its derivatives (RAO, SRIKANTIA, and IYENGAR), i, 675.

Methoxybenzaldehydes, bromohydroxy- and nitrohydroxy-, and their *p*-nitrophenylhydrazones (RUBENSTEIN), i, 1279.

4-Methoxybenzamide, 3:5-*di*nitro- (LINDEMANN and WESSEL), i, 1099.

***p*-Methoxybenzil**, oximes of, and their derivatives (MEISENHEIMER, LANGE, and LAMPARTER), i, 1073.

Methoxybenzils, *di*hydroxy-, and their diacetyl derivatives (MARSH and STEPHEN), i, 1158.

3-Methoxybenzoic acid, 4-bromo- (HODGSON and BEARD), i, 675.

4-Methoxybenzoic acid, 5-bromo-2-amino-, and its copper salt (GRIFFITH and HOPE), i, 827.

***o*- and *m*-Methoxybenzoic anhydrides** (RULE and PATERSON), i, 29.

Methoxybenzopyrones, 3-hydroxy- (PFEIFFER, OBERLIN, and KONERMANN), i, 1304.

2-Methoxy-*p*-benzoquinoneimine (KEHRMANN and HOEHN), i, 561.

1-Methoxy-2:3-benzoxazine (GRIFFITHS and INGOLD), i, 1190.

***o*-Methoxybenzoyl cyanide** (MARSH and STEPHEN), i, 1158.

4-Methoxybenzoyl chloride, 3:5-*di*nitro- (LINDEMANN and WESSEL), i, 1099.

4-Methoxybenzoylformic acid, 2-bromo-2-hydroxy- and 2-hydroxy- (FRIES and SAFTIEN), i, 570.

Methoxybenzoyloxybenzamides (ANSCHÜTZ, ASCHENBERG, KUCKERTZ, KRONE, RIEPENKRÖGER, and ZERBE), i, 666.

6-Methoxybenzthiopyrone (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1305.

2-*o*-Methoxybenzylidenecoumaranone, 4:6-*di*hydroxy-, diacetyl derivative, and its derivatives (KALFF and ROBINSON), i, 1303.

2-Methoxybenzylidenediacetophenone (DILTHEY and FLORET), i, 56.

***p*-Methoxybenzylidenemalonic acid**, ethyl ester (CHRZASZCZEWSKA), i, 956.

Methoxybenzylmandelic acids (MALKIN and ROBINSON), i, 559.

3-*p*-Methoxybenzyloxindole (WINDAUS and EICKEL), i, 33.

Methoxybenzyloxybenzaldehydes (SONN and PATSCHKE), i, 1280.

Methoxy-γ-bromo-β-methoxypropylbenzenes (SCHMIDT, BARTHOLOMÉ, and ASMAS), i, 136.

Methoxychelidonine, and its salts and derivatives (GADAMER and WINTERFELD), i, 238.

4-Methoxy-ω-chloroacetophenone, 5-bromo-2-hydroxy- (FRIES and SAFTIEN), i, 570.

***p*-Methoxy-γ-chlorallylbenzene** (BERT), i, 804.

3-Methoxy-6-ββ-*di*chloroethyl-*p*-toluic acid (MELDRUM and ALIMCHANDANI), i, 1272.

3-Methoxy-6-βββ-*tri*chloro-α-hydroxyethyl-*p*-toluic acid, and its calcium salt and acetyl derivative (MELDRUM and ALIMCHANDANI), i, 1272.

Methoxychromanones, and their derivatives (PFEIFFER, OBERLIN, and KONERMANN), i, 1304.

3-Methoxycinnamic acid, α-amino-β-5-nitro-4-hydroxy-, α-benzoyl derivative (SONN, MÜLLER, BÜLOW, and MEYER), i, 933.

***p*-Methoxycinnamic acids**, bromo- (HARIHARAN and SUDBOROUGH), i, 1149.

4-Methoxycinnamic anhydride (ROBINSON and SHINODA), i, 1301.

***p*-Methoxycinnamylidene-*m*-nitroacetophenone** (GIUA), i, 1283.

6-Methoxycoumaran-2:3-dione (FRIES and SAFTIEN), i, 570.

6-Methoxycoumaran-3-one semicarbazone (SONN and PATSCHKE), i, 282.

6-Methoxycoumaran-3-one, bromo and chloro derivatives, and their derivatives (FRIES and SAFTIEN), i, 570.
2-oximino- (FRIES and SAFTIEN), i, 570.

6-Methoxycoumaran-3-one-2-*p*-aminoanil (FRIES and SAFTIEN), i, 571.

6-Methoxycoumaran-3-one-2-anil, and 5-bromo- (FRIES and SAFTIEN), i, 570.

6-Methoxycoumaran-3-one-2-*p*-dimethylaminoanil (FRIES and SAFTIEN), i, 570.

6-Methoxy-*m*-cresol, 5-bromo-2:4-*di*nitro- (KOHN and MARBERGER), i, 1265.

α-Methoxy-αβ-dibenzoylethylene (CONANT and LUTZ), i, 682.

α-Methoxy-αβ-di-(4-chlorobenzoyl)-ethylene (CONANT and LUTZ), i, 682.

α-Methoxy-αβ-di-(6-chloro-*m*-toluoyl)-ethylene (CONANT and LUTZ), i, 682.

7-Methoxy-4:3′-dicoumaryl (DEY and ROW), i, 150.

α-Methoxy-αβ-di-(2:4-dimethylbenzoyl)-ethylene (CONANT and LUTZ), i, 682.

5-Methoxy-1:2-dihydrocoumarone
3:6-*di*hydroxy-, and its diacetyl derivative (DEAN and NIERENSTEIN), i, 281.

3-Methoxy-9:10-dihydrophenanthrene-9-carboxylic acid, and its derivatives (WINDAUS and EICKEL), i, 33.

5-Methoxy-1:2-dihydro-3:6-quinocoumarone (DEAN and NIERENSTEIN), i, 281.

Methoxydihydrothebenol (SPEYER and ROSENFELD), i, 962.

2-Methoxy-3:5-dimethylacetophenone, and its oxime (V. AUWERS, LECHNER, and BUNDESMANN), i, 266.

4′-Methoxy-4″-dimethylamino-2:4-distyrylbenzopyrylium chloride, 7-hydroxy- (HEILBRON, WALKER, and BUCK), i, 694.

7-Methoxy-4′-dimethylamino-2-styryl-1-methyl-4-quinazolone (HEILBRON, KITCHEN, PARKES, and SUTTON), i, 1321.

Methoxydimethyldehydroindoles, and their picrates (SPÄTH and BRUNNER), i, 574.

Methoxydimethyl-4-quinazolones (HEILBRON, KITCHEN, PARKES, and SUTTON), i, 1321.

Methoxydiphenylacetic acid (STAUDINGER, DYCKERHOFF, KLEVER, and RUZICKA), i, 934.
and its acid chloride (KAHIL and NIERENSTEIN), i, 52.

4-Methoxy-2:5-diphenylfuran (CONANT and LUTZ), i, 682.

2-Methoxydiphenylmethyl chloride (KAHIL and NIERENSTEIN), i, 52.

2-Methoxydiphenylmethyl chloromethyl ketone (KAHIL and NIERENSTEIN), i, 52.

***o*-Methoxydiphenyl-α-naphthylcarbinol**, and its chloride (GOMBERG and MCGILL), i, 1270.

***o*-Methoxydiphenyl-α-naphthylmethyl**, and its *per*oxide (GOMBERG and MCGILL), i, 1270.

β-Methoxy-αγ-diphenylpropane, α-hydroxy- (MALKIN and ROBINSON), i, 559.

***p*-Methoxydiphenylsuccinic acid**, and its nitrile (BRAND and LOEHR), i, 684.

Methoxy-2:4-distyrylbenzopyrylium chlorides, *di-* and *tri*-hydroxy- (HEILBRON, WALKER, and BUCK), i, 694.

***p′*-Methoxydistyryl ketone**, *p*-nitro- (PFEIFFER), i, 409.

Methoxyditoluimides, hydroxy- (ANSCHÜTZ and ASCHENBERG), i, 667.

α-Methoxy-αβ-ditoluoylethylene (CONANT and LUTZ), i, 682.

α-Methoxy-αβ-di-(2:4:6-trimethylbenzoyl)-ethylene (CONANT and LUTZ), i, 682.

3-Methoxy-2-ethoxybenzaldehyde, nitration of (RUBENSTEIN), i, 1428.

4-Methoxy-2-ethoxybenzaldehyde, and 5-nitro-, and their derivatives (RAO, SRIKANTIA, and IYENGAR), i, 676.

4-Methoxy-3-ethoxybenzaldehyde, and its oxime (SPÄTH and BERNHAUER), i, 294.

4-Methoxy-3-ethoxybenzamide (SPÄTH and BERNHAUER), i, 294.

6-Methoxy-7-ethoxy-3:4-dihydro*iso*quinoline, and its picrate (SPÄTH and DOBROWSKY), i, 1085.

7-Methoxy-6-ethoxy-3:4-dihydro*iso*quinoline, and its picrate (SPÄTH and DOBROWSKY), i, 1085.

Methoxyethoxy-1-keto-1:2:3:4-tetrahydro*iso*quinolines (SPÄTH and DOBROWSKY), i, 1086.

3-Methoxy-8-ethoxy-2-*p*-methoxyphenylbenzopyrylium salts (RIDGWAY and ROBINSON), i, 55.

4′-Methoxy-8-ethoxy-2-phenylbenzopyrylium ferrichloride, 3-chloro- (RIDGWAY and ROBINSON), i, 693.

α-3-Methoxy-4-ethoxyphenylethane, β-amino-, and its derivatives (SPÄTH and DOBROWSKY), i, 1085.

α-4-Methoxy-3-ethoxyphenylethane, β-amino-, and its derivatives (SPÄTH and DOBROWSKY), i, 1085.

3-Methoxy-4-ethoxystyrene, ω-nitro- (SPÄTH and DOBROWSKY), i, 1085.

4-Methoxy-3-ethoxystyrene, ω-nitro- (SPÄTH and DOBROWSKY), i, 1085.

β-Methoxyethylcarbimide (JONES and POWERS), i, 14.

5-Methoxy-3-ethyl-4:5-dihydrouric acid, 4-hydroxy- (BILTZ and PEUKERT), i, 1463.

4′-Methoxyflavanone (HATTORI), i, 1444.

3-Methoxyflavone, 7-hydroxy- (ALLAN and ROBINSON), i, 149.

4′-Methoxyflavone (HATTORI), i, 1444.

7-Methoxy*iso*flavone (BAKER and ROBINSON), i, 1299.

2-Methoxy-Δ^1-*cyclo*hexene, 1-cyano- (V. AUWERS, BAHR, and FRESE), i, 312.

7-Methoxy-3-homoveratryl-2-methylchromone (BAKER and ROBINSON), i, 926.

8-Methoxy-2-α-hydroxylcinnamylmethylquinoline hydrochloride (TRÖGER and DANEHL), i, 975.

3-Methoxy-2-β-hydroxy-β-*o*-hydroxyphenylethylquinoline, and its diacetyl derivative (TRÖGER and DUNKER), i, 434.

3-Methoxy-2-β-hydroxy-β-*p*-methoxyphenylethylquinoline, and its salts (TRÖGER and DUNKER), i, 434, 975.

3-Methoxy-2-β-*p*-hydroxy-*m*-methoxystyrylquinoline, and its salts (TRÖGER and DUNKER), i, 434.

4-Methoxy-2-β-*p*-hydroxy-3′-methoxystyrylquinoline, and its hydrochloride (TRÖGER and DUNKER), i, 434.

8-Methoxy-2-β-hydroxy-β-*o*- and -*m*-nitrophenylethylquinolines, and their salts (TRÖGER and DANEHL), i, 974

3-Methoxy-2-β-hydroxy-β-phenylethylquinoline, and its salts (TRÖGER and DUNKER), i, 434.
4-Methoxy-2β-*o*-hydroxystyrylquinoline (TRÖGER and DUNKER), i, 434.
3-Methoxy-2-β-*mp*-*di*hydroxystyrylquinoline, and its *per*chlorate (TRÖGER and DUNKER), i, 434.
1(or 3)-Methoxy*iso*indole-2-oxide (GRIFFITHS and INGOLD), i, 1191.
6-Methoxy-3-keto-2-coumaran-6′-dimethylaminobenzthiazole-2′-spiran, and its derivatives (FRIES and SAFTIEN), i, 571.
***ar*-7-Methoxyketotetrahydronaphthalenes**, and their derivatives (RIEDEL), i, 407.
Methoxyl groups, determination of microchemically (SMITH), ii, 905.
1-Methoxy-3-*o*-methoxyphenyl-5-*p*-dimethylaminostyryl-$\Delta^{1,5}$-*cyclo*hexadiene-2-carboxylic acid, ethyl ester (HEILBRON, FORSTER, and WHITWORTH), i, 1285.
7-Methoxy-4-*p*-methoxystyrylcoumarin (DEY and ROW), i, 953.
4-Methoxy-2-β-*p*-methoxystyrylquinoline, and its salts (TRÖGER and DUNKER), i, 434.
4-Methoxy-2-β-*o*-methoxystyrylquinoline, and its dibenzyl ether (TRÖGER and DUNKER), i, 434.
Methoxymethylacetophenones, and their oximes (v. AUWERS, LECHNER, and BUNDESMANN), i, 266.
Methoxymethylanthranilic acids, and their amides (HEILBRON, KITCHEN, PARKES, and SUTTON), i, 1321.
3-Methoxy-2-methylbenzopyrone, 7-hydroxy-, and its acetyl derivative (ALLAN and ROBINSON), i, 148.
Methoxymethylcarbimide (JONES and POWERS), i, 14.
3-Methoxy-2-methylchromone, 5:7-*di*hydroxy- (KALFF and ROBINSON), i, 1303.
Methoxymethylene-*p*-bromoaniline. See Methyl *iso*formo-*p*-bromoanilide.
3-Methoxy-6:7-methylenedioxy-2-*mp*-dimethoxyphenylquinoline (PRATT and ROBINSON), i, 422.
3″-Methoxy-3′:4′-methylenedioxy-2:4-distyrylbenzopyrylium chloride, 4″:7-*di*hydroxy- (HEILBRON, WALKER, and BUCK), i, 695.
3-Methoxy-6:7-methylenedioxy-2-*p*-methoxyphenylquinoline (PRATT and ROBINSON), i, 422.
Methoxy-3′:4′-methylenedioxy-2-styrylmethyl-4-quinazolones (HEILBRON, KITCHEN, PARKES, and SUTTON), i, 1321.
3-Methoxy-6:7-methylenedioxy-2-*mm′p*-trimethoxyphenylquinoline, and its salts (PRATT and ROBINSON), i, 423.
9-Methoxymethylenefluorene (WIELAND and KRAUSE), i, 902.
Methoxy-2-methylindoles (SPÄTH and BRUNNER), i, 574.
Methoxymethylisatoic anhydrides (HEILBRON, KITCHEN, PARKES, and SUTTON), i, 1321.
3-Methoxy-3-methyl*cyclo*propane-1:2-dicarboxylic acid, constitution of, and its anhydride (GOSS, INGOLD, and THORPE), i, 550.
Methoxy-2-methyl-4-quinazolones (HEILBRON, KITCHEN, PARKES, and SUTTON), i, 1321.
3-Methoxy-2-methylquinoline, and its salts (TRÖGER and DUNKER), i, 433.
8-Methoxy-2-methylquinoline, condensation of *o*- and *m*-nitrobenzaldehydes with (TRÖGER and DANEHL), i, 974.
10-Methoxy-β-naphthacridine, and its 12-carboxylic acid (SAFTIEN), i, 1318.
1-Methoxynaphthalene, 5-bromo- (FUSON), i, 254.
2-Methoxy-3-naphthamide (LESSER, KRANEPUHL, and SAD), i, 1425.
5-Methoxy-α-naphthoic acid (FUSON), i, 254.
2-Methoxy-3-naphthonitrile (LESSER, KRANEPUHL, and SAD), i, 1425.
3-Methoxy-β-naphthyldi-α-naphthafluorene (GOMBERG and MCGILL), i, 1270.
8-Methoxy-2-*m*-nitrostyrylquinoline, and its salts and derivatives (TRÖGER and DANEHL), i, 974.
ε-Methoxy-Δ^{α}-pentinene-γδ-diol (LESPIEAU), i, 1376.
4-Methoxyphenol, *di*bromo- and *di*chloro-*di*nitro-, and their salts (KOHN and MARBERGER), i, 1265.
β-*o*-Methoxyphenoxypropionic acid (PFEIFFER, OBERLIN, and KONERMANN), i, 1304.
***p*-Methoxyphenyl *m*-acetamidostyryl ketone** (PFEIFFER), i, 410.
***p*-Methoxyphenylamino-*p*-methoxyphenyl-acetonitrile** and **-carbamide** (COGHILL), i, 583.
***p*-Methoxyphenyl*m*-aminostyryl ketone**, and its benzoyl derivative (PFEIFFER, PRAHL, FITZ, and STOLL), i, 681.
3-Methoxy-3-phenylbenzopyran, and 2-chloro- and 2-hydroxy- (KAHIL and NIERENSTEIN) i, 53.
2-*p*-Methoxyphenylbenztriazole (ELBS), i, 163.
***p*-Methoxyphenyl benzyl diketone** (MALKIN and ROBINSON), i, 559.

2-*p*-Methoxyphenyl-3-benzylquinoxaline (MALKIN and ROBINSON), i, 559.

***α*-3-Methoxyphenyl-*n*-butane, *α*-4-hydroxy-, and its benzoyl derivative** (NOMURA and HOTTA), i, 1156.

***p*-Methoxyphenylcarbamide** (COGHILL and JOHNSON), i, 582.

***p*-Methoxyphenyl *β*-2:3-dimethoxyphenylethyl ketone**, and its oxime (PFEIFFER, ARMBRUSTER, BACKES, and OBERLIN), i, 270.

***p*-Methoxyphenyl *β*-*p*-dimethoxystyryl ketone** (MALKIN and ROBINSON), i, 559.

***p*-Methoxyphenyl 2:3-dimethoxystyryl ketone** (PFEIFFER, ARMBRUSTER, BACKES, and OBERLIN), i, 270.

β-Methoxypropylbenzene, γ-bromo- (SCHMIDT, BARTHOLOMÉ, and ASMAS), i, 136.
4-Methoxypyridanthrone (SEKA and SCHRECKENTAL), i, 1316.
2-Methoxypyridine, 5-amino-, 5-iodo-, and 5-nitro-, and their derivatives (MAGIDSON and MENSCHIKOFF), i, 302.
6-Methoxy-4-quinolyl ε-aminoamyl ketone, and its dipicronolate (RUZICKA, SEIDEL, and LIEBL), i, 289.
6-Methoxy-4-quinolyl ε-benzoylmethylamino-α-carbethoxyamyl ketone (RUZICKA, SEIDEL, and LIEBL), i, 289.
6-Methoxy-4-quinolyl ε-methylaminoamyl ketone, and its dipicrate (RUZICKA, SEIDEL, and LIEBL), i, 289.
6-Methoxy-4-quinolyl *N*-methyl-2-pyrrolidyl ketone, and its salts (RUZICKA, SEIDEL, and LIEBL), i, 290.
3′-Methoxystilbene, 2:4-*di*nitro-4′-hydroxy- (GULLAND and ROBINSON), i, 1188.
Methoxystilbenes, bromo-, hydroxy-, and *di*nitrohydroxy-, and their α-carboxylic acids (DEY and ROW), i, 954.
Methoxystilbenecarboxylic acids, nitro-, and their salts and derivatives (PFEIFFER, KALCKBRENNER, and BEHR), i, 547.
***p*-Methoxystyrene**, αβ-*di*bromo- (HARIHARAN and SUDBOROUGH), i, 1150.
3-Methoxystyryl *n*-amyl ketone, 4-hydroxy- (MURAI), i, 1157.
***p*-Methoxystyryl amyl ketone** (RYAN and SHANNON), i, 558.
3-Methoxystyryl butyl ketones, 4-hydroxy- (NOMURA and HOTTA), i, 1157.
3-Methoxy-2-styrylchromone, 7-*mono*-, and 5:7-*di*hydroxy- (ROBINSON and SHINODA), i, 1301.
3-Methoxystyryl ethyl ketone, 4-hydroxy- (ICHIKAWA), i, 1156.
***p*-Methoxystyryl ethyl ketone**, and its *di*bromide (RYAN and CAHILL), i, 558.
7-Methoxy-2-styryl*iso*flavone (BAKER and ROBINSON), i, 1299.
Methoxystyrylmethylbenzopyrylium chlorides, hydroxy derivatives (HEILBRON, WALKER, and BUCK), i, 694.
***p*-Methoxystyryl methyl ketone**, chlorooximino- and oximino- (RHEINBOLDT and SCHMITZ-DUMONT), i, 1132.
4-*p*-Methoxystyryl-α-naphthapyrone (DEY and ROW), i, 954.
***p*-Methoxystyryl nitrocinnamylidenemethyl ketones** (PFEIFFER), i, 409.
3-Methoxystyryl *n*-propyl ketone, 4-hydroxy- (NOMURA and HOTTA), i, 1157.
4′-Methoxy-2-styryl-4-quinazolone (HEILBRON, KITCHEN, PARKES, and SUTTON), i, 1321.
2-*p*-Methoxystyrylquinoline, derivatives of (PFEIFFER, RHEINBOLDT, and WOLF), i, 412.
2-β-*p*-Methoxystyrylquinoline, 4-hydroxy- (TRÖGER and DUNKER), i, 434.
4-β-*m*-Methoxystyrylquinoline, 2:4-*p*-*di*hydroxy- (TRÖGER and DUNKER), i, 431.
3- and 4-Methoxy-2-β-styrylquinolines (TRÖGER and DUNKER), i, 434.
***o*-Methoxytetraphenylmethane** (GOMBERG and FORRESTER), i, 1267.
6-Methoxythiochromanone, and its derivatives (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1305.
4-Methoxy-2-thiolbenzoic acid, 5-bromo- (GRIFFITH and HOPE), i, 828.
Methoxytoluamides, benzoyl derivatives (ANSCHÜTZ and ASCHENBERG), i, 667.
2-Methoxytoluene, 5-bromo- (GOMBERG and ANDERSON), i, 1064.
Methoxytoluic acids, methyl esters (ANSCHÜTZ and ASCHENBERG), i, 667.
Methoxytoluoyl chlorides (ANSCHUTZ and ASCHENBERG), i, 667.
α-Methoxyvinyl groups, directing effect of, in aromatic substitution (C. K. and E. H. INGOLD), i, 657.
Methyl alcohol, pure, preparation of (HARTLEY and RAIKES), i, 498.
synthesis of (PATART), i, 110.
dissociation constant of (BJERRUM, UNMACK, and ZECHMEISTER), ii, 1062.
latent heat of fusion of (MAASS and WALDBAUER), ii, 492.
thermal properties of (PARKS), ii, 491.
surface tension of (ALI), ii, 763.

Methyl alcohol, surface tension of, and its mixtures with *cyclo*hexanol (WEISSENBERGER and SCHUSTER), ii, 648.
vapour pressure and specific heat of mixtures of carbon disulphide and (DRUCKER and WEISSBACH), ii, 953.
dehydrogenation of, with catalytic copper (GHOSH and CHAKRAVARTY), ii, 1161.
catalytic dehydration of β-naphthol and (PLÜSS), i, 1410.
equilibrium of carbamide with (WALTON and WILSON), ii, 505.
effect of nitrogen and carbon dioxide dilutions on the explosion of, and its mixtures with acetone (CROUCH and CARVER), ii, 682.
determination of (WIMMER), ii, 1006.
Methyl alkyl ethers, chloro- (FARREN, FIFE, CLARK, and GARLAND), i, 1230.
chloride, density and compressibility of the vapour of (BATUECAS), ii, 753.
ether, compressibility and molecular weight of (BATUECAS), ii, 16, 497.
inhalation of (DAVIDSON), i, 1503.
*s-di*chloro-, condensation of, with phenylethylamine (SHORT), i, 387.
Methylacetophenoneoximes, and hydroxy- (v. AUWERS, LECHNER, and BUNDESMANN), i, 266.
γ-Methylacetylacetone. See γ-Methyl-Δβ-penten-δ-one, β-hydroxy-.
Methylacetylanthranilic hydrazide, and its nitrosoamine (HELLER, GÖRING, KLOSS, and KÖHLER), i, 1323.
***N*-Methylacridone**, 1-nitro- (BURTON and GIBSON), i, 154.
β-Methyladipic anhydride (WEDEKIND, MILLER, and WEINAND), i, 511.
β-Methyladipyl chloride, action of triethylamine on (WEDEKIND, MILLER, and WEINAND), i, 510.
αα-Methylallybutyrophenone (HALLER, BAUER, and RAMART), i, 261.
Methylallylindazoles, and their picrates (v. AUWERS and LOHR), i, 74.
Methylallylindazolium iodides (v. AUWERS and PFUHL), i, 1101.
Methylallylmalonic acid (BHIDE and SUDBOROUGH), i, 1128.
Methylallylmalonic acid, amino- (MANNICH and SUTTER), i, 1037.
3-Methyl-1-allylpyrazole, and its picrate (v. AUWERS and DANIEL), i, 1180.
Methylamine, detection of, in presence of ammonia (VALTON), ii, 446.
***o*-Methylaminobenzhydrazide**, acetyl and benzoyl derivatives (HELLER, GÖRING, KLOSS, and KÖHLER), i, 1322.
***p*-Methylaminobenzoic acid**, phenyl ester (RIVIER and RICHARD), i, 1417.
2-Methylamino-5-ethoxy-4-methyl-4:5-dihydrothiazole, and its salts (BURTLES, PYMAN, and ROYLANCE), i, 697.
6-Methyl-1-amino*cyclo*hexanol, 2-cyano- (v. AUWERS, BAHR, and FRESE), i, 312.
Methylaminomethylallylmalonic acid, and its benzoyl derivative (MANNICH and SUTTER), i, 1037.
5-Methyl-5-aminomethylpyrrole, salts of (SHMOOK), i, 577.
α-Methylaminomethylvalerolactone, and δ-bromo- and δ-iodo-, and their derivatives (MANNICH and SUTTER), i, 1037.
2-Methylamino-oxazolidine, 2-amino-, hydrochloride, and its derivatives (FROMM, BARRENSCHEEN, FRIEDER, PIRK, and KAPELLER), i, 595.
β-Methylamino-β-phenylethyl alcohol. See Phenylethanolmethylamine.
2-Methylamino-5-phenyl-1:3:4-thiodiazine (BOSE), i, 1466.
α-Methylaminopropionacetal (BURTLES, PYMAN, and ROYLANCE), i, 697.
4-Methylaminopyridine, and its salts (TSCHITSCHIBABIN and OSSETROVA), i, 1328.
α-Methylamino-β-3:4:5-trimethoxyphenylacrylic acid, α-benzoyl derivative (SONN, MÜLLER, BÜLOW, and MEYER), i, 933.
α-Methylamino-β-3:4:5-trimethoxyphenylpropionic acid, α-benzoyl derivative (SONN, MÜLLER, BÜLOW, and MEYER), i, 933.
Methylammonium chloroferrates (REMY and ROTHE), ii, 1089.
*tri*iodide (STEINKOPF and BESSARITSCH), i, 497.
3-Methyl-5-amylpyrazole (v. AUWERS and DANIEL), i, 1180.
Methylanhydrobromochelidonine, and its methiodide (GADAMER and WINTERFELD), i, 285.
Methylaniline, vapour pressure of (NELSON and WALES), ii, 494.
d-camphorsulphonate (WEDEKIND), i, 678.
hydroferri- and hydroferro-cyanides (CUMMING), i, 122.
m-nitrobenzenesulphonamide (MARVEL, KINGSBURY, and SMITH), i, 245.
4-Methylanilinoquinaldinium salts (FISCHER, MÜLLER, and VILSMEIER), i, 440.
6-Methylanilinoquinoline (COBENZL), i, 436.

1-Methyl-4-anisylidenehydantoin-3-acetic acid, and its sodium salt and derivatives (HAHN and RENFREW), i, 581.

Methylanthranilic hydrazide (HELLER, GÖHRING, KLOSS, and KÖHLER), i, 1323.

β-Methylanthraquinone, derivatives of (EDER and HAUSER), i, 562, 563.

2-Methylanthraquinone, 1-amino-, benzoyl derivative (BEISLER and BRAY), i, 1288.

and 4-chloro-1-amino-, action of nitrosyl chloride on (BADISCHE ANILIN- & SODA-FABRIK) i, 414.

5:6:7:8-*tetra*chloro-2-*di*bromo-, 5:6:7:8-*tetra*chloro-1-nitro-2-*di*bromo- and 1-nitro-2-*di*bromo- (RUGGLI and BRUNNER), i, 561.

4-fluoro- (QUAYLE and REID), i, 1289.

7-Methylanthraquinone, 1:2:8-*tri*hydroxy- (JACOBSON and ADAMS), i, 278.

Methylanthraquinones, hydroxy- (JACOBSON and ADAMS), i, 272, 278.

*tri*hydroxy-, and their triacetyl derivatives (JACOBSON and ADAMS), i, 1077.

2-Methyl-5:6-anthraquinone-1-oxa-3:4-diazine (TANAKA), i, 1106.

γ-Methylarabinoside (BAKER and HAWORTH), i, 365.

Methyl-*l*-arabinosides, rotation of (HUDSON), i, 232.

Methylation, wandering of acetyl groups in (KUBOTA and PERKIN), i, 1159.

Methylbenzamidosuccinimide, *N*-chloro- and *N*-hydroxy- (CHERBULIEZ and CHAMBERS), i, 1047.

4-Methylbenziminazole-2-benzoic acid (CHAKRAVARTI), i, 162.

Methylbenziminazoletrimethylcyclopentanecarboxylic acids (CHAKRAVARTI and GUPTA), i, 981.

Methylbenzoic acid, *p*-chloro-, *p*-carboxybenzyl ester (BARKENBUS and HOLTZCLAW), i, 1148.

p-hydroxy-, esters of, and their derivatives (CASE), i, 815.

Methylbenzonitrile, *m*-bromo- (v. BRAUN and REICH), i, 1406.

4-Methylbenzophenone, 3′-chloro-2-hydroxy- (SKRAUP and POLLER), i, 143.

2-Methylbenzopyrone, 3:7-*di*hydroxy- (ALLAN and ROBINSON), i, 148.

Methylbenzoquinoneoximes, 2-nitro-4- and -6-nitroso-5-hydroxy- (SCHULTZ and GANGULY), i, 647.

1-Methylbenzoxazole, derivatives of (KÖNIG and MEIER), i, 705.

α-Methyl-β-benzoylacrylic acid (BOGERT and RITTER), i, 816.

4-Methylbenzoyl-*o*-benzoic acid, 2-fluoro- (QUAYLE and REID), i, 1289.

3-Methyl-1-benzoylpyrazole, and its perchlorate (v. AUWERS and DANIEL), i, 1181.

1-Methylbenzthiazole, derivatives of (KÖNIG and MEIER), i, 705.

6-Methylbenzthiopyran, and its sulphone (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.

6-Methylbenzthiopyrone, and 3-bromo-, and their derivatives (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMEYER), i, 1305; (ARNDT), i, 1309.

2-Methylbenzyl alcohol, 6-bromo-4-hydroxy- (KOHN and WEISSBERG), i, 655.

Methylbenzyl chloride, *o*-chloro- (v. BRAUN and REICH), i, 1407.

Methylbenzylamines, chloro-, salts of (v. BRAUN and REICH), i, 1406.

Methylbenzyldihydro*iso*indole, *o*-amino-, and its derivatives, and *o*-hydroxy- (v. BRAUN and ZOBEL), i, 1456.

2-α-Methylbenzylideneaminopyridine, and its derivatives (SCHMID and BANGLER), i, 1459.

***p*-Methylbenzylmenthol** (SAMDAHL), i, 415.

Methylbenzylpiperidine, *o*-amino-, and its picrate and derivatives (v. BRAUN and ZOBEL), i, 1456.

δ-Methyl-α-benzylthioglucoside (PACSU), i, 1243.

Methyl-β-bromoallylaniline, and its salts (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1401.

Methylbromoethylmaleic anhydride (KÜSTER), i, 922.

Methyl-β-bromo-α-methoxyethylmaleinimide (KÜSTER and HEESS), i, 998.

β-Methylbutane, α-bromo- (DEWAEL and WECKERING), i, 3.

bromo derivatives, and their derivatives (MERESHKOVSKI), i, 1033.

γ-Methyl-Δα-buten-γ-ol (CLAISEN), i, 277.

β-Methyl-Δβ-buten-α-ol, γ-bromo-, and its acetate (MERESHKOVSKI), i, 1033.

2-α-Methyl-Δβ-butenyl-*p*-cresol, phenylcarbamate (CLAISEN, KREMERS, ROTH, and TIETZE), i, 656.

***o*-α-Methyl-Δβ-butenylphenol**, and its phenylcarbamate (CLAISEN, KREMERS, ROTH, and TIETZE), i, 656.

Methyl-*n*-butylacetoacetic acid, ethyl ester (POWELL), i, 8.

Methylbutylal (ADAMS and ADKINS), i, 784.

1-Methyl-2-butylindazolium iodides (v. AUWERS and PFUHL), i, 1101.

α-Methylbutylmalonic acid, and its ethyl ester (DEWAEL and WECKERING), i, 3.
β-Methylbutylmalonic acid (DEWAEL and WECKERING), i, 3.
Methyl*iso*butylnonylcarbinol (THOMS and AMBRUS), i, 790.
3-Methyl-5-*iso*butylpyrazoline, and its derivatives (LOCQUIN and HEILMANN), i, 837.
β-Methylbutyronitrile, catalytic reduction of (RUPE and HODEL), i, 275.
d-α-Methyl-*n*-butyryl-1-leucine, ethyl ester (KARRER, MIYAMICHI, STORM, and WIDMER), i, 594.
β-Methylcamphenilan (NAMETKIN and BRIUSOVA), i, 1078.
β-Methylcamphenilol, and its derivatives (NAMETKIN and BRIUSOVA), i, 1078.
β-Methylcamphenilone, and its derivatives (NAMETKIN and BRIUSOVA), i, 1078.
Methylcarbamide, action of phenylcarbimide on (BILTZ and BECK), i, 1393.
3-Methyl-3-*iso*carboline (ARMIT and ROBINSON), i, 1172.
Methylchlorobenzylindazolium iodides (v. AUWERS and PFUHL), i, 1101.
Methyl α-chloroethyl ketone, phytochemical reduction of (SANTOMAURO), i, 203.
Methylchlorohæmin, action of chlorine on (KÜSTER and HUTTENLOCHER), i, 992.
4-Methylchroman-4-ol (ARNDT, PUSCH, and SCHWARZ), i, 1304.
2-Methylcinchoninic acid, 3-amino-, and its methyl ester and their acetyl derivatives (GULLAND and ROBINSON), i, 1187.
d-Methylconhydrinone, and its derivatives (HESS and GRAU), i, 426.
5-Methylcoumaran-3-one-*p*-dimethylaminoanil (FRIES and BARTENS), i, 567.
6-Methylcoumaric acid, and its salts (THOMPSON and EDEE), i, 1442.
6-Methylcoumarin, and its derivatives (THOMPSON and EDEE), i, 1442.
4-Methylcoumarin, 3-bromo-7-hydroxy- (FRIES and NÖHREN), i, 954.
3-Methylcoumarone, 6-hydroxy-, derivatives of (FRIES and NÖHREN), i, 954.
6′-Methyl-3(3′-coumaryl)-benzfuran-2-carboxylic acid. See 3(3′-Coumaryl)-6′-methylbenzfuran-2-carboxylic acid.
7-Methyl-4-coumaryl-*p*-dimethylaminophenylethylene. See 7-Methyl-4-β-dimethylaminostyrylcoumarin.
7-Methyl-4-coumaryl-3′-methoxy-4′-hydroxyphenylethylene. See 7-Methyl-4-*p*-hydroxy-*m*-methoxystyrylcoumarin.
7-Methyl-4-coumaryl-*p*-methoxyphenylethylene. See 7-Methoxy-4-*p*-methoxystyrylcoumarin.
Methylcreatinine picrate (GREENWALD), i, 839.
Methyl-*p*-cresol, *oo′-di*hydroxy-, derivatives of (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 544.
ε-Methyl-Δ$^{\delta\zeta}$-decadiene (GRIGNARD and DUBIEN), i, 112.
ε-Methyl-Δ$^{\zeta}$-decen-ε-ol (GRIGNARD and DUBIEN), i, 111.
δ-Methyldextrose, and its phenylosazone (PASCU), i, 1242.
3-Methyldibenzyl, 6-hydroxy-, and its phenylurethane (SCHORIGIN), i, 1404.
N-Methyldibenzylphthalimidine (WEISS and FREUND), i, 139.
7-Methyl-4:3′-dicoumaryl, and bromo- and chloro-derivatives (DEY and ROW), i, 149.
Methyldihydrochelerythrine (GADAMER and STICHEL), i, 286.
Methyldihydrodeoxytetrahydro-α-methylmorphimethine methiodide (SPEYER and KOULEN), i, 59.
1-Methyl-Δ^{1}-dihydronaphthalene (v. AUWERS), i, 241.
1-Methyl-3:4-dihydronaphthalene (SCHROETER, ZADEK, and HOFFMANN), i, 678.
9-Methyl-9:10-dihydrophenanthrene-10-carboxylic acid, and its methyl ester (WINDAUS, JENSEN, and SCHRAMM), i, 19.
1-Methyl-2:3-dihydropyridine-3:5-dicarboxylic acid, ethyl ester, ψ-cyanide (MUMM), i, 965.
N-Methyldihydrothebenine hydriodide (SPEYER and ROSENFELD), i, 961.
Methyl-β-8(3:4-dimethoxy-5:6-methylenedioxy)phenanthrenylethylamine, and its hydrochloride (OSADA), i, 283.
7-Methyl-4-β-dimethylaminostyrylcoumarin (DEY and ROW), i, 953.
N-Methyldiphenylacetamide (VAN ALPHEN), i, 83.
N-Methyldiphenylamine-6-carboxylic acid, 2′-amino-, and its acetyl derivative, and 2′-nitro- (BURTON and GIBSON), i, 154.
3-Methyldiphenylmethane, 6:4′-*di*hydroxy-, and its derivatives (PUMMERER, PUTTFARCKEN, and SCHOPFLOCHER), i, 1263.
Methyldiphenylmethyl*di*chloroamine, crystallography of (FISHER), ii, 942.
γ-Methyldipropionylmethane, and its copper salt (MORGAN and TAYLOR), i, 634.

o-**Methyldisalicoylimide**, silver salt (ANSCHÜTZ, RIEPENKRÖGER, and KUCKERTZ), i, 667.
Methyldi-*p*-tolylmethane, chloro- (SOMMELET), i, 803.
9-Methyldodecahydrocarbazole methiodide (v. BRAUN and SCHÖRNIG), i, 1450.
γ-Methyl-Δγ-dodecene (THOMS and AMBRUS), i, 789.
Methylenebenzoylpyruvic acid, diethyl ester, and its derivatives (GAULT and FUNKE), i, 37.
Methylenebisdimethyldihydroresorcinol, disodium derivative (RADULESCU and GEORGESCU), i, 820.
Methylenebisphenyldihydroresorcinol, disodium derivative (RADULESCU and GEORGESCU), i, 820.
Methylenebistelluriacetone *di*chloride (MORGAN and DREW), i, 531.
Methylenebistelluritrichloride (MORGAN and DREW), i, 531.
Methylene-blue, photographic action of (EGGERT and REITSTÖTTER), ii, 509.
photolysis of (BAUR), ii, 1082.
adsorption of, by charcoal (MECKLENBURG), ii, 530.
oxidation-reduction with (CLARK, COHEN, and GIBBS), ii, 1164.
reduction of, by dextrose (KNECHT and HIBBERT), ii, 605.
decolorisation of, by mixtures of phosphates, acetaldehyde, and glycine (HAEHN and PÜLZ), i, 858.
mercury derivatives of (CHALKLEY), i, 1108.
polychrome, preparation of (PROESCHER and KRUEGER), i, 597.
determination of, iodometrically (SABALITSCHKA and ERDMANN), ii, 908.
Methylenecitric acid, derivatives of (NAU, BROWN, and BAILEY), i, 1379.
*endo***Methylenedehydropiperidazine**, compound of cuprous chloride and (DIELS, BLOM, and KOLL), i, 977.
Methylenedicarbamic acid, *iso*propyl ester (DATTA and CHATTERJEE), i, 892.
Methylenedihydropyridines (KOENIGS, KÖHLER, and BLINDOW), i, 833; (MUMM), i, 964.
3-Methylene-2:5-diketopiperazine (BERGMANN, MIEKELEY, and KANN), i, 1134.
3-(3′:4′-Methylenedioxybenzyl)oxindole (WINDAUS and EICKEL), i, 33.
3:4-Methylenedioxy-γ-bromo-β-methoxypropylbenzene (SCHMIDT, BARTHOLOMÉ, and ASMAS), i, 136.
3:4(?2:3)-Methylenedioxy-9:10-dihydrophenanthrene-9-carboxylic acid, and its derivatives (WINDAUS and EICKEL), i, 33.
2:3-Methylenedioxydihydroprotoberberine, and its salts (HAWORTH, PERKIN, and PINK), i, 1170.
6:7-Methylenedioxydihydro*iso*quinoline, and its 1-benzoyl derivative, methiodides of (HAWORTH, PERKIN, and RANKIN), i, 1314.
6:7-Methylenedioxy-2′:3′-dimethoxy-2-benzyl-1-nitromethyl-1:2:3:4-tetrahydro*iso*quinoline (HAWORTH and PERKIN), i, 968.
Methylenedioxy-2:4-distyrylbenzopyrylium chlorides, *tri*hydroxy- (HEILBRON, WALKER, and BUCK), i, 695.
4:5-Methylenedioxyhomophthalamic acid (HAWORTH and PINK), i, 929.
4:5-Methylenedioxyhomophthalimide (HAWORTH and PERKIN), i, 929.
2:3-Methylenedioxyoxydihydro*iso*protoberberine (HAWORTH, PERKIN, and PINK), i, 1169.
2:3-Methylenedioxyoxyprotoberberines (HAWORTH, PERKIN, and PINK), i, 1169.
7:8-Methylenedioxy-11-phenylindenoquinoline, and its derivatives (ARMIT and ROBINSON), i, 1171.
2:3-Methylenedioxyprotoberberine, salts of (HAWORTH, PERKIN, and PINK), i, 1170.
3′:4′-Methylenedioxystilbene, 4-nitro-2-amino-, and 2:4-*di*nitro- (GULLAND and ROBINSON), i, 1188.
3′:4′-Methylenedioxy-2-styryl-4-quinazolone (HEILBRON, KITCHEN, PARKES, and SUTTON), i, 1321.
2:3-Methylenedioxytetrahydroprotoberberines, and their salts (HAWORTH, PERKIN, and PINK), i, 1169.
3-Methylene-6-methyl-2:5-diketopiperazine (BERGMANN, MIEKELEY, and KANN), i, 1134.
γ-Methylene-Δδ-octene (GRIGNARD and DUBIEN), i, 112.
3:6-*endo*Methylene-1:2-piperidazine, and its salts and derivatives (DIELS, BLOM, and KOLL), i, 976.
*endo***Methylenepiperidazine-1-carboxylic acid**, methyl ester, and its picrate (DIELS, BLOM, and KOLL), i, 976.
3:6-*endo*Methylene-1:2-piperidazine-1:2-dicarboxylic acid, ethyl ester (DIELS, BLOM, and KOLL), i, 976.
1-Methylene-1:2:3:4-tetrahydronaphthalene, and its ozonide (SCHROETER, ZADEK, and HOFFMANN), i, 678.
3:6-*endo*Methylene-3:4:5:6-tetrahydro-1:2-pyridazine (DIELS, BLOM, and KOLL), i, 977.

3:6-*endo*Methylene-1:2:3:6-tetrahydro-1:2-pyridazine-1:2-dicarboxylic acid, ethyl ester, and its dibromide (DIELS, BLOM, and KOLL), i, 976.

Methylethoxybenzaldehydes (SONN and PATSCHKE), i, 1280.

6-Methyl-2-ethoxymethylene*cyclo*hexanone (v. AUWERS, BAHR, and FRESE), i, 310.

***β*-Methyl-*β*-ethylacrylic acid.** See *β*-Methyl-Δ^{α}-pentenoic acid.

1-Methyl-2-ethylbenzene, formation of, from 2-methyl-3-ethyl-Δ^{2}-*cyclo*hexenone (BLAISE and MONTAGNE), i, 1072.

***β*-Methyl-*α*-ethylbutenoic acid** (KON, SMITH, and THORPE), i, 510.

3-Methyl-2-ethylcoumaran (CLAISEN, KREMERS, ROTH, and TIETZE), i, 656.

***ββ*-Methylethylglutarylfluorescein** (DUTT and THORPE), i, 141.

***ββ*-Methylethylglutarylrhodamine** (DUTT and THORPE), i, 142.

2-Methyl-3-ethyl-Δ^{2}-*cyclo*hexen-1-one (BLAISE and MONTAGNE), i, 836.
conversion of, into 1-methyl-2-ethylbenzene (BLAISE and MONTAGNE), i, 1071.

Methylethylindazoles, and their picrates (v. AUWERS and LOHR), i, 73.

1-Methyl-2-ethylindazolium salts (v. AUWERS and PFUHL), i, 1101.

Methyl ethyl ketone, condensation of aldehydes with (RYAN and CAHILL), i, 558.
action of calcium hydride on (PORLEZZA and GATTI), i, 788.
condensation of, with vanillin (ICHIKAWA), i, 1156.

6-Methyl-6-ethylphenoxarsonium salts (AESCHLIMANN), i, 706.

Methyl-1-ethylpyrazoles, chloro-, and their perchlorate (v. AUWERS and NIEMEYER), i, 1177.

4-Methyl-5-ethylpyrazoline, and its derivatives (LOCQUIN and HEILMANN), i, 837.

2-Methyl-4-ethylpyridine (CHEMISCHE FABRIK AUF AKTIEN VORM. E. SCHERING), i, 431.

2-Methyl-5-ethylpyridine, 6-amino- (CHEMISCHE FABRIK AUF AKTIEN VORM. E. SCHERING), i, 301.

4-Methyl-3-ethylpyridine, synthesis of (KOENIGS and HOFFMANN), i, 298.

***N*-6-Methyl-2:3-ethylpyridylpyrrole** (CHEMISCHE FABRIK AUF AKTIEN VORM. E. SCHERING), i, 1329.

4-Methyl-2-ethylpyrrole-5-carboxylic acid, ethyl ester (FISCHER and KLARER), i, 578.

***as*-Methylethylsuccinylfluorescein** (DUTT and THORPE), i, 141.

***as*-Methylethylsuccinylrhodamine** (DUTT and THORPE), i, 142.

Methylethyltetrahydroindazoles, and their picrates (v. AUWERS, v. SASS, and WITTEKINDT), i, 1183.

6-Methyl-4-ethylthio-chroman-4-ol and **-chromene** (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.

2-Methyl*iso*flavone, 7-*mono*- and 5:7-*di*-hydroxy-, and their derivatives (BAKER and ROBINSON), i, 1299.

5-Methyl-*o*-*trans*-fluoracenedione (RADULESCU and GEORGESCU), i, 1287.

Methyl*iso*formo-*p*-bromoanilide (FARROW and INGOLD), i, 155.

6-Methyl-2-formyl*cyclo*hexanone (v. AUWERS, BAHR, and FRESE), i, 310.

6-Methyl-2-formyl*cyclo*hexenol (v. AUWERS, BAHR, and FRESE), i, 310.

***γ*-Methylfructoside**, fission of, by invertase (SCHLUBACH and RAUCHALLES), i, 1243.

Methylfuran, 2-chloro-, preparation of, from 2-furylcarbinol (GILMAN and VERNON), i, 53.

Methylfurfuraldehyde, hydroxy-, determination of (TROJE), ii, 1210.

Methylgalactoside (HAWORTH, RUELL, and WESTGARTH), i, 117.

***α*-Methylgentobioside**, rotation of (HUDSON), i, 636.

6(?)-Methyl-*d*-glucose, and its osazone (HELFERICH and BECKER), i, 11.

***α*-Methylglucoside** chlorohydrins, salts of (HELFERICH, SPROCK, and BESLER), i, 792.

***α*-Methyl-*d*-glucoside**, derivatives of (HELFERICH and BECKER), i, 10.

***β*-Methylglucoside**, hydrolysis of (JOSEPHSON), i, 1359.

***α*- and *β*-Methylglucosides**, solution volume and refraction constants of (RIIBER), i, 8.

***α*-Methylglutaric acid**, dianilide, di-*β*-naphthylide and di-*p*-toluidide of (v. AUWERS), i, 892.

***α*-Methylglutaric acid**, bromo-, chloro-, hydroxy-, and iodo-, and their salts and derivatives (INGOLD), i, 358.

Methylglyoxal, condensation of thiocarbamide and (SJOLLEMA and SEEKLES), i, 1175.

Methylglyoxal, amino-, acetyl derivative, osazone (MANN and POPE), i, 374.

Methylglyoxalase (MEYERHOF), i, 1507.

1-Methylglyoxaline, chloro- (SONN, HOTES, and SIEG), i, 157.

2-Methylglyoxaline, 4(5)-nitro-5(4)-thiol-, and its ammonium salt (BHAGWAT and PYMAN), i, 1175.
4(5)-Methylglyoxaline, 2-amino-, and its picrate (BURTLES and PYMAN), i, 1326.
Methylglyoxime, and amino- and chloro-, methyl ethers and derivatives of (AVOGADRA and TAVOLA), i, 1040.
Methylguanidine, acetyl and benzoyl derivatives, and their salts (GREENWALD), i, 840.
nitrate (FROMM, BARRENSCHEEN, FRIEDER, PIRE, and KAPELLER), i, 596.
β-Methyl-Δαγ-heptadiene (GRIGNARD and DUBIEN), i, 42.
β-Methylheptane-ββδ-diol (GRIGNARD and DUBIEN), i, 112.
γ-Methylheptan-β-ol, and its acetate (POWELL), i, 8.
γ-Methylheptan-β-one, and its semicarbazone, and δ-hydroxy- (POWELL), i, 7.
β-Methyl-Δγ-hepten-β-ol (GRIGNARD and DUBIEN), 111.
β-Methyl-Δβ-hepten-δ-ol, and its allophanate (GRIGNARD and DUBIEN), i, 112.
β-Methyl-Δβ-hepten-ζ-ol, benzoate of (HELFERICH and FRIES), i, 1039.
Methylheptenone, oxidation of, with ozone (VERLEY), i, 406.
β-Methyl-Δγ-hepten-ε-one, and its semicarbazone (THOMS and KAHRE), i, 788.
γ-Methyl-Δγ-hepten-β-one, and its semicarbazone (POWELL), i, 7.
β-Methylhexaldehyde, and its semicarbazone (DEWAEL and WECKERING), i, 3.
γ-Methylhexane, α-bromo- and α-chloro- (DEWAEL and WECKERING), i, 3.
1-Methyl-3:4-*cyclo*hexanediol ethyl ether (KÖTZ and HOFFMANN), i, 910.
γ- and **δ-Methylhexanols**, and their derivatives (DEWAEL and WECKERING), i, 3.
Methyl*cyclo*hexanols, surface tension and vapour pressure of, and their mixtures with benzene (WEISSENBERGER and SCHUSTER), ii, 648.
1-Methyl-3-*cyclo*hexanol-4-acetic acid, lactone (KÖTZ and HOFFMANN), i, 911.
1-Methyl-3-*cyclo*hexanol-4-malonic acid, and its derivatives (KÖTZ and HOFFMANN), i, 911.
1-Methyl*cyclo*hexan-4-one, chlorination of (GODCHOT and BEDOS), i, 258.
1-Methyl*cyclo*hexan-6-one, methylation of, with benzaldehyde (HALLER and CORNUBERT), i, 1071.
2-Methyl*cyclo*hexanone, derivatives of (HALLER and CORNUBERT), i, 1071.
2-Methyl*cyclo*hexanone, 2:6-*di*bromo-, action of alkalis on (CUSMANO), i, 818.
2-cyano-, and its derivatives (v. AUWERS, BAHR, and FRESE), i, 312.
2- and **6-Methyl*cyclo*hexanones**, 2-cyano-, and their derivatives (v. AUWERS, BAHR, and FRESE), i, 311.
6-Methyl-Δ¹-*cyclo*hexene, 2-amino-1-cyano-, and its derivatives (v. AUWERS, BAHR, and FRESE), i, 312.
β- and **γ-Methylhexoic acids**, derivatives of (DRWAEL and WECKERING), i, 3.
3-Methyl*cyclo*hexylacetic acid, ethyl ester (BECHERER), i, 665.
β- and **δ-Methylhexylamine**, and their derivatives (DEWAEL and WECKERING), i, 3.
3-Methyl*cyclo*hexylethyl alcohol (BECHERER), i, 665.
1-Methyl-2-*cyclo*hexyl*cyclo*hexane (GARLAND and REID), i, 1281.
1-Methyl-2-*cyclo*hexyl*cyclo*hexanol (GARLAND and REID), i, 1281.
2-Methyl*cyclo*hexylhydroxylamine (VAVON and BERTON), i, 807.
1-Methyl*cyclo*hexylidene-4-acetic acid, rotatory dispersion of (RICHARDS and LOWRY), ii, 632.
3-Methyl*cyclo*hexylideneanthranilic acid, and its methyl ester (PERKIN and SEDGWICK), i, 64.
1-Methyl-2-*cyclo*hexylidene*cyclo*hexanol (GARLAND and REID), i, 1281.
1-Methyl-6-*cyclo*hexylidene-Δ¹-*cyclo*hexene (GARLAND and REID), i, 1281.
α-3-Methyl*cyclo*hexylpropionic acid, and 1-hydroxy-, and their ethyl esters (BECHERER), i, 665.
β-3-Methyl*cyclo*hexylpropyl alcohol (BECHERER), i, 665.
Methyl*cyclo*hexylsemicarbazides (VAVON and BERTON), i, 807.
4-Methylhydrindene, and *tri*bromo- (KRUBER), i, 1138.
4-Methylhydrindenesulphonic acid, and its salts and amide (KRUBER), i, 1138.
Methylhydrobenzoins, optically active, dehydration of (MCKENZIE and ROGER), i, 25.
1-Methyl-4-*p*-hydroxybenzylhydantoin-3-acetic acid, and its derivatives (HAHN and RENFREW), i, 581.
Methylhydroxyethylfumaric acid, derivatives of (KÜSTER), i, 922.
Methylhydroxyethylmaleic acid, preparation of (KÜSTER and GRÄSSNER; KÜSTER), i, 922.
Methylhydroxyglyoxime, metallic salts of (PONZIO and RUGGERI), i, 1041.
7-Methyl-4-*p*-hydroxy-*m*-methoxystyrylcoumarin (DEY and ROW), i, 953.

1-Methyl-3-hydroxymethylene*cyclo*-hexan-4-one, derivatives of (v. AUWERS, v. SASS, and WITTEKINDT), i, 1181.

5-Methyliminazoline, 2:5-*di*amino-, tetrabenzoate (FROMM, BARRENSCHEEN, FRIEDER, PIRK, and KAPELLER), i, 595.

Methylindazoles, and their derivatives, and *di*bromo-, *tri*bromo-, and iodo- (v. AUWERS and LOHR), i, 74.

Methylindazoles, 4-nitro- (v. AUWERS and FRESE), i, 1102.

5-Methylindazole-2-carboxylic acid, ethyl and methyl esters (v. AUWERS and LOHR), i, 74.

7-Methyl*iso*indigotin, and its derivatives (WAHL and FAIVRET), i, 588.

7-Methylindirubin (WAHL and FAIVRET), i, 588.

2-Methylindole, 3-chloroacetyl derivative (KALLER & Co.), i, 297.

picryl derivatives (KORCZYŃSKI and KIERZEK), i, 973.

2-Methylindole, 3-cyano- (SEKA), i, 67.

5-Methylindole-3-aldehyde (ROBSON), i, 298.

5-Methylindolylidenehydantoin (ODDO), i, 298.

2-Methylindolyl-2′-methylindolidene-methane, metallic derivatives (KUNZ and STÜHLINGER), i, 1319.

α-Methylindyl-α-methylindolidene-methane, derivatives of (PFEIFFER, RHEINBOLDT, and WOLF), i, 412.

2-Methylindyl-2-methylindolidene-phenylmethane-*o*-carboxylic acid, potassium salt (ODDO), i, 588.

7-Methylisatan (WAHL and FAIVRET), i, 588.

4- and 6-Methylisatin (MAYER and SCHULZE), i, 1315.

7-Methylisatin, derivatives of (WAHL and FAIVRET), i, 588.

Methylisatoic anhydride (HEILBRON, KITCHEN, PARKES, and SUTTON), i, 1321.

Methylisatoid, silver derivative (HANTZSCH), i, 701.

Methylitamalic acid, barium salt (INGOLD), i, 358.

Methylketolephthalein. See Di-2-methylindylphthalide.

Methylketole-yellow. See 2-Methylindyl-2-methylindolidenephenylmethane-*o*-carboxylic acid, potassium salt.

Methyl ketones, formation of, from triglycerides and fatty acids by moulds (STÄRKLE), i, 205.

Methyl-lichenin (SCHMID), i, 1386.

Methylmaltoside, and its hepta-acetyl derivative (FREUDENBERG, v. HOCHSTETTER, and ENGELS), i, 635.

Methylmercuric hydrogen carbonate and mercaptan (KOTEN and ADAMS), i, 236.

*tri*nitrobenzoate (KHARASCH and GRAFFLIN), i, 1107.

2-Methyl-1-methylenebenzthiazoline (KÖNIG and MEIER), i, 705.

6(?)-Methyl-α-methyl-*d*-glucoside (HELFERICH and BECKER), i, 10.

Methylmorphimethines (SPEYER and KOULEN), i, 59.

2-Methylnaphthalene, 6-amino-, 5-amino-6-hydroxy-, 6-hydroxy-, 5-nitro-6-hydroxy-, and 5-nitroso-6-hydroxy-, and their derivatives (DZIEWOŃSKI, SCHOENÓWNA, and WALDMANN), i, 1056.

amino-, bromo-, nitroamino-, and nitro-derivatives, and their derivatives (VESELY and KAPP), i, 246.

1-bromo-4-nitro- (VESELY and KAPP), i, 804.

2-Methylnaphthalene-6-sulphonic acid, derivatives of (DZIEWOŃSKI, SCHOENÓWNA, and WALDMANN), i, 1057.

2-Methyl-5:6-naphthaquinone (DZIEWOŃSKI, SCHOENÓWNA, and WALDMANN), i, 1057.

α-Methyl-β-naphthoic acid, ethyl ester (v. AUWERS and MÖLLER), i, 404.

Δ^1-α-Methyl-β-naphthoic acid, ethyl ester (v. AUWERS and MÖLLER), i, 404.

2-Methylnaphthols, and bromo- (VESELY and KAPP), i, 246.

2-Methyl-α-naphthylamine, 5-bromo- and its acetyl derivative and 4-nitro- (VESELY and KAPP), i, 246.

5-nitro-, and its acetyl derivative (VESELY and KAPP), i, 804.

***N*-Methylnicotone** (KARRER and WIDMER), i, 1084.

***N*-Methylniquine** and its derivatives (SUSZKO), i, 1449.

3-Methyl-1-*o*-nitrobenzoylpyrrole (v. AUWERS and DANIEL), i, 1181.

Methylnitrobenzylindazolium iodides (v. AUWERS and PFUHL), i, 1101.

1-Methylnitrouracil triacetylxyloside (LEVENE and SOBOTKA), i, 1464.

Methyl *n*-nonadecyl ketone (MORGAN and HOLMES), i, 514.

δ-Methyl-Δ^{ϵ}-nonadiene (GRIGNARD and DUBIEN), i, 112.

δ-Methyl-Δ^{ϵ}-nonen-δ-ol (GRIGNARD and DUBIEN), i, 111.

Methyl nonyl ketone (SCHIMMEL & Co.), i, 417.

Methyl ε-nonyl ketone (HESS and BAPPERT), i, 349.
Methyl *n*-octadecyl ketone (MORGAN and HOLMES), i, 514.
γ-Methyl-Δ$^{\beta\delta}$-octadiene (GRIGNARD and DUBIEN), i, 112.
10-Methyloctahydroacridine, and its picrate (PERKIN and SEDGWICK), i, 65.
3-Methyloctahydroindole, picrate of (v. BRAUN and BAYER), i, 429.
γ-Methyloctane-γε-diol (GRIGNARD and DUBIEN), i, 112.
β-Methyloctanols (THOMS and KAHRE), i, 788.
β-Methyloctan-ζ-one, and its semicarbazone (THOMS and KAHRE), i, 788.
γ-Methyl-Δγ-octen-ε-ol (GRIGNARD and DUBIEN), i, 112.
γ-Methyl-Δ$^{\delta}$-octen-γ-ol (GRIGNARD and DUBIEN), i, 111.
β-Methyl-Δγ-octenones, and their semicarbazones (THOMS and KAHRE), i, 788.
Methyl orange (*helianthin*), formula of (THIEL), ii, 37.
ionisation of (KOLTHOFF), ii, 296.
5-Methyloxazolidine, 2-imino-5-chloro-, and its derivatives (FROMM, BARRENSCHEEN, FRIEDER, PIRK, and KAPELLER), i, 595.
5-Methyloxazoline, 2-amino-5-hydroxy-, tribenzoate (FROMM, BARRENSCHEEN, FRIEDER, PIRK, and KAPELLER), i, 595.
Methyl*iso*pelletierine (HESS and GRAU), i, 425.
1-Methyl*cyclo*pentan-5-one, methylation of, with benzaldehyde (HALLER and CORNUBERT), i, 1070.
β-Methyl-Δβ-pentenal phenylhydrazone (v. AUWERS and KREUDER), i, 1454.
α-Methyl-Δγ-pentenoic acid (BHIDE and SUDBOROUGH), i, 1128.
β-Methyl-Δα- and -Δβ-pentenoic acids, and their derivatives (KON and LINSTEAD), i, 506.
γ-Methyl-Δβ-penten-δ-one, β-hydroxy- (KAUFMANN and LIEPE), i, 1241.
4-γ-Methyl-Δα-pentenoyl-4′-dimethylaminoazobenzene, and its hydrochloride (THOMS and KAHRE), i, 789.
γ-Methylpentinen-γ-ols, and their esters (RUPE and VONAESCH), i, 499.
9-Methylphenanthrene, synthesis of, and its picrate (WINDAUS, JENSEN, and SCHRAMME), i, 19.
Methylphenazine, hydroxy- (KEHRMANN and CHERPILLOD), i, 303.
Methylphenoxazine-*o*-quinone, condensation of, with *o*-aminophenol and *o*-diamines (KEHRMANN and WILD), i, 444.
5-Methylphenylene-1:3-diacetic acid, and its derivatives (v. BRAUN and ENGEL), i, 382.
***o*-Methylphthalimidine** (GRIFFITHS and INGOLD), i, 1191.
6-Methylpicolinic acid, derivatives of (MEYER), i, 836.
6-Methyl-1:2-piperidazine-1:2-dicarboxylic acid, 3-chloro-, ethyl ester (DIEL, BLOM, and KOLL), i, 976.
Methylprasindone, salts of (KEHRMANN and CHERPILLOD), i, 303.
1-Methyl*cyclo*propane-1:2-dicarboxylic acids, and their derivatives (INGOLD), i, 358.
3-Methyl*cyclo*propane-1:2-dicarboxylic acid, 2:3-*di*bromo-, methyl ethyl ester (GOSS, INGOLD, and THORPE), i, 550.
Methylpropargylaniline, and its salts (v. BRAUN, FUSSGÄNGER, and KUHN), i. 1401.
Methylpropargylcyanamide (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.
β-Methyl-Δβ-propene, α-bromo- (MEREJKOVSKI), i, 878.
3-Methyl-Δ^{2}-*cyclo*propene-1:2-dicarboxylic acid, esters of (GOSS, INGOLD, and THORPE), i, 549.
Methyl-Δ$^{\alpha}$-propinenyl ketone (YVON), i, 514.
5-Methylpropiophenone, 2-hydroxy-, oxime and semicarbazone (v. AUWERS, LECHNER, and BUNDESMANN), i, 266.
Methyl*iso*propylanthracene picrate (PHILLIPS), i, 45.
1:4-Methyl*iso*propylanthraquinone, and *di*nitro- (PHILLIPS), i, 45.
***o*-2:5-Methyl*iso*propylbenzoylbenzoic acid** (PHILLIPS), i, 45.
Methyl-*n*-propylglycerol. See Heptane-βγδ-triol.
1-Methyl-4-*iso*propyl*cyclo*hexanol-malonic acid, ethyl ester lactone (KÖTZ and HOFFMANN), i, 911.
2-Methyl-2-*n*-propyl*cyclo*hexanone, derivatives of (HALLER and CORNUBERT), i, 1071.
2-Methyl-5-*iso*propyl*cyclo*hexylacetic acid, 1-hydroxy-, ethyl ester (BECHERER), i, 665.
2-Methyl-5-*iso*propyl*cyclo*hexylethyl alcohol (BECHERER), i, 665.
2-Methyl-5-*iso*propyl*cyclo*hexylidene-1-acetic acid, sodium salt and ethyl ester (BECHERER), i, 665.

α-2-Methyl-5-*iso*propyl*cyclo*hexylidenepropionic acid, and its ethyl ester (BECHERER), i, 665.
α-2-Methyl-5-*iso*propyl*cyclo*hexylpropionic acid, 1-hydroxy-, ethyl ester (BECHERER), i, 665.
β-2-Methyl-5-*iso*propyl*cyclo*hexylpropyl alcohol (BECHERER), i, 665.
Methylpropylindazolium salts (v. AUWERS and PFUHL), i, 1101.
Methyl propyl ketones, chloro-oximino- (RHEINBOLDT and SCHMITZ-DUMONT), i, 1132.
Methylpropylnonylcarbinols (THOMS and AMBRUS), i, 789.
γ-2-Methyl-5-*iso*propylphenylpropinene (BERT, DORIER, and LAMY), i, 1374.
3-Methyl-5-*iso*propylpyrazoline, and its derivatives (LOCQUIN and HEILMANN), i, 837.
3-Methyl-4-*n*-propyl-5-pyrazolone (HIRST, MACBETH, and TRAILL), i, 1251.
3-Methylpyrazole-1-carboxyl chloride (v. AUWERS and DANIEL), i, 1181.
Methylpyrazole-1-carboxylamides, and 4-bromo- (v. AUWERS and DANIEL), i, 1181.
3-Methylpyrazole-1-carboxylic acid, esters (v. AUWERS and DANIEL), i, 1180.
Methylpyrazolines, and their derivatives (FREUDENBERG and STOLL), i, 71.
1-Methyl-5-pyrazol-3-one (v. AUWERS and MAUSS), i, 1179.
Methylpyridine, 2-thiol-, and its salts (KOENIGS and GEISSLER), i, 166.
2-Methylpyridine, 4:6-*di*chloro-5-cyano- (SPÄTH and KOLLER), i, 1446.
4-hydroxy-, and its 6-carboxylic acid (COLLIE and BISHOP), i, 974.
3-Methylpyridine, 2-amino- (TSCHITSCHIBABIN; SEIDE), i, 1328.
2-chloro-, 2-hydroxy-, and nitroamino-, and their derivatives (SEIDE), i, 72.
2-Methylpyridine-5-carboxylamide, 4:6-*di*hydroxy- (SPÄTH and KOLLER), i, 1446.
1-Methyl-2-pyridone, 3-nitro- (TSCHITSCHIBABIN and KONOVALOVA), i, 1329.
1-Methyl-4-pyridoneimine, and its salts (TSCHITSCHIBABIN and OSSETROVA), i, 1328.
1-Methyl-2-pyridylnitroimine (TSCHITSCHIBABIN and MENSCHIKOV), i, 437.
1-Methyl-2-pyridylnitroimine, 3- and 5-nitro- (TSCHITSCHIBABIN and KONOVALOVA), i, 1329.
N-Methyl-2-[2-pyridyl]pyrrole, and its picrate (TSCHITSCHIBABIN and BYLINKIN), i, 1174.
1-Methyl-2-pyrimidine, 5-nitro-, and its salts (TSCHITSCHIBABIN and KONOVALOVA), i, 1329.
4-Methylpyrimidine-5-carboxylic acid, 2-amino-, and its ethyl ester (MITTER and PALIT), i, 1320.
Methylpyriminazole, and its chloroplatinate (TSCHITSCHIBABIN), i, 1328.
2-Methyl-4-quinazolone, 3-amino-, propionyl derivative, and 3-*m*-nitroamino-, benzoyl derivative (HELLER, GÖRING, KLOSS, and KÖHLER), i, 1323.
2-Methylquinoline (*quinaldine*), salts of (TRÖGER and DUNKER), i, 433.
2-Methylquinoline, 4-chloro-, derivatives of (FISCHER, DIEPOLDER, and WÖLFEL), i, 439.
γ-2-Methylquinoline-3-butyric acid, 4-hydroxy- (PATERSON and PLANT), i, 1147.
N-Methyl-β-*iso*quinotoxin (SUSZKO), i, 1449.
Methyl-red, ionisation of (KOLTHOFF), ii, 296.
N-Methyl*apo*safranone, and its salts (KEHRMANN and CHERPILLOD), i, 303.
Methylsuccinimide, derivatives of, and *N*-chloro-, and *N*-hydroxy- (CHERBULIEZ and SULZER), i, 1252.
Methyltartaric acid, synthesis of (GOEBEL), i, 1038.
Methyltetrahydroacridone (PERKIN and SEDGWICK), i, 64.
7-Methyltetrahydroanthranil, *C*-amino-, and its derivatives (v. AUWERS, BAHR, and FRESE), i, 312.
Methyltetrahydrobenz-3:4- and -4:5-*iso*oxazoles, and 5-amino-derivative of the former (v. AUWERS, BAHR, and FRESE), i, 310.
5-Methyl-4:5:6:7-tetrahydroindazole, and its picrate (v. AUWERS, v. SASS, and WITTEKINDT), i, 1182.
7-Methyl-4:5:6:7-tetrahydroindazole, 3-amino-, and its salts and derivatives, and 3-bromo- (v. AUWERS, BAHR, and FRESE), i, 312.
5-Methyltetrahydroindazole-2-carboxylamide (v. AUWERS, v. SASS, and WITTEKINDT), i, 1182.
7-Methyl-4:5:6:7-tetrahydroindazole-2-carboxylamide, 3-amino- (v. AUWERS, BAHR, and FRESE), i, 311.
7-Methyltetrahydroindazolenaphthatriazine (v. AUWERS, BAHR, and FRESE), i, 313.
1-Methyl-1:2:3:4-tetrahydronaphthalene, 1:2-*di*hydroxy- (v. AUWERS), i, 241.
Methyl-β-8-(3:4:5:6-tetramethoxy)-phenanthrenylethylamine, and its hydrochloride (OSADA), i, 283.

p-**Methylthiobenzamide** (SCHÖNBERG, ABELSDORFF, ANTONOFF, and KIRCHRATH), i, 557.
4-Methylthiochroman-4-ol (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.
6-Methylthiochromanone, and 3-*mono*- and 3:3-*di*-bromo-, and their derivatives (ARNDT), i, 1309.
* salts of (ARNDT and PUSCH), i, 1304.
Methylthiochromanones, and their derivatives (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1305.
4-Methyl-Δ^3-thiochromene (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.
6-Methylthiochromonol, derivatives of, and 2-bromo-2-chloro-, and 2:2-*di*-chloro- (ARNDT), i, 1311.
6-Methylthiocoumarin, and its mercurichloride (THOMPSON and EDEE), i, 1442.
6-Methylthioflavanone, 3-*mono*- and 3:3-*di*-bromo-, and their derivatives (ARNDT), i, 1309.
6-Methyl-1-thioflavone, and 3-bromo-, 2:3-*di*bromo-, and their derivatives (ARNDT), i, 1309.
5-Methyl-2-thiohydantoin, and its derivatives (SJOLLEMA and SEEKLES), i, 1175.
m-**Methylthiolphenylmethylsulphone** (TWIST and SMILES), i, 895.
5-Methylthiol-3-phenyl-2-tetradecyl-2:3-dihydro-1:3:4-thiodiazole (LANDA), i, 1039.
6-Methylthiol-*m*-toluic acid (ARNDT), i, 1311; (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1306.
5-Methylthionaphthen-2-aldehyde, 3-hydroxy-, and its derivatives (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1306.
2-Methylthiophen, and nitro- (CHRZASZCZEWSKA), i, 956.
4-Methylthiophen-2:3:5-tricarboxylic acid (SEKA), i, 1299.
Methyl *p*-tolyl ketone, chloro-oximino- (RHEINBOLDT and SCHMITZ-DUMONT), i, 1132.
1-Methyl-1:2:3-triazole-4:5-dicarboxylic acid, and its methyl ester (GRISCHKEVITSCH-TROCHIMOVSKI and KOTKO), i, 1104.
Methyl-tribenzoyl-*α*-methyl-*d*-glucoside (HELFERICH and BECKER), i, 10.
8-Methyl-Δ^8-tridecene (THOMS and AMBRUS), i, 790.
6-Methyl-2.3:5-triketopiperazine (BERGMANN, MIEKELEY, and KANN), i, 1134.
Methyltrimethylammonium iodide, hydroxy-, acetyl derivative, and iodo-, action of, on the nervous system (HUNT and RENSHAW), i, 861.
Bz-**3-Methyltryptophan**, synthesis of (ROBSON), i, 297.
5-Methylumbelliferone-4-acetic acid (MÜLLER), i, 1443.
1-Methyluracil xyloside and triacetylxyloside (LEVENE and SOBOTKA), i, 1464.
Methyluracils, alkylated, action of formaldehyde on (SCHMEDES), i, 435.
Methylurethane, nitroso-, reaction of pyrocatechol tannins with (VOGEL), ii, 827.
1-Methyluric acid, oxidation of, in alkaline solution (PIAUX), i, 165.
γ-Methylvaleryl chloride, α-bromo- (ABDERHALDEN and ROSSNER), i, 975.
γ-Methylvalerylpiperazine, 1:4-*di*bromo- (ABDERHALDEN and ROSSNER), i, 975.
Methylvanillin, preparation of (BRINER, v. TSCHARNER, and PAILLARD), i, 1069.
Methylvasicine, hydroxy- (SEN and GHOSE), i, 958.
Methylvinylcarbinol, resolution and rotation of, and its esters (KENYON and SNELLGROVE), i, 771.
Methylvinylmaleic anhydride (KÜSTER), i, 922.
Methyl-*d*-xylosides, rotation of (HUDSON), i, 232.
Mica, hydrolysis of (ZEMIATTSCHENSKI), ii, 814.
orientation of ammonium iodide on (ROYER), ii, 270.
Micas, classification of (HALLIMOND), ii, 819.
Mica group (WINCHELL), ii, 592.
Microbes (*micro-organisms*), effect of toxicity of the medium on life-period of (PAVLOV), ii, 958.
action of the electric current on (KLEIBER), i, 1509.
reduction by (FERRO), i, 340.
energy balance in growth of (TERROINE, TRAUTMANN, and BONNET), i, 1117.
decomposition of amino-acids and proteins by (WAKSMAN and LOMANITZ), i, 867.
in soils, effect of hydrogen-ion concentration on (RIPPEL), i, 220.
liberation and fixation of iodine by (v. FELLENBERG and GEILINGER), i, 339.
utilisation of paraffin by (TAUSSON), i, 479.

Microbes (*micro-organisms*), fermentation of sugars by (KLUYVER and DONKER), i, 1215.
formation of plant vitamins by (MOCKERIDGE), i, 106.
Microsiphoneæ, utilisation of nitrogen by, in soils (GUITTONEAU), i, 106, 341.
Microtome for cutting gels (FRICKE), ii, 965.
Milk, action of hydrogen ions in coagulation of (COSMOVICI), i, 608.
arsenic in, after injection of salvarsan (FORDYCE, ROSEN, and MYERS), i, 189.
bacteriolytic power of (J. and M. BORDET), i, 616.
effect of heat on solubility of calcium and phosphorus compounds of (BELL), i, 998.
separation of the Schardinger enzyme from (HOPKINS and DIXON), i, 1506.
perhydridase of (SBARSKY and MICHLIN), i, 472.
inorganic phosphates in (VLADESCU), i, 1114.
phosphorus compounds in (KAY), i, 998.
effect of replacement of proteins by urea in diet on production of (MORGAN, WINDHEUSER, and OHLMER), i, 217.
xanthine oxydase of (THURLOW), i, 743.
cows', constituents of (BLEYER and KALLMANN), i, 184.
influence of sunlight on properties of (LUCK), i, 211.
precipitation of calcium from (ROTHWELL), i, 1350.
citric acid in (KIEFERLE, SCHWAIBOLD, and HACKMANN), i, 855.
yellowish-green colouring matter of (BLEYER and KALLMANN), i, 457.
cows' and human, phosphorus content of (HESS and HELMAN), i, 1204.
vitamins in (PRINGLE), i, 1018.
dried and evaporated, vitamin content of (HARTWELL) i, 751.
Milk-agar, use of, in bacterial investigations (SLOBODSKA-ZAYKOVSKA), i, 1510.
Milk-serum, organic phosphorus compounds in (PFYL and SAMTER), i, 1114.
Milkweed. See *Asclepias syriaca.*
Millon's base, decomposition of the iodide of (PETRIKALN), ii, 630.
Mineral sulphides, electrosynthesis of sols of (V. HAHN), ii, 522.
Mineral waters. See under Water.
Minerals, density of (PANICHI), ii, 64.
absorption of oxygen and water by (KURNAKOV), ii, 767.
transformation of, by replacement of gels (LINDGREN), ii, 392.
of the mica group (WINCHELL), ii, 592.
determination of the age of (KIRSCH), ii, 320.
fusion mixture for separation of (CLERICI), ii, 594.
"**Misch metal**," cerium-free, preparation of (THOMPSON and KREMERS), ii, 580.
Mists from chemical reactions (REMY and RUHLAND; REMY and KOCH), ii, 107.
Mixtures, binary, influence of chemical constitution on the thermal properties of (PASCAL), ii, 953.
vapour pressure of (BROWN), ii, 377.
Molecular association (ROCARD), ii, 1045.
of organic liquids (LANGE), ii, 840.
and the equation of state (JÄRVINEN), ii, 865.
diameter, calculation of (SIRK), ii, 184.
field, determination of (JONES), ii, 16, 91, 92.
and molecular volume (BATSCHINSKI), ii, 932.
symmetry and optical activity (DARMOIS), ii, 1119.
Molecules, structure of (MÜLLER), ii, 363; (CABRERA), ii, 1107.
formation and decomposition of (PÓLÁNYI and WIGNER), ii, 1077.
refraction and electron constraint in (SMYTH), ii, 843, 1019.
magnetic properties of (WILSDON), ii, 641.
collisions between (FRANCK), ii, 836.
hydration of (FRICKE), ii, 36.
anisotropy of (RAMANATHAN), ii, 478.
diameter of (SIRK), ii, 364.
in isomerides (WÖHLISCH), ii, 269.
determination of cross-section areas of (MACK), ii, 1124.
activation of (DHAR), ii, 214.
dipolar, electric moment of (EBERT), ii, 262.
polyatomic polar, configuration of (HUND), ii, 479.
Molybdenum, *K*-series spectrum of (ALLISON and DUANE), ii, 250; (RICHTMYER and SPENCER), ii, 1101.
wave-length of Kα rays of (COMPTON and WOO), ii, 1128.
Röntgen ray spectra of (ALLISON), ii, 724; (ALLISON and ARMSTRONG), ii, 1015.
X-ray absorption coefficient of (WARBURTON and RICHTMYER), ii, 1103.
pure, electrical properties of (GEISS and VAN LIEMPT), ii, 638.

Molybdenum, electron emission from (DUSHMAN, ROWE, EWALD, and KIDNER), ii, 345.
critical potential in (PETRY), ii, 1017.
temperature scale and melting point of (WORTHING), ii, 759.
Molybdenum alloys, chemical resistance of (GUERTLER and LIEPUS), ii, 1146.
with aluminium and nickel and with nickel and tin (PFAUTSCH), ii, 536.
with chromium and nickel (SIEDSCHLAG), ii, 298.
with nickel and silicon (PFAUTSCH), ii, 298.
Molybdenum compounds, complex (SCAGLIARINI), ii, 891.
tervalent (WARDLAW and PARKER), i, 893.
Molybdenum *di*bromide, and its derivatives (LINDNER and HELWIG), ii, 421.
*di*chromate (CALCAGNI), ii, 891.
halides, action of, with ammonia and with potassamide in liquid ammonia (BERGSTROM), ii, 1083.
*trio*xide, volatility of, and its formation from the sulphide (BRINTON and STOPPEL), ii, 72.
*penta*oxide (WARDLAW and NICHOLLS), ii, 817.
selenide (MOSER and ATYNSKI), ii, 583.
Molybdenyl chloride (WARDLAW and WORMELL), ii, 61.
Molybdic acid, complex compounds of, with pyrocatechol and pyrogallol (FERNANDES), i, 912, 1061.
Molybdates, isomorphism of (ZAMBONINI and LEVI), ii, 1133.
Dithiomolybdates (TER MEULEN), ii, 584.
Molybdosulphites of the rare earths (CANNERI and FERNANDES), ii, 888.
Molybdovanadates (CANNERI), ii, 891.
Molybdenum organic compounds:—
Molybdic acid, compounds of organic acids with (HONNELAITRE), i, 509.
alkyl and aryl ammonium salts (KRAUSE and KRAUSKOPF), i, 908.
Molybdenum determination and separation:—
determination of, colorimetrically (TER MEULEN), ii, 330; (WENDEHORST), ii, 718.
determination of, as trioxide (HARTMANN), ii, 1206.
separation of, from vanadium (STOPPEL, SIDENER, and BRINTON), ii, 718.
Molybdomalic acid, ammonium salt, effect of hydroxy compounds on rotation of (DARMOIS and HONNELAITRE), ii, 184.
Molybdosulphites and **Molybdovanadates**. See under Molybdenum.
Monascus purpureus, colouring matter from (HIBINO), i, 1118.
Monocotyledons, starch-free, carbohydrate enzymes of (CHAPMAN), i, 215.
Monosaccharides, constitution of (HIRST and ROBERTSON), i, 364.
condensation of, with dilute mineral acids (LEVENE and ULPTS), i, 1042.
degradation of mercaptals of (PACSU), i, 515.
Monotropitin, enzymic hydrolysis of (BRIDEL), i, 615.
Monotropitoside, preparation and properties of (BRIDEL and PICARD), i, 1027.
Montanic acid, montanyl ester (FARGHER and HIGGINBOTHAM), i, 880.
Mordanting, theory of (ELÖD), ii, 531.
Morinidin chloride (WILLSTÄTTER and SCHMIDT), i, 54.
and its 3:2′:4′-trimethyl ether and perchlorate (PRATT and ROBINSON), i, 826.
Morphine, and its derivatives, physiological action of (ZAMPARO), i, 1116.
arsenious tartrate (DEBUCQUET), i, 1090.
determination of, by titration with silicotungstic acid (SAS), ii, 1011.
Morphine alkaloids (WIELAND and KOTAKE), i, 1448.
structure of (WIELAND and KOTAKE), i, 1090.
Mosses, respiration and imbibition in (MAYER and PLANTEFOL), i, 1120.
Mother-of-pearl, structure of (SHAXBY), ii, 93.
Moulds, formation of citric and gluconic acids by (BUTKEVITSCH), i, 341.
formation of methyl ketones by (STÄRKLE), i, 205.
phosphorus metabolism of (SCHNÜCKE), i, 204.
utilisation of quinic acid by (BUTKEVITSCH), i, 1511.
decomposition of uric acid by (MORRIS and ECKER), i, 478.
Mucic acid, and its salts (KHOTINOKA and EPIFANOVA), i, 783.
nephropathic action of (ROSE and DIMMETT), i, 733.
Mucilage from plants (KOMATSU and UEDA), i, 762.

Mullite, formation of, from cyanite, andalusite, and sillimanite (GREIG), ii, 987.
crystal structure of sillimanite and (NAVIAS and DAVEY), ii, 1127.
Muscarine in fungi (GUTH), i, 1247.
Muscle, effect of ions on the functions of (ABRAHAM and KAHN), i, 728; (LANGE and MAYER; DEUTICKE), i, 729.
synthesis of carbohydrates in (MEYERHOF, LOHMANN, and MEIER), i, 727.
re-synthesis of carbohydrates in (JANSSON and JOST), i, 1354.
relation between pancreas and carbohydrate metabolism of (FOSTER), i, i, 1495.
production of carbon dioxide by (LIPSCHITZ and MEYER), i, 603.
carnosine in, in relation to excretion of iminazole (HUNTER), i, 459.
contraction of (GARNER), i, 607.
function of creatine in (TIEGS), i, 1003.
formation of lactic acid in (FURUSAWA), i, 849.
creatine content of (REISSER and HAMANN), i, 860.
influence of polyneuritis on (KUDRJAVZEVA), i, 329.
influence of ions on the decomposition of glycogen in (WEBER), i, 1004.
changes of glycogen and phosphates in (v. EULER, MYRBÄCK, and KARLSSON), i, 744.
effect of insulin on oxidation in (AHLGREN; NITZESCU and COSMA), i, 482.
effect of calcium on the synthesis of lactacidogen in (EMMRICH and LANGE), i, 728.
effect of sodium salts on the synthesis of lactacidogen in (EMBDEN, KAHLERT, and LANGE), i, 728.
lactic acid in, during fatigue (HENTSCHEL), i, 728.
oxidation of lactic acid in (v. SZENT-GYÖRGYI), i, 708.
killed by insulin, lactic acid in (BAUR and KÜHN), i, 482.
isoelectric points of proteins of (WÖHLISCH and SCHRIEVER), i, 1488.
colloidal properties of proteins of (WEBER), i, 995.
sugars in juice of (CONSTANTINO), i, 720.
cod's, autolysis of (CALLOW), i, 469.
fatigued, phosphate metabolism in (ANDREWS), i, 729.
Muscle, frog's, formation of acetaldehyde in (NEUBERG and GOTTSCHALK), i, 859.
action of fluorides on the activity and metabolism of (EMBDEN and HENTSCHEL), i, 727.
striated, effect of narcosis on (LANGE and MAYER), i, 735.
plain, physiology of (TSUBURA), i, 1004.
smooth, action of narcotics on (JOACHIMOGLU), i, 735.
Muscovite, orientation of ammonium iodide crystals on the surface of (ROYER), ii, 110.
Muscular exercise, supply and utilisation of oxygen in (FURUSAWA), i, 993.
effect of, on respiration and lactic acid (FURUSAWA, HILL, LONG, and LUPTON), i, 92; (LYTHGOE and PEREIRA; PEREIRA), i, 1341.
effect of, on composition of urine (LILJESTRAND and WILSON; WILSON, LONG, THOMPSON, and THURLOW), i, 1115.
Mustard, white. See *Sinapis alba*.
Mutarotation (RIIBER), i, 8; (RIIBER, ESP, and BERNER), i, 635; (RIIBER, SÖRENSEN, and THORKELSEN), i, 773; (LOWRY; LOWRY and RICHARDS), i, 886; (KUHN and JACOB), ii, 49.
kinetics of (v. EULER, ÖLANDER, and RUDBERG), ii, 876.
Mycorrhyza, activity of enzymes in (MELIN and HELLBERG), i, 745.
Myogen, isoelectric point and stability of (WEBER), i, 995.
Myoporum laetum (ngaio), constituents of (McDOWALL), i, 1521.
Myosin, isoelectric point and solubility of (WEBER), i, 995.
Myricetin, synthesis of (KALFF and R. ROBINSON), i, 423; (DEAN and NIERENSTEIN), i, 951.
5:7:3′:4′:5-pentamethyl ether (SONN, MÜLLER, BÜLOW, and MEYER), i, 933.
Myristaldehyde *p*-nitrophenylhydrazone (STEPHEN), i, 1131.
Myristic acid, hydroxylamine salt (OESPER and BALLARD), i, 1233.
thallous salt (HOLDE and TAKEHARA), i, 1233.
3-hydroxybenzaldehyde-2-mercuric ester (WELLCOME FOUNDATION, LTD., HENRY, and SHARP), i, 1152.

N.

3′-β-Naphthacoumaryl-4-α-naphthapyrone (DEY and ROW), i, 149.

β-Naphthacridine-12-carboxylic acid, 10-amino-, acetyl derivative (SAFTIEN), i, 1318.
1:6-Naphthadiquinoline, and its sulphate (ARMIT and ROBINSON), i, 1172.
Naphthalanil, *o*-amino-, and its derivatives (CHAKRAVARTI), i, 162.
α-Naphthaldehyde *p*-nitrophenylhydrazone (STEPHEN), i, 1131.
Naphthalene, structure of (FUSON), i, 253; (LESSER, KRANLPUHL, and SAD), i, 1424.
constitution and nitration of (ODELO), i, 804.
molecular heat and viscosity of solutions of (DE KOLOSOVSKI), ii, 1163.
boiling point of (FINCK and WILHELM), ii, 759.
surface tension of solutions of, in benzene (SCHECHTMANN), ii, 1148.
solubility of, in tetrachloroethane (COHEN, DE MEESTER, and MOESVELD), ii, 190, 852.
pyrogenic decomposition of, in presence of aluminium and nickel oxides (IPATIEV and KIJUKWIN), i, 241.
derivatives, hydrogenated, formation and spectrochemistry of (v. AUWERS and MÖLLER), i, 402; (v. AUWERS), i, 815.
analysis of, and its sulphonic acids (CALCOTT, ENGLISH, and DOWNING), ii, 73.
Naphthalene, 1:3:4-*tri*amino-, and 3-nitro-1:4-*di*amino-, acetyl derivatives (PANIZZON-FAVRE), i, 145.
2:7-*di*hydroxy-, derivatives of (LESSER, KRANLPUHL, and SAD), i, 1426.
2-iodo-5- and -8-nitro- (CHUDOŽILOV), i, 903.
Naphthalenes, hydrogenated (STRAUS, BERNOULLY, and MAUTNER), i, 1155.
Naphthalenes, *tri*amino-, and their hydrochlorides and *di*nitro- (FINZI), i, 701.
bromonitro- (VESELÝ and CHUDOŽILOV), i, 1056.
Naphthalene series, hydrogenation in (ROWE and TARBETT), i, 317.
1-Naphthaleneazo-2-hydroxynaphthalene, 1′-amino-2′:4′-*di*hydroxy- (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 989.
α-Naphthaleneazo-*ar*-tetrahydro-α-naphthylamine (ROWE and TARBETT), i, 317.
Naphthalene-3-carboxylic acid, 2-hydroxy-, constitution of (LESSER, KRANLPUHL, and SAD), i, 1424.
Naphthalenedisulphonic acids, benzyl-ψ-thiocarbamide salts (CHAMBERS and SCHERER), i, 127.
Naphthalene-2-sulphoiodide (GIBSON, MILLER, and SMILES), i, 1137.
Naphthalene-2-sulphonic acid, metallic salts, and their solubilities (EPHRAIM and PFISTER), i, 896.
Naphthalene-3-sulphonic acid, 1-cyano-, and its salts (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 1426.
Naphthalene-5-sulphonic acid, 1-chloro-, metallic salts, and their solubilities (EPHRAIM and PFISTER), i, 897.
Naphthalenesulphonic acids (AMBLER, LYNCH, and HALLER), i, 126.
arylamine salts (FORSTER and KEYWORTH), i, 126.
benzyl-ψ-thiocarbamide salts (CHAMBERS and SCHERER), i, 127.
α- and β-Naphthalenesulphonylalanines, and their salts (COLLES and GIBSON), i, 137.
2-Naphthalenethiolsulphonic acid, 6-methoxy-*m*-tolyl and 2:4-xylyl esters (GIBSON, MILLER, and SMILES), i, 1137.
Naphthalic acid, preparation of (WHISTON), i, 140.
1:8-Naphthalic acid, derivatives of (MASON), i, 33, 34.
1:8-Naphthalyl chloride, preparation properties and derivatives of (MASON), i, 34.
3-Naphthamido-*p*-cresols, 5-chloro-, and 5-chloro-3:5′-bromo-, and their derivatives (RAIFORD and LANKELMA), i, 810.
Naphthaphenanthrazine, amino-, acetyl derivative (PANIZZON-FAVRE), i, 145.
Naphthaphenazine, 3-hydroxy-, and its acetyl derivative (KEHRMANN and CHERPILLOD), i, 303.
3- and 4-hydroxy- (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 304.
2:3-*di*hydroxy-, and its diacetyl derivative (KEHRMANN and SCHEDLER), i, 441.
αβ-Naphthaphenazinesulphonic acids (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 304.
Naphthaphenfluorindine (KEHRMANN and SCHEDLER), i, 442.
αβ-Naphthaphenoxarsine, 7-chloro- (AESCHLIMANN), i, 706.
α-Naphthapyrone-4-*p*-dimethylaminophenylethylene. See 4-*p*-Dimethylaminostyryl-α-naphthapyrone.
α-Naphthapyrone-4-*p*-methoxyphenylethylene. See 4-*p*-Methoxystyryl-α-naphthapyrone.
β-Naphthaquinol monohydrate (STRAUS, BERNOULLY, and MAUTNER), i, 1155.

α-Naphthaquinoline-6:7-dicarboxylic acid (STEWART), i, 975.
α-Naphthaquinone, action of magnesium phenyl bromide on (FRANSSEN), i, 1146.
derivatives of (SOCIÉTÉ ANONYME DES MATIÈRES COLORANTES), i, 413.
1:4-Naphthaquinone, 2:3-*di*amino-, derivatives of (FRIES and BILLIG), i, 938.
2-nitro-, attempted synthesis of (PANIZZON-FAVRE), i, 144.
Naphthaquinones, action of organomagnesium compounds on (FRANSSEN), i, 1146.
β-Naphthaquinone-1-*p*-acetamidophenylimine (LANTZ and WAHL), i, 820.
1:4-Naphthaquinone-4-anil, 5- and 6-amino-, acetyl derivatives (SANDER), i, 982.
1-β-Naphthaquinone-1-anisylimine (LANTZ and WAHL), i, 820.
β-Naphthaquinonearylimines (LANTZ and WAHL), i, 820, 1159.
1:4-Naphthaquinonediphenylimine, 2-hydroxy- (LANTZ and WAHL), i, 820.
β-Naphthaquinone-1-*o*-methoxyanil (LANTZ and WAHL), i, 1159.
Naphthaquinonyl thiosulphates, potassium salts (HELLER), i, 315.
α-1:4-Naphthaquinonyl-3-acetoacetic acid, 2-amino-, acetyl derivative, ethyl ester (FRIES and BILLIG), i, 940.
Naphtharhodamines (MASON), i, 34.
β-Naphthathioflavone (SCHÖNBERG, ROSENBACH, KRÜLL, and OSTWALD), i, 1300.
Naphthazinesulphonic acids, colouring matters from (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 1330.
Naphthenic acids (TANAKA and NAGAI; TANAKA, NAGAI, and ISHIDA), i, 252.
from Nishiyama petroleum (TANAKA and NAGAI), i, 1271.
conversion of, into ketones (ZELINSKI and RJACHINA), i, 39.
1′:2′-Naphthiminazole-2-benzoic acid (CHAKRAVARTI), i, 162.
Naphthiminazoletrimethyl*cyclo*pentanecarboxylic acids (CHAKRAVARTI and GUPTA), i, 981.
α-Naphthimino*iso*thio-α-naphthamide (ISHIKAWA), i, 1149.
3-Naphthoacetamide, 2-hydroxy-, and its acetyl derivative (LESSER, KRANLPUHL, and SAD), i, 1425.
Naphthoic acid, hydroxy-, alkali vanadyl salts (ROSENHEIM and MONG), i, 1412.
α-Naphthoic acid, 6-amino-, and its acetyl derivative (DZIEWOŃSKI, SCHOENÓWNA, and WALDMANN), i, 1057.
β-Naphthoic acid, 1-bromo-2-hydroxy-, and 2-hydroxy-, salts and derivatives of (LESSER, KRANLPUHL, and SAD), i, 1425.
7-bromo-3-hydroxy-, and its derivatives (CHEMISCHE FABRIK GRIESHEIM-ELEKTRON), i, 599.
α-Naphthol, reaction of phenylcarbylamide with (PASSERINI), i, 1298.
detection and determination of, in β-naphthol (CALLAN), ii, 444.
α-Naphthol, 6-amino-, acetyl derivative (SANDER), i, 982.
5-bromo- (FUSON), i, 254.
6- and 7-bromo- (FUSON), i, 540.
2-nitro-4-amino-, acetyl derivative (PANIZZON-FAVRE), i, 145.
β-Naphthol, catalytic dehydration of methyl alcohol and (PLÜSS), i, 1410.
derivatives of, with chloral hydrate and dimethylaniline (SAKOSCHANASKY), i, 1061.
determination of, oxidimetrically (TÄUFEL and WAGNER), ii, 1007.
α- and β-Naphthols, distinction between (ZAMPARO), ii, 444.
and their derivatives, molecular compounds of (WEISSENBERGER, SCHUSTER, and MAYER), ii, 766.
additive compounds of, with ketones (PFEIFFER, GOEBEL, and ANGERN), i, 271.
β-Naphtholazobenzene-*p*-sulphonic acid. See Orange-II.
β-Naphthol-4-carboxylic acid, preparation of (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 1426.
α- and β-Naphtholcoumareins (SEN and SIRCAR), i, 554.
β-Naphthol-6-sulphonic acid, metallic salts, and their solubilities (EPHRAIM and PFISTER), i, 897.
Naphthoxanthen, 8-hydroxy- (SEN and SARKAR), i, 813.
1-Naphthoxyacetyl bromide (FRIES and PUSCH), i, 569.
α-Naphthoyl chloride, 5-bromo- (RAIFORD and LANKELMA), i, 810.
β-1-Naphthoylacrylic acid (BOGERT and RITTER), i, 816.
1:2(1′:8′)-Naphthoylenebenziminazole (CHAKRAVARTI), i, 162.
1:2(1′:8′)-Naphthoylene-4-methylbenziminazole (CHAKRAVARTI), i, 162.
1:2(1′:8′)-Naphthoylene-1:3-naphthiminazole (CHAKRAVARTI), i, 162.

1-Naphthoylformanilideanil, 2-hydroxy- (Saftien), i, 1318.
2-Naphthoylformic acid, 1-hydroxy-, and 2-hydroxy-, anilide (Fries and Pusch), i, 569.
3-α- and -β-Naphthoylperylenes, 4:10-*di*chloro- (Zinke, Funke, Matscher, Wolfbauer, and Lorber), i, 1436.
αβ-Naphth*iso*thiazole-3-carboxylic acid, and its derivatives (Stolte, Giesel, and Badstübner), i, 1466.
Naphthyl thiosulphates, *di*hydroxy-, potassium salts (Heller), i, 315.
α-Naphthyl ethyl ether, 4-iodo- (Tanaka), i, 1061.
α- and β-Naphthyl benzyl ethers (v. Braun and Reich), i, 1405.
α-Naphthyl groups, migration of (Luce), i, 263.
α-Naphthylamine *di*chloroacetate (Doughty), i, 805.
α-Naphthylamine, 4-bromo- and 4-chloro-3-nitro- (Panizzon-Favre), i, 145.
β-Naphthylamine, catalytic reduction of (Hara), i, 536.
hydroferricyanide (Cumming), i, 122.
α- and β-Naphthylamines, *m*-nitrobenzenesulphonamides (Marvel, Kingsbury, and Smith), i, 245.
β-α- and -β-Naphthylaminobenzylmalonic acids, ethyl esters (Wayne and Cohen), i, 550.
α-Naphthylaminocamphor, phototropism of, in chloroform (Singh), ii, 195.
2-β-Naphthylamino-3-hydroxy-1:4-naphthaquinone (Fries and Billig), i, 939.
3-Naphthylamino-5-keto*iso*oxazoles (Worrall), i, 308.
3-Naphthylamino-5-ketopyrazoles (Worrall), i, 308.
2-β-Naphthylamino-1:4-naphthaquinone, 3-chloro-2-*N*-nitroso- (Fries and Billig), i, 939.
1-α- and -β-Naphthylaminonaphthylamines (Levi and Faldino), i, 171.
2-α- and -β-Naphthylamino-5-phenyl-1:3:4-thiodiazines, and their derivatives (Bose), i, 1466.
2-Naphthylbenztriazole, α-amino-, α-hydroxy-, and β-nitroso- (Elbs), i, 165.
α- and β-Naphthyl benzyl ketones (Luce), i, 264.
1:4-Naphthylene dibenzoate (Panizzon-Favre), i, 145.
1:2-Naphthylenediamine, 4-amino-, acetyl derivative (Panizzon-Favre), i, 145.
aminoazines from (Kehrmann and Safar), i, 1331.
1:4-Naphthylenedihydraziuetetracarboxylic acid, ethyl and methyl esters (Stollé and Adam), i, 1469.
β-Naphthyl-3:4-*di*hydroxy-α-naphthylsulphone, and its derivatives (Hinsberg), i, 1062.
1-Naphthylimino-β-naphthaquinone (Société Anonyme des Matières Colorantes), i, 413.
3-β-Naphthyl-2-methyl-*lin*-naphthiminazole-4:9-quinone (Fries and Billig), i, 939.
2-β-Naphthyl-4-methylpyrimidine-5-carboxylic acid, and its ethyl ester (Mitter and Palit), i, 1320.
***N*-(1')-Naphthylnaphthalimide**, 2'-amino- (Chakravarti), i, 162.
β-Naphthyl-1-β-naphthaquinonylsulphone, and its derivatives (Hinsberg), i, 1062.
Naphthylnaphthylenediamines, and their derivatives (Levi), i, 436, 1186.
β-Naphthyl-4-nitropiaseleneazonium chloride (Battegay and Véchot), i, 1468.
α- and β-Naphthylquinoxalines, hydroxy derivatives (Fries and Pusch), i, 569.
5-α-Naphthyl-2-thion-2:3:4:5-tetrahydro-1:3:4-thiodiazole (Guha and Rây), i, 703.
α-Naphthyl-*p*-tolylsulphone (Gilman, Beaber, and Myers), i, 1057.
6-Naphthyl-1:3:5-triazine, 2:4-*di*amino-6-*p*-hydroxy- (Society of Chemical Industry in Basle), i, 441.
Naphthyridine group, syntheses in the (Gulland and Robinson), i, 1186.
Narcosis (Lange and Mayer), i, 735.
mineral composition of blood in (Blanchetière and Cardot), i, 455.
action of, on smooth muscle (Joachimoglu), i, 735.
Narcotine, salts, dissociation of, and extraction of the alkaloid from solutions (Fabre and Parinaud), i, 962.
Natural water. See under Water.
Nebulium, spectrum of (Rosseland), ii, 3; (Lemon), ii, 1099.
Neodymium, preparation and properties of (Kremers), ii, 588.
pole-effect in spectrum of (Mohr), ii, 612.
Röntgen ray spectrum of (Gleditsch and Botolfsen), ii, 612.
Neodymium oxide, spectrum of (Nichols), ii, 259.
sulphate, double salts of thallous sulphate and (Zambonini and Caglioti), ii, 1185.

Neodymium potassium sulphate (ZAMBONINI and CAGLIOTI), ii, 222, 315.
Neoline, and its derivatives (SCHULZE and BERGER), i, 283.
Neon, spectrum of (CHILDS), ii, 339; (GOUDSMIT), ii, 450; (BURNS; DORGELO), ii, 1099.
reversal of rays in the spectrum of (BUISSON and JAUSSERAN), ii, 333.
absorption spectra of, and of its mixtures with argon and helium (MEISSNER), ii, 1099.
arc spectrum of, and its ionisation potentials (HERTZ), ii, 723.
spark spectrum of (L. and E. BLOCH and DÉJARDIN), ii, 334.
ultra-violet spectrum of (LYMAN and SAUNDERS), ii, 911.
Zeeman effect with (BACK), ii, 341.
electrical properties of (MCCALLUM and FOCKEN), ii, 641.
ionisation potential of (HERTZ and DE VISSER), ii, 339.
in vacuum tubes (RIDING and BALY), ii, 925.
atomic field of (JONES), ii, 253.
emission of light by mixtures of solid nitrogen and (VEGARD, ONNES, and KEESOM), ii, 474.
isotherms of (HOLBORN and OTTO), ii, 851.
absorption in (MEISSNER; JORDAN), ii, 337.
Neopelline (SCHULZE and BERGER), i, 283.
Neosine, detection of (FLÖSSNER and KUTSCHER), i, 327.
Nephelometer, new (KINGSLAKE), ii, 821.
Nephelometry (KLEINMANN), ii, 389.
Nephritis, nitrogenous substances in urine in (MOSONYI), i, 1491.
Nernst filaments, construction of (GRIFFITH), ii, 896.
Nerves, production of carbon dioxide by (PARKER), i, 849.
frogs', excretion of carbon dioxide by (PARKER), i, 1353.
Nervone (KLENK), i, 1346.
Nervous system, formation of ammonia in (WINTERSTEIN and HIRSCHBERG), i, 607.
effect of arsonium, phosphonium, and sulphonium compounds on (HUNT and RENSHAW), i, 861.
central, glycogen and cerebroside metabolism of (WINTERSTEIN and HIRSCHBERG), i, 1495.
Nessler's reagent, preparation of (RICHMOND), ii, 327; (FREDERICK), ii, 435.
without potassium iodide (WINKLER), ii, 713.
Neurosyphilis (MYERS and CORBITT; CORNWALL and MYERS), i, 611.
Neutral-red, toxicity of (POLITZER), i, 197.
Neutral salt action and electrical field of ions (DEBYE and MCAULAY), ii, 171.
Newt, small water. See *Triton tæniatus*.
Ngaio. See *Myoporum laetum*.
Ngaiol, and its derivatives (MCDOWALL), i, 1521.
Ngaione, and its derivatives (MCDOWALL), i, 1521.
Nickel, occurrence of, in arable soils (BERTRAND and MOKRAGNATZ), i, 492.
occurrence of, in soils, plants, and animals (MCHARGUE), i, 1023.
spectrum of (BECHERT), ii, 1014.
arc spectrum of (WALTERS), ii, 335; (BECHERT and SOMMER), ii, 913.
line spectrum of (WORTHING and RUDY), ii, 1102.
spark spectrum of (L. and E. BLOCH), ii, 727.
pure, magnetic properties of (MALCOLM), ii, 371.
films, magnetic properties of (SORENSEN), ii, 82.
magnetic anisotropy of (FORRER), ii, 486, 639.
non-magnetic films of (OSEEN), ii, 734; (INGERSOLL and DE VINNEY), ii, 846.
magnetisation of iron and (DE WAARD; PESCHARD), ii, 751.
magnetisation of iron, cobalt, magnetite, and (ASHWORTH), ii, 944.
magnetostrictive effects in (MCCORKLE), ii, 487.
pure, electrical properties of (GEISS and VAN LIEMPT), ii, 638.
films, electrical conductivity and Hall effect in (RIEDE), ii, 355.
electro-deposition of (EMELIANOVA), ii, 676.
quantitative deposition of, from oxalate electrolytes (FRÖLICH), ii, 604.
conductivities of (SCHOFIELD), ii, 273.
critical potential in electron emission from (PETRY), ii, 1017.
current-potential curves for (LIEBREICH and WIEDERHOLT), ii, 404.
polarisation of (TRIANDAFIL), ii, 405.
passivity of (ROTHMUND, EISENKOLB, and STEINHERZ), ii, 131; (EISENKOLB), ii, 1165.
atomic heat of (RODEBUSH and MICHALEK), ii, 949.
heat of adsorption of hydrogen on (FORESTI), ii, 692.

Nickel, transformation of, at the Curie point (DEL REGNO), ii, 372.
solubility of, in water containing carbon dioxide (ROBL), ii, 231.
electrolytic solution of, in sulphuric acid (ROLLET), ii, 799.
physical state and catalytic activity of (GAUGER), ii, 1072.
catalytic reduction with (FELDMANN), i, 1263.
catalytic reduction of acetaldehyde with (NEGOSHI), i, 1375.
catalytic, promoter action of thoria on (RUSSELL and TAYLOR), ii, 1071.
effect of thiophen on the action of (KUBOTA and YOSHIKAWA), ii, 805.
inactivation of, by impurities (ARMSTRONG and HILDITCH), ii, 562.
colloidal, sols of, in benzene and toluene (HATSCHEK and THORNE), ii, 197.
reduced, composition of (KUBOTA and YOSHIKAWA), ii, 1174.
catalytic action of (KOMATSU and YUKITOMO), i, 687; (KOMATSU and TANAKA), i, 905.
catalytic activity of reduced copper, thoria, and (KOMATSU and MASUMOTO), ii, 1071.
in the animal organism (BERTRAND and MÂCHEBŒUF), i, 719.
Nickel alloys with aluminium and molybdenum and with molybdenum and tin (PFAUTSCH), ii, 536.
with carbon and iron (KASE), ii, 973.
with chromium and molybdenum (SIEDSCHLAG), ii, 298.
with copper (CHEVENARD), ii, 851.
oxidation of (PILLING and BEDWORTH), ii, 689.
with iron (DELORAINE), ii, 639; (GRENET), ii, 973.
magnetic properties of (YENSEN), ii, 372.
thermomagnetic properties of (PESCHARD), ii, 651.
effect of tension on magnetic properties of (BUCKLEY and McKEEHAN), ii, 945.
expansion coefficients of (HONDA and OKUBO), ii, 104.
temper colours of (TAMMANN and SIEBEL), ii, 1169.
with molybdenum and silicon (PFAUTSCH), ii, 298.
Nickel compounds in vegetables (BERTRAND and MOKRAGNATZ), i, 873.
Nickel salts, rotatory dispersion of (ROBERTS), ii, 478.
Nickel chloride, magnetic properties of (WOLTJER; WOLTJER and ONNES), ii, 1038.
Nickel hydroxide, magnetic properties of (VEIL), ii, 412.
solution and precipitation of, in water (VEIL), ii, 183.
precipitation of, electrometrically (BRITTON), ii, 1203.
nitrate, action of phosphorus on (SCHMOSS), ii, 889.
*sub*oxide (LEVI and TACCHINI), ii, 424.
oxide, reduction of, by hydrogen (BENTON and EMMETT), ii, 216.
effect of chlorine on catalysis by (BOSWELL and BAYLEY), ii, 215.
selenide (MOSER and ATYNSKI), ii, 583.
sulphate, hydrated, solubility of (TANCOV), ii, 852.
Nickel organic compounds:—
with diacetyldioxime (PANETH and THILO), i, 1132.
Nickel detection, determination, and separation:—
detection and determination of (FEIGL and CHRISTIANI-KRONWALD), ii, 330; (SOULE), ii, 603.
determination of (JÄRVINEN), ii, 602.
determination of, as dioxide (MOSER and MAXYMOWICZ), ii, 1206.
determination of, in presence of iron and cobalt (WEELDENBURG), ii, 72.
separation of cobalt, manganese, zinc, and (LEMARCHANDS), ii, 242.
separation of, from iron (ARDAGH and BROUGHALL), ii, 603.
separation of iron and, in presence of chromium (ROUSSEAU), ii, 441.
separation of zinc and (KLING and LASSIEUR), ii, 439.
Nickel wire, magnetic spectrum of (ARKADIEV), ii, 82.
Nicotine, rotation of (PATTERSON and FULTON), ii, 1120.
configuration of, and its oxidation (KARRER and WIDMER), i, 1084.
adsorption of, by calcium salts (CHAPIN), i, 697.
separation of, from ammonia, and its decomposition by enzymes (FODOR and REIFENBERG), i, 1519.
Nicotinic acids, derivatives of (MEYER), i, 836.
α-Nicotyrine. See *N*-Methyl-2-[2-pyridyl]pyrrole.
Niobium, arc spectrum of (MEGGERS), ii, 167.
Niobium carbide and nitride (FRIEDERICH), ii, 374.
nitride (FRIEDERICH and SITTIG), ii, 420.
oxide, visible radiation of (NICHOLS), ii, 350.

Niobium detection, determination, and separation :—
detection and determination of, and its separation from tantalum (POWELL and SCHOELLER), ii, 1096.
determination of, and separation from iron (PIED), ii, 442.
Niquine, and *di*bromo-, and their derivatives, and *N*-nitroso- (SUSZKO), i 1449.
Nitella, adsorption of dyes by cell sap of (IRWIN), i, 1363.
Niton (*radium emanation*), radioactive constant of (CURIE and CHAMIÉ), ii, 8.
decay constant of (BASTINGS), ii, 621.
ionisation potential of (GLOCKLER), ii, 1105.
rate of transformation of (CURIE), ii, 463.
number of ions produced by, in a spherical volume (MUND), ii, 732.
action of, on hydrocarbons (MUND and KOCH), i, 625.
perfusion experiments with calcium and (ZWAARDEMAKER, FEENSTRA, and STEYNS), i, 193.
effect of, on growth of rats (CHICK and TAZELAAR), i, 211.
Nitrates. See under Nitrogen.
Nitration (SCHAARSCHMIDT, BALZERKIEWICZ, and GANTE), i, 532; (KLEMENC and SCHÖLLER), ii, 212.
at high temperatures, apparatus for (KRANZ and KOPECKY), ii, 319.
new method of (SCHAARSCHMIDT), i, 128.
with nitrates (MENKE), i, 386, 655.
with mixed nitrosulphonic and fuming nitric acids (VARMA and KULKARNI), i, 238.
Nitric acid. See under Nitrogen.
Nitrides, preparation and properties of (FRIEDERICH and SITTIG), ii, 419.
Nitrification by bacteria in acid solutions (GAARDER and HAGEM), i, 480.
in soils (GIBBS, BATCHELOR, and MAGNUSON), i, 1030.
Nitriles, synthesis of (HARA and KOMATSU), i, 893.
catalytic reduction of (ROSENMUND and JORDAN), i, 245; (GRIGNARD and ESCOURROU), i, 931.
action of magnesium organic compounds on (BRECKPOT), i, 14; (BRUYLANTS), i, 15; (CHRISTIAEN), i, 23; (ECTORS), i, 138; (JASPERS), i, 936.
condensation of thioamides with (ISHIKAWA), i, 917, 1149.
Nitrites. See under Nitrogen.
α-**Nitro-acids**, aliphatic, action of hydrazine hydrate on halogen derivatives of (MACBETH and TRAILL), i, 628.
Nitro-alcohols, aliphatic (TRÉNEL and WILKENDORF), i, 112.
Nitroamide, catalytic decomposition of (BRÖNSTED and DUUS), ii, 982.
Nitroamino-groups, determination of (LEHMSTEDT and ZUMSTEIN), ii, 1201.
Nitro-compounds, physical properties of (DESVERGNES), i, 1056; ii, 490.
reduction of, by calcium hydride (DURAND and HOUGHTON), i, 646.
action of sulphites and hydrogen sulphites on (RASCHIG), i, 289.
aromatic, ionisation of, in liquid ammonia (FIELD, GARNER, and SMITH), ii, 792.
reduction of (WEST), i, 535; (VESELÝ and CHUDOŽILOV), i, 654.
Nitrogen, structure and valency of (WAHL), ii, 937.
atomic, and its arc spectrum (COMPTON), ii, 910; (KIESS), ii, 911.
atom, asymmetric (WEDEKIND and UTHE), i, 536, 1059; (WEDEKIND), i, 678.
tervalent, asymmetric compounds of (HESS and GRAU), i, 425.
nuclei, ejection of protons from (BLACKETT), ii, 256.
spectrum of (MERTON and PILLEY), ii, 333.
band spectrum of (HULTHÉN and JOHANSSON; JOHNSON), ii, 11; (LINDAU), ii, 11, 625; (FASSBENDER), ii, 350; (MERTON and PILLEY; BIRGE and HOPFIELD), ii, 737.
infra-red emission spectrum of (PFUND), ii, 11.
line spectrum of (CROZE), ii, 77, 166.
ionised, line spectrum of (FOWLER), ii, 250.
spark spectrum of (KIESS), ii, 4.
solid, luminescence of (MCLENNAN, ii, 88; (VEGARD), ii, 630.
and its mixtures with neon (VEGARD, ONNES, and KEESOM), ii, 474.
fluorescence radiation of (OLDENBERG), ii, 1116.
magnetic susceptibility of (GLASER), ii, 82.
diamagnetism of, at low pressures (GLASER), ii, 642.
electrical properties of (MCCALLUM and FOCKEN), ii, 641.
heat of dissociation of (EUCKEN), ii, 207.

Nitrogen, molecular heat of (SCHREINER), ii, 97.
reproduction of electrical conditions of the afterglow of (CAMERON), ii, 172.
temperature-entropy diagram for (RODEBUSH, ANDREWS, and TAYLOR), ii, 492.
isotherms of (HOLBORN and OTTO), ii, 851.
absorption of, in water (BECKER), ii, 106.
solubility of, in liquid ammonia (LARSON), ii, 852.
fixation of, by the electric arc process (KARRER), ii, 987.
Haber equilibrium for (GILLESPIE), ii, 532.
as sodium cyanide (GUERNSEY and SHERMAN), ii, 889.
in soils (WINTERS), i, 767; (TRUFFAUT and BEZSSONOFF), i, 1227.
in soils of the Punjab (LAUDER and ALI), i, 1524.
explosion of mixtures of acetylene and (GARNER and SAUNDERS), ii, 627.
attempts to prepare a new chloride of (NOYES), ii, 988.
reaction of hydrogen with, in presence of mercury vapour (NOYES), ii, 573.
sources of available, for higher plants (BIALOSUKNIA), i, 1366.
residual, distribution of, in the organism (MADSEN), i, 718.
excretion of, in urine (SCHIMIZU; TAKANOSU), i, 185.
effect of ethyl acetate and other substances on (BYLSMA), i, 1356.
Nitrogen *tri*chloride, heat of formation of (NOYES and TULEY), ii, 644.
iodide, composition of (RASCHIG), ii, 147.
*mon*oxide (*nitrous oxide*), solubility of, in electrolytes (MANCHOT, JAHRSTORPER, and ZEPTER), ii, 282.
thermal and catalytic decomposition of (HINSHELWOOD and PRICHARD), ii, 310.
adsorption of, by glass (BANGHAM and BURT), ii, 657.
catalytic decomposition of, on gold (HINSHELWOOD and PRICHARD), ii, 567.
solid, structure of (DE SMEDT and KEESOM), ii, 484.
*di*oxide (*nitric oxide*), preparation of (NOYES), ii, 993.
electrical formation of (SCHWAB and LOEB), ii, 150.
Nitrogen *di*oxide (*nitric oxide*), rate of oxidation of (LATSHAW and PATRICK; HASCHE and PATRICK), ii, 681.
oxidation reactions with (KLEMENC), ii, 407.
dissociation equilibria of compounds of ferrous salts with (MANCHOT and HAUNSCHILD), ii, 298; (MANCHOT and LINKH), ii, 317.
formation of nitrous acid from nitric acid and (ABEL and HARASTY), ii, 139.
action of sodium ethoxide on (HESS), i, 58; (TRAUBE), i, 110.
analysis of, colorimetrically (WHITE and TOLMAN), ii, 682.
detection of (EEGRIWE), ii, 156.
*isodi*oxide (RASCHIG), ii, 146.
per- or *tetr*-oxide, adsorption of, by silica gels (RAY), ii, 191.
action of, on copper (KLEMENC and SCHROTH), ii, 228.
action of, on hydrocarbons (SCHAARSCHMIDT), ii, 227.
additive compounds of olefines and (SCHAARSCHMIDT and HOFMEIER), i, 877.
*pent*oxide, decomposition of (HUNT and DANIELS), ii, 801.
thermal decomposition of (HIRST), ii, 554.
velocity of decomposition of (WHITE and TOLMAN), ii, 682.
reactions of, with organic compounds (HAINES and ADKINS), i, 801.
Nitrosonitrogen *tri*oxide (HASCHE), ii, 988.
Nitrogen oxides, compressibility of (BATUECAS), ii, 497.
reduction of, in presence of sulphuric and sulphurous acids (GRAIRE), ii, 227.
determination of, by absorption (SCHLESSING), ii, 599.
determination of, in air and in combustion products of coal gas (FRANCIS and PARSONS), ii, 713.
Nitric acid (KLEMENC and SCHÖLLER), ii, 212.
constitution of (HANTZSCH and WOLF), ii, 634.
synthesis of (PASCAL), ii, 566.
vapour pressure of solutions of (TAYLOR), ii, 767.
action of, on metals (DHAR), ii, 315.
formation of nitrous acid from nitric oxide and (ABEL and HARASTY), ii, 139.

Nitrogen:—
Nitric acid, reduction of, by stannous and titanous chlorides (COBLENS and BERNSTEIN), ii, 804.
Nitrates, formation of, in soils (RUSSEL, JONES, and BAHRT), i, 1031.
detection of (MARVEL and DU VIGNEAUD), ii, 240; (VÁGI), ii, 599; (HAHN), ii, 1095; (HAHN and JAEGER), ii, 1199; (EKKERT), ii, 1200.
detection of, by the diphenylamine reaction (EKKERT), ii, 1093.
determination of (HIBBARD), ii, 240.
Pernitric acid (POLLAK), ii, 407.
Nitrous acid, decomposition of, by light and by catalysts (MUKERJI and DHAR), ii, 691.
reactions of sulphurous acid with (RASCHIG), ii, 146.
Nitrites, oxidation of (REINDERS and VLÈS), ii, 308.
Tromsdorff reagent for (COQUILLAT), ii, 328.
detection of (VÁGI), ii, 599; (HAHN and JAEGER), ii, 1199; (EKKERT), ii, 1200.
detection of, colorimetrically (NOVELLI), ii, 900.
Nitrogen *tetra*selenide and *tetra*sulphide (VAN VALKENBURGH and BAILAR), ii, 993.
*per*sulphide (USHER), ii, 581.
Nitrogen organic compounds, spectrochemistry of (v. AUWERS and KRAUL), ii, 847.
availability of, in pot experiments (CROWTHER), i, 1371.
heterocyclic, synthesis of (MINUNNI), i, 1175.
Nitrogen determination:—
determination of, by Kjeldahl's method (FLEURY and LEVALTIER), ii, 434.
determination of, by modified Kjeldahl methods (FLEURY and LEVALTIER; SHAW), ii, 65; (MARKLEY and HANN), ii, 824.
determination of, microchemically (ROSE), ii, 900.
determination of, in blood (OSBORN), i, 323.
determination of, in explosives (MARQUEYROL, CHENEL, FRIEDERICH, FLORENTIN, KOEHLER, and LORIETTE), ii, 599.
determination of, in nitrates, by Kjeldahl's method (MARGOSCHES, SCHEINOST, and WOYNAR; MARGOSCHES and SCHEINOST), ii, 1094.
determination of, in oil, coke, and proteins (TER MEULEN), ii, 599.
Nitrogen determination:—
determination of, in organic compounds (HESLINGA), ii, 65; (TER MEULEN), ii, 66.
determination of, in proteins (MAIN and LOCKE), i, 997.
determination of distribution of, in proteins (GORTNER and SANDSTROM), ii, 908.
inhibition of bumping in determination of, in soils (HANCE), i, 1032.
amino-, determination of, in bacterial metabolism (PARSONS and STURGES), i, 1509.
Nitroglauberite (FOOTE), ii, 786.
Nitro groups, replacement of benzoyl groups by (ELION), i, 44.
Nitroimino groups, determination of (LEHMSTEDT and ZUMSTEIN), ii, 1201.
Nitronium salts (HANTZSCH and WOLF), ii, 635.
Nitroprussic acid, sodium salt, action of, on acetone and acetaldehyde (VAN URK), ii, 162.
Nitrosochlorination (RHEINBOLDT and SCHMITZ-DUMONT), i, 1131.
Nitroso compounds, constitution of (GOLDSCHMIDT and CHRISTMANN), i, 649.
action of sulphites and hydrogen sulphites on (RASCHIG), i, 239.
Nitroso groups, influence of, in aromatic substitution (INGOLD), i, 646.
Nitrosonitrogen. See under Nitrogen.
Nitrososulphites. See Dinitrososulphonates under Sulphur.
Nitrosulphonic acid, nitration with a mixture of fuming nitric acid and (VARMA and KULKARNI), i, 238.
Nitrosyl chloride, formation of (TRAUTZ and SCHUETER), ii, 552.
velocity of formation of (TRAUTZ and GERWIG), ii, 878.
photochemical decomposition of (BOWEN and SHARP), ii, 695.
condensations with (SCHAARSCHMIDT and RAECK), i, 380.
reactions with (RHEINBOLDT and SCHMITZ-DUMONT), i, 1131.
Nitrous acid. See under Nitrogen.
Nitroxyl bromide and chloride, preparation of, and their reactions with Grignard reagents (ZUSKINE), ii, 587.
Nobili's rings, colours of (CHUCKUBUTTI), ii, 744.
Nonaldehyde, *i*-hydroxy-, and its derivatives (HELFERICH and SCHÄFER), i, 7.
Nonanediols, and their di-*p*-nitrobenzoates (PIERCE and ADAMS), i, 825.
Nona-oxymethylene diacetates (STAUDINGER and LÜTHY), i, 361.

Non-electrolytes, relation of, to rare gases in melting and boiling points (CARLSOHN), ii, 1044.
Δβ-Noninene (BOURGUEL), i, 770.
Non-metals, relations between hydrides and alkyl compounds of (v. GROSSE), ii, 843.
Nonodilactone (BENNETT), i, 883.
Nonoic acid, sodium salt, effect of sodium hydroxide on surface tension of (HARKINS and CLARK), ii, 857.
Nopinene, oxidation of, with permanganate (BRUS), i, 47.
Nor-*m*-hemipinic acid, ethylimide of (SPÄTH and DOBROWSKY), i, 1085.
Northebenine, cyano- (SPEYER and ROSENFELD), i, 962.
Novocaine, determination of, colorimetrically (CHERAMY), ii, 247.
Novocaine, bromo- (FREJKA and VITHA), i, 663, 1416.
Nuclei, mechanism of staining of (FEULGEN and VOIT), i, 1477.
Nucleic acid, determination of, in animal tissues (JAVILLIER and ADAMS), i, 996.
Nucleic acids, alkaloidal salts of (PEISER), i, 1477.
Nucleosides, dissociation constants of, and their relation to nucleic acid (LEVENE and SIMMS), i, 1478.
synthetic (LEVENE and SOBOTKA), i, 1463.
Nucleotides (IZUMI), i, 174.
dissociation of constants of, and their relation to nucleic acid (LEVENE and SIMMS), i, 1478.
plant, in animal tissues (JONES and PERKINS), i, 182.
Nutrient solutions, effect of bacteria on (BLEYER), i, 746.
Nutrition of aquatic animals (KŘIŽENECKÝ and PODHRADSKÝ), i, 612.
Nux vomica, determination of alkaloids in (SABALITSCHKA and JUNGERMANN), ii, 608.

O.

Oak, tannins from (FEIST and BESTEHORN), i, 566.
Oats, nutrients for culture of (JONES and PEMBER), i, 1030.
culture of, with nitrogen, phosphorus, and potassium (PEMBER and MACLEAN), i, 1121.
Oat bran, insulin-like substance in extracts of (BODEN, NEUKIRCH, and WANKELL), i, 483.
Octadecahydrodecacyclene (DZIEWOŃSKI and SUSZKO), i, 242.
Octaethylcellobiose, acetolysis of (HESS and SALZMANN), i, 1383.
Octahydroacridine, and amino-, and nitro-, and their derivatives (PERKIN and SEDGWICK), i, 63.
***s*-Octahydroanthracene**, and its salts and derivatives, and 9-thiol- (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 129.
action of aluminium chloride with (SCHROETER, VAN HULLE, GLUSCHKE, STIER, and MÜLLER), i, 125.
***s*-Octahydroanthracene-9-sulphinic acid**, sodium salt (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 130.
1-*s*-Octahydroanthracenylcarbamide (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 130.
1:2:3:4:5:6:7:8-Octahydrocarbazole, constitution of (v. BRAUN and SCHÖRNIG), i, 1449.
Octahydrodecacyclene (DZIEWOŃSKI and SUSZKO), i, 242.
Octahydroindene, preparation and dehydrogenation of (ZELINSKI and BORISSOV), i, 122.
Octahydronaphthalene (ZELINSKI and GAVEDOVSKAJA), i, 123.
***s*-Octahydrophenanthrene**, and 1-hydroxy-, and their derivatives (SCHROETER, VAN HULLE, and MÜLLER), i, 131.
***s*-Octahydrophenanthrene-9-carboxylic acid**, and its silver salt (SCHROETER, VAN HULLE, and MÜLLER), i, 131.
***s*-Octahydrophenanthrene-9-sulphonic acid**, salts and derivatives of (SCHROETER, VAN HULLE, and MÜLLER), i, 131.
Octahydrophenazine, and its derivatives (GODCHOT), i, 436.
Octahydroretene (VESTERBERG and BORGE), i, 252.
α- and β-Octahydrotrianhydrostrophanthidins (JACOBS and COLLINS), i, 567.
***n*-Octaldehyde** *p*-nitrophenylhydrazone (STEPHEN), i, 1131.
Octa-oxymethylene diacetate (STAUDINGER and LÜTHY), i, 361.
Δγ-Octinene (BOURGUEL), i, 770.
***n*-Octoic acid**, 3-hydroxybenzaldehyde-2-mercuric ester (WELLCOME FOUNDATION, LTD., HENRY, and SHARP), i, 1154.
***n*-Octoylglycine**, ethyl ester (KARRER, MIYAMICHI, STORM, and WIDMER), i, 594.
Octyl alcohol, substitution of hydroxyl group of, by halogen (MCKENZIE and TUDHOPE), i, 226.
***sec.*-Octyl ether** (SENDERENS), i, 113.

Odorants (THOMS), i, 788.
Oidium lactis, action of, on tyrosine and its derivatives (KOTAKE, CHIKANO, and ICHIHARA), i, 746.
Oil, behaviour of oleic acid and, on water (CARRIÈRE), ii, 287.
Oils, action of ultra-violet light on (HESS and WEINSTOCK), i, 212.
surface tensions of aqueous solutions against (HOWARD and SOLLMAN), ii, 109.
acid value of (SOMAZZI), ii, 828.
hydrogenation of (LUSH), ii, 411.
iodine super-number of (MARGOSCHES, FRIEDMANN, SCHEINÖST, and TSCHÖRNER), i, 883.
animal marine, constituents of (ANDRÉ and CANAL), i, 1373.
drying, "oxynes" in (EIBNER and MUNZING), i, 1036.
essential. See Oils, vegetable.
fatty, polymerisation of (MARCUSSON), i, 356, 1234.
drying of (EIBNER and PALLAUF), i, 777.
iodine value of (MARGOSCHES, FRIEDMANN, and TSCHÖRNER), i, 629.
lecithin in (BOEDTKER), i, 1114.
fluorescent, coating of photographic plates with (HARRISON), ii, 930.
lubricating, heat of wetting of (BACHMANN and BRIEGER), ii, 510.
surface tension of (GRUNMACH and SCHWEIKERT), ii, 31.
marine, catalytic hydrogenation of (RICHARDSON, KNUTH, and MILLIGAN), i, 229.
vegetable (SCHIMMEL & Co.), i, 417.
formation of, in plants (FRANCESCONI, MANFREDI, and ASTENGO), i, 759; (POPOVICI), i, 1123.
extracted from flowers (v. SODEN), i, 1123.
fatty degeneration caused by (v. GRAEVENITZ), i, 195.
antiseptic action of (SCHÖBL), i, 1006.
growth-promoting and calcifying properties of, after exposure to light (STEENBOCK and BLACK), i, 1020.
detection of ethyl phthalate in (THOMS), ii, 1008.
determination of cineole in (CASH and FAWSITT), ii, 75.
determination of phenols in (RETI), ii, 604.
Australian, germicidal values of (PENFOLD and GRANT), i, 614.
from Calabria, constituents of (LA FACE), i, 564.
Oils, vegetable, Indian, constituents of (SIMONSEN), i, 565, 1164; (RAO), i, 565, 687; (RAO and SIMONSEN), i, 687; (RAO, SUDBOROUGH, and WATSON), i, 1164.
from Travancore (MOUDGILL), i, 565, 823, 945, 1293.
determination of iodine–bromine numbers of (KÖPKE), ii, 246; (WINKLER), ii, 446, 1009.
determination of nitrogen in (TER MEULEN), ii, 599.
Oil emulsions, reversible (SEIFRIZ), ii, 779.
Oil gas, compressed, hydrocarbons from (LEWIS-DALE), i, 769.
Oleanolic acid (VAN DER HAAR), i, 50.
Olefines, isomerisation in (BRUYLANTS), i, 493.
catalytic reduction of (KERN, SHRINER, and ADAMS), i, 625.
action of nitrogen tetroxide on (SCHAARSCHMIDT and HOFMEIER), i, 877.
Oleic acid, preparation, properties, and salts of (LAPWORTH, PEARSON, and MOTTRAM), i, 355.
synthesis of (G. M. and R. ROBINSON), i, 354.
behaviour of oil and, on water (CARRIÈRE), ii, 287.
oxidation of (LAPWORTH and MOTTRAM), i, 1129, 1234.
ammonium salt, elasticity and viscosity of (HATSCHEK), ii, 862.
calcium salt (KLIMONE, v. MOLTINI, and BENEDIK), i, 506.
solubility of (HARRISON), ii, 190.
sodium salt, surface tension of (JOHLIN), ii, 1054.
surface tension of aqueous solutions of (DU NOÜY), ii, 109.
thallium salt (HOLDE and SELIM), i, 504.
3-hydroxybenzaldehyde-2-mercuric ester (WELLCOME FOUNDATION, LTD., HENRY, and SHARP), i, 1154.
Δ^{α}-Oleic acid, configuration of (SEMERIA), i, 5.
Oleyl acetate and benzoate (HELFERICH and SCHÄFER), i, 7.
***N*-Oleylpropylenediamine** (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1133.
Olives, Palestine, constituents of, and their oil (MENCHIKOWSKY), i, 1521.
Olive oil, oxidation of organic compounds in (WALKER), i, 990.
Olive resin (REINITZER), i, 146.
Onion, toxins in scales of (WALKER, LINDEGREN, and BACHMANN), i, 872.

Ooporphyrin, conversion of, into hæmatoporphyrin (FISCHER and LINDNER), i, 992.
Opianic acid, condensation of, with phenols (JACOBSON and ADAMS), i, 272.
Opium alkaloids, extraction of (KANEWSKAJA), i, 153.
picrates of (MAPLETHORPE and EVERS), i, 1166.
detection of (DAVID), ii, 1010.
Optical activity and molecular dissymmetry (DARMOIS), ii, 1119.
and polarity of substituent groups (RULE and SMITH), ii, 1120.
potential (READ and MCMATH), i, 1126.
constants of matter (DARWIN), ii, 2.
inversion, Walden's (LEVENE and MIKESKA), i, 5; (SENTER and WARD), i, 31, 1128; (MCKENZIE and TUDHOPE), i, 226; (KENYON, PHILLIPS, and TURLEY), i, 507; (TERRY and EICHELBERGER), i, 631.
phenomena, quantum theory of (SLATER), ii, 478.
rotatory power, and size of atoms (BRAUNS), ii, 633.
screening constants (MENZIES), ii, 831.
superposition, studies in (PATTERSON and BUCHANAN), i, 115.
Optically active compounds, chemical constitution and rotatory power of (RUPE and KOPP), i, 274; (RUPE and VONAESCH), i, 499; (RUPE and RINDERKNECHT), i, 533.
Orange II, derivatives of, with sulphites (BUCHERER and STICHEL), i, 1338.
Oranges, insulin-like substances in (FISHER and MCKINLEY), i, 1016.
protein from (SMITH), i, 619.
navel, glucosides of (HALL), i, 760.
Valencia, constituents of the juice of (HALL and WILSON), i, 1521.
Orange juice, antiscorbutic value of (LIOTTA), i, 1365.
effects of lemon juice and of, on calcification (KORENCHEVSKY and CARR), i, 211.
Orchids, loroglossin from (DELAUNEY), i, 487.
Orcinol dimethyl ether, 2:6-*di*bromo- (WAGENHOFER), i, 550.
Orcinol, 2:4-*di*bromo-, and its salts (WAGENHOFER), i, 550.
Ordosite (LACROIX), ii, 429.
Organs, extraction of alkaloids from (FABRE), i, 719.
animal, method of testing therapeutic powders from (JAVILLIER, ALLAIRE, and GROG), ii, 1012.
Organic compounds, structure of, from Röntgen ray crystal analysis (MARK), i, 1.
formation of, from inorganic compounds in light (BAUDISCH), ii, 1082.
ultra-red spectrochemistry of (BONINO), ii, 1032.
ultra-violet absorption spectra of (MARCHLEWSKI and MOROZ), ii, 353.
rotatory dispersion of (LOWRY and RICHARDS), ii, 265; (LOWRY and CUTTER), ii, 356; (RICHARDS and LOWRY), ii, 632, 934; (CUTTER, BURGESS, and LOWRY), ii, 743.
fluorescence of (MOIR), ii, 261.
electron displacement in (LUCAS and JAMESON), i, 2; (LUCAS, SIMPSON, and CARTER), i, 769; (LUCAS and MOYSE), i, 770.
thermochemistry of (PARKS and KELLEY), ii, 949.
heats of combustion of (KHARASCH and SHER), ii, 636.
thermal data of (PARKS), ii, 491.
repulsive action of various groups in (BÖESEKEN), ii, 1031.
lability of halogen atoms in (MACBETH and TRAILL), i, 628, 782.
influence of hydrogen and halogens on the properties of (VAN ARKEL and DE BOER), ii, 758.
stability of (BOLIN), ii, 411.
reactivity of atoms and groups in (NORRIS and ASHDOWN), i, 626.
catalytic hydrogenation of, with platinum oxide (PIERCE and ADAMS), i, 824; (HECKEL and ADAMS), i, 909; (CAROTHERS and ADAMS), ii, 693.
liberation of hydrogen from (DICKSON), i, 1033.
autoxidation of (STAUDINGER), i, 897, 898.
adsorption of, by charcoal (RICHARDSON and ROBERTSON), ii, 383.
decomposition of (SCHÖNBERG), i, 557.
action of chlorine monoxide on (GOLDSCHMIDT and SCHÜSSLER), i, 497.
acidic, colour changes in salt formation by (KEHRMANN), i, 435.
aliphatic, spreading of, on surface of water (CARY and RIDEAL), ii, 1046, 1047, 1048.
complex, reactivity of (REIHLEN, ILLEG, and WITTIG), i, 232.
isomeric, solubility of (ANDREWS; KOHMAN), ii, 1052; (KOHMAN and ANDREWS), ii, 1053.
long-chain, Röntgen ray spectra of (SHEARER), ii, 938.

Organic compounds, proof of identity of (MURMANN), ii, 719.
elementary analysis of (ŠVÉDA and PROČKE), ii, 719.
determination of arsenic in (NEWBERY), ii, 901.
determination of carbon in (WHITE and HOLBEN), ii, 240; (DESGREZ and VIVARIO; SIMON), ii, 436; (WILDE and LOCHTE), ii, 600.
determination of carbon, hydrogen, and nitrogen in (HESLINGA), ii, 65.
determination of halogens in (BUSCH), ii, 823.
determination of nitrogen in (TER MEULEN), ii, 66.
determination of oxygen in (TER MEULEN), ii, 156.
separation of, by means of adsorption (FODOR and ROSENBERG), ii, 1060.
Organic radicals. See under Radicals.
Organic reactions, course of (MÜLLER), ii, 414.
Organic syntheses, physico-chemical study of (MATIGNON), ii, 1068.
Organism, animal, synthesis of amino-acids in (MCGINTY, LEWIS, and MARVEL), i, 100.
electrolytes in the (KRAUS, ZONDEK, ARNOLDI, and WOLLHEIM), i, 198.
metabolism of mineral salts in the (SASAKI), i, 331.
human, water–salt content of, in relation to acid–base balance (OEHME and PAAL), i, 326.
Organo-metallic compounds, fluorides of (KRAUSE and V. GROSSE), i, 378.
Ornithine, behaviour of, in the liver (FELIX and ROTHLER), i, 859.
Orobanches, blackening of, during drying (BRIDEL and CHARAUX), i, 488.
p-**Orsellinic acid** (WAGENHOFER), i, 550.
Orthoboric acid. See under Boron.
Orthocarbonic acid, ethyl ester, hydrolysis of (SKRABAL and BALTADSCHIEVA), ii, 139.
Osmium chloride, compounds of carbon monoxide with (MANCHOT and KÖNIG), ii, 232.
*tetr*oxide (V. WARTENBERG), ii, 231.
boiling point of (V. WARTENBERG), ii, 276.
compounds of (KRAUSS and WILKEN), ii, 894.
Osmium organic compounds, complex base of (TSCHUGAEV and FRITZMANN), i, 1395.
Osmosis in various gels (YUMIKURA), i, 735.
See also Electro-endosmosis.
Osmotic equilibria of systems with a semi-permeable membrane (SCHREINEMAKERS), ii, 975.
Osmotic pressure, determination of, by the solubility method (APPLEBEY and DAVIES), ii, 964.
relation of, to adsorption (PÓLÁNYI), ii, 290.
of colloids (BJERRUM), ii, 111.
electrolytes of high molecular weight (HAMMARSTEN), ii, 195.
Ovariectomy, salts in blood after (BLANCHETIÈRE), i, 1207.
Ovary, preparation of hormone from (DICKENS, DODDS, and WRIGHT), i, 1513.
lipoids of the (YAMAUCHI; LANG), i, 457.
Over-potential, theory of (HEYROVSKÝ), ii, 675.
Overvoltage (KNOBEL), ii, 211, 212; (BIRCHER, HARKINS, and DIETRICHSON), ii, 211; (NEWBERY), ii, 405; (SMITS), ii, 547.
influence of colloids on (MARIE and LEJEUNE), ii, 115.
effect of hydrogen-ion concentration on (HERASYMENKO), ii, 675.
effect of surface condition on (KNOBEL), ii, 547.
cathodic, and passivity (LIEBREICH and WIEDERHOLT), ii, 44.
hydrogen (HARKINS and ADAMS), ii, 301.
on alloys (FISCHER), ii, 44.
at arsenic cathodes (GRUBE), ii, 43.
of lead cathodes (GLASSTONE), ii, 43, 301.
of mercury cathodes (GLASSTONE), ii, 133.
Ox, constituents of extracts of testicles of (MÜLLER), i, 854.
Oxacyanines (KÖNIG and MEIER), i, 705.
p-**Oxadiazphospholes** (AUTENRIETH and BÖLLI), i, 1468.
Oxalacetic acid, fermentation of (NEUBERG and GORR), i, 837.
behaviour of, with animal organs (MAYER), i, 736.
Oxalenediuramidoxime, use in, in detection and determination of nickel (FEIGL and CHRISTIANI-KRONWALD), ii, 330.
Oxalic acid, dissociation constants of (BRITTON), ii, 977.
adsorption of, by oxides (KOZAKEVITSCH), ii, 855.
photochemical decomposition of, in uranyl sulphate solution (ANDERSON and ROBINSON), ii, 415.
esterification of, with phenols (FEIGL and KOBILIANSKY), i, 1235.

Oxalic acid, reaction of ethers with (WASER and SANDER), i, 536.
oxidation of, by hydrogen peroxide (HATCHER and HOLDEN), ii, 684.
catalysis of the reaction of permanganates with (RIDLEY), ii, 689.
additive compounds of sodium ethoxide and esters of (ADICKES), i, 1378.
decomposition of, by plants (PALLADIN and LOVTSCHINOVSKAJA), i, 1222.
Oxalic acid, aniline trihydrogen salt (RAMBECH), i, 385.
calcium salt, abnormal crystal forms of (BARDACH), i, 1114.
hydration of (AUMÉRAS), ii, 895.
action of sulphuric acid on (CARRIÈRE and VILON), ii, 206.
precipitation of, in presence of ammonium citrate (JAKÓB), ii, 69.
conversion of, into calcium carbonate in tissues (LOEPER, SCHULMANN, and TOUNET), i, 1497.
magnesium salt, occlusion of, by calcium oxalate (LEMARCHAND), ii, 385.
molybdenum salts (WARDLAW and PARKER), i, 893.
potassium salt, electrolysis of solutions of (JEFFERY), ii, 304.
effect of light on the reactions of bromine and iodine with (BERTHOUD and BELLENOT), ii, 141.
uranyl salt (COLANI), i, 1235.
urea salts, determination of, in fertilisers (SABALITSCHKA and KUBISCH), i, 347.
Oxalic acid, dinaphthyl and ditolyl esters (FEIGL and KOBILIANSKY), i, 1236.
ethyl and methyl esters, equilibria of, with phenols (KREMANN, ZECHNER, and DRAZIL), ii, 650.
Oxalic acid, detection of, in tissues (KLEIN and WERNER), i, 871.
separation of, in analysis of Group III metals (KESCHAN), ii, 1008.
Oxalpropionic acid, ethyl ester, thermal decomposition of (WATSON), ii, 556.
Oxalsuccinic acid, ethyl ester, thermal decomposition of (WATSON), ii, 556.
Oxalyl-4:4′-*di*aminodiphenylmethane (BUTLER and ADAMS), i, 1458.
Oxalyldibenzyl ketone, azines from (CHAKRAVARTI), i, 1330.
Oxalyldimalonic acid, ethyl ester (PANKOKE), i, 358.
α-Oxalyl-γ-phenyl-Δ$^{\beta}$-butenoic acid, ethyl ester (v. AUWERS and MÖLLER), i, 404.
α-Oxalyl-γ-phenylbutyric acid, ethyl ester (v. AUWERS and MÖLLER), i, 403.
Oxazole-yellow (KÖNIG and MEIER), i, 705.
Oxazoline, 2-hydroxy-, benzoate (FROMM, BARRENSCHEEN, FRIEDER, PIRK, and KAPELLER), i, 595.
Oxeserine, derivatives of (POLONOVSKI and POLONOVSKI), i, 696.
Oxidation (ARMSTRONG), i, 1009.
mechanism of (WARBURG), i, 374; (WIELAND, HAUSSMANN, and LÖVENSKIOLD), ii, 1171.
in light (ECKERT), i, 413.
in oils (WALKER), i, 990.
with ozone (BRINER, v. TSCHARNER, and PAILLARD), i, 1069.
in sea water (HARVEY), ii, 1171.
anomalous protection against (SHEPPARD), ii, 1084.
negative catalysis of (DHAR), ii, 690.
equilibria in stages of (GRUBE and STAESCHE), ii, 893.
biological (MARK), i, 332; (NEILL and AVERY), i, 340.
as a function of temperature (CROZIER), i, 102.
liberation of energy in (AUBEL and WURMSER), i, 480.
influence of oxygen tension on (HAMBURGER and v. SZENT-GYÖRGYI), i, 709.
induced (DEY and DHAR), ii, 692; (JORISSEN and VAN DEN POL), ii, 879.
Oxidation-reduction (COHEN, GIBBS, and CLARK), i, 25; (CLARK), ii, 673; (CADY and TAFT), ii, 1073; (CLARK, COHEN, and GIBBS), ii, 1164.
new system of (HAEHN and PÜLZ), i, 858.
by blood pigments (LIPSCHITZ), ii, 1070.
Oxides, physico-chemical analysis of sols of (LOTTERMOSER, FRIEDRICH, HÜBNER, and SZABÓ), ii, 521.
effect of high temperatures on (RUFF), ii, 579.
acidic and basic, heating curves for mixtures of (DE CARLI), ii, 670.
amphoteric hydrated, molecular size of, in alkaline solution (JANDER and SCHULZ), ii, 528.
See also Metallic oxides.
α-Oxides, thermochemistry of (SWIENTOSLAWSKI), ii, 364.
***cis*-Oxidoethylenedicarboxylic acid**, conversion of, into *r*-tartaric acid (BÖESEKEN), i, 1237.
Oxidoethylene-αβ-dicarboxylic acids, and their salts (KUHN and EBEL), i, 780.

Oxidoethylene-αβ-dicarboxylic acids, action of yeast on (KUHN and EBEL), i, 1237.
Oxido-ketones, preparation of (WEITZ), i, 408.
Oximes, thermochemistry of (DORABIALSKA), ii, 208, 1140.
isomerism of (BRADY and MEHTA), i, 43; (BRADY and KLEIN), i, 674; (BRADY and BISHOP), i, 930.
tautomerism of (GRIFFITHS and INGOLD), i, 1190.
catalytic reduction of (ROSENMUND and JORDAN), i, 245; (GULEVITSCH), i, 653.
electrolytic reduction of (ISHIBASHI), i, 1382, 1431.
reduction of, with aluminium amalgam (MAZOUREVITCH), i, 1247.
sodium salts, distillation of, under reduced pressure (KOMATSU and HIRAIDZUMI), i, 934.
γ-Oximinovaleric acid, electrolytic reduction of (ISHIBASHI), i, 1382.
Oxindigo. See 3:3′-Diketo-$\Delta^{2,2'}$-dicoumaran.
Oxindole, condensation reactions of (MACBETH and CRAIK), i, 1315.
Oxindole-3-aldehyde, 5:7-*di*iodo-, and its derivatives (KALB and BERRER), i, 161.
Oxonic acid, cuprammonium salt (PIAUX), i, 593.
Oxonitin (MAJIMA and SUGINOME), i, 1447.
Oxonium *per*bromides (KEHRMANN and FALKE), i, 351.
Oxonium compounds, heats of formation of (TSCHELINCEV), ii, 480.
Oxyberberine, synthesis of (PERKIN, RÂY, and ROBINSON), i, 695.
Oxycellulose (HESS), i, 519.
nitrates (ATSUKI), i, 120.
Oxycelluloses (BIRTWELL, CLIBBENS, and RIDGE), i, 234.
Oxychelidonine (GADAMER and THIESSEN), i, 287.
Oxycodeinones, preparation of (MERCK, CHEMISCHE FABRIK), i, 1315.
Oxycyanogen (BIRCKENBACH and KELLERMANN), ii, 569.
Oxydase, xanthine (THURLOW), i, 743.
Oxyeseretholemethine, *N*-oxide, and its derivatives (POLONOVSKI and POLONOVSKI), i, 959.
Oxyeseriethine (POLONOVSKI and POLONOVSKI), i, 960.
Oxyeserine, and its derivatives (POLONOVSKI and POLONOVSKI), i, 293.
Oxyeserole-ethine (POLONOVSKI and POLONOVSKI), i, 960.
Oxyeserolene picrate (POLONOVSKI and POLONOVSKI), i, 960.
Oxygen, spectrum of (BUNGARTZ), ii, 609.
arc spectrum of (LOCKROW), ii, 1099.
K-absorption spectrum of (ROBINSON), ii, 614.
ultra-violet absorption spectrum of (SCHMIDT), ii, 336; (FÜCHTBAUER and HOLM), ii, 626.
band spectrum of (HOLLAND), ii, 1113.
ionised, line spectrum of (CROZE), ii, 166, 250.
dry, effect of ultra-violet light on (BAKER and CARLTON), ii, 1180.
atom, co-ordination number of (PICCARD), ii, 15.
liquid, dielectric constant of (BREIT and ONNES), ii, 631.
molecular heat of (SCHREINER), ii, 97.
heat of dissociation of (EUCKEN), ii, 207; (WULF), ii, 848.
temperature-entropy diagram for (RODEBUSH, ANDREWS, and TAYLOR), ii, 492.
isotherms of (HOLBORN and OTTO), ii, 851.
density of (BAXTER and STARKWEATHER), ii, 188.
absorption of, in gas analysis (FIESER), ii, 238.
absorption of, in water (WHITMAN and DAVIS; BECKER), ii, 106.
sorption of, by activated graphite (BANGHAM and STAFFORD), ii, 655.
solubility of, in silver (PARRAVANO and MALQUORI), ii, 769.
velocity of reaction of, with inorganic salt solutions (REINDERS and VLÈS), ii, 567.
activation of (JORISSEN and VAN DEN POL), ii, 52.
catalysis of the formation of water from hydrogen and (HOFMANN and DOLDE), ii, 139.
combination of hydrogen and, in presence of silver and gold (CHAPMAN, RAMSBOTTOM, and TROTMAN), ii, 310.
oxidation of metallic salts with (REINDERS and VLÈS), ii, 308.
exchange of, in blood (MURRAY and MORGAN), i, 1481.
respiration of, in muscular exercise (FURUSAWA), i, 993.
supply and utilisation of, during muscular exercise (LYTHGOE and PEREIRA; PEREIRA), i, 1341.
free, origin of, in air (TAMMANN), ii, 100.

Oxygen, univalent (GOLDSCHMIDT, VOGT, and BREDIG), i, 1434.
Oxygen detection and determination:—
detection of (SCHMALFUSS), ii, 238; (SCHMALFUSS and WERNER), ii, 1198.
determination of, colorimetrically (EFIMOV), i, 481.
dissolved, determination of (FRIEND), ii, 326.
determination of, in aqueous solution, in presence of nitrous acid (ALSTERBERG), ii, 1198.
apparatus for determination of, in air (PLANTEFOL), ii, 902.
determination of, in iron (ROONEY), ii, 327.
determination of, in organic compounds (TER MEULEN), ii, 157.
Oxyhæmin, and its salts (HAMSIK), i, 845.
Oxyhæmocyanin, determination of, colorimetrically (PANTIN and HOGBEN), i, 1481.
Oxyhæmoglobin, crystalline, preparation of (THIVOLLE and ROCHE), i, 1111.
dissociation of, in tissues (CAMPBELL), i, 1481.
Oxylysine, and its derivatives (SCHRYVER, BUSTON, and MUKHERJEE), i, 794.
Oxynes (EIBNER and MUNZING), i, 1036; (EIBNER and RIED), i, 1377.
Oxy*iso*protoberberine (HAWORTH, PERKIN, and PINK), i, 1168.
Oxysanguinarine (GADAMER and THIESSEN), i, 287.
3-Oxythionaphthen, condensation reactions of (MACBETH and CRAIK), i, 1315.
3-Oxy(1)thionaphthen glucoside (*thioindican*) (CRAIK and MACBETH), i, 1296.
Oysters, shell-growth in (ORTON), i, 1002.
Ozone (SCHWAB), ii, 149.
formation of, in incandescent capillaries (RIESENFELD), ii, 989.
electrolytic preparation of (MALQUORI), ii, 62.
production of (WARBURG and RUMP; WARBURG), ii, 706.
altitude of, in the atmosphere (CABANNES and DUFAY), ii, 998.
in flames (v. WARTENBURG), ii, 147; (RIESENFELD), ii, 148.
absorption of radiation by, in the atmosphere (FABRY), ii, 627.
photochemical decomposition of, in presence of chlorine (ALLMAND), ii, 1079.
photochemical and thermal decomposition of (GRIFFITH and MCKEOWN), ii, 1080.
Ozone, thermal decomposition of (GRIFFITH and MCKEOWN), ii, 1168.
destruction of, by various reagents (SMITH), ii, 890.
oxidation with (BRINER, EGGER, and PAILLARD), i, 274; (BRINER, v. TSCHARNER, and PAILLARD), i, 1069.
action of, on inorganic colloids (RIESENFELD and HAASE), ii, 988.
determination and solubility of (WARTENBERG and PODJASKI), ii, 1198.
Ozonides, constitution of (STAUDINGER), i, 897.
Ozoniser, laboratory (SMITH), ii, 896.

P.

Palladium, and its amalgam in British Guiana (HARRISON; HARRISON and BOURNE), ii, 593.
arc spectrum of (BEALS), ii, 1015.
Röntgen ray spectrum of (ALLISON), ii, 724.
polarisation of, in alkaline solution (JIRSA), ii, 45.
physical state and catalytic activity of (SMITH), ii, 1072.
adsorption of hydrogen by (LAMBERT and GATES), ii, 785.
Palladium alloys with copper and with gold, structure of (HOLGERSSON and SEDSTRÖM), ii, 20.
with silver, adsorption of hydrogen by (KRUGER and SACKLOVSKY), ii, 1125.
Palladium oxide, catalytic reduction with (KERN, SHRINER, and ADAMS), i, 625.
selenide (MOSER and ATYNSKI), ii, 584.
Palladium organic compounds:—
Palladium dimethylglyoxime (COOPER), ii, 827.
Palladium determination and separation:—
determination of (ZSCHIEGNER), ii, 443.
separation of platinum and (KRAUSS and DENEKE), ii, 1005.
Palladium black, structure of (OSAWA), ii, 747.
Palm kernel oil (ARMSTRONG, ALLAN, and MOORE), i, 504.
Palm tree, American, fats from (ANDRÉ and GUICHARD), i, 1124.
Palmatrubine, and its salts (FEIST and DSCHU), i, 830.
Palmitaldehyde *p*-nitrophenylhydrazone (STEPHEN), i, 1131.

Palmitic acid, latent and specific heats of (PARKS and KELLEY), ii, 949.
latent heat of fusion of (STRATTON and PARTINGTON), ii, 25.
metallic salts (KLIMONE, v. MOLTINI, and BENEDIK), i, 506.
calcium salt, solubility of (HARRISON), ii, 190.
sodium salt, equilibria of sodium chloride, water, and (McBAIN and LANGDON), ii, 537.
emulsifying power of (YAJNIK and ILAHI), ii, 968.
thallium salt (HOLDE and SELIM), i, 504.
Palmitylacetic acid, ethyl ester (LEVENE and HALLER), i, 890.
Palmitylacetoacetic acid, ethyl ester (LEVENE and HALLER), i, 890.
***N*-Palmitylpropylenediamine** (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1133.
α-Paltreubyl alcohol (VESTERBERG), i, 1062.
Pancreas, effect of ingestion of food on activity of (SEVRINGHAUS and SMITH), i, 727.
effect of removal of, on excretion (BIERRY and RATHERY), i, 856.
relation between carbohydrate metabolism of muscle and (FOSTER), i, 1495.
urinary diastase in diseases of (HANSEN), i, 856.
enzymes of (WALDSCHMIDT-LEITZ and HARTENECK), i, 1360.
hæmoleucolysin from (BELFANTI), i, 326.
nucleic acid from (JORPES), i, 182.
Pancreatic juice, activation of (LISBONNE), i, 615.
by enterokinase (SETH), i, 202.
Papain, lipase from (SANDBERG and BRAND), i, 1009.
proteolytic activity of (FABRE and FROSSARD), i, 863.
Papaverine nitrite, preparation of (BOEHRINGER SOHN), i, 427.
Paracetaldehyde, action of, on proteins and lipins (COOPER), i, 91.
Paracetaldehyde, *di*bromo- (STEPANOV, PREOBRASCHENSKI, and SCHTSCHUKINA), i, 1240.
Parachloralose (CHEVALIER and CHERBULIEZ), i, 467.
Parachor and chemical constitution (SUGDEN, REED, and WILKINS), ii, 936; (SUGDEN and WHITTAKER), ii, 937.
Paraffin, photographic action of *H*-particles from (BLAU), ii, 1111.
utilisation of, by micro-organisms (TAUSSON), i, 479.
Paraffins, cracking of (WILLIAMS-GARDNER), i, 1229.
ignition of mixtures of air and (WHEELER), ii, 408.
*cyclo*Paraffins, structure of (WIGHTMAN), i, 894.
Paraffin wax, melting point of (BJERREGAARD), i, 769.
decomposition of (WATERMAN and PERQUIN), ii, 1125.
Paraldehyde. See Paracetaldehyde.
Paralinoleic acid (HASHIMOTO), i, 1234.
Paramagnetism, theories of (CABRERA), ii, 173.
and the electron configuration of atoms (JACKSON), ii, 732.
of salts (COTTON-FEYTIS), ii, 945.
of substances with an odd number of electrons (TAYLOR and LEWIS), ii, 945.
Parathyroids, extracts of, and their activity (HJORT, ROBISON, and TENDICK; COLLIP), i, 1364.
hormone from (COLLIP; COLLIP, CLARK, and SCOTT), i, 754; (COLLIP and CLARK), i, 1017.
Particles, electric charge on (SEXL; DERIEUX), ii, 832.
recorder for measuring distribution of, in sedimentation (LAMBERT and WIGHTMAN), ii, 1194.
charged, action of, in liquids (BURTON and CURRIE), ii, 531.
α-Particles, model for (HARGREAVES), ii, 835.
enumeration of (APPLETON, EMELÉUS, and BARNETT), ii, 10.
disintegration of atoms by (KIRSCH), ii, 923.
capture and loss of electrons by (HENDERSON), ii, 922.
scattering of, by elements (RUTHERFORD and CHADWICK), ii, 1109.
ionisation of gases by (GURNEY), ii, 256.
stopping power of gases for (FOWLER; KRONIG), ii, 834.
distinction between *H*-particles and (KARA-MICHAILOVA), ii, 621.
***H*-Particles**, retrograde (KIRSCH), ii, 621.
distinction between α-particles and (KARA-MICHAILOVA), ii, 621.
Paschen-Back effect (RUNGE), ii, 341.
Passivity (BECKER and HILBERG), ii, 405; (RUSSELL; GERDING and KARSSEN), ii, 406.
and anodic behaviour of metals (SBORGI), ii, 550.
and cathodic overvoltage (LIEBREICH and WIEDERHOLT), ii, 44.
of metals, influence of anions on (ROTHMUND, EISENKOLB, and STEINHERZ), ii, 131.

Pearlite, structure of ferrite and cementite in (BELAIEW), ii, 768.
Pechmann colouring matters, constitution and formation of (BOGERT and RITTER), i, 255.
Pectic substances in plants (O'DWYER), i, 1225; (NORRIS and SCHRYVER), i, 1226.
Pectin, coagulation of (KOPACZEWSKI), i, 872.
hydrolysis of (SMOLEWSKI), i, 216.
Pectinogen (NORRIS and SCHRYVER), i, 1226.
Pelargonidin chloride, and its 3:3′-dimethyl ether (PRATT and ROBINSON), i, 826.
Pellagra, prevention and causation of (GOLDBERGER and TANNER), i, 1517.
Peneus setiferus (shrimp), amino-acids in muscle of (JONES, MOELLER, and GERSDORFF), i, 1348.
Pentachlororuthenious acid. See under Ruthenium.
Pentadecaldehyde, derivatives of (LANDA), i, 1038.
Pentadecylidenehydrazine benzoyl and *m*-nitrobenzoyl derivatives (LANDA), i, 1039.
Pentaerythritol *tetra*nitrate, crystalline structure of (KNAGGS), ii, 748.
1:3:3′:4′:5′-Pentamethoxybenzoylcoumaranone, 2:4-*di*bromo- (DEAN and NIERENSTEIN), i, 953.
1:3:3′:4′:5′-Pentamethoxybenzylcoumaranone (DEAN and NIERENSTEIN), i, 952.
1:3:3′:4′:5′-Pentamethoxybenzylidenecoumaranone, and 2:4-*di*bromo-, *di*bromide (DEAN and NIERENSTEIN), i, 952.
2:4:6:3′:4′-Pentamethoxydiphenylpropane, isomerides of (DRUMM, O'REILLY, and RYAN), i, 1268.
2:4:6:3′:4′-Pentamethoxy-αα-diphenyl-Δα-propene, and its dibromide (DRUMM, O'REILLY, and RYAN), i, 1268.
1:3:3′:4′:5′-Pentamethoxyflavanone (DEAN and NIERENSTEIN), i, 952.
3:5:7:2′:4′-Pentamethoxyflavylium salts (PRATT and ROBINSON), i, 826.
2:2:3:6:8-Pentamethylbenzopyran (CLAISEN), i, 278.
αα′-Pentamethylene*di*iminodiphenyldiacetic acid, nickel salt (SCHLESINGER), i, 1250.
Pentamethylene*di*thiocarbamic acid, salts of (WHITBY and MATHESON), i, 644.
Pentamethylguanidinium salts (LECHER, GRAF, and GNÄDINGER), i, 1393.
Pentamethyl*leuco*sulphur-blue (BINZ and RÄTH), i, 446.
Pentane, βγ-*di*chloro- (BOURGUEL), i, 770.
*cisc*yclo**Pentane**, 1:3-*di*amino-, and its derivatives (DIELS, BLOM, and KOLL), i, 977.
*cyclo*Pentane-1-carboxylic acid, 1-hydroxy-, compound of boric acid and (HERMANS), i, 501.
*cyclo*Pentane-1′-carboxylylanilino*cyclo*pentane-1-carboxylic acid, 1:1′-hydroxy-, lactone (PLANT and FACER), i, 1271.
Pentane-ββδ-diol, compound of boric acid and (HERMANS), i, 501.
*cisc*yclo**Pentanediol**, potassium borates of (HERMANS), i, 501.
Pentanolones, and their phenylosazones (SCHMIDT and ASCHERL), i, 364.
Penta-oxymethylene diacetate (STAUDINGER and LÜTHY), i, 361.
Δβ-Pentene, action of hydrogen bromide on (LUCAS and MOYSE), i, 770.
Δβ-Pentene, γ-chloro- (BOURGUEL), i, 364.
Δδ-Pentenol (HELFERICH and SCHÄFER), i, 7.
Δβ-Penten-δ-ol (CLAISEN), i, 278.
o-**Pentenyl-*p*-cresol** (CLAISEN), i, 278.
o-**Pentenylxylenol** (CLAISEN), i, 278.
Δα-Pentinene-γδ-diol, ε-chloro- (LESPIEAU), i, 1376.
Δα-Pentinen-γ-ol, δε-*di*chloro-, derivatives of (LESPIEAU), i, 1375.
Pentosans, determination of (KLINGSTEDT), ii, 720.
determination of, in wood (GIERISCH), i, 1122.
Pentoses in plants (ENGLIS and HALE), i, 618.
new reaction for (BERTRAND; DENIGÈS), i, 790.
detection of (THOMAS), ii, 604.
detection of, in plant glucosides (THOMAS and IMAS), ii, 1209.
*cyclo*Pentylideneazine, action of hydrochloric acid on (PERKIN and PLANT), i, 842.
Peppermint oil, influence of hydrogen-ion concentration in soil on composition of (H. and (MME.) H. DEEL), i, 622.
Esthonian, constituents of (WEIDERPASS), i, 687.
Pepsin, ionic nature of (NORTHROP), i, 864.
effect of reagents on activity of (HUGOUNENQ and LOISELEUR), i, 1198.
effect of temperature and reaction on the destruction and activity of (EGE), i, 743.

Pepsin, action of hydrochloric acid and, on proteins (VAN URK), i, 1507.
study of the action of, by peptisation of gold hydrosols (UHLENBRUCK), i, 742.
action of, on insulin (EPSTEIN), i, 1513.
hydrolytic and synthetic properties of (BORSOOK and WASTENEYS), i, 472.
synthesis of proteins by means of (WASTENEYS and BORSOOK), i, 102, 864.
determination of, in gastric juice (ROSTOCK), i, 1009; (BOAS, HIRSCH-MAMROTH, and RINDFLEISCH), i, 1213.
Peptase in leaves (BLAGOVESCHENSKI and BIELOZERSKI), i, 1009.
Peptidase, balance of, in man and animals (PFEIFFER and STANDENATH), i, 1361.
Peptides, hydrolysis of (LEVENE and SIMMS), i, 473.
transformations of (BERGMANN, MIEKELEY, and KANN), i, 1134.
action of alkalis on (LEVENE and PFALTZ), i, 1474.
Peptisation, theory of (SEN), ii, 666.
Peptones, hydrolysis of, with hydrochloric acid (YAITSCHNIKOV), i, 320.
Per-acids, formation of (FICHTER and STOCKER), i, 239.
Perbenzoic acid, preparation of (HIBBERT and BURT), i, 1147.
Perborates. See under Boron.
Perchlorates and **Perchloric acid**. See under Chlorine.
Perfumes in foods (BYLSMA), i, 1356.
Perhydridase of milk (SBARSKY and MICHLIN), i, 472.
Perhydroanthracene (SCHROETER, VAN HULLE, GLUSCHKE, STIER, and MÜLLER), i, 125.
Periodic system (PALMAER), ii, 90.
theory of (SOMMERFELD), ii, 177.
in relation to isotopes (SCHTSCHUKAREV), ii, 462.
of elements (ODDO), ii, 623.
Periodicity in electrochemical reactions (HEDGES and MYERS), ii, 680.
and unsaturated cyclic compounds (PETRENKO-KRITSCHENKO), ii, 1122.
"**Permalloy**" (DELORAINE), ii, 639.
"**Permalloys**," effect of tension on magnetisation and hysteresis of (BUCKLEY and MCKEEHAN), ii, 945.
Permanganates. See under Manganese.
Permanganic acid. See under Manganese.
Permeability (GYÖRGY), i, 322.
of cells (BROOKS), i, 1004; (CHODAT), ii, 521.
Permeability of membranes (BANCROFT and GURCHOT), ii, 110.
for electrolytes (MICHAELIS), ii, 1150; (FUJITA), ii, 1151.
of stereoisomerides (OKAGAWA), i, 711.
reversible (GANS), ii, 173.
Permutoid structure (KAUTSKY and HERZBERG), ii, 941.
Pernitric acid. See under Nitrogen.
Pernitroso compounds, action of potassium cyanide on (PASSERINI), i, 1290.
Perowskite, crystal structure of (LEVI and NATTA), ii, 1036.
Peroxides, fusion with, by the explosion method (MUEHLBERG), ii, 899.
organic, syntheses with (GELISSEN and HERMANS), i, 379, 545, 663, 664.
analogies between diazo compounds and (GELISSEN and HERMANS), i, 813.
determination of (RUPP and SIEBLER), ii, 432.
Peroxydases, influence of neutral salts on (SMIRNOV), i, 486.
hydrolysis of starch by (BIEDERMANN and JERNAKOFF), i, 11.
in dried seeds (COUPIN), i, 615.
Per-salts, determination of (RUPP and SIEBLER), ii, 432.
Perylene, and its derivatives (ZINKE, FUNKE, and PONGRATZ), i, 819; (ZINKE, FUNKE, MATSCHES, WOLFBAUER, and LORBER), i, 1436.
preparation of (COMPAGNIE NATIONALE DE MATIÈRES COLORANTES ET DE PRODUITS CHIMIQUES), i, 21.
derivatives of (ZINKE, LINNER, and WOLFBAUER), i, 383; (ZINKE, PONGRATZ, and FUNKE), i, 384.
Perylene, 1:12-*di*hydroxy- (ZINKE and HANSELMAYER), i, 564.
Perylene colouring matters (BADISCHE ANILIN- & SODA-FABRIK), i, 1290.
1:12-Perylenequinone (ZINKE and HANSELMAYER), i, 564.
Perylenetetracarboxylic acid, and its derivatives (KALLE & Co.), i, 406.
vat dyes from derivatives of (KALLE & Co.), i, 1334.
Perylenetetracarboxylic acid, *tetra*-chloro-, and its imide (KALLE & Co.), i, 1277.
Petroleum, helium in gas from (CLAY), ii, 1195.
sulphur compounds in (BIRCH and NORRIS), i, 628.
action of sodium hypochlorite on (BIRCH and NORRIS), i, 1229.
Niitsu, naphthenic acids from (TANAKA, NAGAI, and ISHIDA), i, 252.
Nishiyama, naphthenic acids from (TANAKA and NAGAI), i, 1271.

Petromyzon fluviatilis, detection of amino-acids and other constituents in (FLÖSSNER and KUTSCHER), i, 327.
Phanerogams, heterotrophic, chemistry of (ZELLNER), i, 1025.
Phase rule and moving boundaries (SMITH), ii, 399.
Phaseolus lunatus, enzymes of (ROSENTHALER), i, 1008.
Phaseolus radiatus, vitamin-*A* and albumin in germinating seeds of (DONATH), i, 483.
***o*-Phenacyloxybenzyl** bromide (FREUDENBERG, FIKENTSCHER, and HARDER), i, 420.
Phenanthraphenazinazine, and amino-, bromo-, bromonitro-, hydroxy-, and nitro- (SIRCAR and DUTT), i, 593.
Phenanthraphenazine-2:7-bis(1′-azo-2′-hydroxy-3′-naphthoic acid (SIRCAR and GUPTA), i, 984.
Phenanthraphenazine-2:7-bis(1′-azo-2′-naphthol (SIRCAR and GUPTA), i, 984.
Phenanthraquinol phenyl ether (GOLDSCHMIDT, VOGT, and BREDIG), i, 1434.
Phenanthraquinone, action of, on aromatic aldehydes in presence of ammonia (SIRCAR and RAY), i, 980.
Phenanthraquinone, *di*amino-, *di*amino-*di*hydroxy-, and *tetra*hydroxy-, and their derivatives (BRASS and NICKEL), i, 273.
Phenanthraquinone colouring matters (SIRCAR and DUTT), i, 593; (SIRCAR and GUPTA), i, 983.
Phenanthraquinonetetrazonium *per*bromides (BRASS and NICKEL), i, 273.
Phenanthraquinonyl-3-azide, acid decomposition of (BRASS and NICKEL), i, 446.
Phenanthraquinonyl-3-diazonium *per*bromide (BRASS and NICKEL), i, 447.
Phenanthrazine (GOLDSCHMIDT, VOGT, and BREDIG), i, 1434.
Phenanthrene, hydrogenation of (SCHROETER, VAN HULLE, and MÜLLER), i, 130.
action of aluminium chloride on a mixture of *m*-xylene and (SCHAARSCHMIDT, MAYER-BUGSTRÖM, and SEVON), i, 241.
Phenanthrene, 9-bromo-10-hydroxy- (GOLDSCHMIDT, VOGT, and BREDIG), i, 1435.
Phenanthrol, oxidation products of (GOLDSCHMIDT, VOGT, and BREDIG), i, 1435.
10-Phenanthryl *per*oxide, 9-bromo- (GOLDSCHMIDT, VOGT, and BREDIG), i, 1435.
Phenarsazinic acid, and its salts and derivatives (BURTON and GIBSON), i, 84.
Phenazine, 1-amino- and 1:3-*di*amino-, and their acetyl derivatives (KEHRMANN and PRUNIER), i, 304.
3-amino-7- and -8-hydroxy-, 3:7-*di*hydroxy-, 3-nitro-7- and -8-hydroxy-, and their derivatives (KEHRMANN and HAENNY), i, 1330.
2-hydroxy-, and its derivatives (KEHRMANN and CHERPILLOD), i, 303.
3-*p*-Phenetidino-5-keto*iso*oxazole (WORRALL), i, 308.
3-*p*-Phenetidino-5-ketopyrazole (WORRALL), i, 308.
Phenetole, 2:4:5-*tri*chloro- (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 1145.
*tri*nitro-, and trinitroanisole, alcoholysis of (BRADY and HORTON), i, 1409.
***o*- and *p*-Phenetolesulphonylacetones**, and their derivatives (TRÖGER and BROHM), i, 1453.
3-*o*- and *p*-Phenetolesulphonyl-2-methylquinolines, and their salts and derivatives (TRÖGER and BROHM), i, 1453.
***p*-Phenetylcarbamide** (*dulcin*), constitution of (TÄUFEL and WAGNER), i, 841.
changes in the sweetening power of (THOMS), i, 538.
Phenol, ultra-violet absorption by benzoic acid and (KEPIANKA and MARCHLEWSKI), ii, 179.
heats of formation of aqueous solutions of (FERGUSON and HOPE), ii, 492.
surface tension of aqueous solutions of (GOARD and RIDEAL), ii, 510.
vapour pressure of aqueous solutions of (FERGUSON and FUNNELL), ii, 501.
vapour pressure of mixtures of, with various compounds (WEISSENBERGER, SCHUSTER, and SCHULER), ii, 649.
influence of another substance on the critical temperature of aqueous solutions of (DUCKETT and PATTERSON), ii, 381.
surface tension of aqueous solutions of (GOARD and RIDEAL), ii, 961.
salting-out of, from aqueous solution (HAFNER and KÜRTHY), ii, 283.
molecular state of, in benzene solution (PHILIP and CLARK), ii, 770.
equilibrium of salicylic acid, water, and (BAILEY), ii, 1064.
condensation of benzyl alcohol and (HUSTON), i, 249.

Phenol, condensation of carbon tetrachloride and (GOMBERG and SNOW), i, 660.
determination of, in blood (HAAS and SCHLESINGER), i, 334.
Phenol, *p*-amino-, sulphate, preparation of (HORII and KOMORI), i, 1410.
*tri*bromo-, and its derivatives (KOHN and STRASSMANN), i, 1264.
3-chloro-*mono*-, *-di*-, and *-tri*-nitro derivatives, and their derivatives (HODGSON and MOORE), i, 1144.
3-chloro*di*nitro- (SANÉ and JOSHI), i, 134.
2:4:5-*tri*chloro-, butyl carbinyl ethers of (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 1145.
thio-, action of anisilic and benzilic acids on (BISTRZYCKI and RISI), i, 1426.
Phenols, heats of solution of, in water (DE KOLOSOVSKI), ii, 540.
catalytic hydrogenation of (VAVON and BERTON), i, 806.
catalytic dehydration of mixtures of alcohols and (BRINER, PLÜSS, and PAILLARD), i, 248.
oxidation of (PUMMERER, PUTTFARCKEN, and SCHOPFLOCHER), i, 1262.
molecular compounds of (WEISSENBERGER and PIATTI), i, 538, 539; (WEISSENBERGER and SCHUSTER), ii, 648, 765; (WEISSENBERGER SCHUSTER, and SCHULER), ii, 649; (WEISSENBERGER, SCHUSTER, and MAYER), ii, 766.
with 4:4′-dipyridylium dialkyl halides (EMMERT and ROH), i, 587.
binary systems of, with acids or esters (KREMANN, ZECHNER, and DRAZIL), ii, 650.
alkylation of (CLAISEN, KREMERS, ROTH, and TIETZE), i, 656; (CLAISEN), i, 1410.
condensation of, with citric acid (MÜLLER), i, 1442.
condensation of diphenylformamidine with (SHOESMITH and HALDANE), i, 39.
nitrosation of (HODGSON and MOORE), i, 1408.
esterification of oxalic acid with (FEIGL and KOBILIANSKY), i, 1235.
preparation of mercury derivatives of (SACCHARIN-FABRIK AKTIEN-GESELLSCHAFT VORM. FAHLBERG, LIST & CO.), i, 1197.
mercuri compounds of (WELLCOME FOUNDATION, LTD., HENRY, and SHARP), i, 1154.
Phenols, monohydric, alkyl ethers of, and their halogen derivatives (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 1145.
polyhydric, association of (ROUYER), i, 911.
detection of, in plants (WARE), i, 1122.
determination of, in essential oils (RETI), ii, 604.
Phenols, amino-, catalytic reduction of (HECKEL and ADAMS), i, 909.
action of sulphuryl chloride on (ELLER and LORENZ), i, 537.
diazo derivatives, thermochemistry of (SWIENTOSLAWSKI and BLASZKOVSKA), ii, 1044.
o-amino-, migration from nitrogen to oxygen in (RAIFORD and LANKELMA), i, 809.
bromo- (KOHN and FINK), i, 133; (KOHN and JAWETZ), i, 135; (KOHN and WIESEN), i, 539; (KOHN and WEISSBERG), i, 655; (KOHN and GUTTMANN), i, 1263; (KOHN and LÖFF; KOHN and STRASSMANN; KOHN and MARBERGER), i, 1264; (KOHN and GRÜN), i, 1265.
2- and 3-bromo-4-nitroso-, and 2-iodo-4-nitroso- (HODGSON and MOORE), i, 1408.
nitro-, equilibria of, with camphor (EFREMOV), ii, 1160.
action of, with *p*-toluenesulphonyl chloride (SANÉ and JOSHI), i, 134.
phenylcarbamates of (BRADY and HARRIS), i, 1261.
determination of (DESVERGNES), ii, 447.
*tri*nitro-, determination of (DESVERGNES), ii, 447.
nitroamino-, detection of, in urine (DESVERGNES), i, 328.
nitroso-, reduction of, with alkali sulphides (POBAI-KOSCHITZ) i, 1060.
Phenolisatein (SEN and SIRCAR), i, 555.
Phenolmercurisulphonic acid (SACCHARIN-FABRIK AKTIEN-GESELLSCHAFT VORM. FAHLBERG, LIST & CO.), i, 1197.
Phenolphthalein, effect of alcohol and salts on dissociation of (RICHTER), ii, 237.
*iso*Phenolphthalein, and its derivatives (ORNDORFF and BARRETT), i, 35.
Phenolphthalin, detection of hydrocyanic acid with (STAMM), ii, 76.
*iso*Phenolphthalin, and its diacetate (ORNDORFF and BARRETT), i, 36.

Phenolresorcinolphthalein, and its derivatives (SEN and SIRCAR), i, 554.
Phenolsulphonephthalein, adsorption of, by charcoal and proteins (GROLLMAN), i, 1000.
effect of alkalis on colour of (HUBBARD and MEEKER), i, 1115.
diethyl and dimethyl ethers (ORNDORFF and SHAPIRO), i, 251.
determination of, in urine in jaundice (ABRAMSON), i, 329.
o- and *p*-**Phenolsulphonic acids**, action of nitrous acid on (RODIONOV and MATVEEW), i, 83.
2:3-*iso*Phenosafranine, and its salts (HOEHN), i, 938.
Phenoxarsine, 6-chloro- (TURNER and SHEPPARD), i, 705.
Phenoxarsines, chloro-, formation of, from phenoxyphenyldichloroarsines (ROBERTS and TURNER), i, 1339.
*di*chloro- (ROBERTS and TURNER), i, 1340.
Phenoxarsinic acids, chloro- (ROBERTS and TURNER), i, 1340.
Phenoxides, metallic, preparation of (ZETZSCHE, SILBERMANN, and VIRLI), i, 1411.
Phenoxyacetic acid, 2:4-*di*nitro- (CHRISTIANSEN), i, 817.
Phenoxyacetic acids, hyperthermic action of (MAMELI and FILIPPI), i, 466.
δ-(ε-Phenoxyamylamino)butylbenzamide hydrochloride (v. BRAUN and ZOBEL), i, 1455.
***o*-Phenoxybenzeneazo-β-naphthol** (TURNER and SHEPPARD), i, 706.
α-Phenoxybutyl alcohol (BAEKELAND and BENDER), i, 689.
ε-(δ-Phenoxybutylamino)amylbenzamide hydrochloride (v. BRAUN and ZOBEL), i, 1456.
δ-Phenoxybutylmalonic acid, and its ethyl ester, and α-bromo- (MARVEL, MACCORQUODALE, KENDALL, and LAZIER), i, 234.
α-Phenoxy-αβ-dibenzoylethylene (CONANT and LUTZ), i, 682.
9-Phenoxy-2:9-diethoxy-9:10-dihydroacridine (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 429.
β′-Phenoxydiethyl ether, β-chloro- (CRETCHER, KOCH, and PITTENGER), i, 627.
9-Phenoxy-2-ethoxyacridine (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 429.
ε-Phenoxyhexoic acid, α-bromo- (MARVEL, MACCORQUODALE, KENDALL, and LAZIER), i, 235.
m- and *p*-**Phenoxymethylbenzonitriles** (v. BRAUN and REICH), i, 1405.
***p*-Phenoxymethylbenzyl alcohol** (v. BRAUN and REICH), i, 1405.
***p*-Phenoxymethylbenzyl bromide** (v. BRAUN and REICH), i, 1405.
m- and *p*-**Phenoxymethylbenzylamines**, and their salts and derivatives (v. BRAUN and REICH), i, 1405.
Phenoxy-*P*-oxotetrahydrodiazphospholium (AUTENRIETH and BÖLLI), i, 1469.
Phenoxy-*P*-oxydihydrobenzodiazphospholium (AUTENRIETH and BÖLLI), i, 1468.
9-Phenoxy-10-phenanthryl *per*oxide (GOLDSCHMIDT, VOGT, and BREDIG), i, 1434.
***o*-Phenoxyphenylarsinic acid** (TURNER and SHEPPARD), i, 706.
Phenoxyphenylarsinic acids, and chloro- (ROBERTS and TURNER), i, 1440.
***o*-Phenoxyphenyl*di*chloroarsine** (TURNER and SHEPPARD), i, 706.
and its chloro-derivatives, conversion of, into chlorophenoxarsines (ROBERTS and TURNER), i, 1339.
Phenoxyphenyl*di*chloroarsines, chloro- (ROBERTS and TURNER), i, 1340.
Phenoxy-*p*-thiodihydrodiazphospholium (AUTENRIETH and MEYER), i, 990.
Phenyl allyl ether, *p*-oximinoamino-, acetyl derivative (KARRER, DIECHMANN, and HAEBLER), i, 243.
allyl ethers, transformation of (CLAISEN and TIETZE), i, 389.
benzhydryl sulphide (BISTRZYCKI and RISI), i, 1426.
benzoate, *m*-bromo- and 3:5-*di*bromo- (KOHN and FINK), i, 133.
benzyl ether, *s-tri*bromo-, and its nitro derivatives (HOLMES and INGOLD), i, 1142.
benzyl ether and sulphide, *o*-amino-, and *o*-nitro-, and their derivatives (SIEGLITZ and KOCH), i, 278.
β-chloroethyl sulphide, and *o*-nitro- (LECHER, HOLSCHNEIDER, KÖBERLE, SPEER, and STÖCKLIN), i, 390.
cinnamyl and γ-phenylpropyl ethers (CLAISEN, KREMERS, ROTH, and TIETZE), i, 656.
4:4′-dimethoxybenzhydryl sulphide (BISTRZYCKI and RISI), i, 1426.
di-*p*-tolyl thiophosphate (AUTENRIETH and MEYER), i, 807.
groups, migration of *p*-anisyl and (TIFFENEAU and ORÉKHOV), i, 679.
hydrogen thiosulphate, 2:4-*di*hydroxy-, and its potassium salt (HELLER), i, 315.

Phenyl hydroxyphenylalkyl ethers (BAEKELAND and BENDER), i, 689.
o-iodobenzyl ether, *o*-iodo- (SIEGLITZ and KOCH), i, 278.
p-methylaminophenyl sulphide, and its derivatives (RIVIER and RICHARD), i, 1417.
α-methyl-Δ*β*-butenyl ether (CLAISEN, KREMERS, ROTH, and TIETZE), i, 656.
β-phenylethyl ether, *o*-amino-, *o*-hydroxy-, and *o*-nitro-, and their derivatives (SIEGLITZ and KOCH), i, 278.
*cyclo*propylmethyl ether (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.
Phenyl-4-acenaphthylmethane (LORRIMAN), i, 673.
Phenyl-4′-acenaphthylmethane-2-carboxylic acid (LORRIMAN), i, 673.
Phenyl-4-acenaphthylphthalide (LORRIMAN), i, 672.
Phenylacetaldehyde-ammonia (GRIGNARD and ESCOURROU), i, 931.
***β*-Phenylacetaldimine**, and its hydrochloride (GRIGNARD and ESCOURROU), i, 931.
3-Phenylacetamido-*p*-cresol, 5-chloro-, and its *p*-toluate (RAIFORD and LANKELMA), i, 810.
Phenylacetic acid, hydroxylamine salt (OESPER and BALLARD), i, 1233.
***d*- and *l*-Phenylacetic acids**, *α*-bromo- and *α*-chloro-, bornyl esters (MCKENZIE and SMITH), i, 822.
Phenylacetomethylamide, *o*-nitro- (NEBER, HARTUNG, and RUOPP), i, 1073.
Phenylaceto-*β*-phenylethylamide, *o*-amino- (GADAMER, OBERLIN, and SCHOELER), i, 576.
3-Phenylacetoxymethyl-6-methylbenzthiopyrone (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.
***o*-Phenylacetyldeoxybenzoin** (WEISS and SONNENSCHEIN), i, 937.
Phenylalkylcyanoacetamides (THOMPSON, BEDELL, and BUFFETT), i, 699.
Phenylalkylhydantoins (THOMPSON, BEDELL, and BUFFETT), i, 699.
3-Phenyl-3-allyl-4:5-benzocoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 148.
3-Phenyl-3-allylcoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 148.
3-*α*-Phenylallyl-*p*-cresol, and its phenylcarbamate (CLAISEN and TIETZE), i, 389.
2-Phenyl-2-allyldiketohydrindene, spiran derivatives of (RADULESCU), i, 1159.
***o*-*α*-Phenylallylphenol**, and its phenylcarbamate (CLAISEN and TIETZE), i, 389.
***α*-Phenyl-*α*-allylsuccinamic acid**, ethyl ester (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 376.
***α*-Phenyl-*α*-allylsuccinimide** (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 376.
1-Phenyl-4-allylthiosemicarbazide, *o*-nitro- (GUHA and RAY), i, 1462.
Phenyl*tetra*aminobenzene, and its derivatives (KEHRMANN and STANOYÉVITCH), i, 1332.
2-Phenyl-4-aminomethylquinoline, and its salts (JOHN), i, 1317.
4-Phenyl-1-*o*-aminophenylthiosemicarbazide (GUHA and RAY), i, 1462.
Phenyl aminostyryl ketones, *per*chlorates of (PFEIFFER), i, 410.
Phenyl*iso*amyl*di*thiocarbamic acid, salts of (WHITBY and MATHESON), i, 644.
4-Phenyl-3-anisyl-2-anisylidene-5-methyl-Δ³-*cyclo*penten-1-one (RYAN and LENNON), i, 1282.
3-Phenyl-4-*p*-anisylcoumarin, 7-hydroxy-, and its acetyl derivative (BARGELLINI), i, 1442.
***β*-Phenyl-*β*-anisylethylamine**, *β*-hydroxy-, action of nitrous acid on (ORÉKHOV and ROGER), i, 262.
***αα*-Phenyl-*p*-anisylethylene** iodohydrin (TIFFENEAU and ORÉKHOV), i, 680.
***α*- and *β*-Phenylanisylfuroxanes** (MEISENHEIMER, LANGE, and LAMPARTER), i, 1075.
4-Phenyl-3-anisyl-5-methyl-Δ²-*cyclo*penten-1-one (RYAN and LENNON), i, 1282.
1-Phenyl-3-*p*-anisyl-5-methylpyrazole-4-carboxylic acid, and its ethyl ester (MINUNNI, LAZZARINI, and D'URSO), i, 1176.
Phenyl-*p*-anisyl-*α*-naphthylmethane (DILTHEY), i, 651.
Phenyl-*p*-anisyl-*α*-naphthylmethyl bromide and chloride (DILTHEY), i, 651.
Phenylanisylpyrazolines, acetyl derivatives, and 4-hydroxy- (FREUDENBERG and STOLL), i, 70.
Phenylarsenious oxide, 3-nitro-4-hydroxy- (CHRISTIANSEN, NORTON, and SHOHAN), i, 1471.
Phenyl-1-arsenoxide-4-stibinoxide (CHEMISCHE FABRIK VON HEYDEN), i, 86.
Phenylarsinic acid, *p*-amino-, salts of, crystal structure of (GILTA), ii, 93.
action of pyruvic acid and, on aldehydes (ADAMS and JOHNSON), i, 319.

Phenylarsinic acid, *p*-amino-, benzoyl, aminobenzoyl, and nitrobenzoyl derivatives of, and their derivatives (KING and MURCH), i, 319.
3-amino-4-hydroxy-, 3-acetyl derivative, bismuth salt, action of, in syphilis (LEVADITI), i, 1005; (FOURNIER and SCHWARTZ), i, 1006.
4-amino-3-hydroxy-, action of carbonyl chloride on (CASSELLA & Co.), i, 172.
3-chloro-2-amino-4-hydroxy- and its acetyl derivative, and 3-chloro-2-nitro-4-hydroxy- (CASSELLA & Co.), i, 1471.
3-oximinoamino-4-hydroxy-, 3-acetyl derivative (KARRER, DIECHMANN, and HAEBLER), i, 243.
Phenylarsinic acids, *di*amino- and nitroamino-, benzoyl derivatives (HAMILTON and MAJOR), i, 990.
Phenyl-1-arsinic acid–3-stibinic acid, 4-hydroxy- (CHEMISCHE FABRIK VON HEYDEN), i, 86.
Phenylarsinodicarboxylic acid, ethyl ester (JOB, REICH, and VERGNAUD), i, 173.
Phenylazodiacetylsuccinic acid, *p*-amino-, acetyl derivative, ethyl ester (BÜLOW and BAUR), i, 1327.
Phenylbarbituric acid, bromo- (VOORHEES and SKINNER), i, 837.
2-Phenyl-1:3-benzdiazole, and its hydrochloride (GUHA and RAY), i, 1462.
***N*-Phenylbenzimidophenyl ether**, and its chloro-derivatives, molecular rearrangement of (CHAPMAN), i, 1400.
3-Phenylbenzopyran, bromohydroxy- and hydroxy-, and their derivatives (KAHIL and NIERENSTEIN), i, 53
2-Phenylbenzopyrylium chloride, 3:5:7-2-2′:4′-*penta*hydroxy-. See Morinidin chloride.
1-Phenylbenzoxazole, 1-*o*-hydroxy- (v. AUWERS and JORDAN), i, 265.
3-Phenyl-3-benzoylcoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 148.
Phenylbenzoyldiazomethane, reaction of carbon disulphide with (MEYER), i, 424.
1-Phenylbenzthiazole methiodide (CLARK), i, 841.
2-Phenylbenztriazole, *p*-amino-, *m*-amino-*o*-hydroxy-, *mm′-di*-bromo- and -chloro-*s*-*p*-hydroxy-, *di*bromo*di*hydroxy-, *p-mono*- and *op-di*-hydroxy-, and their derivatives (ELBS), i, 163.
1-Phenylbenztriazole-5-carboxylic acid, 7-amino-, and its acetyl derivative, and 7-nitro- (LINDEMANN and WESSEL), i, 1190.
3-Phenyl-3-benzyl-4:5-benzocoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 147.
3-Phenyl-3-benzylcoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 147.
Phenyl benzyl diketone, and its derivatives (MALKIN and ROBINSON), i, 559.
Phenylbenzyldimethylammonium iodide, compound of iodoform with (STEINKOPF and BESSARITSCH), i, 495.
Phenylbenzyldimethylarsonium iodide, compound of iodoform with (STEINKOPF and BESSARITSCH), i, 496.
α-Phenylbenzyl ethyl ketone, semicarbazone (LÉVY and LAGRAVE), i, 679.
Phenylbenzylglyoxal. See *αγ*-Diphenylpropan-*αβ*-dione.
Phenylbenzyl-*p*-hydroxytolylacetic acid, potassium salt (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 147.
3-Phenyl-3-benzyl-5-methylcoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 147.
α-Phenylbenzyl methyl ketone, semicarbazone (LÉVY and LAGRAVE), i, 679.
Phenylbenzylmethyl-(methylanilinoethyl)ammonium nitrate (WEDEKIND and UTHE), i, 536.
***d*-Phenylbenzylmethyl-*β*-phenylmethylaminoethylammonium nitrate**, decomposition of, by aniline in chloroform solution (WEDEKIND and UTHE), i, 1059.
α-Phenyl-*β*-benzyl-*β*-methylpropane (TROTMAN), i, 383.
***as*-Phenylbenzyl-*p*-phenylenediamine**, and its derivatives (DESAI), i, 388.
Phenyl *o*-benzylphenyl ketone (MAYER and FISCHBACH), i, 1076.
α-Phenyl-*β*-benzylpropane, *β*-bromo- (TROTMAN), i, 382.
α-Phenyl-*β*-benzylpropan-*β*-ol, γ-amino- (THOMAS and BETTZIECHE), i, 250.
Phenylbenzylpyrazoles, chloro- (v. AUWERS and MAUSS), i, 1179.
2-Phenyl-3-benzylquinoxaline (MALKIN and ROBINSON), i, 559.
Phenyl-bis-(3-hydroxy-4:4′-dicarbethoxy-5:5′-dimethyl-2:3′-dipyryl)-methane, and its derivatives (FISCHER and HEYSE), i, 78.
ω-Phenylbiuret, and its methyl derivatives (GATEWOOD), i, 805.
Phenyl *αβ-di*bromo-*α*-methoxy-*β*-phenylethyl ketone (MALKIN and ROBINSON), i, 559.
3-Phenylbromomethyl-6-methylbenzthiopyrone, and its pyridinium salt (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.

2-Phenyl-6-bromo-4-methylquinoline, and its salts (JOHN and WEBER), i, 1452.

Phenyl-*p*-bromophenylformamidines, *N*-hydroxy-*N*- and -*N'*-*p*-chloro- (FARROW and INGOLD), i, 155.

Phenyl-*p*-bromophenyl-α-naphthylmethyl chloride (DILTHEY), i, 653.

Phenyl-*N*-*p*-bromophenylnitron, *o*-hydroxy- (BAMBERGER), i, 142.

Phenyl-*p*-bromophenyloxazolidines (DAINS, BREWSTER, MALM, MILLER, MANEVAL, and SULTZABERGER), i, 1064.

Phenylbromotolylcarbamide (BAMBERGER), i, 143.

Phenylbromotolylthiocarbamide (BAMBERGER), i, 143.

δ-Phenylbutinene (BERT, DORIER, and LAMY), i, 1373.

Phenylbutinoic acid (BOURGUEL), i, 770.

Phenyl-*n*-butylcyanamide (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.

Phenyl butyl ketones, 2:4-*di*hydroxy- (SHARP & DOHME and DOHME), i, 541.

Phenyl*cyclo*butylmethylcyanamide (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.

Phenylcarbamic acid, 2-chloro-4:6-*di*nitro-, ethyl ester (KNIPHORST), i, 907.

Phenylcarbamide, bromo*di*nitro-, chloro-*di*nitro-, and 2:4:6-*tri*nitro- (KNIPHORST), i, 906.

Phenylcarbamidomalonic acid, ethyl ester (GATEWOOD), i, 1189.

β-Phenyl-α-carbethoxyhydrazine-β-diphenylacetic acid (INGOLD and WEAVER), i, 580.

Phenylcarbimide, action of methylcarbamide on (BILTZ and BECK), i, 1393.

Phenylcarbylamine, action of α-naphthol with (PASSERINI), i, 1298.

Phenylchelerythrine, and its chloroaurate (GADAMER and STICHEL), i, 287.

Phenyl*di*chloroarsine, additive compound of aluminium chloride and (HUNT and TURNER), i, 844.

Phenyl-ββ'-*di*chlorodivinylarsine, and its derivatives (HUNT and TURNER), i, 844.

2-Phenylchloro-4-methylquinolines, and their salts (JOHN and WEBER), i, 1452.

1-Phenyl-5-*o*-chlorophenyl-3-methylpyrazoline (v. AUWERS and KREUDER), i, 1455.

Phenyl-4-chloropiaselenazonium chloride (BATTEGAY and VÉCHOT), i, 1467.

Phenyl *o*-chlorostyryl ketone, *o*-hydroxy-, and its acetyl derivative and their dibromides (RÖTHLISBERGER), i, 572.

Phenyl-β-chlorovinylchloroarsine (HUNT and TURNER), i, 843.

Phenylchromans. See Phenylbenzopyrans.

3-Phenylchroman-2-one, and its phenylhydrazone (KAHIL and NIERENSTEIN), i, 52.

Phenylcinchonic acid, β-hydroxyethyl ester (CRETCHER and PITTENGER), i, 1415.

α-Phenylcinnamylideneacetonitrile, photodimerides of (STOBBE and KUHRMANN), i, 253.

Phenyl cinnamylidenemethyl ketone, *p*-hydroxy-, glucoside (BARGELLINI and LEONE), i, 1284.

Phenylcitronellylacetic acid, and its derivatives (BECHERER), i, 664.

Phenylcitronellylamine, and its salts and derivatives (RUPE and RINDERKNECHT), i, 658.

Phenylcitronellylcarbinol (RUPE and RINDERKNECHT), i, 658.

***as*-Phenylcitronellylhydrazine**, and its derivatives (RUPE and RINDERKNECHT), i, 658.

3-Phenylcoumarin, 6-bromo-, 6-chloro-, 6:8-*di*chloro-, and 7-hydroxy-, and its acetyl derivative (DEY and ROW), i, 150.

4-Phenylcoumarin, 5:7:4-*p*-*tri*hydroxy-, and its triacetyl derivative (BARGELLINI), i, 1299.

3-Phenylcoumarone, 2-hydroxy-, potassium, and sodium derivatives (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 147.

γ-Phenylcrotonamide, α-hydroxy-, derivatives of (BOUGAULT), i, 921.

Phenylcyanamide, 2:4-*di*nitro- (GIUA and PETRONIO), i, 1396.

Phenyl-di-3(2-anilino-1:4-naphthaquinonyl)-amine (FRIES and BILLIG), i, 940.

Phenyl αα-di-*p*-anisylbenzyl ketone (TIFFENEAU and ORÉKHOV), i, 680.

α-Phenyl-ββ-dibenzylpropane (TROTMAN), i, 383.

Phenyldiethylallylammonium iodide, compound of iodoform with (STEINKOPF and BESSARITSCH), i, 495.

α-Phenyl-αα'- and **-αα'-diethylsuccinimides** (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 377.

1-Phenyl-3-dimethylene-4-methylpyrazolone, and its hydrochloride (KÜSTER), i, 923.
***N*-Phenyl-*N'*:*S*-dimethyl-*N*-ethyl-ψ-thiocarbamide**, and its salts (LECHER), i, 1391.
2-Phenyl-4:5-dimethylglyoxaline, and its picrate (MORGAN and HICKINBOTTOM), i, 156.
1-Phenyl-3:5-di(2-methylindyl)pyrazole (ODDO), i, 297.
2-Phenyl-1:6-dimethylmethylenedihydropyridine, and *m*-nitro-, and their derivatives (MUMM), i, 965.
α-Phenyl-ββ-dimethylpentan-α-ol, and its phenylurethane (HALLER, BAUER, and RAMART), i, 261.
α-Phenyl-ββ-dimethyl-Δ-penten-α-ol, and its phenylurethane (HALLER, BAUER, and RAMART), i, 261.
1-Phenyl-3:5-dimethylpyrazole, *p*-nitro- (v. AUWERS and KREUDER), i, 1455.
5-Phenyl-1:3-dimethylpyrazoline, and its picrate (v. AUWERS and KREUDER), i, 1455.
3-Phenyl-1:2-dimethylpyrazolium iodide, 5-iodo- (v. AUWERS and MAUSS), i, 1179.
1-Phenyl-2:3-dimethyl-5-pyrazolones, *mono-* and *di*-chloro- (CHATTAWAY and STROUTS), i, 71.
4-Phenyl-1:6-dimethylpyridine-3:5-dicarboxylic acid, ethyl ester, methosulphate (MUMM), i, 964.
1-Phenyl-2:5-dimethylpyrrole, 3:4-*di*-iodo-, and 3:4-*di*nitro- (PIERONI and NOCENTINI), i, 1097.
1-Phenyl-2:5-dimethylpyrrole-3-carboxylic acid, 4-iodo-, and its silver salt (PIERONI and NOCENTINI), i, 1097.
2-Phenyl-4:8-dimethylquinoline, and its salts (JOHN and WEBER), i, 1452.
Phenyldimethyltetrahydroindazoles, and their *per*chlorates (v. AUWERS, v. SASS, and WITTEKINDT), i, 1182.
2-Phenyl-6:6-dimethylthiopyranone (ARNDT, PUSCH, and SCHWARZ), i, 1304.
Phenyldi-α-naphthylmethyl acetate (SCHOEPFLE), i, 811.
Phenyldi-α-naphthylmethylamine (SCHOEPFLE), i, 811.
Phenyl 3:4-dioxymethylenestyryl ketone, 4-hydroxy-, glucoside (BARGELLINI and LEONE), i, 1284.
Phenyldiphenazineoxazine (KEHRMANN and BENER), i, 444.
***N*-Phenyldiphenylacetamide, *o*-nitro-** (VAN ALPHEN), i, 83.
3-Phenyl-5-diphenylmethyl-2-keto-2:3-dihydrofuro-3:4-diazole (VAN ALPHEN), i, 81.
Phenyldiphenylyl-α-naphthylcarbinol, additive compounds of (DILTHEY), i, 653.
Phenyldiphenylyl-α-naphthylmethyl bromide and methyl ether (DILTHEY), i, 653.
Phenyldi-*o*-tolylmethane-*o*-carboxylic acid (WEISS and KORBZYN), i, 560.
Phenyldiveratroharmyrine methosulphate (ARMIT and ROBINSON), i, 1172.
***o*-Phenylenecarbamide**, acetyl and benzoyl derivatives (HELLER, BUCHWALDT, FUCHS, KLEINICKE, and KLOSS), i, 1324.

Phenylene-2-*p*-chlorophenyltriazolylene-glycollic acid, and its sodium salt (CHARRIER, GALLOTTI, and VITALE), i, 307.

***p*-Phenylenediamine**, electrolytic preparation of (NORRIS and CUMMINGS), i, 668.
oxidation of, by the action of hydrogen peroxide and formaldehyde (LÄTT), i, 1457.
in tissues (v. SZENT-GYÖRGYI), i, 93.

Phenylenediamines, compounds of carbon suboxide with (VAN ALPHEN), i, 81.

***o*- and *m*-Phenylenediamines**, hydroferricyanides of (CUMMING), i, 122.

***o*-Phenylenediphenyldiglycollolactone**, and its methyl ester (WEISS and SONNENSCHEIN), i, 938.

Phenyleneoxamide, salts and *O*-benzoyl derivative of (HELLER, BUCHWALDT, FUCHS, KLEINICKE, and KLOSS), i, 1324.

Phenylene-2-phenyltriazolyleneglycollic acid, and its sodium salt (CHARRIER, GALLOTTI, and VITALE), i, 306.

***r*-Phenylethanolmethylamine**, *o-di*hydroxy-, hydrochloride (SOCIÉTÉ CHIMIQUE DES USINES DU RHÔNE), i, 136.

3-Phenylethoxymethyl-6-methylbenzthiopyrone (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.

2-Phenyl-8-ethoxy-4-methylquinoline, and its salts (JOHN and WEBER), i, 1452.

β-Phenylethylacetoacetic acid, ethyl ester (v. AUWERS and MÖLLER), i, 404.

γ-(β-Phenylethyl)acetylacetone (v. AUWERS and MÖLLER), i, 404.

β-Phenylethyl alcohol, synthesis of (LEONARD), i, 913.

Phenylethylamine, condensation of, with *s*-dichlorodimethyl ether (SHORT), i, 387.

Phenylethylamine, chloro-*p*-hydroxy-, and its hydrochloride (ZEYNEK), i, 920.

β-Phenyl-γ-ethylamylene βγ-glycol (ROGER), i, 660.

Phenylethylbarbituric acid, dimethylamine salt (HOFFMANN, LA ROCHE & Co.), i, 300.

5-β-Phenylethylbarbituric acid (DOX), i, 301.

3-Phenyl-3-ethyl-4:5-benzocoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 148.

β-Phenylethylbenzoyl-*d*-ψ-ecgonine, and its hydrochloride (GRAY), i, 830.

δ-Phenyl-γ-ethylbutan-γ-ol, δ-amino-, and its hydrochloride and benzoyl derivative (THOMAS and BETTZIECHE), i, 250.

Phenylethylcarbamic acid, 4-bromo-2:6-*di*nitro-, esters of (KNIPHORST), i, 906.

α-Phenyl-β-ethylcarbamide, bromo-, and chloro- (KNIPHORST), i, 906.

2-β-Phenylethylchromone, 3:7-*di*hydroxy- (ROBINSON and SHINODA), i, 1301.

3-Phenyl-3-ethylcoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 148.

Phenylethyldimethylamine, *p*-amino- (KINDLER), i, 387.

2-β-Phenylethyl-4:4-dimethylhomophthalimide (HAWORTH, PERKIN, and PINK), i, 1168.

Phenylethylene, αβ-*di*thiocyano- (SÖDERBÄCK), i, 899.

5-β-Phenylethyl-5-ethylbarbituric acid (DOX), i, 301.

β-Phenylethylethylmalonic acid, and its ethyl ester (DOX), i, 300.

Phenylethyl*cyclo*hexylamines, and their salts (WIELAND and DRAGENDORFF), i, 1089.

Phenylethyl *n*-hexyl ketone (THIERFELDER and KLENK), i, 193.

***N*-β-Phenylethylhomophthalamic acid**, and its methyl ester (HAWORTH, PERKIN, and PINK), i, 1168.

2-β-Phenylethylhomophthalimide (HAWORTH, PERKIN, and PINK), i, 1168.

3-α-Phenylethylideneoxindole (WINDAUS, JENSEN, and SCHRAMME), i, 19.

Phenylethylketazine (MAZOUREVITCH), i, 1240.

β-Phenylethyl ketone, *o*-hydroxy-, and its salts (FREUDENBERG, FIKENTSCHER, and HARDER), i, 420.

β-Phenylethylmalonic acid, ethyl ester, and its amides (DOX), i, 300.

β-Phenylethylmethylamine (KINDLER), i, 387.

β-Phenylethyl methyl ketone, *m*-hydroxy-, and its derivatives (MURAI), i, 1158.

α-Phenyl-ββ-ethylnitrocarbamide 4-bromo-2:6-*di*nitro-, chloro*di*nitro-, and 2:4-*di*- and 2:4:6-*tri*-nitro- (KNIPHORST), i, 906.

α-Phenylethyloxindole (WINDAUS, JENSEN, and SCHRAMME), i, 19.

ε-Phenyl-γ-ethylpentan-γ-ol, δ-amino-, and its benzoyl derivative (THOMAS and BETTZIECHE), i, 251.

3-Phenyl-1-ethylpyrazole, and its picrate (v. AUWERS and SCHMIDT), i, 586.

Phenylethylpyrazoles, chloro- (v. AUWERS and MAUSS), i, 1179.
β-Phenylethylpyridine, 2-β-bromo-β-*o*-nitro-, hydrobromide (RÄTH and LEHMANN), i, 432.
α-Phenyl-α-ethylsuccinamic acid, ethyl ester (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 376.
α-Phenyl-α-ethylsuccinimide (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 376.
2-β-Phenylethyl-1:2:3:4-tetrahydro*iso*quinoline, and its hydrochloride (HAWORTH, PERKIN, and PINK), i, 1168.
Phenylethyl*di*thiocarbamic acid, salts of (WHITBY and MATHESON), i, 644.
1-Phenyl-4-ethyl-1:2:3-triazole (BERTHO), i, 840.
3-Phenylflavone, 7-hydroxy-, and its acetyl derivative (BAKER and ROBINSON), i, 1299.
5-Phenylfluoflavine (KEHRMANN and BENER), i, 443.
1-Phenylfluorenone, 3-hydroxy- (JONESCU), i, 1154.
Phenylfluorone, *p*-hydroxy-, and its acetyl derivative (GOMBERG and SNOW), i, 660.
9-Phenylfluorone, 9-*o*:*p*-*di*hydroxy- (SEN and SARKAR), i, 813.
Phenyl furfurylidenemethyl ketone, 4-hydroxy-, glucoside (BARGELLINI and LEONE), i, 1284.
Phenylgermanonic acid (MORGAN and DREW), i, 1197.
β-Phenylglutamic acid (HARINGTON), i, 1094.
β-Phenylglutaric acid, ethyl ester (SPRIGHT, STEVENSON, and THORPE), i, 32.
β-Phenylglutaric acid, α-amino-, benzoyl derivative, and α-oximino-, and its ethyl ester (HARINGTON), i, 1094.
α-*mono*- and αα′-*di*-bromo-, and their esters, and α-bromo-α′-hydroxy-, ethyl ester, lactone (HAERDI and THORPE), i, 924.
Phenylglycine, derivatives of (WESSELY), i, 1152.
Phenylglycine, *p*-hydroxy-, synthesis of (SHIMO), i, 1423.
Phenylglycine-*o*-carboxylic acid, 4-iodo- (KALB and VOGEL), i, 161.
Phenylglycol, potassium borate of (HERMANS), i, 501.
***N*-Phenylglycylglycine**, and its ethyl ester (WESSELY), i, 1152.
***N*-Phenylglycyl-*l*-tyrosine**, ethyl ester (WESSELY), i, 1152.
2-Phenylglyoxaline, *o*-, *m*-, and *p*-nitro-, and their salts and 4-carboxylic acids (PYMAN and STANLEY), i, 158.
4(5)-Phenylglyoxaline, 2-bromo-, 5(4)-bromo- and its salts, and 2:5(2:4)-*di*bromo- (FORSYTH and PYMAN), i, 700.
4(5)-Phenylglyoxaline-5(4)-carboxylic acid, and 2-thiol-, ethyl esters (FORSYTH and PYMAN), i, 700.
β-Phenylglyoxime, α-hydroxy-, and its derivatives (PONZIO), i, 1075.
Phenylglyoxylic acid, *p*-bromo-, and its methyl ester, and *p*-nitro-, xylylhydrazones of (BUSCH and v. BEUST), i, 400.
β-Phenyl-Δ$^{\alpha\gamma}$-heptadiene (GRIGNARD and DUBIEN), i, 112.
β-Phenylheptane-βδ-diol (GRIGNARD and DUBIEN), i, 112.
η-Phenyl-Δ$^{\beta\delta\zeta}$-heptatrien-α-al (VORLÄNDER, FISCHER, and KUNZE), i, 1068.
η-Phenyl-Δ$^{\beta\delta\zeta}$-heptatrienylmalonic acid (VORLÄNDER, FISCHER, and KUNZE), i, 1069.
β-Phenyl-Δγ-hepten-β-ol (GRIGNARD and DUBIEN), i, 111.
s-Phenylheptylhydrazine (MAZOUREVITCH), i, 1247.
α- and γ-Phenylhexa-βδ-diones, and their copper salts (MORGAN, DREW, and PORTER), i, 363.
9-Phenylhexahydrocarbazole, 11-nitro-10-hydroxy- (LINNELL and PERKIN), i, 63.
6-Phenylhexahydro-1:2:3:4-tetrazine-1:2:3:4-tetracarboxylic acid, ethyl ester (INGOLD and WEAVER), i, 581.
α-Phenyl-γ-hexanol, resolution and rotation of, and its salts and esters (HEWITT and KENYON), i, 914.
s-Phenyl*cyclo*hexylhydrazine (GOODWIN and BAILEY), i, 843.
Phenylhydantoins, *p*-hydroxy- (COGHILL and JOHNSON), i, 582.
3-Phenylhydantoin-[Δ$^{5:3'}$]-oxindole (HILL and HENZE), i, 306.
5-Phenylhydrazidouracil (LEVENE), i, 979.
Phenylhydrazine, compounds of carbon suboxide with (VAN ALPHEN), i, 83.
reaction of mercuric acetate with (VECCHIOTTI and CAPODACQUA), i, 1106.
acetyl derivative, bromination of (HUMPHRIES and EVANS), i, 1339.
Phenylhydrazine, *o*-amino-, and its derivatives (GUHA and RAY), i, 1461.
2:4-*di*bromo-, preparation of (HUMPHRIES and EVANS), i, 1339.
3:4-*di*bromo- (VOTOČEK and JIRŮ), i, 317.
o-nitro-, derivatives of (GUHA and RAY), i, 1462.

3-Phenylhydrazino-5-phenyl*iso*oxazole, 4-amino- and 4-nitroso- (RUGGERI), i, 79.

Phenylhydrazones, behaviour of, when dissolved in organic solvents (RASTELLI), i, 256.
reduction of (GOODWIN and BAILEY), i, 843.
action of chlorine on (HUMPHRIES, HUMBLE, and EVANS), i, 989.
influence of constitution on formation of pyrazolines from (v. AUWERS and KREUDER), i, 1456.

Phenyl 2-hydroxy-4:6-dimethoxystyryl ketone (PRATT and ROBINSON), i, 825.

Phenylhydroxyfurazan, and its derivatives (GASTALDI and REPOSSI), i, 988.

Phenylhydroxylamine, nitroso- (*cupferron*), salts of (AUGER, LAFONTAINE, and CASPAR), ii, 328.

Phenyl 2-hydroxy-3-methoxystyryl ketone, and its potassium salt, and acetyl derivative (PFEIFFER, ARMBRUSTER, BACKES, and OBERLIN), i, 270.

Phenyl 4-hydroxy-3-methoxystyryl ketone, 4-hydroxy-, glucoside (BARGELLINI and LEONE), i, 1283.

γ-Phenyl-α-hydroxymethylene-Δβ-butenoic acid, ethyl ester (v. AUWERS and MÖLLER), i, 404.

γ-Phenyl-α-hydroxymethylenebutyric acid, ethyl ester (v. AUWERS and MÖLLER), i, 404.

2-Phenyl-8-hydroxy-4-methylquinoline, and its salts (JOHN and WEBER), i, 1452.

Phenyl 2-hydroxy-3-naphthyl ketone, and its potassium salt (LESSER, KRANLPUHL, and SAD), i, 1426.

3-Phenyl-5-*p*-hydroxyphenyl-4:5-dihydro*iso*oxazole, and its derivatives (VORLÄNDER and SCHOENEMANN), i, 269.

Phenyl β-*di*hydroxyphenylethyl ketones, *di*hydroxy- (CHAPMAN and STEPHEN), i, 669.

1-Phenyl-5-*o*-hydroxyphenyl-3-methylpyrazoline, *p*-nitro- (v. AUWERS and KREUDER), i, 1455.

3-Phenyl-5-*p*-hydroxyphenyl*iso*oxazole (VORLÄNDER and SCHOENEMANN), i, 269.

1-Phenyl-2:4:6-*tri*-*p*-hydroxyphenylpyridinium bromide (DILTHEY and SCHAEFER), i, 154.

1-Phenylhydroxyquinoxalone (KEHRMANN and BENER), i, 444.

Phenyl *p*-hydroxystyryl ketone, and *p*-hydroxy-, and their derivatives (VORLÄNDER, HIEMESCH, SCHOENEMANN, SCHADE, and KUNZE), i, 267.

Phenyl-6-hydroxy-*m*-tolylmethane. See 3-Benzyl-*p*-cresol.

Phenyl β-hydroxyvinyl ketone, derivatives of (v. AUWERS and SCHMIDT), i, 585.

α-Phenyl-β-iminoethane. See β-Phenylacetaldimine.

2-Phenylimino-1:2:3:4-tetrahydro-1:3:4-benztriazine (GUHA and RÂY), i, 1462.

5-Phenylimino-2-thion-2:3:4:5-tetrahydro-1:3:4-thiodiazole, *p*-bromo- and *m*-chloro-, and their derivatives (GUHA and RÂY), i, 703.

Phenyl*cyclo*iminotoluquinone, and bromo- and chloro-derivatives (CHATTAWAY and PARKES), i, 985.

Phenylindandionyldi-indonylmethane (RADULESCU and GEORGESCU), i, 1287.

Phenylindandionylmethyl alcohol, and its derivatives (RADULESCU and GEORGESCU), i, 1286.

2-Phenylindazole, 5-chloro-, 5-chloro-3-cyano-, and 3-cyano-, 3-cyano-2-*p*-chloro-, and their oxides (HELLER and SPIELMEYER), i, 838.

2-Phenylindazole-3-carboxylic acid, and 2-*p*-chloro-, and 5-chloro- (HELLER and SPIELMEYER), i, 838.

2-Phenylindole, 2-*p*-hydroxy- (KORCZYŃSKI and KIERZEK), i, 978, 1098.

2-Phenyl-6-iodo-4-methylquinoline, and its salts (JOHN and WEBER), i, 1452.

***s*-Phenyl-5-iodo-*o*-tolylcarbamide** (HANN and BERLINER), i, 908.

Phenylmercuric *tri*nitrobenzoate (KHARASCH and GRAFFLIN), i, 1107.

Phenylmercury 2:4:6-trinitrophenyl (KHARASCH and GRAFFLIN), i, 1107.

Phenyl *p*-methoxybenzyl ketone (TIFFENEAU and ORÉKHOV), i, 680.

Phenyl *p*-methoxybenzyl diketone (MALKIN and ROBINSON), i, 559.

2-Phenyl-3-*p*-methoxybenzylquinoxaline (MALKIN and ROBINSON), i, 559.

Phenyl α-methoxy-β-hydroxyvinyl ketone, and its copper salt (MALKIN and ROBINSON), i, 827.

3-Phenylmethoxymethyl-6-methylbenzthiopyrone (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.

2-Phenyl-8-methoxy-4-methylquinoline, and its salts (JOHN and WEBER), i, 1452.

Phenyl β-methoxystyryl ketone (MALKIN and ROBINSON), i, 559.

Phenyl *p*-methoxystyryl ketone, *p*-hydroxy-, and its salts (VORLÄNDER, HIEMESCH, SCHOENEMANN, SCHADE, and KUNZE), i, 267.

Phenyl *p*-methoxystyryl ketone, *p*-hydroxy-, glucoside (BARGELLINI and LEONE), i, 1283.
3-Phenyl-5-methyl-3-allylcoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 148.
4-Phenylmethylamino-1-methyl-2-methylene-1:2-dihydroquinoline (FISCHER, DIEPOLDER, and WÖLFEL), i, 438.
4-Phenylmethylamino-2-methylquinoline, and its picrate (FISCHER, DIEPOLDER, and WÖLFEL), i, 439.
1-Phenyl-2-methylbenziminazole-5-carboxylic acid, 7-nitro- (LINDEMANN and WESSEL), i, 1100.
3-Phenyl-3-methyl-4:5-benzocoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 148.
1-Phenyl-5-methylbenzthiazole, 4'-amino-, physiological action of (HUNTER), i, 702.
*per*bromide (HUNTER), i, 987.
1-Phenyl-4(or 6)-methyl-1:2:3-benztriazole, 7-nitro- (BRADY, HEWETSON, and KLEIN), i, 16.
ω-Phenyl-*ms*-methylbiuret (BILTZ and BECK), i, 1393.
ω'-Phenyl-ω-methylbiuret, ω-nitroso- (BILTZ and BECK), i, 1393.
α-Phenyl-β-methylbutane, β-bromo- (TROTMAN), i, 382.
α-Phenyl-β-methyl-Δ$^{\alpha}$-buten-γ-one, condensation of aldehydes with (RYAN and LENNON), i, 1282.
Phenyl γ-methyl-Δ$^{\alpha}$-butenyl ketone, and *p*-amino-, and its hydrochloride (THOMS and KAHRE), i, 789.
α-Phenyl-β-methylbutyronitrile (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 376.
Phenylmethylcarbinol, *o*-chloro- (v. AUWERS, LECHNER, and BUNDESMANN), i, 266.
3-Phenyl-2-methylcoumaran (CLAISEN and TIETZE), i, 389.
3-Phenyl-3-methylcoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 147.
3-Phenyl-4-methylcoumarin, 7-hydroxy- (BAKER and ROBINSON), i, 1300.
Phenylmethyldipropargylammonium bromide (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1401.
Phenyl-*Py*-*N*-methyldiveratro*iso*-harmyrine, and its methiodide (ARMIT and ROBINSON), i, 1172.
1-Phenyl-3-*mp*-methylenedioxyphenyl-5-methylpyrazole-4-carboxylic acid, and its ethyl ester (MINUNNI, LAZZARINI, and D'URSO), i, 1176.
Phenylmethylethylallylarsonium iodide (STEINKOPF and BESSARITSCH), i, 496.
3-Phenyl-5-methyl-3-ethylcoumaran-2-one (LÖWENBEIN, SIMONIS, LANG, and JACOBUS), i, 148.
4-Phenyl-6-methyl-2-ethylpyridine-3:5-dicarboxylic acid, ethyl ester, and its derivatives (MUMM), i, 966.
2-Phenyl-4-methyl-6-ethylquinoline, and its salts (JOHN and WEBER), i, 1452.
1-Phenyl-4-methylglyoxaline, 2-thiol- (BURTLES, PYMAN, and ROYLANCE), i, 697.
4-Phenyl-1-methylglyoxaline, 5-bromo-, and its picrate (FORSYTH and PYMAN), i, 700.
β-Phenylmethylglyoxime methyl ethers (AVOGADRO and TAVOLA), i, 1040.
1-Phenyl-5-methyl-3-*n*-hexylpyrazole-4-carboxylic acid (MINUNNI, LAZZARINI, and D'URSO), i, 1176.
3-Phenyl-1-methylhydantoylmethylamide, and 5-hydroxy- (GATEWOOD), i, 1188.
Phenylmethylketen oxides (STAUDINGER, DYCKERHOFF, KLEVER, and RUZICKA), i, 934.
2-Phenyl-4-methyl-β-naphthaquinoline (JOHN and NOZICZKA), i, 1451.
2-Phenyl-4-methyl-β-naphthaquinoline, hydroxy-, and its salts and derivatives (JOHN and WEBER), i, 1452.
3-Phenyl-2-methyl-*lin*-naphthiminazole, 4:9-*di*hydroxy-, and its diacetyl derivative (FRIES and BILLIG), i, 939.
3-Phenyl-2-methyl-*lin*-naphthiminazole-4:9-quinone (FRIES and BILLIG), i, 939.
Phenylmethylnitroamine, *tri*nitro- (*tetryl*), heat effusion of (RINKENBACH and HALL), ii, 207.
α-Phenyl-ββ-methylnitrocarbamide, 2:4-*di*nitro- (KNIPHORST), i, 907.
Phenylmethylnonylcarbinol (THOMS and AMBRUS), i, 790.
Phenylmethyl*iso*oxazole, *O*-alkyl ethers of (WEYGAND and FRIELING), i, 1288.
1-Phenyl-2-methylperimidine, 7-hydroxy-, and its hydrochloride (SANDER), i, 982.
α-Phenyl-β-methylpropane, β-bromo- (TROTMAN), i, 383.
Phenylmethyl-*n*-propylallylarsonium iodide (STEINKOPF and BESSARITSCH), i, 496.
3-Phenyl-4-methylpyrazole, 5-chloro-, and its hydrochloride (v. AUWERS and MAUSS), i, 1179.
Phenylmethylpyrazoles, and 4-bromo- (v. AUWERS and SCHMIDT), i, 586.
1-Phenyl-5-methylpyrazole-3:4-dicarboxylic acid, 1-*p*-amino-, and its acetyl derivative, and its ethyl ester (BÜLOW and BAUR), i, 1327.

5-Phenyl-1-methylpyrazoline hydrobromide, 4-bromo- (v. AUWERS and OTTENS), i, 1429.
Phenylmethylpyrazolines, and their derivatives (FREUDENBERG and STOLL), i, 70.
1-Phenyl-3-methyl-5-pyrazolone, *mono*- and *di*-chloro-, and their derivatives (CHATTAWAY and STROUTS), i, 71.
Phenylmethylpyrazol-5-ones (v. AUWERS and MAUSS), i, 1179.
1-Phenyl-3-methyl-5-pyrazolone-4-azobenzene, 2′:4′-*di*chloro- (CHATTAWAY and STROUTS), i, 72.
1-Phenyl-3-methyl-5-pyrazolone-4-azochlorobenzenes, 1-chloro-(CHATTAWAY and STROUTS), i, 71.
1-Phenyl-2-methylpyrrolidine, and its methiodide (WOLFF), i, 428.
2-Phenyl-4-methylquinolines, substituted (JOHN and NOZICZKA), i, 1451; (JOHN and WEBER), i, 1452.
2-Phenyl-4-methylquinolinecarboxylic acids, and their salts and derivatives (JOHN and WEBER), i, 1452.
Phenylmethylsulphone, derivatives of, and 3-nitro- (TWIST and SMILES), i, 895.
Phenylmethylsulphone, 4-*mono*- and 2:5-*di*-chloro- (MILLER and SMILES), i, 392.
Phenylmethyltetrahydroindazoles, and their perchlorates (v. AUWERS, v. SASS, and WITTEKINDT), i, 1182.
Phenylmethyl*di*thiocarbamic acid, salts of (WHITBY and MATHESON), i, 644.
4-Phenyl-6-methylthio-chroman-4-ol- and -chromene (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.
1-Phenyl-4-methyl-1:2:3-triazole (BERTHO), i, 840.
Phenylnaphthafluorone, 2′:4′-*di*hydroxy- (SEN and SARKAR), i, 812.
12-Phenyl-$\alpha\beta$-naphthaphenazonium salts, 5:12-*m*-*di*amino-, and their acetyl derivatives (KEHRMANN and LISTVA), i, 1332.
Phenylnaphthaphenfluorindines (KEHRMANN and SCHEDLER), i, 442.
2-Phenyl-$\alpha\beta$-naphthatriazole, 4-hydroxy-2-*p*-bromo-, and oxide, 2-*p*-bromo- and 2-*p*-chloro- (CHARRIER, CRIPPA, TOIA, and BIANCHESSI), i, 591.
Phenyl*iso*naphthophenazonium salts, and amino-, constitution and absorption spectra of (KEHRMANN and SANDOZ), i, 983.
Phenyl-β-naphthylamine-*m*-sulphonic acid (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 591.
α-Phenyl-δ-naphthyl-*n*-butane, and its oxidation products (SCHROETER, VAN HULLE, GLUSCHKE, STIER, and MÜLLER), i, 125.
Phenylnaphthylenediamines (LEVI), i, 1186.
β-Phenyl-β-1-naphthylethylamine, and its salts (LUCE), i, 264.
Phenyl α-naphthylmethyl ketone (LUCE), i, 264.
Phenyl-1′-naphthylphthalide-4:5′-dicarboxylic acid, and its anhydride (LORRIMAN), i, 672.
Phenyl-1′-naphthylphthalide-4:4′:5′-tricarboxylic acid, and its anhydride (LORRIMAN), i, 673.
Phenyl-α-naphthylpropylene (LUCE), i, 263.
4-Phenyl-1:8-naphthyrid-2-one, supposed, constitution of (SEIDE), i, 437.
Phenyl-2(6?)-nitro-6(2?)-amino-*m*-tolylamine (BRADY, HEWETSON, and KLEIN), i, 16.
α-Phenyl-β-nitrocarbamide, α-2:4-*di*nitro- (GIUA and PETRONIO), i, 1396.
α-Phenyl-*p*-nitrocinnamic acid, ethyl ester (RANFALDI), i, 399.
Phenyl *o*-nitrocinnamylidenemethyl ketone (PFEIFFER), i, 409.
5-Phenyl-1-*p*-nitrophenyl-3-methylpyrazoline (v. AUWERS and KREUDER), i, 1455.
2-Phenyl-4-*o*-nitrophenyl-5-methyl-1:2:3-triazole (NEBER, HARTUNG, and RUOPP), i, 1073.
Phenyl-4-nitropiaselenazonium chloride, and *p*-hydroxy- (BATTEGAY and VÉCHOT), i, 1467.
2-Phenyl-5-oxazolidone, acetyl and benzoyl derivatives (BERGMANN, ENSSLIN, and ZERVAS), i, 891.
2-Phenyloxazoline-4-carboxylic acid, and its methyl ester and hydrochloride (BERGMANN and MIEKELEY), i, 235.
Phenylparaconic acid, *o*-bromo- (FUSON), i, 254.
m- and *p*-bromo- (FUSON), i, 540.
ϵ-Phenyl-$\Delta\beta\delta$-pentadien-α-al (VORLÄNDER, FISCHER, and KUNZE), i, 1068.
ϵ-Phenylpentadienylmalonic acid (VORLÄNDER, FISCHER, and KUNZE), i, 1068.
α-Phenyl-$\Delta^{\alpha\gamma}$-pentadi-inene, and its tetrabromides (PRÉVOST), i, 878.
γ-Phenylpenta-$\beta\delta$-dione, and its copper salt (MORGAN, DREW, and PORTER), i, 364.
α-Phenyl-γ-pentanol, resolution and rotation of, and its salts and esters (HEWITT and KENYON), i, 914.
α-Phenyl-$\Delta\gamma$-pentenonitrile (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 376.

3-Phenyl-3-phenacyl-4:5-benzocoumaran-2-one (Löwenbein, Simonis, Lang, and Jacobus), i, 147.
3-Phenyl-3-phenacyl-5-methylcoumaran-2-one (Löwenbein, Simonis, Lang, and Jacobus), i, 147.
9-Phenylphenanthraphenazonium chloride, 11:12-*di*amino-, and its salts (Kehrmann and Stanoyévitch), i, 1332.
N-Phenylphenanthraphenfluorindine (Kehrmann and Schedler), i, 442.
2-Phenylphenanthriminazole, and 2′-nitro- (Sircar and Ray), i, 980.
2-Phenylphenanthroxazole, 2′-hydroxy-, and 2′- and 3′-nitro- (Sircar and Ray), i, 980.
Phenyl β-phenyl-α-*p*-anisylethyl ketone (Tiffeneau and Orékhov), i, 680.
Phenyl δ-phenylbutyl ketone, and its oxime (Pfeiffer, Armbruster, Backes, and Oberlin), i, 270.
1-Phenyl-5-β-phenylethylbarbituric acid (Dox), i, 301.
1-Phenyl-5-β-phenylethyl-5-ethylbarbituric acid (Dox), i, 301.
Phenyl β-phenylethyl ketone dimethyl acetal (Straus and Ehrenstein), i, 535.
Phenyl-*N*-phenylnitron, *o*-hydroxy- (Bamberger), i, 142.
Phenyl γ-phenylpropyl ketone, and its semicarbazone (v. Auwers and Möller), i, 404.
4-Phenyl-1-*o*-phenylthiocarbamidophenylthiosemicarbazide (Guha and Rây), i, 1461.
3-Phenylphenylthiolmethyl-6-methylbenzthiopyrone (Krollpfeiffer, Schultze, Schlumbohm, and Sommermeyer), i, 1307.
2-Phenyl-4-phthalimidomethylquinoline (John), i, 1317.
Phenylpiaselenazonium chloride (Battegay and Véchot), i, 1467.
Phenylpiaselenazonium-4-sulphonic anhydride, and *p*-hydroxy- (Battegay and Véchot), i, 1468.
3-Phenyl*cyclo*propane-1:2-dicarboxylic acid, 1-bromo-, methyl esters (Haerdi and Thorpe), i, 924.
Phenylpropiolaldehyde, derivatives of (v. Auwers and Ottens), i, 1428.
β-Phenylpropionamide, β-amino- (Stosius and Philippi), i, 918.
2-Phenylpropionic acid, 1-α-amino-3:4-*di*hydroxy-, detection of, in presence of tyrosine (Schmalfuss and Werner), i, 1361.
3-Phenylpropionic acid, α-bromo-, amide and nitrile, and α-cyano-β-2:4-*di*hydroxy- (Baker and Lapworth), i, 30.
β-Phenylpropionic acid, β-bromo-, conversion of, into β-hydroxy-β-phenylpropionamide, and its ammonium and diethyl ammonium salts (Senter and Ward), i, 1128.
2:6-*di*hydroxy- (Chapman and Stephen), i, 669.
β-Phenylpropionic acids, β-hydroxy-, conversion of, into β-bromo-β-phenylpropionic acids (Senter and Ward), i, 31.
β-Phenylpropionic anhydride (Robinson and Shinoda), i, 1301.
β-Phenylpropionitrile, α-bromo- (Freudenberg, Fikentscher, and Harder), i, 420.
Phenylpropionylmandelic acids, ethyl and methyl esters (Freudenberg and Markert), i, 1275.
α-Phenylpropylamine, salts of (Mazourevitch), i, 1240.
N-γ-Phenylpropylaniline, and its hydrochloride (Bamberger), i, 142.
α-Phenyl-Δ^α^-propylene, β-chloro-α-2:4-*di*nitro- (Neber, Hartung, and Ruopp), i, 1073.
s-Phenyl*iso*propylhydrazine, and its salts and derivatives (Goodwin and Bailey), i, 843.
Phenyl *iso*propyl ketone, 2:4-*di*hydroxy- (Sharp & Dohme and Dohme), i, 541.
Phenyl*iso*propylsemicarbazides, and their derivatives (Goodwin and Bailey), i, 843.
α-Phenyl*iso*propylsuccinamic acid, ethyl ester (Farbwerke vorm. Meister, Lucius, & Brüning), i, 376.
α-Phenyl-α-*iso*propylsuccinimide (Farbwerke vorm. Meister, Lucius, & Brüning), i, 376.
1-Phenyl-4-*iso*propyl-1:2:3-triazole (Bertho), i, 840.
2-Phenyl-1-*iso*propylurazole (Goodwin and Bailey), i, 843.
3(5)-Phenylpyrazole, and its derivatives (v. Auwers and Schmidt), i, 585.
3(5)-Phenylpyrazole, 4-bromo-, hydrobromide (v. Auwers and Ottens), i, 1460.
Phenylpyrazoles, chloro-, acetyl, benzoyl, and nitrobenzoyl derivatives of (v. Auwers and Mauss), i, 1180.
3-Phenylpyrazole-1-carboxylamide, and 4-bromo- (v. Auwers and Ottens), i, 1460.
5-Phenylpyrazole-1-carboxylamide (v. Auwers and Ottens), i, 1460.
3-Phenylpyrazoline, derivatives of (Freudenberg and Stoll), i, 70.
1-Phenylpyridinium iodide, 3-bromo- and 3-iodo- (Baumgarten), i, 1381.

1-Phenylpyridinium salts, and 1-amino-, 4-chloro-, and 1-nitro- (VORLÄNDER), i, 1256.

1-Phenyl-4-pyridone, and 1-*p*-amino-, -*p*-chloro-, -*p*-hydroxy-, and -*p*-nitro- and their salts (VORLÄNDER), i, 1257.

1-Phenylpyrrole, compounds of, with mercuric chloride (PLANCHER and ROSSI), i, 601.

1-Phenylpyrrole, *di*bromo- (PLANCHER and ROSSI), i, 601.

1-Phenyl-5-pyrrolidone-4-carboxylic acid (KÜSTER and GRÄSSNER), i, 922.

4-Phenyl-2-pyrrolidone-5-carboxylic acid, and 4′-amino-, 3′:5′-*di*iodo-4′-amino-, 3′:4′:5′-*tri*iodo-, and 4′-nitro- (HARINGTON), i, 1094.

Phenylpyruvic acid, and its ethyl ester, *p*-tolylhydrazones (WALKER), i, 1193.

Phenylpyruvic acid, 2-nitro-4-cyano-, ethyl ester (KERMACK), i, 67.

2-Phenyl-4-quinazolone, 3-amino-, and its derivatives (HELLER, GÖRING, KLOSS, and KÖHLER), i, 1322.

2-Phenylquinoline-4-aldehyde, and its phenylhydrazone, preparation of (CHEM. FABRIK AUF AKTIEN, VORM. E. SCHERING), i, 1452.

2-Phenylquinoline-4-carboxylic acid, bismuth salts (RIEDEL), i, 1170.

Phenyl-8-quinolylamine-*p*-carboxylic acid, *o*-nitro- (SEKA), i, 587.

***s*-Phenyl-8-quinolylcarbamide** (SEKA), i, 587.

2-Phenyl-4-quinolyl δ-methylaminobutyl ketone, and its dihydrochloride (RUZICKA, SEIDEL, and LIEBL), i, 290.

2-Phenyl-4-quinolyl 3-*N*-methyl-2-piperidonyl ketone, and its picrate (RUZICKA, SEIDEL, and LIEBL), i, 290.

3-Phenylquinoxaline, 3-*o*-hydroxy- (FRIES and SAFTIEN), i, 570.

3-Phenylrhodanylidene-$\Delta^{5:3'}$-oxindoles (HANN), i, 987.

Phenylselenoglycollic acid, and *p*-bromo-, and their salts (MORGAN and PORRITT), i, 1196.

Phenylselenoxyglycollic acid, *p*-bromo-, and its salts (MORGAN and PORRITT), i, 1196.

Phenylsemicarbazide, action of, on acetylacetone (WHEELER and BROOKS), i, 1459.

2-Phenylsemicarbazide (GOODWIN and BAILEY), i, 318.

4-Phenylsemicarbazide, 2′:4′-*di*nitro-, and its semicarbazones (KNIPHORST), i, 907.

Phenylstibinic acid, *p*-amino-, sodium salt, glucoside of (WELLCOME FOUNDATION, LTD., and GRAY), i, 991.

Phenylstilbazonium salts, 3-chloro- (KEHRMANN and FALKE), i, 303.

2-Phenyl-4-styrylbenzopyrylium chloride, 4:5:7-*tri*hydroxy- (WALKER and HEILBRON), i, 693.

Phenyl styryl ketone (*benzylideneacetophenone*), 4-hydroxy-, glucoside (BARGELLINI and LEONE), i, 1283.

Phenyl styryl ketones, isomeric (DILTHEY and RADMACHER), i, 408.

Phenylsuccinic acid, *p*-hydroxy- (CHRZASZCZEWSKA), i, 956.

Phenylsulphur chloride, 2:5-*di*chloro- (MILLER and SMILES), i, 392.

9-Phenyltetrahydrocarbazole, and 5(?)-nitro- (LINNELL and PERKIN), i, 63.

9-Phenyl-1:2:3:4-tetrahydrocarbazole-8-carboxylic acid, 2′-amino- (LINNELL and PERKIN), i, 63.

4-Phenyltetrahydro-1:4-oxazine, and a green colouring matter therefrom (ADKINS and SIMINGTON), i, 986.

2-Phenyl-4:5:6:8-tetramethylquinoline, and its salts (JOHN and WEBER), i, 1452.

2-Phenyl-1:2:3:4-tetrazole, 5-amino-, and its derivatives (STOLTE and ORTH), i, 1464.

2-Phenyl-1:2:3:4-tetrazole-5-carboxylic hydrazide, and its derivatives (STOLTE and ORTH), i, 1464.

Phenylthiarsane, and its salts (JOB, REICH, and VERGNAUD), i, 173.

4-Phenylthiazole, 2-amino-, and its derivatives (BOGERT and CHERTCOFF), i, 315.

4-Phenyl-1-thiazole-5-carboxylic acid, 2-amino-, ethyl ester (HIRST, MACBETH, and TRAILL), i, 1251.

Phenyl-α-thienylmethylcarbamide (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.

Phenylthiocarbamide, condensation of diethylamine with (HUNTER), i, 805.

α-Phenylthiodi-*p*-anisylacetic acid, and its barium salt (BISTRZYCKI and RISI), i, 1426.

5-Phenyl-1:3:4-thiodiazine, 2-amino-, and its derivatives (BOSE), i, 167.

3-Phenyl-2-thiohydantoin-[$\Delta^{5:2'}$]-ψ-indoxyl (HILL and HENZE), i, 306.

3-Phenyl-2-thiohydantoin-[$\Delta^{5:3'}$]-oxindole (HILL and HENZE), i, 306.

β-Phenylthiol-*n*-butyric acid (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1305.

Phenylthiolcarbamic acid, benzyl and *p*-tolyl esters (GILMAN and KING), i, 811.

β′-Phenylthioldiethyl ether, β-chloro- (CRETCHER, KOCH, and PITTENGER), i, 628.

α-Phenylthioldiphenylacetic acid, and its salts and acid chloride (BISTRZYCKI and RISI), i, 1426.
3-Phenylthiolhydantoin, 3-*p*-nitro- (COGHILL and JOHNSON), i, 582.
β-Phenylthiolpropionic acid, β-*p*-bromo- (ARNDT), i, 1309.
β-*p*-chloro- (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1305.
Phenylthiophens, amino-, iodo-, and nitro- (CHRZASZCZEWSKA), i, 956.
Phenylthiophosphordihydrazide, dibenzylidene derivative (AUTENRIETH and MEYER), i, 990.
4-Phenylthiosemicarbazide, bromo- and chloro- (GUHA and RÂY), i, 703.
Phenylthiosemicarbazides, action of benzoyl chloride on (FROMM and TRUKA), i, 703.
Phenyl-*p*-tolyl-4-acenaphthylmethane (LORRIMAN), i, 673.
Phenyl-*p*-tolyl-4′-acenaphthylmethane-2-carboxylic acid, and its methyl ester (LORRIMAN), i, 673.
Phenyl-*p*-tolylacetic acid, benzyl ester (RAMART and AMAGAT), i, 659.
5-Phenyl-3-*o*-tolyl-1-*p*-anisyl-2-*p*-chlorophenyl-1:2:3:6-tetrahydro-1:3:4-triazine (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 41.
5-Phenyl-3-*o*-tolyl-1-*p*-anisyl-2-*p*-dimethylaminophenyl-1:2:3:6-tetrahydro-1:3:4-triazine (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 41.
5-Phenyl-3-*o*-tolyl-1-*p*-anisyl-2-methyl-1:2:3:6-tetrahydro-1:3:4-triazine (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 41.
5-Phenyl-3-*o*-tolyl-1-*p*-anisyl-1:2:3:6-tetrahydro-1:3:4-triazine (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 41.
Phenyl-*p*-tolylbenzylacetic acid, and its benzyl ester (RAMART and AMAGAT), i, 659.
5-Phenyl-1-tolyl-3-*tert.*-butylpyrazolines (v. AUWERS and KREUDER), i, 1455.
Phenyltolylcarbamides, *di*nitro- (KNIPHORST), i, 907.
5-Phenyl-3-*o*-tolyl-1:2-di-*p*-anisyl-1:2:3:6-tetrahydro-1:3:4-triazine (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 41.
β-Phenyl-β-*p*-tolylethyl alcohol (RAMART and AMAGAT), i, 659.
Phenyl-*p*-tolylformamidines, *N*-hydroxy-, and their derivatives (FARROW and INGOLD), i, 155.
3-Phenyl-1-*o*-tolyl-3-methylpyrazole, 4-chloro- (v. AUWERS and KREUDER), i, 1455.
1-Phenyl-3-*p*-tolyl-5-methylpyrazole-4-carboxylic acid, and its ethyl ester (MINUNNI, LAZZARINI, and D'URSO), i, 1176.
5-Phenyltolylmethylpyrazolines, and *o*-chloro- (v. AUWERS and KREUDER), i, 1455.
Phenyl-*p*-tolyl-α-naphthylmethane (DILTHEY), i, 652.
Phenyl-*p*-tolyl-α-naphthylmethyl bromide, chloride, and methyl ether (DILTHEY), i, 652.
Phenyl-*N*-*p*-tolylnitron, *o*-hydroxy- (BAMBERGER), i, 142.
2-Phenyl-3-*p*-tolyloxazolidine, 2-*p*-bromo- (DAINS, BREWSTER, MALM, MILLER, MANEVAL, and SULTZABERGER), i, 1064.
αα-Phenyl-*p*-tolylpropionic acid, and its benzyl ester (RAMART and AMAGAT), i, 659.
4-Phenyl-1-*p*-tolyl-1:2:3-triazole, 5-chloro- and 5-hydroxy- (CARNELLEY and DUTT), i, 166.
Phenyltriazoles (ELBS), i, 163.
vic.-2-Phenyltriazolephthalonic acid, and its derivatives, true nature of supposed (CHARRIER), i, 76.
1-Phenyl-3:4:5-trimethylpyrazole, *p*-nitro- (v. AUWERS and KREUDER), i, 1454.
1-Phenyl-3:5:5-trimethylpyrazoline, *p*-nitro- (v. AUWERS and KREUDER), i, 1454.
2-Phenyl-4:5:8-trimethylquinoline, and its salts (JOHN and WEBER), i, 1452.
9-Phenyl-1:3:7-trimethyluric acid, action of alkalis on (GATEWOOD), i, 1188.
Phenyltriphenazineoxazine, and its derivatives (KEHRMANN and SCHEDLER), i, 444.
N-Phenyltriphenazineoxazine, and its derivatives (KEHRMANN and SCHEDLER), i, 444.
β-Phenyl-Δβ-undecene (THOMS and AMBRUS), i, 790.
3-ω-Phenylvinyl-2-methylindole, ω-cyano- (SEKA), i, 67.
Phenylxanthene, *p*-hydroxy- (GOMBERG and SNOW), i, 660.
Phenylxylylformazylcarboxylic acid, and *p*-bromo-, and *p*-nitro-, methyl esters (BUSCH and v. BEUST), i, 400.
Phenylxylyl-α-naphthylmethyl chlorides and methyl ether (DILTHEY), i, 652.
Phloridzin, clinical experiments with (DÜNNER and MECKLENBURG), i, 1500.
action of, on blood (ETS), i, 734.

Phloroacetophenone, derivatives of (SONN and BÜLOW), i, 1268.
Phloroacetophenone-*o*-carboxylic acid, methyl ester (SONN and BÜLOW), i, 1268.
Phloroacetophenone-*o*-dicarboxylic acid, dimethyl ester (SONN and BÜLOW), i, 1268.
Phloroacetophenonetricarboxylic acid, trimethyl ester (SONN and BÜLOW), i, 1268.
Phloroglucinol, tautomerism of derivatives of (SONN and BÜLOW), i, 1267.
***iso*Phonopyrrolecarboxylic acid**, synthesis of (FISCHER and NENITZESCU), i, 835.
Phormidium laminosum, enzymes of (HARVEY), i, 746.
Phosgene. See Carbonyl chloride.
Phosphatase in the liver (BRUGSCH and HORSTERS), i, 483.
Phosphates. See under Phosphorus.
Phosphatese in the liver (BRUGSCH and HORSTERS), i, 483.
Phosphatides, formation of choline from (ABDERHALDEN and PAFFRATH), i, 1016.
of brain, preparation of (THIERFELDER and KLENK), i, 997.
of plants (GRAFE; GRAFE and HORVAT), i, 1522.
Phosphine. See Phosphorus *tri*hydride.
Phosphinic acids, hydroxy-, aliphatic (BERNTON), i, 646.
Phosphinoacetic acid, and its salts and derivatives (NYLÉN), i, 1135.
Phosphinoformic acid, salts and derivatives of (NYLÉN), i, 1135.
α-Phosphinopropionic acid, and its salts (NYLÉN), i, 1136.
Phosphonium compounds, effect of, on the nervous system (HUNT and RENSHAW), i, 861.
Phosphors, luminescence of, under magnetic and electric fields (RUPP), ii, 13.
alkaline earth, rare earths in (TOMASCHEK), ii, 354.
of boric acid (MICKWITZ), ii, 476.
Phosphorescence, excitation of (RUPP), ii, 262.
Phosphorescent compounds, economy coefficients of (SCHMIEDER), ii, 931.
Phosphoric acid. See under Phosphorus.
Phosphorus, spectra of (SALTMARSH), ii, 724.
spectral frequencies of (HOLWECK), ii, 336.
arc spectrum of (DUFFENBACK and HUTHSTEINER), ii, 452; (SUR), ii 1014.
Phosphorus, spectrum of electrodeless discharge in vapour of (SHAVER), ii, 471.
Röntgen ray spectrum of (LUNDQUIST), ii, 1014.
series spectra of (BOWEN and MILLIKAN), ii, 342, 610.
luminescence of (EMELÉUS and DOWNEY), ii, 89; (EMELÉUS), ii, 354.
critical potential of (HOLWECK), ii, 729.
action of, on nickel nitrate (SCHMOSS), ii, 889.
effect of, on lipins and fats in the liver (SACCHETTO), i, 1357.
in blood of children (ANDERSON), i, 188.
metabolism. See Metabolism.
black, Röntgen ray structure of (LINCK and JUNG), ii, 1035.
red, action of, on carbon disulphide solutions of (TRAXLER and GERMANN), ii, 1087.
white, doubly-refractive (VORLÄNDER, SELKE, and KREISS), ii, 1086.
yellow, effect of, on bone formation (BERNHARDT and RABL), i, 1357.
Phosphorus compounds, *K* absorption spectra of (STELLING), ii, 935.
in milk (KAY), i, 998.
effect of heat on solubility of, in milk (BELL), i, 998.
fixation of, in bones (TELFER), i, 859.
determination of, in blood, and their distribution (STANFORD and WHEATLEY), i, 1200.
Phosphorus *tri*bromide and *tri*iodide, preparation of (REKSCHINSKI), ii, 994.
*tri*chloride, hydrolysis of (MITCHELL), ii, 316.
chlorides, action of ammonia on (PERPÉROT), ii, 1186.
oxychloride, electrolysis in, and its physical constants (CADY and TAFT), ii, 1073.
influence of, on the catalytic reduction of acid chlorides (ZETZSCHE and ARND), i, 1415.
*tri*hydride (*phosphine*), spectrum of the combustion of (EMELÉUS), ii, 740.
*tri*iodide, preparation of sulphide compounds of (KARANTASSIS), ii, 998.
nitride, nitrification of (ALLISON), i, 218.
*tri*oxide, preparation of, and spectrum of its combustion (EMELÉUS), ii, 740.

Phosphorus *pento*xide, vapour pressure of (SMITS and RUTGERS), ii, 268.
purification of (WHITAKER), ii, 1195.
drying tube for (DENNIS), ii, 428.
Phosphorous acid and its derivatives, constitution and *K* absorption spectra of (STELLING), ii, 936.
Phosphoric acid, constitution of (FRÖSCHL), ii, 19.
esterification of, by yeast (GOTTSCHALK and NEUBERG), i, 337.
formation of, in muscle (LANGE and MAYER), i, 729.
esters, synthesis of (KOMATSU and NODZU), i, 515.
detection of (FEIGL), ii, 435.
determination of (MCCANDLESS and BURTON), ii, 157; (JÖRGENSEN), ii, 824.
determination of, electrometrically, with alkalis (HOFFMAN and GORTNER), ii, 1011.
determination of, by the magnesium ammonium phosphate method (L. and J. DESHUSSES), ii, 67.
use of phenolphthalein as indicator for determination of (NYSSENS), ii, 1201.
determination of, in vegetable ash (L. and J. DESHUSSES), ii, 67.
separation of, in analysis, by means of bismuth nitrate (KESCHAN), ii, 328.
separation of, from metals of the group (JÄRVINEN), ii, 602.
Phosphoric acids, absorption of ethylene by (MÜLLER), i, 1373.
Phosphates, absorption spectra of beads of (SCHAUM and FUNCK), ii, 178.
absorption of, by Pasteur–Chamberlain filters (PARKER), i, 1372.
action of sodium carbonate on (COLANI), ii, 1001.
effect of adrenaline and phloridzin on excretion of (ALLAN, DICKSON, and MARKOWITZ), i, 726.
removal of, in qualitative analysis (CURTMAN, MARGULIES, and PLECHNER), ii, 68.
determination of (LE GUYON and MAY), ii, 1202.
determination of, in blood (MCCLUSKEY), i, 605.
determination of calcium and, in bone (v. EULER and JOHANSSON), i, 1489.
determination of, in presence of organic matter (SCHMITT-KRAHMER), i, 613.
Phosphorus:—
Phosphates, determination of, in serum (ESSINGER and GYÖRGY), i, 178.
Orthophosphoric acid, solubility and freezing point curves of (ROSS and JONES), ii, 971.
Orthophosphates, detection of metaphosphates, pyrophosphates, and (DE BOER), ii, 67.
Hexametaphosphates, preparation of (PASCAL), ii, 420.
Phosphorus organic compounds (NYLÉN), i, 1134.
Phosphites, neutral, preparation of (JANCZAK), i, 1051.
Thiophosphorous acid, aryl derivatives of (AUTENRIETH and MEYER), i, 807.
Thiophosphoryl chloride, aryl derivatives of (AUTENRIETH and MEYER), i, 807.
Phosphorus determination:—
determination of (RICHARDS and GODDEN), ii, 66; (STEWART and ARCHIBALD), ii, 824.
effect of ammonium sulphate on the determination of, colorimetrically (RIMINGTON), i, 183.
determination of, by means of lead amalgam (SOMEYA), ii, 1201.
determination of, in blood (MYRBÄCK), i, 1485.
lipoid, determination of, in blood and plasma (WHITEHORN), i, 95.
determination of, in proteins (SØRENSEN), ii, 900.
determination of, in presence of vanadium (GRAY and GARBUTT), ii, 600.
Photocatalysis with neutral salts (BERGER), ii, 313.
Photochemical equivalence, law of (BERTHELOT), ii, 1022; (ALLMAND), ii, 1074; (DHAR and MUKERJI; WEIGERT and BRODMANN), ii, 1075.
reactions (DHAR and MUKERJI), ii, 1079.
Becquerel effect in (SCHAUM and SCHLEUSSNER), ii, 985.
importance of water and of intensity of light in (CHAPMAN), ii, 1078.
temperature-coefficients of (DHAR), ii, 135; (PADOA), ii, 415.
and thermal reactions (DHAR and MUKERJI), ii, 809.
mechanism of (BODENSTEIN), ii, 1075.
elementary processes of (FRANCK), ii, 1077.
quantum sensitivity in (WINTHER), ii, 1074.

Photochemical reactions, relation between velocity of, and dielectric constants (WINTHER), ii, 1082.
formation of polar compounds in (NOYES), ii, 1081.
sensitisation (BERTHOUD), ii, 1083.
studies (REYCHLER), ii, 219, 1180; (NOYES), ii, 573.
thresholds and the dissociation theory (BOWEN), ii, 1074.
Photochemistry, technique of (REEVE), ii, 234; (FRANKLIN, MADDISON, and REEVE), ii, 809.
quantum laws in (WARBURG), ii, 984.
periodic reactions in (PLOTNIKOV), ii, 883.
of complex compounds (SCHWARZ and WEISS), ii, 576.
Photo-electric absorption coefficient (MILNE), ii, 920.
activity of elements (HAMER), ii, 7.
effect (AUDUBERT), ii, 43.
influence of temperature on (NIELSEN), ii, 172.
on metallic films (GROSS), ii, 344.
Photo-electrons, direction of emission of (AUGER), ii, 730.
Photographic blackening with Röntgen rays (BUSSE), ii, 1080.
developers (HORII and KOMORI), i, 1410.
fluorescence of (A. and L. LUMIÈRE and SEYEWETZ), i, 1060.
blackening curve for (MEIDINGER), ii, 143.
emulsions, ripening of (SCHMIDT), ii, 810; (LÜPPO-CRAMER), ii, 810, 986.
films, Röntgen ray measurements of (BLUNCK and KOCH), ii, 940; (KOCH and VOGLER), ii, 941.
image, latent (AUDUBERT), ii, 56; (TOY), ii, 143.
history and theory of (LÜPPO-CRAMER), ii, 575, 811.
plates, blackening of (ROBERTSON and THWAITES), ii, 575.
effect of coating, with fluorescent oils (HARRISON), ii, 930.
solarisation of (EDER), ii, 986.
for detection of mass rays (ASTON), ii, 706.
reversal (ARENS), ii, 313.
Photography, gelatin in (SHEPPARD), ii, 966.
silver in (LÜPPO-CRAMER), ii, 935.
silver bromide grain in (BAKER; LÜPPO-CRAMER), ii, 574.
Photolysis, mechanism of (BAUR), ii, 1082.
Photometer, rotatory dispersion (GIBSON), ii, 934.
Photometric studies (SCHAUM and FUNCK), ii, 178.
Photosensitisation (TAYLOR), ii, 1078.
Photosynthesis (MAZÉ), i, 485.
in tropical sunlight (DHAR and SANYAL), ii, 884.
activity of various radiations in (WURMSER), ii, 1082.
Phototropism in solution (SINGH), ii, 195.
Phtanites, hydrocarbons and carbonates in (DE LAPPARENT), ii, 821.
Phthalaldehyde 1-oxime, derivatives of (GRIFFITHS and INGOLD), i, 1190.
o-**Phthalaldehydic acid**, refractivity of (SEEKLES), i, 31.
Phthalamic acids, preparation of, and their conversion into anthranilic acids (CHAPMAN and STEPHEN), i, 1151.
Phthalazine, 4-chloro-1-hydroxy-, and 1:4-*di*thio- (RADULESCU and GEORGESCU), i, 1186.
Phthaleins, excretion of, in bile (ROSENTHAL and WHITE), i, 101.
Phthalhydrazide, and its acetyl derivatives (RADULESCU and GEORGESCU), i, 1185.
derivatives of (HELLER, BUCHWALDT, FUCHS, KLEINICKE, and KLOSS), i, 1324.
Phthalic acid, salts, instability of, with hydrogen electrodes (DRAVES and TARTAR), ii, 695.
camphoryl hydrogen esters (FORSTER and SHUKLA), i, 1161.
hydroxylamine salt (OESPER and BALLARD), i, 1233.
ethyl ester, detection of (LEFFMANN and TRUMPER; LEVINSON; THOMS), ii, 1008.
detection of, in ethyl alcohol (RALEIGH and MARIE), ii, 605.
determination of (HANDY and HOYT), ii, 1210.
determination of, oxidimetrically (TÄUFEL and WAGNER), ii, 1008.
Phthalic acid, 3-nitro-, preparation of (LITTMANN), i, 1066.
esters of, and their solubilities (NICOLET and SACKS), i, 1277.
Phthalic anhydride, 3-nitro-, as a reagent for identification of (NICOLET and SACKS), i, 1277.
Phthalidylidenedi-4-[salicylic phthalidylidene ether ester] *di*thioether (KAUFMANN and ROSSBACH), i, 1273.
Phthalimide, mercury derivatives of (LYONS), i, 645.
β'-**Phthalimidodiethyl** ether, *β*-chloro- (CRETCHER, KOCH, and PITTENGER), i, 628.
Phthalobenzylamic acid (HOLMES and INGOLD), i, 1142

Phthalonitrile, action of magnesium organic compounds on (WEISS and FREUND), i, 139.
Phthalophenone derivatives, structure of (DOMINIKIEWICZ), i, 53.
Phthalylglycylglycine, ethyl ester (GRANÄCHER), i, 594.
Phthalyl-*p*-tolil, nitration of (BRADY, QUICK, and WELLING), i, 1400.
Phycocyanine (KITASATO), i, 1111.
Phycoerythrin (KITASATO), i, 1111.
Phylloerythrin (FISCHER and HILMER), i, 855.
Physics, molecular (LASAREV), ii, 1134.
Physical chemistry, apparatus for (SCARPA), ii, 150.
influence of Willard Gibbs on (CONNAN), ii, 395.
constants in relation to metastability of matter (COHEN), ii, 1138.
Physiological action and chemical constitution (GILMAN and PICKENS), i, 333; (DUBIN, CORBITT, and FREEDMAN), i, 1502.
fluids, dextrose in (LUNDSGAARD and HOLBØLL), i, 1207.
electrometric analysis of (MISLOWITZER and VOGT), i, 1485.
Physostigmine. See Eserine.
Phytic acid, and its barium salt (CONTARDI), i, 277.
Phytosterols (VESTERBERG and BORGE), i, 252.
Phytosterols, irradiated, antirachitic value of (HESS, WEINSTOCK, and HELMAN), i, 750; (HESS and WEINSTOCK), i, 1020.
Piaselenazonium salts (BATTEGAY and VÉCHOT), i, 1466.
α-Picoline, 6-amino-, derivatives of (MEYER), i, 836.
γ-Picoline chlorostannate (DRUCE), i, 1096.
Picolinic acid, derivatives of (MEYER), i, 836.
Picric acid, conductivity of, in methyl alcohol (GOLDSCHMIDT and AARFLOT), ii, 976.
heat of fusion of (RINKENBACH and HALL), ii, 207.
reduction of, in organs of the body (GIORGI), i, 733.
detection of, colorimetrically (TORTI), ii, 905.
determination of, in presence of nitrocompounds (DESVERGNES), ii, 607.
Picrolonic acid, preparation and properties of (HUGOUNENQ, FLORENCE, and COUTURE), i, 435.
Picrotoxin, constitution of (BAKUNIN and GIORDANI), i, 691.
Picrylbenz*syn*aldoxime (BRADY and KLEIN), i, 674.
Picrylcinnam*syn*aldoxime (BRADY and KLEIN), i, 674.
Picryl-*p*-dimethylaminobenz*syn*aldoxime (BRADY and KLEIN), i, 674.
Picryl-2:3-dimethylindole (KORCZYŃSKI and KIERZEK), i, 1097.
***N*-Picryldi-*n*-propylcarbamide** (LECHER), i, 1391.
Picrylmethoxybenz*syn*aldoximes (BRADY and KLEIN), i, 674.
Picryl-3:4-methylenedioxybenz*syn*aldoxime (BRADY and KLEIN), i, 674.
Picryl-2-methylindole (KORCZYŃSKI and KIERZEK), i, 1097.
Picrylnitrobenz*syn*aldoximes (BRADY and KLEIN), i, 674.
Picryl-4-picryloxy-3-methoxybenz*syn*aldoxime (BRADY and KLEIN), i, 674.
Picrylsemicarbazide (GIUA and PETRONIO), i, 1397.
Picrylsemioxamazide (GIUA and PETRONIO), i, 1397.
Piezochemical studies (COHEN, DE MEESTER, and MOESVELD), ii, 190; (COHEN and BRUINS), ii, 280; (COHEN and VAN DER BOSCH), ii, 283.
Pigs, effect of iodine on assimilation of nitrogen, phosphorus, and calcium in (KELLY), i, 1210.
Pigeons, digestion in (MANGOLD), i, 615.
Pigments, formation of (SCHMALFUSS and WERNER), i, 1361.
by fungi (DANILOV), i, 1013.
metabolism of. See Metabolism.
Pilocarpidine, constitution of (BURTLES, PYMAN, and ROYLANCE), i, 696.
constitution and derivatives of (SPÄTH and KUNZ), i, 575.
***iso*Pilocarpidine** nitrate (SPÄTH and KUNZ), i, 576.
Pilocarpine 2:4:6-*tri*nitro-*m*-tolyloxide (SPÄTH and KUNZ), i, 576.
***iso*Pilocarpine** methopicrate (SPÄTH and KUNZ), i, 576.
***n*- and *iso*-Pilocarpines**, and their derivatives (LANGENBECK), i, 151.
***n*- and *iso-neo*Pilocarpines**, and their salts (BURTLES, PYMAN, and ROYLANCE), i, 696.
Pimenta officinalis, oil from leaves of (KEMP), i, 565.
Pinacolin, decomposition of (HURD and TALLYN), i, 885.
Pinacolin, chloro-oximino-, and its benzoyl derivative (RHEINBOLDT and SCHMITZ-DUMONT), i, 1132.
Pinacone, compound of boric acid and (HERMANS), i, 501.
Pinane (LIPP), i, 1080.
Pine lignin. See Lignin.

Pineapples, non-volatile acids of (NELSON), i, 762.
nitrogen assimilation of (STEWART, THOMAS, and HORNER), i, 1366.
Pinene (KONDAKOV and SAPRIKIN), i, 1080.
oxide, hydration of (NAMETKIN and JARCEVA), i, 1081.
α-Pinene, catalytic hydrogenation of (ZELINSKI), i, 821.
action of chlorine on (BRUS), i, 821.
Pinenes, relation between terpineols and (DÉLÉPINE), i, 564.
Pinus longifolia, abietic acid from rosin of (RAO and SIMONSEN), i, 687.
Piperazine, compounds of, with amino-acids (ABDERHALDEN and ROSSNER), i, 975.
1:4-dichloroacetyl derivative (ABDERHALDEN and ROSSNER), i, 976.
hydroferricyanide (CUMMING), i, 122.
Piperidine, preparation of (MARIE and LEJEUNE), i, 577.
influence of, in rickets (ÉDERER), i, 869.
chlorostannate (DRUCE), i, 1096.
hydroferricyanide (CUMMING), i, 122.
Piperidinoacetic acid, phenyl ethyl ester, and its hydrochloride (WEIL), i, 157.
9-Piperidinoanthracene (BARNETT, COOK, and MATTHEWS), i, 648.
9-Piperidinoanthrone, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 1399.
α-Piperidino-β-benzylbutan-γ-one, and its hydrochloride (MANNICH), i, 375.
Piperidinodiphenylmethane, and its hydrochloride (CHRISTIAENN), i, 23.
β-*N*-Piperidinoethyl phenyl ether, and its hydrobromide and hydrochloride (BRILL), i, 833.
α-Piperidino-β-ethylbutan-γ-one, and its hydrochloride (MANNICH), i, 375.
***N*-Piperidinoethyloleamide** (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1133.
2-Piperidinohydroindene, 1-oximino- (STRAUS and EKHARD), i, 1139.
Piperidino-1-ketotetrahydronaphthalene (STRAUS, BERNOULLY, and (MAUTNER), i, 1155.
Piperidinomethylallylmalonic acid (MANNICH and SUTTER), i, 1037.
α-Piperidinomethyl-γ-valerolactone, and δ-bromo-, and their derivatives (MANNICH and SUTTER), i, 1038.
Piperidinophenylbenzylmethane, and its hydrochloride (CHRISTIAENN), i, 23.
α-Piperidino-α-phenyl-*n*-propane, and its hydrochloride (CHRISTIAENN), 23.
γ-*N*-Piperidinopropyl benzoate, and phenyl ether and their salts (BRILL), i, 833.
2-Piperidinotetrahydronaphthalene, 1-oximino- (STRAUS and EKHARD), i, 1139.
***d*-Piperitol** (SIMONSEN), i, 1165.
Piperonal, preparation of (BRINER, v. TSCHARNER, and PAILLARD), i, 1069.
determination of (RADCLIFFE and SHARPLES), ii, 1210.
Piperonaldoxime *N*-phenyl ether (BAMBERGER), i, 142.
Piperonyl bromide, preparation of (CHEMISCHE FABRIK FLORA), i, 1413.
Piperonyl compounds, carbon-like residue from heating (PASCAL), i, 1278.
α-Piperonylideneacetohexoic acid (RYAN and SHANNON), i, 558.
Piperonylidenemethyl amyl ketone, and its derivatives (RYAN and SHANNON), i, 558.
Piperonylidenemethyl ethyl ketone (RYAN and CAHILL), i, 558.
Piperonylideneoxindole, 6′-amino-, and its methosulphate (ARMIT and ROBINSON), i, 1172.
2-Piperonylidene-4-phenyl-3-anisyl-5-methyl-Δ^3-*cyclo*penten-1-one (RYAN and LENNON), i, 1282.
Piperonylidene-γ-piperonylpropylamine (BAKER and ROBINSON), i, 925.
3 Piperonyl-4-phenyl-5-methyl-Δ^2-*cyclo*penten-1-one (RYAN and LENNON), i, 1282.
β-Piperonylpropionic acid, 6-nitro- (BAKER and ROBINSON), i, 925.
β-Piperonylpropionitrile, and 6-nitro- (BAKER and ROBINSON), i, 925.
γ-Piperonylpropylamine, and its derivatives (BAKER and ROBINSON), i, 925.
γ-Piperonylpropyltrimethylammonium iodide (BAKER and ROBINSON), i, 925.
Piperonylsuccinic anhydride (BAKER and LAPWORTH), i, 671.
Pipette, Cornec–Cottet, for measurement of small volumes (NICLOUX), ii, 898.
Pistacia terebintus, oil from (TIMOSUFF), i, 1124.
Pituitary extracts, dialysis of, and their quantitative effect on secretion of urine (SMITH and MCCLOSKY), i, 207.
Placenta, transmission of blood constituents through the (PLASS and MATTHEW), i, 1489.
Planck's law, deduction of (EDDINGTON), ii, 1022.

Plants, photosynthesis by (MAZÉ), i, 485.
absorption of ultra-violet light by (PALLADIN and HÜBBENET), i, 1223.
absorption of salts by (LUNDEGÅRDH and MORÁVEK), i, 214.
absorption of mineral salts by (DUSTMAN), i, 1123.
absorption of potassium by (ANDRÉ and DEMOUSSY), i, 758.
anaërobic respiration in (NEUBERG and GOTTSCHALK), i, 213.
effect of wounding on respiration of (PALLADIN), i, 1221.
apparatus for study of the respiration of (GINSBURG), i, 1120.
influence of end-products of metabolism on (SIGMUND), i, 344.
occurrence of aromatic compounds in (RETI), i, 418.
influence of external factors on the ash-content of (SEIDEN), i, 1518.
relation between yield of, and the intensity of external factors (BRIGGS), i, 1222.
suitable depth in soil for (LEMMERMANN, WIESSMANN, and ECKL), i, 1029.
equilibria of nutrition in (RIPPEL and LUDWIG), i, 485.
effect of bases on growth of seedling (BOKORNY), i, 489.
effect of, on reaction of culture solutions (HOAGLAND), i, 1368.
acidity of the sap of (ARLAND), i, 213.
cuticle of (LEGG and WHEELER), i, 1025.
formation of asparagine in (PRIANISCHNIKOV), i, 213.
formation of carbohydrates in, from proteins and fats (TERROINE, TRAUTMANN, and BONNET), i, 755.
carbon dioxide as a climatic factor in growth of (REINAU), i, 213.
effect of carbon dioxide in soil air on growth of (PARKER), i, 1223.
effect of dicyanodiamide on (ALLISON, SKINNER, and REID), i, 1030.
oxidation by enzymes of (ONSLOW and ROBINSON), i, 1010.
specificity of enzymes of (BLAGOVESCHENSKI and SOSSIEDOV), i, 1007; (BLAGOVESCHENSKI and BIELOZERSKI), i, 1009.
glycuronic acid in (PALLADIN and LEVTSCHENKO), i, 1369.
stimulation of, by hydrogen cyanide (GASSNER), i, 1029.
incrustive substances of (SCHMIDT and MAHLER), i, 213; (SCHMIDT, HAAG, and SPERLING), i, 1370.
Plants, lævulosans in (COLIN), i, 618.
occurrence of metals in (MCHARGUE), i, 1023.
mineral constituents in (SMIRNOV), i, 486.
nitrates in, in relation to nitrogen nutrition (NIKLAS and VOGEL), i, 213.
utilisation of ammonium nitrate by (PRIANISCHNIKOV), i, 757.
action of nitrites on growth of (FEHÉR and VÁGI), i, 488.
decomposition of oxalic acid by (PALLADIN and LOVTSCHINOVSKAJA), i, 1222.
pectic substances in (NORRIS and SCHRYVER), i, 1226.
pentoses in (ENGLIS and HALE), i, 618.
effect of phosphate manuring on vitamin-*B* in (HORNEMANN), i, 623.
phosphatides of (LEVENE and ROLF), i, 487; (GRAFE; GRAFE and HORVAT), i, 1522.
availability of potassium silicates to (DOBRESCU-CLUY), i, 1223.
silica in growth of, and its relation to phosphoric acid (NANJI and SHAW), i, 214.
influence of silica and silicates on growth of (LEMMERMANN, WIESSMANN, and SAMMET), i, 766; (DUCHON; LEMMERMANN; DENSCH), i, 767.
action of sodium carbonate on germination and growth of (FEHÉR and VÁGI), i, 1023.
action of soil solutions on development of roots of (TERLIKOWSKI), i, 1029.
formation of starch from arabinose by (POLONOVSKI and MORVILLEZ), i, 1222.
effect of desiccation on sugar content of (LINK), i, 618.
tyrosinase in (BOAS and MERKENSCHLAGER), i, 474.
formation of vegetable oils in (FRANCESCONI, MANFREDI, and ASTENGO), i, 759.
zymase in (PALLADIN and ILLJUVIEV), i, 1519.
diseases of (ANDERSON), i, 1522.
green, poisonous action of carbon monoxide on (WEHMER), i, 1029.
higher, sources of available nitrogen for (BIALOSUKNIA), i, 1366.
effect of urea, thiourea, and allylthiourea on (E. and G. NICOLAS), i, 757.
chemistry of (KOMATSU and UEDA), i, 762; (KOMATSU and YAMADA), i, 881; (KOMATSU and NODZU), i, 1025; (KOMATSU and TANAKA), i, 1369.

Plants, lower, effect of oxygen on energy balance of (TERROINE, BONNET, and HEE), i, 1517.
medicinal, constituents of (ZELLNER), i, 763.
South African, active principles of (JURITZ), i, 761.
young, influence of light on absorption of nutrients by (WIESSMANN), i, 757.
detection of phenols in (WARE), i, 1122.
determination of camphor in (GORI), ii, 1009.
determination of chlorides and sulphates in sap of (GORTNER and HOFFMAN), i, 485.
determination of nitrate nitrogen in (BURRELL and PHILLIPS), i, 1367.
Plant ash, physico-chemical analysis of (L. and J. DESHUSSES), ii, 67.
Plant cells, equilibrium and oxidation in (MAYER and PLANTEFOL), i, 1120.
staining of, with colouring matters (SCHWARZ), i, 755.
effect of poisons on (ARZICHOVSKI and SCHELJAKIN), i, 1227.
Plant extracts, blood-sugar depressant action of (GLASER and WITTNER), i, 209.
Plant fibres, Röntgen ray patterns from (SPONSLER), ii, 844.
Plant juices, hydrogen-ion concentration of (GUSTAFSON), i, 1023.
Plant plasma, influence of alkaline earth salts on the heat coagulation of (KAHO), i, 217.
Plant roots, exposed to light, development and distribution of chlorophyll in (POWELL), i, 1221.
Plant tissues, distribution of potassium in (DOWDING), i, 871.
laboratory apparatus for wet grinding of (ROACH), i, 1517.
Plaster, hard, preparation of (CHASSEVENT), ii, 559.
Plasticity (SHEPPARD; BOGUE; SHEPPARD and CARVER; VENABLE), ii, 1058.
Plastids, amylogenic activity of (MAIGE), i, 486.
Platinum, spark spectrum of (L. and E. BLOCH), ii, 829.
photo-electric effect and conductivity of (HERRMANN), ii, 947.
photo-electric sensitivity of (SUHRMANN), ii, 831.
valency of, in respect to mercaptans (P. C. and K. C. B. RÂY), ii, 1121.
melting point of (HOFMANN), ii, 99.
Platinum, adsorption of metals by (MAXTED), ii, 384.
adsorption of water on (MCHAFFIE and LENHER), ii, 854.
effect of Röntgen rays on the catalytic activity of (CLARK, MCGRATH, and JOHNSON), ii, 1176.
physical state and catalytic action of (SMITH; GAUGER), ii, 1072.
catalytic hydrogenation with (BODENSTEIN), ii, 216; (WALDSCHMIDT-LEITZ and SEITZ), ii, 411.
behaviour of, with fused silicates (JANDER), ii, 416.
colloidal, nuclear hydrogenation with (SKITA), i, 140.
oxide-coated, emission of negative ions from (BARTON), ii, 1020.
thermionic work function of (DAVISSON and GERMER), ii, 81.
sols, cataphoresis of, in presence of caoutchouc (EVERS), ii, 668.
Platinum alloys, reaction limits of (TAMMANN), ii, 378.
Platinum salts, trypanocidal action of (LEVADITI, GIRARD, and NICOLAU), i, 1117.
Platinum oxide, catalytic reduction with (KERN, SHRINER, and ADAMS), i, 625; (PIERCE and ADAMS), i, 824; (HECKEL and ADAMS), i, 909; (CAROTHERS and ADAMS), ii, 693.
Platinic chloride, compounds of ethyl sulphide and (P. C. and K. C. B. RÂY), ii, 1121.
selenide (MOSER and ATYNSKI), ii, 584.
telluride (BRUKL), ii, 895.
Chloroplatinic acid, compounds of acid amides with (FRICKE and RUSCHHAUPT), ii, 894.
Platinum organic compounds:—
Platinum, hydrazine carbylamine compounds of (TSCHUGAEV, SKANAVY-GRIGORJEVA and POSNJAK), i, 1395.
dimethylglyoxime (COOPER), ii, 827.
Platinicyanides, optical properties of crystals of (POCHETTINO), ii, 21.
Platinum separation:—
separation of palladium from (KRAUSS and DENEKE), ii, 1005.
separation of ruthenium and (RUFF and VIDIC), ii, 443.
Platinum black, structure of (OSAWA), ii, 747.
preparation and activation of (KÄB), ii, 564.
catalytic hydrogenation with (WASER), i, 584.
effect of chlorine on catalysis by (BOSWELL and BAYLEY), ii, 215.

Platinum electrodes. See Electrodes.
Platinum films, velocity of photo-electrons emitted from (CHA), ii, 476.
electrical resistance of, in presence of hydrogen (GAUGER), ii, 1040.
sputtered, effect of gas on the resistance of (REYNOLDS), ii, 108.
Platinum wedges for spectrophotometry (MERTON), ii, 78.
Platinum wire, effect of absorption of gas on resistance of (KLEINE), ii, 947.
Plum, wild. See *Ximenia americana.*
Pneumococcus, oxidation and reduction by (NEILL and AVERY), i, 340, 867; (NEILL), i, 868.
Pneumonia, excretion of organic acids after (CLAUSEN), i, 1491.
Poison, rattlesnake, fractionation of the proteins of (WELKER), i, 998.
Poisons, adsorption of, by charcoal (DINGEMANSE and LAQUEUR), i, 1500.
adsorption of, by a new plant charcoal (LAQUEUR and SLUYTERS), i, 736.
effect of, on plant cells (ARZICHOVSKI and SCHELJAKIN), i, 1227.
convulsive, influence of acids and alkalis on the action of (FRÖHLICH and SOLÉ), i, 334.
use of hydrogen peroxide in analysis of (MAGNIN), ii, 594.
Poisoning, carbon monoxide, spectrochemistry of (BALTHAZARD), i, 196.
Polar compounds, formation of, in photochemical reactions (NOYER), ii, 1081.
Polarisation (GLASSTONE), ii, 43, 133; (HOLLER), ii, 793.
and electrical double layers (CLARK), ii, 673.
effect of alternating currents on (GLASSTONE; ISGARISCHEV and BERKMANN), ii, 548.
of metallic electrodes (DRESBACH and HOSMER), ii, 1068.
anodic, oxygen evolution theory of (JIRSA and LORIS; JIRSA), ii, 45.
dielectric (EBERT), ii, 14.
rotatory, theory of (DE MALLEMANN), ii, 1029.
Polarity and optical activity of substituent groups (RULE and SMITH), ii, 1120.
induced alternate (LAPWORTH), ii, 636.
Polarograph (HEYROVSKÝ and SHIKATA), ii, 674.
Polonium, α-particles from (CURIE), ii, 343, 834.
ionisation due to α-particles from (EVANS), ii, 343.
Polonium, distribution of length of α-particles of, in oxygen and nitrogen (CURIE and YAMADA), ii, 175.
long-range particles from (YAMADA), ii, 255; (CURIE and YAMADA), ii, 621.
adsorption of, by various substances (BRENNEN), ii, 770.
growth of, in radium preparations (CURIE and YOVANOVITCH), ii, 464.
Polydihydrodi*cyclo*pentadiene ozonide (STAUDINGER), i, 898.
Polydi*cyclo*pentadiene diozonide (STAUDINGER), i, 898.
Polymerides, magnetochemistry of (PASCAL), ii, 371.
Polymerisation (LEBEDEV and FILONENKO), i, 225; (STAUDINGER and LÜTHY), i, 360, 361; (STAUDINGER), i, 362.
by means of aluminium oxide and iron (IPATIEV and KIJUKVIN), i, 226.
Polymethine colouring matters, preparation of (FARBENFABRIKEN VORM F. BAYER & Co.), i, 839.
Polymorphism, aggregation and (SCHAUM, NAUMANN, UNGER, and HOFFARTH), ii, 1132.
and isomerism (PFEIFFER, KALCKBRENNER, and BEHR), i, 547.
Polyoxymethylenes, constitution of (STAUDINGER and LÜTHY), i, 360; (STAUDINGER), i, 362.
Polypeptides, oxidation of (ABDERHALDEN and KOMM), i, 848.
cleavage of, by yeast enzymes (FODOR and EPSTEIN), i, 1214; (FODOR, BERNFELD, and SCHÖNFELD), i, 1215.
Polysaccharides (KARRER, SCHNIDER, and SMIRNOV), i, 418; (KARRER and ILLING), i, 741, 1029; (KOMATSU and UEDA), i, 762; (KARRER and LIER), i, 793; (KARRER and JOOS), i, 1028.
synthesis of (SCHLUBACH and MAURER; SCHLUBACH and RAUCHENBERGER), i, 888.
methylation of (SCHMID), i, 1386.
ethers of (WELTZIEN), i, 12; (HERZOG), i, 371.
Polystictus versicolor, attack of apples by (SMITH), i, 1226.
Polysulphides. See under Sulphur.
Polythionates. See under Sulphur.
Porcelain, action of metals and gases on vessels of (v. WARTENBERG), ii, 699.
Porphyrin, formation of, from hæmoglobin (SCHUMM), i, 88.
of fæces (PAPENDIECK), i, 98; (KÉMERI), i, 188.

Porphyrins, natural (FISCHER and HILGER), i, 307; (KÜSTER and HUTTENLOCHER), i, 845; (FISCHER and MÜLLER), i, 845, 846; (SCHUMM), i, 846; (FISCHER and LINDNER), i, 992, 997.
in blood serum (PAPENDIECK), i, 96.
in yeast (FISCHER and FINK), i, 866.
Potamogeton, leaf pigments of (PRÁT), i, 487.
Potash-oligoclase from Mt. Erebus (MOUNTAIN), ii, 819.
Potassamide, reactions of, with cobalt and iron salts in liquid ammonia (BERGSTROM), ii, 231.
Potassium, molecular weight of (JOUNIAUX), ii, 187.
Potassium, spectrum of, at low voltage (NEWMAN), ii, 1014.
spectrum of, burning in chlorine (RAMDAS), ii, 334.
absorption spectrum of (SUR and GHOSH), ii, 453.
absorption and emission spectra of (NARAYAN and GUNNAIYA; NARAYAN and SUBRAHMANYAM), ii, 737.
band spectrum of, and of mixtures of the vapours with sodium vapour (SMITH), ii, 86.
Röntgen ray spectrum of (LUNDQUIST), ii, 1014.
spark spectrum of (DAHMEN; DE BRUIN and ZEEMAN), ii, 167.
photo-electric effect of (HORNBECK), ii, 81; (LAWRENCE), ii, 831.
ionisation of the vapour of, by light (SAMUEL), ii, 459; (ARNULF), ii, 460.
vapour, low voltage arcs in (NEWMAN), ii, 450.
radioactivity of (HARKINS and GUY), ii, 1109.
as a trap for mercury vapour (HUGHES and POINDEXTER), ii, 895.
Potassium alloys with mercury, electrolysis of (KREMANN, MÜLLER, and ORTNER), ii, 132.
effect of light on the action of water with (BHATNAGAR, PRASAD, and MUKERJI), ii, 811.
interfacial tension between benzene and (BHATNAGAR, PRASAD, and MUKERJI), ii, 194.
with sodium, electrolysis of (KREMANN and v. REHENBURG), ii, 132.
Potassium salts, distribution of, in plant tissues (DOWDING), i, 871.
adsorption of, by plants (ANDRÉ and DEMOUSSY), i, 758.
in soils, effect of fertilisers and cropping on (AMES and SIMON; FRAPS), i, 1523.
Potassium bromate, electrolytic preparation of (EWING and SCHMIDT), ii, 551.
bromide, reflection of Röntgen rays by crystals of (KULENKAMPFF), ii, 1033.
bromide and chloride, mixed crystals of (BROOMÉ), ii, 366.
Röntgen ray analysis of solid solutions of (SASAHARA), ii, 745.
bromide or iodide, action of chlorine on, in presence of water (PARSONS), ii, 880.
sodium carbonates (BAIN), ii, 577.
chlorate, effect of, on blood, and its excretion (ROSS), i, 732.
chloride, dispersion of (HERZFELD and WOLF), ii, 1119.
electrical conductivity of solutions of (LORENZ and VOIGT), ii, 871.
activity coefficient of (SCATCHARD), ii, 397.
liquid junction potential between hydrochloric acid and (SCATCHARD), ii, 398.
transference numbers of, and its mixtures with sodium chloride (MACINNES), ii, 872; (DEWEY), ii, 873.
density of aqueous solutions of (H. C. and E. W. PARKER), ii, 288.
equilibrium of ammonium and mercuric chlorides, water, and (OSAKA and ANDO), ii, 123.
reaction between sodium dichromate and (ROBERTSON), ii, 121.
chromate, equilibrium of ammonium chromate, water, and (ARAKI), ii, 786.
*di*chromate, melting and transition points of (ROBINSON, STEPHENSON, and BRISCOE), ii, 374.
depolarising action of (VINCENT), ii, 882.
lanthanum chromates (CAROBBI), ii, 315.
hydroxide, activity coefficient of (SCATCHARD), ii, 397; (HARNED), ii, 398.
iodide, action of light on, in presence of potassium dichromate and eosin (REYCHLER), ii, 1180.
electrical conductivity of bromine–iodine solutions of (PLOTNIKOV), ii, 791.
absorption of, by the skin (CANALS and GIDON), i, 1116.
iodide and *per*sulphate, reaction between, in gelatin sols (RAWLING and GLASSETT), ii, 561.
*per*manganate, ultra-violet absorption spectrum of (VITERBI), ii, 352.

Potassium *per*manganate, oxidation of hydrogen by (WILKE and KUHN), ii, 51.
decomposition of solutions of (HOLLUTA), ii, 422.
titration of, with hydrogen peroxide in presence of ammonium sulphate (TANANAEV), ii, 430.
standardisation of, with sodium oxalate (DEL FRESNO), ii, 602, 904.
ammonomolybdite and ammonotungstite (BERGSTROM), ii, 1084.
dihydrogen phosphate, crystal structure of (HASSEL), ii, 1130.
chlororuthenates (BRIGGS), ii, 703.
chlororuthenites (CHARONNAT), ii, 586.
pentachlororuthenite and hexachlororuthenate (AOYAMA), ii, 816.
pentachlororuthenites (GUTBIER and NIEMANN), ii, 231.
silicates, assimilation of, by plants (DOBRESCU-CLUY), i, 1223.
chromosilicate, synthesis of (KARFIOL), ii, 1087.
lanthanum sulphates (ZAMBONINI and CAROBBI), ii, 222.
lithium sulphate, crystal structure of (BRADLEY), ii, 638.
neodymium sulphates (ZAMBONINI and CAGLIOTI), ii, 222, 315.
*penta*sulphide, action of allyl iodide on (THOMAS and RIDING), i, 4.
sulphite (FOERSTER, BROSCHE, and NORBERG-SCHULZ), ii, 120.
pyrosulphite, absorption spectrum of (DIETZEL and GALANOS), ii, 1115.
dinitrososulphonate (*nitrososulphite*) (RASCHIG), ii, 226.
chloroiminodisulphonate (RASCHIG), ii, 986.
tantalate, diffusion and molecular weight of (JANDER and SCHULZ), ii, 528.
tungstate, equilibria of, with lithium tungstate and tungsten trioxide (VAN LIEMPT), ii, 421.

Potassium organic compounds:—
Potassium ferritripyrocatecholoxide, use of, as an indicator (BINDER), ii, 596.

Potassium detection, determination, and separation:—
substitute for blue glass in detection of (MEYER), ii, 601.
distinction between sodium and, by means of ammonium oxalate (MEYER-WELO), ii, 1202.
determination of (VÜRTHEIM), ii, 487; (MENDRICK), ii, 825; (YOE), ii, 902.

Potassium detection, determination, and separation:—
determination of, polarimetrically (WRÓBEL), ii, 240.
determination of, in blood serum (LEBERMANN), i, 96, 714.
determination of, in urine (v. DEHN), i, 855.
determination and separation of (SMITH and ROSS), ii, 601.

Potatoes, composition of (WILLAMAN and WEST), i, 1522.
respiration and carbohydrate changes in, at low temperatures (HOPKINS), i, 344.
cork layer of the skin of (RHODES), i, 1026.

Potato plants, growth of, in nutrient solutions (JOHNSON), i, 1367.

Potential, effect of presence of porous materials on measurements of (FRICKE), ii, 544.
relation between energy of escape of electrons and (GÜNTHER-SCHULZE), ii, 477.
effect of filtration on (RIETY), ii, 796.
at surfaces of inorganic liquids (WESSEL), ii, 795.
fall of, in liquids, produced by air bubbles (KLEEMAN and PITTS), ii, 659.
differences of, between liquids and air (FRUMKIN), ii, 544.
differences of, at the junction of two liquids (VOSNESSENSKI), ii, 673.
differences of, at the boundary of two phases (REICHINSTEIN), ii, 545.
electronegative series of, in liquid ammonia (BERGSTROM), ii, 794.
contact, of metals (DOWLING), ii, 796.
decomposition, of non-aqueous solutions (FINKELSTEIN), ii, 546.
of electrodes (HOLLER), ii, 793.
of metals against pure water (SMITS, GERDING, and KROON), ii, 795.
single-phase boundary, measurement of (BAUR), ii, 1164.
spark, Townsend theory of (DÄLLENBACH), ii, 740.

Potential scales, comparison of electrode potentials and (BIRCHER), ii, 711.

Potentiometer, new (MISLOWITZER), i, 1485.

Praseodymium, preparation and properties of (WIERDA and KREMERS), ii, 993.
Röntgen ray spectrum of (GLEDITSCH and BOTOLFSEN), ii, 612.

Praseodymium chlorovanadinite (CAROBBI), ii, 582.

Precipitates, stratified structure of (v. WEIMARN), ii, 959.

Precipitates, adsorption by (WEISER), ii, 108.
emanating capacity of, and surface variation (HAHN), ii, 177.
ignition of (BRINTON and STOPPEL), ii, 72.
Precipitation, laws of (v. WEIMARN), ii, 1064.
of coloured salts in gels (RIEGEL and WIDGOFF), ii, 863.
fractional (RUFF and HIRSCH), ii, 992.
rhythmic, in gels (FISCHER), ii, 853.
in gelatin gels (SCOTT-BLAIR), ii, 519.
Precipitin, behaviour of, when adsorbed, to its antigen (EISLER), i, 96.
Pregnancy, toxæmia of (STANDER, DUNCAN, and SISSON), i, 1492.
storage of vitamin-*A* in white rats during (SCHEUNERT and CANDELIN), i, 1515.
Pressure, internal, in terms of critical pressure and temperature (SCHUSTER), ii, 951.
and molecular volume (SCHUSTER), ii, 1142.
Pressure equaliser (PATTERSON), ii, 151.
Primeverase, from almond emulsin (BRIDEL), i, 1438.
Primeverose (BRIDEL), i, 336, 615, 760.
Primeverosidase (BRIDEL), i, 760, 1438.
Primula, unpleasant taste of roots of (KOFLER and BRAUNER), i, 1224.
Privet berries, colouring matter of (PFAU), i, 572.
Proflavine, effect of, on infusoria (ROBERTSON), i, 1012.
Prolamines (HOFFMAN and GORTNER), i, 1479.
Propane, *αβγ-tri*amino-, and its derivatives and complex metallic compounds (MANN and POPE), i, 373.
l-**Propane**, *α*-amino-*β*-hydroxy-, and its salts (KARRER and KLARER), i, 1036.
*αβ-di*hydroxy-, preparation of (LEVENE and HALLER), i, 1375.
*cyclo***Propane compounds**, influence of phenyl groups on the formation of (HAERDI and THORPE), i, 923.
*cyclo***Propane series**, three-carbon tautomerism in (GOSS, INGOLD, and THORPE), i, 549.
*cyclo***Propanebis-2:6-diketophenyl*cyclo*hexanedispiran** (RADULESCU and GEORGESCU), i, 820.
*cyclo***Propanedicarboxylic acid**, derivatives of (KÜSTER and GRÄSSNER), i, 922.
2-Propenyl-3-*o*-anisolesulphonyl-2-methylquinoline (TRÖGER and BROHM), i, 1453.
Propepsin in blood and urine (GOTTLIEB), i, 742.
Propinene, synthesis from (YVON), i, 514.
Propiolic acid, methyl ester (INGOLD), i, 779.
l-**Propionamide**, *α*-amino-, *p*-toluenesulphonate (FREUDENBERG and HUBER), i, 229.
Propionic acid, partition of, between water and ethyl ether (DE KOLOSOVSKI), ii, 506.
hydroxylamine salt (OESPER and BALLARD), i, 1233.
alkoxymethyl esters (FARREN, FIFE, CLARK, and GARLAND), i, 1230.
furfuryl ester (ZANETTI), i, 567.
Propionic acid, *α*-bromonitro-, *α*-chloronitro-, and *α*-nitro-, ethyl esters, and hydrazine derivative of the latter (MACBETH and TRAILL), i, 629.
β-chloro-, preparation of (POWELL), i, 228.
d-**Prepionic acid**, *α*-thiol-, sodium salts (LEVENE and MIKESKA), i, 512.
Propionitrile, *β*-chloro-, reaction of resorcinol with (CHAPMAN and STEPHEN), i, 669.
β-nitro-*α*-oximino-, and its derivatives (WIELAND), i, 1049.
3-Propionylbornylene. See *α*-Bornylene ethyl ketone.
3-Propionylcamphane. See *α*-Camphanyl ethyl ketone.
Propionylcarbazole, and its picrate, and nitro- (ODDO), i, 296.
5-Propionyl-5:10-dihydrophenarsazine, 10-chloro- (BURTON and GIBSON), i, 85.
3-Propionylphenylarsinic acid, 4-hydroxy-, *p*-nitrophenylhydrazone (MARGULIES), i, 447.
2-Propionylpyrrole, 3:4-*di*- and 3:4:5-*tri*-iodo- (TERENTIEV and TSCHELINCEV), i, 295.
Propionylveratrole, *β*-chloro- (FREUDENBERG and FIKENTSCHER), i, 69.
***β*-Propoxybenzoic acids**, *p*-bromo-, *p*-chloro-, *p*-iodo-, and *p*-hydroxy-, and their derivatives (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 1424.
2-Propoxy-Δ^1-*cyclo*hexene, 1-cyano- (v. AUWERS, BAHR, and FRESE), i, 312.
*iso***Propoxy-5-methylacetophenone**, and its derivatives (v. AUWERS, LECHNER, and BUNDESMANN), i, 266.

Propyl alcohol, β-chloro-, conversion of, into β-hydroxybutyronitrile (DEWAEL), i, 14.

*iso***Propyl alcohol**, latent and specific heats of (PARKS and KELLEY), ii, 949.

properties of mixtures of ethyl alcohol and (PARKS and KELLEY), ii, 764.

*l-iso***Propyl alcohol**, αα-*di*chloro-, urethane of (SEN), i, 337.

n- and *iso*-**Propyl alcohols**, refractive indices of (BENNETT and GARRATT), i, 498.

l-**Propylallylbarbituric acid** (VOLWILER), i, 1174.

l-**Propylamine**, β-hydroxy-, hydrochloride (LEVENE and HALLER), i, 1375.

Propylammonium chloroferrates (REMY and ROTHE), ii, 1089.

n-**Propylaniline** *m*-nitrobenzenesulphonamide (MARVEL, KINGSBURY, and SMITH), i, 245.

n-**Propylbenzene**, 3:5-*di*hydroxy- (MAUTHNER), i, 25.

γ-**Propylbenzoic acid**, *o*-amino-, and the corresponding lactam (v. BRAUN and REICH), i, 1407.

n-**Propylbenzoyloximidocarbonic acid**, ethyl ester (OESPER and COOK), i, 523.

γ-**Propylbenzyl bromide**, *o*-bromo- (v. BRAUN and KAISER), i, 1414.

*iso***Propyl-β-bromoallylbarbituric acid** (RIEDEL), i, 1453.

Propylbutylals (ADAMS and ADKINS), i, 785.

s-**Propylcarbamide**, *di*-β-hydroxy- (LEVENE and HALLER), i, 1375.

*p-iso***Propyl-γ-chloroallylbenzene**, and its dibromide (BERT), i, 804.

*p-iso***Propyl-ω-chlorobutenylbenzene** (BERT), i, 804.

Propylene, equilibrium of hydrogen bromide with (MAASS and WRIGHT), ii, 214.

catalytic addition of halogen acids to (WIBAUT, DIEKMANN, and RUTGERS), i, 494.

inhalation of (DAVIDSON), i, 1503.

Propylene, αβγ-*tri*bromo-αγ-*di*nitro- (WIELAND and JUNG), i, 1374.

α-**Propylene oxide**, heat of combustion of (ZUBOV and SWIENTOSLAWSKI), ii, 364.

*iso***Propylfurfurylal** (ADAMS and ADKINS), i, 785.

*iso***Propylheptylal** (ADAMS and ADKINS), i, 785.

1-*iso*Propylcyclohexan-3-one, and its semicarbazone (SEIFERT), i, 407.

2-Propylcyclohexanone, 2-cyano-, and its semicarbazone (v. AUWERS, BAHR, and FRESE), i, 312.

o-**Propylcyclohexylamines**, and their salts (v. BRAUN and BAYER), i, 428.

*iso***Propylidene compounds** of sugars (FREUDENBERG and DOSER), i, 366; (FREUDENBERG and WOLFF), i, 367.

Propylidenedi-indone (RADULESCU and GEORGESCU), i, 1287.

*iso***Propylidenequinamide** (KARRER, WIDMER, and RISO), i, 673.

α-**Propylindole** (VERLEY and BEDUWÉ), i, 578.

3-**Propylindole**, 3-γ-amino-, and its salts (MAJIMA and HOSHINO), i, 1451.

*cyclo***Propylmethylthiocyanate** (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.

*cyclo***Propylmethylamine**, and its benzoyl derivative (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.

*cyclo***Propylmethylbenzylmethylamine**, and its hydrochloride (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.

*cyclo***Propylmethylmethylaniline**, and its salts (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.

*cyclo***Propylmethylmethylcyanamide** (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1402.

2-**Propyl-3-phenyl*iso*indolinone**, 3-hydroxy-2-γ-bromo-, and its derivatives (KOHN and LAKNER), i, 1276.

γ-4-*iso***Propylphenylpropinene** (BERT, DORIER, and LAMY), i, 1373.

Propylphthalimide, γ-bromo-, action of magnesium phenyl bromide on (KOHN and LAKNER), i, 1276.

n-**Propyl-*m*-toluidine**, 2:4- and 4:6-*di*nitro- (GIUA and PETRONIO), i, 1397.

1-*iso***Propylurazole** (GOODWIN and BAILEY), i, 843.

*iso***Propylurethane**, αα-*di*chloro-, and αα'-*di*iodo- (CHINOIN FABRIK CHEMISCH-PHARMAZEUTISCHER PRODUKTE), 1, 13.

n-**Propylvinylcarbinol**, resolution and rotation of, and its salts and esters (KENYON and SNELLGROVE), i, 771.

4-*iso***Propyl-*o*-xylene**, *tri*nitro- (KRUBER), i, 1138.

4-*iso***Propyl-*o*-xylenesulphonic acid**, and its sodium salt and amide (KRUBER), i, 1138.

Prosopanche Burmeisteri, constituents of (ZELLNER), i, 1025.

Prostate, tuberculosis and calcification of (MCKENZIE, SENG, and MACALLUM), i, 330.

effect of injections of emulsions of, on metabolism (KORENCHEVSKY and CARR), i, 1513.

Prostate, nitrogen excretion in hypertrophy of (NICOLAYSEN), i, 857.
Proteases, animal, specificity of (WALDSCHMIDT-LEITZ and SCHÄFFNER), i, 1110.
α-Proteases, effect of quinine compounds and urea on (SMORODINCEV and ADOVA), i, 335.
Proteic acid, hydroxy-, in urine (FREUND and SITTENBERGER-KRAFT), i, 723.
Proteins (JOHNSON and DASCHAVSKY), i, 176; (LÜDTKE), i, 450; (SHELTON and JOHNSON), i, 602; (SÖRENSEN), i, 1110; (HOFFMAN and GORTNER), i, 1479.
structure of (ABDERHALDEN, KLARMANN, and KOMM), i, 174; (ABDERHALDEN and KOMM), i, 175, 320, 848, 1475; (HERZOG), i, 450; (BLANCHETIÈRE), i, 602; (TROENSEGAARD and FISCHER; BERGMANN), i, 848; (ABDERHALDEN), i, 848, 1341; (ABDERHALDEN and SCHWAB), i, 991.
structure and synthesis of (WALDSCHMIDT-LEITZ and SCHÄFFNER), i, 1110.
synthesis of, by enzymes (WASTENEYS and BORSOOK), i, 102; (BORSOOK and WASTENEYS), i, 472, 864, 865; (RONA and KLEINMANN), i, 473.
molecular weights of (COHN, HENDRY, and PRENTISS), ii, 641.
ionisation of (LINDERSTRØM-LANG), ii, 203.
heat denaturation of (H. and D. Y. WU), i, 1110.
adsorption of, by collodion membranes (HITCHCOCK), ii, 1054.
adsorption of phenolsulphonephthalein by (GROLLMAN), i, 1000.
liberation of adsorbed substances from (ROSENTHAL), i, 1203.
solubility of (SÖRENSEN), i, 602.
solubility of, in organic solvents (COOPER and NICHOLAS), i, 955.
depolymerisation of (SHIBATA), i, 1109.
coagulation of, in drops (MORAŠKO), i, 1487.
by heat (M. and P. L. SÖRENSEN), ii, 518.
hydrolysis of (SCHRYVER, BUSTON, and MUKHERJEE), i, 794.
by enzymes (RONA and KLEINMANN), i, 103.
with hydrochloric acid (YAITSCHNIKOV), i, 320.
decomposition of, by microbes (WAKSMAN and LOMANITZ), i, 867.
Proteins, decomposition of, by pepsin (UHLENBRUCK), i, 742.
effect of amino-acids on (SEUFFERT and MARKS), i, 730.
decomposition products of (IVANOV), i, 1480.
influence of glutathione on oxidation of (HOPKINS), i, 1499.
compounds of acids with (MODERN and PAULI), ii, 518.
combination of, with acids and alkalis (HARRIS), i, 450.
cystine and tryptophan in (JONES, GERSDORFF, and MOELLER), i, 98.
action of, on gold sols (ZSIGMONDY and JOËL), ii, 35; (REINDERS), ii, 1059; (KREBS), ii, 1155.
action of hypobromites on (GOLDSCHMIDT and STEIGERWALD), i, 1109; (ABDERHALDEN), i, 1475.
action of paraldehyde on (COOPER), i, 91.
action of pepsin and hydrochloric acid on (VAN URK), i, 1507.
sulphur in (HOFFMAN), i, 1480.
compounds of zinc chloride with (PAULI and SCHÖN), ii, 198.
new amino-acid from (GORTNER and HOFFMAN), i, 602.
metabolism of. See Metabolism.
action of bile on pancreatic digestion of (ROSENOV), i, 1507.
precipitation of, from body fluids (WUNSCHENDORFF), i, 1346.
substitutes for, in diet of goats (PAASCH), i, 1498.
replacement of, by urea in diet of milch animals (MORGAN, WINDHEUSER, and OHLMER), i, 217.
Bence-Jones, precipitin reaction of (HEKTOEN and WELKER), i, 328.
in blood, and their determination (HUECK), i, 1484; (HOLM and TÓMASSON), i, 1485.
gluten, from wheat flour (BLISH and PINCKNEY), i, 176.
halogenated (VANDEVELDE), i, 91, 707, 1477.
hydrolysed, dynamic action of, as foodstuffs (MELLY and v. RÖTTH), i, 193.
of muscle, isoelectric points of (WÖHLISCH and SCHRIEVER), i, 1488.
colloid characteristics of (WEBER), i, 995.
in germinating seeds (FODOR and REIFENBERG), i, 756.
of serum (LEENDERTZ), i, 96.
calcium content of (CSAPÓ and FAUBL), i, 96.
precipitation of (RUSZCZYNSKI), i, 322.

Proteins, of serum, precipitation of, by salts (CSAPÓ and v. KLOBUSITZKY), i, 178.
precipitin reactions of (HEKTOEN and WELKER), i, 823.
of skin, extraction of (PINESS, MILLER, and ALLES), i, 331.
water-soluble, electrolyte-free (ADOLF and PAULI), ii, 289; (PAULI), ii, 319.
effect of glycerol on the biuret reaction for (SEIBERT and LONG), i, 1110.
reaction of, with phosphoric acid (ROMIEU), i, 607.
analysis of the hydrolysis products of (WASTENEYS and BORSOOK), i, 97.
detection of (NOUY), ii, 1212.
determination of, electrometrically, with alkalis (HOFFMAN and GORTNER), ii, 1011.
determination of amino acids from hydrolysis of (CHERBULIEZ and WAHL), ii, 1211.
determination of nitrogen in (MAIN and LOCKE), i, 997; (TER MEULEN), ii, 599.
determination of nitrogen distribution in (GORTNER and SANDSTROM), ii, 908.
determination of phosphorus in (SØRENSEN), ii, 900.
determination of tyrosine in (FÜRTH and FISCHER), ii, 448.
Proteoses, solubility of, in organic solvents (COOPER and NICHOLAS), ii, 955.
of egg-albumin (RUDD), i, 320, 321.
Proteus, formation of gelatinase by (CLARK and MERRILL), i, 1511.
Protoparaffin. See Ceresin.
Protoplasm, toxic action of copper and gold salts on (VOEGTLIN, JOHNSON, and DYER), i, 1116.
living, permeability of (OSTERHOUT), i, 1355.
Prowazekia edax, influence of hydrogen-ion concentration on the growth of (RAABE), i, 868.
Prunus pissardi, flavone from the leaves of, and its reactions (JONESCO), i, 824, 825.
Prussian blue, formation of, in cyanide test (SCHÜLEK), ii, 71.
sols, coagulation of (GHOSH and DHAR), ii, 778; (WEIR), ii, 1155.
Prussic acid, labile. See *iso*Hydrocyanic acid.
Pseudo-acids (KARVE), ii, 1188.
Psicaine, synthesis of (WILLSTÄTTER), i, 424.
experiments with (WAGNER), i, 1503.
Ptychotis verticillata, essential oil of (MORANI), i, 146.
Pulmonaria officinalis, constituents of (ZELLNER), i, 763.
Pump for circulation of gases (MENZIES, COLLINS, and TYSON), ii, 818.
automatic mercury (MCLAUGHLIN and BROWN), ii, 428.
laboratory (CAMERON), ii, 707.
circulating, for corrosive gases (KREMERS), ii, 427.
Pungency in relation to chemical constitution (NOMURA and HOTTA), i, 1156.
Purine derivatives, excretion of, in dogs (LANGFELDT and HOLMSEN), i, 1205.
Putrescine, behaviour of, in the liver (FELIX and ROTHLER), i, 859.
Pycnometer, new (H. C. and E. W. PARKER), ii, 288.
Pylorus, dehydration after obstruction of the (GAMBLE and ROSS), i, 1852.
Pyocyanine (WREDE and STRACK), i, 174.
and its derivatives (WREDE and STRACK), i, 844.
Pyramidone, compound of veronal with (PFEIFFER), i, 1318.
Pyranones, 1-thio- (ARNDT, NACHTWEY, and PUSCH), i, 1307.
Pyrazoles, synthesis of (BÜLOW and BAUR), i, 1827.
Pyrazole series, isomerism in (v. AUWERS and NIEMEYER), i, 1176; (v. AUWERS and MAUSS), i, 1178; (v. AUWERS and DANIEL), i, 1180.
Pyrazole-blue, *m*- and *p*-chloro- (CHATTAWAY and STROUTS), i, 71.
Pyrazolecarboxylamides, formation and transformation of (v. AUWERS and OTTENS), i, 1459.
Pyrazolecarboxylic acids, synthesis of (MINUNNI), i, 1175.
Pyrazolines, influence of constitution on formation of, from phenylhydrazones (v. AUWERS and KREUDER), i, 1454.
spontaneous oxidation of (LOCQUIN and HEILMANN), i, 1185.
substituted isomeric (FREUDENBERG and STOLL), i, 70.
Pyrazolone derivatives, preparation of (FARBENFABRIKEN VORM. F. BAYER & Co.), i, 301.
Pyrid-2-imine, 1-chloroacetyl derivative, and its salts (FINGER and KRAFT), i, 73.
Pyridine, electrolytic reduction of (MARIE and LEJEUNE), i, 577.
nucleus, fission of, during reduction (SHAW), i, 299.

Pyridine, equilibria of, with cadmium chloride and with zinc chloride (MASON and MATHEWS), ii, 1063.
arsenyl tartrate (DEBUCQUET), i, 973.
compounds formed by action of, on βγ-dibromoallyl bromide (v. BRAUN and KÜHN), i, 1375.
compound of hexanitrodiphenylamine and (DESVERGNES), i, 1056.
hydroferricyanide (CUMMING), i, 122.
compounds of silver perchlorate, water, and (MACY), ii, 536.
derivatives, formation of, from acyclic δ-diketones (BLAISE and MONTAGNE), i, 835.
preparation of alkyl derivatives of (CHEMISCHE FABRIK AUF AKTIEN VORM. E. SCHERING), i, 431.
Pyridine, 2-amino-, tautomerism of, and its derivatives (TSCHITSCHIBABIN), i, 158.
condensation of, with fatty-aromatic ketones (SCHMID and BANGLER), i, 1459.
2:6-*di*amino-, preparation of (CHEMISCHE FABRIK AUF AKTIEN VORM. E. SCHERING), i, 589.
2:3-*di*amino-, and 3-nitro-2-amino-, acetyl derivatives, and 2-chloro-, 2-chloro-5-bromo-3-nitro-, 2-chloro-5-iodoxy-, and their derivatives (PIERONI and HAUPT), i, 1316.
3-bromo-, and 3-iodo-, and their salts (BAUMGARTEN), i, 1381.
2-chloro-5-iodo-, 5-iodo-2-amino-, and 5-iodo-2-nitroamino-, and their derivatives (MAGIDSON and MENSCHIKOFF), i, 301.
hydroxy-derivatives (TSCHITSCHIBABIN), i, 299.
3-nitro-, and 3-nitroso- (KIRPAL and REITER), i, 697.
*di*nitro-2-amino- (TSCHITSCHIBABIN), i, 1328.
3-nitro-2-nitroamino- (TSCHITSCHIBABIN and KONOVALOVA), i, 1329.
5-nitro-2-nitroamino-, reactions of, and 5-nitro-2-nitroso- (RÄTH and PRANGE), i, 978.
Pyridines, arylated (DILTHEY and SCHAEFER), i, 153; (DILTHEY and RADMACHER), i, 1441.
Pyridines, amino-, tautomerism of (TSCHITSCHIBABIN and OSSETROVA; TSCHITSCHIBABIN), i, 1328.
Pyridine-1-acetic acid, 1-chloro-2-hydroxy- (KIRPAL), i, 66.
Pyridine-2-carboxylic acid, 4:6-*di*chloro-5-cyano- (SPÄTH and KOLLER), i, 1446.
2-Pyridine-3-carboxylic acid, 2-amino-, anhydride and acetyl derivative, methyl ester (SEIDE), i, 72.
Pyridine-3-sulphonic acid, 4-amino-, and 4-hydroxy-, and their barium salts (KOENIGS and JUNGFER), i, 154.
Pyridinium methiodide, compound of benzidine with (EMMERT, ROH, and KOBERNE), i, 588.
Pyridofluorene, and its derivatives (MILLS, PALMER, and TOMKINSON), i, 69.
Pyridofluorenone-1:3:4-tricarboxylic acid (MILLS, PALMER, and TOMKINSON), i, 69.
2-Pyridone, 5-iodo- (MAGIDSON and MENSCHIKOFF), i, 302.
4-Pyridone, 3-amino-, and 3-nitro-5-amino-, salts of (CROWE), i, 1319.
2-Pyridone-1-acetic acid, and its silver salt and derivatives (KIRPAL), i, 66.
2-Pyridoneimine-1-acetic acid, and its chloroplatinate (TSCHITSCHIBABIN), i, 158.
Pyridonemethides. See Methylenedihydropyridines.
4:5-Pyridothiophen, 3-hydroxy- (KOENIGS and GEISSLER), i, 166.
Pyridotripyrocatechylantimonic acid, potassium and sodium salts (REIHLEN, SAPPER, and KALL), i, 912.
Pyridotripyrocatechylarsenic acid, sodium salt (REIHLEN, SAPPER, and KALL), i, 912.
α-Pyridylanthranilic acid, sodium salt (SEIDE), i, 160.
5-Pyridylazo-β-naphthol, 2-chloro- (PIERONI and HAUPT), i, 1316.
Pyridylglycine, and its derivatives (REINDEL and RAUCH), i, 438.
monohydrate (FINGER and KRAFT), i, 73.
3-Pyridylglycine-2-carboxylic acid, (SUCHARDA), i, 1331.
5-Pyridylhydrazine, 2-chloro- (PIERONI and HAUPT), i, 1316.
β-3-Pyridylhydroxylamine (KIRPAL and REITER), i, 698.
3-Pyridyl δ-methylaminobutyl ketone, and its salts (RUZICKA, SEIDEL, and LIEBL), i, 290.
3-Pyridyl 3-*N*-methyl-2-piperidonyl ketone, and its picronolate (RUZICKA, SEIDEL, and LIEBL), i, 290.
***C*-(2′-Pyridyl)-1-methylpyrrole**, and its methiodide (WIBAUT and COPPENS), i, 75.
Pyridyl-2-nitroamine, alkylation of (TSCHITSCHIBABIN and MENSCHIKOV), i, 487.
***N*-2-Pyridylpyrrole** (CHEMISCHE FABRIK AUF AKTIEN VORM. E. SCHERING), i, 1329.
2-Pyridylpyrroles, and their picrates (TSCHITSCHIBABIN and BYLINKIN), i, 1174.

Pyrimidines, phenylhydrazine derivatives of (LEVENE), i, 979.
Pyriminazole, and its chloroplatinate (TSCHITSCHIBABIN), i, 1328.
δ-Pyrindigotin, and its derivatives (SUCHARDA), i, 1331.
Pyrindoxyl, constitution of (FINGER and KRAFT), i, 73.
Pyrites from Serbia (BARTHOUX), ii, 429.
Pyrocatechol, antimony, arsenic, and bismuth compounds with (ROSENHEIM and BARUTTSCHISKY), i, 808.
compounds of boric acid and (WEIL and ADLER), i, 136.
compounds of molybdic, tungstic, and uranic acids with, and their salts (FERNANDES), i, 912, 1061.
complex vanadyl salts (ROSENHEIM and MONG), i, 1412.
determination of derivatives of, colorimetrically (GLASSTONE), ii, 331.
Pyrocatechol, 4-amino-, acetyl and benzoyl derivatives (KEHRMANN and HOEHN), i, 560.
4:5-*di*amino-, and its derivatives, and 5-nitroso-4-amino-, 4-acetyl derivative (HOEHN), i, 938.
Pyrocatecholboric acid, 3-nitro-, salts of (BÖESEKEN and MIJS), i, 912.
Pyrocatechol tannins, detection of (VOGEL), ii, 827.
Pyrocholoidanic acid, oxidation of (WIELAND), i, 1066.
Pyrodeoxybilianic acid, derivatives of (WIELAND), i, 1066.
Pyrogallol, compounds of molybdic, tungstic, and uranic acids with, and their salts (FERNANDES), i, 912, 1061.
determination of derivatives of, colorimetrically (GLASSTONE), ii, 331.
Pyrogallolacrolein (SEN and SARKAR), i, 812.
Pyrogallolbenzein, and its hydrochloride (ORNDORFF and WANG), i, 277.
and its *o*-hydroxy derivative (SEN and SARKAR), i, 812.
Pyrogallolcoumarein (SEN and SIRCAR), i, 554.
Pyrogallolglycerein (SEN and SARKAR), i, 812.
Pyrogallol-*omp-trihydroxybenzein* (SEN, SINHA, and SARKAR), i, 916.
Pyrogallolisatein (SEN and SIRCAR), i, 555.
Pyrogallolsalicylein (SEN and SIRCAR), i, 554.
Pyrolithobilianic acid, methyl ester (WINDAUS, BOHNE, and SCHWARZKOPF), i, 406.
Pyromellitic acid, condensation of, with decalin and tetralin (PHILIPPI, SEKA, and FUNKE), i, 556.
derivatives of (DE DIESBACH and ZURBRIGGEN), i, 1427.
Pyromellitic acid, bromo-, and its anhydride (PHILIPPI, SEKA, and BAUER), i, 555.
Pyromelliticdi-imidines. See Bis(aminomethyl)-benzenedicarboxylic acid, dilactams.
Pyromellitide. See Bis(hydroxymethyl)-benzenedicarboxylic acid dilactone.
Pyrometers, black body for calibration of (ROBERTS), ii, 756.
micro- (HENNING and HAUSE), ii, 427.
Pyromucic acid, *iso*amyl ester (NAKAI), i, 360.
furfuryl ester (MEERWEIN and SCHMIDT), i, 1239.
Pyrone, and thio-, halochromism of halogenated derivatives of (ARNDT and PUSCH), i, 1304.
Pyrone, 4-thio- (ARNDT, SCHOLZ, and NACHTWEY), i, 58.
Pyrones, structure of (ARNDT, SCHOLZ, and NACHTWEY), i, 57.
Pyrones, 1-thio- (ARNDT, NACHTWEY, and PUSCH), i, 1307.
Pyrone colouring matters (FARBENFABRIKEN VORM F. BAYER & CO.), i, 955.
γ-Pyronecarboxylic acids, effect of boric acid on the solubility and conductivity of (VERKADE), ii, 128.
Pyroxenes, crystal structure of (WYCKOFF, MERWIN, and WASHINGTON), ii, 1126.
Pyroxonin (MAJIMA and SUGINOME), i, 1448.
Pyroxonitin, and its compound with chloroform (MAJIMA and SUGINOME), i, 1448.
Pyrroflavin (KÖNIG), i, 1184.
Pyrrole, absorption spectrum of (GALLERANI), ii, 266.
action of iodine on (G. E. K. and H. E. H. BRANCH), i, 66.
derivatives, absorption spectra of (KORSCHUN and ROLL), ii, 258.
bromination and iodination of (TERENTIEV and TSCHELINCEV), i, 295.
Pyrrole, iodo-derivatives (PIERONI and NOCENTINI), i, 1096.
4-iodo-3-nitro- (TERENTIEV and TSCHELINCEV), i, 295.
Pyrroles, action of formaldehyde and alcohols on (FISCHER and NENITZESCU), i, 834.
Pyrrole colouring matters (KÖNIG), i, 1184.

Pyrrole series, preparation of aldehydes and ketones of (KALLE & Co.), i, 297.
Pyrrolealdehyde, constitution of (RASTELLI and MINGOZZI), i, 1316.
Pyrrole-2-aldehyde, *tetra*iodo- (TERENTIEV and TSCHELINCEV), i, 295.
Pyrrole-2-carboxylic acid, *n*-propyl ester (ODDO), i, 296.
Pyrrole-2-glyoxylic acid, ethyl ester (ODDO), i, 297.
Pyrrolenephenylcarbinol-*o*-carboxylic acid, ammonium salt (ODDO and MINGOIA), i, 978.
Pyrrolenephthalides (ODDO), i, 978.
Pyrrolephthalides (ODDO and MINGOIA), i, 978.
Pyruvamide, hydrazones of (BÜLOW and SPENGLER), i, 1103.
Pyruvic acid, absorption spectra and tautomerism of (HENRI and FROMAGEOT), ii, 929.
heat of combustion of (BLASCHKO), i, 1011.
catalytic decomposition of (E. and F. MÜLLER), ii, 414.
action of *p*-aminophenylarsinic acid and, on aldehydes (ADAMS and JOHNSON), i, 319.
action of carboxylase of yeast on (NEUBERG), i, 336.
possible rôle of, in growth of bacteria (QUASTEL), i, 1216.
fate of, in the animal body (OTANI), i, 731.
esters, hydrolysis of (SKRABAL, PFAFF, and AIROLDI), ii, 139.
Pyruvic ureide, bromonitro- and nitro-, and its acetyl derivative (DAVIDSON), i, 975.
Pyruvyl bromide and chloride, hydrazones of (BÜLOW and SPENGLER), i, 1103.
Pyruvylalanine (BERGMANN, MIEKELEY, and KANN), i, 1134.
Pyrylium compounds (DILTHEY and FLORET), i, 55; (DILTHEY and RADMACHER), i, 1441.
Pyrylium salts, synthesis of (PRATT and ROBINSON), i, 422, 825, 826; (MALKIN and ROBINSON), i, 827.
Pyvuril (DAVIDSON), i, 583.

Q.

Quantum numbers and series spectra (LINDSAY), ii, 915.
and atomic numbers (HARTREE), ii, 467.
Quantum rule, Epstein–Sommerfeld (KORDYSCH), ii, 886.
Quantum theory in relation to the atomic theory and energetics (BERTHELOT), ii, 1022.
and molecular formation (BORN and FRANCK), ii, 266.
application of, to gases (PLANCK; EINSTEIN), ii, 495.
and Bohr's correspondence principle (TOLMAN), ii, 466.
of radiation (BOTHE and GEIGER; KETCHUM), ii, 1.
and resonance radiation (DARWIN), ii, 169.
Quartz, structure of (BRAGG), ii, 1131.
and its reflexion of X-rays (GIBBS), ii, 867.
spiral springs of (SMITH), ii, 818; (DRANE), ii, 995.
Quartz mercury lamp. See under Lamp.
Quebrachitolpentaphosphoric acid, salts of (CONTARDI), i, 277.
Quercetin, isolation and identification of, in apple peel (SANDS), i, 216.
5-methyl ether, and its potassium salt and tetra-acetyl derivative (KUBOTA and PERKIN), i, 1160.
Quinaketones, monocyclic (RUZICKA, SEIDEL, and LIEBL), i, 289.
Quinaldine. See 2-Methylquinoline.
Quinaldines, condensation of hydroxy and methoxy derivatives of, with aromatic aldehydes (TRÖGER and DUNKER), i, 432.
Quinatoxins, aliphatic (RUZICKA, SEIDEL, and LIEBL), i, 289.
Quinazoline, bromo-4-hydroxy-, and its methiodide (SEIDE), i, 159.
Quinhydrone, *di*cyano-, reduction potential of (RIDEAL), ii, 546.
Quinhydrones (PFEIFFER, GOEBEL, and ANGERN), i, 271.
reduction potentials of (BJILMANN, JENSEN, and PEDERSEN), ii, 404.
Quinhydrone electrode. See Electrodes.
Quinic acid, constitution of (KARRER, WIDMER, and RISO), i, 673.
utilisation of, by moulds and bacteria (BUTKEVITSCH), i, 1511.
Quinidine, determination of, spectrophotometrically (FABRE), ii, 1212.
Quinine, action of sulphuric acid on (GIEMSA and BONATH), i, 291.
compounds of cupric hydroxide and (ERBEN), i, 573.
effect of, on fermentation in the organism (SMORODINCEV and ADOVA), i, 335.
iodobismuthate (FRANÇOIS and SEGUIN), i, 1084.
salicylosalicylate (MERCK & Co.), i, 1448.

Quinine chlorostannate and chlorostannite (DRUCE), i, 1096.
arsenious tartrate (DECBUCQUET), i, 1090.
determination of, spectrophotometrically (FABRE), ii, 1212.
Quinine, amino-, and its salts and derivatives (FRÄNKEL, TRITT, MEHRER, and HERSCHMANN), i, 573.
*apo***Quinine**, and its benzoate hydrochloride (FRÄNKEL and BUHLER), i, 573.
derivatives of (SUSZKO), i, 1449.
*β-iso***Quinine**, and its derivatives, and *di*bromo- (SUSZKO), i, 1448.
Quinine series (RUZICKA, SEIDEL, and LIEBL), i, 289.
Quininetrimethylammonium picrate (FRÄNKEL, TRITT, MEHRER, and HERSCHMANN), i, 574.
*iso***Quinocyanines**, 4-chloro-, synthesis of, and their derivatives (FISCHER, MÜLLER, and VILSMEIER), i, 439.
Quinoidine extracts from animal substances (KINNERSLEY, PETERS, and SQUIRES), i, 997.
Quinol, oxidation of, in presence of aliphatic amines (HARGER), i, 24.
ethers, substitution in derivatives of (RUBENSTEIN), i, 1278.
additive compounds of aromatic amines with (HARGER), i, 23.
Quinol, *tri*bromo-, dimethyl ether (KOHN and GUTTMANN), i, 1263.
bromonitro- and chloronitro-, ethers of (KOHN and MARBERGER), i, 1264.
*tetra*chloro- (BINZ and RÄTH), i, 446.
Quinols, *mono*- and *di*-nitro-, colorimetric dissociation constants of (PRIDEAUX and NUNN), i, 24.
ψ-Quinols, preparation of (FICHTER and MEYER), i, 381.
Quinol-*om-di*hydroxybenzein (SEN, SINHA, and SARKAR), i, 916.
Quinoline, centroid structure for (FUSON), i, 1098.
arsenyl tartrate (DEBUCQUET), i, 973.
ethiodide, compounds of, with bromoform and iodoform (STEINKOPF and BESSARITSCH), i, 495.
derivatives (JOHN), i, 1317; (JOHN and NOZICZKA), i, 1451; (JOHN and WEBER), i, 1452.
Quinoline, 8-amino-, and its derivatives (SEKA), i, 587.
8-hydroxy-, salts of (ZETZSCHE, SILBERMANN, and VIRLI), i, 1411.
***iso*Quinoline** derivatives, syntheses of (HAWORTH and PERKIN), i, 968, 969, 970; (HAWORTH, PERKIN, and RANKIN), i, 969; (FORSYTH, KELLY, and PYMAN), i, 1167; (HAWORTH, PERKIN, and PINK), i, 1168.
n- and *iso*-**Quinolines**, hydroferricyanides of (CUMMING), i, 122.
Quinolines, 4-amino-, substituted (FISCHER, DIEPOLDER, and WÖLFEL), i, 438.
hydroxy-derivatives (TSCHITSCHIBABIN), i, 299.
*di*iodohydroxy- (PASSEK), i, 1170.
nitroamino- (TSCHITSCHIBABIN, WITKOVSKY, and LAPSCHIN), i, 838.
Quinoline-4-aldehyde, and its phenylhydrazone, preparation of (CHEM. FABRIK AUF AKTIEN VORM. E. SCHERING), i, 1452.
Quinolinecarboxylic acid, *di*hydroxy-, in rice husks (SAHASHI), i, 1520.
Quinolinic acid, preparation of, and its derivatives (SUCHARDA), i, 1317.
Quinolphthalein, structure and derivatives of (DOMINIKIEWICZ), i, 53.
4-Quinolyl ε-amino-α-carbethoxyamyl ketone, and its picrolonate (RUZICKA, SEIDEL, and LIEBL), i, 289.
4-Quinolyl ε-benzamido-α-carbethoxyamyl ketone, and its picrate (RUZICKA, SEIDEL, and LIEBL), i, 289.
4-Quinolyl δ-benzoylethylaminobutyl ketone, and its picrate (RUZICKA, SEIDEL, and LIEBL), i, 289.
4-Quinolyl δ-benzoylethylamino-α-carbethoxybutyl ketone (RUZICKA, SEIDEL, and LIEBL), i, 289.
4-Quinolyl ε-benzoylmethylaminoamyl ketone (RUZICKA, SEIDEL, and LIEBL), i, 289.
4-Quinolyl ε-benzoylmethylamino-α-carbethoxyamyl ketone, and its salts (RUZICKA, SEIDEL, and LIEBL), i, 289.
4-Quinolyl α-bromo-ε-aminoamyl ketone, and its dihydrobromide (RUZICKA, SEIDEL, and LIEBL), i, 290.
4-Quinolyl α-bromo-ε-methylaminoamyl ketone, and its dihydrobromide (RUZICKA, SEIDEL, and LIEBL), i, 289.
4-Quinolyl *N*-ethyl-2-pyrrolidyl ketone, and its dipicronolate (RUZICKA, SEIDEL, and LIEBL), i, 290.
4-Quinolyl-*N*-methyl-2-piperidylcarbinol, and its salts (RUZICKA, SEIDEL, and LIEBL), i, 290.
4-Quinolyl *N*-methyl-2-piperidyl ketone, and its salts (RUZICKA, SEIDEL, and LIEBL), i, 290.
4-Quinolyl *N*-methyl-2-pyrrolidyl ketone, and its hydrochloride (RUZICKA, SEIDEL, and LIEBL), i, 290.
4-Quinolyl 2-piperidyl ketone, and its phenylhydrazone dipicrate (RUZICKA, SEIDEL, and LIEBL), i, 290.
Quinone See Benzoquinone.
Quinones, bactericidal action of (MORGAN and COOPER), i, 207.

o-**Quinones**, oxidation of (CHARRIER and BERETTA), i, 271.
Quinone*di*chlorodi-imines, heats of formation of (BLASZKOVSKA), ii, 1042.
Quinonechloroimines, heats of formation of (BLASZKOVSKA), ii, 1042.
Quinone-imide colouring matters (KEHRMANN and CHERPILLOD), i, 302; (KEHRMANN and FALKE), i, 303; (KEHRMANN and PRUNIER), i, 304.
Quinoneimine colouring matters (KEHRMANN and STANOYÉVITCH), i, 1334; (KEHRMANN and HAENNY), i, 1330; (KEHRMANN and SAFAR), i, 1331; (KEHRMANN and LISTVA), i, 1332.
a-**Quinoquinolone**, constitution of (SEIDE), i, 159.
Quinotoxine, oxime of, and amino-, and its salts (FRÄNKEL and DIAMANT), i, 574.
phenylhydrazones (FRÄNKEL, TRITT, MEHRER, and HERSCHMANN), i, 574.
*β-iso*Quinotoxine, and its derivatives (SUSZKO), i, 1449.
Quinoxaline, 2:3:6-*tri*chloro-, and 6-chloro-2:3-*di*hydroxy- (KEHRMANN and BENER), i, 443.

R.

Rabbits, influence of histamine and tyramine on nitrogen metabolism of (IWATSURU), i, 1502.
Racemic acid, formation of, from *cis*-oxidoethylenedicarboxylic acid (BÖESEKEN), i, 1237.
Racemic compounds, liquid (AGUIRRECHE), ii, 1142.
Racemisation (LEVENE and PFALTZ), i, 795.
asymmetric catalytic (MCKENZIE and SMITH), i, 822.
Radiation, theories of (MIE), ii, 1128.
quantum theory of (BOTHE and GEIGER; KETCHUM), ii, 1; (LODGE), ii, 465, 624.
nature of (SLATER), ii, 926.
absorption of, by emitting atoms (DE BROGLIE and THIBAUD), ii, 165.
transformation of atoms into (STERN), ii, 1021.
and matter (STERN; WESTPHAL), ii, 926.
from non-luminous flames (HASLAM, LOVELL, and HUNNEMAN), ii, 475.
from incandescent solids, photo-electric action of (BECKER), ii, 1107.
emitted by high resistance conductors (REBOUL), ii, 845.
equilibria between atoms, electrons, and (DIRAC), ii, 6.
Radiation, corpuscular, from salts (VOLMER), ii, 7.
impulse (MIE), ii, 844.
resonance, polarisation of, in magnetic fields (ELLETT), ii, 628; (BREIT), ii, 629.
and the quantum theory (DARWIN), ii, 169.
visible, from solid targets (FOOTE, MEGGERS, and CHENAULT), ii, 80.
Radiation potentials (MOHLER), ii, 1113.
Radiation theory (CSÁSZÁR), ii, 733.
of chemical reactions (RICE), ii, 1076; (ORNSTEIN), ii, 1077.
Radicals, acyclic, migratory tendencies of hydrogen and (LÉVY and LAGRAVE), i, 679.
free, electrochemical relation of, to halochromic salts (CONANT, SMALL, and TAYLOR), ii, 874.
organic, degree of negativity of (KHARASCH and GRAFFLIN), i, 1107.
tenacity of (v. BRAUN, FUSSGÄNGER, and KUHN), i, 1401.
with respect to nitrogen (v. AUWERS and PFUHL), i, 1100.
migration of (TIFFENEAU and ORÉKHOV), i, 378, 679.
Radioactive compounds, fractional crystallisation of (CHLOPIN), ii, 438.
elements (HARKINS and GUY), ii, 1109.
electrolytic separation of (TÖDT), ii, 54.
minerals as indicators of geological age (ELLSWORTH), ii, 593.
particles, colloidal, electrical behaviour of (EHRENHAFT), ii, 465.
Radioactivity, measurements of (MATIGNON and MARCHAL), ii, 1110.
effect of sunlight on (MARACINEANU), ii, 348.
quantum theory of (SMEKAL), ii, 347.
Radio-luminescence, decay and regeneration of (VIOL, KAMMER, and MILLER), ii, 1117.
Radium, β-ray spectrum of (HAHN and MEITNER), ii, 9.
heat set free by, as γ-rays (THIBAUD), ii, 464.
long-range particles from (YAMADA), ii, 834.
growth of polonium in preparations of (CURIE and YOVANOVITCH), ii, 464.
coloration of rock salt by (LUDEWIG and REUTHER), ii, 21.
and its isotopes, electrolytic separation of (TÖDT), ii, 54.
emanation. See Niton.

Radium sulphate, co-precipitation of barium sulphate and (DOERNER and HOSKINS), ii, 381.
determination of, in uranium minerals (CURIE), ii, 241.
separation of groups of radiations from (LATTÈS), ii, 465.
Radium-*B* and **-*C***, β-ray spectra of (CURTISS), ii, 622.
β-particles from (D'ESPINE), ii, 622.
heating effect of γ-rays from (ELLIS and WOOSTER), ii, 622, 923.
Radium-*C*, magnetic spectrum of β-rays of (ELLIS), ii, 9.
Radium-*E*, β-particles from (EMELÉUS),
magnetic spectrum of β-particles from (CURIE and D'ESPINE), ii, 732.
half-value period of (FOURNIER), ii, 1110.
decay of (BASTINGS), ii, 9.
Radium-*F*, α-particles from (HAMMER and PYCHLAN), ii, 621.
Radon. See Niton.
Ragweed, active constituent of the pollen of (BAUMAN, CHUDNOFF, and MACKENZIE), i, 1028.
Raspberry, non-volatile acids of (NELSON), i, 762.
Rats, effect of yellow phosphorus on (BERNHARDT and RABL), i, 1357.
diet of (BOAS; HARTWELL), i, 211.
relation between diet and loss of fur in (HARTWELL), i, 464.
white, chemistry of growth of bone in (HAMMETT), i, 1001.
Rays, analysis by absorption of (LATTÈS), ii, 623.
atomic (SCHMIDT), ii, 251.
canal, Döppler effect in (KREFFT), ii, 3.
canal, slow, passage of, through hydrogen (DEMPSTER), ii, 1020.
cathode (BECKER), ii, 251.
absorption of, in aluminium (TERRILL), ii, 79; (SCHONLAND), ii, 459.
mass, photographic plates for detection of (ASTON), ii, 706.
penetrating, at sea-level (HOFFMANN), ii, 1110.
positive (WIEN), ii, 921.
from the action of ultra-violet light on metals (DU BRIDGE), ii, 251.
electromagnetic analysis of (DÖPEL), ii, 168.
Röntgen, measurements of (HUDSON), ii, 17; (WEBER), ii, 458; (BLAKE), ii, 844.
analysis by, and its use in determining constitution of organic compounds (MARK), i, 1; (ROBINSON), ii, 745.
Rays, Röntgen, quantitative analysis with (GÜNTHER and WILCKE), ii, 237; (DELAUNEY), ii, 822.
apparatus for examination by (LANGE), ii, 482.
analysis of powdered crystals by (BRENTANO), ii, 483.
absorption of (STONER and MARTIN), ii, 257.
absorption and scattering of (DUNBAR), ii, 455; (BARKLA and KHASTGIR; BARKLA), ii, 456.
scattering of (WEBSTER and ROSS; ALLISON and DUANE; COMPTON and SIMON), ii, 1034.
theory of (FRICKE), ii, 941.
Compton and Duane effects in (BECKER), ii, 17.
spectra of. See Spectra.
number of β-rays associated with (JAUNCEY and DEFOE), ii, 1128.
secondary β-rays produced in gases by (AUGER), ii, 175.
reflection of, by crystals (HARTREE; BRAGG), ii, 735; (WEBER), ii, 1034.
by crystals of alkali halides (ARMSTRONG, DUANE, and HAVIGHURST; KULENKAMPFF), ii, 1033.
by barytes (ALLISON), ii, 18.
refractive power of atoms for (MARK and TOLKSDORF), ii, 933.
diffraction of, by polymerised liquids (DE SMEDT), i, 6.
excitation of electrons by (BECKER), ii, 8; (SEITZ), ii, 168, 1034.
secondary electrons produced by (FRICKE and GLASSER), ii, 16.
K and *L* electrons expelled by (RICHTMYER), ii, 1129.
ionisation by (GREBE and KRIEGESMANN), ii, 79.
photographic and ionisation effects of (BERTHOLD), ii, 252.
intensity of, in Debye–Scherrer rings (BLUNCK and KOCH), ii, 940.
photographic blackening by (BUSSE), ii, 1080.
coagulation of colloidal solutions by (DOGNON), ii, 665.
intensity of (CLARK and DUANE; DEFOE and NIPPER), ii, 836.
J-transformation of (KHASTGIR and WATSON), ii, 836, 727; (SIEGBAHN; NIPPER), ii, 727.
K-series of (LEIDE; RÉCHOU; RAY; v. WISNIEWSKI), ii, 457.
from light elements (LEVI), ii, 456.
from hot sparks (BJÖRKESEN), ii, 830.

Rays, Röntgen, coloration of alkali halides by (BAYLEY), ii, 21.
and smectic compounds (FRIEDEL), ii, 186.
effect of, on blood (KONRICH and SCHELLER), i, 1356.
fluorescent, critical excitation frequency for (ALLISON and DUANE), ii, 930.
soft, from iron (THOMAS), ii, 336.
superposed, absorption of (WATSON), ii, 458.
coherence of (BARKLA and MACKENZIE), ii, 614.
α-Rays, decay of luminescence due to (WITMER), ii, 89.
excitation of electrons by (BECKER), ii, 8.
β-Rays, production of, in air by Röntgen rays (IKEUTI), ii, 460.
spectra of. See under Spectra.
associated with Röntgen rays (COMPTON and SIMON), ii, 347.
absorption of (FOURNIER), ii, 176, 622.
secondary, produced in gases by Röntgen rays (AUGER), ii, 175.
γ-Rays, spectra of. See under Spectra.
wave-lengths of (GRAY), ii, 84; (SKOBELTZYN), ii, 835.
photo-electric effect of (DE BROGLIE), ii, 347.
absorption and diffusion of (THIBAUD), ii, 257.
absorption and scattering of (OWEN, FLEMING, and FAGE; GRAY), ii, 84; (AHMAD), ii, 923.
scattering of (SKOBELTZYN), ii, 257.
emission of, in atomic disintegration (MEITNER), ii, 10.
heating effect of (ELLIS and WOOSTER), ii, 622.
Ray liver oil, higher alcohols of (TOYAMA), i, 4.
Reactivity of atoms and groups in organic compounds (NORRIS and ASHDOWN), i, 626.
Reagents used in analysis, specification for (COLLINS, FARR, ROSIN, SPENCER, and WICHERS), ii, 899.
Reductase, influence of colloids on the detection of (VIRTANEN), ii, 76.
of yeast (LVOV), i, 1508.
Reduction, mechanism of (PRINS), ii, 1169.
and oxidation (CADY and TAFT), ii, 1078.
biological (FERRO; NEILL and AVERY), i, 340.
with the zinc arc (STOCK, BRANDT, and FISCHER), ii, 570.
Refraction, Kerr constant of, for liquids (MARTIN), ii, 90.
double, of organic liquids (VORLÄNDER and WALTER), ii, 183.
molecular, and molecular volume (LORENZ and HERZ), ii, 356.
Refractive index, influence of arrangement of atoms on (BRAGG), ii, 92.
and critical resonance potentials (DAVIS), ii, 933.
of acids and bases, relation of, to concentration (HAMMETT), ii, 289.
of benzenoid hydrocarbons (EISENLOHR and SCHULZ), i, 17.
of doubly refracting crystals (PERRIER), ii, 1028.
of binary mixed liquids (LICHTENECKER), ii, 632.
of organic liquids, effect of pressure on (EISELE), ii, 264.
Rennin, preparation of (DE TONI), i, 200.
Reproduction, influence of fluorides and iodides on (MAZÉ), i, 870.
effect of vitamin-*B* deficiency on (PARKES and DRUMMOND), i, 1021.
diet required for (SURE) i, 212, 752.
Resins (VESTERBERG and BORGE), i, 252.
relation between capacity to form, and chemical constitution (HERZOG), i, 386.
autoxidation of (TSCHIRCH), i, 356.
from hops (WALKER), i, 1479.
American and French, constituents of (KNECHT and HIBBERT), i, 1420.
phenolic (BAEKELAND and BENDER), i, 689.
Resin acids from hops (WIELAND, MARTZ, and HOEK), i, 1422.
Resinates, lead solutions of (COFFIGNIER), i, 1294; (UZAC), i, 1295.
Resinoids, phenolic (BAEKELAND and BENDER), i, 689.
Resonance potentials, critical, and refractive indices (DAVIS), ii, 933.
Resorcinol, condensation of primary alcohols with (SEN and SARKAR), i, 812.
additive compounds of, with ketones (PFEIFFER, GOEBEL, and ANGERN), i, 271.
reactions of, with propionitriles (CHAPMAN and STEPHEN), i, 669.
derivatives, substitution in (RAO, SRIKANTIA, and IYENGAR), i, 675.
phenacyl methyl ether (FREUDENBERG, FIKENTSCHER, and HARDER), i, 420.
Resorcinolacrolein (SEN and SARKAR), i, 812.
Resorcinol-*o*-aminobenzein, and its potassium salt, and *di*bromo- (SEN and SIRCAR), i, 554.

Resorcinol-4-azopyridine-3-sulphonic acid (KOENIGS and JUNGFER), i, 154.
Resorcinolbenzein, and its derivatives (SEN and SARKAR), i, 812.
Resorcinol-*p*-cresolphthalein (SEN and SIRCAR), i, 555.
Resorcinolfluorescein (SEN and SIRCAR), i, 555.
Resorcinolgallein, and *di*bromo- (SEN and SIRCAR), i, 554.
Resorcinolglycerein, and its derivatives (SEN and SARKAR), i, 812.
Resorcinol-*op*-*di*hydroxybenzein, and *tetra*bromo- (SEN, SINHAR, and SARKAR), i, 916.
Resorcinol-β-hydroxynaphthalein (SEN and SARKAR), i, 812.
Resorcinolisatein, and *tetra*bromo- (SEN and SIRCAR), i, 555.
Resorcinolsalicylein (SEN and SIRCAR), i, 554.
Respiration, measurement of (WARBURG), i, 321.
of cells (v. SZENT-GYÖRGYI), i, 708.
effect of rubidium and selenium ions on (ROFFO and NEUSCHLOSS), i, 1006.
and fission in cells (MEYERHOF), i, 993.
of tissues (TERROINE and ROCHE), i, 709.
iron as oxygen carrier in (ELLINGER), i, 1342; (WARBURG), i, 1481.
effect of alkalinity of blood on (GOLLWITZER-MEIER), i, 177.
in avitaminosis and inanition (ROCHE), i, 462.
anaërobic, in plants (NEUBERG and GOTTSCHALK), i, 213.
Respiration apparatus for study of plants and soils (GINSBURG), i, 1120.
Respiratory centre, effect of the ionic equilibria in blood on the (GOLLWITZER-MEIER), i, 177.
exchange, apparatus for determination of (HAGEDORN), i, 177.
effect of muscular exercise on (FURUSAWA, HILL, LONG, and LUPTON), i, 92.
Rhamnicogenol (BRIDEL and CHARAUX), i, 636, 690.
Rhamnicoside (BRIDEL and CHARAUX), i, 621, 636, 690.
Rhamnosan, from water-lily blossoms (v. LIPPMANN), i, 366.
Rhamnus catharica, composition of the bark of (BRIDEL and CHARAUX), i, 621, 1224.
[illegible]nium (NODDACK, TACKE, and BERG), i, 989.
[illegible]rheumatism, lactic acid in (CAJORI, CROUTER, and PEMBERTON), i, 828.
Rhinanthus crista galli, changes in, during growth (BRAECKE), i, 619.
Rhodamines (DUTT and THORPE), i, 140.
Rhodanic acids, condensation of isatin with (HANN), i, 987.
Rhodinol, synthesis of (GRIGNARD and ESCOURROU), i, 772.
Rhodium in British Guiana (HARRISON), ii, 592.
density of (ROSE), ii, 278.
Rhodium chloride, compound of carbon monoxide and (MANCHOT and KÖNIG), ii, 1193.
Rhus glabra, tannin from (J. C. and B. L. PEACOCK), i, 1124.
Rice, β-acid from husks of (SAHASHI), i, 1520.
Ricinine, synthesis of (SPÄTH and KOLLER), i, 1446.
Rickets, experimental (MCCOLLUM, SIMMONDS, BECKER, and SHIPLEY), i, 1366.
defective ossification in (ROBISON and SOAMES), i, 462.
effect of calcium and sodium glycerophosphates and sodium dihydrogen phosphate on, in rats (KORENCHEVSKI and CARR), i, 464.
influence of piperidine in (EDERER), i, 869.
mineral constituents of blood in (ACKERSON, BLISH, and MUSSEHL), i, 609.
"**Rimu.**" See *Dacrydium cupressinum*.
Rings, formation of, in additive compounds (HIEBER, BECKER, and WAGNER), i, 1325.
four-membered, additive formation of (INGOLD and WEAVER), i, 580; (INGOLD), i, 840.
Ring compounds, isomerisation of (NAMETKIN), i, 1054.
rules for numbering (PATTERSON), i, 824.
Ring systems, fission of (MRISENHEIMER), i, 1335; (KUHN and EBEL), i, 1378.
dicyclic, stereochemistry of (HÜCKEL), i, 258.
River pebbles, manganese in (DITTLER), ii, 322.
River water. See under Water.
Robinia pseudacacia (locust tree), proteins of the bark of (JONES, GERSDORFF, and MOELLER), i, 1225.
glucoside from (HATTORI), i, 1443.
Rochelle salt. See Tartaric acid, potassium sodium salt.
Rocks, crystallisation in magmas of (DESCH), ii, 788.
iodine in (v. FELLENBERG; v. FELLENBERG, GEILINGER, and SCHWEITZER), ii, 321.

Rocks, igneous, equilibria in the formation of (NIGGLI), ii, 784.
basic volcanic, analysis of (ATHANASIU), ii, 1207.
Rock salt, electrical conductivity of (v. RAUTENFELD), ii, 639; (v. SEELEN), ii, 185.
coloration of, by radium (LUDEWIG and REUTHER), ii, 21.
density of (GEISS), ii, 278; (DEFOE and COMPTON), ii, 646.
See also Sodium chloride.
Rods, thermal conductivity of (BARRATT and WINTER), ii, 756.
iso-**Rosindulines**, and their derivatives (KEHRMANN and LISTVA), i, 1332.
iso-**Rosindulinedisulphonic acid** (ACTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 591.
Rotatory dispersion. See Dispersion.
power and chemical constitution (KENYON, PHILLIPS, and TURLEY), i, 507; (KENYON and SNELLGROVE), i, 771; (HEWITT and KENYON), i, 914.
and constitution of optically active compounds (RUPE and KOPP), i, 274; (RUPE and VONAESCH), i, 499; (RUPE and RINDERKNECHT), i, 533.
calculation of, from molecular structure (DE MALLEMANN), ii, 840.
and structure of sugars (HUDSON and PHELPS), i, 8; (HUDSON), i, 232, 233, 514, 636; (HUDSON and KUNZ), i, 1043.
effect of reading errors on constants of (RINDERKNECHT), ii, 357.
influence of solvents on (LUCAS), ii, 742.
of asymmetric compounds (DE MALLEMANN), ii, 935.
Rotenic acid (TAKEI), i, 761.
Rotenone (TAKEI), i, 761.
Rotenonone (TAKEI), i, 761.
Rothera's reaction, effect of different ammonium salts in (VAN URK), ii, 162.
Rottlerin, and its acetyl and benzoyl derivatives (DUTT), i, 1296.
Rubicene, constitution of (PUMMERER and ULRICH), i, 1259.
Rubidium, spectrum of (OUDT), ii, 915.
arc spectrum of (MEGGERS and LAPORTE), ii, 1101.
flame spectrum of (BLECKER and BONGERS), ii, 77.
radioactivity of (HARKINS and GUY), ii, 1109.
low-voltage arc in vapour of (NEWMAN), ii, 829.
Rubidium, quantum number of (LINDSAY), ii, 467.
Rubidium compounds, effect on, on respiration of cells (ROFFO and NEUSCHLOSS), i, 1006.
Rubidium chloroplatinate, solubility of, in water (ARCHIBALD and HALLETT), ii, 652.
magnesium chromate, optical properties of mixed crystals of ammonium magnesium chromate and (PORTER), ii, 945.
hydroxide, viscosity of solutions of (FRICKE), ii, 389.
iodide, complex compounds of stannous iodide and (AUGER and KARANTASSIS), ii, 1182.
stannic iodide (AUGER and KARANTASSIS), ii, 814.
Rubyl-3-ethosulphuric acid, 9:6′-*di*-hydroxy-, and its hydrochloride (GIEMSA and BONATH), i, 291.
Ruminants, effect of asparagine and ammonium nitrate on nitrogen metabolism of (STARZEVSKA), i, 1115.
Ruthenium, valency of, and its *tetr*oxide and halides (RUFF and VIDIC; KRAUSS and KÜKENTHAL), ii, 480.
co-ordination number of, in the chlororuthenates (BRIGGS), ii, 703.
Ruthenium bases (*ruthenium ammines*):
Rutheniumammine (AOYAMA), ii, 816.
Ruthenium chloride (WÖHLER and BALZ), ii, 424.
*penta*fluoride (RUFF and VIDIC), ii, 443.
*tri*halides, compounds of carbon monoxide with (MANCHOT and KÖNIG), ii, 149.
oxides (WÖHLER, BALZ, and METZ), ii, 149.
Hexachlororuthenic acid, ammonium and potassium salts (AOYAMA), ii, 816.
Pentachlororuthenious acid, potassium salt (AOYAMA), ii, 816.
Pentachlororuthenites (GUTBIER and NIEMANN), ii, 231.
Tetrachlorodioxyruthenic acid (AOYAMA), i, 816.
Ruthenium separation:—
separation of platinum and (RUFF and VIDIC), ii, 443.
Rutile, crystal structure of (GREENWOOD), ii, 93.
Rye, constituents of (HOLTZ and MÜLLER), i, 488.
Rye kernels, constituents of (JODIDI and WANGLER), i, 1224.
Rye straw, effect of silicic acid on the growth of (WIESSMANN), i, 488.

S.

Saccharin (*o-benzoylsulphinide*), derivatives of (HARDING), i, 670.
acetyl and benzoyl derivatives (HELLER, BUCHWALDT, FUCHS, KLEINICKE, and KLOSS), i, 1324.
Saccharinic acids (GLATTFELD and SHERMAN), i, 881.
Safranine colouring matters (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 591.
Safraninedisulphonic acid (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 592.
*apo***Safranone**, 6-chloro-2-hydroxy- (KEHRMANN and SCHEDLER), i, 444.
Safroeugenol. See 4-Ethoxyallylbenzene, 3-hydroxy-.
*iso***Safroeugenol**. See 4-Ethoxypropenylbenzene, 3-hydroxy-.
n- and *iso*-**Safroles**, action of magnesium methyl iodide on (KAFUKU), i, 1413.
Salep manna, hydrolysis of (PRINGSHEIM and GENIN), i, 214.
Salicin, hydrolysis of (JOSEPHSON), i, 1359.
by emulsin (BERTRAND and COMPTON), i, 738.
ethers, tetra-acetyl derivatives (ZEMPLÉN and BRAUN), i, 1081.
Salicin, chloro-, tetra-acetyl derivative (ZEMPLÉN and BRAUN), i, 1081.
Salicylaldehyde, metallic salts (ZETZSCHE, SILBERMANN, and VIELI), i, 1411.
compound of aminomalononitrile with (GRISCHKEVITSCH-TROCHIMOVSKI and SEMENCOV), i, 1069.
Salicylaldehyde, 3:5-*di*bromo-, Schiff's bases and *p*-bromophenylhydrazone of (BREWSTER), i, 38.
Salicylaldoxime *p*-chlorophenyl ether (BAMBERGER), i, 143.
Salicylic acid (*o-hydroxybenzoic acid*), ionisation of, in alcohol–water mixtures (BRADLEY and LEWIS), ii, 868.
heat of combustion of, and its use as a standard (VERKADE and COOPS), ii, 39.
equilibrium of phenol, water, and (BAILEY), ii, 1064.
salts, diffusion potentials and ionic mobilities of (PRIDEAUX and CROOKS), ii, 42.
hydroxylamine salt (OESPER and BALLARD), i, 1233.
theobromine and theophyllin salts (KNOLL & Co.), i, 828.
esters, excretion, toxicity, and stability of (HANZLIK and PRESHO), i, 1501.
Salicylic acid (*o-hydroxybenzoic acid*), ethylene ester (CRETCHER and PITTENGER), i, 1416.
p-propenylphenyl ester (RIEDEL), i, 1423.
determination of, oxidimetrically (TÄUFEL and WAGNER), ii, 1008.
Salicylic acid, amino-, electrolytic preparation of (NORRIS and CUMMINGS), i, 668.
thio- and 5-thiocyano-, phthalidylidene ether esters (KAUFMANN and ROSSBACH), i, 1273.
5-thiol- (KAUFMANN and ROSSBACH), i, 1273.
Salicylic acids, substituted (KAUFMANN and ROSSBACH), i, 1273.
Salicylosalicylic acid, quinine salt (MERCK & Co.), i, 1448.
Salicyluric acid, synthesis of, in the organism (BALDONI), i, 330.
in urine (DRZIMAL), i, 99.
β-Salicylylpropionic acid, α-cyano- (BAKER and LAPWORTH), i, 30.
Saligenin, esters and ethers, anæsthetic and anti-spasmodic action of (JENSEN and HIRSCHFELDER), i, 467.
Saliva, effect of halides and other substances on the diastatic activity of (CLIFFORD; WALKER), i, 738.
calculus from (PETROU), i, 725.
Salivary glands, formation of lactic and phosphoric acids in (SCHMITZ and CHROMETZKA), i, 859.
"**Salluen**," effect of, in syphilis (BERING), i, 858.
Salts, emission of particles by heated (SCHMIDT), ii, 251.
corpuscular radiation from (VOLMER), ii, 7.
electrolysis of equimolar mixtures of (SAXON), ii, 984.
paramagnetism of (COTTON-FEYTIS), ii, 945.
heats of solution and dilution o (WÜST and LANGE), ii, 976.
solubility, heat of solution and lattice energy of (BUTLER), ii, 39.
vapour pressure of aqueous solutions of, from the depression of the freezing point of nitrobenzene (SIDGWICK and EWBANK), ii, 38.
absorption of, by tissues (STILES), ii, 31.
hygroscopicity of (SCHOORL), ii, 400.
hydration of, and their effect on the vapour pressure of water (SIDGWICK and EWBANK), ii, 38.
deliquescence of (SCHERINGA), ii, 296.
liquid-crystalline properties of acids, esters, and (VORLÄNDER), i, 267.
decomposition of, by colloids (HÜMMELCHEN and KAPPEN), i, 218.

Salts, bi-bivalent, solubility of, in solutions containing a common ion (WALKER), ii, 769.
coloured, rhythmic precipitation of, in gels (RIEGEL and WIDGOFF), ii, 863.
complex, magnetic properties and valency of (WELO and BAUDISCH), ii, 1031.
fused, boiling point of (LORENZ and HERZ), ii, 276.
thermal expansion of (LORENZ and HERZ), ii, 950.
equilibria in (JELLINEK and WOLFF), ii, 974; (JELLINEK), ii, 1160.
equilibria of metals with (LORENZ), ii, 536, 537.
polyatomic, dissociation of (SASAKI), ii, 399.
solid, electrical conductivity of, at high temperatures (VAILLANT), ii, 40.
uni-univalent, conductivity of, in methyl alcohol (FRAZER and HARTLEY), ii, 1163.
See also Metallic salts.
Salt solutions, effect of capillary-active substances on the surface tension of (SEITH), ii, 961.
mixed, solubility and heats of solution of (MONDAIN-MONVAL), ii, 654.
Salt vapours, ionisation of (KONDRATÉEV), ii, 615.
Salting-out effect (LINDERSTRÖM-LANG), ii, 30; (HAFNER and KÜRTHY), ii, 283.
Salvarsan (*arsphenamine*), isoelectric point of (HUNTER and PATRICK), i, 1106.
sulphur content of, and its synthesis and toxicity (CHRISTIANSEN, NORTON, and SHOHAN), i, 1471.
and its derivatives, distribution of arsenic in the body after injection of (FORDYCE, ROSEN, and MYERS), i, 189.
action of, *in vitro* and *in vivo* (SCHUMACHER), i, 733.
silver compound of (MYERS and CORBITT; CORNWALL and MYERS; FORDYCE, ROSEN, and MYERS), i, 611.
and its derivatives (BINZ, BAUSCH, and URBSCHAT), i, 1195.
determination of arsenic in (KIRCHER and v. RUPPERT), ii, 240.
Samarium, Röntgen ray spectrum of (GLEDITSCH and BOTOLFSEN), ii, 612.
Sand cultures, effect of silica on the yield of plants in (DUCHON; LEMMERMANN), i, 767.
Sandstone, weathering of (KLANDER), ii, 821.
Sanguinarine (GADAMER and STICHEL), i, 286.
Santonin, action of, on blood sugar (STASIAK), i, 1501.
*desmotropo***Santonin**, action of iodine on (BERTOLO), i, 546.
Sapindus mukorossi and *saponaria*, sapogenin from (JACOBS), i, 1028.
Sapogenin, and its derivatives, from soap nuts (JACOBS), i, 947.
Saponins (VAN DER HAAR), i, 50, 946; (JACOBS), i, 947, 948, 1028.
dialysis of (KOFLER and WOLKENBERG), i, 1519.
toxicity of, and their detoxication by cholesterol (KOFLER and SCHRUTKA), i, 1501.
Sarcosine, preparation of the ester of (STAUDT), i, 1133.
anhydride (ABDERHALDEN and KOMM), i, 175.
Scabiosa succisa, constituents of leaves of (WATTIEZ), i, 1521.
Scandium, spectrum of (CATALÁN), ii, 724.
magnetic resolution of the spectrum of (GOUDSMIT, VAN DER MARK, and ZEEMAN), ii, 912.
arc spectrum of (PIÑA DE RUBIES), ii, 829.
arc and spark spectra of (MEGGERS), ii, 77.
ultra-violet spark spectrum of (IRETON), ii, 453.
Scandium carbide (FRIEDERICH and SITTIG), ii, 705.
nitride (FRIEDERICH), ii, 374; (FRIEDERICH and SITTIG), ii, 420.
Schiff's bases, bromine additive compounds of (BERG), i, 817.
Schoepite, structure and analysis of (SCHOEP), ii, 235.
Scleroproteins (STARY and ANDRATSCHKE), i, 1480.
Scopolamine *N*-oxide, and its derivatives (POLONOVSKI and POLONOVSKI), i, 829.
Scopolia, sterol from roots of (WINDAUS and BRUNKEN), i, 108.
Scurvy (LIOTTA), i, 1365.
biochemistry of (PALLADIN; PALLADIN and KUDRJAVZEVA), i, 330.
calcium and creatine excretion and enzymes of blood in (PALLADIN and KUDRJAVZEVA; PALLADIN and NORMARK; PALLADIN and SAVRON), i, 461.
iron in blood in (MOURIGNAND, LEULIER, and MICHEL), i, 330.
blood of guinea-pigs with (LEPPER and ZILVA), i, 1208.
Scymnus lichα, hydrocarbons from (ANDRÉ and CANAL), i, 1373.

Sea water. See under Water.
Seal, blood of. See Blood.
Secretin and insulin (PENAU and SIMONNET), i, 482.
Sedimentation, recorder for measuring distribution of particles in (LAMBERT and WIGHTMAN), ii, 1194.
Seeds, hydrogen-ion concentration in (NĚMEC), i, 871.
effect of, on hydrogen-ion concentration and reaction of nutrient solutions (RUDOLFS; HOAGLAND), i, 1368.
selective adsorption of ions by (RUDOLFS), i, 1367.
symbiosis of bacteria and (FOWLER and CHRISTIE), i, 344.
germination of (BLAGOVESCHENSKI; FODOR and REIFENBERG), i, 756.
effect of carbon dioxide on (SCHMIDT), i, 758.
action of photocatalysers on (NEITHAMMER), i, 1023.
effect of water and salt solutions on (RUDOLFS), i, 1120.
formation of vitamin-*A* during (STEPP), i, 1220.
dried, peroxydases in (COUPIN), i, 615.
germinating, alkaloids in (SABALITSCHKA and JUNGERMANN), i, 1223.
oxidation of amino-acids in (OPARIN), i, 1518.
formation of vitamin-*D* in (STEPP), i, 1221.
Selenium, atomic weight of (BRUYLANTS, LAFORTUNE, and VERBRUGGEN), ii, 174.
photo-electric emission of (DEL REGNO), ii, 81.
effect of light on the thermoelectric power of (HOLMES), ii, 811.
effect of light on thermal conductivity of (MARTIN), ii, 1117.
crystal structure of (SLATTERY), ii, 369.
optical constants of crystals of (MILLER), ii, 751.
hydrosols, coagulation of, by electrolytes (DOOLAN), ii, 293.
as carrier in chlorination (O. and C. A. SILBERRAD), ii, 1191.
Selenium compounds, acid nature of (KARVÉ), ii, 1188.
effect of, on respiration of cells (ROFFO and NEUSCHLOSS), i, 1006.
Selenium bromide and chloride, preparation of (LENHER and KAO), ii, 1206.
Selenium oxychloride, electrical conductivity of solutions of (JULIEN), ii, 872.
Selenium *di*oxide, molecular weight of, in ethyl alcohol (PRIDEAUX and GREEN), ii, 96.
additive compounds of, with halogen acids (MUEHLBERGER and LENHER), ii, 890.
Selenious acid, dissociation constants of (WILLCOX and PRIDEAUX), ii, 867.
Selenic acid, and its salts (LENHER and WECHTER), ii, 815; (LENHER and KAO), ii, 817.
preparation of (MANCHOT and WIRZ-MÜLLER), ii, 319.
Selenates, double hydrated, dissociation pressures of (FERGUSON), ii, 1063.
Selenides, preparation of (MOSER and ATYNSKI), ii, 583.
electrolytic preparation of (FISCHER), ii, 808.
Selenium determination and separation:—
determination of, and separation from tellurium (LENHER and KAO), ii, 434.
separation of tellurium and (LENHER and KAO), ii, 1199.
Selenocyanogen (BIRCKENBACH and KELLERMANN), ii, 569.
Semecarpus anacardium (marking nut), constituents of (NAIDU), i, 1224.
Semen, spermine phosphate from (ROSENHEIM), i, 180.
Semicarbazide sulphate, electrolytic preparation of (BIRCHER, INGERSOLL, ARMENDT, and COOK), i, 525.
Semicarbazide, thio-, action of aromatic amines on (MAZOUREVITSCH), i, 984.
condensation of ω-bromoacetophenone with (BOSE), i, 167.
Semicarbazides, thio-, condensation of ω-bromoacetophenone with (BOSE), i, 1465.
Semicarbazones, action of amines on (WILSON and CRAWFORD), i, 318.
action of hydrazines on (SUTHERLAND and WILSON), i, 42.
Semioxamazide, derivatives of (WILSON and PICKERING), i, 935.
ζ-Semitruxinonic acid, and its derivatives (STOERMER and KLOCKMANN), i, 928.
Sera, antimeningococcal, flocculation of (DE LA RIVIÈRE and ROUX), i, 749.
normal and luetic, chemical composition of (SOLARI), i, 858.
Sericin, preparation of, from silk (SHELTON and JOHNSON), i, 602.
***dl*-Serine,** derivatives of (BERGMANN and MIEKELEY), i, 235.

Serum, effect of irradiation on (KROETZ), i, 178.
electrical conductivity of (LASSEUR, GIRARDET, and VERMELIN), i, 853.
effect of alcohols or acetone on physical properties of (FÜRTH and PECHHOLD), ii, 1056.
complement activity of (WHITEHEAD, GORDON, and WORMALL), i, 1202.
solubility of the globulins of (SÖRENSEN), i, 1110.
proteins of (LEENDERTZ), i, 96.
precipitation of (CSAPÓ and v. KLOBUSITZKY), i, 178; (RUSZCZYNSKI), i, 322.
precipitin reactions of (HEKTOEN and WELKER), i, 323.
calcium content of (CSAPÓ and FAUBL), i, 96.
in children, acid-combining power of (BOSÁNYI and CSAPÓ), i, 188.
determination of phosphates in (ESSINGER and GYÖRGY), i, 178.
determination of sodium in (KRAMER and GITTLEMAN), i, 180.
Serum-albumin. See under Albumin.
Sesquiterpene, $C_{15}H_{25}$, and its hydrochloride from *Canarium strictum* (MOUDGILL), i, 823.
Sesquiterpenes, from extracts of the cotton plant (POWER and CHESNUT), i, 1026.
ring formation in (RUZICKA and CAPATO), i, 943.
action of formic acid on (ROBERTSON, KERR, and HENDERSON), i, 1293.
Shaking apparatus (MILLIGAN), ii, 150.
Shale oil, Kimmeridge, sulphur compounds of (CHALLENGER, JINKS, and HASLAM), i, 282.
Shark liver oil, higher alcohols of (TOYAMA), i, 4.
Sheep, bile of. See Bile.
excretion of creatine and creatinine by (PALLADIN), i, 327.
Shibuol, constitution of (KOMATSU and MATSUNAMI), i, 950.
Shrimp. See *Peneus setiferus*.
Silage, composition of, and its value as a farm food (BLACKSHAW), i, 1523.
Silane, formation of (SCHWARZ and (HOEFER), ii, 418.
Silex, hydrocarbons and carbonates in (DE LAPPARENT), ii, 821.
Silica. See Silicon *di*oxide.
Silicododecatungstic acid, and its salts (NORTH and BEAL), ii, 607.
Silicohydrocarbons, complex (KIPPING), i, 87.
Silicon, atomic weight of (HÖNIGSCHMID and STEINHEIL), ii, 174.
Silicon, spectra of (MCLENNAN and SHAVER; FOWLER), ii, 452; (LANG and SMITH), ii, 829; (MCQUARRIE), ii, 1013.
singly ionised, spectrum of (SAHA), ii, 1100.
spectral frequencies of (HOLWECK), ii, 336.
critical potential of (HOLWECK), ii, 729.
radio detector action of (CZOCHRALSKI), ii, 642.
sizes of electron-kernels of aluminium, magnesium, sodium, and (TURNER), ii, 349.
Silicon alloys with aluminium (PARRAVANO and SCORTECCI), ii, 281.
with carbon and iron (BECKER), ii, 973.
with molybdenum and nickel (PFAUTSCH), ii, 298.
Silicon nitride, spectrum of (MULLIKEN), ii, 731, 1020.
*di*oxide (*silica*), phosphorescence of, exposed to Röntgen rays (HOPWOOD and MAYNEORD), ii, 839.
effect of temperature on the hygroscopicity of (AARNIO), ii, 1157.
adsorption of acids by (JONES), ii, 382, 509; (MUKHERJEE), ii, 383, 962.
gels, adsorption by (RAY), ii, 191; (PATRICK and JONES), ii, 193; (PATRICK and OPDYCKE), ii, 656.
adsorption of butane by (PATRICK and LONG), ii, 382.
adsorption of gases by (PATRICK), ii, 509.
adsorption of water by (PATRICK and EBERMAN), ii, 284.
heats of adsorption of sulphur dioxide and of water vapour by (PATRICK and GREIDER), ii, 870.
effect of water on dried and pressed (BHATNAGAR, PRASAD, and OHRI), ii, 966.
reducing action of hydrogen adsorbed by (LATSHAW and REYERSON), ii, 412.
new type of (HOLMES and ANDERSON), ii, 518.
equilibrium of calcium and sodium metasilicates and (MOREY and BOWEN), ii, 1161.
equilibrium of sodium metasilicate with (MORLEY and BOWEN), ii, 121.
polymorphism of (LONGCHAMBON), ii, 752.
possible dynamic form of (v. WEIMARN), ii, 395.

Silicon *di*oxide (*silica*), action of, on electrolytes (JOSEPH), ii, 383.
reactions of metals and gases on vessels of (v. WARTENBERG), ii, 699.
surface devitrification of vessels of (VILBRANDT), ii, 1091.
rôle of, in plant growth (NANJI and SHAW), i, 214; (LEMMERMANN, WIESSMANN, and SAMMET), i, 766; (DUCHON; LEMMERMANN; DENSCH), i, 767.
Silicic acid gels, preparation and properties of (FELLS and FIRTH), ii, 390.
sols (PAULI and VALKÓ), ii, 521; (KRUYT and POSTMA), ii, 861.
preparation of (GRUNDMANN), ii, 775.
effect of, on plant growth and soils (WIESSMANN; NOLTE; MUKHERJEE), i, 488.
Silicic acid, detection of (LORENZ and BERGHEIMER), ii, 600.
Silicic acids (SCHWARZ and MENNER), ii, 222.
Silicates (EITEL; TAMMANN and GREVEMEYER), ii, 580.
structure of (DOMINIKIEWICZ), ii, 1036.
properties and uses of sols and gels of (VAIL), ii, 661.
colloidal, oxydase-like activity of (OTA and NODA), ii, 203.
fused, behaviour of gold and platinum with (JANDER), ii, 416.
mineral, constitution of (ISKYUL), ii, 152.
natural, constitution of (RIDLEY), ii, 1130.
determination of ferric iron in (HACKL), ii, 1004.
separation of alkalis in analysis of (CANTONI), ii, 1001.
Silicon organic compounds (KIPPING), i, 87; (VYLE and KIPPING), i, 172.
Silk, use of, in the animal organism (ABDERHALDEN), i, 726.
weighting of, with stannic chloride (FICHTER and REICHART), ii, 193.
viscose, plasticity of (VENABLE), ii, 1058.
Silk fibroin, distillation of (JOHNSON and DASCHAVSKY), i, 176.
hydrolysis of the peptone of (HATANO), i, 201.
tryptophan from (HIRATSUKA), i, 836.
Sillimanite, formation of mullite from (CRAIG), ii, 987.
crystal structure of mullite and (MAYER and DAVEY), ii, 1127.
Siloxen, reaction of halogen compounds with (KAUTSKY and THIELE), ii, 668.
Silver, atomic weight of (DEAN), ii, 255; (MOLES), ii, 346.
K_H absorption in spectrum of (RICHTMYER and SPENCER), ii, 1102.
arc spectrum of (LOWERY), ii, 4; (SHENSTONE), ii, 453; (BENGTSSON and SVENSSON), ii, 166.
spark spectrum of (L. and E. BLOCH), ii, 829.
ultra-violet absorption spectrum of (ZUMSTEIN), ii, 453.
effect of temperature on the anomalous reflexion of (DE SÉLINCOURT), ii, 275.
X-ray absorption coefficient of (WARBURTON and RICHTMYER), ii, 1103.
photo-electric sensitivity of (SUHRMANN), ii, 831.
production of optical activity in (ZOCHER and COPER), ii, 935.
electro-deposition of (SANIGAR), ii, 677.
atoms, free path of, in nitrogen (BIELZ), ii, 668.
films, emission of electrons from, exposed to Röntgen rays (SIMONS), ii, 81.
atomic heat of, at high temperature (MAGNUS and HODLER), ii, 95.
adsorption of, by hydrated manganese dioxide (PAVLOV), ii, 507.
partition of, between lead and zinc (NAISH), ii, 506.
solubility of oxygen in (PARRAVANO and MALQUORI), ii, 769, 879.
solubility of, in water (KŘEPELKA and TOUL), ii, 697.
ions, equilibrium of, with ferrous ions (TANANAEV), ii, 121.
in photography (LÜPPO-CRAMER), ii, 985.
colloidal, preparation of (MORÁVEK), ii, 775.
colour of (FEICK), ii, 1153.
dispersoid sols of (v. WEIMARN), ii, 198.
medicinal preparations of (SCHLEE and THIESSENHUSEN), i, 197; ii, 114.
sols, protected, preparation and properties of (GARARD and DUCKERS), ii, 391.
analysis and constitution of (FRIED and PAULI), ii, 390.
action of arsenious sulphide sols on (FREUNDLICH and MOOR), ii, 198.

Silver alloys, effect of various metals on the properties of (SAEFTEL and SACHS), ii, 1051.
with cadmium, electro-deposition of (ATEN and VAN PUTTEN), ii, 1166.
with lead, electrolysis of (KREMANN and BENDA), ii, 679.
with mercury (TAMMANN and STASSFURTH), ii, 377.
with mercury and tin (TAMMANN and DAHL), ii, 502.
with zinc, Röntgen ray analysis of (WESTGREN and PHRAGMÉN), ii, 746.
Silver salts, therapeutic properties of (V. NEERGAARD), i, 1212, 1357.
Silver azide, action of bromine on (SPENCER), ii, 416.
arsenate and phosphate, crystal structure of (WYCKOFF), ii, 1037.
uranyl carbonate (HEDVALL), ii, 991.
bismuthide (WEEKS and DRUCE), ii, 1188.
bromide, ultra-violet light required to develop (HELMICK), ii, 143.
photographic emulsions of, and the action of light (BAKER; LÜPPO-CRAMER; STOCK), ii, 574.
photochemical decomposition of (HARTUNG), ii, 57.
carbonate, thermal decomposition of (CENTNERSZWER and BRUŽS), ii, 803.
*per*chlorate, compounds of pyridine, water, and (MACY), ii, 536.
chloride, solubility of, in chloride solutions (KENDALL and SLOAN), ii, 1052.
mixed crystals of sodium chloride and (LE BLANC and RÖSSLER), ii, 365; (BROOMÉ; TAMMANN), ii, 366.
gelatino-halides, properties of (REYCHLER), ii, 219.
halides, photoelectric properties of (AUDUBERT), ii, 56.
photomagnetic properties of (GARRISON), ii, 371.
photochemistry of emulsions of (EGGERT and NODDACK), ii, 573.
change in mass of, on illumination (KOCH and KREISS), ii, 810.
hydroxide, precipitation of, electrometrically (BRITTON), ii, 1204.
iodide in photo-electric cells (GARRISON), ii, 212; (PRICE), ii, 680.
adsorption of silver salts by (BEEKLEY and TAYLOR), ii, 855.
hydrosols (LOTTERMOSER, SEIFERT, and FORSTMANN), ii, 514.
nitrate, equilibrium of cupric hydroxide, water, and (MALQUORI), ii, 697.
Silver oxide, solubility of, in water (REMY and KUHLMANN), ii, 119.
oxides (JIRSA), ii, 314.
higher oxides of (JIRSA), ii, 1162; (JIRSA and JELINEK), ii, 1182.
Silver organic compounds:—
Silver salvarsan (MYERS and CORBITT; CORNWALL and MYERS; FORDYCE, ROSEN, and MYERS), i, 611; (BINZ, BAUSCH, and URBSCHAT), i, 1195.
Silver detection, determination and separation:—
detection of (STEIGMANN), ii, 719.
determination of (DOUGHTY), ii, 238.
separation of, by irradiation of photographic plates (KOCH and VOGLER), ii, 941.
Sinapis alba, hexamethylenetetramine as a nutrient for (E. and G. NICOLAS), i, 623.
Sincosite (SCHALLER), ii, 152.
Sirius-yellow G. See 1:2-Benzanthraquinone.
Sitostene, nitro- (WINDAUS and BRUNKEN), i, 394.
Sitosterol (WINDAUS and BRUNKEN), i, 394.
Skatole, determination of, in bacterial cultures (FELLERS and CLOUGH), i, 1015.
Skin, osmosis of boric acid through (KAHLENBERG), i, 101.
hydrolysis of (MERRILL), i, 92.
enzymes of (WOHLGEMUTH and KLOPSTOCK), i, 203; (WOHLGEMUTH and YAMASAKI), i, 472.
absorption of potassium iodide by (CANALS and GIDON), i, 1116.
extraction of proteins from (PINESS, MILLER, and ALLES), i, 331.
substance giving the nitroprusside reaction in (KAYE), i, 180.
Sklodowskite (SCHOEP), ii, 235.
Sky, blue colour of (BUCHWALD), ii, 1117.
Smectic compounds, structure of (FRIEDEL), ii, 186, 272.
Smell, determination of thresholds of (HOFMANN and KOHLRAUSCH), i, 732.
Soaps, Röntgen ray structure of (TRILLAT), ii, 752.
as protective colloids (PAPACONSTANTINOU), ii, 393, 526; (BHATNAGAR, PRASAD, and BAHL), ii, 1155.
calcium, solubilities of (HARRISON), ii, 190.
Soap films, composition of (LAING), ii, 960.
in emulsions (RIEMAN and VAN DER MEULEN), ii, 1148.

Soap solutions, viscosity of (YAJNIK and MALIK), ii, 779.
viscosity and elasticity of (FREUNDLICH and KORES), ii, 663.
colloidal properties of (GURVITSCH), ii, 517.
alcoholic, ionisation in (PATRICK, HYDEN, and MILAN), ii, 859.
Sodamide, syntheses with (HALLER, BAUER, and RAMART), i, 260.
Sodiocyano*cyclo*hexanone (v. AUWERS, BAHR, and FRESE), i, 309.
Sodium, molecular weight of (JOUNIAUX), ii, 187.
absorption spectrum of (HARRISON and SLATER), ii, 911.
K-absorption spectrum of (ROBINSON), ii, 614.
arc spectrum of (v. WISNIEWSKI), ii, 451.
at low voltages (NEWMAN), ii, 723.
band spectrum of, and of mixtures of the vapour with potassium vapour (SMITH), ii, 86.
series spectrum of the vapour of (HARRISON), ii, 5.
vapour, low voltage arcs in (NEWMAN), ii, 450.
electrical double refraction of (LADENBURG and KOPFERMANN), ii, 917.
inverse Stark effect in (LADENBURG), ii, 79.
photo-emission from (BURT), ii, 617.
life of excited atoms of (GERLACH and SCHÜTZ), ii, 171.
atoms, transition probabilities in (HARRISON), ii, 734.
sizes of electron-kernels of aluminium, magnesium, silicon, and (TURNER), ii, 349.
deposition of, by electrolysis through glass (BURT), ii, 921.
resonance radiation, polarisation of, in magnetic fields (ELLETT), ii, 628 ; (BREIT), ii, 629.
vapour pressure of (RODEBUSH and DE VRIES), ii, 1142.
equilibrium between alkaline earth metals and, and their fused chlorides (JELLINEK and CZERWINSKI), ii, 123.
ions, action of, on the heart (HOLZLÖHNER), i, 1500.
reaction of, with aromatic aldehydes, ketones, and esters (BLICKE), i, 37, 862.
reaction between potassium and, in presence of ammonium oxalate (SCHEREFELD), ii, 1202.
Sodium alloys with lead, electrolysis of (KREMANN, KRENZL, and MARKL), ii, 132.
with mercury, preparation of (READ and LUCARINI), ii, 587.
electrolysis of (KREMANN, MÜLLER, and KIENZL), ii, 132.
interfacial tension between benzene and (BHATNAGAR, PRASAD, and MUKERJI), ii, 194.
effect of light on the action of water with (BHATNAGAR, PRASAD, and MUKERJI), ii, 811.
with mercury and zinc, velocity of reaction of aqueous solutions with (KLEIN), ii, 802.
with potassium, electrolysis of (KREMANN and v. REHENBURG), ii, 132.
Sodium antimonite and sulphite, slow oxidation of (JORISSEN and VAN DEN POL), ii, 52.
arsenite, combination of, with loosely-combined nitrogen, oxygen, and sulphur (GUTMANN), i, 1059.
action of, on azido compounds (GUTMAN), i, 84.
reactions of, with halogen organic compounds (GUTMANN), ii, 238.
azide, action of bromine on (SPENCER), ii, 416.
borate, use of, in determination of acids and bases (MELLON and MORRIS), ii, 325.
carbonate, equilibrium of sodium sulphate, water, and (CASPARI), ii, 123.
action of, on phosphates (COLANI), ii, 1001.
hydrogen carbonate, dissociation of (RANC), ii, 414.
equilibrium of hæmoglobin and (ADAIR), i, 850.
potassium carbonates (BAIN), ii, 577.
caseinate, equilibrium of solutions of sodium chloride and (SPORING), ii, 119.
chloride, absorption spectrum of photo-electric crystals of (GYULAI), ii, 837.
photo-electric properties of crystals of (GUDDEN and POHL), ii, 343 ; (GYULAI), ii, 476.
electrical conductivity of solutions of (LORENZ and VOIGT), ii, 871.
activity coefficient of (SCATCHARD), ii, 397.
dispersion of (HERZFELD and WOLF), ii, 1119.
transference numbers of, and its mixtures with potassium chloride (MACINNES), ii, 872 ; (DEWEY) ii, 873.

Sodium chloride, surface tension and adsorption of aqueous solutions of (HARKINS and MCLAUGHLIN), ii, 959.
strength and elasticity of crystals of (JOFFÉ and LEWITSKY), ii, 370; (EWALD and PÓLÁNYI), ii, 371.
mixed crystals of silver chloride and (LE BLANC and RÖSSLER), ii, 365; (BROOMÉ; TAMMANN), ii, 366.
equilibrium of magnesium sulphate with (KURNAKOV and SHEMTSCHUSHNI), ii, 299.
equilibrium of solutions of sodium caseinate and (SPORING), ii, 119.
equilibria of sodium palmitate, water, and (MCBAIN and LANGDON), ii, 537.
equilibrium of sodium sulphate, water, and (PELLING), ii, 670.
interaction of alumina and (CLEWS), ii, 577.
effect of, on solutions of chromic chloride (GUSTAVSON), ii, 1086.
See also Rock salt.
*di*chromate, reaction of potassium chloride with (ROBERTSON), ii, 121.
dithionate, detection and determination of (LITTERSCHEID and LÖWENHEIM), ii, 68.
hydroxide, activity coefficient of (HARNED), ii, 397, 398.
fused, electrical conductivity of (ARNDT and PLOETZ), ii, 127.
solubility of cellulose in (D'ANS and JÄGER), i, 1387.
equilibrium of chromium hydroxide, chromite, and (MÜLLER), ii, 124.
equilibrium of lead hydroxide, plumbite, and (MÜLLER, REISSMANN, and BALLIN), ii, 125.
equilibrium of sodium sulphite, water, and (HAMMICK and CURRIE), ii, 869.
hypochlorite, induced antiseptic action of (VARILLA and TECHOUEYRES), i, 863.
hyposulphite, reducing action of, on dyed cotton (EYMER), ii, 582.
use of, in organic analysis (CLARK), ii, 332.
nitrate, equilibrium of sodium sulphate, water, and (FOOTE), ii, 786.
nitrite, freezing point curve of aqueous solutions of (HELBERG), ii, 971.
rhodizonate, detection of barium, lead, and strontium with (KOLTHOFF), ii, 1095.
silicates, aqueous solutions of (HARMAN), ii, 1065.
Sodium aluminium silicate, crystalline forms of (BOWEN and GREIG), ii, 997.
chromosilicate, synthesis of (KARFIOL), ii, 1087.
metasilicate, equilibrium of silica with (MOREY and BOWEN), ii, 121.
equilibrium of silica, calcium metasilicate, and (MOREY and BOWEN), ii, 1161.
sulphate as a cryoscopic solvent (TURNER and PATTERSON), ii, 273.
equilibrium of sodium carbonate, water, and (CASPARI), ii, 123.
equilibrium of sodium chloride, water, and (PELLING), ii, 670.
equilibrium of sodium nitrate, water, and (FOOTE), ii, 786.
double decomposition of ammonium borate and (SBORGI and BOVALINI), ii, 206; (SBORGI, BOVALINI, and MEDICI; SBORGI), ii, 207.
*mono*sulphide, crystal structure of (CLAASSEN), ii, 845.
*tetra*sulphide, action of, on organic halides (THOMAS and RIDING), i, 113.
sulphides, behaviour of, in water and alcohol (HODGSON), i, 1104.
reactions of, with chloronitrobenzenes (HODGSON and WILSON), i, 532.
sulphite (FOERSTER, BROSCHE, and NORBERG-SCHULZ), ii, 120.
equilibrium of sodium hydroxide, water, and (HAMMICK and CURRIE), ii, 869.
thiosulphate, keeping properties of standard solutions of (COLLARD), ii, 1168.
catalysis of the reaction of ferric chloride with (HOLLUTA and MARTINI), ii, 215.
tungstate, equilibria of, with lithium tungstate and tungsten trioxide (VAN LIEMPT), ii, 421.
Sodium organic compounds:—
Sodium diethyl phosphite (NYLÉN), i, 1135.
Sodium detection, determination, and separation:—
detection of, as oxalate (WINKLER), ii, 1095.
determination of (v. DEHN), i, 855.
determination of, iodometrically (BÁLINT), ii, 158.
determination of, in aluminium (FAIRLIE and BROOK), ii, 241.
determination of, in blood (HADEN), i, 1112.
determination of, iodometrically, in serum (KRAMER and GITTLEMAN), i, 180.

Sodium detection, determination, and separation:—
determination of, in blood serum (LEBERMANN), i, 324.
determination and separation of (SMITH and ROSS), ii, 601.
Soils, mechanical composition curves of (ROBINSON), i, 224.
physical properties of (HAINES), i, 876.
heat of wetting of (BOUYOUCOS), i, 1228.
influence of bases on (PATE), i, 1528.
heat of wetting of colloids in (ANDERSON), i, 219.
relation between vapour pressure and water content of (PURI, CROWTHER, and KEEN), i, 492.
acidity of (KAPPEN), i, 221, 874; (DENSCH), i, 221; (TACKE; RAMANN), i, 875; (KURCKMANN), i, 1032; (HISSINK and VAN DER SPEK; NIKLAS and HOCK; BOBKO and DRUSCHININ; ARRHENIUS), i, 1525.
effect of drying on (ROST and FIEGER), i, 348.
effect of silicic acid on (MUKHERJEE), i, 488.
in relation to base exchange (ROBINSON and WILLIAMS), i, 222.
effect of, on absorption of phosphorus and potassium from (NĚMEC and GRAGANIN), i, 1228.
relation between the hydrogen-ion concentration, lime requirement, and thiocyanate colour of (SAINT), i, 220.
effect of hydrogen-ion concentration on micro-organisms in (RIPPEL), i, 220.
reaction of (CROWTHER), i, 875; (CROWTHER and MARTIN), i, 876.
alkalinity in relation to lithological constitution of (PRATOLONGO), i, 874.
base exchange in (HISSINK), i, 222.
adsorption of ammonium chloride by (PAVLOV), ii, 287.
adsorption of anions from solutions by (COMBER), i, 219.
adsorption of colouring matters by (WILKINSON and HOFF), i, 1227.
moisture in (MCCOOL and WEIDEMANN), i, 1527.
saturation capacity of (HISSINK), i, 490.
fixation of water in (WIEGNER, GALLEY, and GESSNER), ii, 86.
percolation of water through (WINT—), i, 1527.
Soils, dispersion of, when shaken with water (PURI and KEEN), i, 768.
relation of biological processes to concentration of cations in (BURD), i, 1527.
cation of dilute acids on (PURI), i, 1372.
aluminium in (MAGISTAD), i, 1371.
displacement of aluminium by potassium in (SMOLIK), i, 1032.
volatilisation of ammonia from (CLARKE and MORISON), i, 491.
ammonification of amino-nitrogen in (GUITTONNEAU), i, 106.
action of calcium carbonate on (GEHRING and WEHRMANN), i, 1031.
formation of carbon dioxide in (LEMMERMANN and WIESSMANN), i, 348; (REINAU), i, 1526.
clays as colloids in (JOSEPH), i, 1228.
colloids in (ROBINSON and HOLMES), i, 624; (POWELL), i, 1032.
in relation to fertility (JOFFE and MCLEAN), i, 1372.
lime requirements of (ARRHENIUS), i, 490, 766; (CROWTHER and MARTIN), i, 876; (NIKLAS and HOCK), i, 1526.
interactions of lime in (SCHEFFER), i, 624.
lime and calcium carbonate in (RAMANN; BLANCK and LOHMANN), i, 223; (BLANCK and SCHEFFER), i, 491.
occurrence of metals in (MCHARGUE), i, 1023.
formation of nitrates in (RUSSEL, JONES, and BAHRT), i, 1031.
fixation of nitrogen in (VINOGRADSKI), i, 623; (WINTERS), i, 767; (TRUFFAUT and BEZSSONOFF), i, 1227.
accumulation of nitrates in, after growth of clover or lucerne (LYON, BIZZELL, and WILSON), i, 347.
phosphorus requirements of (VAN DER SPUIJ), i, 1524.
availability of phosphorus in (AMES and SCHOLLENBERG), i, 1524.
addition of phosphorus nitride to (ALLISON), i, 218.
potassium salts in (AMES and SIMON; FRAPS), i, 1523.
effect of sodium nitrate in (ANON.), i, 347.
effect of addition of straw to (MARTIN), i, 1372.
sulphofication in (KALUSHSKI), i, 492.
sulphur as a fertiliser for (KALUSHSKI), i, 492.
urea in (BRIOUX), i, 491; (COUTURIER and PERRAUD), i, 765.

Soils, decomposition of urea in (LITTAUER), i, 218.
microbiology of (VINOGRADSKI), i, 765.
inoculation of, with *Azotobacter* (LIPMAN and TEAKLE), i, 491.
effect of alkali salts on bacteria in (GIBBS, BATCHELOR, and MAGNUSON), i, 1030.
effect of micro-organisms on absorption in (STOKLASA), i, 765.
formation of thiosulphates in, by micro-organisms (GUITTONNEAU), i, 766.
effect of carbon dioxide in air of, on growth of plants (PARKER), i, 1223.
formation and decomposition of humus in (BALKS), i, 1031.
effect of removing soluble humus from (CROWTHER), i, 1372.
humification of organic matter in (ROBINSON and JONES), i, 491.
arable, occurrence of cobalt and nickel in (BERTRAND and MOKRAGNATZ), i, 492.
manganese in (BERTRAND), i, 223.
Burma, buffer action of (CHARLTON), i, 768.
clay, electrical charge on colloids in (DAYHUFF and HOAGLAND), i, 219.
forest, air capacity and acidity of (KVAPIL and NĚMEC), i, 221.
"Hager" (KNICKMANN and HELBIG), i, 1528.
limed, retention of sulphates by (MACINTYRE and SHAW), i, 490.
marsh, hydrogen peroxide catalase in (SMOLIK), i, 1524.
moor, acidity of (ARND), i, 221.
effect of humic acids on bacteria in (ARND), i, 490.
prairie, effect of grain growing on nitrogen and organic matter in (SHUTT), i, 768.
Punjab, fixation of nitrogen in (LAUDER and ALI), i, 1524.
Rothamsted, base exchange in (PAGE and WILLIAMS), i, 222.
saline, effect of sulphur on (KALUSHSKI and SOLNIJEVA), i, 624.
analysis of (MCGEORGE), i, 348; (GEDROITZ), i, 489.
determination of acidity of (HAGER), i, 489; (ARND), i, 490; (NIKLAS and HOCK), i, 768.
determination of alkali in (JOSEPH, MARTIN, and HANCOCK), i, 222.
determination of ammonia in (MCLEAN and ROBINSON; HARPER), i, 224.
determination of colloids in (BOUYOUCOS), i, 348.
Soils, determination of hydrogen-ion concentration in (ATKINS; BARNETTE, HISSINK, and VAN DER SPEK), i, 220; (NIKLAS and HOCK), i, 348, 1526; ii, 325; (ARRHENIUS), i, 1525; (PIERRE), i, 1526.
apparatus for (TRÉNEL), i, 874.
with quinhydrone electrodes (BRIOUX and PIEN), i, 1227.
inhibition of bumping in determination of nitrogen in (HANCE), i, 1032.
determination of nutritive requirements of (DENSCH and PFAFF), i, 1371.
determination of sulphur in (WOLKOFF), i, 224.
Soil solution, composition of (MARTIN and BURD), i, 1526, 1527.
Soja beans, culture of plants of (GINSBURG), i, 1121.
constituents of, and the iodine number of their oil (ANON.), i, 346.
oxidising enzymes in (NITZESCU and COSMA), i, 471.
lecithin and cephalin of (LEVENE and ROLF), i, 487.
urease from, and its hydrolytic action (TAUBMANN), i, 744.
Sols, orientation of particles in (ZOCHER), ii, 966.
Solids, properties and structure of (FRIEDERICH), ii, 374.
fluorescence of (GYEMANT), ii, 13.
electrification by friction between gases and (PERUCCA), ii, 1028.
specific inductive capacity of (ERRERA), ii, 362.
corresponding temperatures for (BRODSKY; LAFUMA), ii, 26.
contraction constants of (BALANDIN), ii, 637.
contraction regularities in the formation of compound (SAŠLAVSKY), ii, 933.
angles of contact and polarity of surfaces of (ADAM and JESSOP), ii, 962.
internal pressure of (RICHARDS), ii, 362.
solution of, in liquid surfaces (VOLMER and MAHNERT), ii, 508.
rôle of water in (BALAREFF), ii, 409.
velocity of dissociation of (CENTNERSZWER and BRUŽs), ii, 685.
reactivity of (HEDVALL), ii, 125; (HEDVALL and HEUBERGER), ii, 306.
reactions of (BALAREFF), ii, 893.
binary, density of (PANICHI), ii, 493.
incandescent, photoelectric action of light from (BECKER), ii, 1107.

Solid state, complexity of (SMITS and SCHOENMAKER), ii, 267 ; (SMITS and RUTGERS), ii, 268.
Solid solutions. See Solutions, solid.
Solubility, determination of, at high pressures (COHEN and VAN DER BOSCH), ii, 283.
apparatus for determination of (COHEN, DE MEESTER, and MOESVELD), ii, 151.
heat of solution and lattice energy of salts (BUTLER), ii, 39.
influence of pressure on (COHEN, DE MEESTER, and MOESVELD), ii, 852.
influence of salts on (v. EULER and RUDBERG), ii, 207.
of ampholytes (v. EULER and RUDBERG), ii, 853.
of isomerides (JOHNSTON ; ANDREWS, KOHMAN, and JOHNSTON), ii, 852 ; (ANDREWS ; KOHMAN), ii, 1052 ; (KOHMAN and ANDREWS), ii, 1053.
in mixed liquids (PLEUGER), ii, 283.
of bi-bivalent salts in solutions containing a common ion (WALKER), ii, 769.
Solubility of sparingly soluble substances (REMY and KUHLMANN), ii, 30, 119.
maximum, conditions of (COLSON), ii, 37.
Solutes, ionised, interionic attraction theory of (NOYES and BAXTER ; DEBYE and PAULING), ii, 970.
Solution, contraction of volume on (RAKSHIT), ii, 238.
Solutions, potential differences of, at the boundaries of (FRICKE and ROHMANN), ii, 41.
electrons in (PISARSHEVSKI), ii, 210.
of low dielectric constant, electrolytes in (GROSS and HALPERN), ii, 1152.
specific heat of (DE KOLOSOVSKI), ii, 870.
effect of viscosity on (DE KOLOSOVSKI), ii, 653.
viscosity of (DE KOLOSOVSKI), ii, 765.
compressibility of (KAR), ii, 970.
deviations of, from van't Hoff's law (SWIENTOSLAWSKI), ii, 388.
hydrate theory of (TAYLOR), ii, 858.
molecular contraction in (RAKSHIT), ii, 765.
interaction in (ADAM and JESSOP), ii, 772.
expression for reaction of (GIRIBALDO), ii, 325.
velocity of bimolecular reactions in (CHRISTIANSEN), ii, 47.
films on surfaces of (SCHOFIELD and RIDEAL), ii, 960.
Solutions, spectroscopic determination of complexes in (JOB), ii, 389.
aqueous, absorption of ultra-violet light by (GRIEVESON), ii, 472.
specific heat of (RICHARDS and GUCKER), ii, 848.
effect of temperature on the internal friction and conductivity of (WIEN), ii, 931.
dimensions of ions in (JABŁCZYŃSKI), ii, 33.
determination of complex salts or ions in (PATTERSON and DUCKETT), ii, 389.
of strong electrolytes, theory of (HÜCKEL), ii, 513.
effect of temperature on dielectric constants of (KOCKEL), ii, 932.
surface tensions of, against oils (HOWARD and SOLLMAN), ii, 109.
dilute, electrical conductivity of (REMY), ii, 299.
very dilute, ultra-violet adsorption spectra of (SUHRMANN and HUPPERT), ii, 773.
non-aqueous, electrochemistry of (MÜLLER, HÖLZL, KNAUS, PLANISZIG, and PRETT), ii, 133 ; (MÜLLER, HÖNIG, and KONETSCHNIGG), ii, 134 ; (MÜLLER, PINTER, and PRETT), ii, 882.
decomposition potentials of (FINKELSTEIN), ii, 546.
ultrafiltration of (BECHHOLD and SZIDON), ii, 529.
of non-volatile solutes, vapour pressure of (MALI), ii, 850.
sensitive, apparatus for evaporation of (SCHMALFUSS and KALLE), ii, 320.
solid (BRUNI and LEVI), ii, 281 ; (BRUNI), ii, 380.
theory of (LASAREV), ii, 1144.
electrical conductivity of (CUY), ii, 378.
standard, preparation of (PREGL), ii, 998.
supersaturated (FISCHER), ii, 853.
true, structure of (v. WEIMARN), ii, 1055.
Solvents, theory of systems of (GERMANN), ii, 1143.
influence of, on rotatory power (LUCAS), ii, 712.
selective action of (WRIGHT), ii, 1144.
distribution of a solute between (SCHULZ), ii, 956.
mixed, velocity of reaction in (JONES, MCCOMBIE, and SCARBOROUGH), ii, 137 ; (MCCOMBIE, ROBERTS, and SCARBOROUGH), ii, 554.
organic, solubilities of metallic salts in (MÜLLER), ii, 380.

Somatoid forms (KOHLSCHÜTTER and EGG), ii, 1035.
d-**Sorbitol**, oxidation of, with bromine water (TALEN), i, 1382.
Sorbose, formation of, from formaldehyde (KÜSTER and SCHODER), i, 366.
d-**Sorbose**, preparation of, by oxidation of *d*-sorbitol (TALEN), i, 1382.
Sound, velocity of, in liquids and their heat of vaporisation (IONESCU), ii, 644.
Soy. See Soja.
Sparteine, detection of (COUCH), ii, 448.
Spathulatine, and its derivatives (COUCH), i, 61.
Spectra, complex structure of (GOUDSMIT), ii, 725.
multiplet structure in (BRAMLEY), ii, 831.
quantum theory of red displacement in (KUDAR), ii, 467.
periodicity in structure of (MEGGERS), ii, 258.
excitation of, by impact of electrons (HERTZ and DE VISSER), ii, 338.
excitation of forbidden lines in (FOOTE, TAKAMINE, and CHENAULT), ii, 916.
broadening of lines in (HOLTSMARK and TRUMPY), ii, 338.
fine structure of lines in (VALLARTA), ii, 449; (RUARK and CHENAULT), ii, 1103.
intensities of lines in (KEMBLE), ii, 178; (TAMM), ii, 1023; (FOWLER), ii, 1104.
inter-combination lines in (BOUMA), ii, 915.
multiplet lines in (RUSSELL; RAMAN and DATTA), ii, 614.
intensity of multiplet lines in (ORNSTEIN and BURGER), ii, 251; (FERMI), ii, 340; (SOMMERFELD and HÖNL), ii, 468; (KRONIG), ii, 458, 917; (RUSSELL), ii, 725; (ORNSTEIN), ii, 916; (BACK), ii, 917.
Zeeman patterns in (Hicks), ii, 3.
influence of an electric field on Zeeman effect in (UREY), ii, 170.
doublets and triplets in (SUGIURA), ii, 726.
absorption maxima in, determined spectroscopically and spectrophotometrically (GOMBOS), ii, 178.
in relation to the polarisability of the atom-core (SCHRÖDINGER), ii, 722.
of atoms of the same electronic structure (HARTREE), ii, 2; (BOWEN and MILLIKAN), ii, 916.
of elements from scandium to nickel (HUND), ii, 912.
of the lighter elements, primed terms in (LAPORTE), ii, 1104.
Spectra of explosive mixtures of oxygen, nitrogen, and acetylene (GARNER and SAUNDERS), ii, 627.
of exploded wires (SMITH), ii, 1017.
absorption, of aldehydes and ketones (LECOMTE; PURVIS), ii, 627.
and constitution of colouring matters (KEHRMANN and SANDOZ), i, 983.
dispersion and density of homologous compounds (KRETHLOW), ii, 1029.
of ketones (PLOTNIKOV), ii, 837; (LANGEDIJK), ii, 1116.
of mixed metal vapours (BARRATT), ii, 927.
of non-polar compounds and unsaturated ketones (SCHEIBE, RÖSSLER, and BACKENKÖHLER), ii, 352.
infra-red (MÁRTON), ii, 1025.
of alcohols (LECOMTE), ii, 351.
of organic ammonia compounds (BELL), ii, 928.
ultra-red (BONINO), ii, 838.
ultra-violet, photography of (CROSS), ii, 351.
photometric measurement of (LEY and VOLBERT), ii, 78.
of very dilute solutions (SUHRMANN and HUPPERT), ii, 773.
of organic acids (VLÈS and GEX), ii, 472.
of benzene derivatives (KLINGSTEDT), ii, 929.
of metallic halides (GETMAN), ii, 837.
of organic compounds (MARCHLEWSKI and MOROZ), ii, 353.
K-absorption, and chemical constitution (STELLING), ii, 935, 936.
L-absorption (NISHINA), ii, 457.
arc, broadening of lines in (LOWERY; JOHNSON), ii, 614.
complexity of lines in (ROYDS), ii, 249.
excitation of forbidden lines in (FOOTE, TAKAMINE, and CHENAULT; TAKAMINE and FUKUDA), ii, 166.
Stark effect in (NAGAOKA and SUGIURA), ii, 171.
of the platinum metals (MEGGERS), ii, 454.
arc and spark, *s*-terms in (v. WIŚNIEWSKI), ii, 449.
displacement law for (MEGGERS, KIESS, and WALTERS), ii, 77.
Döppler effect in (KREFFT), ii, 78.
band (DALTA), ii, 86.

Spectra, band (MECKE), ii, 259, 351, 736; (DESLANDRES), ii, 736, 1023, 1114; (DUFFIEUX), ii, 1023; (DUFFENDACK), ii, 1114.
quantum theory of (BLACKBURN), ii, 260.
structure and distribution of (DESLANDRES), ii, 626, 930.
nature of (NICHOLSON), ii, 930.
isotope effect in (MULLIKEN), ii, 259, 346, 833, 1020.
intensities in (FOWLER), ii, 623; (MECKE), ii, 626; (DIEKE), ii, 626, 836; (HÖNL and LONDON), ii, 1024.
in relation to molecular properties (KRATZER), ii, 836.
band emission, of aromatic compounds (MARSH), ii, 470, 625.
cathode, of metals and their salts (KIMURA and NAKAMURA), ii, 166, 167.
comet tail (LEMON), ii, 249.
complex (HUND), ii, 1104.
continuous, of halogens (STEUBING), ii, 452.
diffraction, oscillation phenomena in (BUCHWALD), ii, 1117.
flame, intensity measurements in (BLEEKER and BONGERS), ii, 77; (BLUKER), ii, 1025.
fluorescence (BAYLE, FABRE, and GEORGE), ii, 260; (NUNAN and MARSH), ii, 353.
infra-red (WITT; TROWBRIDGE), ii, 335.
band, constants of (FERMI), ii, 471.
magnetic, study of (NIKITIN), ii, 173.
mass (ASTON), ii, 618.
of light elements (COSTA), ii, 1021.
β-ray (THIBAUD), ii, 622.
γ-rays, study of, by crystal diffraction (THIBAUD), ii, 176.
Röntgen ray (LEVI), ii, 456; (LEIDE; RÉCHOU; RAY; v. WIŚNIEWSKI), ii, 457; (BÄCKLIN, SIEGBAHN, and THORÆUS), ii, 614.
intensities in (ROBINSON), ii, 728.
energy levels of (COSTER), ii, 458.
semi-optical lines in (BÄCKLIN, SIEGBAHN, and THORÆUS), ii, 457; (DE BROGLIE and DAUVILLIER), ii, 458.
$L\alpha$-doublets in (RAY), ii, 78.
from a ruled reflection grating (COMPTON and DOAN), ii, 1103.
effect of a surrounding box on (COMPTON and BEARDEN), ii, 1167.
Spectra, Röntgen ray, of aliphatic acids (DE BROGLIE and TRILLAT), ii, 640.
of elements from aluminium to calcium (BÄCKLIN), ii, 914.
of light elements, K lines in (TURNER), ii, 915.
of long-chain organic compounds (SHEARER), ii, 938.
quantitative analysis by means of (COSTER and NISHINA), ii, 324.
continuous (MARCH), ii, 614; (BRONSTEIN), ii, 727.
doublet (WENTZEL), ii, 728.
Röntgen-spark (WENTZEL), ii, 251.
resonance fluorescence, Döppler effect in (RUMP), ii, 473.
series (BOWEN and MILLIKAN), ii, 252.
quantum numbers and (LINDSAY), ii, 915.
spark (WERNER), ii, 165.
in the Schumann region (L. and E. BLOCH), ii, 726.
classification of enhanced lines in (KIMURA and NAKAMURA; KIMURA), ii, 726.
Tesla-luminescence (MCVICKER, MARSH, and STEWART), ii, 12, 86, 630.
ultra-violet, visual perception of lines in (STEUBING), ii, 449.
screening doublets in (UNSÖLD), ii, 1016.
intensity of (DORGELO), ii, 335.
of alkali metal (SHAVER), ii, 451.
emission, of halogens (LUDLAM and WEST), ii, 350.
spark (LANG), ii, 609.
Spectrochemistry of aromatic polynuclear hydrocarbons (v. AUWERS and KRAUL), i, 900.
of nitrogen compounds (v. AUWERS and KRAUL), ii, 847.
ultra-red (BONINO), ii, 1032.
Spectrograph, Röntgen ray (CORK), ii, 250; (MÜLLER), ii, 895.
Spectrometer, colour vision (PEDDIE), ii, 1118.
Spectrophotometer, direct-reading (KEUFFEL), ii, 1193.
Spectroscope, lighting unit for (FREDERICK and WEBSTER), ii, 588.
Spectroscopy, shift law in (FUES), ii, 340.
new apparatus for (LEISS), ii, 341.
electric and magnetic (ARKADIEV), ii, 750.
Sperm oil, constitution of tetradecenoic acid from (TSUJIMOTO), i, 1128.
Arctic, unsaponifiable matter of (TSUJIMOTO), i, 772.

Spermine, isolation of, and its salts and derivatives (DUDLEY, M. C. and O. ROSENHEIM), i, 294.
phosphate, isolation of, from semen and testis (ROSENHEIM), i, 180.
Sphagnum, acidity of salt solutions after shaking with (SKENE and STUART), i, 765.
Sphingosine (LEVENE and HALLER), i, 890.
Spiræa, monotropitin in roots of species of (BRIDEL), i, 347.
Spirans (LEUCHS and SANDER), i, 1432.
synthesis of (RADULESCU and GEORGESCU), i, 819.
colour of (RADULESCU), i, 1159.
Spleen, formation of bile pigments in (ERNST and SZAPPANYOS; ERNST; ERNST and FÖRSTER), i, 732.
production of urea in autolysis of (McCANCE), i, 472.
effect of removal of, on blood-sugar (BIERRY, RATHERY, and LEVINA), i, 857.
Splenomegaly. See Gaucher's disease.
Squill, African. See *Urginea Burkei*.
Stability of organic compounds (BOLIN), ii, 411.
Staining of tissues (GICKLHORN and KELLER), i, 468.
Standard solutions. See Solutions, standard.
Stannic salts. See under Tin.
Stannous salts. See under Tin.
Staphylococcus, action of bismuth on (LEMAY and JALOUSTRE), i, 206.
Starch (LING and NANJI), i, 516, 517; (PRINGSHEIM and LEIBOWITZ), i, 1043; (PRINGSHEIM, LEIBOWITZ, and SILMANN), i, 1244.
formation of, from arabinose by plants (POLONOVSKI and MORVILLEZ), i, 1222.
constitution of (KUHN), i, 11, 636.
elasticity and tensile strength of (NEALE), ii, 783.
hydrolysis of (BIEDERMANN and JERNAKOFF), i, 11; (KARRER), i, 1370.
action of polarised light on (BALY and SEMMENS), i, 12; (JONES), i, 1212.
adsorption of iodine by (ANGELESCU and MIRCESCU), ii, 1149.
absorption of water by films of boiled (FARROW and SWAN), ii, 506.
swelling of, in cells (LEPESCHKIN), i, 1004.
swelling of granules of (ARZICHOVSKI), ii, 967.
saccharification of, by amylase (PETIT and RICHARD), i, 1504.
Starch, decomposition of, by bacteria (SIEDICH), i, 1510.
action of diastase on (LECOQ; DE HOOP and VAN LAER), i, 470.
colloidal, properties of (SAMEC), ii, 1153.
paste, liquefaction of (PETIT), ii, 967.
capillary flow of (FARROW and LOWE), ii, 509.
sols, properties of (KRUYT and TENDELOO), ii, 113.
iodide, composition of (MURRAY), i, 889.
determination of (CHRZASZCZ), ii, 74.
Stearaldehyde *p*-nitrophenylhydrazone (STEPHEN), i, 1131.
Stearic acid, crystal structure of (MULLER), ii, 748.
mixtures of eicosoic acid and (MORGAN and BOWEN), i, 114.
calcium salt (KLIMONE, v. MOLTINI, and BENEDIK), i, 506.
solubility of (HARRISON), ii, 190.
sodium salt, emulsifying power of (YAJNIK and ILAHI), ii, 968.
thallium salt (HOLDE and SELIM), i, 504.
Stearic acid, *di*bromo*di*iodo- and *di*iodo*di*hydroxy- (HOLDE and GORGAS), i, 883.
β-hydroxy-, and its ethyl ester, and hydrazide (LEVENE and HALLER), i, 890.
γ-hydroxy- (CLUTTERBUCK), i, 5.
*di*hydroxy-, oxidation of (LAPWORTH and MOTTRAM), i, 1234.
Stearolic acid, crystal structure of (MULLER), ii, 748.
hydration of (ROBINSON), ii, 745.
N-**Stearylpropylenediamine** (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 1133.
Stereochemistry (WALDEN), i, 349.
studies in (HOLMBERG and MÜLLER), i, 1236; (HOLMBERG), i, 1238; (HOLMBERG and ROSÉN), i, 1291.
of aromatic compounds (KUHN and JACOB), i, 1404.
Stereoisomerism and permeability (OKAGAWA), i, 711.
of aromatic compounds (KUHN and JACOB), i, 1260.
Steric hindrance (FREUDENBERG and HUBER), i, 229.
Steric series (FREUDENBERG and MARKERT), i, 1275.
Sterol, $C_{34}H_{58}O$, and its acetate, from American cotton wax (CLIFFORD and PROBERT), i, 879.
Stibinic acids, aromatic, complex metallic compounds of (CHEMISCHE FABRIK VON HEYDEN), i, 87.

Stigmastane (WINDAUS and BRUNKEN), i, 394.
Stigmastanol. See Tetrahydrostigmasterol.
Stigmastanone, and its derivatives (WINDAUS and BRUNKEN), i, 394.
Stigmasterol (WINDAUS and BRUNKEN), i, 394.
Stilbazole methiodide (KOENIGS, KÖHLER, and BLINDOW), i, 834.
2-Stilbazole, *cis-* and *trans*-2′-amino-, and -2′-nitro-, and their derivatives (RÄTH and LEHMANN), i, 432.
Stilbene hydrate (ISHIBASHI), i, 1432.
Stilbene, 4-iodo-2-nitro-, and 2:4-*di*-nitro-2′-hydroxy- (GULLAND and ROBINSON), i, 1188.
2-nitro-4′-amino-4-cyano-, and its hydrochloride and derivatives (PFEIFFER, KALCKBRENNER, and BEHR), i, 549.
2′:4′-*di*nitro-3:4-*di*hydroxy-, methylene ether (DEY and ROW), i, 954.
Stilbene-α-carboxylic acid, derivatives of (DEY and ROW), i, 954.
Stilbene-4-carboxylic acid, 2-nitro-4′-amino-, and its salts and derivatives (PFEIFFER, KALCKBRENNER, and BEHR), i, 549.
Stilbenediazonium hydrogen sulphate, nitro- (GULLAND and ROBINSON), i, 1188.
Stilbenediol, potassium salt (SCHEUING and HENSLE), i, 27.
Stirring apparatus, test of efficiency of (ROTH), ii, 150.
Strawberry, non-volatile acids of (NELSON), i, 762.
Streptococcus, action of bismuth on (LEMAY and JALOUSTRE), i, 206.
Strontium, structure of (COLLINS), ii, 733.
pure, preparation of (DANNER), ii, 62.
photo-electric effect on (DÖPEL), ii, 832.
Strontium alloys with mercury, electrodes of. See Electrodes.
Strontium chloride, refractive power of, for *X*-rays (MARK and TOLKSDORF), ii, 933.
selenide, crystal structure of (SLATTERY), ii, 369.
Strontium detection:—
detection of (KOLTHOFF), ii, 1095.
detection of, in presence of barium (FEIGL), ii, 435.
Strophanthidin, structure of (JACOBS and COLLINS), i, 1082.
ψ-Strophanthidin (JACOBS and COLLINS), i, 567.
Strophanthin (JACOBS and COLLINS), i, 566, 1082.
toxicity of (Tocco-Tocco), i, 613.
Strophanthus letei, saponin from (WELLS and GARCIA), i, 614.
Strychnine (LIONS, PERKIN, and ROBINSON), i, 831.
arsenious tartrate (DEBUCQUET), i, 1090.
Strychnos, determination of alkaloids in preparations of (SABALITSCHKA and JUNGERMANN), ii, 608.
Strychnos alkaloids (LEUCHS and KANAO), i, 61; (LEUCHS and TAUBE), i, 1314.
Sturgeon. See *Acipenser sturio*.
Styphnic acid, methyl ester, pyridine and quinoline salts (KÖHN and LÖFF), i, 1265.
Styrene (*phenylethylene*), α-chloro- (DUFRAISSE and VIEL), i, 1138.
Styrylacrolein. See ε-Phenyl-$\Delta^{\beta\delta}$-pentadien-α-al.
Styryl amyl ketone, and its oxime (RYAN and SHANNON), i, 558.
2-Styryl-3-*o*-anisolesulphonyl-2-methylquinoline, and its hydrochloride (TRÖGER and BROHM), i, 1453.
Styrylbenzopyrylium salts (WALKER and HEILBRON), i, 693; (HEILBRON, WALKER, and BUCK), i, 694.
Styryl*di*chloroarsine, α-chloro- (HUNT and TURNER), i, 844.
2-Styrylchromanol, derivatives of (ROBINSON and SHINODA), i, 1301.
2-Styrylchromone, 3:7-*di*- and 3:5:7-*tri*-hydroxy- (ROBINSON and SHINODA), i, 1301.
Styryl *p*-methoxystyryl ketone, *m*-amino- and *o*- and *p*-nitro- (PFEIFFER, PRAHL, FITZ, and STOLL), i, 680.
Styryl *p*-methoxystyryl ketones, amino-, and their *per*chlorates (PFEIFFER), i, 410.
2-Styryl-4-methylbenzopyrylium chloride, 4′:7-*di*- and 3′:4′:7-*tri*-hydroxy- (HEILBRON, WALKER, and BUCK), i, 694.
Styryl methyl ketone (*benzylideneacetone*), absorption spectra of (PURVIS), ii, 627.
oxide (WEITZ), i, 408.
and *o*-chloro-, and *o*-hydroxy-, hydrazones of (v. AUWERS and KREUDER), i, 1455.
Styryl methyl ketone, chloro-oximino-, and its derivatives (RHEINBOLDT and SCHMITZ-DUMONT), i, 1132
α-thiocyano-, and its *di*bromide (CHALLENGER and BOTT), i, 936.
Styryl methyl ketone-*p*-arsinic acid, semicarbazone (MARGULIES), i, 448.
2-Styryl-1-methyl-4-quinazolone (HEILBRON, KITCHEN, PARKES, and SUTTON), i, 1321.

Styryl nitrocinnamylidenemethyl ketones (PFEIFFER), i, 409.

2-Styrylpyridine, 4:6-*di*chloro-5-cyano-, and its dimeride (SPÄTH and KOLLER), i, 1446.

2-Styrylquinoline, derivatives of (PFEIFFER, RHEINBOLDT, and WOLF), i, 412.

2- and **4-β-Styrylquinolines**, hydroxy-derivatives, and their salts (TRÖGER and DUNKER), i, 433.

Sub-electrons (DAECKE), ii, 258, 349.

Sublimation, devices for (JOHN and FISCHL), ii, 897.

Submaxillary glands, metabolism of phosphoric acid in (CAMIS), i, 191.

Substance, $C_3H_5O_3NS$, from lactamide and thionyl chloride (BERGMANN and MIEKELEY), i, 235.

$C_3H_4O_2NCl$, from dichlorourethylane and hydrogen chloride (MELDRUM and ALIMCHANDANI), i, 1273.

$C_4H_4O_3N_2$, from diketopiperazine and hypobromite (GOLDSCHMIDT and STEIGERWALD), i, 1109.

$C_5H_3OCl_5$, from *m*-aminophenol and sulphuryl chloride (ELLER and LORENZ), i, 538.

$C_5H_9O_4ClS$, from ethyl lactate and thionyl chloride (BERGMANN and MIEKELEY), i, 235.

C_6H_9OCl, from chlorine monoxide and *cyclo*hexene (GOLDSCHMIDT and SCHÜSSLER), i, 498.

$C_{10}H_{18}O_2$, from lemon oil (ROMEO), i, 1293.

$C_{10}H_{13}ON_2Br$, from α-bromocinnamaldehyde and methylhydrazine (v. AUWERS and OTTENS), i, 1429.

$C_{11}H_{18}O_2Cl_6$, from condensation of acetone and chloroform (TAFFE), i, 2.

$C_{12}H_{16}O_2$, from oil of Appa grass (MOUDGILL), i, 945.

$C_{13}H_{10}ON_2Se$, from phenylpiaselenazonium chloride and alkalis (BATTEGAY and VÉCHOT), i, 1467.

$C_{13}H_{14}O_5N_2$, from tryptophan in the body (MATSUOKA and YOSHIMATSU), i, 731.

$C_{14}H_{14}O_2$, from chloroacetic acid and magnesium phenyl bromide (PETERS, GRIFFITH, BRIGGS, and FRENCH), i, 544.

$C_{14}H_{18}O_7$, from carbon dioxide and dimethylketen (STAUDINGER, FELIX, and HARDER), i, 786.

$C_{14}H_{19}N_3$, from 2:4-dimethylpyrrole, hydrogen chloride, and hydrogen cyanide (FISCHER and NENITZESCU), i, 835.

Substance, $C_{14}H_{12}O_5Cl_6$, and its derivatives, from *m*-hydroxytoluic acid and chloral hydrate (MELDRUM and ALIMCHANDANI), i, 1272.

$C_{15}H_{16}O_3$, from α-bromopropionic acid and magnesium phenyl bromide (PETERS, GRIFFITH, BRIGGS, and FRENCH), i, 544.

$C_{15}H_{14}ON_2$, from phenylhydrazine and derivatives of phenyl β-hydroxyvinyl ketone (v. AUWERS and SCHMIDT), i, 585.

$C_{15}H_{20}O_2N_2$, and its salts, from oxidation of eserethole (STEDMAN and BARGER), i, 293.

$C_{16}H_9ONS$, from oxidation of 4-hydroxy-2-nitrophenyl α-naphthyl sulphide (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 596.

$C_{16}H_{10}O_3N_2$, from 2-hydroxyanthraquinonyl-3-hydrazine and acetic anhydride (TANAKA), i, 1434.

$C_{16}H_{11}ON_3$, from oxidation of 1-benzeneazo-2-aminonaphthalene (CHARRIER, CRIPPA, TOIA, and BIANCHESSI), i, 590.

$C_{16}H_{28}ON_2$, and its dipicrate, from methylation of esoline ethyl ether (STEDMAN and BARGER), i, 293.

$C_{17}H_{28}O_3$, from bacterial decoompsition of cholic acid (KAZIRO), i, 1363.

$C_{17}H_{13}ON_3$, from *o*-nitro-α-phenylcinnamonitrile and potassium cyanide (BRAND and LOEHR), i, 684.

$C_{18}H_{24}O_{10}Cl_8$, from indene and chlorine monoxide (GOLDSCHMIDT and SCHÜSSLER), i, 498.

$C_{18}H_{30}O_3N_2$, and its salts, from methylation of esoline ethyl ether (STEDMAN and BARGER), i, 293.

$C_{19}H_{24}O_{10}$, from carbon dioxide and dimethylketen (STAUDINGER, FELIX, and HARDER), i, 786.

$C_{20}H_{11}O_3N$, from isatin and 4:5-benzcoumaran-3-one (FRIES and PUSCH), i, 569.

$C_{20}H_{27}O_3N_2P$, from lactophenine, anæsthesin, and phosphoryl chloride (WEIL), i, 157.

$C_{21}H_{18}N_4$, and its derivatives from aniline and 5-chloro-4-phenyl-1-*p*-tolyl-1:2:3-triazole and also from *p*-toluidine and 5-chloro-1:4-diphenyl-1:2:3-triazole (CARNELLEY and DUTT), i, 166.

$C_{21}H_{32}O_4$, from oxidation of methyl abietate (RUZICKA, MEYER, and PFEIFFER), i, 1420.

$C_{22}H_{26}O_4N_4$, from aminoantipyrine and acetylanæsthesin (WEIL), i, 157.

Substance, $C_{26}H_{38}N_4I_2$, from action of methyl iodide on calycanthine (SPÄTH and STROH), i, 1447.
$C_{27}H_{24}O$, from $\beta\beta$-diphenylpropionic acid and magnesium phenyl bromide (PETERS, GRIFFITH, BRIGGS, and FRENCH), i, 544.
$C_{28}H_{22}O_6$, from piperonal and *p*-methoxystyryl ethyl ketone (RYAN and CAHILL), i, 558.
$C_{28}H_{24}N_4$, from phenylacetonitrile and 3-cyano-2-methylindole (SEKA), i, 67.
$C_{28}H_{25}N_3$, and its derivatives, from 2-benzyl-1-hydrindone and phenylhydrazine (LEUCHS and WINZER), i, 1281.
$C_{28}H_{26}O_4$, from anisaldehyde and ketones (RYAN and CAHILL), i, 558.
$C_{28}H_{37}O_9N$, from oxidation of delphinin (KELLER), i, 831.
Substitution, influence of, on physical and chemical properties (RULE and PATERSON), i, 29.
effect of, on equilibria in binary systems (KREMANN and DRAZIL), ii, 649; (KREMANN, ZECHNER, and WEBER; KREMANN, ZECHNER, and DRAZIL), ii, 650.
in aromatic compounds (BARNETT, COOK, and MATTHEWS), i, 648.
influence of α-methoxyvinyl groups in (C. K. and E. H. INGOLD), i, 657.
directive influence of nitrogen and oxygen atoms in (HOLMES and INGOLD), i, 1142.
influence of nitroso groups in (INGOLD), i, 646.
in the aromatic nucleus (BARNETT and MATTHEWS), i, 18; (PRINS), i, 18, 379; (BARNETT and COOK), i, 123; (BARNETT, COOK, and MATTHEWS), i, 900, 1140, 1398.
in the benzene nucleus (FRANCIS, HILL, and JOHNSTON), i, 1141.
Succinamic acid, *d*-thiol- (LEVENE and MIKESKA), i, 6.
Succinic acid, electrolytic preparation of (NORRIS and CUMMINGS), i, 668.
dissociation constants of (BRITTON), ii, 977.
radical dissociation of aryl derivatives of (LÖWENBEIN and FOLBERTH), i, 552.
equilibria of, with phenols (KREMANN, ZECHNER, and DRAZIL), ii, 650.
oxidation of, in tissues (v. SZENT-GYÖRGYI), i, 93.
alkaline earth salts, solubilities of (WALKER), ii, 769.
Succinic acid, aniline trihydrogen salt (RAMBECH), i, 385.
lead salt, solubilities of (AUERBACH and WEBER), i, 1130.
di-*p*-tolyl and di-*m*-xylyl esters, and *di*bromo-, di-*p*-tolyl ester (FRIES and BARTENS), i, 568.
detection of, in tissues (KLEIN and WERNER), i, 871.
Succinic acid, thiol-, and its sodium salts (LEVENE and MIKESKA), i, 512.
d-thiol- (LEVENE and MIKESKA), i, 6.
Succinic acids, substituted, synthesis of (BAKER and LAPWORTH), i, 670.
Succinic acids, $\alpha\beta$-*di*amino-, stereoisomeric, and the dibenzoyl derivative of the *meso*-form (KUHN and ZUMSTEIN), i, 1249.
Succinimide, mercury derivatives of (LYONS), i, 645.
Succinimide, amino-, derivatives of (CHERBULIEZ and CHAMBERS), i, 1046.
iodo-, structure and crystallography of (YARDLEY), ii, 746; (TUTTON), ii, 747.
Succinimides, tetra-alkyl derivatives, and their pharmacological action (DOX), i, 796.
CC-substituted, preparation of (FARBWERKE VORM. MEISTER, LUCIUS, & BRÜNING), i, 376.
Succinodehydrogenase, effect of potassium salts on (SAHLIN), i, 743.
Succinylfluorescein (DUTT and THORPE), i, 141.
Succinylrhodamine hydrochloride (DUTT and THORPE), i, 142.
Succinyl-*p*-tolil, nitration of (BRADY, QUICK, and WELLING), i, 1400.
Sucrose (*saccharose; cane-sugar*), rotatory dispersion of (LOWRY and RICHARDS), ii, 265.
configuration of (SCHLUBACH and RAUCHALLES), i, 1243.
effect of inorganic salts on the polarisation of solutions of (BROWN), ii, 372.
osmotic pressure of (APPLEBEY and DAVIES), ii, 964.
inversion coefficient of (SAILLARD), i, 1133.
catalysis and inversion of, by acetic acid (SAILLARD), ii, 307.
effect of dextrose and lævulose on the inversion of, by honey invertase (NELSON and SOTTERY), i, 104.
hydrolysis of (NELSON and BODANSKY), i, 1008.
hydrolysis constant of (COLIN and CHAUDUN), i, 233.

Sucrose (*saccharose; cane-sugar*), hydrolysis of, by invertase in presence of α-methylglucoside (NELSON and FREEMAN), i, 739.
solubility of (MONDAIN-MONVAL), ii, 769.
effect of catalysts on carbonisation of (LESSING and BANKS), i, 9.
acids resulting from yeast fermentation of (KOSTYTSCHEV and FREY), i, 1214.
determination of, oxidimetrically (TÄUFEL and WAGNER), ii, 1007.
Sugars, preparation of, by means of diphenylmethanedimethyldihydrazine (v. BRAUN and BAYER), i, 1382.
and their derivatives, rotation and structure of (HUDSON and PHELPS), i, 8; (HUDSON), i, 232, 233, 514, 636; (HUDSON and KUNZ), i, 1043.
theory of protective action of (SHRIVASTAVA, GUPTA, PRASAD, and BHATNAGAR), ii, 293.
nomenclature of isomeric (WOHL and FREUDENBERG), i, 366.
adsorption of, by colloidal solutions (PRASAD, SHRIVASTAVA, and GUPTA), ii, 957.
condensation of, with dilute mineral acids (LEVENE and ULPTS), i, 1042.
oxidation of alcohols from (VOTOČEK and LAKES), i, 773.
oxidation of, by permanganates (KUHN and WAGNER-JAUREGG), i, 1241.
relative reducing powers of (ROWE and WIENER), i, 885.
reduction of, by aluminium alloys (NANJI and PATON), i, 117.
unsaturated reduction products of (BERGMANN, MIEKELEY, and STATHER), i, 227; (BERGMANN), i, 887.
acetone fermentation of (SPEAKMAN), i, 1013.
fermentation of, by microbes (KLUYVER and DONKER), i, 1215.
constitution of the monocarboxylic acids derived from (PRYDE, HIRST, and HUMPHREYS), i, 865.
lactone formation from carboxylic acids of (LEVENE and SIMMS), i, 1380.
phosphorylation of (NEUBERG and KOBEL), i, 1508.
compounds of sulphuric acid with (OHLE and BOURJAN), i, 634.
and their derivatives, bismuth nitrates of (MASCHMANN), i, 527.
halogen acetyl derivatives of, and their optical rotation (BRAUNS), ii, 633.
Sugars, in blood. See under Blood.
in cerebro-spinal fluid, in relation to sugar in blood (GOODWIN and SHELLEY), i, 853.
in liver, effect of alcohols on (LESSER), i, 613.
in urine. See under Urine.
colloidal (v. WEIMARN), ii, 290, 390.
polymethylated, action of emulsin on (KUHN and SCHLUBACH), i, 863.
reducing, analysis of (RUOSS), ii, 244.
determination of (PICK), ii, 906.
determination of, volumetrically (LANE and EYNON), ii, 445.
analysis of (HILDT), ii, 244; (KLASON), ii, 331.
determination of, by Benedict's method (QUICK), i, 1115.
determination of, volumetrically (VAN DER HOEVEN), ii, 331.
Sulphæmoglobin, formation of (VAN DEN BERGH and WIERINGA), i, 1475.
Sulphatase (NEUBERG and SIMON; ROSENFELD), i, 743.
Sulphates. See under Sulphur.
Sulphinic acids, and their derivatives, action of hydroxylamine on (WHALEN and JONES), i, 802.
"**Sulphisatyd**," identity of 3-thioloxindole and (SANDER), i, 977.
Sulphites. See under Sulphur.
Sulphoacetaldehyde, chloro-, barium salt (LEPOUSE), i, 784.
Sulphoacetic acid, complex salts of (HAHN and WOLF), ii, 578.
Sulphoacetic acid, bromo-, resolution of (BAEKER and MOOK), i, 632.
chloro-, resolution of, and its salts (BACKER and BURGESS), i, 359, 631.
potassium salt, crystallography of (JAEGER), ii, 948.
3-Sulpho-5-arsinobenzenesulphamic acid, 2-hydroxy, barium salt (CHRISTIANSEN, NORTON, and SHOHAN), i, 1471.
Sulphobenzoic acid, metallic and triamine salts of (HAHN and WOLF), i, 814.
complex salts of (HAHN and WOLF), ii, 578.
α-Sulpho-β-benzoylpropionic acid, and its disodium salt (BOGERT and RITTER), i, 816.
Sulphonamides, aromatic *N*-halogenated, alkali salts (CHEMISCHE FABRIK VON HEYDEN), i, 380.
1-4′-Sulphonaphthaleneazo-2:4-*di*-hydroxynaphthalene, 1-amino- (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 988.

Sulphonium compounds, physiological activity and mobility of -onium ions in (BENCOWITZ and RENSHAW), ii, 872.
effect of, on the nervous system (HUNT and RENSHAW), i, 861.
2-*p*-Sulphophenyl-5-amino-6-methyl-1:3-benzotriazole, and its salts (BERETTA and JACOOB), i, 589.
1-*p*-Sulphophenyl-3-methyl-5-pyrazolone, preparation of (REEVES), i, 699.
1-*p*-Sulphophenyl-1:2:5-triazole-3:4-dicarboxylic acid, and its strontium salt (BERETTA and JACOOB), i, 589.
***d*-α-Sulphopropionic acid**, and its sodium salts (LEVENE and MIKESKA), i, 512.
5-Sulphopyrocatechol-4-carboxylic acid, barium salt (FICHTER and STOCKER), i, 240.
Sulphosuccinic acid, and its potassium salts (LEVENE and MIKESKA), i, 512.
***d*-Sulphosuccinic acid**, salts of (LEVENE and MIKESKA), i, 6.
***d*-Sulphosuccinmonoamide**, barium salt (LEVENE and MIKESKA), i, 6.
Sulphoxyl compounds (BINZ and BAUSCH), i, 991.
Sulphur, spectrum of (BUNGARTZ), ii, 609.
K-absorption spectrum of (ROBINSON), ii, 614.
absorption spectra and constitution of the vapour of (HENRI and TEVES), ii, 19, 87.
spectrum of electrodeless discharge in vapour of (SHAVER), ii, 471.
Röntgen ray spectra of, and its compounds (RAY), ii, 914.
series spectra of (BOWEN and MILLIKAN), ii, 342, 610.
spectral frequencies of (HOLWECK), ii, 336.
critical potential of (HOLWECK), ii, 729.
liquid, electrical properties of (BLACK), ii, 24.
valency of (LECHER), i, 390; (LECHER, KÖBERLE, and STÖCKLIN), i, 391; (STEINKOPF), i, 657.
colloidal, surface tension of (JOHLIN), ii, 1054.
sols, effect of salts on stability of (v. WEIMARN and UTZINO), ii, 664.
velocity of transformation of (FRAENKEL and GOEZ), ii, 557.
affinity of metals for (JELLINEK and ZAKOVSKI), ii, 401.
and its compounds, corrosion of metals by naphtha solutions of (WOOD, SHEELY, and TRUSTY), ii, 980.
interaction of nitrogen sulphide and (USHER), ii, 581.
Sulphur, as a fertiliser (KALUSHSKI), i, 492.
nacreous, physical properties of (WHITAKER), ii, 486.
precipitated, separation of, in analysis (AWSCHALOM), ii, 823.
Sulphur compounds, acid nature of (KARVÉ), ii, 1188.
Sulphur *monochloride*, decomposition of, by water (NOACK), ii, 989.
action of, on organic acid amides (NAIK and PATEL), i, 121.
action of, on thioamides (ISHIKAWA), i, 1149.
Disulphur *di*chloride, decomposition of, by water (NEUMANN and FUCHS), ii, 410.
Sulphuryl chloride (O. and C. A. SILBERRAD and PARKE), i, 1137.
catalysis of the formation of (CUSMANO), ii, 690.
thermal decomposition of (SMITH), ii, 876.
Disulphur *di*fluoride, preparation and properties of (CENTNERSZWER and STRENK), ii, 701.
Sulphur hydride. See Hydrogen Sulphide.
Sulphides, electrolytic preparation of (FISCHER), ii, 807.
analysis of mixtures of sulphites, thiosulphates and (KURTENACKER and BITTNER), ii, 239.
determination of, in alkali and alkaline earth sulphides (SCHULEK), ii, 327.
Sulphur *di*oxide, electrolysis in (CADY and TAFT), ii, 1073.
electrochemistry of oxidation by (CARTER and JAMES), ii, 134.
adsorption of, by glass (BANGHAM and BURT), ii, 657.
heat of adsorption of, by silica gels (PATRICK and GREIDER), ii, 870.
adsorption of, in water (WHITMAN and DAVIS), ii, 106; (SHERWOOD), ii, 852.
solubility of, in water and aqueous solutions of potassium chloride and sodium sulphate (HUDSON), ii, 768.
equilibrium of water and (TAMMANN and KRIGE), ii, 869.
solubility of mixtures of cetene and (SEYER and HUGGETT), ii, 504.
solubility of mixtures of *n*-hexane and (SEYER and GILL), ii, 504.
gaseous, photochemical decomposition of (HILL), ii, 56.
detection of (EEGRIWE), ii, 156.

Sulphur *sesqui*oxide (VOGEL and PARTINGTON), ii, 890.
*tri*oxide, pure, melting point and vapour pressure of (SMITS and SCHOENMAKER), ii, 267; (SMITS), ii, 268.
Sulphurous acid, and its salts (FOERSTER and KUBEL; FOERSTER, BROSCHE and NORBERG-SCHULZ), ii, 120.
absorption spectra of (DIETZEL and GALANOS), ii, 1115.
action of, on hydroxylamine (RASCHIG), ii, 225.
reactions of nitrous acid with (RASCHIG), ii, 146.
Sulphites, catalytic oxidation of (REINDERS and VLÈS), ii, 567.
action of, on nitro and nitroso compounds (RASCHIG), i, 239.
analysis of mixtures of sulphides, thiosulphates and (KURTENACKER and BITTNER), ii, 239.
determination of, by the action of oxidising agents (HENDRIXSON), ii, 1001.
acid, combination of ethylenic hydrocarbons with (KOLKER and LAPWORTH), i, 353.
action of, on nitro and nitroso compounds (RASCHIG), i, 239.
Sulphuric acid, catalytic action of platinum in the contact process for (CLARK, MCGRATH, and JOHNSON), ii, 1176.
passage of an alternating current through (LATTEY), ii, 979.
partial pressures of water in aqueous solutions of (GREENEWALT), ii, 493.
vapour pressure of aqueous solutions of (GROLLMAN and FRAZER), ii, 398.
absorption of hydrochloric acid by (CUPR), ii, 655.
free energy of, in sulphate solutions (HARNED and STURGIS), ii, 538.
solvolysis of salts in (DAVIDSON), ii, 505.
reduction of, to hydrogen sulphide (VILA), ii, 148.
Sulphates, formation of, from thiosulphates by soil bacteria (GUITTONNEAU), i, 1218.
viscosity of solutions of (GRUNERT), ii, 859.
action of oxidising agents on, and their determination (HENDRIXSON), ii, 712.
determination of, volumetrically (KLINKE), ii, 239.
determination of, in plant sap (GORTNER and HOFFMAN), i, 485.
Sulphur:—
Persulphuric acid, electrolytic preparation of (MAZZUCCHELLI), ii, 214.
Persulphates, reaction between iodides and, in gelatin (RAWLING and GLASSETT), ii, 561.
Thiosulphates, formation of, by microorganisms in soils (GUITTONNEAU), i, 766.
conversion of, into sulphates by soil bacteria (GUITTONNEAU), i, 1218.
reduction of ferric salts by (HOLLUTA and MARTINI), ii, 305, 702.
standardisation of solutions of (DIMITROV), ii, 598.
analysis of mixtures of sulphides, sulphites, and (KURTENACKER and BITTNER), ii, 239.
determination of, in alkali and alkaline earth sulphides (SCHULEK), ii, 327.
Thionic acids, constitution of (VOGEL), ii, 1189.
Polythionic acids, preparation, constitution, and properties of (RASCHIG), ii, 229, 230.
determination of (KURTENACKER and BITTNER), ii, 434.
Polythionates (KURTENACKER and KAUFMANN), ii, 1189, 1190.
formation and decomposition of (FOERSTER), ii, 148, 701; (FOERSTER and RIESENFELD), ii, 229.
Dinitrososulphonates (RASCHIG), ii, 226.
Sulphur organic compounds (SCHÖNBERG, ROSENBACH, KRÜLL, and OSTWALD), i, 1300.
Sulphur phenyl chloride. See Benzene, chlorothiol-.
Sulphides, cyclic (v. BRAUN, BAYER, and KAISER), i, 1445.
Polysulphides, organic (THOMAS and HARDING), i, 4, 113.
Sulphurous acid, organic derivatives, constitution of (RASCHIG), i, 245.
Thiosulphates, organic (HELLER), i, 313.
Sulphur determination:—
determination of (KÜHL), ii, 156.
determination of, microchemically (GEILMANN), ii, 1000.
determination of, in polysulphides (KURTENACKER and BITTNER), ii, 433.
determination of, in soils (WOLKOFF), i, 224.
Sulphur-blue, constitution of (BINZ and RÄTH), i, 445.
Sulphuric and **Sulphurous acids**. See under Sulphur.

Sunlight, tropical, photosynthesis in (DHAR and SANYAL), ii, 884.
Suprarenals, cholesterol content of (PARHON and MARZA), i, 1346.
Suprarenal powders, detection and determination of adrenaline in (BAILLY), ii, 248.
Surfaces, thermodynamics of (GAY), ii, 539.
Surface energy and adsorptive power of solids (ILJIN), ii, 856.
and adsorption at phase boundaries (ILJIN), ii, 958.
Surface tension (BRILLOUIN), ii, 496.
determination of (DU NOÜY), ii, 279; (CARVER and HOVORKA), ii, 647; (MOLODYI and PAVLOV), ii, 1142.
from capillary rise (SUGDEN), ii, 497.
cause of (KENNARD), ii, 1046, 1148; (ADAM), ii, 1046.
and the scattering of light by liquids (RAMAN and RAMDAS), ii, 952, 1046.
relation between heat of vaporisation and (PLÁCINTEANU), ii, 89.
relation between foaming power and (OSTWALD and STEINER), ii, 771.
effect of concentration on (SCHECHTMANN), ii, 1148.
and surface energy (WILLIAMS), ii, 386.
during esterification (CAUQUIL), ii, 964.
of aqueous solutions against oils (HOWARD and SOLLMAN), ii, 109.
of higher fatty acids (FRUMKIN), ii, 856.
measurement of, in biological fluids (BRINKMAN and VON DER VELDE), i, 468.
of crystals against saturated solutions (SOEP), ii, 1046.
of dilute electrolytes (WAGNER), ii, 387.
of liquid films (MARCELIN; DELAPLACE), ii, 772.
at interface of liquids (DU NOÜY), ii, 647.
of salt solutions, effect of capillary-active substances on (SEITH), ii, 961.
negative (ADAM and JESSOP), ii, 772.
Swelling (CLARKE), ii, 863.
measurement of (THIESSEN and CARIUS), ii, 520.
effect of alcohol on (LOEBENSTEIN), ii, 520.
of colloids (BILTZ), ii, 520; (KATZ and MARK), ii, 666.
[illegible] MOLENGRAAFF and HALL), ii, 64[illegible].
Symmetry, tetrahedral and octahedral, tridentate groups in (SMITH), ii, 841.
Syphilis (FORDYCE, ROSEN, and MYERS), i, 189, 611.
action of bismuth in (LEVADITI, NICOLAU, SALGUE, and SCHOEN), i, 463.
effect of "salluen" in (BERING), i, 858.
Systems; critical state for (GAY and PERRAKIS), ii, 669.
binary. See Binary systems.
disperse, viscosity of (OSTWALD), ii, 392.
giving colour changes (v. WEIMARN), ii, 390.
heterogeneous, velocity of reaction in, in relation to rate of stirring (KLEIN), ii, 802.
conjugated, additive character of (JONESCU), i, 1153.
metastable, velocity of transformation of, in relation to temperature (STEPANOV), ii, 645.

T.

Tadpoles, effect of carbamide on the nutrition of (KŘIŽENECKÝ and PODHRADSKÝ), i, 612.
Taka-diastase, hydrolysis by (HATANO), i, 201.
lipase from (OGAWA), i, 103.
Taka-esterase (WILLSTÄTTER and KUMAGAWA), i, 1213.
Taka-rennin (HATANO), i, 102.
Talc from Armenia (DITTLER), ii, 323.
Tallow, Rambutan, *n*-eicosoic acid from (MORGAN and HOLMES), i, 777.
***d*(-)-Talose**, and its derivatives (v. BRAUN and BAYER), i, 1382.
Talosebisdiphenylmethanedimethyldihydrazone (v. BRAUN and BAYER), i, 1382.
Tangentimeter (LATSHAW), ii, 428.
Tannins (FREUDENBERG and BLÜMMEL), i, 51; (FREUDENBERG, FIKENTSCHER, and HARDER), i, 419; (FREUDENBERG, FIKENTSCHER, and WENNER), i, 692; (FREUDENBERG, FIKENTSCHER, HARDER, and SCHMIDT), i, 1165.
autoxidation of (TSCHIRCH), i, 856.
reaction between carbohydrates and (STOCKS and GREENWOOD), i, 1165.
precipitation of gelatin by (SMORODINCEV and ADOVA), i, 847.
oakwood (FEIST and BESTEHORN), i, 566.
in ripening vine-shoots (PICARD), i, 346.

Tannins, analysis of, with ferrous tartrate reagent (WARE), ii, 444.
detection of, by the ferric citrate test (WARE), ii, 905.
detection of, in drugs (WARE), ii, 1209.
determination of, with cinchonine (HOOPER), ii, 443.
Tantalum, electron emission from (DUSHMAN, ROWE, EWALD, and KIDNER), ii, 345.
Tantalum *tri*chloride, derivatives of (RUFF and THOMAS), ii, 1187.
*penta*chloride, reduction of (RUFF and THOMAS), ii, 1187.
Tantalic acid, and its alkali salts (JANDER and SCHULZ), ii, 701.
Tantalum detection, determination, and separation :—
detection and determination of, and its separation from niobium (POWELL and SCHOELLER), ii, 1096.
determination of, and separation from iron (PIED), ii, 442.
Tar, low temperature, aromatic hydrocarbons in (KRUBER), i, 1137.
Taraktogenic acid, and its silver salt (HASHIMOTO), i, 1234.
Tartaric acid, preparation of (MILAS and TERRY), i, 780.
rotatory power of (VLÈS and VELLINGER), ii, 964.
in relation to hydrogen-ion concentration (VLÈS and VELLINGER), i, 356.
rotatory dispersion of derivatives of (AUSTIN and PARK), ii, 1028.
dissociation constants of (BRITTON), ii, 977.
second dissociation constant of (PAUL), ii, 116.
photochemical reaction between bromine and (GHOSH and MUKHERJEE), ii, 1179.
salts, administration and excretion of (SIMPSON), i, 1211.
amine antimonyl salts (CHRISTIANSEN and NORTON), i, 654.
aniline trihydrogen salt (RAMBECH), i, 385.
arsenyl salts with organic bases (DEBUCQUET), i, 973.
lead salt, solubilities of (AUERBACH and WEBER), i, 1130.
potassium and sodium salts, hydrates of (LOWRY and MORGAN), ii, 26.
potassium sodium salt (*Rochelle salt*), dielectric fatigue in (VALASEK), ii, 1118.
vapour pressure of (LOWRY and MORGAN), ii, 26.
properties of crystals of (ISELY; VALASEK), ii, 23.
Tartaric acid, sodium tribismuthyl salt (MASCHMANN), i, 527.
distinction of citric acid from (PARRI), ii, 162.
detection of, in tissues (KLEIN and WERNER), i, 871.
determination of (FRANÇOIS and LORMAND), ii, 75.
determination of, oxidimetrically (TÄUFEL and WAGNER), ii, 1007.
meso-**Tartaric acid**, hydrate of (AMADORI), i, 511.
Tartarobismuthic acid, sodium potassium salt, action of, on liver catalase (MAUBERT, JALOUSTRE, LEMAY, and ANDREOLY), i, 614.
Taurine, methylation and acetylation of (TERAOKA), i, 1390.
Tautomerism and additive reactions (INGOLD), i, 357.
and the mobility of hydroxyl groups (FARROW and INGOLD), i, 155.
of dyads (INGOLD), i, 779; (GRIFFITHS and INGOLD), i, 1190.
of heterocyclic compounds (HELLER, BUCHWALDT, FUCHS, KLEINICKE, and KLOSS), i, 1323.
keto-enolic (KAUFMANN and LIEPE), i, 1241.
ring-chain (DUTT and THORPE), i, 140; (KON, SMITH, and THORPE), i, 509; (ROTHSTEIN, STEVENSON, and THORPE), i, 884; (BAKER), i, 916.
three-carbon (KON and LINSTEAD), i, 506.
three-carbon, in the *cyclo*propane series (GOSS, INGOLD, and THORPE), i, 549.
Teeth, calcium salts in (LIESEGANG), i, 607.
effect of fluorides in diet of rats on (MCCOLLUM, SIMMONDS, BECKER, and BUNTING), i, 861.
Telluridiacetic acid, *di*chloro- (MORGAN and DREW), i, 530.
Tellurium, molecular weight of (JOUNIAUX), ii, 187.
optical constants of (MILLER), ii, 751.
reduction potential of, and the energy and heat of formation of the dioxide (SCHUMANN), ii, 670.
vapour pressure of (DOOLAN and PARTINGTON), ii, 278.
crystal structure of (SLATTERY), ii 369.
hydrosols, coagulation of, by electrolytes (DOOLAN), ii, 293.
Tellurium compounds, acid nature of (KARVE), ii, 1188.
Tellurium *tetra*chloride, interaction of acetic anhydride with (MORGAN and DREW), i, 530.

Tellurium *sub*oxide (DAMIENS), ii, 316.
*di*oxide, fused, electrocapillarity of (SIMEK and KADLCOVA), ii, 678.
Tellurium organic compounds (MORGAN and TAYLOR), i, 634.
Tellurium β-diketones, bactericidal action of (MORGAN, COOPER, and CORBY), i, 206.
O-ethyldi*iso*butyrylmethane trichloride (MORGAN and TAYLOR), i, 634.
n-nonylacetone trichloride (MORGAN and TAYLOR), i, 634.
Tellurium determination and separation:—
determination of, and separation from selenium (LENHER and KAO), ii, 434.
Tellurodiacetic acid, and its salts (MORGAN and DREW), i, 530.
Temperature, relation of, to density (HERZ), ii, 494, 1141.
corresponding, of solids (BRODSKY; LAFUMA), ii, 26.
high, equilibria at (PUSHIN and GREBENSHCHIKOV), ii, 38; (v. WARTENBERG), ii, 576.
low, constant (SLIGH), ii, 756.
thermodynamic, of gases (WERTHEIMER), ii, 784.
Temperature coefficients and mechanism of chemical reactions (RICE, FRYLING, and WESOLOWSKI), ii, 48.
Terephthalic acid, 2-amino- and 2-nitro-, diethyl and diethylaminoethyl esters, and their hydrochlorides (SODERMAN and JOHNSON), i, 814.
Terephthaloyl chloride, nitro- (SODERMAN and JOHNSON), ii, 814.
Ternary systems, equilibria in (SCHREINEMAKERS), ii, 869.
graphic representation of (URAZOV), ii, 788.
Terpenes (VESTERBERG and BORGE), i, 252; (KONDAKOV and SAPRIKIN), i, 1163, 1292.
Terpenes, and their derivatives, catalytic hydrogenation of (ARMSTRONG and HILDITCH), ii, 563.
autoxidation of (TSCHIRCH), i, 356.
catalytic oxidation of (RAO), i, 687.
dicyclic, structure of (SŁAWINSKI), i, 48.
Terpene compounds (RUZICKA and CAPATO), i, 943.
higher (RUZICKA and PFEIFFER; RUZICKA, MEYER, and PFEIFFER), i, 1419.
α-Terpineol, resolution of, and its esters (FULLER and KENYON), i, 48.
Terpineols, relation between pinenes and (DUPONT), i, 564.
Testicles of cattle, lipoids in (SORG), i, 457.
Testicles, cholesterol content of (PARHON and MARZA), i, 1346.
effect of injection of emulsions of, on metabolism (KORENCHEVSKY and CARR), i, 1513.
spermine phosphate from (ROSENHEIM), i, 180.
Test-tube stand, improved (PATTERSON), ii, 151.
Tetany, etiology of, in children (ANDERSON and GRAHAM), i, 330.
effect of cod-liver oil on metabolism in (LIU), i, 725.
parathyroid, and its effect on calcium of the blood (CAMERON and MOORHOUSE), i, 857.
Tetra-acetoxy*di*chlorodititanium chloride (GIUA and MONATH), i, 531.
Tetra-acetoxy*di*hydroxydititanium chloride (GIUA and MONATH), i, 531.
Tetra-acetyldextrose-1-pyridinium tetra-acetyldextrose ζ-sulphate (OHLE and BOURJAN), i, 634.
Tetra-acetylmucic acid, salts and methyl ester of (SIMON and GUILLAUMIN), i, 116.
Tetra-allylammonium iodide, compound of iodoform with (STEINKOPF and BESSARITSCH), i, 495.
α-Tetra-amylose nitrates (PRINGSHEIM, LEIBOWITZ, and SILMANN), i, 1244.
Tetra-anhydrotetrakisdiphenylgermanediol (MORGAN and DREW), i, 1197.
Tetra-anisylethylene sulphide (SCHÖNBERG, ROSENBÄCH, KRÜLL, and OSTWALD), i, 1301.
Tetra-arsenoacetic acid, sodium salt, therapeutic action of (BARBOUR, RIDOUT, and CLAYDON), i, 733.
Tetrabenzylmethane (TROTMAN), i, 383.
Tetra-(4-carbethoxy-2:3-dimethylpyrryl) ethane (FISCHER and BELLER), i, 1333.
Tetra-(4-carbethoxy-2:3-dimethylpyrryl) ethylene (FISCHER and BELLER), i, 1333.
Tetracarbethoxyellagic acid (FEIST and BESTEHORN), i, 566.
Tetrachlorodioxyruthenic acid. See under Ruthenium.
Tetradecenoic acid from sperm oil (TSUJIMOTO), i, 1128.
9:10-Tetraethyl*di*amino-9:10-dihydroanthracene, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 1140.
Tetraethylammonium iodide, concentration cells containing (GRANT), ii, 301.
compound of iodoform and (STEINKOPF and BESSARITSCH), i, 495.

βγε(ζ)-6-Tetraethylglucose (HESS and SALZMANN), i, 1383.
Tetraethylmethane. See γγ-Diethylpentane.
Tetraethylsuccinic acid, imide and nitrile of (DOX), i, 797.
Tetrahydroacridine, and amino-, chloro-, and nitro-, and their derivatives (PERKIN and SEDGWICK), i, 63.
Tetrahydroacridone, amino- and nitro-derivatives, and their derivatives (PERKIN and SEDGWICK), i, 64.
1:2:3:4-Tetrahydroanthracene, derivatives of (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 128.
Tetrahydroanthranil, *C*-amino-, and its derivatives (v. AUWERS, BAHR, and FRESE), i, 312.
1:2:3:4-Tetrahydroanthraquinone (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 128.
Tetrahydrobenzothiochromanones (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1305.
Tetrahydrobenz*iso*oxazoles (v. AUWERS, BAHR, and FRESE), i, 308.
Tetrahydroberberine, 6-nitro- (HAWORTH and PERKIN), i, 970.
Tetrahydrocarbazole, derivatives of (LINNELL and PERKIN), i, 62.
Tetrahydrofurfuraldehyde (SCHEIBLER, SOTSCHEK, and FRIESE), i, 1298.
Tetrahydrofurylbutylcarbinol, and its acetate (PIERCE and ADAMS), i, 825.
Tetrahydro-ψ-glucal diacetate (BERGMANN), i, 887.
Tetrahydroindazoles (v. AUWERS, v. SASS, and WITTEKINDT), i, 1181.
Tetrahydroindene (ZELINSKI and BORISSOV), i, 122.
Tetrahydrojatrorrhizine, derivatives of (SPÄTH and DUSCHINSKY), i, 1313.
Tetrahydrolupulon, and its salts (WÖLLMER), i, 691.
Tetrahydro-α-methylmorphimethine, chloro-, salts of (SPEYER and KOULEN), i, 59.
Tetrahydro-γ-methylmorphimethine, and its derivatives (SPEYER and KOULEN), i, 60.
Tetrahydro-α-methylmorphimethine-*N*-oxide-sulphonic acids (SPEYER and KOULEN), i, 60.
1:2:3:4-Tetrahydro-1-methyl-2-naphthoic acid (v. AUWERS and MÖLLER), i, 404.
Tetrahydronaphthalene, action of aluminium chloride with (SCHROETER, VAN HULLE, GLUSCHKE, STIER, and MÜLLER), i, 125.
Tetrahydronaphthalene, *ac*-2-nitro-1-oximino- (STRAUS and EKHARD), i, 1138.
Tetrahydronaphthalenes, bromonitro- (VESELÝ and CHUDOZILOV), i, 1056.
4-*ar*-Tetrahydronaphthalene, 4-α-nitro- (ROWE and TARBETT), i, 317.
α-*ar*-Tetrahydronaphthaleneazo-α-naphthylamine (ROWE and TARBETT), i, 317.
α-*ar*-Tetrahydronaphthaleneazo-*ar*-tetrahydro-α-naphthylamine (ROWE and TARBETT), i, 317.
1:2:3:4-Tetrahydronaphthalene-1:2-carboxylic acid, and its anhydride (v. AUWERS and MÖLLER), i, 404.
***cis*Tetrahydronaphthalenediols,** borates of (HERMANS), i, 501.
***ar*-Tetrahydro-β-naphthol,** derivatives of (CHEMISCHE FABRIK VON HEYDEN), i, 1407.
1-Tetrahydronaphthoylmethylmalonic acid, potassium hydrogen salt (SCHROETER, VAN HULLE, and MÜLLER), i, 130.
2-Tetrahydronaphthoylmethylmalonic acid, and its salts and ethyl ester (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 128.
β-1-Tetrahydronaphthoylpropionic acid, (SCHROETER, VAN HULLE, and MÜLLER), i, 130.
β-2-Tetrahydronaphthoylpropionic acid, salts of (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 128.
1:2:3:4-Tetrahydronaphthyl-1-acetic acid, and its copper salt and ethyl ester (SCHROETER, ZADEK, and HOFFMANN), i, 677.
1:2:3:4-Tetrahydronaphthyl-1-acetic acid, 1-hydroxy-, and its ethyl ester and hydrazide (SCHROETER, ZADEK, and HOFFMANN), i, 677.
γ-1-Tetrahydronaphthyl-*n*-butyric acid (SCHROETER, VAN HULLE, and MÜLLER), i, 131.
γ-Tetrahydronaphthylcrotonolactone (SCHROETER, GLUSCHKE, VAN HULLE, and GÖTZKY), i, 128.
β-1-Tetrahydronaphthylthiolpropionic acid (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1305.
Tetrahydronaphthylylene-1-acetic acid, and its ethyl ester (SCHROETER, ZADEK, and HOFFMANN), i, 677.
1:2:3:4-Tetrahydrophenanthrene, spectrochemistry and structure of (v. AUWERS and KRAUL), i, 900.
and its picrate (SCHROETER, VAN HULLE, and MÜLLER), i, 131.

4-Tetrahydroquinolone, preparation of (BRITISH DYESTUFFS CORPORATION, LTD., PERKIN, and CLEMO), i, 697.
Tetrahydrostigmasterol, and its acetate (WINDAUS and BRUNKEN), i, 394.
Tetrakistrimethylstibinepalladous chloride (MORGAN and YARSLEY), i, 378.
Tetrakistrimethylstibineplatinous salts (MORGAN and YARSLEY), i, 378.
"Tetralin," surface tension of (GRUNMACH and SCHWEIKERT), ii, 31.
5-Tetralone. See 1-Keto-1:2:3:4-tetrahydronaphthalene.
Tetramercuriaceto-*o*-toluidide acetate (ROSSI and BOCCHI), i, 601.
ω:3:4:5-Tetramethoxyacetophenone, and its semicarbazone (PRATT and ROBINSON), i, 423.
1:2:6:7-Tetramethoxy-9-anthrone (JACOBSON and ADAMS), i, 1077.
3:3′:4′:5′-Tetramethoxybenzoylcoumaranone, bromo- (DEAN and NIERENSTEIN), i, 953.
Tetramethoxybenzoyldihydrocoumarones, and their phenylhydrazones (DEAN and NIERENSTEIN), i, 281.
6:7:2′:3′-Tetramethoxy-2-benzoyl-1:2-dihydro*iso*quinoline, 1-cyano- (HAWORTH and PERKIN), i, 968.
Tetra-*p*-methoxybenzpinacolin (TIFFENEAU and ORÉKHOV), i, 680.
Tetramethoxybenzyldihydrocoumarones, α-hydroxy-, and their acetyl derivatives (DEAN and NIERENSTEIN), i, 281.
6:7:2′:3′-Tetramethoxy-2-benzyl-1:2-dihydro*iso*quinoline, 1-cyano- and 1-hydroxy- (HAWORTH and PERKIN), i, 968.
6:7:3′:4′-Tetramethoxy-2-benzyl-1:2-dihydro*iso*quinoline, 1-cyano- and 1-hydroxy- (HAWORTH, PERKIN, and RANKIN), i, 969.
6:7:2′:3′-Tetramethoxy-2-benzyl-3:4-dihydro*iso*quinolinium iodide (HAWORTH and PERKIN), i, 968.
6:7:3′:4′-Tetramethoxy-2-benzyl-3:4-dihydro*iso*quinolinium salts (HAWORTH, PERKIN, and RANKIN), i, 969.
6:7:2′:3′-Tetramethoxy-2-benzyl-3:4-dihydro-1-*iso*quinolone (HAWORTH and PERKIN), i, 968.
3:3′:4′:5′-Tetramethoxybenzylidenecoumaranone, and bromo-, and its dibromide (DEAN and NIERENSTEIN), i, 952.
6:7:2′:3′-Tetramethoxy-2-benzyl-1-methyl-1:2:3:4-tetrahydro*iso*quinoline, and its picrate (HAWORTH and PERKIN), i, 968.
6:7:2′:3′-Tetramethoxy-2-benzyl-1-nitromethyl-1:2:3:4-tetrahydro*iso*quinoline (HAWORTH and PERKIN), i, 968.
6:7:3′:4′-Tetramethoxy-2-benzyl-1-nitromethyl-1:2:3:4-tetrahydro*iso*quinoline (HAWORTH, PERKIN, and RANKIN), i, 969.
6:7:2′:3′-Tetramethoxy-2-benzyl-1-*iso*quinoline (HAWORTH and PERKIN), i, 968.
6:7:3′:4′-Tetramethoxy-2-benzyl-1-*iso*quinoline (HAWORTH, PERKIN, and RANKIN), i, 969.
6:7:3′:4′-Tetramethoxy-2-benzyl*iso*quinolinium bromide and iodide (HAWORTH, PERKIN, and RANKIN), i, 969.
6:7:2′:3′-Tetramethoxy-2-benzyl-1:2:3:4-tetrahydro*iso*quinoline, and 1-cyano- and 1-hydroxy-, and their salts (HAWORTH and PERKIN), i, 968.
6:7:3′:4′-Tetramethoxy-2-benzyl-1:2:3:4-tetrahydro*iso*quinoline, and 1-cyano- and 1-hydroxy- (HAWORTH, PERKIN, and RANKIN), i, 969.
6:7:2′:3′-Tetramethoxy-2-benzyl-1:2:3:4-tetrahydro*iso*quinoline-1-carboxylamide (HAWORTH and PERKIN), i, 969.
Tetramethoxydibenzoyldimethylbenzenes (DE DIESBACH and STREBEL), i, 1436.
5:7:3′:4′-Tetramethoxyflavan, 4-hydroxy-, and its acetyl derivative (NIERENSTEIN), i, 279.
4:3′:4′:5′-Tetramethoxyflavanone, and *iso*nitroso- (DEAN and NIERENSTEIN), i, 952.
5:7:2′:4′-Tetramethoxyflavylium salts (PRATT and ROBINSON), i, 825.
4:4′:7:7′-Tetramethoxyindigotin (RUBENSTEIN), i, 1279.
3:7:3′:4′-Tetramethoxy-2-styrylchromone, 5-hydroxy- (ROBINSON and SHINODA), i, 1302.
Tetramethylacetonedicarboxylic anhydride. See β-Keto-αaγγ-tetramethylglutaric anhydride.
4:4′-Tetramethyl*di*aminobenzophenone, additive compounds of, with resorcinol and α-naphthol (PFEIFFER, GOEBEL, and ANGERN), i, 262.
9:10-Tetramethyl*di*amino-9:10-dihydroanthracene, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 1140.
pp′-Tetramethyl*di*aminodiphenyl (VORLÄNDER), i, 1258.
9:10-Tetramethyl*di*aminodiphenyl-9:10-dihydroanthracene (BARNETT, COOK, and MATTHEWS), i, 648.
9:10-Tetramethyl*di*aminodiphenyl-9:10-dihydroanthracene, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 1140.

Tetramethylammonium *tetra*chloroferrate (REMY and ROTHE), ii, 1039.
Tetramethylarsonium stannic iodide (AUGER and KARANTASSIS), ii, 814.
Tetramethylbenzopyrans (CLAISEN), i, 277.
9:10-Tetramethyldianilinoanthracene, 1:5-*di*chloro- (BARNETT, COOK, and MATTHEWS), i, 1399.
2:2′:5:5′-Tetramethyl-4:4′-dipyrrylmethane-3:3′-dicarboxylic acid, ethyl ester (FISCHER and NENITZESCU), i, 833.
Tetramethyldistannane, disodium derivative (KRAUS and GREER), i, 1394.
***N*:*N*″:*N*‴:*N*‴-Tetramethyl-*N*-ethylguanidine** (LECHER, GRAF, and GNÄDINGER), i, 1393.
Tetramethylgalactose (HAWORTH, RUELL, and WESTGARTH), i, 117.
Tetramethylglucose, mutarotation of, in various solvents (LOWRY and RICHARDS), i, 886.
Tetramethylguanidines, preparation of (SCHENCK and v. GRAEVENITZ), i, 377.
Tetramethylhæmatoporphyrin ester, isomerism of (FISCHER and MÜLLER), i, 846.
Tetramethylmethylgalactoside (HAWORTH, RUELL, and WESTGARTH), i, 117.
3:3′:4′:5′-Tetramethylmyricetin, and its diacetyl derivative (KALFF and ROBINSON), i, 423.
Tetramethylnaphthalene, and its picrate (BRINER, PLÜSS, and PAILLARD), i, 249.
Tetramethylquinamide (KARRER, WIDMER, and RISO), i, 673.
1:3:7:9-Tetramethyluric acid, action of alkalis on (GATEWOOD), i, 1189.
Tetranaphthylene*cyclo*octatetraene. See Dehydrofluorocyclene.
Tetra-oxymethylene, and its diacetate (STAUDINGER and LÜTHY), i, 361.
Tetraphenylcarbazide (FEIGL), i, 170.
1:3:4:6-Tetraphenyl-1:4-dihydro-1:2:4:5-tetrazine, 1:4-*di*-*p*-bromo-, and 1:4-*ω*-2′:4′-*tetra*bromo- (CHATTAWAY and WALKER), i, 930.
Tetraphenyldipyroxonium *per*bromide (ARNDT, SCHOLZ, and NACHTWEY), i, 58.
2:6:2′:6′-Tetraphenyl-4:4′-dipyrylene (ARNDT, SCHOLZ, and NACHTWEY), i, 58.
Tetraphenylgermane (MORGAN and DREW), i, 1197.
Tetraphenyl-1-methylpyrrole (PERKIN and PLANT), i, 843.
Tetraphenylsuccinodilactones, 2:2-*di*hydroxy-. See 2:2′-Diketo-3:3′-diphenyl-3:3′-dicoumaranyls.
Tetraphenyl*di*thiopyrylene (ARNDT, NACHTWEY, and PUSCH), i, 1312.
Tetrapropylammonium iodide, compounds of, with bromoform, chloroform, and iodoform, and the *tri*iodide (STEINKOPF and BESSARITSCH), i, 495.
Tetrazole, cyano-, action of hydrazine on (OLIVERI-MANDALÀ), i, 78.
Tetrolaldehyde *p*-nitrophenylhydrazone (v. AUWERS and DANIEL), i, 1181.
Tetryl. See Phenylmethylnitroamine, *tri*nitro-.
Textiles, action of ultra-violet light on (HEERMANN), ii, 144.
absorption of water by (SHORTER), ii, 789.
Thallium, absorption spectrum and dispersion of the vapour of (NARAYAN, GUNNAIYA, and RAO), ii, 5; (RAO), ii, 455.
spark spectrum of (RAO), ii, 610; (CARROLL), ii, 1101.
vapour, resonance radiation from (NARAYAN and RAO), ii, 338.
transformation of *α*- into *β*- (ASAHARA), ii, 488, 645.
effect of allotropy on growth of crystals of (ASAHARA), ii, 637.
possible transformation of lead into (RUSSELL), ii, 924.
Thallium alloys with cadmium and lead (DI CAPUA), ii, 787.
Thallium compounds, isomorphism of, with those of rare earth metals (ZAMBONINI and CAROBBI), ii, 272
Thallous bromide and chloride, crystal structure of (LUNDE), ii, 941.
chloride, activity coefficient of aqueous solutions of (RANDALL and VANSELOW), ii, 33.
double selenates (LINDSLEY and DENNIS), ii, 584.
selenide (MOSER and ATYNSKI), ii, 583.
sulphate, double salts of neodymium sulphate and (ZAMBONINI and CAGLIOTI), ii, 1185.
cobalt and nickel sulphates (TUTTON), ii, 749.
Thallous lanthanum sulphates (ZAMBONINI and CAROBBI), ii, 579.
sulphide, equilibria of, with arsenic and lead sulphides (CANNERI and FERNANDES), ii, 887.
telluride (BRUKL), ii, 895.
Thallic thallous halides (BERRY), ii, 59.

Thallium organic compounds:—
Thallium alkyl and aryl halides and salts (KRAUSE and V. GROSSE), i, 378, 1252.
Thebaine, constitution of (WIELAND and KOTAKE), i, 1448.
action of cyanogen bromide on (SPEYER and ROSENFELD), i, 962.
Thebenone, and its derivatives (WIELAND and KOTAKE), i, 1093.
Theobromine, and its derivatives, salts of (KNOLL & Co.), i, 828.
Theophylline, salts of (KNOLL & Co.), i, 828.
riboside, triacetylriboside, xyloside, and triacetylxyloside (LEVENE and SOBOTKA), i, 1463.
Therapeutic compounds (WELLCOME FOUNDATION, LTD., GRAY, and HENRY), i, 1446.
Thermal conductivity of wires and rods (BARRATT and WINTER), ii, 756.
expansion of fused salts (LORENZ and HERZ), ii, 950.
of alkali halides (HENGLEIN), ii, 950.
reactions, temperature-coefficients of (DHAR), ii, 135.
and photochemical reactions (DHAR and MUKERJI), ii, 809.
Thermochemical data (SWIENTOSLAWSKI), ii, 540, 1139; (SWIENTOSLAWSKI and POPOV; SWIENTOSLAWSKI and STARCZEVSKA), ii, 1139.
Thermochemistry of diazo compounds (SWIENTOSLAWSKI; SWIENTOSLAWSKI and BLASZKOVSKA), ii, 1044.
of organic compounds (PARKS and KELLEY), ii, 949.
Thermodynamics, laws of, and the equation of state (KOLTSCHIN), ii, 1061.
third law of (WEBB), ii, 867.
Willard Gibbs' work on (MILLER), ii, 399.
of solutions of electrolytes (HARNED), ii, 977.
potentials in (FREUNDLICH and ETTISCH), ii, 873.
of surface action (GAY), ii, 539.
Thermo-electric power and the Hall coefficient (HEAPS), ii, 1135.
Thermo-electricity of electrolytes (THIELE), ii, 545.
Thermo-element, vacuum (MOLL and BURGER), ii, 613.
Thermometer, air differential (NOYES), ii, 896.
platinum-resistance (VAN DUSEN), ii, 590.
Thiazine red, preparation of (PROESCHER and KELLNER), i, 597.
Thiazine series, preparation of keto derivatives of (AKTIEN-GESELLSCHAFT FÜR ANILIN-FABRIKATION), i, 596.
Thiazoles (BOGERT and CHERTCOFF), i, 315.
Thiazole colouring matters (BOGERT and CHERTCOFF), i, 80.
Thiazole-purple (KÖNIG and MEIER), i, 705.
α-Thienylmethyl bromide (V. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.
α-Thienylmethylallylaniline, and its salts (V. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.
α-Thienylmethylbenzylmethylamine, and its salts (V. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.
α-Thienylmethylfurfurylmethylamine, and its salts (V. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.
α-Thienylmethylthiocarbimide (V. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.
α-Thienylmethyltrimethylammonium salts (V. BRAUN, FUSSGÄNGER, and KUHN), i, 1403.
Thioamides, action of sulphur chloride on (ISHIKAWA), i, 1149.
condensation of nitriles with (ISHIKAWA), i, 917, 1149.
Thiobacillus thio-oxidans, nutrition and physiology of (STARKEY), i, 1015.
Thiocarbamide (*thiourea*), constitution of (LECHER), i, 1390; (LECHER and HEYDWEILLER), i, 1392.
oxidation of, by charcoal (FREUNDLICH and FISCHER), ii, 307.
condensation of, with dihydroxyacetone and with methylglyoxal (SJOLLEMA and SEEKLES), i, 1175.
Thiocarbamides, substituted (DAINS, BREWSTER, MALM, MILLER, MANEVAL, and SULTZABERGER), i, 1063.
aryl derivatives, reactions of, with sulphur and amines (LEVI), i, 445.
Thiocarbamide-diacetic acid, ethyl esters (JOHNSON and RENFREW), i, 583.
Thiocarbanilide, formation of (SNEDKER), i, 385.
Thiocarbimides (*isothiocyanates*), formation of, from thiocyanates (BILLETER), i, 1051.
aromatic substituted, addition of ethyl sodioacetoacetate to (WORRALL), i, 244.
Thiocarbohydrazide, derivatives of (GUHA and DE), i, 599.
Thiocarbonic acid, *di*-β-naphthyl and pyrocatechyl esters (AUTENRIETH and HEFNER), i, 1376.

Thiocarbonyl chloride, preparation of, and its derivatives (AUTENRIETH and HEFNER), i, 1376.
Thiocyanates, conversion of, into thiocarbimides (BILLETER), i, 1051.
detection of, in organic matter (DANCKWORTT and PFAU), i, 196.
detection and determination of, in presence of cyanides (SCHULEK), ii, 432, 712.
determination of, bromometrically (OBERHAUSER), ii, 828.
determination of, colorimetrically (K. C. and D. F. H. BAILEY), ii, 447.
Thiocyanic acid, potassium salt, reaction of ferric chloride with (BAILEY; BAILEY and KIDD), ii, 422.
Thiocyanines (KÖNIG and MEIER), i, 705.
Thiocyanogen, preparation of (KAUFMANN and KÖGLER), i, 1252.
action of, on unsaturated compounds (SÖDERBÄCK), i, 899; (CHALLENGER and BOTT), i, 936.
reaction of azoimide with (WILCOXON, MCKINNEY, and BROWNE), i, 1051.
Thiodiazines (BOSE), i, 167, 1465.
Thiohydrates (BILTZ and KEUNECKE), ii, 986.
Thioindican. See 3-Oxy(1)thionaphthen glucoside.
Thioketones (SCHÖNBERG, ROSENBACH, KRÜLL, and OSTWALD), i, 1300.
Thionacetanilide, *m*-bromo- and *p*-iodo- (WORRALL), i, 244.
Thionacetoanisidides (WORRALL), i, 244.
Thionaceto-*m*-toluidide (WORRALL), i, 244.
Thionaphthen, hydrogenation of (FRICKE and SPILKER), i, 249, 1311.
2-Thionaphthen-9′-anthraceneindolignone (SANDER), i, 982.
3-Thionbenzoyldiphenyl-2:3-dihydro-1:2:4-triazoles (FROMM and TRUKA), i, 704.
Thionic acids. See under Sulphur.
Thionium compounds, heats of formation of (TSCHELINCEV), ii, 480.
Thionmalono-*p*-anisidic acid, and its acetyl derivative, ethyl ester (WORRALL), i, 244.
Thionmalono-*m*-bromoanilic acid, and its acetyl derivative, ethyl ester (WORRALL), i, 244.
Thionmalono-*p*-chloroanilic acid, and its acetyl derivative, ethyl ester (WORRALL), i, 244.
Thionmalono-*p*-iodoanilic acid, and its acetyl derivative, ethyl ester (WORRALL), i, 244.
Thionmalono-α-naphthylamic acid, and its acetyl derivative, ethyl ester (WORRALL), i, 244.
Thionmalono-*p*-phenetidic acid, and its acetyl derivative, ethyl ester (WORRALL), i, 244.
Thionmalono-*m*-toluidic acid, and its acetyl derivative, ethyl ester (WORRALL), i, 244.
3-Thion-1:2:3:4-tetrahydro-1:2 4-benztriazine, and its derivatives (GUHA and RAY), i, 1462.
Thiophen, and its derivatives, spectrochemistry of (V. AUWERS and KOHLHAAS), i, 150.
poisoning of catalysts by (KUBOTA and YOSHIKAWA), ii, 805.
derivatives, synthesis of (CHRZASZCZEWSKA), i, 956.
Thiuronium salts, constitution of (LECHER), i, 1390; (LECHER and HEYDWEILLER), i, 1392.
Thorium, preparation of (VAN ARKEL and DE BOER), ii, 1193.
β-ray spectra of the disintegration products of (BLACK), ii, 922.
velocity of α-particles from (ROSENBLUM), ii, 463.
emanation (BATSCHA), ii, 177.
Thorium hydroxide, precipitation of, electrometrically (BRITTON), ii, 1203.
oxide (*thoria*), catalytic activity of (KOMATSU and TANAKA), i, 905.
catalytic activity of reduced copper and nickel and (KOMATSU and MASUMOTO), ii, 1071.
promoter action of, on catalytic nickel (RUSSELL and TAYLOR), ii, 1071.
Thorium separation:—
separation of, from zirconium and rare earth metals (FERNANDES), ii, 426.
Thorium-*B*+*C*, magnetic spectrum of β-rays of (YOVANOVITCH and D'ESPINE), ii, 176; (POHLMEYER), ii, 347.
Thorium-*B*, -*C*, and **-*D***, spectra of (BLACK), ii, 177.
Thorium-*X*, production of, by recoil (BRIGGS), ii, 922.
determination of (GAZZONI), ii, 441.
Thoron. See Thorium emanation.
Thrombin (WÖHLISCH), i, 1486.
theory of the action of (WÖHLISCH), i, 452.
detection of, in blood (STUBER and KUHN), i, 452.
detection of, in oxalate plasma (STUBER and LEE), i, 94.
Thymine, 4:5-*di*hydroxy- (BAUDISCH and DAVIDSON), i, 1100.

Thymol, surface tension of aqueous solutions of (EDWARDS), ii, 387.
catalytic reduction of (DOMINIKIEWICZ), i, 146.
Thymol-blue, dissociation constant of (HOLMES and SNYDER), ii, 325.
Thymus, histones of the (FELIX), i, 1203.
Thyroglobulin, precipitation reaction of (HEKTOEN and SCHULHOF), i, 1345.
Thyroid, pharmacology of preparations of (HAFFNER and KOMIYAMA), i, 1119.
absorption, distribution and determination of iodine in the (RABINOVITSCH and FRITH), i, 1488; (ABELLES and POPPER; PICKWORTH), i, 1489.
iodine in the blood of (GLEY and CHEYMOL), i, 456.
lipases from (HERZFELD and ENGEL), i, 201.
goat's, iodine in (ARNOLD and GLEY), i, 325.
normal and diseased, constituents of (WEIR), i, 1491.
Thyroidectomy, fat and cholesterol in blood after (HECKSCHER), i, 999.
Thyroxin, ultra-violet absorption spectrum of, and its constitution (HICKS), ii, 473.
Tiglic aldehyde phenylhydrazone (v. AUWERS and KREUDER), i, 1454.
Tin, molecular weight of (JOUNIAUX), ii, 489.
absorption spectrum of the vapour of (NARAYAN and RAO), ii, 927.
absorption and arc spectra of (MCLENNAN, YOUNG, and MCLAY), ii, 454.
arc spectrum of (SPONER), ii, 454.
X-ray absorption coefficient of (WARBURTON and RICHTMYER), ii, 1103.
passivity of (ROTHMUND, EISENKOLB, and STEINHERZ), ii, 131.
electro-deposition of (SMRZ), ii, 677.
single crystal rods of, thermo-electric force of (BRIDGMAN), ii, 1136.
crystals, tensile strength of (POLANYI and SCHMID), ii, 752.
grey and white, specific heats of (COHEN and MOESVELD), ii, 950.
Tin alloys, electrolysis of (KREMANN and v. REHENBURG), ii, 313.
heat of formation of (BILTZ and HOLVERSCHEIT), ii, 268.
with aluminium, electrolysis of (KREMANN and DELLACHER), ii, 679.
with bismuth and lead, hardness of (DE CAPUA), ii, 1051.
with copper (ISHIHARA), ii, 122.
Tin alloys with copper, α-phase boundary in (STOCKDALE), ii, 973.
hardness of (BAUER and VOLLENBRUCK), ii, 104.
with mercury, electrolysis of (KREMANN, KAPAUN, and BUDAN), ii, 313.
with mercury and silver (TAMMANN and DAHL), ii, 502.
with molybdenum and nickel (PFAUTSCH), ii, 536.
with zinc, electrolysis of (KREMANN and BAUKOVAC), ii, 679.
Tin hydride, preparation and properties of (PANETH and RABINOVITSCH), ii, 59; (PANETH, HAKEN, and RABINOVITSCH), ii, 60.
pharmacology of (PANETH and JOACHIMOGLU), i, 197.
hydroxide, precipitation of, electrometrically (BRITTON), ii, 1203.
selenides (MOSER and ATYNSKI), ii, 584.
tellurides (BRUKL), ii, 895.
Stannous chloride, effect of neutral salts on the reaction of ferric chloride with (TIMOFEEV, MUCHIN, and GUREVITSCH), ii, 586.
iodide, properties of (FREUNDLER and LAURENT), ii, 1085.
photochemical properties of (FREUNDLER and LAURENT), ii, 22.
compounds of, with caesium and rubidium iodides (AUGER and KARANTASSIS), ii, 1182.
Stannic chloride, distillation of (RÖHRE), ii, 157.
weighting of silk with and its compounds with ethyl aminoacetate and acetic acid (FICHTER and REICHART), ii, 193.
compounds of, with β-diketones (DILTHEY), i, 1473.
iodide, complex compounds of (AUGER and KARANTASSIS), ii, 814.
additive compounds of hexamethylenetetramine and (SCAGLIARINI), i, 890.
Tin organic compounds (DRUCE), i, 798.
Tin dimethyl, derivatives of (KRAUS and GREER), i, 1394.
trimethyl, and its hydroxide and derivatives (KRAUS and SESSIONS), i, 1253; (KRAUS and HARADA), i, 1254.
tetra-*p*-nitrophenyl (VORLÄNDER), i, 1256.
Stannic halides, compounds of, with diamines and polycarboxylic esters (HIEBER, BECKER, and WAGNER), i, 1325.

Tin organic compounds:—
Chloro-stannates and -stannites (DRUCE), i, 1096.
Tin determination and separation:—
determination of, electrometrically (FLEYSHER), ii, 243.
determination and separation of, in alloys (EVANS), ii, 826.
separation of antimony and (SACCARDI), ii, 159.
separation of antimony, copper, lead, and (LASSIEUR), ii, 328.
separation of, from tungsten (JILEK and LUKAS), ii, 242.
Tissues, hydrogen-ion concentration in (SCHMIDTMANN), i, 99.
colloidal processes in stimulation of (LASAREV), i, 1499.
effect of salts on the adsorption of colouring matters by (MANN), ii, 35.
absorption of salts by (STILES), ii, 31.
respiration of (TERROINE and ROCHE), i, 709.
animal. See Animal tissues.
normal, and cancer, reducing power of (VOEGTLIN, JOHNSON, and DYER), i, 99.
vegetable. See Plant tissues.
determination of chlorine in (URBACH and FANTL), i, 1203.
determination of cholesterol and its esters in (GARDNER and FOX), i, 182.
determination of copper in (CURRIE), i, 183.
determination of iron in (YABUSOE), i, 724.
Titanium, preparation of (VAN ARKEL and DE BOER), ii, 1193.
arc spectrum of (BEHNER), ii, 1100.
vacuum-arc spectrum of (CREW), ii, 385.
crystal structure of (PATTERSON), ii, 345.
Titanium alloys with carbon and iron (TAMARU), ii, 787.
Titanium carbide and nitride (FRIEDERICH), ii, 374.
*di*oxide (*titania*), catalytic action of and adsorption of gases by (BISCHOFF and ADKINS), ii, 568.
jellies of (KLOSKY and MARZANO), ii, 1057.
Titanous chloride, reduction of nitric acid by (COBLENS and BERNSTEIN), ii, 804.
standardisation of solutions of (ZINTL and RAUCH), ii, 1003.
use of, in electrovolumetric analysis (TOMIČEK), ii, 243.
Titanic chloride, reduction of (SCHMIDT), ii, 315.

Toluene compounds Me = 1.
Titanium:—
Titanic chloride, compound of acetic acid with (FICHTER and REICHART), ii, 194.
Titanic organic compounds (GIUA and MONATH), i, 581.
Titanium ores, fusion of (SEARS and QUILL), ii, 580.
Tobacco, dried, fermentation of (FODOR and REIFENBERG), i, 1519.
o-**Tolidine**, preparation of solutions of (ROAKE), ii, 432.
p-**Tolualdehyde**, condensation of, with menthone (SAMDAHL), i, 414.
o- and *p*-**Tolualdehydes** *p*-nitrophenylhydrazines (STEPHEN), i, 1131.
Toluamides, hydroxy-, acetyl, and benzoyl derivatives (ANSCHÜTZ, ASCHENBERG, KUCKERTZ, KRONE, RIEPENKRÖGER, and ZERBE), i, 666.
Toluene, sorption of the vapour of, by sugar charcoal (BAKR and MCBAIN), ii, 193.
catalytic chlorination of (O. and C. A. SILBERRAD and PARKE), i, 1137.
chlorination of, with selenium (O. and C. A. SILBERRAD), ii, 1191.
mercuration of (COPLEY), i, 844.
oxidation of (KNOOP and GEHRKE), i, 1131.
electrochemical oxidation of (MANN and PAULSON), i, 556.
action of benzoyl peroxide on (GELISSEN and HERMANS), i, 545.
Toluene, 3:5-*di*amino-2:4-*di*hydroxy-, and its tetra-acetyl derivate (HENRICH and GÖTZ), i, 913.
p-chloro-, photochemical action of iodine on (SILBERRAD), i, 16.
nitration of (HODGSON), i, 1397.
p-chlorothiol- (LECHER, HOLSCHNEIDER, KÖBERLE, SPEER, and STÖCKLIN), i, 390.
p-nitro-, melting point of (PUSHIN), ii, 277.
*tri*nitro-, heat of fusion of (RINKENBACH and HALL), ii, 207.
2:4:6-*tri*nitro-, decomposition of, by sunlight (KRAUZ and TUREK), i, 646; (WICHERT and DONAT), i, 803.
halogenation of (GANGULY), i, 647.
Toluenes, iodo-, isomeric, polarity effects in (SHOESMITH and SLATER), i, 16.
electrolytic oxidation of (FICHTER and LOTTER), i, 1055.
nitro-, action of light on (SCHULTZ and GANGULY), i, 647.
o- and *p*-nitro-, separation of (MOLINARI), i, 380.

Toluene compounds, Me = 1.

Toluenes, *as-tri*nitro-, reactions of (BRADY, HEWETSON, and KLEIN), i, 16.

***o*-Tolueneazoacetylacetone**, and its derivatives, and 3-nitro- (BÜLOW and SPENGLER), i, 1102.

***p*-Tolueneazoallylformaldoxime** (WALKER), i, 1193.

***p*-Tolueneazobenzylformaldoxime**, and its phenylcarbamate (WALKER), i, 1193.

4-*p*-Tolueneazo-3:5-dimethyl*iso*oxazole, and 4-*m*-nitro- (BÜLOW and SPENGLER), i, 1102.

4-*p*-Tolueneazo-3:5-dimethylpyrazole, and its salts, and 4-*m*-nitro- (BÜLOW and SPENGLER), i, 1102.

Toluene-3-azo-oximinoacetotoluidides (KARRER, DIECHMANN, and HAEBLER), i, 243.

4-*p*-Tolueneazo-1-phenyl-3:5-dimethylpyrazole, and 4-*m*-nitro- (BÜLOW and SPENGLER), i, 1102.

1-*p*-Tolueneazoxy-2-aminonaphthalene (CHARRIER, CRIPPA, TOIA, and BIANCHESSI), i, 591.

***p*-Toluenesulphenanilide** (LECHER, HOLSCHNEIDER, KÖBERLE, SPEER, and STÖCKLIN), i, 390.

***p*-Toluenesulphobenzylamide** (HOLMES and INGOLD), i, 1143.

***p*-Toluenesulphobenzylmethylamide**, and its hydrochloride (HOLMES and INGOLD), i, 1143.

***o'*-Toluenesulphonamidobenzaldoximes**, and the corresponding acetates (V. AUWERS), i, 1461.

***o*-2-Toluenesulphonamidobenzonitrile** (V. AUWERS), i, 1460.

1-*p*-Toluenesulphonamidonaphthalene-8-sulphonic acid, and its sodium salt (FINZI), i, 654.

Toluene-*o*-sulphonic acid, electrochemical oxidation of (FICHTER and STOCKER), i, 239.

indazole ester (V. AUWERS), i, 1461.

Toluene-*p*-sulphonic acid, esters, alkylation by (FINZI), i, 648.

action of magnesium organic halides with (GILMAN and BEABER), i, 802.

substituted phenyl and tolyl esters (SANÉ and JOSHI), i, 134.

Toluenesulphonic acids, *di*nitro-, sodium salts (BRADY, HEWETSON, and KLEIN), i, 16.

***d*-α-*p*-Toluenesulphonoxypropionic acid**, and its ethyl ester and amide (KENYON, PHILLIPS, and TURLEY), i, 507.

***p*-Toluenesulphonyl chloride**, action of on nitrophenols (SANÉ and JOSHI) i, 134.

Toluene compounds, Me = 1.

***p*-Toluenesulphonylhydrazine**, and its derivatives (FREUDENBERG and BLÜMMEL), i, 52.

***o*-Toluenesulphonylindazoles** (V. AUWERS), i, 1461.

Toluene-*p'*-sulpho-*p*-phenetidide, nitroderivatives, and their derivatives (REVERDIN), i, 1409.

***p*-Toluenethiolsulphonic acid**, *o*-nitrophenyl ester (MILLER and SMILES), i, 392.

***m*-Toluic acid**, 6-thiol- (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1306; (ARNDT), i, 1311.

***p*-Toluic acid**, 2-amino- and 2-nitro-, diethylaminoethyl esters, and their hydrochlorides (SODERMAN and JOHNSON), i, 814.

ω-trichloro-, synthesis of (BÖESEKEN and GELISSEN), i, 30.

Toluic acids, hydroxylamine salts (OESPER and BALLARD), i, 1233.

Toluic acids, amino-, separation of (MAYER and SCHULZE), i, 1315.

***o*-Toluidine**, 3:5-*di*bromo-, additive compounds of, with metallic salts (HANN and SPENCER), i, 653.

5-iodo-, preparation of, and its salts and derivatives (HANN and BERLINER), i, 908.

***m*-Toluidine**, bromo-4:6-*di*hydroxy-, hydrobromide, and its derivatives (HENRICH and GÖTZ), i, 913.

***p*-Toluidine**, surface tension of aqueous solutions of (EDWARDS), ii, 387.

Toluidines hydroferricyanides of (CUMMING), i, 122.

detection of, colorimetrically (MURRAY), ii, 163.

ω-*o*- and -*p*-Toluidineacetophenones, hydrazones of (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 41.

***p*-Toluidino-*p*-anisidino-1:4-naphthaquinone** (FRIES and BILLIG), i, 940.

β-Toluidinobenzylmalonic acids, esters of (WAYNE and COHEN), i, 550.

3-Toluidino-5-keto*iso*oxazoles (WORRALL), i, 308.

3-Toluidino-5-ketopyrazoles (WORRALL), i, 308.

1-Toluidinomethylbenzthiazoles, and their derivatives (HUNTER), i, 1336.

2-*p*-Toluidino-1:4-naphthaquinone, 3-chloro-2-*N*-nitroso- (FRIES and BILLIG), i, 939.

1-*p*-Toluidino-β-naphthol-4-sulphonic acid (LANTZ and WAHL), i, 910.

Toluidino-oximinopinacolin (RHEINBOLDT and SCHMITZ-DUMONT), i, 1132.

Toluene compounds, Me = 1.

Toluidino-5-phenyl-1:3:4-thiodiazines, and their hydrobromides and derivatives (BOSE), i, 1465.

m-**Toluidino-***m*-**toluthiazole**, and its derivatives (LEVI), i, 445.

5-Toluidino-4-*o*-**tolyl-1:2:4-triazole**, 3-thiol-, derivatives of (FROMM and SZENDRŐ), i, 985.

p-**Toluidino-3:4:5-trimethoxyphenylcarbinol**, and its hydrochloride (SONN and MEYER), i, 932.

p-**Toluimino***iso***thio-***p*-**toluamide**, and its hydrochloride (ISHIKAWA), i, 1149.

p-**Toluoyl** chloride, 2-nitro- (SODERMAN and JOHNSON), i, 814.

Toluoylacetamides, hydroxy-(ANSCHUTZ, ASCHENBERG, KUCKERTZ, KRONE, RIEPENKRÖGER, and ZERBE), i, 667.

o-**Toluoylbenzoic acid**, methyl ester (WEISS and KOREZYN), i, 560.

o-**Toluoylbenzoic acids** (BRAND, LUDWIG, and BERLIN), i, 904.

m-**Toluoylbenzoic acid**, *o*-4-bromo- (HELLER and MÜLLER-BARDORFF), i, 546.

m-**Toluoyl-3:4:5:6-***tetra***chloro-2-benzoic acid**, 2′-hydroxy- (ORNDORFF and PATEL), i, 672.

8-Toluoyl-α-naphthoic acid (MASON), i, 33.

β-Toluoyloxypropionic acids, and their amides (POWELL and JOHNSON), i, 278.

γ-*m*- and **-***p*-**Toluoyloxypropyl alcohols** (POWELL and JOHNSON), i, 278.

2-*o*-**Toluoylphenyldi-***o*-**tolylcarbinol** (WEISS and KOREZYN), i, 560.

Toluquinone, action of azides with (CHATTAWAY and PARKES), i, 985.

Toluyleneamidine-2-phenyl-*o*-**carboxylic acid.** See 4-Methylbenziminazole-2-benzoic acid.

m-**Tolyl** hydroxyethyl ether (CASSELLA & Co.), i, 397.

p-**Tolyl** *p*-acetoxybenzyl ether (PUMMERER, PUTTFARCKEN, and SCHOPFLOCHER), i, 1263.

*iso*amyl sulphide (GILMAN, BEABER, and MYERS), i, 1057.

benzyl ether (v. BRAUN and REICH), i, 1405.

β-chloroethyl sulphide (LECHER, HOLSCHNEIDER, KÖBERLE, SPEER, and STÖCKLIN), i, 390.

cinnamyl ether (CLAISEN, KREMERS, ROTH, and TIETZE), i, 656.

methyl ether, 2-amino-, and 5-bromo-2-amino-, 2-acetyl derivatives (GRIFFITH and HOPE), i, 827.

o- and *p*-**Tolyl** acetates, action of sodium on (HALL), i, 23.

p-**Tolylacetaldehyde** *p*-nitrophenylhydrazone (STEPHEN), i, 1131.

Toluene compounds, Me = 1.

o-**Tolylacetic acid**, ω-amino- and its derivatives (v. BRAUN and REICH), i, 1407.

p-**Tolyl***iso***amylsulphone** (GILMAN, BEABER, and MYERS), i, 1057.

o-**Tolyl anisyl ketone** (DE DIESBACH and STREBEL), i, 1435.

o-**Tolylarsinic acid** (BURTON and GIBSON), i, 84.

Tolyl-5-arsinic acids, *di*amino-, and nitroamino-, benzoyl derivatives (HAMILTON and MAJOR), i, 990.

N-*p*-**Tolylbenzimido-***p*-**tolyl ether** (CHAPMAN), i, 1401.

o-**Tolylbenzylketimine**, and its hydrochloride (JASPERS), i, 936.

p-**Tolylborneol** (LEDUC), i, 821.

p-**Tolylcamphene** (LEDUC), i, 821.

o- and *p*-**Tolylcarbamic acids**, *di*nitro-, esters of (KNIPHORST), i, 906.

o-**Tolylcarbamide**, 5-iodo-, and its hydrochloride (HANN and BERLINER), i, 908.

m-**Tolylcarbamide**, 2:4- and 4:6-*di*nitro- (GIUA and PETRONIO), i, 1397.

o- and *p*-**Tolylcarbamides**, *di*nitro- (KNIPHORST), i, 906.

o-**Tolylcarbylamine**, 5-iodo- (HANN and BERLINER), i, 908.

p-**Tolylcitronellylamine**, and its derivatives (RUPE and RINDERKNECHT), i, 658.

m-**Tolylcyanamide**, 4:6-*di*nitro- (GIUA and PETRONIO), i, 1397.

1-Tolyl-3:5-diketopyrazolidines, tolylhydrazine derivatives of (VAN ALPHEN), i, 83.

p-**Tolyldimethylaminomethyl-***p*-**tolylmethane**, and its hydrochloride (SOMMELET), i, 803.

p-**Tolyldiphenylyl-α-naphthylmethyl** chloride and methyl ether (DILTHEY), i, 653.

p-**Tolyl diphenylyl ketone**, and its oxime (DILTHEY), i, 653.

β-**Tolylethylamines**, ω-chloro-, salts and derivatives of (v. BRAUN and REICH), i, 1406.

α-*o*-**Tolyl-β-ethylcarbamide** (KNIPHORST), i, 906.

o-**Tolylethylketimine**, and its hydrochloride (JASPERS), i, 936.

α-**Tolyl-ββ-ethylnitrocarbamides**, *di*nitro- (KNIPHORST), i, 906.

p-**Tolylidenemalonic acid**, and its ethyl ester (CHRZASZCZEWSKA), i, 956.

p-**Tolylidenementhone**, and its hydrochloride (SAMDAHL), i, 415.

5-Tolylimino-4-acetyl-2-methylthiol-4:5-dihydrothiodiazole (GUHA and RÂY), i, 703.

Toluene compounds, Me = 1.

1-Tolylimino-β-naphthaquinone (Société Anonyme des Matières Colorantes), i, 413.

5-Tolylimino-2-thion-2:3:4:5-tetrahydro-1:3:4-thiodiazole, and its derivatives (Guha and Rây), i, 703.

***o*-Tolylcycloiminotoluquinone** (Chattaway and Parkes), i, 985.

2-*p*-Tolylindazole, 3-cyano-, and its oxide (Helle and Spielmeyer), i, 838.

1-Tolylindazoles, 4-nitro- (v. Auwers and Frese), i, 1102.

2-*p*-Tolylindazole-3-carboxylic acid (Heller and Spielmeyer), i, 838.

***p*-Tolylmercuric** hydrogen carbonate and mercaptan (Koten and Adams), i, 236.

***p*-Tolylmercuri-2:4:6-trinitrophenyl** (Koten and Adams), i, 237.

***o*-Tolylmethylketimine**, and its hydrochloride (Jaspers), i, 936.

α-*p*-Tolyl-ββ-methylnitrocarbamide, 2:6-*di*nitro- (Kniphorst), i, 907.

3-*m*′-Tolyl-5-methylpyrazole, 3:2′-hydroxy- (Wittig), i, 279.

4-*p*-Tolylmorpholine (Cretcher and Pittenger), i, 228.

Tolylnaphthalimide, *o*-amino- (Chakravarti), i, 162.

2-Tolyl-αβ-naphthatriazoles, and their oxides, and 4-hydroxy- (Charrier, Crippa, Toia, and Bianchessi), i, 591.

1-*p*-Tolyl-*lin*-naphthatriazole-4:9-quinone (Fries and Billig), i, 940.

***m*-Tolyl-α-** and **-β-naphthylamines**, *di*nitro- (Brady, Hewetson, and Klein), i, 16.

***s-o*-Tolyl-α-naphthylcarbamide**, 5-iodo- (Hann and Berliner), i, 908.

α-*m*-Tolyl-β-nitrocarbamide, α-4:6-*di*nitro- (Giua and Petronio), i, 1397.

α-*m*-Tolyloxy-αβ-dibenzoylethane (Conant and Lutz), i, 682.

α-Tolyloxy-αβ-dibenzoylethylenes (Conant and Lutz), i, 682.

2-*p*-Tolyloxy-2:3-dihydro-*p*-benzoquinonemethane, and its derivatives (Pummerer, Puttfarcken, and Schopflocher), i, 1262.

***p*-Tolyloxy-*P*-oxodihydrobenzodiazphospholium** (Autenrieth and Bölli), i, 1469.

***p*-Tolyloxy-*P*-oxotetrahydrodiazphospholium** (Autenrieth and Bölli), i, 1469.

***p*-Tolyloxy-*p*-thiodihydrobenzodiazphospholium** (Autenrieth and Meyer), i, 990.

***p*-Tolyloxythiophosphoryl *di*chloride** (Autenrieth and Meyer), i, 807.

***o*-Tolylphenylketimine**, and its derivatives (Jaspers), i, 936.

Toluene compounds, Me = 1.

γ-*o*- and -*p*-Tolylpropinenes (Bert, Dorier, and Lamy), i, 1373.

β-*m*-Tolylpropionic acid, α-cyano- (Baker and Lapworth), i, 30.

1-*p*-Tolyl-2-pyrrolidone, and its picrate (Lipp and Caspers), i, 963.

3-Tolylrhodanylidene-Δ$^{5:3}$-oxindoles (Hann), i, 987.

***p*-Tolylselenoglycollic acid**, and its salts (Morgan and Porritt), i, 1197.

***p*-Tolylselenoxyglycollic acid** (Morgan and Porritt), i, 1197.

4-*p*-Tolylsemicarbazide, and its derivatives (Wheeler and Bost), i, 317.

***p*-Tolylsuccinic acid** (Chrzaszczewska), i, 956.

***p*-Tolylsulphonyl-β-phenylpropionic acid** (Arndt), i, 1310.

β-*p*-Tolylsulphonylpropionic acid (Arndt), i, 1310.

β-*p*-Tolylsulphoxypropionic acid (Arndt), i, 1310.

Tolyl-2-thio-4-ketothiazolidines, condensation of, with substituted vanillins (Hann), i, 1105.

β-*p*-Tolylthiol-*n*-butyric acid (Kroll-pfeiffer, Schultze, Schlumbohm, and Sommermeyer), i, 1305.

α-*p*-Tolylthioldiphenylacetic acid (Bistrzycki and Risi), i, 1426.

2-*p*-Tolylthiophen (Chrzaszczewska), i, 956.

***o*-Tolyl *p*-tolyl ketone** (de Diesbach and Strebel), i, 1435.

4-*o*-Tolyl-1-*o*-tolylthiocarbamidophenylthiosemicarbazide (Guha and Ray), i, 1462.

Tomato plants, nutrition and growth of (Kraybill and Smith), i, 1122.
effect of sodium nitrate on growth of (Work), i, 1366.

Torulin (Kinnersley and Peters), i, 1516.

Tourmaline in Dartmoor granite (Brammall and Harwood), ii, 819.

Toxicological analysis. See Analysis.

Toxicology, chemical (Kohn-Abrest), i, 1116.

Toxins (Karrer, Weber, and van Slooten), i, 1226.
conversion of, into anatoxins (Berthelot and Ramon), i, 481.

Train oil, separation of unsaturated fatty acids in (Toyama and Tsuchiya), i, 1129.

Transfer resistance (Ferguson and van Zyl), ii, 547.

Transport numbers, apparatus for determination of (MacInnes and Brighton; Smith and MacInnes), ii, 542.

Trees, descent of nitrogenous substances in leaves of, in autumn fading (COMBES), i, 1023.
deciduous, constituents of leaves of (FRICKE), i, 764.
Trehalose in yeast (E. M. and F. C. KOCH), i, 1508.
*iso***Trehalose**, and its octamethyl ether (SCHLUBACH and MAURER), i, 888.
Triacetonamine, nitroso-, catalysis of decomposition of, by hydroxyl ions (BRÖNSTED and KING), ii, 1171.
ω-2:4-Triacetoxyacetophenone (NIERENSTEIN, WANG, and WARR), i, 34.
2:4:6-Triacetoxybenzaldehyde (PRATT and ROBINSON), i, 826.
Triacetoxy*di*hydroxychlorodititanium chloride (GIUA and MONATH), i, 531.
Triallylacetophenone (HALLER, BAUER, and RAMART), i, 261.
Triallylsulphonium iodide, compound of iodoform with (STEINKOPF and BESSARITSCH), i, 496.
β-Triamylose nitrates (PRINGSHEIM, LEIBOWITZ, and SILMANN), i, 1244.
Trianhydrostrophanthidin (JACOBS and COLLINS), i, 566.
Trianhydrotetrakisdiphenylgermanediol (MORGAN and DREW), i, 1197.
4:4′:4″-Trianilinotri-*m*-tolylcarbinol (GOMBERG and ANDERSON), i, 1065.
4:4′:4″-Trianilinotri-*m*-tolylmethane (GOMBERG and ANDERSON), i, 1065.
Triaquotriamminecobaltictriaquotrisulphatocobaltiate. See under Cobalt.
Triarsenatomanganic acid (DEISS), ii, 893.
Triarylcarbinols, *o*-hydroxy-, tautomerism of (GOMBERG and MCGILL), i, 1269.
Triazine derivatives, thermal properties of binary mixtures of (PASCAL), ii, 953.
Triazines, preparation of (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 441.
Triazinetricarboxylic acid, complex iron derivatives of (PASCAL), i, 984.
1:2:3-Triazole, 4:5-*di*cyano-, and its derivatives (GRISCHKEVITSCH-TROCHIMOVSKI; GRISCHKEVITSCH-TROCHIMOVSKI and KOTKO), i, 1104.
1:2:3-Triazolecarboxylic acid, cyano-, and its ethyl ester (GRISCHKEVITSCH-TROCHIMOVSKI; GRISCHKEVITSCH-TROCHIMOVSKI and KOTKO), i, 1104.
Triazoledicarboxylic acid, *N*-hydroxy-, and its potassium hydrogen salt (WIELAND), i, 1050.
1:2:3-Triazole-4:5-dicarboxylic acid, monoamide of (GRISCHKEVITSCH-TROCHIMOVSKI), i, 1104.
3:4:5-Tribenzoyloxybenzaldehyde (SONN and MEYER), i, 932.
3:4:5-Tribenzoyloxybenzanilide (SONN and MEYER), i, 932.
Tribenzylammonium iodide, compound of iodoform with (STEINKOPF and BESSARITSCH), i, 495.
*tri*iodide (STEINKOPF and BESSARITSCH), i, 497.
Tribenzylmethylammonium iodide, compound of iodine with (STEINKOPF and BESSARITSCH), i, 495.
3:4:5-Tribenzyloxybenzanilide (SONN and MEYER), i, 932.
Tributylcarbinol (IVANOV), i, 503.
Tributylmethane. See ε-Butylnonane.
Tricarbethoxyglycerol (ALLPRESS and MAW), i, 4.
Tricarbomethoxyglycerol (ALLPRESS and MAW), i, 4.
Tri-*p*-carboxyphenylbismuthine *di*chloride (SUPNIEWSKI), i, 1473.
Tricyclene, nitration of (NAMETKIN and ZABRODIN), i, 416.
*di*chloride. See Camphane, *di*chloro-.
Tricyclo-(2,2,1,1,1,1,)-dodecane-5:10:11:12-tetraone, and its derivatives (WEDEKIND, MILLER, and WEINAND), i, 510.
Triethylamine, action of, on adipyl and β-methyladipyl chlorides (WEDEKIND, MILLER, and WEINAND), i, 510.
compound of iodoform with (STEINKOPF and BESSARITSCH), i, 496.
Triethylcarbinyl iodide (MORGAN, CARTER, and DUCK), i, 877.
Triethylene *tri*sulphide, supposed (BENNETT and BERRY), i, 695.
*tetra*sulphide, oxidation of, with potassium permanganate, and metallic salts derived therefrom (RÂY), i, 352.
Triethylphosphine, salts and derivatives from (COLLIE), i, 797.
additive compound of carbon disulphide and (WIBAUT), i, 527.
compounds of, with iodoform (STEINKOPF and BESSARITSCH), i, 496.
Triethylpropylphosphonium iodide (STEINKOPF and BESSARITSCH), i, 496.
Triethyltrimethylenetriamine, salts of (GRAYMORE), i, 76.
Trimercuriaceto-*o*-toluidide acetate (ROSSI and BOCCHI), i, 601.
3:4:5-Trimethoxyacetophenone, oxime of, and ω-amino-, hydrochloride and ω-oximo-, and its sodium salt (SONN, MÜLLER, BÜLOW, and MEYER), i, 932.
3:4:5-Trimethoxy-1-γ-aminopropylbenzene (MERCK, WOLFES, and DÜTZMANN), i, 393.
1:2:6-Trimethoxyanthraquinone, 7-hydroxy- (JACOBSON and ADAMS), i, 1077.

1:2:6-Trimethoxy-9-anthrone, 7-hydroxy- (JACOBSON and ADAMS), i, 1077.
3:4:5-Trimethoxybenzaldehyde, formation of, from trimethylgallic acid (SONN and MEYER), i, 931.
3:4:5-Trimethoxybenz-*p*-anisidide, and its derivatives (SONN and MEYER), i, 932.
3:4:5-Trimethoxybenzbenzylamide, and its derivatives (SONN and MEYER), i, 932.
3′:4′:5-Trimethoxybenzil, 2:4-*di*- and 2:4:6-*tri*-hydroxy-, and their acetyl derivatives (MARSH and STEPHEN), i, 1158.
3:4:5-Trimethoxybenzmethylamide, and its derivatives (SONN and MEYER), i, 932.
3:4:5-Trimethoxybenz-*p*-toluidide (SONN and MEYER), i, 931.
5:3′:4′-Trimethoxy-4-benzyl-1:2-dihydrocoumarone, α:3:6-*tri*hydroxy- (DEAN and NIERENSTEIN), i, 282.
5:3′:4′-Trimethoxy-4-benzyl-1:2-dihydro-3:6-quinocoumarone, α-hydroxy-, and its acetyl derivative (DEAN and NIERENSTEIN), i, 282.
3:4:5-Trimethoxybenzylidenemethylamine (SONN, MÜLLER, BÜLOW, and MEYER), i, 932.
4(3′:4′:5′-Trimethoxybenzylidene)-2-phenyl-5-oxazolone (SONN, MÜLLER, BÜLOW, and MEYER), i, 933.
3:4:5-Trimethoxybenzylmethylamine, and its derivatives (SONN, MÜLLER, BÜLOW, and MEYER), i, 932.
3:4:5-Trimethoxy-1-γ-bromopropylbenzene (MERCK, WOLFES, and DÜTZMANN), i, 393.
3:5.7-Trimethoxy-2-(2′:4′-dimethoxyphenyl) benzopyrylium chloride (WILLSTÄTTER and SCHMIDT), i, 54.
3 5:7-Trimethoxy-2-3′:4′-dimethoxyphenylbenzopyrylium chloride (WILLSTÄTTER, ZECHMEISTER, and KINDLER), i, 54.
3:7:2′-Trimethoxyflavone, 5-hydroxy- (KALFF and ROBINSON), i, 1303.
Trimethoxyglutaric acid, methyl ester and diamide of (HIRST and ROBERTSON), i, 365.
3:4:5-Trimethoxy-1-γ-methylaminopropylbenzene (MERCK, WOLFES, and DÜTZMANN), i, 393.
β-3:4:5-Trimethoxyphenylacrylic acid, α-amino-, benzoyl derivative (SONN, MÜLLER, BÜLOW, and MEYER), i, 933.
2:4:6-Trimethoxyphenyl α-bromo-β-phenylethyl ketone (FREUDENBERG, FIKENTSCHER, and HARDER), i, 420.

***l*-2:2:4-Trimethyl-Δ^3-*cyclo*hexene-1-carboxylic acid**, and its salts and methyl ester (GIBSON and SIMONSEN), i, 920.

1:2:5-Trimethylindazolium iodide, 3-bromo- (v. AUWERS and LOHR), i, 75.

Trimethyl β-methylarabinoside (HIRST and ROBERTSON), i, 365.

Trimethyl γ-methylarabinoside (BAKER and HAWORTH), i, 365.

Trimethylnaphthalene, amino-, and nitro- (PLÜSS), i, 1410.

2:3:3-Trimethyl-β-naphthindolenine (PLAUCHER, COLACICCHI, and BARBIERI), i, 379.

β-2:2:3-Trimethyl*cyclo*pentyl*iso*propyl alcohol, 3-cyano-, and its derivatives (HALLER and LEGAGNEUR), i, 924.

3:5:5'-Trimethylpyrazolidine cuprochloride (DIELS and KOLL), i, 988.

3:5:5-Trimethylpyrazoline-1-carbamide (LOCQUIN and HEILMANN), i, 837.

2:4:5-Trimethylpyrrole-3-aldehyde (FISCHER and NENITZESCU), i, 835.

2:3:4-Trimethylpyrryl-bis-(3-acetyl-2:4-dimethylpyrryl)methane (FISCHER and HEYSE), i, 78.

2:3:4-Trimethylpyrryl-bis-(3-carbethoxy-2:4-dimethylpyrryl)methane (FISCHER and HEYSE), i, 78.

Trimethylstibine, reactions of, with platinic and palladous chlorides (MORGAN and YARSLEY), i, 378.

Trimethylstibine *di*chloropalladium hydrochloride (MORGAN and YARSLEY), i, 378.

2:4:6-Trimethyl*cyclo*telluripentane-3:5-dione 1:1-*di*chloride (MORGAN and TAYLOR), i, 634.

2:4:6-Trimethyl*cyclo*telluropentane-3:5-dione, and its dioxime (MORGAN and TAYLOR), i, 634.

Trimethyltetrahydroindazoles, and their picrates (v. AUWERS, v. SASS, and WITTEKINDT), i, 1183.

3:3:5-Trimethyl-Δ^4-tetrahydro-1:2-pyridazine-1:2-dicarboxylic acid, ethyl ester (DIELS, BLOM, and KOLL), i, 976.

4:6:8-Trimethylthiochroman-4-ol (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.

4:6:8-Trimethyl-Δ^3-thiochromene (KROLLPFEIFFER, SCHULTZE, SCHLUMBOHM, and SOMMERMEYER), i, 1307.

***N*:*N*:*N'*-Trimethyl-*N'*:*N''*:*N''*-triethylguanidinium salts** (LECHER, GRAF, and GNÄDINGER), i, 1393.

Trimethyltrimethylenetriamine, salts of (GRAYMORE), i, 76.

Trimethyltriphenylmethyl-α-methyl-*d*-glucoside, and its triacetyl derivative (HELFERICH and BECKER), i, 10.

3:3':3''-Trimethyl-*N*:*N'*:*N''*-triphenylpararosaniline (*triphenylros*-o-*toluidine*) (GOMBERG and ANDERSON), i, 1064.

1:4:5-Trimethyluracil, dimeride of, and its derivatives (SCHMEDES), i, 435.

1:3:9-Trimethyluric acid, action of alkalis on (GATEWOOD), i, 1189.

Trinaphthylenebenzene. See Decacyclene.

Tri-α-naphthylstibine, and its derivatives (MATSUMIYA), i, 1472.

2:4:6-Trinaphthyl-1:3:5-triazine, 2:4:6-*tri*-*p*-hydroxy- (SOCIETY OF CHEMICAL INDUSTRY IN BASLE), i, 441.

Trioxymethylene, and its diacetate (STAUDINGER and LÜTHY), i, 361.

Triphendioxazine, methylammonium base from, and its salts (KEHRMANN and WILD), i, 444.

Triphenylacetonitrile, *tri*-*p*-amino-, and its derivatives and *tri*-*o*-nitro- (VORLÄNDER), i, 1256.

Triphenylallene, dimerisation of (ZIEGLER, GRABBE, and ULRICH), i, 131; (STRAUS and EHRENSTEIN), i, 584.

aaγ-Triphenylallyl alcohol and its methyl ether (ZIEGLER, GRABBE, and ULRICH), i, 132.

Triphenylbenzylarsonium iodides (STEINKOPF and BESSARITSCH), i, 496.

Triphenylbismuthine, *tri*nitro-, and its derivatives (SUPNIEWSKI), i, 1473.

Triphenylcarbinol hydrochloride (HELFERICH and DEHE), i, 1269.

Triphenylcarbinol, 4:4′:4″-*tri*hydroxy-, hydrate (GOMBERG and SNOW), i, 661.

***d*- and *l*-Triphenylethanols, β-amino-**, camphosulphonates of (MCKENZIE and WILLS), i, 396.

***d*- and *l*- aaβ-Triphenylethyl alcohols, β-amino-** (MCKENZIE and WILLS), i, 396.

β-Triphenylethylamine hydrochloride (RUPE and GISIGER), i, 1095.

Triphenylgermanium bromide and oxide (MORGAN and DREW), i, 1197.

2:4:5-Triphenylglyoxaline, 2:4:5-*tri*-*p*-nitro- (TRÖGER and THOMAS), i, 979.

2:4:5-Triphenylglyoxaline-*m*-sulphonic acid (TRÖGER and THOMAS), i, 980.

Triphenylmethane (STRAUS and HEYN), i, 1430.
preparation of (NORRIS and YOUNG), i, 20.
constitution of coloured derivatives of (KEHRMANN), i, 435.
derivatives, halochromism of (BRAND, STALLMANN, GROEBE and STEIN), i, 397.

Triphenylmethane, *o*-hydroxy-. See *o*-Benzhydrylphenol.

Triphenylmethane colouring matters (DILTHEY), i, 650.
metallic lakes of (HALLER), ii, 287.
violet, detection of (HOLMES), ii, 1212.

Triphenylmethane series, coloured salts of (MADELUNG), i, 1459.

Triphenylmethanecarboxylic acid, *p*-hydroxy- (ORNDORFF and BARRETT), i, 36.

Triphenylmethanetricarboxylic acid, trimethyl ester (WEISS and KOREZYN), i, 560.

β-Triphenylmethoxypropionic acid and its sodium salt and ethyl ester (HELFERICH, MOOG, and JÜNGER), i, 791.

Triphenylmethyl (GOMBERG and FORRESTER), i, 1266.
chloride and peroxide, *tri*-*p*-hydroxy-acetyl and benzoyl derivatives (GOMBERG and SNOW), i, 661.

Triphenylmethylaminoacetic acid, and its salts and ethyl ester (HELFERICH, MOOG, and JÜNGER), i, 791.

***dl*-α-Triphenylmethylaminopropionic acid**, and its sodium salt and ethyl ester (HELFERICH, MOOG, and JÜNGER), i, 792.

Triphenylmethyldibenzoyldextrose *iso*-propylidene ether (HELFERICH, MOOG, and JÜNGER), i, 791.

α-Triphenylmethylethylene glycol, and its *di*-*p*-nitrobenzoate (LEWIS, NIERENSTEIN, and RICH), i, 936.

Triphenylmethyl-*d*-galactose (HELFERICH, MOOG, and JÜNGER), i, 790.

Triphenylmethyl-*d*-gluconic acid, potassium salt (HELFERICH, MOOG, and JÜNGER), i, 791.

Triphenylmethyl-*d*-gluconphenylhydrazide (HELFERICH, MOOG, and JÜNGER), i, 791.

Triphenylmethyl-*d*-glucoses, and their tetra-acetates (HELFERICH, MOOG, and JÜNGER), i, 790.

Triphenylmethyl-α- and -β-methyl-*d*-glucosides, and their derivatives (HELFERICH and BECKER), i, 10.

Triphenylmethylthiocarbamide (HELFERICH, MOOG, and JÜNGER), i, 791.

2:4:5-Triphenyloxazole, and amino-, and hydroxy-, and their derivatives (TRÖGER and PHILIPPSON), i, 986.

aaε-Triphenyl-Δ$^{\beta\delta}$-pentadiene γ-chloro- (STRAUS and EHRENSTEIN), i, 535.

Triphenylphosphine oxide, *tri*-, *m*-, and *p*-chloro- (CHALLENGER and WILKINSON), i, 172.

aaγ-Triphenylpropane (ZIEGLER, GRABBE, and ULRICH), i, 132.

aaγ-Triphenylpropane, **αβ-*di*bromo-** (ZIEGLER, RICHTER, and SCHNELL), i, 915.

aaγ-Triphenylpropan-α-ol, β-amino-, hydrochloride (THOMAS and BETTZIECHE), i, 250.

Triphenylpropargyl alcohol, and its ethers (MOUREU, DUFRAISSE and BLATT), i, 136.
thermochemistry of, and its derivatives (LANDRIEU and BLATT), i, 137.

aaγ-Triphenyl-Δ$^{\alpha}$-propene (ZIEGLER, GRABBE, and ULRICH), i, 132.

aγγ-Triphenylpropenyl methyl ether (STRAUS and EHRENSTEIN), i, 534.

aaβ-Triphenylpropyl alcohol, β-amino- (MCKENZIE and WILLS), i, 396.

aaγ-Triphenylpropyl alcohol (ZIEGLER, GRABBE, and ULRICH), i, 132.

ββγ-Triphenylpropyl alcohol (RAMART and AMAGAT), i, 659.

aaγ-Triphenylpropyl methyl ether (STRAUS and EHRENSTEIN), i, 535.

aaγ-Triphenylpropyl methyl ether β-bromo- (ZIEGLER, RICHTER, and SCHNELL), i, 915.

ααγ-Triphenyl-Δβ-propylene, γ-chloro- (STRAUS and EHRENSTEIN), i, 534.
ααβ-Triphenylpropylene αβ-glycol (ROGER), i, 660.
Triphenylpyrylium compounds, *m*-substituted (DILTHEY and RADMACHER), i, 1441.
Triphenylros-*o*-toluidine. See 3:3′:3″-Trimethyl-*N*:*N*′:*N*″-triphenylpararosaniline.
Triphenyltetrazolium *d*-camphorsulphonates (WEDEKIND), i, 678.
Tripyrocatechylarsinic acids, optically active, and their salts (ROSENHEIM and PLATO), i, 1412.
Tripyrocatechylantimonic acid, formula of (REIHLEN, SAPPER, and KALL), i, 912.
Tripyrrylmethanes (FISCHER and HEYSE), i, 76.
Triterpene from *l*-pinene (KONDAKOV and SAPRIKIN), i, 1293.
Trithiocarbonic acid, *di*-*p*-tolyl ester (AUTENRIETH and HEFNER), i, 1376.
Tri-*p*-tolyl thiophosphate (AUTENRIETH and MEYER), i, 807.
Tri-*p*-tolylbismuthine, *tri*-2-nitro-, and its derivatives (SUPNIEWSKI), i, 1473.
Tri-*m*-tolylcarbinol, 4:4′:4″-*tri*hydroxy-, triacetyl derivative (GOMBERG and ANDERSON), i, 1065.
Triton tæniatus, skin secretion of (MAKI), i, 327.
Tritopine, constitution of (SPÄTH and SEKA), i, 1093.
Trivinylarsine, βββ-*tri*chloro-, silver nitrate compound of (LEWIS and STIEGLER), i, 1470.
Trivinylmethylarsonium salts, βββ-*tri*chloro- (LEWIS and STIEGLER), i, 1470.
Trixanthylhydrazine (FOSSE and HIEULLE), i, 1130.
Trocstite (WHEATLEY), ii, 488.
l-**Tropamide** (MCKENZIE and STRATHERN), i, 401.
Tropic acid, β-dimethylaminoethyl and β-piperidinoethyl esters (CHEMISCHE WERKE GRENZACH), i, 31.
Tropic acid group, displacement reactions in (MCKENZIE and STRATHERN), i, 401.
Tropine *N*-oxide, and its derivatives (POLONOVSKI and POLONOVSKI), i, 829.
Trouton's rule, at absolute zero (PERRAKIS), ii, 492.
revised (BYK), ii, 97.
for associated liquids (WAGNER), ii, 762.
Truxenequinone (RADULESCU and GEORGESCU), i, 1286.
ζ-Truxinamic acids, and their methyl esters (STOERMER and KLOCKMANN), i, 928.
ζ-Truxinanilic acids, methyl esters and nitroso derivative (STOERMER and KLOCKMANN), i, 927.
ζ-Truxinic acid, and its derivatives (STOERMER and KLOCKMANN), i, 927.
Truxones, constitution and synthesis of (DE FAZI), i, 269.
Trypaflavine, sensitivity to light of (JOHN), i, 465.
Trypanocidal action and chemical constitution (KING and MURCH), i, 319.
Trypanocidal compounds (ADAMS and JOHNSON), i, 319.
Trypsin, activity of (EHRENBERG), i, 103.
effect of reagents on the activity of (HUGOUNENQ and LOISELEUR), i, 1198.
inactivation of, by Röntgen rays (CLARK and NORTHROP), i, 1361.
digestion with low concentrations of (EHRENBERG), i, 202.
production of ammonia in digestion by (HUNTER and SMITH), i, 473.
action of, on insulin (SCOTT), i, 870.
effect of lecithin and cholesterol on digestion by (STANDENATH), i, 473.
synthesis of proteins by (WASTENEYS and BORSOOK), i, 865.
pancreatic (WALDSCHMIDT-LEITZ and HARTENECK), i, 1360.
determination of (WILLSTÄTTER and PERSIEL), i, 741.
determination of, colorimetrically (SMORODINCEV and ADOVA), i, 473.
Tryptophan from silk fibroin (HIRATSUKA), i, 836.
content of, in proteins (JONES, GERSDORFF, and MOELLER), i, 98.
metabolism of. See **Metabolism.**
colour reactions of aldehydes with (BLANCHETIÈRE), i, 963; (KOMM), ii, 164.
detection of, by means of *Bacillus coli* (MME. E. and E. WOLLMAN), i, 205.
determination of, colorimetrically, and its separation from indole and skatole (KRAUS), ii, 448.
Tuberculin (MUELLER), i, 616.
Tuberculosis, lipase in (CAPPELLI), i, 725.
basic constituents of urine in (REINWEIN), i, 189.
Tumours, carbohydrate metabolism of (C. F. and G. T. CORI), i, 999, 1492.
formation of lactic acid in (WARBURG), i, 1492.

Tumours, urea in blood after inoculation with, and exposure to *X*-rays (DODDS, LAWSON, and MOTTRAM), i, 1492.
Tungsten, physical properties of (ZWIKKER), ii, 1041.
line spectrum of (WORTHING and RUDY), ii, 1102.
Röntgen ray absorption and emission spectra of (ZUMSTEIN) ii, 725.
K-series spectrum of (ALLISON and DUANE), ii, 250.
M-series spectrum of (THORAEUS), ii, 5.
spark spectrum of (BAYEN), ii, 168; (L. and E. BLOCH), ii, 168, 727; (LEMON), ii, 454.
X-ray absorption coefficient of (WARBURTON and RICHTMYER), ii, 1103.
electron emission from (DUSHMAN, ROWE, EWALD, and KIDNER), ii, 345.
emission of electrons from films on (KINGDON), ii, 9.
secondary electrons from (STUHLMAN), ii, 1104.
pure, electrical properties of (GEISS and VAN LIEMPT), ii, 638.
electrical properties of, after cold working (GEISS and VAN LIEMPT), ii, 372.
electro-deposition of (VAN LIEMPT), ii, 694.
incandescent, specific heat of (BOCKSTAHLER), ii, 643.
diffusion of carbon through (ANDREWS and DUSHMAN), ii, 500,
effect of cold working on density of (GEISS and VAN LIEMPT), ii, 762.
movement of a crystal of, under loads (GEISS), ii, 96.
macro-crystal formation in (ALTERTHUM), ii, 136.
equilibria of, with oxygen and with water vapour (ALTERTHUM and KOREF), ii, 1159.
Tungsten halides, action of, with ammonia and with potassamide in liquid ammonia (BERGSTROM), ii, 1083.
trioxide, equilibria of, with alkali tungstates (VAN LIEMPT), ii, 421.
selenide (MOSER and ATYNSKI), ii, 583.
Tungstic acid, electrolytic reduction of, in hydrochloric acid (COLLENBERG and BACKER), ii, 571.
electrolytic reduction of, in presence of oxalic acid (COLLENBERG and WILSON), ii, 1166.
alkyl and aryl ammonium salts (KRAUSE and KRAUSKOPF), i, 908.
Tungsten:—
Tungstic acid, complex compounds of, with pyrocatechol and pyrogallol (FERNANDES), i, 912, 1061.
Tungstates, reduction of (SPITZIN), ii, 1191.
Tungsten determination and separation:—
determination of, by means of bismuth and lead amalgams (SOMEYA), ii, 904.
determination of boron in (BROPHY), ii, 901.
determination of carbon in (KING), ii, 435.
separation of, from tin (JILEK and LUKAS), ii, 242.
Tungsten arc, measurements of (DE GROOT), ii, 1137.
Tungsten filaments, hafnium oxide in (VAN LIEMPT), ii, 233.
Tungsten wire, electrical explosion of (BRISCOE, ROBINSON, and STEPHENSON), ii, 348.
hard-drawn, softening of (KOREF), ii, 846.
Tunicin, Röntgen spectra of cellulose and (HERZOG and GONELL), i, 871.
Turbidimeter, micro- (CONKLIN), ii, 708.
Turgoelectricity (KOPACZEWSKI), ii, 978.
Turmeric paper, double-reacting (BRINSMAID), ii, 435.
Turpentine, oxidation of organic compounds in (WALKER), i, 990.
spruce, *l*-borneol from (WHEELER and HARRIS), i, 1437.
Tutocaine, experiments with (WAGNER), i, 1503.
Tyramine, preparation of (JOHNSON and DASCHAVSKY), i, 540.
influence of, on nitrogen metabolism (IWATSURU), i, 1502.
detection of, microchemically (VAN ITALLIE and STEENHAUER), ii, 608.
Tyrosinase in plants (BOAS and MERKENSCHLAGER), i, 474.
oxidative deamination by (ROBINSON and MCCANCE), i, 745.
deamination of tyrosine by (RAPER and WORMALL), i, 473; (HAPPOLD and RAPER; GORTNER), i, 474.
Tyrosine, deamination of, by tyrosinase (RAPER and WORMALL), i, 473; (HAPPOLD and RAPER; GORTNER), i, 474.
methylation of (ABDERHALDEN and SCHWAB), i, 1423.
determination of, in proteins (FÜRTH and FISCHER), ii, 448.
Tyrosine, bromo-, bromonitro-, chloro-, chlorobromo-, and chloronitro-, and their derivatives (ZEYNEK), i, 920.

Tyrosylalaninecarboxylic acid (HAVESTADT and FRICKE), i, 163.
Tyrosylaspartic acid (HAVESTADT and FRICKE), i, 163.
Tyrosylhistidinecarboxylic acid (HAVESTADT and FRICKE), i, 163.
Tyuyamunite (TSCHIRVINSKI), ii, 430.

U.

Ulmins, coal (FRANCIS and WHEELER), i, 1389.
Ultrabalance (HOLTZ and KUHLMANN), ii, 319; (KUHLMANN), ii, 706; (HOLTZ), ii, 1091.
Ultracentrifuge (SVEDBERG and RINDE), ii, 233.
Ultrafilters (MÜLLER), ii, 1061.
Ultrafiltration, mechanism of (DUCLAUX and ERRERA), ii, 530.
under pressure (BRUCKNER and OVERBECK), ii, 529.
of non-aqueous solutions (BECHHOLD and SZIDON), ii, 529.
electro- (BECHHOLD), ii, 1158.
Ultramarine, structure of (DOMINIKIEWICZ), ii, 1131.
Ultramicrons (SIEDENTOPF), ii, 637.
Ultramicroscope, kino- (KRAEMER), ii, 1156.
Umbilicus pendulinus, maltose in tubers of (BRIDEL), i, 620.
n-**Undecane-***a*-*ι*-**diol** (HELFERICH and SCHÄFER), i, 7.
n-**Undecan-ζ-ol** (HESS and BAPPERT), i, 849.
Undecaoxymethylene diacetate (STAUDINGER and LÜTHY), i, 361.
Unsaturated compounds, formation of, from halogenated open-chain derivatives (INGOLD), i, 357; (HAERDI and THORPE), i, 923.
polar and non-polar valencies in (SUGDEN, REED, and WILKINS), ii, 936.
catalytic hydrogenation of (LEBEDEV, KOBLIANSKY, and YAKUBCHIK), i, 350.
addition of iodine bromide and hypoiodous acid to (HOLDE and GORGAS), i, 882.
oxidation of, with permanganate (NAMETKIN), i, 1146.
action of silicates on (LEBEDEV and FILONENKO), i, 225.
action of thiocyanogen on (SÖDERBÄCK), i, 899; (CHALLENGER and BOTT), i, 936.
cyclic, theory of (PETRENKO-KRITSCHENKO), ii, 1122.
Unsaturation of organic ring systems (MEREJKOVSKI), i, 1291.
Unstable substances, attempts to isolate (STAUDINGER and KREIS), ii, 316.
Uracil xylosides, substituted (LEVENE and SOBOTKA), i, 1463.
Uracylic acid, brucine salt (PEISER), i, 1477.
Uræmia, diazo reactions of serum in (HEWITT), i, 726.
Uragoga ipecacuanha, alkaloids of (KELLER and BERNHARD), i, 1086.
Uranic hydroxide. See under Uranium.
Uranic acid. See under Uranium.
Uranium, isotopes of (HAHN), ii, 921.
change of, into uranium-*X* (GASCHLER), ii, 925.
Uranium compounds, isomorphism of zirconium and (FERNANDES), ii, 1133.
isomorphism of, with those of metals of the magnesium group (CAROBBI), ii, 892.
reactions of, with organic compounds in presence of sunlight (ALOY and VALDIGUIÉ), ii, 1081.
Uranium sulphates (MEYER and NACHOD), ii, 230.
Uranic hydroxide, precipitation of, electrometrically (BRITTON), ii, 1204.
Uranic acid, complex compounds of, with pyrocatechol and pyrogallol (FERNANDES), i, 912, 1061.
Uranyl salts, reduction of, with the dropping mercury cathode (HERASYMENKO), ii, 695.
Uranyl barium and silver carbonates (HEDVALL), ii, 990.
Uranylsulphites of the rare earths (CANNERI and FERNANDES), ii, 888.
Uranium determination and separation:—
determination of, oxidimetrically (KOBLIC), ii, 831.
determination of, in carnotite (BRINTON and ELLESTAD), ii, 72.
separation of, from rare earths (CANNERI and FERNANDES), ii, 71.
Uranylsalicylic acid, alkali salts (CANNERI and FERNANDES), ii, 71.
Urazole, *di*thio-, structure of (GUHA and RÂY), i, 702.
Urea (*carbamide*), formation of, in autolysis of liver and spleen (MCCANCE), i, 472.
metabolism of. See Metabolism.
as a source of nitrogen in ruminants (LAVROV, MOLTSCHANOVA, and OCHOTNIKOVA), i, 464.
influence of adrenaline on concentration of, in blood (DUBOIS and POLONOVSKI), i, 481.

Urea (*carbamide*), in fungi (IVANOV), i, 344, 746.
effect of, and its derivatives, on higher plants (E. and G. NICOLAS), i, 757.
in soils (COUTURIER and PERRAUD), i, 765.
decomposition of, in soils (LITTAUER), i, 218.
replacement of proteins by, in diet of milch animals (MORGEN, WINDHEUSER, and OHLMER), i, 217.
new form of, in urine (MOOR), i, 460.
determination of (HUNTER and DAUPHINEE), ii, 247.
apparatus for determination of (HORVATH), ii, 237.
determination of, colorimetrically (HUNTER and DAUPHINEE), i, 104.
determination of, in blood (KARR), i, 323; (PATTERSON), i, 1200.
determination of, in blood and urine (MURRAY), i, 710.
determination of, in physiological fluids (REHBERG; ROIG and HELMHOLTZ), i, 853.
determination of, in urine (KIKUCHI; GOLSE), i, 609.
See also Carbamide.
Urease, effect of alcohol on (ROSENFELD), i, 336.
gastric (KORTSCHAGIN), i, 200.
physiology of (LUCK and SETH), i, 1010.
soja bean, hydrolysis by (TAUBMANN), i, 744.
Urethane, density and compressibility of solutions of (RICHARDS and CHADWELL), ii, 1049.
Urethane, hydroxy-, alkyl derivatives of (NEUFFER and HOFFMAN), i, 891.
Urethanes, hydroxy- (OESPER and BROKER), i, 1407.
Urginea Burkei (African squill), active principles of (GEORGE), i, 823.
Uric acid, first synthesis of (BEHREND), i, 441.
supersaturated solutions of (STERN), ii, 196, 504, 1152.
solvent action of trimethylenetriamines on, and its trimethyl- and triethyl-trimethylenetriamine salts (GRAYMORE), i, 76.
catalytic oxidation of, and its copper salts (PIAUX), i, 592.
oxidation of, with iodine (FÜRTH), i, 1462.
decomposition of, by bacteria and moulds (MORRIS and ECKER), i, 478.
excretion of, in bile and urine (BRUGSCH and ROTHER), i, 860.
Uric acid, in blood (HARDING, ALLIN, and VAN WYCK), i, 94; (LENNOX and O'CONNOR), i, 711.
effect of fat diet on (HARDING, ALLIN, EAGLES, and VAN WYCK), i, 604.
in cerebrospinal fluid (BERNHARD), i, 326.
accumulation of, after liver removal (BOLLMANN, MANN, and MAGATH), i, 1496.
excretion of, in urine (RANGIER), i, 186; (CHELLE and RANGIER), i, 187.
sodium salt, transformation of, on keeping (STERN), ii, 34.
determination of, by Benedict's method (COHEN), i, 184.
determination of, in blood (BULMER, EAGLES, and HUNTER; GARRY), i 605; (BENEDICT), i, 995; (DELAVILLE and JONES), i, 1344.
determination of, in blood plasma (DELAVILLE and JONES), i, 1201.
determination of, in urine (AUFRECHT), i, 187.
Uric acids, methylated, synthesis of (PRÜSSE), i, 441.
substituted, action of alkalis on (GATEWOOD), i, 1188, 1189.
Uric acid glycols, oxidation of (SLOTTA), i, 1189.
Uricolytic index in diabetes (LANGFELDT and HOLMSEN), i, 1207.
Urindigo. See Diuracil-4:4′-indigotin.
Urine, effect of muscular exercise on composition of (LILJESTRAND and WILSON; WILSON, LONG, THOMPSON, and THURLOW), i, 1115.
effect of neutral salts on the acidity of (GYÖRGY), i, 459.
effect of calcium and potassium salts on acidity of (BENATT and HÄNDEL), i, 722.
secretion of (STARLING and VERNEY), i, 458.
effect of pituitary extracts on (SMITH and MCCLOSKY), i, 207.
acetone substances in (HUBBARD and NOBACK), i, 712.
acetone and β-hydroxybutyric acid in (LUBLIN), i, 459.
arsenic in (COX), ii, 157.
basic constituents of, in tuberculosis (REINWEIN), i, 189.
calculi in (RANDALL), i 1491.
capillary active substance of (KIESEL), i, 98.
excretion of carbon and nitrogen in (SCHIMIZU), i, 185.
excretion and detection of chlorophyll degradation products in (HOFSTETTER; KITAHARA), i, 460.

Urine, cholesterol in (GARDNER and GAINSBOROUGH), i, 1204.
red colouring matter in, after administration of chlorophyll (GODINHO), i, 460.
red pigment from *p*-dimethylaminobenzaldehyde and (SCHEFF), i, 855.
dextrose in (LUND and WOLF), i, 1205.
diastase in, in pancreatic diseases (HANSEN), i, 856.
nitrogen distribution in hydroxyproteic acids of (BRINGS), i, 328; (FREUND and SITTENBERGER-KRAFT), i, 723; (EDLBACHER), i, 855.
excretion of iminazole in, after disappearance of carnosine (HUNTER), i, 459.
nitrogen and chloride excretion in (TAKANOSU), i, 185.
organic bases in (HEFTER), i, 1350.
oxalate from (MOOR), i, 1490.
organic phosphorus of (YOUNGBURG and PUCHER), i, 98.
propepsin in (GOTTLIEB), i, 742.
salicyluric acid in (DRZIMAL), i, 99.
sugars in (GREENWALD, GROSS, and SAMET), i, 185.
urochrome and new form of urea in (MOOR), i, 460.
excretion of uric acid in (RANGIER), i, 186; (CHELLE and RANGIER), i, 186.
volatile substance of (PITTARELLI), i, 98.
of various animals, comparative biochemistry of (ROTHWELL), i, 1350.
camel's, constituents of (READ), i, 1204.
dog's, excretion of purine derivatives in (LANGFELDT and HOLMSEN), i, 1205.
of ruminants, distribution of nitrogen in, and its alkalinity after administration of sodium nitrate (ROGOZINSKI and STARZEVSKA; STARZEVSKA), i, 1355.
whale's (MORIMURA), i, 1348.
Urine, analytical methods relating to:—
analysis of (RAQUET and PAGET), i, 1350.
diazo reaction in (HUNTER), i, 459.
clinical detection of dextrose in (RUOSS), i, 185.
detection of hæmatoporphyrin and urobilin in (POLICARD and LEULIER), i, 1351.
detection and determination of indican in (GORE), i, 186.
detection of nitroaminophenols in (DESVERGNES), i, 328.
Urine, analytical methods relating to:—
detection of urobilin in (RODILLON), i, 722.
detection of urobilin and urobilinogen in (BENGUEREL), i, 460.
detection and determination of acetone in (ENGFELDT), i, 1490.
determination of, in urine and fæces (VAN SPENGLER; TERWEN), i, 1351.
determination of acetoacetic acid and β-hydroxybutyric acid in (GOLDBLATT), i, 1204.
determination of acetone in, colorimetrically (SITSEN), i, 855.
determination of ammonia in (YOVANOVITCH), i, 1114.
determination of ammonia in, colorimetrically (ORR), i, 184.
determination of ammonia and ammonium salts in (YOVANOVITCH), i, 1204.
determination of ammonia and urea in (MURRAY), i, 710.
determination of bismuth in (KÜRTHY and MÜLLER), i, 100.
determination of cystine in (MAGNUS-LEVY), i, 610.
determination of formic acid in (DE EDS), i, 713.
determination of guanidines in (SHARPE), i, 722.
hydrogen-ion determination in (HASTINGS, SENDROY, and ROBSON), i, 1490.
determination of iodides in (v. BODÓ), i, 1490.
determination of organic acids in (GOIFFON), i, 459.
determination of phenolsulphonephthalein in, in jaundice (ABRAMSON), i, 329.
determination of potassium and sodium in (v. DEHN), i, 855.
determination of reducing sugars in (WOKES), i, 1205.
diabetic, determination of sugar in (SUMNER), i, 186, 1491; (WILLIAMS and CASEY), i, 998.
determination of sugar, after santonin treatment (PÉGURIER), i, 609.
determination of urea in (KIKUCHI; GOLSE), i, 609; (ROIG and HELMHOLTZ), i, 853; (ADDIS), i, 1113.
determination of uric acid in (AUFRECHT), i, 187.
determination of urobilin in (VAN SPENGLER; TERWEN), i, 1351.
determination of urobilinogen in (TERWEN), i, 1351.

Urobilin, detection of (ADLER), i, 328.
detection of, in urine (BENGUEREL), i, 460.
detection of, in fæces (ADLERSBERG and PORGES), i, 98.
detection of, in urine (RODILLON), i, 720; (POLICARD and LEULIER), i, 1351.
determination of, in human excreta (OPITZ and BREHME), i, 187.
Urobilinogen, detection of, in urine (BENGUEREL), i, 460.
determination of, in urine and fæces (TERWEN), i, 1351.
Urocanic acid, formation and fate of, in the animal body (KONISHI), i, 731.
Urochrome, glycuronic acid as a constituent of (POLLECOFF), i, 186.
in urine (MOOR), i, 460.
Urochromogen (MOOR), i, 328.
Uroflavine (REINWEIN), i, 725.
Ursolic acid (VAN DER HAAR), i, 50.
Utricularia vulgaris, enzymes of (ADOVA), i, 202.

V.

Vaccines, bacterial, nitrogen content of (KAUTSKY, LEINEWEBER, and FAMULENER), i, 1511.
Vacuum apparatus, trap for mercury vapour in (HUGHES and POINDEXTER), ii, 818.
Vacuum door (MEHL and SMITH), ii, 707.
Vacuum gauge, laboratory (HAMLIN), ii, 431.
Valency (SCHÖNBERG), i, 557; (LORING), ii, 841.
problems of (MÜLLER), ii, 863.
electron theory of (LOWRY), ii, 15; (ODDO), ii, 623.
in relation to heat of combustion (KHARASCH and SHER), ii, 636.
magnetic theory of (LAURIE), ii, 16.
higher, in relation to assimilation and catalysis (TSCHELINCEV), ii, 481.
polar and non-polar, theories of (BURKHARDT and LAPWORTH), ii, 937.
in unsaturated compounds (SUGDEN, REED, and WILKINS), ii, 936.
Valeraldehyde, γ-hydroxy-, and its dimethylacetal, and their benzoyl derivatives (HELFERICH and FRIES), i, 1039.
Valerian root, Indian, oleo-resin from (BULLOCK), i, 1294.
n-Valeric acid, preparation of (GILMAN and PARKER), i, 228.
n-**Valeric acid**, hydroxylamine salt (OESPER and BALLARD), i, 1233.
furfuryl ester (ZANETTI), i, 567.
*iso***Valerylglycine**, ethyl ester (KARRER, MIYAMICHI, STORM, and WIDMER), i, 594.
Valonia, cell sap of, with reference to flotation (OSTERHOUT and DORCAS), i, 868.
Valonia macrophysa, permeability of, by arsenic (BROOKS), i, 1004.
Valve, fat-free, with porous glass plates (STOCK), ii, 1195.
Vanadic acid. See under Vanadium.
Vanadisalicylic acid (SCAGLIARINI and AIROLDI), i, 920.
Vanadium, ultra-violet spark spectrum of (KING), ii, 453.
ionised, spectrum of (MEGGERS), ii, 913.
Vanadium alloys with iron, temper colours of (TAMMANN and SIEBEL), ii, 1169.
Vanadium carbide and nitride (FRIEDERICH), ii, 375.
*pent*oxide sols (FREUNDLICH, STAPELFELDT, and ZOCHER), ii, 199, 200; (FREUNDLICH), ii, 1153.
alkali sulphates (ROSENHEIM and MONG), i, 1411.
Vanadic acid, determination of (FURMAN), ii, 442.
Vanadium organic compounds (SCAGLIARINI and AIROLDI), i, 920.
salts of organic acids (ROSENHEIM and MONG), i, 1411.
pyridine sulphate (SCAGLIARINI and AIROLDI), i, 920.
Vanadium determination and separation:—
determination of (HARTMANN), ii, 604.
determination of, iodometrically (STOPPEL, SIDENER, and BRINTON), ii, 73.
determination of, in presence of iron (SOMEYA), ii, 161.
determination of, in presence of iron and chromium (KOLTHOFF and TOMIČEK), ii, 72.
separation of, from molybdenum (STOPPEL, SIDENER, and BRINTON), ii, 718.
Vanillin, solubility of (MANGE and EHLER), ii, 119.
ferrous salt (ZETZSCHE, SILBERMANN, and VIELI), i, 1411.
condensation of, with methyl ethyl ketone (ICHIKAWA), i, 1156.
determination of (RADCLIFFE and SHARPLES), ii, 1210.
Vanillin, 5-chloro- (HANN), i, 1105.

Vanillinoxime *N*-phenyl ether (BAMBERGER), i, 142.
Vanillylidenenitromethane as an indicator (RAO, SRIKANTIA, and IYENGAR), i, 676.
5-Vanillylidene-2-thio-3-tolyl-4-ketothiazolidines, and 5-bromo-, 5-chloro-, 5-iodo-, and 5-nitro- (HANN), i, 1105.
Vanillylsuccinic acid, and its derivatives (BAKER and LAPWORTH), i, 670.
Vaporisation, kinetic theory of (BRADFORD), ii, 1142.
Vapour pressure (BERLINER and MAY), ii, 1045.
application of kinetic theory to (BRADFORD), ii, 26.
thermodynamic equation for (EUCKEN, KARWAT, and FRIED), ii, 98.
and ionisation of gases (BECKER), ii, 342.
of binary mixtures (BROWN), ii, 377.
and miscibility of binary mixed liquids (HERZFELD), ii, 1143.
of organic mixed liquids (LESLIE and CARE), ii, 1050.
of metallic chlorides (MAIER), ii, 850.
of monatomic substances (EGERTON), ii, 25.
of molecular compounds of phenols (WEISSENBERGER and SCHUSTER), 766.
of salts (LORENZ and HERZ), ii, 493.
of salt solutions, measurement of (SIDGWICK and EWBANK), ii, 38.
of solutions of non-volatile solvents (MALI), ii, 850.
charts for organic vapours (DAVIS), i, 1033.
Vasicine, and its salts (SEN and GHOSE), i, 958.
Vaterite (GIBSON, WYCKOFF, and MERWIN), ii, 1183.
Vegetables, cobalt and nickel in (BERTRAND and MOKRAGNATZ), i, 873.
effect of storage on the anti-scurvy value of (DELF), i, 484.
green, action of ultra-violet light on (HESS and WEINSTOCK), i, 212.
Velocity of absorption, effect of gas velocity and temperature (HASLAM, HERSHEY, and KEEN), ii, 106.
Velocity of chemical change, effect of diffusion on (SANO), ii, 681.
Velocity of coagulation of colloids (JABŁCZYŃSKI), ii, 34, 35.
Velocity of crystallisation (JENKINS), ii, 559.
Velocity of decomposition of esters (KARLSSON), ii, 877.
Velocity of diffusion, relation of, to viscosity and pressure (COHEN and BRUINS), ii, 280.
Velocity of diffusion of metals in mercury (COHEN and BRUINS), ii, 648.
Velocity of dissociation of solids (CENTNERSZWER and BRUŽS), ii, 685.
Velocity of esterification (PETRENKO-KRITSCHENKO, BOGATSKY, and LUBMAN), ii, 556.
Velocity of gas reactions, apparatus for measuring (LATSHAW and PATRICK), ii, 681.
Velocity of photochemical reaction (PERRIN and CHOUCROUN), ii, 55.
Velocity of reaction, theory of (BRÖNSTED), ii, 681; (LEWIS and SMITH), ii, 799.
coefficients of (WAGNER), ii, 406, 407.
and distribution of energy (HINSHELWOOD and THORNTON), ii, 1167.
ions influencing (v. EULER and RUDBERG), i, 135.
between two liquid phases (JABŁCZYŃSKI, WIECKOWSKI, and KLEIN), ii, 410.
in mixed solvents (JONES, MCCOMBIE, and SCARBOROUGH), ii, 137; (MCCOMBIE, ROBERTS, and SCARBOROUGH), ii, 554.
in heterogeneous systems in relation to rate of stirring (KLEIN), ii, 802.
bimolecular, in solutions (CHRISTIANSEN), ii, 47.
coupled (WEGSCHEIDER), ii, 47.
rapid, measurement of (HARTRIDGE and ROUGHTON), ii, 47.
Velocity of saponification of ionic esters (BRÖNSTED and DELBANCO), ii, 684.
Velocity of swelling of gels (LIEPATOV), ii, 685.
Velocity of transformation of metastable systems (STEPANOV), ii, 645.
β-Veratrylacrylic acid, α-cyano- (BAKER and ROBINSON), i, 926.
Veratrylaminoacetyl (FORSYTH, KELLY, and PYMAN), i, 1167.
1-Veratrylhydrohydrastinine, and 6′-amino-, 6′-nitro-, and their derivatives (HAWORTH, PERKIN, and RANKIN), i, 1314.
Veratrylideneaminoacetal (FORSYTH, KELLY, and PYMAN), i, 1167.
Veratrylnorhydrohydrastinine, 6′-bromo-, and its salts and formyl derivative and 6′-nitro- (HAWORTH and PERKIN), i, 970.
β-Veratrylpropionic acid, α-cyano- (BAKER and ROBINSON), i, 926.
β-Veratrylpropionitrile (BAKER and ROBINSON), i, 926.
Veronal, compound of pyramidone with (PFEIFFER), i, 1318.
Vesuvius, radioactivity of gases from (STOKLASA and PENKAVA), ii, 235.

Vibrio choleræ, biochemistry of (HIRSCH), i, 479.
Vicia faba, proteolytic enzymes in pods of (DANCKWORTH and PFAU), i, 202.
effect of boron compounds on the growth of (BRENCHLEY and THORNTON), i, 1368.
Vicianose, preparation of, from gein (HÉRISSEY and CHEYMOL), i, 1383.
Vine, alkaline chlorosis of (PRATOLONGO), i, 623.
phosphoric acid and nitrogen in leaves of (LAGATU and MAUME), i, 756.
tannins in shoots of ripening (PICARD), i, 346.
See also *Vitis vinifera*.
Vinegar, acetylmethylcarbinol in (VAN'T HOOFT), i, 772.
Vinylalkylcarbinols, conversion of, into ethyl alkyl ketones (DELABY and DUMOULIN), i, 632.
Vinylarsenious oxide, β-chloro- (LEWIS and STIEGLER), i, 1470.
Vinylarsines, bromo-, chloro-, and chloroiodo-derivatives (LEWIS and STIEGLER), i, 1470.
chloro- (HUNT and TURNER), i, 843.
Vinylarsinic acid, β-bromo-, and β-chloro-, silver salt (LEWIS and STIEGLER), i, 1470.
Vinylcarbinols, aryl-substituted, and their derivatives (ZIEGLER, RICHTER, and SOHNELL), i, 915.
poly-arylated, and their derivatives (ZIEGLER, GRABBE, and ULRICH), i, 131; (ZIEGLER), i, 395.
Vinyldiacetonamine, benzoyl derivatives of (KIPPING and GREASLEY), i, 144.
7-Vinyl-7:12-dihydro-7-benzophenarsazine, 7-β-chloro- (LEWIS and STIEGLER), i, 1470.
2:2′-*streptomono*Vinylene-4:4′-dicarbethoxy-3:3:5:5′-tetramethylpyrroflavinium salts (KÖNIG), i, 1184.
3:3′-*streptomono*Vinylene-2:2′-dimethylindorhodinium hydroxide, and its salts (KÖNIG), i, 1184.
3:3′-*streptomono*Vinylene-2:2′:5:5′-tetramethylindorhodinium salts (KÖNIG), i, 1184.
Vinylhydroxythiocyanoarsine, β-chloro- (LEWIS and STIEGLER), i, 1470.
Vinylindole, 3-ω-nitro-, 1-acetyl derivative (MAJIMA and KOTAKE), i, 1450.
3-Vinyl-2-methylindole, ω-nitro- (SEKA), i, 67.
1-Vinylphenanthrene (GADAMER, OBERLIN, and SCHOEBLER), i, 577.
6-Vinylphenarsazine, 6-β-chloro- (LEWIS and STIEGLER), i, 1470.
*iso*Violanthrone, *di*bromo-, and 4′:4″-*di*chloro- (ZINKE, FUNKE, and PONGRATZ), i, 819.
*di*hydroxy- (ZINKE, FUNKE, MATSCHER, WOLFBAUER, and LORBER), i, 1436.
Viscose, plasticity of (VENABLE), ii, 1058.
Viscosimeter, new (AUERBACH), ii, 589.
Ostwald (MARTIN), ii, 499.
Viscosity, measurement of (MARTIN), ii, 499; (DUCLAUX and ERRERA), ii, 1048.
and its relation to diffusion velocity (COHEN and BRUINS), ii, 280.
temperatures of equal (HERZ), ii, 1049.
as a function of volume (DUBIEF), ii, 498.
during esterification (CAUQUIL), ii, 964.
of colloidal solutions (SZEGVARI), ii, 111; (FREUNDLICH and SCHALEK), ii, 112; (MATTHÄUS; OSTWALD), ii, 663; (DE WAELE), ii, 777.
of disperse systems (OSTWALD), ii, 291, 392.
of reversible emulsions (JOSHI), ii, 776.
of gases at low temperatures (GÜNTHER), ii, 100.
and molecular weight of liquids (MACLEOD), ii, 498.
of liquids at the boiling point (MACLEOD), ii, 1049.
under pressure (BRIDGMAN), ii, 1143.
containing dissolved gases (LEWIS), ii, 377.
of binary mixed liquids (MACLEOD), ii, 280.
of organic liquids (WÖHLISCH), ii, 277.
of solutions (DE KOLOSOVSKI), ii, 765.
effect of, on specific heat of solutions (DE KOLOSOVSKI), ii, 653.
Vital-red. See Brilliant Congo R.
Vitamins (SCHEUNERT and HERMERSDÖRFER), i, 617; (GROEBBELS and SPERFELD), i, 1514; (SCHEUNERT and CANDELIN), i, 1515.
action of ultra-violet light on (SPINKA), i, 212; (ZILVA), i, 485.
colloid chemistry of (v. HAHN), ii, 664.
promoting bacterial growth (DAVIDSOHN), i, 108.
parasympathetic stimulants in extracts of (MORI), i, 1021.
deficiency of, in pernicious anæmia (DHAR), i, 1221.

Vitamins, influence of, on phosphates in blood (v. EULER and MYRBÄCK), i, 1515.
in milk (PRINGLE), i, 1018.
antineuritic, effect of ultra-violet light on (WILLIAMS), i, 751.
fat-soluble (NELSON and STEENBOCK), i, 484, 1020; (STEENBOCK and BLACK), i, 1020.
plant, formation of, by micro-organisms (MOCKERIDGE), i, 106.
water-soluble, of beer wort (SOUTHGATE), i, 209.
determination of, biochemically (SAGASTUME and SPEGAZZINI), i, 209.
Vitamin-*A* (STEENBOCK, NELSON, and BLACK; BEZSSONOFF; STEENBOCK and NELSON), i, 107.
formation of, in germination of (STEPP), i, 1220.
occurrence and distribution of, in the body according to age, diet, etc. (SHERMAN and BOYNTON), i, 1018; (SHERMAN and STORMS; SHERMAN and MACLEOD), i, 1019.
synthesis of, by *Chlorella* (COWARD), i, 750.
physical and chemical properties and derivatives of (TAKAHASHI, MAKAMIYA, KAWAKAMI, and KITASATO), i, 1365.
occurrence of copper compounds with (MCHARGUE), i, 1515.
persistence of, in plant tissues (COWARD), i, 1017.
in yeast fat (LUCE and MACLEAN), i, 483.
identity of (JAVILLIER, BAUDE, and LEVY-LAJEUNESSE), i, 617.
detection of, colorimetrically (ROSENHEIM and DRUMMOND), i, 1515.
determination of (SHERMAN and MUNSELL), i, 1018.
determination of, physiologically (JAVILLIER, BAUDE, and LEVY-LAJEUNESSE), i, 1364.
Vitamins-*A* and -*B*, influence of, on diet (EDERER), i, 869.
Vitamin-*B*, effect of phosphate manuring on production of, in plants (HORNEMANN), i, 623.
concentration of (LEVENE and VAN DER HOEVEN; KINNERSLEY and PETERS), i, 1516.
basal diet free from (BACHARACH), i, 1220.
in dried and evaporated milks (HARTWELL), i, 751.
effect of deficiency in, on blood sugar and liver glycogen (RANDOIN and LELESZ), i, 751.
Vitamin-*B*, effect of absence of, on fats and lipoids in blood (IWATSURU), i, 1515.
effect of deficiency of, on blood sugar (EGGLETON and GROSS), i, 1220.
in excreta of rats (SALMON), i, 1516.
effect of, on reproduction (PARKES and DRUMMOND), i, 1021.
reaction for (BEZSSONOFF; LEVINE), i, 1220.
Jendrassik reaction for (LEVINE), i, 108.
effect of bacterial flora on biological detection of (HELLER, MCELROY, and GARLOCK), i, 1365.
Vitamin-*C*, synthesis of, in germination (HONEYWELL and STEENBOCK), i, 751.
possible isolation of, from cabbage (BEZSSONOFF), i, 751.
effect of deficiency in, on urea in blood (RANDOIN and MICHAUX), i, 751.
in chicken liver (CARRICK and HAUGE), i, 617.
Vitamin-*D*, formation of, in germinating seeds (STEPP), i, 1221.
diets deficient in (MCCOLLUM, SIMMONDS, BECKER, and SHIPLEY), i, 1366.
Vitamin-*E* (EVANS and BURR), i, 1022.
in maize, wheat, and hemp-seed (SURE), i, 212.
solubility of, in organic solvents (SURE), i, 752.
Vitis vinifera (vine), constituents of the sap of (WORMALL), i, 215.
Vivianite, synthetic formation of (KURNAKOV), ii, 767.
Volatility, law of (MATIGNON), ii, 670.
Volcanoes, radioactivity of gases from (STOKLASA and PENKAVA), ii, 235.
rare gases from (PIUTTI and BOGGIO-LERA), ii, 1092.
Volume, contraction of, on solution (RAKSHIT), ii, 288.
of liquid mixtures (LORENZ and HERZ), ii, 101.
molecular, and molecular refraction (LORENZ and HERZ), ii, 356.
and molecular field (BATSCHINSKI), ii, 932.
relation between critical temperature and (LORENZ and HERZ), ii, 25, 183.
and internal pressure (SCHUSTER), ii, 1142.
changes of, in formation of solid compounds (SASLAVSKY), ii, 933.
of crystals (HENGLEIN), ii, 477.
of isomerides (WÖHLISCH), ii, 269.
of organic liquids (WÖHLISCH), ii, 277.

Volume, molecular, of salts at the melting point (LORENZ and HERZ), ii, 840.

W.

Walden inversion (LEVENE and MIKESKA), i, 5; (SENTER and WARD), i, 31, 1128; (MCKENZIE and TUDHOPE), i, 226; (KENYON, PHILLIPS, and TURLEY), i, 507; (TERRY and EICHELBERGER), i, 631.
Walnut. See *Juglans regia*.
Water, formation of, from its elements in presence of chlorine (NORRISH and RIDEAL), ii, 572.
catalytic synthesis of (LARSON and SMITH; REMY and SCHAEFFER), ii, 563.
physical properties of (MACLEOD), ii, 498.
absorption spectrum of (WITT), ii, 352; (REMY and GÖNNINGEN), ii, 1176.
infra-red absorption spectra of (DREISCH), ii, 627.
vapour, infra-red absorption spectrum of (DESLANDRES), ii, 736.
ultra-violet absorption spectrum of (DIEKE), ii, 180, 927.
emission spectrum of (WATSON), ii, 349.
thermal variation of magnetism of (CABRERA and DUPERIER), ii, 754.
conductivity of (BORDAS and TOUPLAIN), ii, 155.
activity coefficients and ionisation of, in solutions of potassium and sodium chlorides (HARNED), ii, 538.
distilled, hydrogen-ion concentration of (DAWSON), ii, 680.
effect of strong electrolytes on the dielectric constant of (ZAHN), ii, 263.
vapour, heat of adsorption of, by silica gels (PATRICK and GREIDER), ii, 870.
expansion of, on freezing (LAURIE), ii, 762.
vapour, temperature of, from a boiling aqueous solution (REISSMANN), ii, 105.
effect of salts on the vapour pressure of (SIDGWICK and EWBANK), ii, 38.
surface tension of (ALI), ii, 763.
effect of organic vapours on the surface tension of (KORÁN), ii, 659.
effect of electrolytes on the diffusion of, through collodion membranes (ADOLPH), ii, 859.
viscosity of (LEROUX), ii, 1048.
adsorption of, on glass and platinum (MCHAFFIE and LENHER), ii, 854.
Water, adsorption of, by silica gels (PATRICK and EBERMAN), ii, 284.
effect of curvature of surface on solubility of air in (BAYLIS), ii, 980.
structure of films on (ADAM), ii, 195.
influence of surface films on evaporation of (HEDESTRAND), ii, 102; (ADAM), ii, 658.
films on salt solutions, structure of (HARKINS and MCLAUGHLIN), ii, 959.
movement of bubbles of gas in (MCTAGGART), ii, 509.
capillary rise of, in various metallic tubes (CARVER and HOVORKA), ii, 647.
partial pressure of, in mixtures with sulphuric acid (GREENEWALT), ii, 493.
rôle of, in solids (BALAREFF), ii, 409.
effect of, on chemical reactions (PARSONS), ii, 880.
combination of, in colloids (HÜTTIG), ii, 516.
decomposition of, by metallic couples (HEDGES and MYERS), ii, 306.
fixation and metabolism of, in the organism (FISCHER; SCHADE; HANDOVSKY), ii, 36.
toxic effects of (UNDERHILL and SALLICK), i, 613.
distilled, use of, in biological work (CANALS and GENEVET), ii, 847.
Conductivity water, preparation of (BENCOWITZ and HOTCHKISS), ii, 317.
NATURAL WATER:—
action of, on copper (HENSTOCK), ii, 696.
presence of iodates in (HICKETHIER and JACOBUCCI), ii, 1197.
Lake water, nitrogen in (DOMOGALLA, JUDAY, and PETERSON; PETERSON, FRED, and DOMOGALLA), i, 765.
River water of the Rhine, gold and silver in (HABER and JAENICKE), ii, 997.
River and lake water of the United States (CLARKE), ii, 323.
Sea water, hydrogen-ion concentration of (ATKINS), i, 199.
equilibrium of carbonates and other weak acids in (IRVING), i, 1022.
evolution of iodine from (v. FELLENBERG), ii, 306.
corrosion of metals in (BENGOUGH and MAY), ii, 218.
oxidation in (HARVEY), ii, 1171.
Spring and mineral waters, ageing of (BAUDISCH and WELO), ii, 992.

NATURAL WATER:—
Spring and mineral waters, effect of, on colloids (HENRIJEAN and KOPACZEWSKI; D'ARSONVAL and BORDAS), ii, 291.
diuretic action of (STARKENSTEIN), i, 327.
Swiss, iodine in (v. FELLENBERG), i, 347.
Water analysis:—
distilled, detection of copper in (POIROT), ii, 242.
determination of, in mixtures of ether, alcohol, and water (NEWMAN), ii, 156.
determination of iron in (HOPKINS), ii, 1096.
Water bath, constant-level (WING), ii, 707.
Weights, molecular, determination of (BERL and RAU), ii, 24; (SADIKOV and MICHAILOV), ii, 32; (RASTELLI), ii, 1040.
by isothermal distillation (HRYWAKOWSKI), ii, 187.
with liquid ammonia as solvent (SCHMID and BECKER), i, 1386; (STOCK and POHLAND), ii, 489.
and viscosity of liquids (MACLEOD), ii, 498.
Weiss-Curie law, value of A in the (CABRERA; DUPERIER), ii, 173.
Wetting and capillarity (SCHULTZE), ii, 856.
Whale, biological relations of types of (FUSE), i, 1348.
cartilage and tendon of (OIKAWA), i, 1349.
genital cysts of (OKAZAKI), i, 1348.
flesh of (SUZUKI), i, 1349.
peritoneal fluid of (FUSE), i, 1349.
enzymes of the pancreas of (TAKATA), i, 1349.
nature of the stomachs of (TAKATA), i, 1348.
synovial fluid of (FUSE), i, 1348.
urine of. See Urine.
fin-back, blood of. See Blood.
sperm, amniotic fluid of (SUZUKI), i, 1350.
Whale oil, South Georgia, fatty acids in (ARMSTRONG and HILDITCH), i, 778.
Wheat, nutrients for culture of (JONES and PEMBER), i, 1030.
influence of a mineral fertiliser on development of (CHAUSSIN), i, 623.
culture of, with nitrogen, phosphorus, and potassium (PEMBER and McLEAN), i, 1121.
influence of soil temperature and moisture on (ECKERSON and DICKSON), i, 217.
Wheat, development of grains of (WOODMAN and ENGLEDOW), i, 217.
amino-nitrogen and protein in grains of (SHARP), i, 622.
nucleic acid from embryos of, and its sodium salts (THOMAS and DOX), i, 873.
vitamin-*E* in embryos of (SURE), i, 212.
Wheat bran, proteins of (JONES and GERSDORFF), i, 1027.
Wheat flour, gluten proteins from (BLISH and PINCKNEY), i, 176.
Whelk. See *Buccinum undatum*.
Wires, thermal conductivity of (BARRATT and WINTER), ii 736.
Wood from deciduous trees, chemistry of (HEUSER and BROTZ), i, 889.
degradation of, by fungi (WEHMER), i, 521.
determination of pentosans in (GIERISCH), i, 1122.
Woodruff. See *Asperula odorata*.
Wool, adsorption of dyes by (SPEAKMAN and BATTYE), ii 284.
absorption of water by (SHORTER and HALL), ii, 782.
dyeing of (SPEAKMAN), ii, 515.
mordanting of (ELÖD), ii, 531.
Wool fat (LIFSCHÜTZ), i, 327.
Wurtzite, crystal structure of graphite and (BECKENKAMP), ii, 271.

X.

Xanthates. See under Xanthic acid.
Xanthen, 3-hydroxy-, and its *di*bromo-derivative (SEN and SARKAR), i, 813.
Xanthic acid, salts, analysis of (CALCOTT, ENGLISH, and DOWNING), ii 606; (HIRSCHKIND), ii, 1212.
cadmium and molybdenum salts (CECCHETTI), i, 503.
alkylmercuric derivatives of (KOTEN and ADAMS), i, 236.
Xanthine oxydase (DIXON), i, 1010; (DIXON and THURLOW), i, 1213.
Xanthione (SCHÖNBERG, ROSENBACH, KRÜLL, and OSTWALD), i, 1300.
Xanthone, 1-hydroxy-, magnesium salt (ZETZSCHE, SILBERMANN and VIELI), i, 1411.
Xanthonecarboxylic acids, and their salts and derivatives (ANSCHÜTZ, STOLTENHOFF, and VOELLER), i, 1274.
Xanthophyll, preparation and properties of (SCHERTZ), i, 1024.
determination of (SCHERTZ), i, 871.
Xanthopropionic acid, and its sodium salt (LEVENE and MIKESKA), i, 512.

(o-*Xylene*, *Me* : *Me* = 1:2 ; m-*xylene*, *Me* : *Me* = 1:3 ; p-*xylene*, *Me* : *Me* = 1:4.)

Xanthopterin, and its barium salt, from *Gonypteryx rhamni* (WIELAND and SCHÖPF), i, 1465.

Xanthopyrrolecarboxylic acid, synthesis of (FISCHER and KLARER), i, 577.

d-**Xanthosuccinamic acid** (LEVENE and MIKESKA), i, 6.

Xanthosuccinic acid, and its sodium salts (LEVENE and MIKESKA), i, 6, 512.

Xenon hydrate (DE FORCRAND), ii, 812.

Ximenia americana (wild plum), constituents of (ANON.), i, 764.

m-**Xylene**, electrochemical oxidation of (FICHTER and MEYER), i, 381.

action of aluminium chloride on a mixture of phenanthrene and (SCHAARSCHMIDT, MAYER-BUGSTRÖM, and SEVON), i, 241.

Xylenes, extraction of, from crude xylol (PATTERSON, MCMILLAN, and SOMERVILLE), i, 124.

Xylenes, ω-bromo-, isomeric, polarity effects in (SHOESMITH and SLATER), i, 16.

p-**Xylene-2:6-disulphonyl** chloride (CHOUFOER), i, 896.

p-**Xylene-5-sulphonyl** chloride, 2-nitro- (CHOUFOER), i, 896.

as-m-**Xylidine**, oxidation of, and its methyl derivatives (FICHTER and MÜLLER), i, 805.

p-**Xylidine** hydroferricyanide (CUMMING), i, 122.

p-**2-Xylidine**, 5-chloro- hydrochloride (WHEELER and MORSE), i, 22.

ω-*as-m*-**Xylidinoacetophenone-***o*-**tolylhydrazone** (BUSCH, FRIEDENBERGER, and TISCHBEIN), i, 41.

Xylidino-*m*-**xylothiazole**, and its derivatives (LEVI), i, 445.

Xylindein, and its derivatives (KÖGL and v. TAEUFFENBACH), i, 1441.

Xylol, extraction of xylenes from (PATTERSON, MCMILLAN, and SOMERVILLE), i, 124.

3-Xyloyl-α-naphthoic acids (MASON), i, 33.

4-*m*-**Xylyl** benzyl ether (SCHORIGIN), i, 1404.

β-*p*-**Xylylaminoethyl alcohol**. See Ethyl-*p*-xylidine, *N*-hydroxy-.

p-**Xylylchrysofluorene** (DILTHEY), i, 652.

o-**Xylylene** sulphide (v. BRAUN, BAYER, and KAISER), i, 1445.

5-Xylylimino-2-thion-2:3:4:5-tetrahydro-1:3:4-thiodiazole, and its derivatives (GUHA and RÂY), i, 703.

1-*as-m*-Xylylindazole, 4-nitro- (v. AUWERS and FRESE), i, 1102.

s-m-**Xylylmethylcarbinol** (v. AUWERS, LECHNER, and BUNDESMANN), i, 266.

4-*m*-Xylyl methyl ketoximes, 5-hydroxy-, and their derivatives (v. AUWERS and JORDAN), i, 264.

3-Xylylrhodanylidene-Δ$^{5:3'}$-oxindoles (HANN), i, 987.

4-*m*-Xylylthiosemicarbazide (GUHA and RÂY), i, 703.

Y.

Yajeine (BARRIGA VILLALBA), i, 828.

Yajenine (BARRIGA VILLALBA), i, 828.

Yamamomo, fruit of (KOMATSU and NODZU), i, 1025.

Yeast, growth of (PESKETT), i, 1011, 1012.

effect of ammonium salts on (FULMER), i, 1508.

effect of calcium sulphate on the growth and fermentation of (RICHARDS), i, 1011.

non-homogeneity of (VAN NIEL and HOOFT), i, 1286.

acceleration of the activity of, by a biocatalyst (v. EULER and MYRBÄCK), i, 745.

effects of marmite and of, on calcification (KORENCHEVSKY and CARR), i, 211.

antineuritic concentrates of (KINNERSLEY and PETERS), i, 1516.

formation of acetylmethylcarbinol and 2:3-butyleneglycol in fermentation by (KLUYVER and DONKER), i, 1215.

toxicity of acids towards (TAYLOR), i, 1011.

reserve carbohydrates in (WARKANY), i, 105.

carbohydrate and fat metabolism in growth of (MACLEAN and HOFFERT), i, 204.

synthesis of coproporphyrin by (FISCHER and FINK), i, 105.

extracts, action of, on dextrose (KUHN and v. GRUNDHERR) i, 203.

enzymes of (NEUBERG), i, 336.

fermentation of galactose by (v. EULER and LÖVGREN), i, 1214; (ABDERHALDEN), i, 1362.

glycogen from (LING, NANJI, and PATON), i, 1011.

increase in invertase content of (WILLSTÄTTER, LOWRY, and SCHNEIDER), i, 1214.

fate of invertase of, in the animal organism (NOGAKI) i 745.

action of, on lactic acid (MYRBÄCK and EVERITT), i, 105.

Yeast, fermentation of mannitol by (Lvov), i, 1509.
metabolism of (Balls and Brown), i, 476.
effect of nitrates on (Fernbach and Nicolau), i, 477.
cells, nitrogenous equilibrium of (v. Euler and Sandberg), i, 1213.
changes in phosphates and glycogen by means of (v. Euler, Myrbäck, and Karlsson), i, 744.
adsorption of phosphoproteins of, by various adsorbents (Fodor and Schönfeld), ii, 857.
cleavage of polypeptides by (Fodor and Epstein), i, 1214; (Fodor, Bernfeld, and Schönfeld), i, 1215.
porphyrins in (Fischer and Fink), i, 866.
action of reductase of (Lvov), i, 1508.
sulphur-containing constituent of (Suzuki, Odake, and Mori), i, 338.
presence of trehalose in (E. M. and F. C. Koch), i, 1508.
crystalline bios-like substance from (Eddy, Kerr, and Williams), i, 342.
relations between the water-soluble growth factors in (v. Euler and Swartz), i, 209.
vitamin-*A* in the fat of (Luce and Maclean), i, 483.
co-zymase of (v. Euler and Myrbäck), i, 105.
zymocasein from (Lüers and Nowak) i, 338.
dried (v. Euler and Westling), i, 203; (Sobotka), i, 865.
fermentation by (Harden), i, 1010.
oxygenated, action of, on glycerol and on β-hydroxybutyric acid (Marian), i, 105.
effect of insulin on the functions of (Fürth), i, 107.
Yeast-nucleic acid, hydrolysis of (Jones and Perkins), i, 487.
Yttrium, arc spectrum of (Meggers and Moore), ii, 612.
arc and spark spectra of (Meggers), ii, 77.
Yttrium salts, solubility of (Crew, Steinert, and Hopkins), ii, 190.
Yttrium oxide, preparation of (Prandtl), ii, 489.

Z.

Zanthoxylum ovalifolium, constituents of oil from (Simonsen), i, 565.
Zea mays, proteins from the leaves of (Chibnall and Nolan), i, 215.
Zeeman effect (Heisenberg), ii, 8, 729; (Pauli), ii, 251; (Ornstein and Burger; Landé), ii, 340; (Back), ii, 341, 917; (Zeeman), ii, 614; (Hicks; Ornstein, Burger, and van Geel), ii, 729; (Mosharrafa; Conway; Gianfrancheschi), ii, 830; (Kronig), ii, 917; (Kapitza and Skinner), ii, 918; (van Geel; Tartakovski), ii, 1016.
Zeolites, properties and occurrence of (Weigel), ii, 709.
combination of water in (Rothmund), ii, 710.
Zinc, occurrence of, in soils, plants, and animals (McHargue), i, 1023.
structure of (Collins), ii, 926.
shifting of lines in spectrum of (Fukuda), ii, 1101.
K-absorption spectrum of (Walter), ii, 611.
atomic and band spectra of (Hulthèn), ii, 1113.
infra-red line spectrum of (Randall and St. Peter) ii, 1101.
spark spectrum of (v. Salis), ii, 334.
vacuum spark spectrum of (Sawyer and Martin), ii, 1100.
optical constants of crystals of (Graber), ii, 1041.
conductivities of (Schofield), ii, 273.
potentials of, in cyanide solutions (Walker, Sorrels, and Breckenridge), ii, 1066.
polarisation of, in alkaline solution (Jirsa and Loris), ii, 45.
electro-deposition of (Marshall), ii, 808.
absorption coefficient of electrons in vapour of (Brode), ii, 1020.
expansion coefficient of (Borelius and Johansson), ii, 27.
thermal expansion of (Grüneisen and Goens), ii, 488.
vapour pressure and entropy of (Rodebush and Dixon), ii, 492.
physical properties of crystals of (Grüneisen and Goens) ii, 22.
tensile strength of (Masing and Pólányi), ii, 370; (Schmid), ii, 752.
effect of colloids on the displacement of lead and copper by (Gray), ii, 578.
effect of impurities on the solubility of, in acids (Vondrаček and Izak-Križko) ii, 686.
solubility of, in hydrochloric acid (Ipatiev and Verchovski), ii, 1069.

Zinc, effect of emulsoids on the solution of, in solutions of copper, lead, and nickel salts (FRIEND and TIDMUS), ii, 306.
corrosion of, in sea-water (BENGOUGH and MAY), ii, 218.
physiological effects of iron and (BERTRAND and NAKAMURA), i, 1114.
Zinc alloys with aluminium (TANABE), ii, 204; (ISIHARA), ii, 298, 786.
tensile strength of (ELAM), ii, 954.
decomposition of (FRAENKEL and GOEZ), ii, 314.
with aluminium and copper (HANSON and GAYLER), ii, 974.
with antimony and lead (TAMMANN and DAHL), ii, 535.
with copper (GENDERS and BAILEY), ii, 297.
β-transformations in (HAUGHTON and GRIFFITHS), ii, 973.
equilibrium in (IITSUKA), ii, 651.
with copper, gold, and silver, Röntgen ray analysis of (WESTGREN and PHRAGMÉN), ii, 746.
with copper and magnesium, determination of magnesium in (SCHÜRMANN and SCHOB), ii, 902.
with gold (SALDAU), ii, 205.
with mercury and sodium, velocity of reaction of, with aqueous solutions (KLEIN), ii, 802.
with tin, electrolysis of (KREMANN and BAUKOVAC), ii, 679.
Zinc chloride, equilibrium of pyridine with (MASON and MATHEWS), ii, 1063.
compounds of proteins with (PAULI and SCHÖN), ii, 198.
additive compound of 3:5-dibromo-*o*-toluidine and (HANN and SPENCER), i, 653.
hydroxide, two crystal forms of (FRICKE), ii, 484.
precipitation of, electrometrically (BRITTON), ii, 1203.
oxide, solubility of, in water (REMY and KUHLMANN), ii, 119.
selenide (MOSER and ATYNSKI), ii, 583.
sulphate, specific heat of aqueous solutions of (COHEN, HELDERMAN, and MOESVELD), ii, 126.
solubility of hydrates of (BURY), ii, 119.
solubility of, in water (COHEN and MOESVELD; COHEN and HETTERSCHIJ), ii, 652.
action of lead iodide with (STOFFELLA), ii, 1064.
Zinc sulphide, scintillations in (STALONY-DABROVSKI), ii, 1027.
Hall effect with crystals of (LENZ), ii, 920.
Zinc organic compounds:—
Zinc diethyl, preparation of (MEYER), i, 893.
preparation and purification of (DENNIS and HANCE), i, 798.
diphenylcarbazides (FEIGL and LEDERER), i, 171.
phenylarsine iodide (JOB, REICH, and VERGNAUD), i, 173.
Zinc determination and separation:—
determination of (JÄRVINEN), ii, 602; (CONGDON, GUSS and WINTER), ii, 1002.
determination of, electrolytically, in presence of copper (SPRINGER), ii, 241.
determination of, gravimetrically (MARCKWALD and GEBHARDT), ii, 1002
determination of, in organic matter (LUTZ), ii, 825.
determination of, volumetrically (BEYNE), ii, 69, 438; (KIEPER), ii, 70.
recovery of, and its determination in biological material (THOMPSON), i, 1489.
separation of cadmium and (LUFF), ii, 159.
separation of cobalt, manganese, nickel, and (LEMARCHANDS), ii, 242.
separation of nickel and (KLING and LASSIEUR), ii 439.
Zinc wire, single crystal, thermo-electric effect of (LINDER; BRIDGMAN) ii, 1136.
Zincite, experiments on (DITTLER), ii, 1184.
Zingerone, preparation of (NOMURA), i, 1157.
homologues of (NOMURA and HOTTA), i, 1156.
*iso***Zingerone**. See 4-Methoxyphenylethyl methyl ketone, β-3-hydroxy-.
Zirconium, atomic weight of (HÖNIGSCHMID, ZINTL, and GONZÁLEZ), ii, 174; (HEVESY), ii, 255.
preparation of (VAN ARKEL and DE BOER), ii, 1193.
Zirconium compounds, isomorphism of uranium and (FERNANDES), ii 1133.
Zirconium carbide and nitride (FRIEDERICH), ii, 374.
*tetra*chloride compounds of, with β-diketones (DILTHEY), i, 1473.
double fluorides, solubility of (HEVESY, CHRISTIANSEN, and BERGLUND), ii, 505.

Zirconium hydroxide precipitation of, electrometrically (BRITTON), ii, 1203.
nitride (FRIEDERICH and SITTIG), ii, 420.
oxide, density of (HEVESY and BERGLUND), ii, 25.
phosphate (HEVESY and KIMURA), ii, 1085.
solubility of hafnium phosphate and (HEVESY and KIMURA), ii, 1147.
action of acids and bases on (DE BOER and VAN ARKEL), ii, 1185.
sulphate, isomorphism of cerium sulphate and (FERNANDES), ii, 748.
Zirconium separation:—
separation of, from its ores (DE BOER and VAN ARKEL), ii, 705.
Zirconium separation:—
separation of, from cerium, thorium, and titanium (MOSER and LESSING), ii, 718.
separation of hafnium and (NAAMLOOZE VENNOOTSCHAP PHILIPS' GLOEILAMPENFABRIKEN), ii, 62, 63; (DE BOER and VAN ARKEL), ii, 243; (MARQUIS, P. and G. URBAIN), ii, 699.
separation of, from iron (WENGER and MÜLLER), ii, 1207.
Zirconium ores, hafnium content of HEVESY and JANTZEN), ii, 430.
Zymase, formation of, in plants (PALLADIN and ILLJUVIEV), i, 1519.
activity of (PARIS), i, 475.
fermentation with (JENSEN), i, 337.
Zymocasein from yeast (LÜERS and NOWAK), i, 338.

ERRATA.

VOL. 126 (ABSTRACTS, 1924).

Page	Line	
i, 273	26	*for* "KERNER" read "KIRNER."

VOL. 128 (ABSTRACTS, 1925).

i, 30	9*	,,	"*α-cyano-β-salicylylpropionic acid*" read "*α-cyano-β-salicylpropionic acid*," and for "*α-cyano-β-*m*-tolylpropionic acid*" read "*α-cyano-β-*m*-hydroxyphenylpropionic acid.*"
i, 298	14—15	,,	"*ethyl 3-aldehydo-5-methylindole-2-carboxylate*" read "*3-aldehydo-5-methylindole-2-carboxylic acid.*"
i, 495	26	,,	"*dipropylallylammonium iodide*" read "*dipropyldiallylammonium iodide.*"
i, 510	26*	,,	"MÜLLER" *read* "MILLER."
i, 743	6*		Insert author's name, "S. THURLOW."
i, 759	7, 9, 18 and 20		for "*Mercuralis*" read "*Mercurialis.*"
i, 830	16 and 18		*for* "Columba" *read* "Calumba."
i, 881	23		*for* "Glattfield" *read* "Glattfeld."
i, 890	7*	,,	"N. EUSSLIN" *read* "H. ENSSLIN."
i, 943	26	,,	"hexahydrocadaline" *read* "hexahydrocadalene."
i, 954	15*	,,	"Nöhreu" *read* "Nöhren."
i, 971	2*	,,	"*Ketonor-7-demethylo-ψ-corydaline*" read "*Keto-7-demethylo-ψ-corydaline.*"
i, 1010	33	,,	"*Biochem. J.*" read "*Biochem. Z.*"
ii, 23	7*	,,	"JOUNEAUX" *read* "JOUNIAUX."
ii, 59	3	,,	"GETMAN" *read* "GERMANN."
ii, 65	18*	,,	"C. MÜLLER" *read* "E. MÜLLER."
ii, 195	4	,,	"ADAMS" *read* "ADAM."

INSTRUCTIONS TO ABSTRACTORS,

GIVING THE

NOMENCLATURE AND SYSTEM OF NOTATION

ADOPTED IN THE ABSTRACTS

INSTRUCTIONS TO ABSTRACTORS,

GIVING THE

NOMENCLATURE AND SYSTEM OF NOTATION

ADOPTED IN THE ABSTRACTS.

THE object of the British Chemical Abstracts is to furnish a concise account of the progress of chemical science and industry. It must be understood that as the abstracts are prepared for the information of chemists in general, they cannot possibly be made so full or so detailed as to obviate on the part of those who are engaged on special investigations the necessity of consulting the original memoirs.

1. Titles of papers must be given literally, but unnecessary words such as "The," "Improvements in," "Process for the," etc., should be omitted. Where the original title is not sufficiently informative, an addition may be made in [ ], thus:

Electrochemical reduction [of nitro-compounds].

The names (with initials) of authors should be clearly written, followed by the abbreviated title of the Journal (see p. 14), the year, volume number, and first and last pages of paper, thus:

Dehydrogenation in presence of catalysts. M. G. STANTON and C. J. HOWE (J. Amer. Chem. Soc., 1926, **48**, 1873–1882).—

2. Before beginning to write the abstract, the whole of the original paper must be read, in order to obtain a clear and connected idea of its contents and to form a judgment of its importance and of the scale on which the abstract should be made.

3. In the case of papers dealing with subjects not strictly chemical, the abstract should refer only to matters of chemical interest in the original.

4. The abstract should consist mainly of the expression, in the abstractor's own words, of the substance of the paper. Authors' summaries or conclusions may be found useful as the basis of abstracts, but in nearly every case it will be found necessary to supplement these with data from the body of the paper.

5. The abstract should be made as short as is consistent with a clear and accurate statement of the author's views and results. As the chief function of an abstract is to be informative, it should recount the achievements of the work, not merely its scope.

6. A concise statement showing the general trend of the investigation should be given at the commencement of those abstracts where the nature of the original permits of it.

7. If an abstract of a paper on the same subject, either by the author of the paper abstracted, or by some other author, has already appeared, reference to this should be made.

8. Matter which has appeared once in the *Abstracts* is not to be abstracted again, a reference being given to the volume in which the abstract may be found.

9. The abstracts, including those of Patents, should contain a record of all new compounds; the names of these are printed in italics and should therefore be underlined in MS. Crystal form need not be stated unless some special significance attaches to it, and it is not generally necessary to mention that a compound is colourless, or that a nitro-compound or picrate is yellow, etc. As a rule, details of methods of preparation or analysis, or generally speaking of work, are to be omitted, unless such details are essential to the understanding of the results, or have some independent value. Further, comparatively unimportant compounds, such as the inorganic salts of organic bases or acids, should be mentioned quite shortly. Merely qualitative statements as to solubility should as a rule be omitted. On the other hand, data such as melting and boiling points, sp. gr., specific rotation, etc., must be given in every case unless recorded in earlier papers.

10. There is to be no duplication of abstracts in the A and B sections. When papers marked for abstraction for A contain matter of technical interest, or for B matter of purely scientific interest, this should be included in the abstract.

11. Abstractors should not attempt to deal with papers sent to them which they consider too far outside their scope. Further, they should notify the Editor if more papers are being sent to them than they can handle satisfactorily.

12. The Editor will be glad if abstractors will direct his attention to any papers which, in their opinion, merit notice and have not been abstracted, or to those papers which, although marked, do not appear to be worthy of an abstract.

13. Abstracts of patents should be based on the "Claims," supplemented where necessary by matter from the body of the specifications. Abstractors should notify the Editor if material sent to them for abstraction is insufficient for the production of an intelligible abstract, or if the patent appears to be devoid of scientific foundation. Illustrations should be used when required for a proper understanding of the invention.

In English and Foreign Patents the date is the date of application; when "a convention date" is given this should be added, thus: "Conv., 12. 9. 24." For U.S. Patents the date is that of the Official Gazette containing the claims; the date of filing should also be given thus: "Appl., 25. 6. 23"; serial numbers are not noted.

14. The following abbreviations are permitted:—

melting point	m. p.
freezing point	f. p.
boiling point at 240° under 35 mm. pressure	b. p. 240°/35 mm.
density 1·462 at 20° compared with water at 4°	d_4^{20} 1·462
observed rotation at 17°	α_D^{17}
specific rotation at 17°	$[\alpha]_D^{17}$
specific refraction for D line at 10°	n_D^{10}
atomic weight	at. wt.
molecular weight	mol. wt.
molecule	mol.
gram-molecule	g.-mol.
atmospheres	atm.
with decomposition (in connexion with m. p.)	decomp.
absolute (temperature)	Abs.
corrected (do.)	corr.
gram-calories	cal.
kilogram-calories	Cal
British thermal units	B.Th.U.
grams	g.
kilograms	kg.
milligrams	mg.
centimetres	cm.
decimetres	dm.
cubic centimetres	c.c.
metres	m.
millimetres	mm.
normal (for solutions)	*N*
electromotive force	*E.M.F.*
potential difference	*P.D.*
for example	*e.g.*
that is	*i.e.*
namely	viz.
per cent.	%

Nomenclature.

15. Employ names such as *sodium chloride, potassium sulphate* for inorganic compounds, and use the terminals *ous* and *ic* only in distinguishing compounds of different orders derived from the same elementary radical; such, for instance, as mercurous and mercuric chlorides, sulphurous and sulphuric acids.

16. Term compounds of metallic radicals with the OH group *hydroxides* and not hydrates, the name hydrate being reserved for compounds supposed to contain water of combination or crystallisation.

17. Term salts containing an amount of metal equivalent to the displaceable hydrogen of the acid, *normal* and not neutral salts, and assign names such as sodium hydrogen sulphate, disodium hydrogen

phosphate, etc., to the acid salts. Basic salts as a rule are best designated merely by their *formulae*.

18. Names in common use for oxides should be employed, for example: NO, nitric oxide; CO_2, carbon dioxide; P_4O_{10}, phosphoric oxide; As_4O_6, arsenious oxide; Fe_2O_3, ferric oxide.

19. In open chain compounds, Greek letters must be used to indicate the position of a substituent, the letter α being assigned to the first carbon atom in the formula, except in the case of CN and CO_2H, for example, $CH_3 \cdot CH_2 \cdot CH_2 \cdot CH_2I$ α-iodobutane, $CH_3 \cdot CH_2 \cdot CHCl \cdot CN$, α-chlorobutyronitrile.

20. Isomeric open chain compounds must be represented as substitution derivatives of the longest carbon chain in the formula; for example,

$$CH_3 \cdot CH_2 \diagup \!\!\!\diagdown CH \cdot CH \diagup \!\!\!\diagdown \begin{matrix} CH_3 \\ CH_3 \end{matrix} \text{ or } CH_3 \cdot CH_2 \cdot CHMe \cdot CHMe \cdot CH_3$$

should be termed $\beta\gamma$-dimethylpentane, not methylethyl*iso*propylmethane, and

$$\begin{matrix} CH_3 \\ CH_3 \end{matrix} \diagup \!\!\!\diagdown CH \cdot CH \diagup \!\!\!\diagdown \begin{matrix} CH_3 \\ CO_2H \end{matrix} \text{ or } CH_3 \cdot CHMe \cdot CHMe \cdot CO_2H$$

should be termed $\alpha\beta$-dimethylbutyric acid, not $\alpha\beta\beta$-trimethylpropionic, or α-methyl*iso*valeric, or methyl*iso*propylacetic acid.

21. Use names such as methane, ethane, etc., for the normal paraffins or hydrocarbons of the C_nH_{2n+2} series of the form $CH_3 \cdot [CH_2]_5 \cdot CH_3$, etc. Term the hydrocarbons C_2H_4 and C_2H_2 ethylene and acetylene respectively (not ethene and ethine). Homologues of the ethylene series are to be indicated by the suffix *-ene*, and those of the acetylene series, wherever possible, by *-inene*. Adopt the name allene for the hydrocarbon $CH_2 \cdot C \cdot CH_2$.

22. Distinguish all hydroxyl derivatives of hydrocarbons by names ending in *ol*. Alcohols should be spoken of as mono-, di-, tri-, or n-hydric, according to the number of OH groups. Compounds which are not alcohols, but for which names ending in *ol* have been used, are to be represented by names ending in *ole*, if a systematic name cannot be given, thus anisole not anisol, indole not indol. Compounds such as MeONa, PhONa, etc., should be termed sodium methoxide, sodium phenoxide, etc.

23. The radicals indicated in the name of a compound are to be given in the order chloro-, bromo-, iodo-, fluoro-, nitro-, nitroso-, amino-, imino-, hydroxy-, aldehydo-, keto-, thiocyano-, acyloxy-,* alkyloxy-,* acyl-,* alkyl-.*

24. Compounds analogous to the acids of the lactic series containing the OH group should be termed *hydroxy*-derivatives, and not oxy-derivatives; for example, hydroxyacetic and not oxyacetic acid. Compounds containing the analogous groups OEt, OPh, OAc, etc., should in like manner be termed ethoxy-, phenoxy-, acetoxy-derivatives. Thus α-ethoxypropionic acid, $OEt \cdot CHMe \cdot CO_2H$, instead of ethyl-lactic acid;

* In these groups, closed chain radicals precede open chain radicals (*e.g.*, benzoyl, acetyl, or phenyl, methyl); within the same section, more saturated precede less saturated (*e.g.*, *cyclo*hexyl, phenyl, styryl) or less complex, more complex (*e.g.*, phenyl, naphthyl), univalent radicals precede bivalent, and so on.

3:4-diethoxybenzoic acid, $(OEt)_2C_6H_3\cdot CO_2H$, instead of diethylprotocatechuic acid; and α-acetoxypropionic acid, $OAc\cdot CHMe\cdot CO_2H$, instead of acetyl-lactic acid. Terms such as diethylprotocatechuic acid should be understood to mean a compound formed by the displacement of hydrogen atoms in the hydrocarbon radical of protocatechuic acid by ethyl, thus, $C_6HEt_2(OH)_2\cdot CO_2H$, and not $C_6H_3(OEt)_2\cdot CO_2H$, just as dibromoprotocatechuic acid is understood to be the name of a compound of the formula $C_6HBr_2(OH)_2\cdot CO_2H$.

25. The term *ether* should be restricted to the oxides of hydrocarbon radicals and their derivatives, and the esters should be represented by names similar to those given to metallic salts.

26. When a substituent is one of the groups NH_2, NHR, NR_2, NH, or NR, its name should end in *ino*; for example, β-aminopropionic acid, $NH_2\cdot CH_2\cdot CH_2\cdot CO_2H$, β-anilinoacrylic acid, $NHPh\cdot CH{:}CH\cdot CO_2H$, α-iminopropionic acid, $NH{:}CMe\cdot CO_2H$. When, however, the NH_2 group is substituted with an acid residue such as acetyl it becomes acetamido, etc.

27. Compounds of the radical SO_3H should, whenever possible, be termed sulphonic acids, or failing this, sulpho-compounds; for example, benzenesulphonic acid, sulphobenzoic acid.

28. Basic substances should invariably be indicated by names ending in *ine*, as aniline instead of anilin, the termination *in* being restricted to certain neutral compounds, viz., glycerides, glucosides, bitter principles, and proteins, such as palmitin, amygdalin, albumin. The compounds of basic substances with hydrogen chloride, bromide, or iodide should always receive names ending in *ide* and not *ate*, as morphine hydrochloride and not morphine hydrochlorate.

29. The Chemical Society's Collective Index (1913–1922) should be adopted as the standard of reference on questions of nomenclature not provided for in the preceding sections.

Notation.

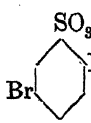
30. In empirical formulæ the elements are to be given in the order C, H, O, N, Cl, Br, I, F, S, P, and the remainder alphabetically.

31. Equations should be omitted unless essential to the understanding of the results; as a rule, they should not be written on a separate line, but should "run on" with the text.

32. To economise space, it is desirable:

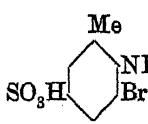
(a) That *dots* should be used instead of *dashes* in connecting contiguous symbols or radicals, whenever this does not interfere with the clearness of the formula.

(b) That formulæ should be shortened by the judicious employment of the symbols Me for CH_3, Et for C_2H_5, Pr^α for $CH_2\cdot CH_2\cdot CH_3$, Pr^β for $CH(CH_3)_2$, Bu for $CH_2\cdot[CH_3]_3$, Ph for C_6H_5, Ac for $CO\cdot CH_3$, and Bz for $CO\cdot C_6H_5$.



(c) That formulæ should be written *in one line* whenever this can be done without obscuring their meaning.

33. In representing the constitution of benzene derivatives, the relative positions of the radicals in the symbol of benzene should be indicated by numerals, instead of by means of the hexagon formula.



(a) The abbreviations *o*-, *m*-, and *p*-, should be used in place of 1 : 2- or ortho-, 1 : 3- or meta-, and 1 : 4- or para.

(b) In numbering positions in the case of substitution derivatives of phenol, aniline, benzonitrile, benzoic acid, benzenesulphonic acid, benzaldehyde, and toluene, the characteristic radical of each of these parent substances is to be regarded as in position 1 (compare Chemical Society's Collective Index).

(c) Names of substitution derivatives should be given in such a way that the position of the substituent is indicated by a numeral prefixed; for example :—

Br is 2 : 5-dibromobenzenesulphonic acid;

is 3-bromo-*o*-toluidine-5-sulphonic acid.

34. In representing the constitution of derivatives of other cyclic hydrocarbons, graphic formulæ should not be employed, but the system of numbering positions indicated in Richter's *Lexikon der Kohlenstoff-Verbindungen* (3rd edition, 1910, pp. 14—26) should be used, pending the adoption of a scheme by the International Committee.

35. Attention is directed to the list of physico-chemical symbols on pp. 10–13, which should be used whenever possible, and also to the list of radicals which appears at the end of the Chemical Society's Collective Index.

Manuscript.

36. In view of the difficulty of dealing with MSS. of widely varying sizes, abstracts must be written on quarto paper (8×10 in.).

37. Each abstract, however short, should be written on a separate sheet.

38. When an abstract exceeds a sheet in length, the sheets must be fastened together by means of gum at the top left-hand corner.

39. The name of the abstractor must be written at the end of the abstract.

40. Abstracts, whether in typescript or MS., should have a wide margin at the left side and sufficient space between the lines for insertion of corrections.

Proofs.

41. Abstractors are expected to read and correct proofs carefully, and to check all names, formulæ, and figures against MSS.

42. All proofs, however small, must be returned to the Editor not later than 24 hours after receipt from the printers.

*** The Editor's decision, in all matters connected with the Abstracts, must be considered final.

List of Physico-chemical Symbols adopted by the Chemical Society.

[See J.C.S., 1921, **119**, 502—512.]

1. *Mathematical Symbols.*

	Usual symbol.	Alternative symbol.
Base of natural (Napierian) logarithms ...	e	
Diameter	d	
Radius	r	
Ratio of circumference to diameter	π	
Summation.....	Σ	
Variation	δ	
Total differential	d	
Partial differential	∂	

2. *Universal Constants.*

Acceleration due to gravity.....	g	
Mechanical equivalent of heat	J	
Avogadro's constant [number of molecules in 1 gram-molecule (mole)]	N	
Gas constant per mole	R	
Faraday's constant (number of coulombs per gram-equivalent of an ion)	F	
Charge on an electron	e	

3. *General Physics and Chemistry.*

Length	l	
Height.....	h	
Mass	m	
Time	t	
Volume	v, V	
Density (mass per unit volume)	d	D
Pressure	p, P	
Concentration	c, C	
Mole fraction	x	
Critical constants: pressure, volume, temperature (centigrade), temperature (absolute), density	p_c, v_c t_c, T_c d_c	
Reduced quantities: pressure, volume, temperature, density	p_r, v_r t_r, T_r, d_r	
van der Waals's constants	a, b	
Fluidity	ϕ	
Viscosity	η	
Surface tension	γ	σ
Diffusion coefficient	Δ	
Atomic weight	A	
Molecular weight	M	
Velocity coefficient of reaction	k	
Equilibrium constant	K, (K_c, K_p)	
van't Hoff coefficient	i	
Degree of dissociation (electrolytic, thermal, etc.)	α	

4. *Heat and Thermodynamics.*

	Usual symbol.	Alternative symbol.
Temperature (centigrade)	t	θ
Temperature (absolute)	T	
Critical temperature	t_c, T_c	
Reduced temperature	t_r, T_r	
Critical solution temperature	t_{cs}, T_{cs}	
Quantity of heat	Q	
Entropy	S	
Specific heat	c	
Specific heat at constant pressure	c_p	
Specific heat at constant volume	c_v	
Ratio of specific heats, $c_p : c_v$	γ	
Molecular heat	C	
Molecular heat at constant pressure	C_p	
Molecular heat at constant volume	C_v	
Latent heat per gram	l	
Latent heat per mole	L	
Maximum work (diminution of free energy)	A	

5. *Optics.*

Wave-length of light	λ	
Refractive index	n	n_r
Specific refractive power (Gladstone and Dale)	r_G, $[r_G]^t_\lambda$	
Specific refractive power (Lorentz and Lorenz)	r_L, $[r_L]^t_\lambda$	
Molecular refractive power	R_G, R_L $[R_G]^t_\lambda$, $[R_L]^t_\lambda$	
Angle of optical rotation	α	
Specific rotatory power	$[\alpha]$	
Molecular rotatory power	$M[\alpha]$	
Specific magnetic rotation	$[\omega]$	
Molecular magnetic rotation	$M[\omega]$	

6. *Electricity and Magnetism.*

Quantity of electricity	Q	
Current intensity	I	
Resistance	R	W
Electromotive force	E	
Electrode potential, or discharge potential of an ion	E	ϵ
Electrode potential referred to the normal hydrogen or normal calomel electrode respectively, the potential of which is taken as zero	E_h, E_c	ϵ_h, ϵ
Normal potential, *i.e.*, the electrode potential referred to the normal hydrogen or normal calomel electrode respectively, when the solution is molecular-normal in respect of all participating substances and ions of variable concentration	${}_0E_h$, ${}_0E_c$	${}_0\epsilon_h$, ${}_0\epsilon$
Dielectric constant	ϵ	
Conductivity (specific conductance)	κ	
Equivalent conductivity	Λ	
Equivalent conductivity at different dilutions—volumes in litres containing 1 gram-equivalent	Λ_{10^3}, Λ_v, Λ_∞	

6. *Electricity and Magnetism*—(continued).

	Usual symbol.	Alternative symbol.
Equivalent conductivity of kation and of anion	Λ_k, Λ_a	
Equivalent conductivity of specified ions	Λ_K, $\Lambda_{Cl'}$	
Molecular conductivity	μ	
Velocity of kation and of anion in cm./sec. when the potential gradient is 1 volt per cm.	U_k, U_a	
Transport number of kation and of anion	n_k, n_a	
Magnetic permeability	μ	
Magnetic susceptibility	κ	

List of Symbols, Arranged Alphabetically.

Symbol.	Name of quantity.
A	Atomic weight; maximum work.
a	Van der Waals's constant.
b	Van der Waals's constant.
C	Concentration; molecular heat.
c	Concentration; specific heat.
C_p, C_v	Molecular heat at constant pressure, and at constant volume.
c_p, c_v	Specific heat at constant pressure, and at constant volume.
D	Alternative symbol for density.
d	Diameter; total differential; density.
d_c	Critical density.
δ	Reduced density.
E	Electromotive force; electrode potential.
e	Base of Napierian logarithms; charge on an electron.
E_h, E_c	Electrode potential referred to the normal hydrogen or the normal calomel electrode, respectively, the potential of which is taken as zero.
${}_0E_h$, ${}_0E_c$	Normal potential, that is, the electrode potential referred to the normal hydrogen or the normal calomel electrode respectively, when the solution is molecular-normal in respect of all participating substances and ions of variable concentration.
F	Faraday's constant (number of coulombs per gram-equivalent of an ion).
g	Acceleration due to gravity.
h	Height.
I	Current.
i	Van't Hoff's coefficient.
J	Mechanical equivalent of heat.
K	Equilibrium constant.
K_c, K_p	Equilibrium constant, when molar concentrations and partial pressures respectively are employed.
k	Velocity coefficient of reaction.
L	Latent heat per mole.
l	Length; latent heat per gram.
M	Molecular weight.
$M[\alpha]$	Molecular rotatory power.
$M[\omega]$	Molecular magnetic rotatory power.
m	Mass.
N	Avogadro's constant (Loschmidt's number) or number of molecules in 1 gram-molecule.
n	Refractive index.

List of Symbols, Arranged Alphabetically—(continued).

Symbol.	Name of quantity.
n_k, n_a	Transport number of kation and of anion.
n_r	Refractive index (alternative symbol).
P	Pressure.
p	Pressure.
p_c, p_r	Critical pressure : reduced pressure.
Q	Quantity of heat; quantity of electricity.
R	Gas constant per mole; electrical resistance.
R_G, R_L	Molecular refractive power, according to Gladstone and Dale, and to Lorentz and Lorenz respectively.
r	Radius.
r_G, r_L	Specific refractive power according to Gladstone and Dale, and to Lorentz and Lorenz respectively.
S	Entropy.
T	Absolute temperature.
T_c	Critical temperature (on the absolute scale).
T_r	Reduced temperature (absolute).
T_{cs}	Critical solution temperature (absolute).
t	Time; temperature (centigrade).
t_c	Critical temperature (centigrade).
t_{cs}	Critical solution temperature (centigrade).
t_r	Reduced temperature (centigrade).
U_k, U_a	Velocity of kation and of anion in cm./sec. when the potential gradient is 1 volt per cm.
V	Volume.
v	Volume.
v_c, v_r	Critical volume : reduced volume.
W	Electrical resistance (alternative symbol).
x	Mole fraction.
α	Degree of dissociation (electrolytic, thermal, etc.); angle of optical rotation.
$[\alpha]$	Specific rotatory power.
γ	Surface tension; ratio of specific heats.
Δ	Diffusion coefficient.
δ	Variation.
∂	Partial differential.
ϵ	Electrode potential (alternative symbol); dielectric constant.
ϵ_h, ϵ	Electrode potential referred to the normal hydrogen or the normal calomel electrode respectively, the potential of which is taken as zero (alternative symbols).
${}_0\epsilon_h, {}_0\epsilon$	Normal potential, that is, the electrode potential referred to the normal hydrogen or the normal calomel electrode respectively, when the solution is molecular-normal in respect of all participating substances and ions of variable concentration (alternative symbols).
η	Viscosity.
θ	Temperature (centigrade), (alternative symbol).
κ	Specific conductance (conductivity); magnetic susceptibility.
Λ	Equivalent conductivity.
$\Lambda_{10}, \Lambda_v, \Lambda_\infty$	Equivalent conductivity at different dilutions (volumes in litres containing 1 gram-equivalent).
Λ_k, Λ_a	Equivalent conductivity of kation and of anion.
λ	Wave-length of light.
μ	Molecular conductivity; magnetic permeability.
π	Ratio of circumference to diameter.
Σ	Summation.
σ	Surface tension (alternative symbol).
ϕ	Fluidity.
$[\omega]$	Specific magnetic rotation.

JOURNALS FROM WHICH ABSTRACTS ARE MADE.

The following is a list of Journals from which abstracts are made (directly or indirectly) by the Bureau of Chemical Abstracts.

Abbreviated Title.	Journal.
Abh. Böhm. Akad.	Abhandlungen der Böhmischen Akademie.
Abh. Deut. Naturwiss. Med. Ver. Böhmen	Abhandlungen der Deutschen Naturwissenschaftlichen und Medizinischen Verein, Böhmen.
Acta Phytochim.	Acta Phytochimica.
Acta. Sci. Fennicae	Acta Societatis Scientiarum Fennicae.
Agric. Bull. F. M. S.	Agricultural Bulletin of the Federated Malay States.
Agric. J. India	Agricultural Journal of India.
Agric. Res. Inst., Pusa, Rep. (Bull.)	Agricultural Research Institute, Pusa, Report and Bulletins.
Allgem. Z. Bierbrau.	Allgemeine Zeitschrift für Bierbrauerei und Malzfabrikation.
Amer. J. Bot.	American Journal of Botany.
Amer. J. Dis. Children	American Journal of Diseases of Children.
Amer. J. Pharm.	American Journal of Pharmacy.
Amer. J. Physiol.	American Journal of Physiology.
Amer. J. Publ. Health	American Journal of Public Health.
Amer. J. Sci.	American Journal of Science.

PROCEEDINGS

OF THE

CHEMICAL SOCIETY.

Ordinary Scientific Meeting, Thursday, January 15th, 1925, at 8 p.m., Professor W. P. WYNNE, D.Sc., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through death, of the following Fellows:

	Elected.	Died.
Robert P. Douglas	May 2nd, 1912.	Nov. 24th, 1924.
Khasberao B. Jadhava	June 16th, 1887.	Oct. 6th, 1924.
Edmund G. Lamb	May 4th, 1893.	Jan. 3rd, 1925.
George Downing Liveing	Nov. 21st, 1853.	Dec. 26th, 1924.
James McAlley	June 15th, 1899.	Feb. 1924.
William Sharman	June 4th, 1874.	Dec. 21st, 1924.

The PRESIDENT announced:

(1) That the names of the Members of Council who retire at the Annual General Meeting on the 26th March, 1925, and who are ineligible for re-election to the same office until the lapse of one year, are as follows:

President:
Prof. W. P. Wynne.

Foreign Secretary:
Dr. A. W. Crossley.

Vice-Presidents who have filled the office of President:
Prof. H. B. Dixon, Prof. P. F. Frankland.

Vice-Presidents who have not filled the office of President:
Prof. E. C. C. Baly, Dr. J. T. Hewitt.

Ordinary Members of Council:

(*a*) Town Members:
Dr. C. Dorée, Dr. J. J. Fox, Prof. J. R. Partington.

(*b*) Country Members:
Prof. I. M. Heilbron, Prof. J. W. McBain, Dr. W. H. Mills.

The following vacant places fall due to be filled at the Annual General Meeting on March 26th, 1925, in accordance with the Bye-Laws :

President	One vacancy.
Secretaries	One vacancy.
Foreign Secretary	One vacancy.
Vice-Presidents who have filled the office of President	Three vacancies.

(Note : the vacancy additional to the two prescribed by the Bye-Laws is caused by the death of Sir James Dobbie.)

Vice-Presidents who have not filled the office of President	Two vacancies.

Ordinary Members of Council :

(*a*) Town Members (*i.e.*, those living within a radius of 50 miles from Charing Cross)	Five vacancies.
(*b*) Country Members (*i.e.*, those living beyond a radius of 50 miles from Charing Cross)	Two vacancies.

(Note : In accordance with the Bye-Laws, the number of vacancies in each of the categories (*a*) and (*b*) is three. But this year the vacancies among Town Members are increased by two and among Country Members reduced by two, owing to Prof. C. K. Ingold and Prof. J. Reilly, who are no longer resident in the London area, being transferred from Town to Country Members; while the resignation of a Country Member increases the number of vacancies among Country Members from one to two.

The Council has nominated :

Dr. A. W. Crossley to the office of President.
Dr. T. Slater Price to the office of Secretary.
Prof. F. G. Donnan to the office of Foreign Secretary.

(2) That the following address of congratulation was presented by Sir William Pope, F.R.S., to the Société Chimique de France on December 22nd, 1924, on the occasion of the celebrations of the 50th Anniversary of the foundation of Stereochemistry by van't Hoff and Le Bel in 1874 :

" To the Société Chimique de France.

" The President, Council and Fellows of the Chemical Society rejoice to learn that the Société Chimique de France is meeting on December 22nd on the occasion of the 50th anniversary of the foundation of Stereochemistry by Joseph Achille Le Bel and Jacobus Henricus van't Hoff.

"These two savants will ever be remembered for one of the most important advances in modern chemical thought and practice. The masterly conception which they gave to the chemical world has proved a fruitful incentive to brilliant researches, which have not only confirmed their theoretical reasoning, but have also immeasurably widened our knowledge of chemical structure.

"The Chemical Society, which is proud to have the name of Joseph Achille Le Bel on its list of Foreign Fellows, welcomes the opportunity of joining with its sister Society in doing honour to Le Bel and van't Hoff and in paying homage to their genius.

"Signed on behalf of the Chemical Society,
W. P. WYNNE, *President.*
JOCELYN THORPE, *Treasurer.*
(L.S.)
T. SLATER PRICE, } *Secretaries.*
C. S. GIBSON, }
ARTHUR W. CROSSLEY, *Foreign Secretary.*

"Sealed in Council this Eighteenth day of December, One Thousand Nine Hundred and Twenty-four."

The following were formally admitted Fellows of the Chemical Society: H. J. George, E. Rothstein, R. F. Goldstein, S. Barratt, E. Roberts, J. A. Aeschlimann, J. Ross, and C. I. Kelly.

Certificates were read for the first time in favour of:

Claud McClellan Bottomley, B.Sc., 43, Manor Road, Blackburn.
Frederick Stanley Brown, B.Sc., A.I.C., Rosebank, Tile Hill Lane, Coventry.
Herbert Isaac Coombs, B.Sc., B.A., Trinity College, Cambridge.
Ernest James Davis, 45, McClure Street, Ormeon Road, Belfast.
Henry Bell Footner, B.Sc., Great Dean, nr. Christchurch, Hants.
Robert Owen Griffith, M.Sc., A.I.C., Muspratt Laboratory of Physical Chemistry, The University, Liverpool.
Herbert Henry Hodgson, M.A., Ph.D., B.Sc., F.I.C., 136, Paley Road, Bradford.
Wilford Jordayne Johnson, Devanha, South Road, Brighton Beach, Victoria, Australia.
William Wenallt Jones, M.Sc., 19, White Hart Lane, Wood Green, N. 22.
Jacob Kracovski, B.Sc., 11, Ernest Street, E. 1.
John Joseph Laws, 45, Fulham Road, South Kensington, S.W. 7.
Alexander John Simpson Leiper, 74, Whitworth Road, South Norwood, S.E. 25.
William Hamilton McVicker, M.Sc., 45, Wellington Park, Belfast.
Frank Douglas Miles, Caldwell Road, West Kilbride, Ayrshire.
William Bayley Parker, F.I.C., 3, Murray Road, Rugby.
Isaac Vogel, B.Sc., 16, Wellclose Square, E. 1.
Nellie Walker, M.A., Ph.D., B.Sc., 15, Fintry Place, Broughty Ferry.
James Ewart Whipp, 15, St. John's Street, Longsight, Manchester.

The following papers were read:

"6-Chlorophenoxarsine." By E. E. TURNER and A. B. SHEPPARD.

"The chemistry of the three-carbon system. Part III. αβ-βγ-Change in unsaturated acids." By G. A. R. KON and R. P. LINSTEAD.

"The influence of valency direction on the dissociation constants of dibasic acids." By C. H. SPIERS and J. F. THORPE.

"The relation of pilocarpidine to pilocarpine. Synthesis of 1 : 4- and 1 : 5-dimethylglyoxalines." By R. BURTLES, F. L. PYMAN, and J. ROYLANCE.

LECTURE.

Sir William Hardy, Sec.R.S., will deliver his Lecture entitled "Problems presented by Films on Solid Surfaces," on Thursday, February 26th, 1925, at 8 p.m., in the Lecture Hall of the Institution of Mechanical Engineers, Storey's Gate, Westminster, S.W. 1.

ANNIVERSARY DINNER.

The Anniversary Dinner will be held in the Grand Hall of the Hotel Victoria, Northumberland Avenue, W.C. 2, on Thursday, March 26th, 1925, the day of the Annual General Meeting. Further particulars will be issued shortly.

ORDINARY SCIENTIFIC MEETINGS IN FEBRUARY.

February 5th, at 8 p.m.

February 19th, at 8 p.m., when a ballot for the election of Fellows will be held.

List of Papers received between December 19th, 1924, and January 15th, 1925. (This List does not include the titles of papers, or abstracts thereof, which have been read at a Scientific Meeting, or which have appeared in the Journal.)

"Note on a simple constant-level apparatus for thermostats and water-baths." By J. M. SMITH.

"Studies of equilibrium in systems of the type $Al_2(SO_4)_3$–$M''SO_4$–H_2O. Part I. $Al_2(SO_4)_3$–$CuSO_4$–H_2O. $Al_2(SO_4)_3$–$MnSO_4$–H_2O at 30°." By R. M. CAVEN and T. C. MITCHELL.

"The mercuration of aromatic substances. Part I. Toluene." By S. COFFEY.

"The chemistry of the three-carbon system. Part IV. A case of retarded mobility." By G. A. R. KON and R. P. LINSTEAD.

"The velocity of reaction in mixed solvents. Part VIII. The velocity of formation of certain quaternary ammonium salts." By H. McCombie, H. M. Roberts, and H. A. Scarborough.

"Crystalline cuprous bromide." By D. B. Briggs.

"Phenyl benzyl diketone and some derivatives." By T. Malkin and R. Robinson.

"Tautomerism of amidines. Part V. Methylation of glyoxalines by diazomethane. Bromination of 4(or 5)-phenylglyoxaline." By W. G. Forsyth and F. L. Pyman.

"The mass of the hydrogen atom computed." By E. F. Morris.

"The reduction of aromatic nitro-compounds." By R. W. West.

"A redetermination of the atomic weight of boron." By H. V. A. Briscoe and P. L. Robinson.

"The interaction of nitrogen sulphide and sulphur. Nitrogen persulphide." By F. L. Usher.

"The composition of the liquid and vapour phases in mixtures of glycerol and water." By M. P. I. V. Iyer and F. L. Usher.

"Note on some metallic couples decomposing water at the ordinary temperature." By E. S. Hedges and J. E. Myers.

"Styrylbenzopyrylium salts. Part IV. γ-Styryl derivatives of 5 : 7-dihydroxy- and 5 : 7-dimethoxy-2-phenyl-4-methylbenzopyrylium chloride." By G. H. Walker and I. M. Heilbron.

"Styrylbenzopyrylium salts. Part V. Distyryl derivatives of 7-hydroxy-2 : 4-dimethylbenzopyrylium chloride." By I. M. Heilbron, G. H. Walker, and J. S. Buck.

"Interactions of tellurium tetrachloride and acetic anhydride." By G. T. Morgan and H. D. K. Drew.

"Quantitative reduction by hydriodic acid of halogenated malonyl derivatives. Part IV. The influence of substitution in the amide group on the reactivity of the halogen atom in bromomalonamide." By R. W. West.

CERTIFICATES OF CANDIDATES FOR ELECTION AT THE BALLOT TO BE HELD AT THE ORDINARY SCIENTIFIC MEETING ON THURSDAY, FEBRUARY 19TH, 1925.

N.B.—The names of those who sign from "General Knowledge" are printed in *italics*.

Ashley, Julius Nicholson, 37, Scarsdale Road, Victoria Park, Manchester. British. Chemical Research student at the Victoria University of Manchester. B.Sc. Hons. (Birm.) 1923. A.I.C. 1923. (*Signed by*) Arthur Lapworth, R. Robinson, Frederick Challenger.

BARTRAM, GEORGE ALFRED, 19, Valley Rd., Spital, Chesterfield. British. Teacher of Chemistry. Student at University College, Nottingham, 1914–15, 1919 and 1920. B.Sc. (London Pass), 1920; B.Sc. (Lond., 2nd Class Hons. Chem.), 1922. Elected A.I.C. 1923. Teacher of Chemistry 1920 to present time. In charge of Chem. Advanced Course recognised by Board of Education 1922 to present time. (*Signed by*) F. Stanley Kipping, E. B. R. Prideaux, J. B. Firth, A. R. Blackburn.

BEEBY, GEORGE HARRY, 92, Ashby Rd., Loughborough. English. Chemistry Research Student. Training received at Loughborough College, under A. Bramley, Esq., D.Sc., F.I.C., etc. Hold degree of B.Sc. London. 2nd Hons. Chemistry. A.I.C. Diploma of Loughborough College (Hons.). Engaged on Metallurgical Research. (*Signed by*) Arthur Bramley, George Lawton, T. L. Garner, A. T. Eggington.

BISHOP, ARTHUR HENRY BURDICK, Westminster Training College, 130, Horseferry Rd., Westminster, S.W. 1. British. Assistant Lecturer in Chemistry. Research for one year at Jesus College, Oxford, on "Adsorption of Gases by Glass Wool." At present engaged in research on "Optical Rotatory Dispersion." (*Signed by*) P. C. Austin, E. E. Walker, Gerald Druce.

BLOOMER, VINCENT, B.Sc., 33, Balfour St., Oldham. British. Student. Have completed 3 years' Honours Chemistry Course at Victoria University, Manchester; am now doing one year's research course for the degree of M.Sc. (*Signed by*) Henry Stephen, F. P. Burt, D. H. Bangham.

BOTTOMLEY, CLAUD MCCLELLAN, 43, Manor Road, Blackburn. British. Brewer. B.Sc. (Lond.) [Chemistry taken at Final Exam.]. (*Signed by*) W. J. Stansfield, A. Bramley, G. W. F. Holroyd.

BROWN, FREDERICK STANLEY, "Rosebank," Tile Hill Lane, Coventry. British. Research Student (in receipt of a Scientific and Industrial Research Grant). Two years' works experience. Academic training at University College of Wales, Aberystwyth, from 1919 up to present time. 1st Hons. B.Sc. (Wales). A.I.C. Over two years' research experience. *J.C.S.* 1923, Vol. **123**, 2430. *J.C.S.* 1924, Vol. **125**, 2219. (*Signed by*) T. Campbell James, C. R. Bury, Albert Green.

CHORLEY, PERCY, 87, Hazelbottom Rd., Crumpsall, Manchester. British. Chemist. M.Sc. (Vict.). Beyer Fellow, Victoria University, Manchester, 1914. Published, with Professor A. Lapworth, a paper on "A new series of nitrogenous compounds derived from camphoroxalic acid" (*Trans.*, 1920, 728). Chemist, on the staff of British Dyestuffs Corporation, Ltd. (*Signed by*) E. H. Rodd, R. Brightman, H. Swann, Carlton Butler, Morvan Lapworth.

COOMBS, HERBERT ISAAC, Trinity College, Cambridge. British. Student. Bachelor of Science, First-class Bachelor of Arts of Oxford; Research work under Professor Perkin, F.R.S., and Professor Hopkins, F.R.S. (*Signed by*) W. H. Perkin, H. Raymond Ing, R. H. Griffith, N. V. Sidgwick.

CORBET, ALEXANDER STEVEN, "Abbey Stone House," Sidmouth St., Reading. British. Chemist. B.Sc., Ph.D. (London University). A.I.C. Papers published with Professor H. Bassett: "The Hydrolysis of Potassium Ferricyanide and Potassium Cobalticyanide by Sulphuric Acid," *J.C.S.*, June 1924. "A Phase-rule Study of the Cupro-, Argento-, Auro-, and Thallo-cyanides of Potassium," August, 1924. (*Signed by*) H. Bassett, J. W. Dodgson, D. Roy Maxted.

CROWE, WILLIAM HAUGHTON, "Bettwsville," Cherry Valley Park, Belfast (N. Ireland). British. Assistant in Chemistry (Q.U.B.). Research in Chemistry, Queen's University, Belfast. 1922–23, subject, "Effect of Light

on Brominations." 1923–24, University College, London, "Pyridones." (*Signed by*) A. W. Stewart, J. K. Marsh, H. Graham.

DAVIDSON, ALFRED, 91, Hazelbottom Rd., Cheetham, Manchester. British. Research Chemist, British Dyestuffs Corporation. B.Sc. (Glasgow) with distinction in Chemistry. T. S. Patterson and A. Davidson, *J.C.S.* (1912), **101**, 374. (*Signed by*) E. J. Amies, C. Hollins, S. C. Bate.

DAVIS, ERNEST JAMES, 45, McClure Street, Ormeau Road, Belfast. British. Chief Assistant Chemist, Messrs. Harland and Wolff, Belfast. Ten years Industrial Chemist with Messrs. J. Stone & Co., Deptford; Martin's Heat Treating and Testing Works, Coventry; Harland and Wolff, Ltd., Belfast. (*Signed by*) Henry Wren, Theophilus Harper, James W. Porter.

DUFFIN, WALTER MARK, 35, Binfield Road, S.W. 4. English. Research Student. A.R.C.S. B.Sc., London. Engaged in Research. (*Signed by*) H. B. Baker, G. A. R. Kon, Arnold Stevenson, M. A. Whiteley.

DURRANT, ARTHUR HYNARD, 47, Cassiobury Rd., London, E. 17. British. Bacteriologist and Demonstrator in Chemistry, Guy's Hospital and The Technical Institute, E. 17. Inventor of a Constant Cell, see *Junior Mechanic*, May, 1921. (*Signed by*) W. H. Collier, H. L. Long, E. C. Edgar.

EATON, FREDERICK JOHN, Ph.D. (Edin.), B.Sc. (Edin.), A.I.C., Chemical Laboratory, Gas Light and Coke Coy., Horseferry Rd., Westminster. British. Research Chemist, Gas Light and Coke Coy. Formerly part time Assistant Dept. of Medical Chemistry, Univ. of Edinburgh, and Research Student under Prof. Barger, F.R.S., Univ. of Edinburgh. Paper on "Blue Adsorption Compounds of Iodine," accepted 9th Sept., 1924. (*Signed by*) George Barger, Ellen Field, John E. Mackenzie.

EDWARDS, GEORGE ALFRED, 21, Crystal Palace Rd., London, S.E. 22. British. Demonstrator in Chemistry, King's College, London University. B.A. Oxon., First Class Honours in Chemistry. B.Sc. Oxon. Demonstrator in Chemistry at King's College, London University. Joint author of "Amino-derivatives of Tetrahydrocarbazole." (*Signed by*) Samuel Smiles, A. J. Allmand, E. W. McClelland, Frank W. Stoyle.

EMELÉUS, HARRY JULIUS, Battle, Sussex. British. Student. Research Student at Imperial College of Science and Technology. Graduate of London University. Chemistry (1st Class Hons.). A.R.C.S. (1st Class Chemistry). (*Signed by*) H. B. Baker, M. A. Whiteley, M. Carlton.

ESDAILE, RALPH MARGRAVE, the Lytle Coal Co., Ltd., Minerville, Pa., U.S.A. British. Chemist to the Lytle Coal Co., Ltd., Minerville, Pa., U.S.A. Trained at Finsbury Technical College, 1919–1923. Desires to receive the publications of the Chemical Society. Awarded Diploma, July, 1922, A.C.G.F.C. (*Signed by*) A. J. Hale, H. M. Atkinson, R. J. Seal.

FLACK, EDWARD HUGH ST. CLAIR, 9, Bridge Street, Cambridge. British born subject. Research Student in Organic Chemistry, Univ. of Cambridge. M.Sc. (Univ. of S. Africa). (*Signed by*) W. J. Pope, W. H. Mills, R. C. Odams.

FOOTNER, HENRY BELL, Great Dean, nr. Christchurch, Hants. British. Chemist. B.Sc. (Lond.), 1st Hons. Chemistry. 1922–1924, Research work on reactions of Alkyl Thiosulphates and Allied Compounds—publication pending. (*Signed by*) Samuel Smiles, C. Montague Bere, Hubert Painter.

GEOGHEGAN, DESMOND, 13, Port View, Heavitree, Exeter. British. Analytical Chemist. Three years pupil-assistant to T. Tickle, Esq., Devon County Analyst; two and a half years' experience in Practical Organic Chemistry and General Chemical Analysis at University College, Exeter, under Prof. W. H. Lewis. Educated at Sherborne School, Dorset, and at Douai School, Berks. Desire Fellowship, to have use of the Library, and

to keep in touch with modern research through the publications of the Society. (*Signed by*) Thomas Tickle, S. Glasstone, F. Southerden, R. King, W. H. Lewis.

GIBBY, CLIFTON WILLIAM, "The Rise," Foxley Lane, Purley, Surrey. British. Research Worker in Chemistry. Three years' study of Chemistry at University College, London, including a year's research with Professor Irvine Masson. Honours B.Sc. in Chemistry. A.I.C. by Exam. Now appointed Research Assistant to Mr. A. C. Egerton, at the Clarendon Laboratory, Oxford. (*Signed by*) F. G. Donnan, Henry Terrey, L. F. Gilbert.

GIBSON, REGINALD OSWALD, 41, Peak Hill, Sydenham, S.E. 26. British. Research Chemist. Bachelor of Science (London), 1924. Associate of the Institute of Chemistry, 1924. (*Signed by*) F. G. Donnan, W. E. Garner, O. L. Brady, I. E. Weber, V. W. Slater.

GIMINGHAM, CONRAD THEODORE (F.I.C.), Haddon House, Aarenbury Lane, Harpenden, Herts. British. Research Chemist, Insecticides and Fungicides Dept., Rothamsted Experimental Station, Harpenden, Herts. Research and Advisory Work in Agric. Chemistry at University of Bristol, 1909–1919. Research Work, Chemical Warfare Dept., 1916–1919. Chemist, Research Dept., Olympia Agric. Co., 1920–1923. Since then at Rothamsted Experimental Station. Various papers on Agric. Chem. subjects in *Jour. Agric. Sci.*, *Ann. App. Biol.*, etc. (*Signed by*) E. J. Russell, H. J. Page, H. W. Dudley.

GOODSPEED, JONATHAN, 36, Vicarage Lane, East Ham, E. 6. Student. Chemistry Student at East London College. (*Signed by*) J. R. Partington, E. E. Turner, B. D. Shaw.

GREENHALGH, RICHARD, 139, Stuart Street, Clayton, Manchester. British. Research work at Manchester University for M.Sc. Degree. Degree of B.Sc. in Chemistry Honours at Manchester University, Class II, Division I. (*Signed by*) Arthur Lapworth, Henry Stephen, Frederick Challenger, Fred Fairbrother, Colin Campbell.

GRIFFITH, ROBERT OWEN, Muspratt Laboratory of Physical Chemistry, Liverpool University. British. Lecturer in Physical Chemistry, Liverpool University. B.Sc., 1st Class Hons. Chem. (Liverpool), 1914; M.Sc., 1915; A.I.C., 1915–1918. Chemist under D.I.H.E., Liverpool. 1919, Lecturer in Physical Chemistry, Liverpool University. *Publications :* "Einstein's Law of the Photochemical Equivalent," Appendix VII. Lewis's "System of Physical Chemistry," Vol. 3, 3rd edition. Sections "Chemical Equilibrium" and "Reaction Velocity" in "Tables Annuelles de Constanter," Vol. 5 (in print). Papers in *J.C.S.* : (1) 1916, **109**, 67; (2) 1917, **111**, 389; (3) 1921, **119**, 1948; (4) 1923, **123**, 2752; (5) 1923, **123**, 2767. Also *Trans. Faraday Soc.*, 1921, **17**, 525. (*Signed by*) W. C. M. Lewis, F. C. Guthrie, E. C. C. Baly, I. M. Heilbron.

HAILWOOD, ANTHONY JAMES, Hazel Bank, Hazel Road, Altrincham. British. Research Chemist in the British Dyestuffs Corporation, Ltd., Manchester. Formerly on the manufacturing staff of the same Corporation. B.Sc. with 1st Class Honours in Physics (Manchester University). *Signed by*) W. H. Perkin, G. R. Clemo, S. C. Bate.

HISCOCKS, EDWARD STANLEY, 5, Rosehill, Swansea. British. Research Student, Chemistry Dept., University College, Swansea. Part-time Lecturer in Chemistry to the Municipal Technical College, Swansea. Hons. Graduate (Wales) in Chemistry. Part-time Lecturer in Physical and Inorganic Chemistry to the Municipal Technical College, Swansea. (*Signed by*) J. E. Coates, Leonard E. Hinkel, Ernest E. Ayling.

HODGSON, HERBERT HENRY, M.A. (Cambridge), B.Sc. (London), Ph.D. (Heidelberg), F.I.C., 136, Paley Road, Bradford. British. Head of Colour Chemistry Dept., Technical College, Huddersfield, since Sept. 1918. Previous posts, 1908–1912, Lecturer and Research Chemist, Technical College, Bradford; 1912–1915, Head of Chemical Dept., Northern Polytechnic Institute, London, N.; 1915–1918, Chief Chemist to Messrs. Brotherton & Co. at Birmingham and Stourton (Leeds). *Papers:* (1) "Dissertation," Heidelberg, 1908; (2) "Some Reactions of Phenyl Iodide, Chloride, and Iodosobenzene Acetate," *Proc. Camb. Phil. Soc.*, 1908; (3) "Isomere organische Magnesiumverbindungen" (with J. Schmidlin), *Ber.*, **41**, 430–437; (4) "Triphenylessigsäure und Tritolylessigsäure" (with J. Schmidlin), *Ber.*, **41**, 438–447; (5) "The Iodination of Phenols, etc." (with W. M. Gardner), *J.C.S.*, 1909, **95**, 1819–1827; (6) "The Development of Sulphuric Acid from Sulphide Dyestuffs and from Free Sulphur" (with W. M. Gardner), *J. Soc. Chem. Ind.*, 1910; (7) "The Action of Sulphur on Amines. Part I. *o*-Toluidine," *J.C.S.*, 1912, **101**, 1693–1701; (8) "The Action of Sulphur on Amines. Part II. Aniline," *J.C.S.*, 1914, **105**, 952–956; (9) "Nitrosation of Phenols. Part I. 3-Chloro-4-nitrosophenol and its Conversion into Two Isomeric Chloroquinone Monoximes" (with F. H. Moore), *J.C.S.*, 1923, **123**, 2499–2507; (10) "The Preparation of 2- and 4-Nitro-1-naphthols" (with E. Kilner), *J.C.S.*, 1924, **125**, 808–811; (11) "Direct Sulphuration of Aniline," *J.C.S.*, 1924, **125**, 1855–1858; (12) "Mononitration of *p*-Chlorotoluene" (with P. Anderson), *J.C.S.*, Oct. Notes, 1924; 4 papers now before the Publication Committee. *Patents:* Some New Sulphur Compounds and Dyestuffs therefrom, 1912; Preparation of Meta Halogenated Phenols, Brit. Pat. 200714; Preparation of Dihalogenated Fluoranes, Brit. Pat. 205254; Preparation of Tautomers of Nitroso-*m*-halogenated Phenols, Brit. Pat. 206734; 2 now filing on *m*-Hydroxybenzaldehyde and Azo Dyestuffs from Alkyl Thiol Amines. (*Signed by*) James Bruce, L. Gordon Paul, R. W. Merriman.

HUGHES, DAVID, 18, Holmes Grove, Westbury on Trym, Bristol. British. Chemist. At present on the Staff of British Colloids, Ltd. Passed Qualifying Examination of the Pharmaceutical Society, 1894. Engaged for 10 years in Chemical and Clinical Laboratory Work on my own account in Bath and Clifton. Studied Bacteriology under Prof. Stanley Kent, Bristol University. Co-operated with Dr. A. L. Flemming, Bristol, in a monograph on the Spectroscopic Examination of Blood in Ethyl Chloride Anæsthesia. Desirous of keeping up to date in developments of Chemical Science and to be allowed the privilege of the Library. (*Signed by*) John Macvie Hill, Archibald Macpherson, John F. Ward, Geo. A. Turner.

HUGHES, KATHLEEN HARRIET, 8, Ormiston Drive, Knock, Belfast. British. Lecturer in Pure and Applied Chemistry, Municipal College of Technology, Belfast. Lecturer in Chemistry, M.C.T.B., 1920–1924. Temporary Assistant Chemist, Government Laboratory, Strand, 1917–1920. (*Signed by*) Henry Wren, Theophilus Harper, James W. Porter.

HUNT, ARTHUR FREDERICK, 6, Seabrooke Cottages, Front Lane, Cranham (nr. Upminster), Essex. Chemical Research Student. B.Sc. (Lond.), 1st Class Hons. Research Student at East London College under Dr. E. E. Turner. (*Signed by*) J. R. Partington, Elwyn Roberts, D. C. Jones, E. E. Turner.

INGHAM, BERTRAM HOBART, Yew Bank, Langham Rd., Bowdon, Cheshire. British. Research Student. B.Sc. Hons., Victoria University, Manchester (*Signed by*) Arthur Lapworth, F. P. Burt, J. E. Myers, Henry Stephen, R. Robinson.

JOHNSON, JOHN DOBNEY, 6, Edward St., Loughborough, Leics. British. Research Student. B.Sc. Hons., London. Royal Scholar. Research Student. (*Signed by*) Jocelyn Thorpe, M. A. Whiteley, G. A. R. Kon, Arnold Stevenson.

JOHNSON, WILFORD JORDAYNE, "Devanha," South Rd., Brighton Beach, Victoria. Licensed Gold Assayer and Chemical Analyst. Associate, Australian Chemical Institute. 1913–1922 (except for War Service), Assistant to Mr. Henry W. Levy, Assayer and Metallurgical Chemist, Melbourne, Australia. September 1922 to date, in partnership with Mr. Henry W. Levy, in private practice as Assayers and Metallurgical Chemists. (*Signed by*) D. O. Shiels, Henry W. Levy, Robert Law.

JONES, CECIL BRELLISFORD OAKES, Old Sewage Works, Whitley, Coventry. British. Analytical Chemist to the Coventry City Council. Four years assistant to W. D. Scouller, Esq., M.Sc., A.I.C., F.C.S. Ten years chief assistant to John Haworth, Esq., F.I.C., F.C.S. Author of "Sewage Works Analyses" (*Surveyor*, April 25th, 1924). (*Signed by*) John Haworth, W. D. Scouller, James H. Kershaw.

JONES, WILLIAM WENALLT, 19, White Hart Lane, Wood Green, N. 22. British. Assist. Chemist, The British Drug Houses, Ltd., Graham St., City Road, N. 1. B.Sc. Wales, June 1922; 2nd Class Honours Chemistry. M.Sc. Wales, June 1924. One session's Research Experience at the University College of North Wales, Bangor. (*Signed by*) Francis H. Carr, Charles Alex. Hill, S. Sugden.

KENNEDY, ALAN RICHMOND, 88, Sellons Avenue, Harlesden, N.W. 10. British. Assistant Chemist (Thomas de la Rue & Co., 110, Bunhill Row, E.C.). Undergraduate (University of London) in Faculty of Science (graduation, 1925). Employed in commercial Laboratory (founded by Dr. Hugo Müller). Desirous of receiving Society's literature concerning particularly modern researches in Organic Chemistry. (*Signed by*) Hubert L. Lucking, P. C. L. Thorne, E. de Barry Barnett, Henry J. S. Sand.

KENYON, FRANK, Power Station, Creekmouth, Barking, Essex. British. Chemist to the New Electrical Station, Barking, County of London Electric Supply Co., Ltd. Associate of the Institute of Chemistry, Branch D. (*Signed by*) J. Kenyon, J. L. White, Harold Hunter.

KING, FREDERICK ERNEST, 101, Cavendish Road, Highams Park, Essex. British. Student (Research at East London College). (*Signed by*) J. R. Partington, E. E. Turner, D. C. Jones.

KNOTT, ERIC, 21, West Richmond St., Edinburgh. British. Lecturer in Chemistry and Physics at the Royal Dispensary and School of Pharmacy of Edinburgh. Student of the Royal Dispensary and School of Pharmacy of Edinburgh, 1919–21, from which place I obtained the Qualifying Certificate of the Pharmaceutical Society and also the Diploma of Pharmaceutical Chemist. For past three years engaged as Lecturer at above School in Chemistry and Physics. (*Signed by*) Russell G. Thin, A. Scott Dodd, William Duncan.

KRACOVSKI, JACOB, 11, Ernest St., London, E. 1. English. Research Student. B.Sc., 1st Class Hons. in Chemistry. At present engaged in research. (*Signed by*) Jocelyn Thorpe, G. A. R. Kon, M. A. Whiteley, E. H. Farmer.

LAMBOURNE, HERBERT, 44, Brighton Road, S. Croydon, Surrey. British. Head of the Chemistry Dept., Borough Polytechnic Institute, Borough Road, S.E. 1. Late Senior Lecturer in Organic Chemistry, University College, Nottingham. Research work on "Quinaldine and Derivatives," "Methyl-

stannonic Acid and Derivatives." M.A. (Cantab.), M.Sc. (Lond.), F.I.C. (*Signed by*) F. S. Kipping, J. B. Firth, E. B. R. Prideaux, F. C. Laxton.

LAWS, JOHN JOSEPH, 45, Fulham Rd., South Kensington. English. Chemist, Dentist, and Optician. Holding the Qualifying Certificate of the Pharmaceutical Society of G.B. (Lond.). Hon. Treasurer of the Chemists' Dental Society of Great Britain and Ireland (Reg. No. 15073). Hon. Gen. Secretary of the Institute of Chemists and Opticians. Examiner in Refraction to the Institute of Chemists and Opticians. Member of the Public Dental Services. At one time principal of the West End College of Chemistry and Pharmacy. Private tutor of Chemistry for many years. (*Signed by*) Percy Barrs, Robert W. Lindsey, James Harry Smith, Frank B. Arnold.

LE FEVRE, RAYMOND JAMES WOOD, 17, Broadway Avenue, St. Margarets, Twickenham, Mdx. British. University Undergraduate. Chemistry Student, East London College (2nd year of final). (*Signed by*) J. R. Partington, E. E. Turner, B. D. Shaw.

LEIPER, ALEXANDER JOHN SIMPSON, 74, Whitworth Road, South Norwood, London, S.E. 25. Scottish. Chemist. I wish to join the Chemical Society in order to keep in touch with up-to-date research and proceedings. I am an Associate of the Royal College of Science in Chemistry. (*Signed by*) M. A. Whiteley, Jocelyn Thorpe, James C. Philip.

LENNANE, ALFRED JAMES ANDREW, 22, Ryder St., St. James's, S.W. 1. British. Physician and Surgeon. Formerly Opium Analyst to the Indian Government. M.R.C.S., L.R.C.P. (*Signed by*) Frank Radcliffe, Thos. R. Owles, Samuel Gray Fenton.

LILEY, FREDERICK WILLIAM, 41, Beaconsfield Rd., West Croydon. British. Assistant, Croydon Borough Analyst. Student at King's College, London. 2 Years assistant to Croydon Borough Analyst. (*Signed by*) Lester Reed, Eric K. Rideal, Ed. Hinks.

LUNT, JAMES GILBERT, 17, York Avenue, Sefton Park, Liverpool. British. B.Sc. of Liverpool. Chemical Analysis, c/o Anglo-South American Meat Co., San Martin 235, Buenos Aires, Argentina. (*Signed by*) I. M. Heilbron, William Doran, Stanley J. C. Snedker.

MCVICKER, WILLIAM HAMILTON, 45, Wellington Park, Belfast. British. Chemical Research Student. B.Sc. (1st Class Honours), and M.Sc., Queen's University of Belfast. Musgrave Research Student, Queen's University of Belfast, 1923–25. Joint author of 7 papers as follows: *J.C.S.*, **123**, 642, 817, 820, 2147; **125**, 1743; *J. Amer. C. S.*, XLVI, 1351; *Phil. Mag.*, XLVIII, 628. (*Signed by*) A. Killen Macbeth, Ernest W. McClelland, A. W. Stewart, J. K. Marsh, H. Graham.

MANN, THOMAS, Alexander Terrace, Bransty, Whitehaven. British. Partner in firm of Hellon and Mann, Analytical and Consulting Chemists, Whitehaven. (*Signed by*) G. W. Martin, C. A. Mitchell, Bernard Dyer.

MASCARENHAS, VINCENT MARK, Bangalore. Indian Christian. Student, Indian Institute of Science, Bangalore. Bachelor of Arts of the University of Mysore with Chemistry as a main subject. Completed the work on the Chemistry of Indian Black Mustard Seed Oil, and that of Malabar Tallow (*Vateria Indica*) awaiting publication in the Journal of the Indian Institute of Science. (*Signed by*) J. J. Sudborough, M. O. Forster, Roland V. Norris.

MILES, FRANK DOUGLAS, Caldwell Road, West Kilbride, Ayrshire. English. Research Chemist. Asst. Lecturer in Inorganic Chemistry, Heriot-Watt College, Edinburgh, 1909–1915. Service in Dept. of Explosives Supply,

1915–1919. Senior Research Chemist, H.M. Factory, Gretna. Chief Research Chemist, Messrs. Burt, Boulton, and Haywood, 1919–1922. At present a member of the Research Section of Nobel Industries, Ltd. *Publications:* "Egyptian Blue," with H. P. Laurie and W. F. P. McLintock, *Proc. Roy. Soc.*, 1914. Also papers in *Proc. Roy. Soc. Edin.* (two, 1915), and in *Journ. Soc. Chem. Ind.*, 1920 and 1922. "A Volumetric Method for the Estimation of Lead," *J.C.S.*, 1915, **107**, 988; "The Solubility of Sulphur Dioxide in Sulphuric Acids" (with J. Fenton), *J.C.S.*, 1920, **117**, 59. Also author of forthcoming volume of Lunge's "Sulphuric Acid and Alkali" entitled, "Sulphuric Acid—Contact Process." (*Signed by*) John Weir, Norman Picton, W. Young.

NIGHTINGALE, EDWARD ARTHUR, 39, Pacific Rd., Fords Park Rd., Canning Town, E. 16. British. Commercial Analytical Chemist, Messrs. Burt, Boulton, and Heywood, Ltd., Coal Tar and Creosote Works, Silvertown, 1918–1920. Messrs. Pinchin, Johnson & Co., Paint and Varnish Manufacturers, Silvertown, 1920. Student at Borough Polytechnic for Paints, Oils, and Colours. Student at East Ham Technical College, Chemistry, 6 years' course. City and Guilds of London Institute, Coal Tar, 1st Class certificate. (*Signed by*) R. W. Griffiths, W. H. Barker, W. T. Clough.

OFFORD, FREDERICK WILLIAM, 66, Watford Road, Canning Town, London, E. 16. English. Analytical Chemist. National Certificate in Chemistry, "Higher" or "Advanced," 1923. Worked under J. Bendix, F.I.C., F.C.S. (1915–1920). (*Signed by*) E. W. Griffiths, E. G. Churchill, W. H. Barker.

OUTRIDGE, LIONEL EDWARD, "Fernhurst," The Avenue, Chingford, Essex. British. Research Student. B.Sc. (London), Honours Chemistry. Research student at East London College under Dr. D. C. Jones. (*Signed by*) J. R. Partington, Elwyn Roberts, D. C. Jones, E. E. Turner.

PARKER, THOMAS WEBSTER, Mildenhall, Suffolk. British. Chemist. Student at the Royal College of Science (London), 1919–23. A.R.C.S., 1921. Chemist to the Dartmoor China Clay Co. (*Signed by*) James C. Philip, M. B. Donald, A. B. P. Page.

PARKER, WILLIAM BAYLEY, F.I.C., 3, Murray Road, Rugby, Warwickshire. Chief Chemist (Research and Works), The British Thomson-Houston Co., Ltd., Rugby. Chief Chemist to B.T.H. from April 1902, and Author of "Specifications for Foundry Pig Irons," Pt. I and II., Proceedings British Foundrymens' Association, 1912–13 and 1906; "Specifications for Alloys for High Speed Superheated Steam Turbine Blading," Jnl. Inst. of Metals, No. 2, 1915; "Purchasing Specifications for Resins and Shellac," Jnl. Oil and Colour Chemists' Association, Vol. V, 1922; "Variation of Refractive Index and Density of Benzene with Temperature," W. B. Parker and G. Thompson, *Trans. Chem. Soc.*, 1922, Vol. **121**. (*Signed by*) Percy F. Frankland, S. Judd Lewis, Gartha Thompson.

PARSONS, STUART RUSSELL, 65, Oakfield Road, Ilford. Research Student (Chemistry). B.Sc. (Lond.), Honours Chemistry. A.I.C. Research student at East London College, under Dr. E. E. Turner. (*Signed by*) J. R. Partington, Elwyn Roberts, D. C. Jones, E. E. Turner.

PAYNE, WILLIAM SAMUEL, Moseley House, Rounds Green, Oldbury. English. Chemist. 5 years Laboratory Steward, Oldbury Secondary Schools. 3 years Laboratory Steward, Oldbury Technical Schools. 2 years Demonstrator and Assistant Chemistry Master, Oldbury Technical Schools. U.E.I. Certificate in Advanced Inorganic and Physical Chemistry, 1924. (*Signed by*) John G. Clarke, C. Mansfield Swain, E. Pritchett.

PEARSON, KENNETH JOHN, 105, Winterbourne Road, Thornton Heath.

British. Two years Assistant to the Croydon Borough Analyst. (*Signed by*) Lester Reed, Ed. Hinks, Henry P. Stevens.

PIKE, RICHARD EDWIN, 6, Haymarket, London, S.W. 1. British. Student. Pass B.Sc. (Lond.). Studying for Honours at Royal College of Science since October, 1923. (*Signed by*) H. B. Baker, H. F. Harwood, M. A. Whiteley, James C. Philip.

PLUMBRIDGE, DOUGLAS VICTOR, 21, Heathfield Rd., Wavertree, Liverpool. British. Research Chemist. Ph.D. (Munich). A.R.C.Sc. (London). A.I.C. On the staff of the Chemical Dept., Messrs. The Salt Union, Ltd., Western Point, Cheshire. (*Signed by*) A. Bramley, Norman M. Comber, James C. Philip.

PRESTON, JOHN MASSEY, The Dower House, Euxton, Chorley, Lancs. British. Private Research in Chemistry. B.Sc., 2nd Class Hons. Chem. (Liv.). A.I.C. (*Signed by*) E. C. C. Baly, H. Rogerson, F. C. Guthrie.

RAPER, RICHARD, 12, Mill Lane, Cambridge. British. Research Student. 1st Class Honours in Nat. Sci. Tripos, Parts I and II (Chemistry) of Cambridge University. Two years' research work under Dr. Mills, F.R.S., and two years' experience as Demonstrator in Cambridge University Chemical Laboratory. (*Signed by*) W. J. Pope, W. H. Mills, H. R. Stevens.

RULE, JOHN FREDERICK JAMES, 29, Alexandra Road, East Ham, E. 6. Research Student. Have passed the B.Sc. Hons. examination in Chemistry of London University, and I am undertaking Research Work under Professor Partington. (*Signed by*) J. R. Partington, W. H. Patterson, E. E. Turner.

SCORAH, LESLIE VIVIAN DONALD, 139, Dodworth Road, Barnsley (Yorks). British. Research Student. B.Sc. (Hons. Chem.) Sheffield. A.I.C. (*Signed by*) W. P. Wynne, G. M. Bennett, F. G. Tryhorn, Arthur W. Chapman.

SHEPPARD, GEORGE FREDERICK, 72, Mortlake Rd., Kew Gardens, Surrey. British. Chemist, Cl. II. Department of Government Chemist. Position as above. Student, Royal College of Science, London, 1900–2, passed examinations of the Associateship Course in Chemistry for Revenue Students. Past experience: Analytical work in above Department since November, 1902. (*Signed by*) Thos. J. Cheater, W. Williamson, Robert Robertson, Geo. Stubbs.

SHEVLIN, JOSEPH THOMAS, "Corwen," Frederick Road, Wylde Green, Birmingham. British. Patent Agent. Associate of the Chartered Institute of Patent Agents. Associate of the Institute of Physics. Associate of the Institution of Electrical Engineers. Fellow Physical Society of London. I am desirous of becoming a Fellow of the Society in order that I may be well versed in the more recent developments in Chemistry. (*Signed by*) G. G. Henderson, F. J. Wilson, E. W. Moss.

SMETHURST, ARTHUR FREDERICK, Nippon, Cedar Road, Sutton, Surrey. British. Undergraduate. Student in Chemistry at the Royal College of Science since October, 1922. (*Signed by*) H. B. Baker, H. F. Harwood, M. A. Whiteley, James C. Philip.

SMEWING, ETHEL MINNIE, 42, Park Avenue South, Crouch End, N. 8. British. Teacher. B.Sc. Hons. Chem. (Lond.). Teacher of Chemistry. (*Signed by*) J. F. Spencer, M. S. Crewdson, H. Crompton.

SMITH, ALTON EWART CLARENCE, Breydon, Oakmount Avenue, Southampton. British. Lecturer in Physical Chemistry, University College of Southampton. Lecturer as above since 1919. (*Signed by*) D. R. Boyd, C. K. Ingold, C. F. Cross.

SNELUS, SUZANNE MABEL LAVINIA, 67, Elgin Mansions, W. 9. British. Analytical and Consulting Chemist. Member of the Pharmaceutical Society

Associate of the Institute of Chemistry. Senior Analyst to Messrs. Parke Davis & Co. Chemist in Charge to Messrs. J. C. Arnfield & Sons. Assistant Research worker, Dr. F. W. Passmore. (*Signed by*) P. C. L. Thorne, E. de Barry Barnett, Henry J. S. Sand.

SPIERS, CLAUDE HYMAN, 34, Brondesbury Road, N.W.6. British. Research Chemist. M.A. (Cambridge). B.Sc. (London). Ph.D. (Cambridge). *T.*, 1924, **125**, 450. (*Signed by*) Jocelyn Thorpe, Arnold Stevenson, G. A. R. Kon, H. M. Spiers.

STERN, HAROLD JACOB, 17, Croxteth Grove, Sefton Park, Liverpool. British. Chemist to firm of paper stainers. Research on Photosynthesis, Liverpool University, 1921–22. Research in Organic Chemistry under Prof. W. H. Perkin, Oxford, 1922–24. B.Sc. (Hons. Chem.), Liv., 1921. Ph.D., Liv., 1923. B.Sc., Oxon., 1924. Baly, Heilbron, and Stern, 1923, **123**, 185. (*Signed by*) W. H. Perkin, Fredk. A. Mason, G. R. Clemo, S. G. P. Plant, E. Hope, F. Raymond Ing.

STILL, CHARLES JAMES, 50, Queen's Parade, Bangor, Co. Down. British. Lecturer in Bleaching and Dyeing, Municipal College of Technology, Belfast. B.Sc. (Lond.); M.Sc. and Ph.D. (Queen's Univ., Belfast). Joint author of several communications (in collaboration with Dr. Henry Wren) on Diphenylsuccinic Acids, published in *J. Chem. Soc.* (*Signed by*) Henry Wren, James W. Porter, Theophilus Harper.

SYED, MOHAMMAD HASSAN, Rupar (Amballa), India. Indian Muhammadan. Demonstrator, Maclagan Engineering College, Lahore, India. B.Sc. (Chemistry), Punjab University. Desirous of being in touch with the recent work in Chemistry. (*Signed by*) S. D. Muzaffar, S. J. Kohli, Edwin Theodore Dean.

THOMAS, MARY BEATRICE, Girton College, Cambridge. Lecturer in Chemistry and Director of Studies in Natural Sciences. Lecturer in Chemistry, Girton College, Cambridge. (*Signed by*) W. J. Pope, F. G. Hopkins, A. Hutchinson.

TIMMS, ERIC SPENCER, 96, Grange Park Rd., Thornton Heath. Research Student (Chemistry). B.Sc. (London), Honours Chemistry. Research Student at East London College under Dr. D. C. Jones. (*Signed by*) J. R. Partington, Elwyn Roberts, D. C. Jones, E. E. Turner.

TITTERINGTON, ERIC, Abdine Palace, Cairo, Egypt. British. Private Chemist to H.M. the King of Egypt. Member of the Pharmaceutical Society of Great Britain. Engaged in the examination of food and all drugs used in the household of His Majesty. Attached to the Medical Staff of His Majesty for Physiological work. Appointed Examiner in Chemistry to the Cairo Medical School, 1924. (*Signed by*) Ayerst Henham Hooker, W. Morris Colles, C. S. Gibson.

TUDHOPE, THOMAS MARTIN AITKEN, 8, Anson Road, Tufnell Park, London, N. 7. British. Temporary Assistant Chemist in the Government Laboratory. B.Sc. (St. Andrews), with Special Distinction in Chemistry. Ph.D. (St. Andrews). Carnegie Research Scholar for two years (sessions 1921–1923). Engaged in Chemical Research at University College, Dundee, for three years. "Optically Active β-Phthalimino-β-phenylpropiophenones," McKenzie and Tudhope, *J.C.S.*, 1924, **125**, 923. (*Signed by*) Robert Robertson, Geo. Stubbs, J. J. Fox.

VASS, CHARLES CYRIL NORREY, "Holmleigh," Harboro' Rd., Kingsthorpe, Northampton. British. Student. B.Sc. Ordinary (Leeds, 1924). (*Signed by*) C. K. Ingold, P. K. Dutt, W. A. Wightman, H. M. Dawson, R. Whytlaw-Gray.

VILLAGE, JOHN HARRY, 61, Broxholme Lane, Doncaster. British. Chemist. B.Sc. Hons. (Lond.). For 5 years engaged as Assistant Chemist by the Koppers' Coke Oven Co. under G. E. Foxwell, M.Sc., A.Inst.P., F.C.S. Here I have assisted in numerous researches on coal and its by-products. Now in charge of Laboratory. (*Signed by*) G. E. Foxwell, P. G. Mander, G. D. Crosley.

VOGEL, ISRAEL, 16, Wellclose Square, London, E. 1. Research Student in Chemistry at the East London College. B.Sc., 1st Class Honours Chemistry. Neil Arnott Scholar and Bronze Medallist in Chemistry of the University of London. Author of "The Constitution of the Thionic Acids," *Chem. News*, **128**, 325–327, 342–345, 361 (1924). (*Signed by*) J. R. Partington, E. E. Turner, D. C. Jones.

WILSON, JOHN, 115, Canterbury Rd., North Harrow. British. Student engaged in Biochemical Research, Imperial College of Science and Technology, M.Sc. (Sheffield). (*Signed by*) S. B. Schryver, Harold Mastin, J. Knaggs.

WALKER, NELLIE, 15, Fintry Place, Broughty Ferry, Forfarshire. Lecturer in Chemistry, University College, Dundee (University of St. Andrews). M.A., B.Sc., Ph.D. (St. Andrews). Conjoint author of the following papers in the Journal of the Chemical Society: *J.C.S.*, 1914, **105**, 1131; *J.C.S.*, 1915, **107**, 1685; *J.C.S.*, 1922, **121**, 349; *J.C.S.*, 1923, **123**, 2875. (*Signed by*) Alex. McKenzie, J. C. Irvine, John S. W. Boyle.

WARD, WILLIAM JOSEPH VICTOR, 41, Marlowe Rd., Cambridge. English. Research Student. 1st Class Natural Sciences Tripos, Part II, Chemistry 1924, Cambridge. (*Signed by*) W. J. Pope, W. G. Palmer, W. H. Mills.

WHIPP, JAMES EWART, 15, St. John's St., Longsight, Manchester. Pharmacist. Student of the Institute of Chemistry. Fellow of the Biochemical Society. Fellow of the Royal Microscopical Society. Member of the Society of Chemical Industry. (*Signed by*) Henry Garnett, Harry Brindle, Chas. Turner.

WHITEHEAD, ALAN DOUGLAS, "Trevorian," 90, West Hill, Putney, S.W. 15. British. Chemist. Student in Dept. of Chemistry, University College, London, Sessions 1921–22, 1922–23, 1923–24. B.Sc. (Lond.), Honours in Chemistry. (*Signed by*) F. G. Donnan, A. Greeves, W. E. Garner.

WILLIAMS, LESLIE THOMAS DOUGLAS, 23, Queen's Gate Gardens, S.W. 7. British. Student. Associateship of the Royal College of Science. I am now performing research at the above college and am desirous of keeping abreast with modern progress in science. (*Signed by*) G. A. R. Kon, M. A. Whiteley, H. L. Riley.

WYLDE, JOHN HENRY, 203, Boleyn Rd., Forest Gate, E. 7. English. Asst. Chemist, Laboratory of the Gas Light and Coke Coy, Stratford Station. Student at the East Ham Tech. College. National Cert. in Chemistry, Part-time Course, Higher or Advanced (distinction Inorganic Chemistry). City and Guilds of London, Gas Engineering, Ordinary and Honours. (*Signed by*) E. W. Griffiths, W. H. Barker, W. T. Clough.

YARSLEY, VICTOR EMMANUEL, The View, Highfield, Chasetown, nr. Walsall. British. Salter Research Fellow, 1924. B.Sc., 1st Hons., School of Chemistry, B'ham. Associate of the Institute of Chemistry. (*Signed by*) G. T. Morgan, H. D. K. Drew, C. E. Wood.

The following Certificates have been authorised by the Council for presentation to ballot under Bye-Law I (2).

NAIR, SADASHIV PARASHURAM, Nair Building, Lamington Road, Bombay. Indian (British subject). Pharmaceutical Chemist, i/c Powell's Pharma-

ceutical and Chemical Laboratory. Ph.G. (Boston). Graduate of the Massachusetts College of Pharmacy, Boston, Mass. Member of the American Pharmaceutical Association. At present working on finding out the commercial utility of some of the indigenous plants. My aim in joining the Society is to come in contact with the members of the Society and enjoy the privileges given by the same. (*Signed by*) H. B. Tilden.

San, Moung Ba, B.A., 3, Stewart Road, Rangoon, Burma. Burmese. Assistant to the Chemical Examiner to the Government of Burma and Demonstrator in Physics and Chemistry at the Burma Government Medical School, Rangoon. Graduate of Calcutta University (1911–12). Winner of Chemistry Prize (term 1911–12) in the then Govt. College, Rangoon, now the Rangoon University College. No publications yet. 11 years' analytical experience in the Chemical Examiner's Laboratory, comprising examination of Mineral Oils, Drugs, Foodstuffs, Public Water supplies, and also Toxicological and Medico-legal analysis as well as Analysis of Ores, Minerals, and other commodities. (*Signed by*) Thein Kin, William Dallas.

ADDITIONS TO THE LIBRARY.

I. *Donations.*

Abderhalden, Emil. [Editor.] Handbuch der biologischen Arbeitsmethoden. Abt. III. Physikalisch-chemische Methoden, Teil A, Heft iv. Abt. XI. Methoden zur Erforschung der Leistungen des Pflanzenorganismus, Teil 3, Hefte i and ii. Berlin 1924. *Mk.* 9, 9·60, 7·50. (*Recd.* 23/12/24.)

From the Publishers: Herren Urban & Schwarzenberg.

PROCEEDINGS

OF THE

CHEMICAL SOCIETY.

Ordinary Scientific Meeting, Thursday, February 5th, 1925, at 8 p.m., Professor W. P. WYNNE, D.Sc., F.R.S., President, in the Chair.

The following were formally admitted Fellows of the Chemical Society: E. Lakeman, W. Kilroy, D. McKie, R. F. Barnes, and S. Krishnamurti.

Certificates were read for the first time in favour of:

Niels Janniksen Bjerrum, Vendersgade 28, Copenhagen.
James Herbert Clegg, West Cliffe, Queens Park Road, Burnley.
Horace Cecil Cockroft, B.Sc., A.I.C., 6, Highfield Terrace, Halifax.
Francis Xavier Coyne, 160, Addison Street, Blackburn.
Robin George Westbury Farnell, A.R.C.S., A.I.C., Exeter College, Oxford.
Richard Randolph Garran, B.Sc., Orphir, St. George's Road, Toorak, Melbourne.
James Francis Halpin, F.I.C., 39, Benson Road, Forest Hill, S.E. 23.
John Stanley Heaton, Ph.D., B.Sc., 43, Birch Road, Crumpsall, Manchester.
John Cyril Hensman, M.A., A.I.C., Aldenham School, Elstree.
Horace William Hughes, B.Sc., 27, Ombersley Road, Balsall Heath, Birmingham.
David Bret Jehu, M.Sc., 34, High Street, Welshpool, Montgomeryshire.
Clifford Merton Jones, B.Sc., Buxton Crescent, Newton Hill, Wakefield.
David McDowall, 2, Kennishead Road, Thornliebank, Glasgow.
Richard Alan Morton, B.Sc., Ph.D., A.I.C., 2, Lumley Street, Garston, Liverpool.
Frederick Wilson Moulds, Hill Crest, Villa Road, Nottingham.
David Pomerantz, 15, Nottingham Place, Commercial Road, E. 1.
Robert Joseph Salmon, M.Sc., Holly Bank, Rowton, Chester.
Talrain Singh Prem Chandra Sharma, M.Sc., Engineering College Hostel, Hindu University, Benares, India.
John Robert Shepherd, M.Sc., A.I.C., Lady Hall Farm, Broughton-in Furness.
Leslie John Walker, 45, Devereux Road, Wandsworth Common, S.W. 18.
William Alexander Waters, B.A., 35, Shirley Road, Cardiff.
James Bernard Watson, 30, Mulgrave Road, West Hartlepool.

The following papers were read :

" The chemistry of petroleum. Part I. The occurrence of compounds of sulphur in the light distillate from the crude oil of Maidan-i-Naftun." By S. F. BIRCH and W. S. G. P. NORRIS.

" The chemistry of the three-carbon system. Part IV. A case of retarded mobility." By G. A. R. KON and R. P. LINSTEAD.

" Alternation in the molecular volumes of the normal monobasic fatty acids." By W. E. GARNER and E. A. RYDER.

Ordinary Scientific Meeting, Thursday, February 19th, 1925, at 8 p.m., Professor W. P. WYNNE, D.Sc., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society through the death of Dr. Horace T. Brown on February 6th, and announced that the Council had passed the following resolution :

" On behalf of the Chemical Society the Council desires to express its sense of the great loss the Society has sustained in the death of Dr. Horace T. Brown, who served on the Council as Vice-President, Ordinary Member of Council, Treasurer, and Foreign Secretary during a period of twenty years, and offers to his son and daughters deep sympathy in their bereavement."

Certificates were read for the first time in favour of :

Janardhana Ram Bhatt, B.A., Sre Sumangala College, Panadura, Ceylon.
Archibald Beresford Blunsden, The Bungalow, Westbury-on-Trym, Bristol.
Thomas Henry Bowles, Allandale, Meadowside Road, Cheam.
William Harrison Brindley, M.C., M.A., M.Sc.Tech., A.I.C., 11, Millmoor Terrace, Glossop.
Thomas James Elijah Gardner, 12, Bushwood Road, Kew.
Helen Simpson Gilchrist, 82, North Street, St. Andrews.
Frederick Denison Maurice Hocking, M.Sc., A.I.C., 18, Woodside Park Road, N. Finchley, N. 12.
Joseph Taylor Jackson, B.Sc., 192, Algernon Road, Lewisham, S.E. 13.
Ernest Edward Mabbott, B.Sc., 358, Fore Street, Edmonton, N. 9.
Edgar Kent Palmer, B.Sc.Tech., Rose Bank, Victoria Road, Hale, Cheshire.
John Brent Reed, B.Sc., A.I.C., 49, St. Mildred's Road, S.E. 12.
George James Robertson, M.A., B.Sc., Ph.D., The Manse, Stratkinness St. Andrews.
Leonard William Ernest Townsend, 35, Harewood Road, Collier's Wood, Merton, S.W. 19.
Edwin John Woodcock, Stonecot, Claremont Hill, Jersey.

The following Certificates have been authorised by the Council for presentation to ballot under Bye-Law I (2) :

James Munsie Bell, Department of Chemistry, University of North Carolina, Chapel Hill, N.C., U.S.A.
John Cameron, Peking Union Medical College, Peking, Chihli, N. China.
Gordon McIntyre, B.Sc., Sarnia, Ontario, Canada.

Dr. B. Flürscheim and Dr. S. Sugden were elected Scrutators, and a ballot for the election of Fellows was held. The following were subsequently declared elected as Fellows :

Julius Nicholson Ashley, B.Sc., A.I.C.
George Alfred Bartram, B.Sc., A.I.C.
George Harry Beeby, B.Sc., A.I.C.
Arthur Henry Burdick Bishop.
Vincent Bloomer, B.Sc.
Claude McClellan Bottomley, B.Sc.
Frederick Stanley Brown, B.Sc., A.I.C.
Percy Chorley, M.Sc.
Herbert Isaac Coombs, B.A., B.Sc.
Alexander Steven Corbet, Ph.D., B.Sc., A.I.C.
William Haughton Crowe.
Alfred Davidson, B.Sc.
Ernest James Davis.
Walter Mark Duffin, B.Sc., A.R.C.S.
Arthur Hynard Durrant.
Frederick John Eaton, Ph.D., B.Sc., A.I.C.
George Alfred Edwards, B.A., B.Sc.
Harry Julius Emeléus, B.Sc., A.R.C.S.
Ralph Margrave Esdaile.
Edward Hugh St. Clair Flack, M.Sc.
Henry Bell Footner, B.Sc.
Desmond Geoghegan.
Clifton William Gibby, B.Sc., A.I.C.
Reginald Oswald Gibson, B.Sc., A.I.C.
Conrad Theodore Gimingham, F.I.C.
Jonathan Goodspeed.
Richard Greenhalgh, B.Sc.
Robert Owen Griffith, M.Sc., A.I.C.
Anthony James Hailwood, B.Sc.
Edward Stanley Hiscocks, B.Sc.
Herbert Henry Hodgson, M.A., Ph.D., B.Sc., F.I.C.
David Hughes.
Kathleen Harriet Hughes.
Arthur Frederick Hunt, B.Sc.
Bertram Hobart Ingham, B.Sc.
John Dobney Johnson, B.Sc.
Wilford Jordayne Johnson.
Cecil Brellisford Oakes Jones.
William Wenallt Jones, M.Sc.
Alan Richmond Kennedy.
Frank Kenyon, A.I.C.
Frederick Ernest King.
Eric Knott.
Jacob Kracovski, B.Sc.
Herbert Lambourne, M.A., M.Sc., F.I.C.
John Joseph Laws.
Raymond James Wood Le Fevre.
Alexander John Simpson Leiper, A.R.C.S.
Alfred James Andrew Lennane, M.R.C.S., L.R.C.P.
Frederick William Liley.
James Gilbert Lunt, B.Sc.
William Hamilton McVicker, M.Sc.
Thomas Mann.
Vincent Mark Mascarenhas, B.A.
Frank Douglas Miles.
Sadashiv Parashuram Nair, Ph.G.
Edward Arthur Nightingale.
Frederick William Offord.
Lionel Edward Outridge, B.Sc.
Thomas Webster Parker, A.R.C.S.
William Bayley Parker, F.I.C.
Stuart Russell Parsons, B.Sc., A.I.C.
William Samuel Payne.
Kenneth John Pierson.
Richard Edwin Pike, B.Sc.
Douglas Victor Plumbridge, Ph.D., A.R.C.S., A.I.C.
John Massey Preston, B.Sc., A.I.C.
Richard Raper, B.A.
John Frederick James Rule, B.Sc.
Moung Ba San, B.A.
Leslie Vivian Donald Scorah, B.Sc., A.I.C.
George Frederick Sheppard.
Joseph Thomas Shevlin.
Arthur Frederick Smethurst.
Ethel Minnie Snewing, B.Sc.
Alton Ewart Clarence Smith.
Susanne Mabel Lavinia Snelus, A.I.C.
Claude Hyman Spiers, M.A., Ph.D., B.Sc.
Harold Jacob Stern, Ph.D., B.Sc.
Charles James Still, Ph.D., M.Sc.
Mohammad Hassan Syed, B.Sc.
Mary Beatrice Thomas.
Eric Spencer Timms, B.Sc.
Eric Titterington.
Thomas Martin Aitken Tudhope, Ph.D., B.Sc.

Charles Cyril Norrey Vass, B.Sc.
John Harry Village, B.Sc.
Israel Vogel, B.Sc.
John Wilson, M.Sc.
Nellie Walker, M.A., Ph.D., B.Sc.
William Joseph Victor Ward, B.A.
James Ewart Whipp.
Alan Douglas Whitehead, B.Sc.
Leslie Thomas Douglas Williams, A.R.C.S.
John Henry Wylde.
Victor Emmanuel Yarsley, B.Sc., A.I.C.

The following paper was read :

"The nature of the alternating effect in carbon chains. Part II. The directing influence of the α-methoxyvinyl group in aromatic substitution." By C. K. INGOLD and E. H. INGOLD.

Dr. T. SLATER PRICE discussed "The action of light on the photographic plate."

ANNUAL GENERAL MEETING.

The Annual General Meeting will take place on Thursday, March 26th, 1925, at 4 p.m., when the PRESIDENT, Professor W. P. WYNNE, D.Sc., F.R.S., will deliver his Address.

ANNIVERSARY DINNER.

The Anniversary Dinner will be held in the Grand Hall of the Hotel Victoria, Northumberland Avenue, W.C. 2., on Thursday, March 26th, 1925 (the day of the Annual General Meeting), at 7 for 7.30 p.m. The presence of ladies will be welcomed.

Tickets, price 12*s.* 6*d.* each (including gratuities to waiters) can be obtained from the Assistant Secretary. It will facilitate arrangements if Fellows will apply for tickets at an early date, in any event before March 19th.

List of Papers, or Abstracts thereof, received between January 16th and February 19th, 1925. (This list does not include the titles of papers which have been read at a Scientific Meeting, or which have appeared in the Journal.)

"Colour and molecular geometry. Part III. A graphical presentation of the theory." By J. MOIR.

"Tesla-luminescence spectra. Part V. Some polynuclear hydrocarbons." By W. H. MCVICKER, J. K. MARSH, and A. W. STEWART.

"The surface tensions of aqueous solutions of various organic compounds." By P. R. EDWARDS.

"The cryoscopic method for adsorption." By H. L. RICHARDSON and P. W. ROBERTSON.

"Ring-chain tautomerism. Part XII. Derivatives of α-ethyl-ββ-dimethylglutaric acid." By G. A. R. KON, L. F. SMITH, and J. F. THORPE.

"A determination of the melting and transition points of potassium dichromate." By P. L. ROBINSON, G. E. STEPHENSON, and H. V. A. BRISCOE.

"Interaction of hydrogen and carbon dioxide on the surface of platinum." By C. R. PRITCHARD and C. N. HINSHELWOOD.

"The identity of uncineol with eudesmol." By A. R. PENFOLD.

"Further *X*-ray measurements on long-chain compounds (*n*-hydrocarbons)." By A. MÜLLER and W. B. SAVILLE.

"An *X*-ray investigation of the ketone series." By W. B. SAVILLE and G. SHEARER.

"The relationship of thyroxin to tryptophane." By C. S. HICKS.

"A new method of flame analysis." By O. C. DE C. ELLIS and H. ROBINSON.

"The movement of flame in closed vessels." By O. C. DE C. ELLIS and R. V. WHEELER.

"*cyclo*Telluropentanediones containing aliphatic and aromatic substituents." By G. T. MORGAN and C. J. A. TAYLOR.

"3-Chlorobenzopyrylium derivatives." By L. R. RIDGWAY and R. ROBINSON.

"A qualitative test for weak bases." By R. ROBINSON.

"The labile nature of the halogen atom in organic compounds. Part X. The action of hydrazine hydrate on the halogen derivatives of α-nitro-fatty acids." By A. K. MACBETH and D. TRAILL.

"The effect of colloids on the replacement of lead and copper from their salts by zinc." By L. T. M. GRAY.

"A new portable apparatus for the analysis of illuminating and other gases." By H. D. MURRAY.

"The action of halogen on phenylhydrazones. Part II. The action of chlorine." By J. E. HUMPHRIES, H. HUMBLE, and R. EVANS.

"Anomalous adsorption." By J. B. SPEAKMAN and A. E. BATTYE.

"The photo-decomposition of chlorine water and of aqueous hypochlorous acid solutions. Part I." By A. J. ALLMAND, P. W. CUNLIFFE, and R. E. W. MADDISON.

"Studies of dynamic isomerism. Part XVII. The mutarotation of aluminium benzoyl-camphor." By I. J. FAULKNER and T. M. LOWRY.

"Studies of dynamic isomerism. Part XVIII. The mechanism of mutarotation and of hydrolytic and prototropic change; with a criticism of Baker, Ingold, and Thorpe's doctrine of non-intervention." By T. M. LOWRY.

"Studies of dynamic isomerism. Part XIX. Experiments on the arrest of mutarotation in tetramethylglucose." By T. M. LOWRY and E. M. RICHARDS.

"The freezing points of hydrofluoric acid." By J. D. C. ANTHONY and L. J. HUDLESTON.

"The hydrolysis of iodine as measured by the iodine electrode." By H. D. MURRAY.

"Some aromatic chlorovinylarsines." By A. F. HUNT and E. E. TURNER.

"The mechanism of the reaction between arylhydrazine sulphonic acids and acetoacetic ester." By G. REEVES.

"The compounds formed by the action of bromine upon benzaldehyde-phenylhydrazone." By F. D. CHATTAWAY and A. J. WALKER.

"Periodic electrochemical phenomena." By E. S. HEDGES and J. E. MYERS.

"The nitration of meta-hydroxybenzaldehyde carbonate and ethyl carbonate." By F. A. MASON.

"A synthesis of 1 : 2-dihydroquinaldine." By F. A. MASON.

"The synthesis of 5 : 5'-dibromo-6 : 6'-dimethoxy thioindigo." By R. H. GRIFFITH and E. HOPE.

"The interaction of sodium chloride and alumina." By F. H. CLEWS.

"A resolution of benzoin." By F. J. WILSON and I. V. HOPPER.

"Semicarbazones of benzoin. Part I." By I. V. HOPPER.

"The 'activation' of graphite as a sorbent of oxygen." By D. H. BANGHAM and J. STAFFORD.

"The mechanism of the formation of malachite from basic cupric carbonate." By J. R. I. HEPBURN.

"A synthesis of oxyberberine. Part I." By W. H. PERKIN, J. N. RÂY, and R. ROBINSON.

"Variation of colour in the fluoresceine family." By J. MOIR.

"The equilibria underlying the soap boiling processes. Pure sodium palmitate." By J. W. MCBAIN and G. M. LANGDON.

"Some reactions of triethylphosphine." By J. N. COLLIE.

"Nitro- and amino-ethoxy-lutidine." By J. N. COLLIE and G. BISHOP.

PROCEEDINGS

OF THE

CHEMICAL SOCIETY.

Lecture, held in the Lecture Hall of the Institution of Mechanical Engineers, Storey's Gate, Westminster, S.W. 1, on Thursday, February 26th, 1925, at 8 p.m., Professor W. P. WYNNE, D.Sc., F.R.S., President, in the Chair.

Sir WILLIAM HARDY, M.A., Sec.R.S., delivered his Lecture entitled: "Problems presented by Films on Solid Surfaces." A vote of thanks to the Lecturer, proposed by Professor H. E. Armstrong, F.R.S., seconded by Professor A. V. Hill, F.R.S., and supported by the Chairman, was carried with acclamation, and acknowledged by Sir William Hardy.

Ordinary Scientific Meeting, Thursday, March 5th, 1925, at 8 p.m., Professor W. P. WYNNE, D.Sc., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through death, of the following Fellows:

	Elected.	Died.
Sir Edward Thorpe	Feb. 16th, 1871.	Feb. 23rd.
Alexander Mitchell Williams	Dec. 7th, 1922.	Feb. 21st.

The PRESIDENT also announced that at a Special Meeting of the Council, held on February 26th, 1925, the following resolution was passed:

"On behalf of the Chemical Society, the Council desires to express its profound regret at the death of Sir Edward Thorpe, who for 54 years was a Fellow, and during 39 years served the Society as Member of Council, Vice-President, Treasurer and President, and while Treasurer initiated and supervised the production of the first three volumes of the Collective Indexes of the Society's Journal.

"The Council recognises that by Sir Edward Thorpe's death the

Society loses a wise counsellor and British Chemistry a distinguished investigator, and offers to Lady Thorpe its sincere sympathy in her bereavement."

The Fellows present expressed their concurrence in this resolution by rising from their places.

It was also announced that

(1) With a view to increasing the usefulness of the Library, the Council has made arrangements for the photographic copying by means of the Photostat, of material contained in the Library. Particulars as to cost, etc., can be obtained from the Librarian.

(2) The first lecture in connection with the Fison Memorial Fund, which was established to endow a Lectureship in memory of the late Dr. A. H. Fison, will be delivered by Professor J. J. Thomson, O.M., F.R.S., on Thursday, May 7th, 1925, at 5 p.m., the Right Hon. the Earl of Balfour presiding. The place of meeting will be announced later. Tickets of admission will be obtainable from Mr. S. E. Carr.

The following List of Nominations for vacant places on the Council was read from the Chair:

President: Arthur W. Crossley.

Vice-Presidents who have filled the office of President (3 vacancies): H. E. Armstrong, A. Scott, W. P. Wynne.

Vice-Presidents who have not filled the office of President (2 vacancies): J. B. Cohen, N. V. Sidgwick.

Secretary: T. Slater Price.

Foreign Secretary: F. G. Donnan.

Ordinary Members of Council:

(*a*) Town Members, *i.e.*, those resident within 50 miles of Charing Cross (5 vacancies): H. Bassett, F. W. Gamble, J. Kenyon, B. D. Porritt, G. Stubbs.

(*b*) Country Members, *i.e.*, those resident beyond 50 miles from Charing Cross (2 vacancies): F. A. Freeth, W. Rintoul, F. J. Wilson.

Dr. P. W. Austin and Dr. E. E. Turner were appointed Scrutators to assist in the counting of votes recorded in the election of the Country Members of Council.

The following were formally admitted Fellows of the Chemical Society: F. H. Banfield, F. Kenyon, A. H. Durrant, A. F. Smethurst, J. D. Johnson, R. E. Pike, C. H. Spiers, S. Dutt, J. Kracovski, H. J. Emeléus, I. Vogel, K. V. Thimann, S. S. G. Sircar, B. T. Narayanan.

The Treasurer drew attention to the fact that on Thursday, March 5th, 1885, exactly 40 years ago, a certificate of a candidate for election as a Fellow was read for the first time in favour of William Palmer Wynne. Commenting on the uniqueness of the occasion, the Treasurer expressed the hope that the President would long be spared to give the Society the benefit of his wise counsel. The meeting showed its hearty approval of the Treasurer's remarks, and the President expressed his sincere thanks for the kind reference.

Certificates were read for the first time in favour of:

Geoffrey Alger Blyde, East Cliffe, East Bank Road, Sheffield.
Frank Henry Charles Bull, B.Sc., A.I.C., 50, Cornwall Road, Bishopston, Bristol.
Harry Dean, 134, New Lane, Oswaldtwistle.
Irvine John Faulkner, Emmanuel College, Cambridge.
Thomas Flett, B.Sc., A.I.C., Anchor Cottage, Kirkwall, Orkney.
John Charles Giblin, B.Sc., A.I.C., 3, Kensington Terrace, Brecon.
Isabel Hodgson Hadfield, M.Sc., 65, Langham Road, Teddington.
Thomas Haworth, 8, Park Terrace, Fielding Lane, Oswaldtwistle.
William Jobson, 52, The Mall, Swindon.
Thomas William Jones, B.Sc., 36, St. Vincent Road, Westcliff-on-Sea.
John Keane, M.Sc., Ph.D., 6 Shamrock Villas, Drumcondra, Dublin.
Andrew Joseph Myles, 12, Gardner Road, Tue Brook, Liverpool.
Alfred William Nash, B.Sc., 18, Prospect Road, Moseley, Birmingham.
Henry Bowen Oakley, M.Sc., A.R.C.S., Wellcome Tropical Research Laboratories, Khartoum.
Harry Rawlings, B.Sc., 15, Station Road, Ramsey, Huntingdon.
Alan Lawrence Smith, M.Sc., 22, Dean Street, Blackpool.
George Thorn, B.Sc., Grove House, Beechen Grove, Watford.
Ernest Swann Watts, Eaglesfield, Limefield Road, Kersal, Manchester.
Archibald Steele Whamond, 22, Church Street, Alloa.
John Stanley Worthington, 27, Rowena Street, Great Lever, Bolton.

The following papers were read:

"Studies of dynamic isomerism. Part XVII. The mutarotation of aluminium benzoylcamphor." By I. J. FAULKNER and T. M. LOWRY.

"Studies of dynamic isomerism. Part XVIII. The mechanism of mutarotation, and of hydrolytic and prototropic change; with a criticism of Baker, Ingold, and Thorpe's doctrine of non-intervention." By T. M. LOWRY.

"Studies of dynamic isomerism. Part XIX. Experiments on the arrest of mutarotation in tetramethylglucose." By T. M. LOWRY and E. M. RICHARDS.

Ordinary Scientific Meeting, Thursday, March 19th, 1925, at 8 p.m., Professor W. P. WYNNE, D.Sc., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through the death of Joseph Arderne Ormerod, who was elected a Fellow on May 16th, 1872, and died on March 5th.

R. H. Purcell was formally admitted a Fellow of the Chemical Society.

Certificates were read for the first time in favour of :

James Lindsay Buchan, B.Sc., Hampden Club, N.W. 1.
John Alfred Valentine Butler, M.Sc., The Potteries, Winchcombe, Glos.
Annie Lavinia Byford, B.Sc., 73, Elderton Road, Westcliff-on-Sea.
James Craik, M.A., B.Sc., Ph.D., The University, St. Andrews.
Herbert Greetham Dane, M.Sc., The Diocesan Training College, Winchester.
Margaret Stedman Leonora Dixon, Homebush, Worcester Road, Sutton.
Donald Hanson, 7, Willow Bank, Halifax.
Joseph Hill, 58, Spring Street, Accrington.
Jim Hoyle, 11, Crow Lane, Ramsbottom.
Richard H. F. Manske, M.Sc., The University, Manchester.
Hugh Clonston Moir, B.Sc., A.I.C., 7, Craigielea Street, Dennistoun, Glasgow.
William George Rhodes, 318, Granville Road, Park, Sheffield.
Thomas Kennedy Walker, M.Sc., Ph.D., F.I.C., 4, Swythamley Road, Cheadle Heath, Stockport.

The following Certificates have been authorised by the Council for presentation to ballot under Bye-Law I (2) in favour of :

Karl Thomas, M.D., The University, Leipzig.
Frederic N. Williams, P.O. Box 1117, Shreveport, La., U.S.A.

The following papers were read :

" The 'activation' of graphite as a sorbent of oxygen." By D. H. BANGHAM and J. STAFFORD.

" Ring-chain tautomerism. Part XIV. The structure of Balbiano's acid." By E. ROTHSTEIN, A. STEVENSON, and J. F. THORPE.

" The tendency towards intramolecular condensation in cyclic keto-esters. Part I. The formation and disruption of bicyclic dihydroresorcinols." By E. H. FARMER and J. ROSS.

" The structure of the enolic forms of β-ketoesters and β-diketones." By N. V. SIDGWICK.

PUBLICATIONS FUND.

In connection with the Appeal for the Publications Fund issued by the Treasurer, it has been decided that a list of donations and subscriptions received shall appear in the Proceedings for June. All donations and subscriptions received prior to the end of May will be included in the List.

LIST OF FELLOWS, 1925.

It has been decided to print the List of Fellows for 1925 and to supply the List to those Fellows who make application to the Assistant Secretary by the 31st July, 1925.

List of Papers, or abstracts thereof, received between February 19th and March 19th, 1925. (This List does not include the titles of papers which have been read at a Scientific Meeting, or which have appeared in the Journal.)

"The isomerism of the oximes. Part XXI. Action of picryl chloride and of 2 : 4-dinitrochlorobenzene on aldoximes." By O. L. BRADY and L. KLEIN.

"Derivatives of semioxamazide. Part III." By F. J. WILSON and E. C. PICKERING.

"The stereochemistry of the hydronaphthalenes and related sesquiterpenes. Part I. Decahydro-β-naphthoic acid." By F. W. KAY and N. STUART.

"Irregularities in the condensation of certain nitriles with resorcinol." By E. CHAPMAN and H. STEPHEN.

"Studies in the benzothiazole series. Part III. The pseudobases of the *l*-substituted benzothiazole quaternary salts." By L. M. CLARK.

"Sulphur compounds removed from a Persian petroleum by means of sulphuric acid. Part I." By E. H. THIERRY.

"Ring-chain tautomerism. Part XIII. Three carbon ring-chain tautomerism in a bridged ring system." By J. W. BAKER.

"The measurement of the dielectric constants of liquids." By H. HARRIS.

"Note on the physiological action of certain benzothiazoles and mercaptan derivatives." By R. F. HUNTER.

"Note on the physiological action of certain arylamino-derivatives of monochloroacetic acid." By R. F. HUNTER.

"The hydrolytic properties of certain amino-acids." By L. P. BOSMAN.

"The reduction of anethole nitrosochloride." By J. B. SHOESMITH and R. H. SLATER.

"Investigations on the dependence of rotatory power on chemical constitution. Part XXV. Three optically active alcohols containing a phenyl group and some esters derived therefrom." By L. F. HEWITT and J. KENYON.

"The integral relations between the vibration frequencies of molecules." By E. C. C. BALY, R. A. MORTON, and E. ROGERS.

"The photochemical decomposition of nitrosyl chloride." By E. J. BOWEN and J. F. SHARP.

"Ray's supposed triethylene trisulphide." By G. M. BENNETT and W. A. BERRY.

"Hepta- and nono-dilactones." By G. M. BENNETT.

"A synthesis of pyrylium salts of anthocyanidin type. Part VI. Polyhydroxyflavylium salts related to chrysin, apigenin, lotoflavin, luteolin, galangin, fisetin, and morin." By D. D. PRATT and R. ROBINSON.

"Reactions depending upon the vapour at the interface of two immiscible liquids. Part II." By G. HARKER and R. K. NEWMAN.

"The hydrates of calcium carbonate." By J. HUME.

"The labile nature of the halogen atom in organic compounds. Part XI. The halogenation of acetylsuccinic ester." By A. K. MACBETH and D. TRAILL.

"A solid hydride of antimony." By E. J. WEEKS and J. G. F. DRUCE.

"A study of the effect of the concentration of aqueous sodium hydroxide solutions upon the rate of saponification of olive oil." By G. I. FINCH and A. KARIM.

"The formation of *d*-2 : 2 : 4-trimethyl*cyclo*hexan-3-one-1-carboxylic acid from *d*-camphorquinone." By C. S. GIBSON and J. L. SIMONSEN.

"The reaction between aromatic aldehydes and phenanthraquinone in presence of ammonia." By A. C. SIRCAR and N. C. G. RAY.

"Studies in heterocyclic compounds. Part I." By A. C. SIRCAR and P. K. DE.

"The action of azides on toluquinone." By F. D. CHATTAWAY and G. D. PARKES.

"The partial pressures of water vapour and of sulphuric acid vapour over concentrated solutions of sulphuric acid at high temperatures." By J. S. THOMAS and W. F. BARKER.

"Investigations on the dependence of rotatory power on chemical constitution. Part XXVI. Four alcohols containing the vinyl group and some esters derived therefrom." By J. KENYON and D. R. SNELLGROVE.

"A synthesis of pyrylium salts of anthocyanidin type. Part VII. The preparation of the anthocyanidins with the aid of triacetylphloroglucinaldehyde." By D. D. PRATT and R. ROBINSON.

"A synthesis of pyrylium salts of anthocyanidin type. Part VIII. A new synthesis of pelargonidin chloride and of galanginidin chloride." By T. MALKIN and R. ROBINSON.

"The action of halogens upon *m*- and *p*-nitrobenzaldehyde phenylhydrazones." By F. D. CHATTAWAY and A. J. WALKER.

"Plant cuticles. Part I. Modern plant cuticles. Studies in the composition of coal." By V. H. LEGG and R. V. WHEELER.

"The explosion of ammonia with carbon monoxide and oxygen." By J. W. BEESON and J. R. PARTINGTON.

"3 : 3-Diethylpentane (tetraethylmethane)." By G. T. MORGAN, S. R. CARTER, and A. E. DUCK.

"Aromatic esters of acylecgonines." By W. H. GRAY.

"The additive formation of four-membered rings. Part VII. The synthesis and division of some dimethylene-1 : 3-oxaimines." By C. K. INGOLD.

"The decomposition of hydrogen peroxide by cobaltic hydroxide." By F. G. TRYHORN and G. JESSOP.

PROCEEDINGS

OF THE

CHEMICAL SOCIETY.

ANNIVERSARY DINNER.

THE Anniversary Dinner of the Society was held in the Grand Hall, Hotel Victoria, on Thursday, March 26th, 1925, at 7 for 7.30 p.m., Dr. ARTHUR W. CROSSLEY, C.M.G., C.B.E., D.Sc., F.R.S., President, in the Chair. The following is a list of those present:

Aeschlimann, J. A.
Anderson, Rt. Hon. Sir John, G.C.B., *Permanent Under-Secretary of State for Home Affairs.*
Anderson, Miss O. R.
Armstrong, H. E., F.R.S., *Past-President.*
Armstrong, Miss N.
Austin, P. C.
Austin, Mrs. P. C.
Backer, H. J.
Baker, H. B., C.B.E., F.R.S.
Baker, Mrs. H. B.
Baly, E. C. C., C.B.E.
Bassett, H.
Bennett, Miss D. M.
Bennett, J. C. S.
Bennett, G. M.
Bolton, E. R.
Bolton, Mrs. E. R.
Bolton, L. H.
Bolton, Mrs. L. H.
Boyd, D. R.
Brady, O. L.
Brewer, F. M.
Brown, R. B.
Brown, Mrs. R. B.
Burch, W. J. N.
Burgess, W. T.
Burton, H.
Carr, F. H., C.B.E.
Carr, Mrs. F. H.
Carr, Miss M.
Carr, S. E., *Assistant Secretary.*
Chapman, A. Chaston, F.R.S.
Chapman, Mrs. Chaston.
Chapman, A. W.
Chattaway, F. D., F.R.S.
Chemical Age.
Chemistry and Industry.
Clifford, E.
Clifford, F. W., *Librarian.*

Woolcock, W. J. U., C.B.E., *President, The Society of Chemical Industry.*
Wynne, Miss D. P.
Wynne, W. P., F.R.S., *Past-President.*

After the loyal toasts had been honoured the President announced that he had had a telegram from Professors Biilmann, Bjerrum, Bohr, Brönsted, and Sörensen sending their hearty greetings and congratulations to the Society. This was received with acclamation.

The following is a list of the Toasts proposed :—

1. " His Most Gracious Majesty The King."

2. " Their Majesties the Queen and Queen Alexandra, His Royal Highness the Prince of Wales, and the other members of the Royal Family."

By Sir H. Frank Heath, K.C.B., Secretary of the Department of Scientific and Industrial Research :—

3. "The Chemical Society," coupled with the name of the President.

By Professor Henry E. Armstrong, LL.D., F.R.S., Past-President :—

4. "The Retiring President, Professor W. P. Wynne, D.Sc., F.R.S."

By Professor Irvine Masson, M.B.E., D.Sc. :—

5. "The Federated Societies," coupled with the name of W. J. U. Woolcock, Esq., C.B.E., President of the Society of Chemical Industry.

By Professor F. G. Donnan, C.B.E., D.Sc., F.R.S., Foreign Secretary :—

6. "The Guests," coupled with the names of Professor Ernst Cohen, of Utrecht University (representing the Nederlandsche Chemische Vereeniging), and J. Hunter Gray, Esq., K.C., M.A.

Sir H. Frank Heath, K.C.B., in proposing the toast of "The Chemical Society," said :—

Mr. President, Ladies and Gentlemen, after I had accepted with some hesitation the invitation to address you this evening, and to propose this toast, I happened to be present at a public dinner where one of His Majesty's Judges said that after considerable experience of speeches of the kind he had come to the conclusion that most proposers of toasts began by explaining how unfitted they were for the task entrusted to them, and spent the rest of the time in proving it. Well, Ladies and Gentlemen, after that opinion from the Bench, there is nothing left for me but to throw myself on the mercy of the court.

I do, indeed, feel it to be a very great honour that a great scientific society like this should ask to have the principal toast of the evening proposed by a layman. You are not only a focus of research in pure science, you not only have a membership of 4,000 Fellows, but I see at these tables to-night inorganic and organic chemists, analytical and physical chemists, and not least of all, perhaps, biochemists. I won't suggest that the specialisation which is obviously taking place in your ranks has gone quite as far as the young American medical student of whom Dr. Howe told us in Philadelphia last autumn, who announced his intention of specialising in the ear, but had not made up his mind whether it was to be the right ear or the left. But specialisation there certainly is. Indeed, the foundation of the Society was an act of specialisation in 1841; when the Royal Society was first founded, I find from those

interesting records in *Nature* that the discussions ranged quite easily from naval architecture to the distillation of charcoal, from the anatomy of animal intestines to the discussion of a new digester for the brewing industry. Well, every one of those fields now has its own special society or societies. Specialisation must continue, I imagine, and increase, and yet to me as a layman I think there seems to be a movement in progress which must tend to counteract any disadvantages there might be from excessive specialisation; I mean the obvious tendency for different sciences to co-operate in the solution of the more difficult problems that are in front of you.

Professor Wynne, in his address this afternoon, referred to the Department with which I happen to be connected, and spoke of the share which chemists had undoubtedly had in the movement that led to the establishment of that Department. But I do not think that even you perhaps fully realise how close the link always has been, and I imagine always must be, between any organisation established to encourage scientific research and the chemists. Just look back. Professor Wynne's address was partly concerned in dealing with the review that Professor Meldola took before the war—I think in 1907—of the difficulties of the research worker in this country. Professor Meldola, a Past-President of this Society, was an original member of the Advisory Council of the Department of Scientific and Industrial Research and remained a member of that Council until his unfortunate death. Your new President, Dr. Crossley, is Director of Research to the largest Research Association for Industry that has come into existence since those difficult days of the war, the British Cotton Research Association, and that Association and Dr. Crossley are working in constant and continuous co-operation with the Department. Dr. Slater Price, another officer of this Society, is Director of the British Photographic Research Association; Sir Herbert Jackson, a former Vice-President, is Director of the Scientific Instrument Research Association; Dr. Pickard, a former member of your Council, is Director of the Leather Association; Dr. Scott, a Past-President, is a Director of the Laboratory established by the Department at the British Museum in order to study the best means of preserving antique objects of every kind; and finally there is your Treasurer, Professor Jocelyn Thorpe, who is to-day a member of the Chemistry Research Board of the Department and a member of many of its committees.

Now, my contact with all those distinguished men has made a double impression upon my mind. One is the adaptability of the chemist, and the other is his extraordinary power of penetration. Looking at the Research Association movement which I have

referred to already—incidentally there are twenty-four different industries which have organisations of this kind in this country, and the majority of the Directors of Research of those twenty-four Associations are chemists—I draw the conclusion that they must have great adaptability, because I happen to know that in many cases, and in some of the most outstanding cases, the chemists who have been called to those important posts knew nothing about the industry when they took up the appointment, and for that very reason have brought success. Professor Wynne told you this afternoon that those Associations have been useful because they have opened new posts to young men, and nothing could be more important than that. But I think he might possibly have added that these Associations have done more than that. I will tell you an experience of mine which explains. The other day I was in the largest textile mill in the world, and found that they have quite a large and busy research laboratory, and I was told that the reason that that laboratory had been established was because they had been so convinced of the value of research by the Association of which the firm was a member that they were determined to carry the matter further and have an organisation of their own within the works. That is going on all over the country; so that it is not merely if you look at it simply from the point of view of openings for young men—which after all is not the whole story—it is not merely that the Associations provide openings, but that in increasing measure the firms in the Associations as they come to realise the value of research will need the help of chemists and other men of science. And, sir, their power of permeation! Chemistry, it seems to me, has made its way already into almost every sphere of human life. You dictate to us, sir, what we are to eat, though I believe you are not entirely agreed as to the preservatives that should be used for our food; you give us new textiles to wear—or at least you give our wives new textiles to wear, and when we are ill you indicate to us, attracted as we are by the skilful advertisements of people who are out for that weakness of man that comes with illness, and you tell us where the medicines we are advised to take fail to come up to what they claim to be.

Now, sir, I could quite safely, with considerable safety, go on to tell you of the records of your great men who have been officers and Fellows of this Society. I could refer to the Central Library which you have established, which helps all the Societies connected with chemistry to have a nodal point from which they can gather their recorded information. I could speak of your research fund. I could tell you of the brave efforts you are making in spite of rising prices and a printers' strike to keep the publications going. But

if I did, I should only be telling you what you know far better than I do.

I am going to venture, sir, in view of the most excellent hospitality which you have offered me, and in view of the patience with which you, ladies and gentlemen, have listened to me up to the moment, I am going to venture to be bold, and to tell you how the present state of chemistry strikes a rank outsider.

I remember that when my brother-in-law, more than forty years ago, tried to teach me some chemistry, the molecule seemed to me a much more important thing than the atom. The atom, to my untutored mind, seemed a sort of axiom which you had to accept, but which compared with the interest of the molecule was a poor thing. Now I venture to think that possibly until comparatively recent times chemistry has concerned itself a good deal more with the molecule and its behaviour than with the atom. But is that condition going to last? The other night I heard a distinguished young biologist speaking of several sciences and claim as his belief that the central science of the future would be biology. He was prepared to take off his hat to physics and chemistry as important fundamentally, but the future lay with biology. One did not live in the cellars of a house, but in the upper storey. Well, as an outsider I am bound to say that I doubt that. To me, at any rate, and possibly to other people who are not chemists, chemistry seems to be taking increasingly a central position and bringing to its service the work, the tools, which other scientists on both sides of it are preparing. What has physics done recently from the point of view of chemistry? Has it not, by giving you the anatomy of the atom, and by revealing the structure of the space lattice, helped you to get a picture of three things—first, the mystery of chemical attraction, secondly, as Sir William Hardy, in his Bakerian lecture, pointed out, the phenomena presented by liquid and solid surfaces in close contact, and thirdly, the problem of catalysis. Those things are giving you, are they not, larger control over the speed and nature of reaction? But the engineer similarly is bringing in the tool of high pressure, and what will happen when the knowledge you already have, and these tools you already have, are brought to bear under the conditions of high pressure, it is very difficult to prophesy. And so you are forcing your way into the biological field. Another tool I fancy I see in your hands will be those mysterious accessory vitamins which link up your chemical work with those mysterious chemical reactions of the animal and vegetable organisms.

Well, sir, I have proved my incapacity for proposing this toast, and I will therefore ask you to drink to the health and future of the

Chemical Society, coupling with the toast the name of your President, Dr. Crossley.

Dr. ARTHUR W. CROSSLEY replied :—

I am sure the Society would wish me to thank you, Sir Frank Heath, very warmly for the way in which you have proposed this toast. My predecessor in this Chair has this afternoon answered, I think, fairly fully some of the remarks which you have made. He has expressed his appreciation of the efforts of the Department of Scientific and Industrial Research. Perhaps, as being somewhat intimately associated with that Department, I may be allowed to add one or two words. So far as my experience goes that Department is free from, shall we say, a Government monopoly—Red Tape, and is willing in every way possible to help anyone interested in the work it is doing. I have had some experience of the professional or professorial side of chemistry, and for the past five years I have had some experience of chemistry as applied to industry. I say, with full consideration of what I am saying, that in my opinion the Department has founded in the Industrial Research Associations a movement which is destined to play an all-important part in the future of this country. By no other means that I can conceive could science have been brought into those industries. I hope on some future occasion to speak somewhat more fully on this subject, and for the present, if you will not think it impertinent on my part, I should like to congratulate the Department on the big efforts which it has started and to say, "Don't be in the least discouraged by disparaging remarks that may be made about you."

I believe it is customary for the President on these occasions to make some reference to the affairs of the Society. This afternoon we had our Annual General Meeting, and by virtue of a decision arrived at, I find things weighing somewhat heavily on my shoulders. I refer to the decision which permits me to have the honour to occupy the position which I do at the present moment.

The election of one President, of necessity, means the retirement of someone who has occupied that post. It falls to more eloquent lips than mine to propose the toast of Professor Wynne this evening. I hope, however, that Professor Armstrong will forgive me if I say one or two words. When the time comes for Professor Wynne to apply for armorial bearings I would like to suggest that he take one single word for his motto, and that word is "Thorough." His sole aim has been efficiency, and in endeavouring to attain it he has not spared himself in the slightest degree. Few realise when he comes to a meeting and quietly says, "I think we should be well advised to do so and so," that this has possibly meant hours of thought, perhaps wrestling with the mystic language of charters and bye-

laws, perhaps the writing of numerous letters and documents. To do the right thing for the Society's welfare has been his sole object. I should like to speak on behalf of us all just one or two words to Professor Wynne. They are simple, but my long-standing friendship with him enables me to know, I think, that he will understand.

"Professor Wynne, we have learned to know something of the time, care and thought which you have expended on our behalf during the past two years. We appreciate; we are grateful."

The Chemical Society is rightly, in the opinion of its Fellows, a very exceptional and uncommon institution, indeed our forbears taught us to regard it as such. They did not found the Chemical Society of London, or England, or of Great Britain, they founded simply "the Chemical Society," and as such we are proud to regard it. We desire no addition: we ourselves are content to be chemists, without the added epithet of druggists which so many kind friends attempt to hurl at us. But I regret to say that when one consideration is taken into account we become quite unexceptional, quite common, and resemble most other societies, institutions, and individuals, inasmuch as we are finding it very difficult to make our income balance our expenditure. Up to the early days of 1914 we were quite a happy band, able to publish the original communications sent in by our Fellows, able to give our Fellows full value for their subscriptions and able to put by a small sum of money each year. In those days a page of the Journal cost 17*s.* 5*d.*; in 1921 the price had risen to £2 12*s.* 4*d.* It is true that at the present moment the price has fallen somewhat, but it is still well above twice the amount that it was in 1914. Moreover, the original communications are always on the increase, and we have now to make annual provision for the publication of 3,500 to 4,000 pages of Transactions alone. The situation is a very serious one from the point of view of the Society and it has given the Council furiously to think as to the possibilities of meeting it. The first step was to increase the subscription of our Fellows by 50 per cent. It is greatly to be regretted that it was found necessary to do so, for the majority of our Fellows are young men, and young chemists—in fact, I think I may say most chemists—are not over-burdened with this world's goods. The second step was to adopt the suggestion of the Treasurer to ask our Fellows to subscribe to a Publications Fund, the interest on which should be devoted to the upkeep of the Journal. We have raised in this way nearly two thousand pounds, but that is not enough, and we were faced this year with a possible adverse balance of some three thousand pounds. The Treasurer this afternoon told us we actually had a credit balance of some £210, but how has this been obtained? By ruthlessly cutting down the original communications

sent in for publication, to such an extent as to cause endless displeasure to authors and to leave it doubtful as to whether we are doing justice to their work; further, by asking Fellows to pay for the Annual Reports, which so far have always been distributed free, and by many other curtailments of our legitimate activities which, in my opinion, are greatly to the disadvantage of our Fellows and form a distinct danger to the prestige of British chemistry. Most societies, most institutions and most individuals themselves decide the pace at which they will live, and the pace is generally regulated by monetary possibilities. But the Chemical Society is again exceptional. The pace at which we are living has not been decided upon by ourselves, but has been decided upon by no less an authority than the nation.

I have stated that up to 1914 we were a happy band. In that year the nation spoke to us for the first time on record, I believe, but it spoke in no uncertain voice. It said, in the first place, "We are at war. We want certain drugs used for the alleviation of pain and suffering; we have so far obtained these supplies from abroad, and that source is now cut off. We are aware that these drugs have never previously been made in this country; we are aware that they require skilled labour for their production. Therefore we want you to prepare them for us." Well, those drugs were prepared by an organised effort on the part of the chemists of practically all the Universities and University Colleges in this country. Then came a second call. The nation said, "We want more explosives: T.N.T., picric acid, ammonium nitrate; we want acetone and dye-stuffs." Finally, there came a third call: "We want poison gas, poisonous and always more poisonous, and with each gas we want complete protection." I do not think it can be said that any of these calls were made in vain, or that the chemists of this country were found wanting in any way. So far as I know the chemists of this country, that is, the Chemical Society has never spoken back to the nation, but I suggest the time has come when this might be done, and in terms such as these:—

"In 1914 you asked us to do certain work for you, which we did to the best of our ability. We at once admit that some of our results were not forthcoming as speedily as we could have wished and in circumstances where speed was all important, due to the fact that the type of work which you asked us to do was new to us and we had perforce to gain experience. This experience has shown us clearly that in order to be prepared for any call which you may make upon us in the future, when delay may prove fatal, it is necessary that nothing should be left to chance, and it is therefore essential for us to carry out numberless researches so as to keep ourselves fully

informed of the possibilities of chemistry generally. Your requests of 1914 have greatly stimulated research activities in this country, and the publication of the increased number of papers has become a very serious matter to the Chemical Society, which can only meet the present situation by greatly curtailing its legitimate and rightful activities. In these special circumstances, will you not help us to carry on our legitimate work?"

I cannot think that such an appeal could possibly fall on deaf ears, for this very simple reason, that the Chemical Society through the efforts of its members has proved itself to be a national asset of the utmost magnitude and importance. Sir Frank Heath, once more I thank you for the way in which you have proposed the toast of the Chemical Society.

Professor Henry E. Armstrong (Past-President), in proposing "The Retiring President," Professor W. P. Wynne, said:—

Mr. President and Fellows of the Chemical Society, I ask you to lend me your ears and I hope I shall reach them. You have an unusual opportunity, an unusual spectacle, to offer to our guests to-night—that of a retiring President. The programme is wrongly printed. The "The" should be in Clarendon and "retiring" in italics. Presidents are not often retiring. Their business is to be unashamed and aggressive on behalf of the bodies they represent. A little more than two years ago I undertook two tasks: one, an easy one, was to convince the Society, the Council of your Society, that a particular person was *the* man for the office of President; the other, an almost impossible one, to cajole, to persuade, all but to force that particular person to recognise, as the walrus said, that his time was come to take on the many things pertaining to the President's office in our honourable body. It is little short of forty years ago, on March 27th, 1886, that he came to me as private assistant and had we been wise we should never have parted company. The years we worked together were the happiest and most fruitful of my life. We were not called upon to concentrate hydrogen ions; we never wasted time on noughts and crosses; no Lowry worried us with perpetual rechristenings of the already fully-named; we just quietly kept company with a hydrocarbon which was thoroughly well behaved and responsive. Our work was straightforward. There was no angle worship about it and we reported our results without fuss of any kind, in the briefest possible manner.

We put up ten signposts for the Di- and fourteen for the Trichloronaphthalenes and thereby demonstrated the truth of a doctrine fitly to be called, a *theory* of benzenoid structure, which I venture to say no *X*-ray analysis can upset. I think I may say

we were both proud of our exhibit at Wembley last year, when we thought of its implications. Our work pleased the Germans but it met with no recognition at home. It was unnoticed and that was a double compliment. It cost much toil during many years and a good deal of hard cash; neither of us made a halfpenny out of it.

I am told that Mr. Wells asks a couple of hundred pounds for a couple of thousand words. At all times, we could get what we wanted, what material we wanted, free of cost from Germany. We were never offered anything from our English works and our advice and assistance was never invited, although we worked in a technical college. Now, a great branch of the dye-stuff industry stands upon the foundation we built up. Yet neither before nor during the war, nor since, have we been asked to advise or assist in any way in the construction of the English edifice. Now, I modestly mention these points, in support of what the President said to-day as to the lack of co-operation between science and industry. When that address of his is printed, I trust that the measured terms in which he spoke on that subject will have their effect. I may say that the work was done in a sense *sub-rosa*, without official encouragement. I recollect on one occasion speaking to our hon. secretary, Sir John Watney, about research. His immediate reply was, "Your business is to teach boys, not to do research." That is the kind of encouragement we got in those days. This is the spirit that has been behind the comparative failure of our institutions to do original work, of which the President spoke to-day. It was not the primary fault of those who were working in the institutions.

I was glad to hear him speak out particularly on one subject—I think it was the keynote of his address—and say plainly that it is absurd for the Universities of this country all to attempt to do the same thing and on the same scale. Sir Frank Heath has told you of the tendency there is to specialise. A great lesson to be learnt by the Universities in this country is that they too must specialise. His University has no right to deal with anything but iron and steel and things of that kind. It will only be by specialising, that it will be possible for the several universities to effect the exchange of workers of which he spoke. Supposing we were to legislate to-morrow in the direction in which he spoke, all the research workers would drift to one or two places. That is a serious danger of any attempt of that kind.

Now to return to the man. My respect for his great ability as a worker, as a chemist and teacher and for the nobility of his character, has steadily increased with years. As a chemist, I

know of no better worker and teacher; as a man I have known no man so conscientious and self-sacrificing. I would recall to you the service he rendered as Editor in years gone by, of which our President gave so striking an illustration to-day. I wish the spirit he showed on that occasion could be manifest throughout the Society and I wish that Editors could be brought to take the same interest and at the same time show the same ability in their Editorial work that our late President displayed. You have heard how conscientious he has been. He has attended every possible meeting of the Society it has been possible for him to attend and he has done a great deal of outside work. Such a man deserves our thanks, not only for the work he has done, for the direct service he has rendered, more particularly must we thank him for the example he has set. Unsparing unselfishness is scarcely a present failing of the chemist, but the time is at hand when it must be your distinct characteristic.

Sir Frank Heath has rightly told you that after all it is not the atom but the molecule that is the real thing. The atom has no character until it joins up into the molecule. Speaking before the Institute of Chemistry recently, I said that chemists have reason to be proud of themselves on account of their achievements. At all events, the young women of the day are clad in cellulose and fine raiment mainly through your services. Even the Medical Research Council is faintly yearning for chemical aid. Sir Frank Heath spoke of Biology being the science of the future. Biology is nothing but chemistry when it comes to the real thing. Biology is making slow progress at the present time but most of the Bio-chemists, as I have said, are but bits of chemists. When they become chemists, there will be a real advance in vital chemistry and in medicine too. Still, with all this service to your score you have no recognised public standard and what is worse, no internal cohesion but lots of friction. You are not three hydrocarbons but more than thirty. Now is the time for you to show that you can come together, hold together, log roll together and organise together. There must be complete fusion of interests, I hold; an end must be put to the present chaos and inefficiency of publication. If necessary, to find funds, you must give up smoking. Your analyses will be more trustworthy if you do. There will be less tendency to believe in the transmutation of copper into lithium. No small temporary scheme will suffice. To be at all, you must be big.

Now, gentlemen, if you have any element of human feeling, you will sympathise with me in my determination to overcome to-night the modesty of your too-retiring President and join with

me in thanking him, with all possible warmth, for the distinguished way in which he has served the Society during the past two years and for the great example he has set by his unselfish devotion to the interests of our profession. I call upon you to join with me in drinking the future health and happiness of our late President, Professor Wynne.

Professor W. P. WYNNE, D.Sc., F.R.S., responding, said :—

I rise to thank you most heartily for the cordial way in which you have received the toast. I hope I may be allowed to regard it not as applying only to myself, but as including all those who have worked with me in the interests of the Society during the past two years. But for the loyal co-operation and cordial support of the officers, the Council and the office staff I could have done little or nothing, despite all the kind things Professor Armstrong has said in proposing the toast. He is my father in chemistry, and his eulogy is to be explained not by my merit but by the partiality often displayed by a parent.

As a father, Professor Armstrong is doubly fortunate, for, in addition to four distinguished sons who bear his name, he has a numerous chemical family of which I am proud to be the eldest. Two others of us, Sir William Pope and Professor Lowry, are also present this evening. As will have been gathered from what he said we may not be in complete agreement with our father's views on every subject—a not uncommon experience in families, chemical or otherwise—but that does not diminish in the slightest degree our affection for him or sincere appreciation of our fortunate upbringing.

Professor Armstrong referred to the date on which I became his private assistant. I had left South Kensington a few months earlier, and it was through Professor Japp's kind offices that this most happy chance came my way. If a reference may be permitted to the plea put forward this afternoon for the encouragement of migration, this crossing of Exhibition Road from the one College to the other did undoubtedly exercise a profound influence on my own career.

I had the good fortune to number among my teachers no fewer than seven Fellows of the Royal Society, five of them being Past-Presidents of this Society, and, on an occasion such as this, it is no less a pleasure than a duty gratefully to acknowledge my deep indebtedness to them. The first of these Fellows was Dr. George Gore, who, it may be remembered, published so long ago as 1865 an account of the modification in the properties of some seventy substances produced by complete desiccation, and thus was a pioneer in the field of research so closely associated with Professor

Brereton Baker's name. He was a self-made man. How he came to be chemistry master in King Edward's School, Birmingham, I do not know, but he had never been to a training college, and thus his originality had not been educated out of him. His method of judging the nature of our work was to suggest at the commencement of the class, that we should write a résumé of the previous lesson. This was assessed by the number of pages handed in at the end of a quarter of an hour, irrespective of the fact that some of them might contain six words and some of them sixty. That is the way in which I started to learn chemistry. Then, having left school, I went to evening classes after the day's work, and am a product of that system of "payment by results," under which science classes were farmed out to teachers, who were paid by fees based on successes achieved by their students in the examinations conducted by the Science and Art Department of those days. Despite the hard things which have been said about it, I do not think the system was wholly bad. At any rate it gave me my chance and to many others theirs. It provided, indeed, the only avenue to instruction in science subjects open to most students in the 'seventies of last century before University Colleges and Technical Schools came into existence. By its aid I went to South Kensington in 1881 and there had the great advantage of being a student under Sir Edward Frankland, Professor Percy Frankland and Professor Japp, who began my training in research. Thereafter followed the training as a teacher under Professor Armstrong, who taught me—nay, compelled me—to think; Sir Edward Thorpe, who brought me back to the old College, and Sir William Tilden, who last year, although in infirm health, did me the great honour of coming to the anniversary meeting and saying words which I shall never forget. I am to see him to-morrow, and I hope I may take to him from this gathering a message of affectionate regard and esteem. (Cheers.)

There is just one remark I should like further to make. Sir Frank Heath spoke in most appreciative terms of chemists and of their adaptability, for which we thank him. But it is only right to remember that the indebtedness to which he referred is not wholly on one side. I think the signal success which has attended the work of Sir William McCormick and Sir Frank Heath, neither of them men of science, in producing the result known as the Department of Scientific and Industrial Research, serves to show that success in such enterprises comes not only from a knowledge of men and affairs, but in no small measure from a sympathy with, followed by an understanding of, the type of problem to be solved.

As the thirty-ninth President, no longer retiring but retired, I salute my friend and colleague, the fortieth President, wishing him

as happy a time during his period of office as fell to my lot. Once again I thank you all most sincerely for the way in which the toast has been received. I do not deserve the praise; I have simply done my job.

The toast of "The Federated Societies" was given by Professor IRVINE MASSON, who said:—

There are, I suppose, few of us here who are so deeply learned in chemical politics as to be at once aware of what this term connotes; and I will therefore first adopt the old-fashioned plan of giving instruction by means of enumeration. The Chemical Society is affiliated with no fewer than seventeen others. Of the eighteen, four deal primarily with pure science—the Mineralogical, Faraday, Biochemical, and ourselves; twelve with the methods and the discoveries of pure science as applied to practical arts, namely the Society of Chemical Industry, Society of Public Analysts, Royal Agricultural Society, Institute of Brewing, Society of Dyers and Colourists, Society of Leather Trades' Chemists, Royal Photographic Society, Institute of Metals, Iron and Steel Institute, Ceramic Society, Society of Glass Technologists, Institution of Gas Engineers; and two are of a special character, namely, the Institute of Chemistry and the Association of British Chemical Manufacturers, which deal with chemists professionally and in their relation to the lay public.

What is especially made prominent by this list is, not so much the subdivision of pure chemistry, as the great number of ways in which the science as a whole has found a place in the business concerns of the nation. So evident is this, indeed, to chemists, that we have now and then to remind ourselves that if we have won the privilege of helping a little in the material welfare of our country, we cannot evade the responsibility which has thereby been entrusted to us. And, with this in view, the more we can do to foster intellectual sympathy between all kinds of chemists, the more will our science be able to serve the nation at large. And this is why there is a Federation of all these societies: it is a federation primarily *pro bono publico*, not merely *pro bono chemico*.

Let me indicate briefly two or three ways in which co-operation has usefully shown itself at present.

The Library of the Chemical Society has of late years been extended and is annually increased, with the set purpose of being useful not alone to its own Fellows but also to members of the other affiliated societies. Towards the heavy annual cost of this addition to its original function, many of these Societies have contributed; and now our Library, poorly housed though it is, is becoming a truly national asset. Last year, for instance, the

visits to consult our 30,000 volumes averaged about twenty-two per day; and of these, one-third of the consultations were made by members, not of the Chemical Society, but of other societies, while among the other two-thirds many were members of the Chemical Society and the others as well.

Another example is seen in the co-operation between the Chemical Society and the Society of Chemical Industry which has set going the Bureau of Chemical Abstracts. The Bureau has done a great deal of quiet work already, and it has before it the central problem of unifying the British publications which survey each month or fortnight the whole of the world's current literature of chemistry. Surely no obstacle short of insuperable bankruptcy should be allowed to stand in the way of an end so desirable.

A collective token of federation is, I take it, to be seen in that body of delegates, the Federal Council for Pure and Applied Chemistry. There is something in this Council which reminds one of the luminiferous ether. It was originally invented to offer a medium for the propagation of light and radiation of energy, and to overcome the difficulty of action at a distance. Yet, I have been told, experiments made with the object of detecting it in motion have failed; and some daring moderns have even questioned the necessity for believing in it, and have dubbed it a pure convention.

Now there is a name which I have to couple with this toast—that of Mr. Woolcock. Chemists, as such, are trained to deal with things which are in themselves non-human; yet, because these things, and we ourselves, must everywhere affect human affairs, we need human guidance. It is to wise and experienced men like Mr. Woolcock that we instinctively turn for such help; and not one of you does not know how well and generously Mr. Woolcock gives it—think of one example alone, chemistry at Wembley. Mr. Woolcock fulfils the function of an ideal catalyser; for he starts, facilitates, or hastens actions, without upsetting any equilibrium, and himself emerges apparently unchanged at the end.

I ask you to couple with the toast of the Federated Societies the name of Mr. Woolcock.

Mr. W. J. U. Woolcock in his reply stated :—

I feel my efforts to respond to this toast will be somewhat inadequate, the more so as on looking at the toast list and seeing the term, "The Federated Societies," I did not know what was meant by it. My chemical education is, as you know, very limited. Hitherto I have supposed that I knew just sufficient chemistry to understand what the real chemist was talking about when I had to take his advice. For once I have failed. Professor Masson, convincing as

he is on most subjects, lucid to a fault on his own particular subject, has left me absolutely in the dark as to what is meant by the "Federated Societies." I at first thought that possibly it was a misprint and that Sir William Pope was intended to reply on behalf of the Federal Council. The delightful language in which Professor Masson brushed on one side the Federal Council leaves me in no doubt that he is not referring to that body, but he gave us, in order that we might know exactly about what we are talking, a list of learned bodies which, in the hope or in the anticipation of the Chemical Society, will ultimately become federated. Let us hope that that will eventuate. In future when I have to think of a reason why I should be considered a chemist, I shall always think of what Sir Frank Heath said, and regard adaptability as a qualification in a claim for that distinguished name, because I think it is a qualification which those of us who lack some qualification in science may readily embrace and regard as practicable, and in that way seek admission to the inner circle, because it is very true that the chemist is an adaptable person, and those who have to have something to do with him need to be adaptable as well.

It has been my fortune during the past twelve months to study two chemists at very close range. In fact, if I had attempted to define the Federated Societies I should have thought of a rather shorter list, and thought of the Chemical Society, the Institute of Chemistry and the Society of Chemical Industry, because of the real federation which has existed between those three bodies for some little time, and perhaps never more closely than during the past twelve months. I have been able to study at short range the Presidents of the Chemical Society and the Institute of Chemistry. We have travelled together, and it is a common thing for Professor Henderson and myself to speak together in different towns. That kind of intimacy brings familiarity and a working together which can only be obtained in that way. I remember that some time ago we arrived in Birmingham together. We had been in Glasgow the night before and had as usual said the proper thing about each other. Professor Henderson, when we got to Birmingham, called my attention to a placard just outside the station, and, after a quick glance, said, "They know we are coming," but not taking it quite as quickly as Professor Henderson, I saw that he was mistaken and I studied it a little more closely. The two Macs advertised there were not ourselves.

During the past twelve months there has been hardly a local branch of the Society of Chemical Industry or of the Institute of Chemistry that has not had a joint dinner. This indicates a desire for co-operation among the rank and file of which those who are

temporarily the leaders of the chemical societies and associations in this country will have to take notice.

I do not myself believe it is possible for the Councils of the various Societies to lay down a definite scheme for federation and to attempt to impose that on the local branches of the various Societies, but I do think that at the present time there is a demand throughout the country that we shall do something to prevent this appalling overlapping and duplication in the production of chemical literature, and do something which will satisfy the man who likes to consider himself in the rank and file and who at the same time feels that there is a definite need for a closer union among the Societies and the Associations.

Well now, neither Professor Wynne nor Professor Henderson nor myself is capable of doing that sort of thing individually. Together, of course, we have found it very easy. If we were upon a job which required modesty of demeanour, Professor Palmer Wynne did it. If it required some of that native shrewdness and ruggedness of character, Professor Wynne and I pushed Professor Henderson into it. If, of course, it were a mere torrent of words that was required, you know what would happen. But unlike the Duke of Plaza Toro, we have no desire to lead our Societies from behind, and in our individual capacity—not in our representative capacity—we have prepared a scheme for a Chemistry House to which each of us felt entitled to put his name, not binding our respective Societies or Associations in any way. This is a scheme which we feel we can recommend to those of our friends who are prepared to listen to our recommendations. I feel that with you, Dr. Crossley, in the chair in succession to Professor Palmer Wynne—and if I may say so, I welcome you very heartily in the chair—the work will continue.

We of the " Federated Societies," yes, of the Federated in inverted commas Societies, thank you very much indeed for inviting us to-night, and thank Professor Masson for proposing the toast. We wish the Chemical Society every prosperity during the coming year, and hope that the traditions which have been built up during the past four or five years of close working and co-operation between the officers of the various Societies will be maintained. We trust that under your guidance those traditions will continue and we may be even more successful in the coming year than in the past.

Professor F. G. Donnan, C.B.E., D.Sc., F.R.S. (Foreign Secretary), proposed the toast of " The Guests," coupled with the names of Professor Ernst Cohen, of Utrecht University (representing the Nederlandsche Chemische Vereeniging), and Mr. J. Hunter Gray, K.C., M.A. He said :—

We have here to-night four distinguished representatives of

Holland, Professor H. J. Backer, Professor Ernst Cohen, Professor A. F. Holleman, and Professor H. ter Meulen. Three of them are accompanied by their wives. May I say that we wish these ladies also a very hearty welcome to London and to the Chemical Society dinner.

I believe it is true that although the population of Holland is relatively small, actually the largest number of Nobel prizes has been given to that nation, which is a wonderful tribute to the scientific output and ability of Holland. It is nothing new, for that country has always been perhaps the greatest centre of scientific culture in Europe. I have great pleasure in saying a few words about my friend Professor Cohen, of Utrecht, whose name I have the honour to couple with this toast. I think it is rather late in the evening to refer to the distinguished work of Professor Cohen, but he is the most eminent pupil of that great man, Professor J. H. van't Hoff, and is one of the greatest authorities on the effect of high pressure on chemical reactions, and many other things.

When I come to look at the list of other distinguished guests associated with this toast, I feel like a miserable sinner transported to Paradise and asked to propose the toast of all the holy Saints. The Rt. Hon. Sir John Anderson, G.C.B. (Permanent Under-Secretary of State for Home Affairs), is one of our guests, and may I assure him, speaking as one Secretary of State to another, that if in the conduct of the affairs of this great country he wishes for any advice, the President of the Chemical Society will be always willing to help.

I have also the pleasure of coupling with this toast another name, that of one of those modest men of law, Mr. J. Hunter Gray. I have had the honour to be associated with him in one or two cases. It is needless to speak about these great men, because we all spend our nights reading the *Evening Standard*, and our days reading *The Times*, and we have the greatest admiration for their work.

There is one thing I should like to say before I conclude, namely, in reference to a very important part of the toast, that of the ladies present to-night. We wish them all a very hearty welcome.

It is my great pleasure and honour now to give you the toast of "The Guests," coupled with the names of Professor Cohen and Mr. Hunter Gray.

Professor ERNST COHEN, who replied for the Dutch chemists present, said :—

During the toast of my friend Donnan I made some notes, but it seems to be impossible to make a response to all the remarks he made in the toast. I think it would take too much time. This afternoon I had a warning from the new President of your Society

that everyone must be brief. I think there is no nation more fond of conciseness in speech than the English. Take, for instance, your chemical abstracts. When an English chemist wants to describe the properties of any substance or fluid he says: B.P. 100, F.P. zero, D.C. 80, and for those who are not familiar with those telegraphic hieroglyphics I will add that B.P. means boiling point, F.P. freezing point, D.C. dielectric constant.

In English literature or poetry you find absolutely the same thing. I remember an English rhyme made up of initial letters which, for those who are not in a hurry, I will translate:

A fishy old fisher, called Fisher,
Fished fish on the edge of a fissure.
The fish with a grin
Pulled the fisherman in.
Now they're fishing for the Fisher within.

But the most striking conciseness is found in the language of English daily life. When I have to write a letter to the Foreign Secretary of the Chemical Society I write: F. G. Donnan, M.A., Ph.D., F.R.S., F.S.C.S., London, W.C.1, and so I could go on. If I were to follow these lines in responding, I would have to condense them into a few initials, which in plain English would mean, "I wish to the Council and the Fellows of the Chemical Society, good luck, welfare, prosperity and happiness."

Ladies and gentlemen, as I am a foreigner, you will allow me to express myself in a somewhat more elaborate way. In the first place, I have to thank the Council and the Fellows of the Chemical Society in the name of my Dutch colleagues who were so kindly invited to attend this dinner and the Annual Meeting this afternoon, and also to thank you in the name of the Dutch Chemical Society whose representatives are prevented from being here and celebrating with you the birthday of this Society with which so many illustrious names are linked.

There is a French saying which means, "Every meeting we finish by a dinner whenever we can, and it is by a dinner that we rule over man." But I make an alteration in the last line and say, "It is our dinners which delight ladies and men." The question arises as to the origin of the custom of finishing such a meeting with a dinner. We have had two dinners to-day; in the afternoon our President gave us mental food in his most interesting lecture, and now we have material food. Whence comes the custom of linking the two? It is your countryman, Joseph Priestley, to whom you are indebted for this most pleasant custom. Priestley has been pictured in a fascinating way in a caricature by one of your countrymen as sitting at a dinner, but at a dinner which he never attended.

Priestley was a very wise man. He also invented soda-water, a very good remedy for many persons who have attended a dinner. I have been so lucky as to find the caricature, and I have had it copied and will ask you all to accept a copy not only as a memento of this splendid invention by your countryman, but also as a memento of most pleasant hours spent in your company. I feel sure that my Dutch colleagues will feel with me that we have had a very interesting meeting and enjoyable dinner with you, and thank you all for the very kind way in which you have invited and entertained us.

Mr. J. HUNTER GRAY also replied, saying :—

Professor Donnan, and members of the Chemical Society, a few days ago I had the burden and privilege to make the last speech at another meeting and I had taken the greatest trouble to prepare an impromptu speech to deliver on that evening. It passed through my mind that I might palm it off once more, but I had no sooner come into this room than I found two members of this company—Sir Frank Heath and Professor Armstrong—who had heard my last impromptu effort. Therefore I am thankful I had made preparations for another impromptu speech.

This toast recalls to me a set of questions and answers which appeared recently in one of the newspapers. The publication of those questions and answers was for the purpose of demonstrating the super-excellence of a system of education in this country for which we paid so many millions of pounds annually. One question put was, What is a Guest? One bright youth answered, "A Guest is a joke." Well, I hope the guests are not worse than jokes to-night, because I would rather be a guest than a nuisance, especially as I am making the last speech on the toast list. The guest who talks too much is apt to become a nuisance, so I will be quite brief. Another answer was, "A Guest is a person usually of the male sex who eats and drinks as much as he can and pays nothing for it." I suspect that the young person who wrote that answer was a precocious member of the other sex. But we do, as guests, come within that definition.

We to-night are guests of a most eminent body of scientific men, and it is inevitable that our thoughts should be extraordinary when we hear about molecules and atoms and the somewhat dubious relationship between them, and we may play with unusual ideas. For example, usually when I look at the menu and note the various courses and I see there is one course entitled *Saumon d'Écosse* with some other French words, I should say that was good Scotch salmon. But no such thoughts came into my mind to-night. When I put my knife into that salmon, I wondered if I should find at least a dozen of those bodies Sir Frank Heath referred to, vitamins,

running about, and perhaps I might even find a few of those bodies known by some curious names, and see the poor little vitamin running away and calling in terror-stricken tones, " Yadil, Yadil."

But let me be serious. I am not one of those, although a mere lawyer, who think that the premier gifts of scientific genius have departed from this country. I believe that in the future, as in the past, our British men of science will remain in the van of scientific progress. The whole world has marvelled at the wonderful work done by them, and especially, may I say, by our chemists in the Great War, and believing, as I do, that any future warfare will depend more and more upon scientific progress, I have no fear, if only the public and the Governments of this country will give to science that encouragement which it demands and which it deserves.

I am proud to be associated with the great scientist Professor Cohen to-night in responding to the toast of the Guests. We, the Guests, thank you, our Host.

Ordinary Scientific Meeting, Thursday, April 2nd, 1925, at 8 p.m., Dr. ARTHUR W. CROSSLEY, C.M.G., C.B.E., D.Sc., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through death, of the following:

Honorary Fellow.	Elected.	Died.
Guglielmo Körner	Jan. 20th, 1898.	March 28th.
Fellows.		
Charles Samuel Mummery	Dec. 5th, 1907.	March 27th.
Robert Atkinson Oddy	Feb. 21st, 1918.	March 12th.

The PRESIDENT announced:

1. That the Keith Gold Prize Medal of the Royal Society of Edinburgh awarded to the late Robert Traill Omond, LL.D., has been lent by Mr. Arnold Stevenson for exhibition in the Medal Case. It is hoped that other Fellows will add to the interest of the Society's Collection by loan or gift.

2. That the following Committees for 1925–1926 had been appointed by the Council:

Finance Committee: J. L. Baker, A. Chaston Chapman, F. P. Dunn, C. A. Hill, G. T. Moody, R. H. Pickard, and the Officers (Treasurer as Chairman).

House Committee: J. L. Baker, Sir Herbert Jackson, Alexander Scott, J. M. Thomson, Sir William Tilden, E. W. Voelcker, and the Officers.

Library Committee: P. P. Bedson, O. L. Brady, J. R. Partington (Chairman), Sir Thomas K. Rose, Alexander Scott, J. F.

Spencer, the Officers, and the Librarian, together with the following representatives of contributing Societies: J. L. Baker, R. B. Brown, J. C. Drummond, A. Harden, J. P. Longstaff, R. L. Mond, G. Senter.

Publication Committee: H. B. Baker, E. C. C. Baly, H. Bassett, O. L. Brady, H. W. Dudley, U. R. Evans, J. J. Fox, A. J. Greenaway, I. M. Heilbron, T. A. Henry, C. K. Ingold, H. McCombie, I. Masson, W. H. Mills, T. S. Moore, G. T. Morgan, J. R. Partington, J. C. Philip, R. H. Pickard, F. L. Pyman, N. V. Sidgwick (Chairman), W. P. Wynne, and the Officers.

Research Fund Committee: A. J. Allmand, H. B. Baker, E. C. C. Baly, J. B. Cohen, W. H. Mills, Sir Robert Robertson, R. Robinson, N. V. Sidgwick, Sir James Walker, W. P. Wynne, and the Officers.

The following were formally admitted Fellows of the Chemical Society: G. E. Gardam, G. E. Watts.

Certificates were read for the first time in favour of:

Neville Melton Bligh, A.R.C.S., A.I.C., 67, Castle Road, Bedford.
Hugh Alexander Millar Borland, M.Sc., A.R.C.S., 14, Cotham Road, Bristol.
Malcolm Sinclair Gaskill, 3, Buckingham Road, Hilton Park, Prestwich, Manchester.
Norman Hamer, Ash Mount, Holcombe, Manchester.
Ivor Gray Nixon, 75, The Vale, Golder's Green, N.W. 11.
Vincent Joseph Occleshaw, M.Sc., A.I.C., 22, Byrn Street, Ashton-in-Makerfield, Wigan.
Leon Rubenstein, B.Sc., 87, Eaton Grove, Swansea.
Alec Thomas Streather, B.Sc., A.I.C., 3, Wellington Road, Watford.
Violet Corona Gwynne Trew, 18, Adam Street, Portman Square, W. 1.

The following papers were read:

"The formation of *d*-2 : 2 : 4-trimethyl*cyclo*hexan-3-one-1-carboxylic acid from *d*-camphorquinone." By C. S. Gibson and J. L. Simonsen.

"Aromatic esters of acylecgonines." By W. H. Gray.

"The decomposition of hydrogen peroxide by cobaltic hydroxide." By F. G. Tryhorn and G. Jessop.

RESEARCH FUND COMMITTEE.

A meeting of the Research Fund Committee will be held in June next. Applications for Grants, to be made on forms which can be obtained from the Assistant Secretary, Chemical Society, Burlington House, W. 1, must be received on or before Monday, June 1st, 1925.

All persons who received grants in June, 1924, or in June of

any previous year, whose accounts have not been declared closed by the Council, are reminded that reports must be returned by June 1st.

PUBLICATIONS FUND.

In connection with the Appeal for the Publications Fund issued by the Treasurer, it has been decided that a list of donations and subscriptions received shall appear in the Proceedings for June. All donations and subscriptions received prior to the end of May will be included in the List.

LIST OF FELLOWS, 1925.

It has been decided to print the List of Fellows for 1925 and to supply the List to those Fellows who make application to the Assistant Secretary by the 31st July, 1925.

BERICHTE, 1915 to 1924.

Sets of the Berichte from 1915 to 1924 (10 years) are now offered to Fellows of the Society at £22, carriage extra. Application should be made to Mr. S. E. Carr.

List of Papers, or Abstracts thereof, received between March 20th and April 2nd, 1925. (This list does not include the titles of papers which have been read at a Scientific Meeting, or which have appeared in the Journal.)

"The thermal decomposition of ammonia upon various surfaces." By C. N. Hinshelwood and R. E. Burk.

"Strychnine and brucine. Part III. The position of the methoxyl groups in brucine." By F. Lions, W. H. Perkin, and R. Robinson.

"Compounds of tervalent molybdenum. Part III. New oxalates." By W. Wardlaw and W. H. Parker.

"The composition of starch iodide." By H. D. Murray.

"Note on the atomic volume of manganese." By A. N. Campbell.

"Note on molybdenum semipentoxide." By W. Wardlaw and F. H. Nicholls.

"The action of hydrogen chloride on *cyclo*hexylideneazine and on *cyclo*pentylideneazine." By W. H. Perkin and S. G. P. Plant.

"The constitution of soap solutions in the presence of electrolytes: sodium laurate and potassium chloride." By W. C. QUICK.

"The tautomerism of dyads. Part III. The effect of the triple linking on the reactivity of neighbouring atoms." By E. H. INGOLD.

"The molecular condition of phenol in benzene solution." By J. C. PHILIP and C. H. D. CLARK.

"The solubility of sulphur dioxide in water and in aqueous solutions of potassium chloride and sodium sulphate." By J. C. HUDSON.

CERTIFICATES OF CANDIDATES FOR ELECTION AT THE BALLOT TO BE HELD AT THE ORDINARY SCIENTIFIC MEETING ON THURSDAY, MAY 7TH, 1925.

BJERRUM, NIELS JANNIKSEN, Copenhagen, Vendersgade 28. Danish. Professor in Chemistry at the Royal Veterinary and Agricultural College in Copenhagen. Researches on liquid potentials, on complex compounds, especially of chromium, on the ionisation of electrolytes, on the thermic dissociation of water and carbon dioxide, on the theory of titration, on the atomistic explication of ultra-red spectra, etc. (*Signed by*) F. G. Donnan, J. N. Collie, W. E. Garner.

BLUNSDEN, ARCHIBALD BERESFORD, "The Bungalow," Westbury-on-Trym, Bristol. English. Asst. Tech. and Analytical Chemist. Employed for over five years by The British Oil and Cake Mills, Ltd. (Bristol branch) in research, etc., in their laboratory and works. Evening study at the Merchant Venturers Tech. College, including lectures, advanced analysis, and research. City and Guilds of London Institute Final Certificate (Technological) in Oils, Fats, and Candle Manufacture. National Certificate in Chemistry. Desire to keep up-to-date with advance in the scientific world. (*Signed by*) Arthur Marsden, M. W. Jones, Chas. J. Waterfall, S. Siddons Wilson.

BLYDE, GEOFFREY ALGER, "East Cliffe," East Bank Road, Sheffield. British. Steel Maker at A. Blyde & Co., The Wallace Steel Works, Sheffield. Late Student of Metallurgy, Applied Science Department, The University of Sheffield. I am desirous of joining with a view to extending my knowledge of Chemistry and Metallurgy by the use of the Society's Library and Journals. (*Signed by*) John Evans, L. Archbutt, J. E. A. Blyde.

BOWLES, THOMAS HENRY, "Allandale," Meadowside Rd., Cheam, Surrey. British. Chemist, 1st Grade, Government Chemists' Department. 28 years Government Chemists' Department. (*Signed by*) R. Robertson, Geo. Stubbs, J. J. Fox.

BRINDLEY, WILLIAM HARRISON, 11, Millmoor Terrace, Glossop, Derbyshire. British. Demonstrator in Chemistry, Faculty of Technology, University of Manchester. M.C., M.A. (Cantab.), M.Sc.Tech. (Manc.), A.I.C. Demonstrator as above since 1921. Joint author of "An Attempt to Resolve Quaternary Phosphonium Compounds," and "Some Esters of Anisic Acid." (*Signed by*) Frank Lee Pyman, Fredk. M. Rowe, John K. Wood.

BUCHAN, JAMES LINDSAY, Hampden Club, London, N.W. 1. British.

Physico-chemical Research Student, University College, London. B.Sc. (Lond.), Hons. Chemistry. (*Signed by*) F. G. Donnan, W. E. Garner, D. McKie.

BULL, FRANK HENRY CHARLES, 50, Cornwall Road, Bishopston, Bristol. British. Works Chemist in the employ of Bristol Gas Company, Bristol. B.Sc. degree 1916 (Bristol University) (Subjects: Chemistry, Physics, Mathematics); Associate of the Institute of Chemistry, 1919; Full Technological Certificates in Gas Engineering and Gas Supply from City and Guilds of London Institute, 1923—4. (*Signed by*) F. Francis, J. W. McBain, M. E. Laing.

BUTLER, JOHN ALFRED VALENTINE, "The Potteries," Winchcombe, Glos. British. Assistant Lecturer in Chemistry, University College of Swansea. M.Sc. (Birmingham), 1922. Author of papers: *Trans. Faraday Soc.*, **19**, 659, 729, 734, 1924; *J. Phys. Chem.*, **28**, 438, 1924; *Phil. Mag.*, **48**, 746, 927; *Zeits. phys. Chem.*, **113**, 279, etc. *J.C.S.*, 1923, pp. 2370, 2380; 1924, pp. 963, 1101 (jointly with other authors). (*Signed by*) G. T. Morgan, S. R. Carter, J. E. Coates, L. E. Hinkel, E. E. Ayling.

BYFORD, ANNIE LAVINIA, 73, Elderton Rd., Westcliff-on-sea, Essex. British. Student of Chemistry. B.Sc. (Pass). Studying for B.Sc. Honours in Chemistry at Bedford College for Women. (*Signed by*) J. F. Spencer, H. Crompton, P. V. McKie, E. R. Levy.

CLEGG, JAMES HERBERT, "West Cliffe," Queens Park Rd., Burnley. British. Engineer and Manager, Burnley Corporation Gas Dept. Member of the Institution of Gas Engineers. My object in seeking membership of your Society is to extend my knowledge of and assist in the furtherance of Chemical Science. (*Signed by*) Raymond Ross, Ernest Hardiker, J. P. Leather.

COCKROFT, HORACE CECIL, 6, Highfield Terrace, Halifax. British. Schoolmaster. London, B.Sc., 2nd Class Hons. Chemistry, 1922; Associate of the Institute of Chemistry, Jan. 1923; Student at University College, Reading, 1919—1922. Research work on CuCN–KCN–H_2O system incorporated in paper, Bassett and Corbett, *J.C.S.*, Vol. **125**, 1924. (*Signed by*) Robt. D. Abell, H. Bassett, J. W. Dodgson.

COYNE, FRANCIS XAVIER, 160, Addison St., Blackburn, Lancs. English. Student at the Blackburn Technical College. Three years' work at a Manufacturing Chemist's as a chemist, in the laboratory. Proficiency in Chemistry, Physics, Mathematics, German, French, Latin, and Greek. (*Signed by*) G. W. F. Holroyd, Harry G. Leigh, Robert H. Pickard.

CRAIK, JAMES, The University, St. Andrews. British. Carnegie Research Fellow. M.A. 1920 (St. Andrews). B.Sc. 1921 (St. Andrews). Ph.D. 1924 (St. Andrews). Author of a paper entitled "The Mechanism of the Oxidation of Typical Carbohydrates with Hydrogen Peroxide and Hypochlorous Acid," *J. Soc. Chem. Ind.*, 1924, **43**, 171. At present engaged in Research Work in the Chemistry Department, University of St. Andrews. (*Signed by*) J. C. Irvine, John Read, G. M'Owan.

DANE, HERBERT GREETHAM, The Diocesan Training College, Winchester, Hants. British. Tutor and Lecturer (and Demonstrator) in Chemistry at the Winchester Training College. B.Sc. with First Class Honours in Chemistry, Sheffield, 1922. M.Sc. (Sheffield) 1923. Worked under Dr. J. Kenner 1921-22 on the Influence of Steric Factors on Intramolecular Condensation, see J. Kenner and E. Witham, *T.*, 1921, 1452. (*Signed by*) W. P. Wynne, F. G. Tryhorn, Arthur W. Chapman.

DEAN, HARRY, 134, New Lane, Oswaldtwistle, nr. Accrington. English.

Textile Chemist and Colorist. Assoc. Manchester Coll. of Technology (Bleaching, Dyeing, and Printing, including advanced Organic Chem. and Dyestuffs Intermediates). 3rd year College Certificate of Blackburn Tech. Coll. (Inorg. and Organic Chem. and allied subjects). (*Signed by*) Percy J. Rhodes, G. W. F. Holroyd, E. Knecht.

DIXON, MARGARET STEDMAN LEONORA, Homebush, Worcester Rd., Sutton, Surrey. British. Student. A student taking a B.Sc. Honours Degree in Chemistry at Bedford College for Women (University of London). (*Signed by*) J. F. Spencer, H. Crompton, P. V. McKie.

FARNELL, ROBIN GEORGE WESTBURY, Exeter College, Oxford. British. Chemist to the British Empire Sugar Research Association, 3, 5, 7, Old Queen St., S.W. 1. A.R.C.S. A.I.C. Research into the colloidal constituents of the juice of the sugar cane. (*Signed by*) James C. Philip, M. A. Whiteley, H. B. Baker.

FAULKNER, IRVINE JOHN, Emmanuel College, Cambridge. British. Research Student. (*Signed by*) T. M. Lowry, R. G. W. Norrish, L. P. McHatton.

FLETT, THOMAS, Anchor Cottage, Kirkwall, Orkney. British. Chemist. At present Works Chemist in a Factory. 4 Years' Course at Glasgow University, 1919—1923; Graduated B.Sc. (Applied Chem.) and was elected A.I.C., 1923; Works chemist at Thornley Binders, Ltd., since January 1924. (*Signed by*) G. G. Henderson, T. S. Patterson, R. Wright, S. Horwood Tucker.

GARDNER, THOMAS JAMES ELIJAH, 12, Bushwood Road, Kew, Surrey. English. Works Chemist (Consol Products, Ltd., Sunbury Common, Middlesex). 30 Years' experience in Manufacturing Chemistry, especially in the investigation and perfecting of Synthetical Essences and like products. I am anxious to keep in touch with the developments of modern Chemistry, particularly as applying to my own work. (*Signed by*) Francis W. Hodges, Frank A. Boys, Archibald Macpherson.

GARRAN, RICHARD RANDOLPH, Orphir, St. George's Rd., Toorak, Melbourne, Australia. Research student at the University of Melbourne. Bachelor of Science (Melbourne), 1st class Honours and Exhibition in Chemistry in first and second years, 2nd class in third year. Has since done a year's research (heterogeneous equilibrium) and is at present reading for Final Honour Examinations in Chemistry. (*Signed by*) A. C. D. Rivett, E. J. Hartung, W. Davies.

GIBLIN, JOHN CHARLES, 3, Kensington Terrace, Brecon, Wales. British. Science-master, Christ College, Brecon. Bachelor of Science (London, 1st Hons. Chem.). Associate of the Institute of Chemistry. (*Signed by*) W. J. Jones, Claude M. Thompson, E. P. Perman.

GILCHRIST, HELEN SIMPSON, 82, North St., St. Andrews. British. Research Chemist, Food Investigation Board, D.S.I.R. B.Sc. (St. Andrews), 1917. Ph.D. (St. Andrews), 1921. Author of a thesis on "The Preparation and Constitution of Synthetic Fats, containing a Carbohydrate Residue." Assistant in Chemistry, The University, St. Andrews, 1918—21. Joint author, with Principal Irvine, of (1) A Synthetic Fat, etc., *T.*, 1924, **125**, 1. (2) Condensation of Mannitol with Olive Oil, *ibid.*, 10. (*Signed by*) J. C. Irvine, John Read, G. M'Owan.

HADFIELD, ISABEL HODGSON, 65, Langham Rd., Teddington, Middlesex. English. Research Chemist. M.Sc., London University. Seven years' research work for the Aeronautics Advisory Committee. Member of the staff at National Physical Laboratory. (*Signed by*) Guy Barr, L. L. Bircumshaw, J. T. Hewitt.

HALPIN, JAMES FRANCIS, St. Chads, 39, Benson Road, Forest Hill, S.E. 23. British. Superintending Chemist, Government Chemist's Department. Superintending Chemist in the Government Laboratories. Fellow of the Institute of Chemistry. (*Signed by*) Robert Robertson, Geo. Stubbs, A. More, J. J. Fox.

HANSON, DONALD, 7, Willow Bank, Halifax. English. Works Chemist. Passed in Physics as subsidiary to taking Honours B.Sc. (External) of London University. Also 8 years' Laboratory and Technical Experience in Explosive Manufacture, Tar Distillation, Textile Chemistry, and Analytical Work. (*Signed by*) W. Sowden, G. C. Riley, W. J. Stansfield.

HAWORTH, THOMAS, 8, Park Terrace, Fielding Lane, Oswaldtwistle, Lancs. English. Assistant Gas Engineer and Manager, Oswaldtwistle Urban District Council. (*Signed by*) G. W. F. Holroyd, Harry G. Leigh, J. T. Holden.

HEATON, JOHN STANLEY, 43, Birch Rd., Crumpsall, Manchester. British. Research Chemist. Student and research worker at Liverpool University for five years. B.Sc. (1st Hons.). Ph.D. Now engaged on research in textile industry. "The Investigation of Meso-thioanthracene Derivatives. Part I," Heilbron and Heaton, *J.C.S.*, 1923, **123**, 173. (*Signed by*) I. M. Heilbron, William Doran, F. C. Guthrie.

HENSMAN, JOHN CYRIL, M.A., A.I.C., Aldenham School, Elstree, Herts. British. Chemistry Master, Aldenham School. 1921, Cambridge Natural Sciences Tripos, Part I (Chem., Physics, Physiology); 1923, Cambridge Natural Sciences Tripos, Part II (Chemistry); 1923, elected to an Associateship of the Institute of Chemistry; 1923–4, Asst. Science Master, Rotherham Grammar School, Yorks.; 1924, Chemistry Master, Aldenham School. (*Signed by*) T. M. Lowry, W. H. Mills, Charles T. Heycock.

HILL, JOSEPH, 58, Spring St., Accrington, Lancs. English. Chemist (Works). Past Blackburn Tech. College, 4th year Day Course. Occupation: Chemist, East Lancashire Soap Works. (*Signed by*) G. W. F. Holroyd, Harry G. Leigh, J. T. Holden.

HOCKING, FREDERICK DENISON MAURICE, 18, Woodside Park Road, N. Finchley, N. 12. British. Biochemist (and at present Final Year Medical Student, Univ. of London). M.Sc. (Lond.) with mark of distinction. A.I.C. (1920). A.C.G.F.C. and Streathfield Memorial Prize, 1919. (*Signed by*) A. Prideaux Dawson, Arthur J. Hale, H. M. Atkinson.

HOYLE, JIM, 11, Crow Lane, Ramsbottom. British. Finisher (Woollen). 2nd and 3rd Year Certificates Chemistry gained at Blackburn Technical College. 1st, 2nd, 3rd, and 4th Year Chemical Trades Course. U.L.C.I., with distinction in Magnetism and Electricity. (*Signed by*) G. W. F. Holroyd, Harry G. Leigh, J. T. Holden.

HUGHES, HORACE WILLIAM, 27, Ombersley Rd., Balsall Heath, Birmingham. British. Schoolmaster. B.Sc. (Birmingham), Class 1 (1921). Principal Subjects: Metallurgy, Chemistry; Subsidiary: Strength of Materials. (*Signed by*) Harold Harris, Thomas Turner, Wm. Wardlaw.

JACKSON, JOSEPH TAYLOR, B.Sc. (Lond.), 192, Algernon Road, Lewisham, S.E. 13. British. Lecturer in Applied Chemistry at The Leathersellers' Company's Technical College, S.E. 1. Bachelor of Science, London University. Fellow Royal Microscopical Society, London. War service (France and Salonika), Sept. 1914–Jan. 1919. (*Signed by*) Arthur Harden, Charles Dorée, S. Judd Lewis.

JEHU, DAVID BRET, 34, High Street, Welshpool, Montgomeryshire. British (Welsh). Research Student. B.Sc., University of Wales, First Class Honours. M.Sc., University of Wales. Associate of the Institute of Chemistry. Paper

Jehu and Hudleston, *Trans.*, 1924, **125**, 1451. (*Signed by*) T. Campbell James, C. R. Bury, L. J. Hudleston, H. Medwyn Roberts.

JOBSON, WILLIAM, 52, The Mall, Swindon, Wilts. British. Analytical Chemist. Asst. Analyst in G. W. Rly. Chemical Laboratory, Swindon, for the last 25 years (less 4½ years' war service), appointed Chief Assistant, May 1922. Board of Education, S. and A. Dept., Inorganic Chemistry (Practical), Honours Part 1, 1903, Pass. (*Signed by*) W. R. Bird, T. C. Davison, T. Hartley.

JONES, CLIFFORD MERTON, Buxton Crescent, Newton Hill, Leeds Rd., Wakefield. British. University Student (post graduate). Science student at Queen Elizabeth's Grammar School, Wakefield (1914–1920). Laboratory assistant for two years (part time). Student in Science at University of Leeds, 1921 onwards. 2nd Class Honours B.Sc. in Chemistry, July 1924. (*Signed by*) J. B. Cohen, W. Lowson, W. A. Wightman.

JONES, THOMAS WILLIAM, 36, St. Vincent Road, Westcliff-on-Sea. English. Technical Chemist. B.Sc. (Hons. Chem.), London 1922. (*Signed by*) J. R. Partington, E. E. Turner, Stephen Miall, W. G. Shilling, F. A. Williams.

KEANE, JOHN, 6, Shamrock Villas, Drumcondra, Dublin. Irish. Assistant Lecturer in Chemistry, University College, Dublin. B.Sc. (First Hons.), 1917. M.Sc. 1918. Ph.D. 1922 (National University). (*Signed by*) A. G. G. Leonard, A. O'Farrelly, Sydney Young.

LUCY, ALFRED, 16, Chesney Street, Battersea, London, S.W. 11. British. Junior Assistant Chemist. Twelve years' Practical Chemical experience in Works and Research Laboratories (*i.e.*, The Gas Lighting Improvement Co., Ltd.), etc. Chemistry student, attended classes up to and including the B.Sc. Standard in Theoretical and Practical Inorganic and Organic Chemistry. Battersea Polytechnic certificates for Inorganic Chemistry and Oils, Fats, and Waxes. (*Signed by*) William A. Godby, J. L. White, John Wilson.

MABBOTT, ERNEST EDWARD, 358, Fore Street, Edmonton, N. 9. British. Student. B.Sc. Engaged upon Organic Research work at East London College. (*Signed by*) J. R. Partington, E. E. Turner, A. T. Healey.

McDOWALL, DAVID, 2, Kennishead Road, Thornliebank, Glasgow. British. Process Supervisor, Calico Printers, Ltd., 8 years, Manager, McDowall, Morrison & Co., Ltd., Chemical Manufacturers, and interested in research on behalf of Chemical Industry and in connection with Manufacturing Chemistry. (*Signed by*) Robert Craig McDowall, W. McHutchison, Andrew S. Matchett.

MANSKE, RICHARD H. F., The University, Manchester. British. Research Student in Chemistry, Victoria University, Manchester. B.Sc. 1923. M.Sc. 1924. Queen's University, Kingston, Canada. 1851 Exhibition Scholar, 1924—from Canada. (*Signed by*) Arthur Lapworth, R. Robinson, J. Kalff.

MOIR, HUGH CLOUSTON, 7, Craigielea St., Dennistoun, Glasgow. British. Chemist. Bachelor of Science (Applied Chemistry), Glasgow University. Associate of the Institute of Chemistry. Presently employed as Chemist by Wm. Beattie, Ltd., Dennistoun Bakery, 116, Paton St., Glasgow. (*Signed by*) G. G. Henderson, T. S. Patterson, S. Horwood Tucker.

MORTON, RICHARD ALAN, 2, Lumley Street, Garston, Liverpool. British. University Lecturer (Inorganic Chemistry). B.Sc., Ph.D. (Liv.), A.I.C. Several papers, *J.C.S.*, *Jour. Phys. Chem.* (*Signed by*) E. C. C. Baly, Harold Rogerson, I. M. Heilbron.

MOULDS, FREDERICK WILSON, Hill Crest, Villa Road, Nottingham. British. Chemist and Druggist. Member of the Pharmaceutical Society. Chemist

in charge of the Laboratories of Messrs. Newball & Mason, Ltd., Nottingham, and a director of the firm. Late student of the University College, Nottingham, where I studied Chemistry and Pharmacy, also Industrial Bacteriology. (*Signed by*) F. S. Kipping, J. B. Firth, F. C. Laxton, Wm. H. Sims.

MYLES, ANDREW JOSEPH, 12, Gardner Rd., Tue Brook, Liverpool. British. Works Manager and Chemist. 20 Years' experience in Tar Distillation and research work on Roads Compositions. Have written and read papers on treatment of and construction of modern road surfaces. Designed a viscometer for tar and bituminous compositions. (*Signed by*) George Tate, George S. Irvine, Thomas J. Roberts.

NASH, ALFRED WILLIAM, 18, Prospect Rd., Moseley, Birmingham. British. Professor of Oil Engineering and Refining. B.Sc. degree for original researches on the "Pyrogenesis of Hydrocarbons." "The Berginisation of Coal and Oil," author, *Journ. Inst. Pet. Technologists*, Vol. **10**, 43. "Fuel Oil Resources of the Future," joint author, *Journ. Inst. Pet. Tech.*, Vol. **10**, 47. "Somerset Oil-shales," joint author, *Journ. Inst. Pet. Tech.*, Vol. **10**, 47. 1907–22, engaged in Oil Refineries—eventually General Manager. 1922–present, Birmingham University, Senior Lecturer, afterwards Professor. (*Signed by*) G. T. Morgan, A. E. Dunstan, Harold Harris.

OAKLEY, HENRY BOWEN, Wellcome Tropical Research Laboratories, Khartoum, Sudan. British. Assistant Government Research Chemist. Diploma of Imperial College. M.Sc. London. A.R.C.S. London. In conjunction with Prof. J. C. Philip, *J.C.S.*, 1924, **123**, 1189. (*Signed by*) A. F. Joseph, James C. Philip, M. B. Donald.

PALMER, EDGAR KENT, Rose Bank, Victoria Rd., Hale, Altrincham. British. Post-graduate research. Oct. 1919–July 1923, Student at College of Technology, Manchester, in full-time degree course in the Chemical Technology of Textiles. July 1923, Grad. B.Sc.Tech. June 1924, Research under Prof. E. Knecht, Ph.D., and at present the same. (*Signed by*) Frank Lee Pyman, Edmund Knecht, John K. Wood.

POMERANTZ, DAVID, 15, Nottingham Place, Commercial Rd., E. 1. British. Student. Inter B.Sc. Two years at Royal College of Science for the 3 years necessary for the associateship (Chemistry). Am now doing the honours course at West Ham M. C. (*Signed by*) H. Bogdanor, George Dean, R. S. Glennie.

RAWLINGS, HARRY, 15, Station Road, Ramsey, Huntingdon. British. Science master (Chemistry). B.Sc. Lond., 2nd Hons. Chemistry, 1921. Assistant Analyst, Messrs. Boots Pure Drug Co., Ltd., 1915–17. Unpublished research on organic derivs. of tin, under Prof. Kipping at Univ. Coll., Nottingham, 1921 and early 1922. Chemistry student at Univ. Coll., Nottingham, 1917 and 1919–22. Am at present working for M.Sc. (Lond.) [May 1925], and desire access to the Library of the Society. (*Signed by*) F. S. Kipping, E. B. R. Prideaux, J. B. Firth.

REED, JOHN BRENT, 49, St. Mildred's Rd., London, S.E. 12. British. Assistant Research Chemist in the Research Laboratories of the South Metropolitan Gas Coy. Bachelor of Science, London. Associate of the Institute of Chemistry of Gt. Britain and Ireland. Student at Birkbeck College for the degree of Doctor of Philosophy. (*Signed by*) George Senter, S. Sugden, Walter T. J. Morgan, S. Medsforth.

RHODES, WILLIAM GEORGE, Park View, 318, Granville Rd. Park, Sheffield. English. Senior Science Master, Firth Park Secondary School, Sheffield. (*Signed by*) C. K. Ingold, John Evans, A. S. Russell.

ROBERTSON, GEORGE JAMES, M.A., B.Sc., Ph.D., The Manse, Strathkinness,

St. Andrews, Fife. British. Assistant in Chemistry and Carnegie Teaching Fellow in the University of St. Andrews. A thesis entitled "Investigations on Cellulose." Conjoint paper read by Principal Irvine before the American Chemical Society. (*Signed by*) J. C. Irvine, John Read, G. M'Owan.

SALMON, ROBERT JOSEPH, C.M.S. Medical Training College, Hangchow, Chekiang, China. British. Lecturer in Chemistry, Medical Training College, Hangchow. M.Sc. Manchester. (*Signed by*) Arthur Lapworth, Frederick Challenger, John F. Wilkinson, Harold Mastin, D. H. Bangham, Fred Fairbrother.

SHEPHERD, JOHN ROBERT, Lady Hall Farm, Broughton-in-Furness, Lancs. British. Chemist. M.Sc. (London) in Chemistry. A.I.C. (*Signed by*) Robert H. Pickard, J. Kenyon, J. L. White, A. Houssa, Harold Hunter.

SINGH, TERRAIN, alias PREM CHANDRA SHARMA, Engineering College Hostel, Benares Hindu University. Indian. M.Sc. Demonstrator in the Department of Industrial Chemistry of B.H.U. M.Sc. of the Benares Hindu University with a thesis on "The Effect of the Size of the Soil-particles and Electrolytes on the Equilibrium of Moisture between the Seed and the Soil." (*Signed by*) Phuldeo Sahay Varma, S. S. Bhatnagar, N. R. Dhar.

SMITH, ALAN LAWRENCE, Bank House, 22, Dean St., Blackpool. British. *Trans. Chem. Soc.*, 1923, **123**, 1046–1055, "The Interaction of Hydrogen Sulphide, Thiocyanogen and Thiocyanic Acid on Unsaturated Compounds." M.Sc., Victoria University. (*Signed by*) Henry Stephens, Frederick Challenger, F. P. Burt, D. H. Bangham, Fred Fairbrother, John F. Wilkinson.

THORN, GEORGE, Grove House, Beechen Grove, Watford. British. Science Master, Boys' County School, Harrow. B.Sc. (Bristol). (*Signed by*) F. Francis, J. W. McBain, F. W. Rixon.

TOWNSEND, LEONARD WILLIAM ERNEST, 35, Harewood Rd., Collier's Wood, Merton, S.W. 19. British. Assistant Chemist at the South Metropolitan Gas Co., 709, Old Kent Rd., S.E. Student, five years' laboratory training. (*Signed by*) S. Medsforth, E. de Barry Barnett, P. C. L. Thorne.

WALKER, LESLIE JOHN, 45, Devereux Road, Wandsworth Common, S.W. 18. British. Student at the School of Pharmacy of the Pharmaceutical Society of Gt. Britain, 17, Bloomsbury Sq., W.C. 1. Pharmacist, have passed Qualifying Exam. of Pharmaceutical Society of Gt. Britain. Chemistry is included in this Exam., and it is my intention to continue studies in same. At present studying for Major Exam. of Pharmaceutical Society. (*Signed by*) C. E. Corfield, F. Browne, F. H. Lowe.

WALKER, THOMAS KENNEDY, 4, Swythamley Road, Cheadle Heath, Stockport. British. Research Chemist to the Institute of Brewing, Research Scheme Committee. Degrees: M.Sc., Ph.D., Victoria University of Manchester. Fellow of the Institute of Chemistry. Two years' research for the Admiralty, and for two years as Assistant Chemist to Sir R. Robertson, F.R.S., in the Research Department, Royal Arsenal, Woolwich. Three years' research in Organic Chemistry with Professor A. Lapworth, F.R.S., at Manchester University. For the past three years I have been assisting Professor F. L. Pyman, F.R.S., in investigations on the preservative principles of hops under the Institute of Brewing Research Scheme. Publications: "Preparation of Sodium Ethoxide from Caustic Soda" (*Journ. Soc. Chem. Ind.*, 1921, **40**, 172T); "Condensation of Aryldiazonium Salts with Monoalkylated Malonic Acids" (*J.*, 1923, **123**, 2775); "Condensation of Aryldiazonium Salts and of Alkyl Nitrites with Cyanoacetic Acid Derivatives" (*J.*, 1924, **125**, 1622); five other papers dealing with the antiseptics of hops, of which one was published jointly with Professor Pyman and Harold Roger-

son, Esq. (*Journ. Inst. Brew.*, 1922, **19**, 929; 1923, **20**, 373; 1924, **21**, 570, 712). (*Signed by*) Frank Lee Pyman, Fredk. M. Rowe, Jas. Grant.

WATERS, WILLIAM ALEXANDER, 35, Shirley Road, Cardiff. British. Research Student in Chemistry (Resident B.A. of Gonville and Caius College, Cambridge). Cambridge Natural Sciences Tripos, Part I, Class I, Cambridge Natural Sciences Tripos, Part II (Chemistry), Class I. Shuttleworth Research Studentship in Chemistry at Caius College, Cambridge. (*Signed by*) Hamilton McCombie, Harold A. Scarborough, Eric K. Rideal.

WATSON, JAMES BERNARD, 30, Mulgrave Road, West Hartlepool. British. Metallurgical Chemist. Four years in the laboratory of the Technical College, West Hartlepool. Seven years as chemist in the Chemical and Metallurgical laboratory of the Central Marine Engine Works, West Hartlepool. (*Signed by*) J. W. Patterson, Gilbert Palmer, D. Arthur Ruell.

WATTS, ERNEST SWANN, "Eaglesfield," Limefield Road, Kersal, Manchester. British. Chief Chemist, E. Griffiths Hughes, Ltd., Manchester. Qualifying Examination of the Pharmaceutical Society of Great Britain. (*Signed by*) S. Ernest Melling, Harry Brindle, Chas. Turner.

WHAMOND, ARCHIBALD STEELE, 22, Church St., Alloa, Clackmannanshire. British. Analytical Chemist. Studied Chemistry at Heriot Watt College, Edinburgh, Day and Evening Classes, 1911–1914. March 1914–Nov. 1923, Assistant Chemist, Messrs. Wm. McEwan & Co., Ltd., Edinburgh (Army Service, Sept. 1914–Jan. 1919). Nov. 1923–present time, Chief Chemist, Messrs. Geo. Younger & Son, Ltd., Alloa. (*Signed by*) John M. Guthrie, A. Scott Dodd, John Doull.

WOODCOCK, EDWIN JOHN, "Stonecot," Claremont Hill, Jersey, C.I. British. Assistant Official Analyst. For the past 28 years Assistant to F. W. Toms, Esq., F.I.C., Official Analyst of Jersey, namely, the first five years as private assistant and since then as senior assistant analyst to the States of Jersey. (*Signed by*) F. W. Toms, Bernard Dyer, Alex. K. Miller, F. G. P. Remfry, G. Neville Huntly, R. Le Rossignol.

WORTHINGTON, JOHN STANLEY, 27, Rowena St., Great Lever, Bolton. British. Works Chemist. Experience in manufacture of Heavy Chemicals at Messrs. John Smith Junr. & Co., Ltd., Great Lever Chemical Works, Bolton, since 1908. Student in Advanced Chemical Tech. at Manchester College of Technology. At present have control of large Sulphuric Acid Plant. (*Signed by*) Arthur Worthington, Frank Lee Pyman, T. Trevor Potts.

The following Certificates have been authorised by the Council for presentation to ballot under Bye-Law I (2):

BELL, JAMES MUNSIE, Dept. of Chemistry, Univ. of North Carolina, Chapel Hill, N.C., U.S.A. Canadian. Professor of Chemistry. Head of Chemical Department, University of N. Carolina. Formerly in Bureau of Mines, Washington, D.C., U.S.A. Numerous original publications, chiefly in the *Journal of the American Chemical Society*. (*Signed by*) James W. McBain.

CAMERON, JOHN, Peking Union Medical College, Peking, Chihli, North China. British (Scotch). Pharmacist to the above-named institution. Member of the Pharmaceutical Society of Great Britain. Publications as per attached list to date (17 articles). Instructor in Pharmacy in British Army in France, 1917–18. Lecturer in Pharmacy and Materia Medica in Peking Union Medical College, 1920–25. (*Signed by*) A. E. Newland.

MCINTYRE, GORDON, Sarnia, Ontario, Canada. Canadian. Chemist and Petroleum Technologist. Graduate McGill University, B.Sc., Ch.E. Chief

Chemist, Imperial Oil Refineries, Limited. (*Signed by*) Alfred Stansfield, Harold J. Roast.

THOMAS, Professor KARL, M.D., Leipzig, Liebig str. 16. German. Professor ordinar. für physiologische Chemie an der Universität, Leipzig, seit 1921. Mitarbeiter von Hoppe-Seylers Zeitschrift für physiologische Chemie (herausgegeben v. Kossel) und der Biochemischen Zeitschrift (herausgegeben von Neuberg). Schüler von W. Wislicenus, H. Thierfelder und Max Rubner, Mitglied der Biochemical Society. (*Signed by*) George Barger, Robert Robinson.

ADDITIONS TO THE LIBRARY.

I. *Donations.*

DUPARC, LOUIS, and BASADONNA, M. Manuel théorique et pratique d'analyse volumétrique. 2nd edition. By LOUIS DUPARC and PAUL WENGER. Paris 1925. pp. 214. ill. 18 *fr.* (*Recd.* 18/3/25.) From the Publisher: M. Payot.

FRANZEN, HANS. Margarine. (Chem. Tech. in Einzeldarstellungen.) Leipzig 1925. pp. viii + 100. ill. *Gm.* 10. (*Recd.* 31/3/25.) From the Publisher: Herr Otto Spamer.

INDUSTRIAL CHEMIST and chemical manufacturer: a journal devoted to the progress of applied chemistry and chemical engineering. Vol. I, etc. London 1925 +. (*Reference.*)

PROCEEDINGS

OF THE

CHEMICAL SOCIETY.

Ordinary Scientific Meeting, Thursday, May 7th, 1925, at 8 p.m., Professor J. C. PHILIP, O.B.E., D.Sc., F.R.S., Vice-President, in the Chair.

The CHAIRMAN referred to the loss sustained by the Society, through death, of the following Fellows:

	Elected.	Died.
Edward Wightman Bell	June 20th, 1889.	Jan. 29th.
Arthur Boake	Dec. 2nd, 1875.	April 12th.
William Dugdale Harland	Feb. 7th, 1878.	April 23rd.
Sir David L. Salomons	May 4th, 1876.	April 19th.
George Young	Dec. 4th, 1890.	April 3rd.

The CHAIRMAN announced:

1. That the following address of congratulation had been sealed and would be presented to the Royal University of Pavia on the occasion of the Centenary Celebrations of that University which were being held from May 20th to 22nd, 1925:

To the Rector, Senate, Professors, and Alumni of the Royal University of Pavia from The Chemical Society.

The Chemical Society sends cordial greetings and felicitations to the illustrious University of Pavia on the completion of no less than eleven centuries of high service to mankind.

As representatives of a Science rooted in antiquity, we gratefully acknowledge the debt we owe to the members of your University who throughout the ages preserved ancient learning and extended the boundaries of knowledge, giving to us our heritage. We do not forget that the celebrated Lanfranc, one of your earliest and greatest teachers, carried the torch of learning to our country as Archbishop of Canterbury. Since her foundation the University of Pavia has given to the world many men distinguished for learning

and science—Alexander Volta, who pointed out new paths which now we follow, Camillus Golgi, the great neurologist, and many others whose genius we gratefully acknowledge.

We join with those who will be hastening from all parts of the world to lay before you their tribute of praise, and we hope that in the future renewed prosperity will be added to your illustrious past.

Signed on behalf of the Chemical Society.

ARTHUR W. CROSSLEY, *President.*
JOCELYN THORPE, *Treasurer.*
(L.S.) T. SLATER PRICE, C. S. GIBSON, } *Secretaries.*
F. G. DONNAN, *Foreign Secretary.*

Sealed this Seventh day of May, One Thousand Nine Hundred and Twenty Five.

2. That a copy of the works of the late Walthère Spring had been presented to the Library by the Belgian Chemical Society, and that this volume can be purchased from Monsieur J. Wauters, Secrétaire, Société Chimique de Belgique, 83, Rue Souveraine, Brussels, price 40 francs, post free.

The following were formally admitted Fellows of the Chemical Society: Alan D. Whitehead, Stuart R. Parsons, Leslie S. Theobald, J. F. J. Rule, and A. H. B. Bishop.

Certificates were read for the first time in favour of:

Maung Hla Baw, R-1, 64th Street, Danneedaw, Rangoon.
Joseph John Blackie, c/o Messrs. Duncan, Flockhart & Co., 104, Holyrood Road, Edinburgh.
Samuel Cyril Blacktin, M.Sc., 173, Ecclesall Road South, Sheffield.
Nirmal Boran Brohmachary, B.Sc., Ghugudanga-Post, 24, Porganas, Calcutta.
Gertrude Margaret Bullick, B.Sc., 43, Belsize Park, Hampstead, N.W. 3.
Ralph Edgar Cable, Queen's Gardens, Hong Kong.
Leslie Marshall Clark, B.A., Ph.D., A.I.C., 38, Park Road, Hampton Wick.
Clive Kear Colwell, B.A., Ormesty, Great North Road, N. 2.
Jan Coops, 25, Sireelinckplein, The Hague, Holland.
William George Corderoy, B.Sc., 35, Century Road, Walthamstow, E. 17.
Oswald Pilkington Cronshaw, 141, Blackburn Road, Great Harwood, Blackburn.
John Alexander Currie, B.A., B.Sc., 44, Phillimore Gardens, W. 8.
Thomas Dillon, University College, Galway.
Octave Charles Marie Dony, 30, Rue Émile Banning, Brussels.
William Edward Gibbs, D.Sc., 4, Stanley Villas, Runcorn.
Ernest Hartshorne, B.Sc.Tech., 12, Muriel Street, Broughton.
Arthur Harvey, 12, Chaldon Road, Fulham, S.W. 6.
Charles Richard Hennings, Ph.D., 19, St. Dunstan's Hill, E.C. 3.
Noel Waterman Vere Jones, Eastnook, Pakefield, Lowestoft.
Frank William Linch, M.Sc., F.I.C., 89, Hazelbottom Road, Cheetham, Manchester.

Charles Lipshaw, 48, Lower Broughton Road, Salford.
James Arthur Prescott, The University, Adelaide.
Malik Karam Singh, B.Sc., Rawalpindi City, India.
Norman Heath Smith, B.Sc., Anglo-Persian Oil Co., Ltd., Abadan.
John Thurgood, B.Sc., Roseleigh, Elmwood Avenue, Harrow.
Shojiro Uchida, 12, Shinryudo-Machi, Azabu-Ku, Tokio.
John Henry Walker, A.I.C., Gourepore Works, Naihati, E.B.Ry., Bengal.

Messrs. H. Burton and J. N. Sugden were elected Scrutators, and a ballot for the election of Fellows was held, the following subsequently being declared elected as Fellows:

James Munsie Bell.
Niels Janniksen Bjerrum.
Archibald Beresford Blunsden.
Geoffrey Alger Blyde.
Thomas Henry Bowles.
William Harrison Brindley, M.C., M.A., M.Sc.Tech., A.I.C.
James Lindsay Buchan, B.Sc.
Frank Henry Charles Bull, B.Sc., A.I.C.
John Alfred Valentine Butler, M.Sc.
Annie Lavinia Byford, B.Sc.
John Cameron.
James Herbert Clegg.
Horace Cecil Cockroft, B.Sc., A.I.C.
Francis Xavier Coyne.
James Craik, M.A., B.Sc., Ph.D.
Herbert Greetham Dane, M.Sc.
Harry Dean.
Margaret Stedman Leonora Dixon.
Robin George Westbury Farnell, A.R.C.S., A.I.C.
Irvine John Faulkner.
Thomas Flett, B.Sc., A.I.C.
Thomas James Elijah Gardner.
Richard Randolph Garran, B.Sc.
John Charles Giblin, B.Sc., A.I.C.
Helen Simpson Gilchrist, B.Sc., Ph.D.
Isabel Hodgson Hadfield, M.Sc.
James Francis Halpin, F.I.C.
Donald Hanson.
Thomas Haworth.
John Stanley Heaton, B.Sc., Ph.D.
John Cyril Hensman, M.A., A.I.C.
Joseph Hill.
Frederick Denison Maurice Hocking, M.Sc., A.I.C.
Jim Hoyle.
Horace William Hughes, B.Sc.
Joseph Taylor Jackson, B.Sc.
David Bret Jehu, M.Sc., A.I.C.
William Jobson.
Clifford Merton Jones, B.Sc.
Thomas William Jones, B.Sc.
John Keane, M.Sc., Ph.D.
Alfred Lucy.
Ernest Edward Mabbott, B.Sc.
David McDowall.
Gordon McIntyre, B.Sc., Ch.E.
Richard H. F. Manske, M.Sc.
Hugh Clouston Moir, B.Sc., A.I.C.
Richard Alan Morton, B.Sc., Ph.D., A.I.C.
Frederick Wilson Moulds.
Andrew Joseph Myles.
Alfred William Nash, B.Sc.
Henry Bowen Oakley, M.Sc., A.R.C.S.
Edgar Kent Palmer, B.Sc.Tech.
David Pomerantz.
Harry Rawlings, B.Sc.
John Brent Reed, B.Sc., A.I.C.
William George Rhodes.
George James Robertson, M.A., B.Sc., Ph.D.
Robert Joseph Salmon, M.Sc.
Prem Chandra Sharma, M.Sc.
John Robert Shepherd, M.Sc., A.I.C.
Alan Lawrence Smith, M.Sc.
Karl Thomas, M.D.
George Thorn, B.Sc.
Leonard William Ernest Townsend.
Leslie John Walker.
Thomas Kennedy Walker, M.Sc., Ph.D., F.I.C.
William Alexander Waters, B.A.
James Bernard Watson.
Ernest Swann Watts.
Archibald Steele Whamond.
Edwin John Woodcock.
John Stanley Worthington.

The following papers were read:

"The tautomerism of dyads. Part III. The effect of the triple linking on the reactivity of neighbouring atoms." By Mrs. E. H. INGOLD.

"The rotatory dispersive power of organic compounds. Part XVI. Halogen-derivatives of camphor." By J. O. CUTTER, H. BURGESS, and T. M. LOWRY.

"The isomerism of the oximes. Part XXII. The configuration of the aldoximes." By O. L. BRADY and G. BISHOP.

"The parachor and chemical constitution. Part I. Polar and non-polar valencies in unsaturated compounds." By S. SUGDEN, J. B. READ, and H. WILKINS.

"The tautomerism of dyads. Part IV. New evidence of the tautomeric mobility of oximes." By J. P. GRIFFITHS and C. K. INGOLD.

Ordinary Scientific Meeting, Thursday, May 21st, 1925, at 8 p.m., Professor W. P. WYNNE, D.Sc., F.R.S., Vice-President, in the Chair.

The CHAIRMAN referred to the loss sustained by the Society, through death, of the following:

	Elected.	Died.
Albin Haller (Honorary Fellow)	Feb. 6th, 1908.	May 1st.
Samuel Henry Davies	Feb. 15th, 1894.	May 9th.
John Mylne Mullaly	May 4th, 1922.	May 4th.

It was also announced that the Celebration of the Centenary of Faraday's discovery of benzene, which is being arranged by the Royal Institution in association with the Chemical Society, the Society of Chemical Industry, and the Association of British Chemical Manufacturers, will take place at the Royal Institution on Tuesday, June 16th, 1925. In the morning, at eleven o'clock, there will be a reception by the Duke of Northumberland of English and foreign delegates, and several short addresses will be delivered commemorative of Faraday's chemical work. In the evening, a banquet will be held in the Goldsmiths' Hall, the price of the tickets being £2 2*s*. each, including wine. Application for tickets for the reception and for the banquet, which are limited in number, should be made to the Secretary, The Royal Institution, Albemarle Street, W. 1.

Mr. H. G. Dane was formally admitted a Fellow of the Chemical Society.

Certificates were read for the first time in favour of:

Marion Alice Battie, B.Sc., A.I.C., The Orchard, Ivy Lane, Woking.
William Ambler Berry, B.Sc., 19, Blakeney Road, Sheffield.

Thomas Anthony Canning, Crindau Gas Works, Newport, Mon.
John Carroll Culbert, 172, North Road, Belfast.
Alexander John Dey, F.R.S.E., Rothiemay, Corstorphine, Edinburgh.
Stanley James Featherston, 33, Belmont Road, Beckenham.
James Hindle, 4, Plane Street, Blackburn.
Thomas Moore, B.Sc., 8, Cyprus Avenue, Belfast.
Alexander John Morrison, Testing Branch, Public Works Department, Sydney, N.S.W.
Frank Richard Morrison, Brae Street, Waverley, Sydney, N.S.W.
Ernest Charles Padgham, 30, Churchill Road, N.W. 2.
John Monteath Robertson, B.Sc., A.I.C., The Chemistry Department, The University, Glasgow.
Ernest Henry Warren, B.A., 1, Chamber's Lane, Willesden Green, N.W. 10.
James Watt, F.R.S.E., Craiglockhart House, Slateford, Edinburgh.
William John Willis, Hazel Mount, Carnforth.

The following Certificates have been authorised by the Council for presentation to ballot under Bye-Law I (2):

Howard Ecker, 1510, Dana Avenue, Cincinnati, Ohio, U.S.A.
William Beesley, Binnyston Gardens, Bangalore, India.
Alexander Smith, P.O. Box 103, Nairobi, Kenya Colony.

The following papers were read:

"The rotatory dispersion of derivatives of tartaric acid. Part II. Acetyl derivatives." By P. C. Austin and J. R. Park.

"The stability of additive compounds between esters and acids." By J. Kendall and J. E. Booge.

"Additive compounds in the ternary system, acid–ester–water." By J. Kendall and C. V. King.

"A spectroscopic study of the combustion of phosphorus trioxide and of phosphine." By H. J. Emeléus.

"The nature of the alternating effect in carbon chains. Part III. A comparative study of the directive efficiencies of oxygen and nitrogen atoms in aromatic substitution." By E. L. Holmes and C. K. Ingold.

LIST OF FELLOWS, 1925.

It has been decided to print the List of Fellows for 1925 and to supply the List to those Fellows who make application to the Assistant Secretary by the 31st July, 1925.

BERICHTE, 1915 to 1924.

Sets of the Berichte from 1915 to 1924 (10 years) are now offered to Fellows of the Society at £22, carriage extra. Application should be made to Mr. S. E. Carr.

List of Papers, or Abstracts thereof, received between April 3rd and May 21st, 1925. (This List does not include the titles of papers which have been read at a Scientific Meeting, or which have appeared in the Journal.)

"The ionisation of aromatic nitro-compounds in liquid ammonia." By M. J. FIELD, W. E. GARNER, and C. C. SMITH.

"α-Acenaphthoquinoline." By J. STEWART.

"Alcohols of the hydroaromatic and terpene series. Part IV. α- and β-Fenchyl alcohols and some esters derived therefrom." By J. KENYON and H. E. M. PRISTON.

"Perkin's reaction." By T. HOPKINS.

"Action of zinc alkyl halides on nitric esters." By T. HOPKINS.

"Polynuclear heterocyclic aromatic types. Part II. Some anhydronium bases." By J. W. ARMIT and R. ROBINSON.

"β-Piperonylpropionitrile and some derived substances." By W. BAKER and R. ROBINSON.

"The melting points of benzene derivatives." By T. BEACALL.

"Nitrosation of phenols. Part II. 3-Bromo-, 2-bromo-, 3-iodo-, and 2-iodo-phenols, with evidence favouring the nitroso form for 4-nitroso phenol." By H. H. HODGSON and F. H. MOORE.

"The Kekulé formula for benzene and the existence of isomeric ortho disubstitution products." By H. H. HODGSON and J. H. WILSON.

"A new method of diagnosing potential optical activity. Part I. The optical activity of chlorobromomethanesulphonic acid." By J. READ and A. M. MCMATH.

"The carboxy-phenyl camphoramic acids." By M. SINGH and R. SINGH.

"A simplified method of micro-combustion: the micro-Dennstedt method." By C. FUNK and S. KON.

"Interfacial tension." By J. R. POUND.

"Low temperature oxidation at charcoal surfaces. Part I. The behaviour of charcoal in the absence of promoters." By E. K. RIDEAL and W. M. WRIGHT.

"Osmotic pressure by the solubility method in concentrated solutions." By M. P. APPLEBEY and P. G. DAVIES.

"Synthetical experiments in the naphthyridine groups." By J. M. GULLAND and R. ROBINSON.

"Chlorobenzothiazole dibromide." By R. F. HUNTER.

"Note on the action of sodium of chlorobenzothiazole." By R. F. HUNTER.

"Investigations into the analytical chemistry of tantalum, niobium, and their mineral associates. Part III. A new method for

the separation of tantalum from niobium. Part IV. The detection and determination of tantalum in niobium compounds." By A. R. POWELL and W. R. SCHOELLER.

"The conditions underlying the formation of unsaturated and cyclic compounds from halogenated open-chain derivatives. Part VII. The influence of the phenyl group on the formation of the *cyclo*propene ring." By W. HAERDI and J. F. THORPE.

"Rapid determination of copper and iron in mixtures of their salts." By A. S. RUSSELL.

"The bromination of 4'-amino-1-phenyl-5-methyl benzothiazole and of 1 : 1-bisbenzothiazole." By R. F. HUNTER.

"Amino benzothiazoles. Part I. 1-Phenylamino benzothiazole and its homologues." By R. F. HUNTER.

"The directing influence of the methane sulphonyl group." By R. F. TWIST and S. SMILES.

"The dissociation constants of selenious acid." By J. S. WILLCOX and E. B. R. PRIDEAUX.

"The velocity of benzylation of certain amines. Part II." By D. H. PEACOCK.

"Measurements of energy absorption of certain photo-chemical reactions with iodine." By B. K. MUKERJI and N. DHAR.

"The action of hydrogen peroxide on limonene." By J. SWORD.

"Synthetical experiments in the *iso*quinoline group. Part I." By R. D. HAWORTH and W. H. PERKIN.

"Synthetical experiments in the *iso*quinoline group. Part II." By R. D. HAWORTH, W. H. PERKIN, and J. RANKIN.

"Synthetical experiments in the *iso*quinoline group. Part III." By R. D. HAWORTH and W. H. PERKIN.

"Synthetical experiments in the *iso*quinoline group. Part IV." By R. D. HAWORTH and W. H. PERKIN.

"Synthesis of ψ-protoberberine and ψ-protopapaverine." By J. S. BUCK, W. H. PERKIN, and T. S. STEVENS.

"Note on a laboratory method of preparing *p*-benzoquinone." By R. CRAVEN and W. A. T. DUNCAN.

"Hydroxybenzils." By J. T. MARSH and H. STEPHEN.

"Researches on sulphuryl chloride. Part III. Influence of catalysts on the chlorination of toluene." By O. SILBERRAD, C. A. SILBERRAD, and B. PARKE.

"The adsorption of water from the gas phase on plane surfaces of glass and platinum." By I. R. MCHAFFIE and S. LENHER.

"The action of phosphorus pentachloride on 2-*iso*nitroso-1-hydrindones." By R. D. HAWORTH and H. S. PINK.

"Oxidation products of oleic acid. Part I. Conversion of oleic acid into dihydroxystearic acid and the determination of the

higher saturated acids in mixed acids from natural sources." By A. LAPWORTH and E. N. MOTTRAM.

"The spatial structure of *cyclo*paraffins. Part I. A new aspect of Mohr's theory and the isomerism of decahydronaphthalene." By W. A. WIGHTMAN.

"The absorption spectra of the vapours of anthracene and anthraquinone, phenanthrene, and phenanthraquinone, and other quinones." By J. E. PURVIS.

"Investigations on the dependence of rotatory power on chemical constitution. Part XXVII. Some esters of *p*-toluene-sulphonic and -sulphinic acids." By H. PHILLIPS.

"Oxidations in turpentine and olive oil." By E. WALKER.

"Colour and molecular geometry. Part IV. Explanation of the colours of the cyanine dyes." By J. MOIR.

"The surface tensions of aqueous phenol solutions. Part II. Activity and surface tension." By A. K. GOARD and E. K. RIDEAL.

"Triad groups in complexes of octahedral symmetry." By J. D. M. Smith.

"*Iso*quinoline derivatives. Part IX. Preparation and reduction of *iso*quinoline and its derivatives." By R. FORSYTH, C. I. KELLY, and F. L. PYMAN.

"The nitration of *m*-meconine." By J. N. RÂY and R. ROBINSON.

"Chenopodium oil. Part II. The hydrocarbon fraction." By T. A. HENRY and H. PAGET.

"The amino-γ-pyridones." By W. H. CROWE.

"Studies of the glucosides. Part III. The synthesis of thioindican." By J. CRAIK and A. K. MACBETH.

"The reduction of the bromoanthraquinones." By E. DE B. BARNETT and J. W. COOK.

"The chlorination of acetanilide and the chloroamine-chloroanilide transformation." By F. G. SOPER.

"The thermal decomposition of ozone." By R. O. GRIFFITH and A. MCKEOWN.

"Studies of electrolytic polarisation. Part III. The diffusion layer." By S. GLASSTONE.

"Theories of polar and non-polar free affinities. A practical and theoretical reply to some recent criticisms and comparisons." By G. N. BURKHARDT and A. LAPWORTH.

"The reaction between sodium hypobromite and urea." By M. B. DONALD.

"Echitamine." By J. A. GOODSON and T. A. HENRY.

"The preparation of phthalamic acids and their conversion into anthrenilic acids." By E. CHAPMAN and H. STEPHEN.

"An *X*-ray examination of maleic and fumaric acid." By K. YARDLEY.

"The estimation of arsenic in organic compounds." By G. NEWBERY.

"The bromination of acyl derivatives of phenylhydrazine: the preparation of 2 : 4-dibromophenylhydrazine." By J. E. HUMPHRIES and R. EVANS.

"The system chromium trioxide–boric acid–water." By L. F. GILBERT.

CERTIFICATES OF CANDIDATES FOR ELECTION AT THE BALLOT TO BE HELD AT THE ORDINARY SCIENTIFIC MEETING ON THURSDAY, JUNE 18TH, 1925.

BATTIE, MARION ALICE, The Orchard, Ivy Lane, Woking, Surrey. British. Post-graduate student. B.Sc. Honours (Chemistry), Class II. Associate of the Institute of Chemistry. (*Signed by*) T. S. Moore, Mary Boyle, S. Smiles.

BAW, MAUNG HLA, R-1, 64th Street, Danneedaw, Rangoon. Burmese. Analytical Chemist, Messrs. E. M. D'Souza & Co., Rangoon, and Science Master, St. John's College, Rangoon. Passed the Intermediate Examination in Science of the Calcutta University in 1916, taking Chemistry, Physics, and Mathematics. Process Chemist (1916 to 1921) at the Seikkyi Refinery of Messrs. The Indo Burma Petroleum Co., Ltd.; and Process Chemist (1922) in the acid works of The Burma Chemical Industries, Ltd. Process Chemist (1923) with The Rangoon Pharmaceutical and Chemical Works, Rangoon. Since 1924 chemist in charge of the analytical laboratory of Messrs. E. M. D'Souza & Co., Rangoon, and Science Master, St. John's College, Rangoon. (*Signed by*) Maung Tun Tin, Maung Ba, Maung Ba San.

BERRY, WILLIAM AMBLER, 19, Blakeney Rd., Sheffield. British. Research Student at University of Sheffield. B.Sc., Hons. Chem., 1924. Joint author with Dr. G. M. Bennett of the Note, *J.C.S.*, 1925, **127**, 910. (*Signed by*) W. P. Wynne, T. M. Lowry, G. M. Bennett, F. G. Tryhorn.

BLACKIE, JOSEPH JOHN, c/o Duncan, Flockhart & Co., 104, Holyrood Road, Edinburgh. British. Pharmaceutical Chemist. Minor and Major Examination, Pharmaceutical Society of Great Britain. Laboratory Manager of Messrs. Duncan, Flockhart & Co., Manufacturing Chemists, Edinburgh. Examiner in Chemistry of the Pharmaceutical Society of Great Britain. (*Signed by*) George Barger, William Duncan, Eric Knott.

BLACKTIN, SAMUEL CYRIL, 173, Ecclesall Road South, Sheffield. British. Research Assistant. (Junior Assistant, Safety in Mines Research Laboratories, Badger Lane, Sheffield.) M.Sc. (Sheffield). (*Signed by*) W. P. Wynne, F. G. Tryhorn, J. Kenner.

BLIGH, NEVILLE MELTON, 67, Castle Road, Bedford. British. Science Master. A.R.C.S. (Chemistry), London, 1921. A.I.C., 1923. Formerly Senior Science Master, Wimborne Grammar School, Dorset. At present (Temporary) Senior Science Master, Stevenage Grammar School, Herts. (*Signed by*) H. B. Baker, James C. Philip, M. A. Whiteley.

BORLAND, HUGH ALEXANDER MILLAR, 14, Cotham Road, Bristol. British.

Teacher of Chemistry. A.R.C.S. (Lond.). M.Sc. (Bristol). Lecturer on Chemistry 1896 to present date (Secondary and Technical). Lecturer on Applied Chem., University of Bristol, 1910–19. (*Signed by*) Arthur Marsden, F. Francis, J. W. McBain, F. W. Rixon.

BROHMACHARY, NIRMAL BORAN, Ghugudanga-Post 24 Porganas, Calcutta, India. Hindu (Indian). Chemist to Messrs. B. K. Paul's Chemical and Pharmaceutical Works, Dum Dum, Calcutta. Passed the B.Sc. examination of the Calcutta University in 1920. Worked as an analytical and manufacturing chemist. Assistant of Messrs. Smith, Stanistreet & Co. for 2 years, and at present working as the Chemist for Messrs. B. K. Paul & Co. (for last three years). (*Signed by*) Dhirendra Nath Mukerji, Sudhindranarayan Ray, R. L. Jenks.

BULLICK, GERTRUDE MARGARET, 43, Belsize Park, Hampstead, N.W. 3. British. Hons. Student in Chemistry, Bedford College, Univ. of London. Graduate of Lond. Univ. B.Sc., June, 1924. (*Signed by*) Holland Crompton, J. F. Spencer, M. S. Crewdson, J. Stewart.

CABLE, RALPH EDGAR, Queen's Gardens, Hong Kong. English. Apothecary, Medical Department, Hong Kong. Lecturer (part time), University of Hong Kong, Med. Faculty, Practical Pharmacy. (*Signed by*) R. W. E. Stickings, A. J. Ewins, G. Newbery, P. Blenkinsop.

CANNING, THOMAS ANTHONY, Crindau Gas Works, Newport, Mon. English. Gas and Chemical Engineer, now General Assistant Technical Engineer to the Newport (Mon.) Gas Company. Certificates in Chemistry granted by Institution of Gas Engineers. Engaged 7 years in Gas Manufacture and allied work and the chemistry of same. I desire to become a Fellow of the Chemical Society in order to keep in touch with current chemical literature. (*Signed by*) Geo. R. Thompson, H. E. Cox, J. H. Canning.

CLARK, LESLIE MARSHALL, 38, Park Rd., Hampton Wick, Kingston-on-Thames. English. Chemist, National Physical Laboratory, Teddington. Late Scholar and Research Scholar, Sidney Sussex College, Cambridge. Late Assistant Demonstrator, Cambridge University Chemical Laboratory. B.A., Cantab. Ph.D., London. Associate of Institute of Chemistry. Joint author of papers in *J.C.S.*, 1923, **123**, 2353, and 2362. (*Signed by*) M. Johnson, Guy Barr, Percy G. Ward.

COLWELL, CLIVE KEAR, Ormesty, Great North Road, N. 2. English. Analytical and Consulting Chemist. B.A., Cantab. Paper in conjunction with A. J. Berry, M.A., in Chemical News. (*Signed by*) A. H. M. Muter, Cyril Dickinson, J. Kear Colwell.

COOPS, JAN, den Haag, 25 Sireelinckplein. Dutchman. Dr. ir. Delft. Assistant, Commercial University, Rotterdam. Author of some papers in *Rec. trav. chim.*, 1920, 1921, 1922, 1923, 1924, 1925, *Chem. Weekblad*, and *Kon. Akad. van Weten. Amsterdam*, etc. (*Signed by*) H. J. Backer, Ernest Cohen, A. Smits.

CORDEROY, WILLIAM GEORGE, 35, Century Rd., Walthamstow, E. 17. British. Student for Teaching Profession (entering profession next Sept.). 1st Honours (Chem.), B.Sc. (Lond.). [Studied at East London College, 1921–24.] (*Signed by*) J. R. Partington, E. E. Turner, D. C. Jones, Elwyn Roberts.

CRONSHAW, OSWALD PILKINGTON, 141, Blackburn Road, Great Harwood, near Blackburn. British. Chemist and Assistant Gas Engineer, Accrington District Gas and Water Board. For past 3 years Chief Chemist to the Accrington District Gas and Water Board, having full chemical control of all gas manufacturing operations, the manufacture of sulphate of ammonia,

etc. Hold 1st Class Certificates Gas Manufacture (City and Guilds). Distinction in Inorganic Chemistry (Lanc. and Cheshire Inst.). 1st Class Certificate Inorganic and Organic Chemistry at Blackburn College of Technology. Associate Member of Institution of Gas Engineers. (*Signed by*) James Booth, John S. Morrison, Robert C. McDowall.

CULBERT, JOHN CARROLL, 172, North Road, Belfast. British. Pharmacist. Pharmaceutical Chemist, Member of Pharm. Society of Ireland, ex-Member Council of Pharm. Society of Ireland. (*Signed by*) George Scott Robertson, W. H. Gibson, Henry Wren.

CURRIE, JOHN ALEXANDER, 44, Phillimore Gardens, London, W. 8. British. Student. Honours B.A., Chemistry, and B.Sc., Oxford. Now researching under Professor Donnan at University College, London. (*Signed by*) F. G. Donnan, W. E. Garner, C. W. Bonniksen.

DEY, ALEXANDER JOHN, Rothiemay, Corstorphine, Edinburgh. British. Manufacturing Chemist. Managing Director, T. and H. Smith, Ltd., Manufacturing Chemists. F.R.S.E. (*Signed by*) James Walker, Alex. C. Cumming, Alexander Lauder.

DILLON, THOMAS, University College, Galway. Irish. Professor of Chemistry, University College, Galway. Papers on Waxes, *Proc. R.D.S.*, 1909, vol. 12, No. 20; vol. 15, No. 10; *Proc. R.I.A.*, vol. 29, sec. B, No. 8. On separation of Isotopes of Lead, *Proc. R.D.S.*, 1922, vol. 17, p. 53. (*Signed by*) A. G. G. Leonard, Sydney Young, Emil A. Werner, A. O'Farrelly.

DONY, OCTAVE CHARLES MARIE, Bruxelles, 30 Rue Emile Banning. Belge. Professeur à l'Université de Bruxelles (Faculté de Science appliquées). Membre de l'Académie royale de Belgique. (*Signed by*) C. S. Gibson, Eric K. Rideal, T. M. Lowry, W. J. Pope, Henry E. Armstrong.

FEATHERSTON, STANLEY JAMES, 33, Belmont Rd., Beckenham, Kent. British. Analytical Chemist in Laboratory of Manufacturing Chemists, namely, Messrs. Hopkins & Williams, 16–17, Cross St., E.C. Honours Student in Chem. at Birkbeck Coll., University of London. 5 Years analytical work with manufacturing chemists. (*Signed by*) George Senter, F. Barrow, Samuel Sugden.

GASKILL, MALCOLM SINCLAIR, 3, Buckingham Rd., Hilton Park, Prestwich, Manchester. British. Chemical Engineer, West's Gas Improvement Co., Ltd., Manchester. Associate of the Manchester College of Technology. Chemist and Assistant Manager, Messrs. Hardman & Holden, Ltd., Chemical Manufacturers, Clayton. Present position, as above. Desirous of keeping in touch with modern developments of pure and applied chemistry. (*Signed by*) Harold G. Colman, William Buckley, Joseph Poulson.

GIBBS, WILLIAM EDWARD, 4, Stanley Villas, Runcorn. British. Chief Chemist to the Salt Union, Ltd. D.Sc. (Liverpool). Author of books: "Clouds and Smokes: The Properties of Disperse Systems in Gases," "The Dust Hazard in Industry." *Journ. Inst. Metals*, XV (1916), 1, pp. 41–191; *J.S.C.I.*, XLI, pp. 189–196; *Faraday Soc.*, XI, 1915, pp. 295–297, etc. (*Signed by*) W. C. McC. Lewis, I. M. Heilbron, E. C. C. Baly.

HAMER, NORMAN, "Ash Mount," Holcombe, nr. Manchester. British. Research and Analytical Chemist in Calico Printing, Dyeing, and Bleaching Works. As a student I have gained the Associateship of the Manchester College of Technology (Assoc. M.C.T.), whilst my duties as chemist cover a fairly wide field of analytical work, together with the investigation of the many and varied problems which are continually arising in the works. (*Signed by*) Arthur M. Morley, John K. Wood, Frank Lee Pyman.

HARTSHORNE, ERNEST, 12, Muriel St., Broughton, Manchester. British.

Chemist in the Laboratory of Dr. A. K. Miller, F.C.S. Degree of Bachelor of Technical Science in General Chemical Technology, Victoria University, Manchester. (*Signed by*) Alex. K. Miller, Frank Lee Pyman, John K. Wood.

HARVEY, ARTHUR, 12, Chaldon Road, Fulham, S.W. 6. British. Chemist. Formerly Agricultural Analyst, South Eastern Agricultural College (Univ. Lond.), Wye, Kent. Formerly lecturer on Applied Chemistry, Leathersellers College, London. Author of "Practical Leather Chemistry" and "Tanning Material," published by Crosby Lockwood & Son. Also several papers on leather chemistry in *J. Soc. L. Trades Chem.* Editor of Abstracts, *J. Soc. L. Trades Chem.* Member, British Association of Chemists, American Chemical Society, Society of Leather Trades Chemists. (*Signed by*) M. C. Lamb, A. B. Bradley, R. W. West.

HENNINGS, CHARLES RICHARD, 19, St. Dunstan's Hill, London, E.C. 3. German. Consulting Chemist. Qualified Pharmaceutical Chemist. Graduated in Chemistry. Ph.D., Freiburg. Papers as given before when first being admitted. (*Signed by*) Otto Oberländer, George P. Forrester, A. W. Edwards.

HINDLE, JAMES, 4, Plane St., Blackburn, Lancs. British. Student. Have been full-time day student in the Chemistry Dept. Municipal Technical College, Blackburn, for four years and am now preparing for Hons. Chemistry, B.Sc. (Lond.) there. (*Signed by*) G. W. F. Holroyd, Harry G. Leigh, J. T. Holden.

JONES, NOEL WATERMAN VERE, Eastnook, Pakefield, Lowestoft. British. Student. Have been studying Chemistry for five years and wish to keep abreast of modern advances. (*Signed by*) E. de Barry Barnett, James W. Cook, Marcus A. Matthews.

LINCH, FRANK WILLIAM, 89, Hazelbottom Rd., Cheetham, Manchester. British. Research Chemist, British Dyestuffs Corporation. M.Sc., Lond. 1st Hons. Chemistry at B.Sc. F.I.C. Asst. Chief Chemist, H.M. Factory, Queensferry, 1915–1917. Chief Chemist, H.M. Factory, Avonmouth, 1917–1919. 1919 to date, Research Chemist, British Dyestuffs Corp., Blackley, Manchester. Action of sodium hypobromite on carbamide derivs. Part I. 3-Amino-coumarin. Both papers in Trans. 1912. (*Signed by*) G. R. Clemo, Colin H. Lumsden, Anthony J. Hailwood.

LIPSHAW, CHARLES, 48, Lr. Broughton Rd., Salford. British. Chemist to Messrs. Halliday & Co., Ltd., Bankfield Mills, Stockport. 4 years Laboratory Chemist, and Assistant Works Chemist, at Lowerhouse Printworks, Burnley. Student at the Royal Technical College, Salford. Diploma of the College, City and Guilds of London Institute, Final Certificates in Dyeing and Textile Printing. (*Signed by*) S. N. Brown, V. Edge, E. Clark, B. Prentice.

MOORE, THOMAS, 8, Cyprus Avenue, Belfast. British. Student. Graduate of London (with Honours) and of the Queen's University, Belfast. Fifth year research student in Photochemistry. (*Signed by*) Wm. H. McVicker, Joseph K. Marsh, A. W. Stewart, H. Graham.

NIXON, IVOR GRAY, 75, The Vale, Golder's Green, N.W. 11. English. Student. Have studied chemistry for over 6 years and desire to keep abreast of modern developments. (*Signed by*) E. de Barry Barnett, P. C. L. Thorne, James W. Cook.

OCCLESHAW, VINCENT JOSEPH, 22, Bryn Street, Ashton-in-Makerfield, nr. Wigan. British. Lecturer and Demonstrator in Inorganic Chemistry. M.Sc. (Liv.). A.I.C. (*Signed by*) E. C. C. Baly, J. T. Nance, A. O. Jones.

PADGHAM, ERNEST CHARLES, 30, Churchill Road, N.W. 2. British. Research Assistant at the British Museum Laboratory. Trained in Analytical

Chemistry under the late Dr. Ludwig Mond, F.R.S., and the late Dr. B. Mohr, 1891–1896. Assistant at the Davy Faraday Research Laboratory of the Royal Institution, 1896–1918. Research Assistant at The British Museum Laboratory since 1920. (*Signed by*) Alexander Scott, H. J. Plenderleith, John W. Heath.

PRESCOTT, JAMES ARTHUR, The University, Adelaide, South Australia. British (England). Professor of Agricultural Chemistry at the Waite Agricultural Research Institute of the University of Adelaide. Papers on Soil Chemistry in the "Journal of Agricultural Science," VI, 111; VIII, 65, 111, 136; IX, 216; X, 177; XIII, 333; also Bulletins of the Sultanic Agricultural Society, Egypt. Research Scholar, Rothamsted Experimental Station, 1912–1916. Chief Chemist, Sultanic Agric. Soc., Egypt, 1916–1924. Proceedings, vol. 30, No. 123, 1914. (*Signed by*) Edward H. Rennie, E. J. Russell, H. B. Dixon, Arthur Lapworth, Robert Robinson, H. J. Page.

ROBERTSON, JOHN MONTEATH, Nether Fordun, Auchterarder, Perthshire. Scottish. Research Assistant. B.Sc. (Hons. Chem.), Glasgow, 1923. A.I.C., 1924. Strang-Steel Research Scholar, 1923–24. Carnegie Research Scholar, 1924–25. (*Signed by*) S. Horwood Tucker, T. S. Patterson, G. G. Henderson, R. Wright, David T. Gibson.

RUBENSTEIN, LEON, Jesus College, Oxford (Rookwood, 87, Eaton Grove, Swansea). British. Research Student for Doctorate of Philosophy (Oxford University). First Class Honours, Degree of Bachelor of Science (Welsh Univ.). Bachelor of Science (Oxford Univ.). "Substitution in Vicinal Trisubstituted Benzene Derivatives" (November 1923). (*Signed by*) W. H. Perkin, S. G. P. Plant, J. F. S. Stone, R. H. Griffith, R. D. Haworth.

SINGH, MALIK KARAM, Rawalpindi City. Indian (British subject). Paper Expert. I am a B.Sc. (Physics and Chemistry). Was granted a "State Technical Scholarship" by the Govt. of India for the study of the Paper-making industry in Gt. Britain and other Western countries. Before going to England I worked for about twenty months in the Bengal Paper Mills, Raneegunj (near Calcutta), during 1918–20. Joined College of Technology, Manchester, in 1920. During 1920–21 I completed in one year, a two years' course in paper making, and in the final examination I got a 1st class both in the theoretical and practical parts of the subject. I also studied the following subjects: Organic Chemistry, Physical Chemistry, Chemistry of Dyeing, Chemistry of the Colouring Matters, Economics, Chemical Engineering, Heat Engines, and Construction of Works. In 1921–22 (about 15 months) I received practical training in the following three paper mills, in Aberdeen, Scotland, making different classes of paper: (1) The Donside Paper Mills; (2) The Alex Pirie Paper Mills at Stoneywood, and (3) The Mugiemoss Paper Mills at Bucksburn. During 1922–24 I conducted a special research on about a score of Indian raw materials, with a view to ascertain their suitability for making paper. I have paid short visits lasting from one to ten days to about a score of other paper mills and paper mill machinery manufacture workshops. I have seen almost all the paper mills in India. (*Signed by*) John K. Wood, Frank Lee Pyman, F. M. Rowe.

SMITH, NORMAN HEATH, Hillcroft, Spencer Avenue, Leek, Staffs. British. Process Chemist, at present with Messrs. Anglo-Persian Oil Co., Ltd., Abadan, Persia. B.Sc. (Tech.). Post grad. research on vegetable oils; 2½ years with Messrs. The British Aluminium Co., Ltd., as Asst. Chemist, and over 2 years with Messrs. Anglo-Persian Oil Co., Ltd. (*Signed by*) Colin E. Spearing, S. W. Hayter, H. Harper.

STREATHER, ALEC THOMAS, 3, Wellington Road, Watford. British. Works Chemist. B.Sc. (Honours Chemistry), Birmingham, 1922. Associate Institute of Chemistry. (*Signed by*) G. T. Morgan, S. R. Carter, C. E. Wood, F. W. Pinkard.

THURGOOD, JOHN, "Roseleigh," Elmwood Ave., Harrow, Middx. British. Analytical and Research Chemist. Engaged for 4 years in laboratory of Dunlop Rubber Co., Birmingham. Graduated B.Sc. at Birmingham University in 1922. At present engaged as Assistant Chemist to British Oxygen Co., Ltd., N. Wembley. (*Signed by*) G. T. Morgan, C. E. Wood, E. Holmes.

TREW, VIOLET CORONA GWYNNE, 18, Adam Street, Portman Square, W. 1. British. Student at Bedford College (London University). Reading for an Honours Degree in Chemistry. (*Signed by*) J. F. Spencer, H. Crompton, P. V. McKie.

UCHIDA, SHOJIRO, 12, Shinryudo-Machi, Azabu-Ku, Tokio, Japan. Japanese. Research Chemist of the Fuel Research Board of Japan. Undergraduate of Department of Chemistry, College of Technology, University of Tokio, Japan. (*Signed by*) W. A. Batley, V. H. Legg, M. J. Burgess, F. V. Tideswell.

WALKER, JOHN HENRY, A.R.T.C., A.I.C., Gourepore Works, Naihati, E.B. Ry., Bengal, India. Scotch. Chemist and Oil-mill Manager. Student Royal Technical College, Glasgow. Student with late Dr. J. Lewkowitsch. Sundry papers in *Analyst* and in *J.S.C.I.* Chemist and latterly mill-manager, Gourepore Co., Ltd., Linseed Oil. (*Signed by*) G. G. Henderson, Thomas Gray, F. J. Wilson.

WARREN, ERNEST HENRY, 1, Chamber's Lane, Willesden Green, N.W. 10. English. Research Student. B.A., Cantab. (*Signed by*) Robert Robertson, Geo. Stubbs, P. J. Sageman.

WATT, JAMES, Craiglockhart House, Slateford, Edinburgh. British. Writer to the Signet. Chairman of Directors, T. and H. Smith, Ltd., Chemical Manufacturers. F.R.S.E. (*Signed by*) James Walker, Alex. C. Cumming, Alexander Lauder.

WILLIS, WILLIAM JOHN, Hazel Mount, Carnforth, Lancs. English. Chief Valuer to Michael Faraday and Partners, 77, Chancery Lane, W.C. 2. 3 years' Assistant Demonstrator, Inorganic Chemistry, Barrow Technical School. 3 years' Lecturer on Metallurgy and Iron Foundry Practice, Bradford Technical College. 1st Class Honours Inorganic Chemistry, Science and Art Department. 1st Class Honours and Bronze Medal, City and Guilds of London, Iron and Steel Manufacture. 1st Class and Silver Medal, City and Guilds of London, Salt Manufacture. 8 years Analytical Chemist, Barrow Hematite Steel Co., Ltd. 6 years Chief Chemist and Assistant Works Manager, Yorkshire Iron and Coal Co., Ltd. 5 years Chief Valuer to Michael Faraday and Partners, Surveyors and Valuers. (*Signed by*) T. A. Henry, A. E. Bond, Harry W. Dixon.

The following Certificates have been authorised by the Council for presentation to ballot under Bye-Law I (2).

BEESLEY, WILLIAM, Binnyston Gardens, Bangalore City, Mysore, India. British. Works' Chemist. Took course in Bleaching and Dyeing at the Manchester College of Technology. Technological Certificate and Silver Medallist in Dyeing, City and Guilds of London Institute. Six years Chemist Assistant with Messrs. Binny & Co., Ltd. Now Head Chemist, Bangalore Woollen Mills, India. (*Signed by*) E. Knecht.

ECKER, HOWARD, 1510 Dana Ave., Cincinnati, Ohio, U.S.A. American.

Research Director for The R. I. Johnston Paint Co., Cincinnati, Ohio. Graduate student from Ohio Mechanics Institute, Cin., Ohio. 1 year graduate work, Columbia College, N.Y. 6 years teaching at Ohio Mechanics Institute and for 3 years head of the department. Member of the American Chemical Society, Society of Chemical Industry, German Chemical Society. (*Signed by*) John H. Foulger.

SMITH, ALEXANDER, P.O. Box 103, Nairobi, Kenya Colony. Scot. Chemist and Managing Director, A. H. Wardle & Co., Ltd. Lecturer on chemistry for 2 years, School of Mines, South Africa. Pharmaceutical Society, minor certificate. Consulting Chemist to Kenya Marble Quarries. In charge Hygiene Laboratory (Dr. Kochs), Dar-es-Salaam, 12 months. (*Signed by*) G. T. R. Francis.

ADDITIONS TO THE LIBRARY.

PROCEEDINGS

OF THE

CHEMICAL SOCIETY.

Ordinary Scientific Meeting, Thursday, June 4th, 1925, at 8 p.m., Dr. ARTHUR W. CROSSLEY, C.M.G., C.B.E., D.Sc., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through death, of Mr. Charles E. Soane, who was elected a Fellow on February 3rd, 1887, and who died on May 17th.

The PRESIDENT announced that the following address of congratulation had been sealed and will be presented on June 16th, 1925, to the Royal Institution on the occasion of the celebration of the Centenary of the discovery of benzene by Michael Faraday:

To the President, Officers and Members of the Royal Institution of Great Britain.

The Chemical Society welcomes the opportunity of associating itself with the Royal Institution in celebrating the centenary of the Discovery of Benzene by Michael Faraday, a discovery which was destined to have such far-reaching effects on the foundation and development of structural organic chemistry and to lead to the establishment of many new and important industries. We remember with pride that in 1868 the Chemical Society instituted a Triennial Lecture to commemorate the work of Faraday, for we recognise in him the pioneer of many of the principles underlying the chemical science of to-day.

We desire to join with the other Learned Societies and Academies of the world in offering our homage to the memory of this great and distinguished man.

Signed on behalf of the Chemical Society,

ARTHUR W. CROSSLEY, *President.*
JOCELYN THORPE, *Treasurer.*
T. SLATER PRICE, } *Secretaries.*
C. S. GIBSON, }
F. G. DONNAN, *Foreign Secretary.*

Sealed in Council this Fourth Day of June, One Thousand Nine Hundred and Twenty Five.

Mr. W. A. Wightman was formally admitted a Fellow of the Chemical Society.

Certificates were read for the first time in favour of:

William Bouch O'Brien Goudielock, 28, Fairfield Lane, Barrow-in-Furness.
Jnanendra Nath Ray, M.Sc., The University, Manchester.
Phyllis Mary Sanderson, 7, Cresswell Place, S.W. 10.
Eric Alfred Speight, B.Sc., A.R.C.S., 61, Arthur Road, Wimbledon Park, S.W. 19.
Gordon Mitchell Wright, M.A., B.Sc., University Chemical Laboratory, Cambridge.

The following papers were read:

"The spatial structure of *cyclo*paraffins. Part I. A new aspect of Mohr's theory and the isomerism of decahydronaphthalene." By W. A. WIGHTMAN.

"Chenopodium oil. Part II. The hydrocarbon fraction." By T. A. HENRY and H. PAGET.

"Echitamine." By J. A. GOODSON and T. A. HENRY.

Ordinary Scientific Meeting, Thursday, June 18th, 1925, at 8 p.m., Dr. ARTHUR W. CROSSLEY, C.M.G., C.B.E., D.Sc., F.R.S., President, in the Chair.

The PRESIDENT announced:

1. That, as Fellows would know, the Council has had before it for some time past the possibility of unifying chemical abstracts in pure and applied chemistry in the English language, and as stated in the Report of Council for 1923—1924, the Bureau of Chemical Abstracts was created to effect such unification. The Council, at its meeting that afternoon, had under consideration the following proposals of the Bureau, that

(1) The format adopted for the unified publications should be double column quarto.

(2) The type should be that now employed in the "A" Abstracts.

(3) The existing overlap, estimated to be at least 10%, should be eliminated,

as well as the further suggestion that, in the event of these proposals being adopted, one annual index covering both sections of the Abstracts should be supplied to all members of the two Societies concerned.

The Council has adopted the following resolution:

"That the Council concurs in the Bureau's proposals for the unification of the Abstracts in Pure and Applied Chemistry, and urges the Fellows, in the interests of co-operation and of

the consolidation of British Chemical Abstracts, to accept loyally such changes of format and arrangement as these proposals may involve."

It was further intimated that the proposals of the Bureau have also been accepted by the Council of the Society of Chemical Industry.

The President expressed the hope that Fellows would loyally support the efforts being made in the direction of unifying British chemical abstracts.

2. That the Faraday Society will hold a General Discussion on "Photochemical Reactions in Liquids and Gases" at Oxford on October 1st and 2nd next. The subject will be discussed under two main heads: (1) Einstein's Law of Photochemical Equivalence, (2) The Mechanism of Photochemical Reactions. Part I will be opened by Professor A. J. Allmand (King's College) and Part II by Professor M. Bodenstein (Berlin).

Fellows of the Chemical Society will be welcomed at this meeting, and it is hoped to accommodate all who attend the meeting at Exeter College and Lincoln College. Those desirous of attending are asked to communicate at once with the Secretary of the Faraday Society, 90, Great Russell Street, London, W.C. 1, from whom full particulars may be obtained.

3. That a communication has been received from the Committee of the van't Hoff Fund for the endowment of research in pure and applied chemistry. The amount from this fund available for distribution during 1926 is about 1400 Dutch florins.

A Committee, consisting of Professor A. F. Holleman (President), Professor F. M. Jaeger, Professor A. Smits, and Mr. J. P. Wibaut (Secretary), has been appointed to award Grants. Applications should be sent before November 1st, 1925, by registered post to: "Het Bestuur der Koninklyke Akademie van Wetenschappen, bestemd voor de Commissie van het 'van't Hofffonds,' Trippenhuis, Kloveniersburgwal, Amsterdam." Every applicant is requested to submit a detailed account of the manner in which he proposes to expend the grant and to state the reasons for which he makes his application.

Papers embodying the results of the research may be published in any journal, but acknowledgment must be made of the source of the grant. Copies of papers containing the results of the research must be forwarded to the Committee.

4. That Volume V of the Annual Tables of Constants and Numerical Data is now ready, and is obtainable from Monsieur Charles Marie (9, Rue de Bagneux, Paris VI) who will be glad to send particulars on application.

Messrs. J. B. Reed and P. W. B. Harrison were formally admitted Fellows of the Chemical Society.

Certificates were read for the first time in favour of :

Joseph Raymond Dolphin, B.Sc., Chemical Department, The University, Birmingham.
Henry Wilfrid Keenan, 80, Upper Richmond Road, East Sheen, S.W. 14.
Bertram Grey Leatherbarrow, Hill Crest, Station Road, Brimington, Chesterfield.
Henry Nicholson, M.Sc., Aberlady, Osborne Road, Stockton-on-Tees.
Robert Saxon, B.Sc., Westfield Terrace, Baildon, Yorks.

The following Certificates have been authorised by the Council for presentation to ballot under Bye-Law I (2) :

Bertram Cuthbert, c/o The British Australian Cotton Association, Ltd. Oil Mills, Brisbane.
Albert Louis Auguste Sigot, Institut de Chimie, 2, Rue Goethe, Strasbourg.

Mr. H. C. Sayer and Dr. H. Burgess were elected Scrutators, and a ballot for the election of Fellows was held, the following subsequently being declared elected as Fellows :

Marion Alice Battie, B.Sc., A.I.C.
Maung Hla Baw.
William Beesley.
William Ambler Berry, B.Sc.
Joseph John Blackie.
Samuel Cyril Blacktin, M.Sc.
Neville Melton Bligh, A.R.C.S., A.I.C.
Hugh Alexander Millar Borland, M.Sc., A.R.C.S.
Nirmal Boran Brohmachary, B.Sc.
Gertrude Margaret Bullick, B.Sc.
Ralph Edgar Cable.
Thomas Anthony Canning.
Leslie Marshall Clark, B.A., Ph.D., A.I.C.
Clive Kear Colwell, B.A.
Jan Coops.
William George Corderoy, B.Sc.
Oswald Pilkington Cronshaw.
John Carroll Culbert.
John Alexander Currie, B.A., B.Sc.
Alexander John Dey.
Thomas Dillon, M.A., D.Sc.
Octave Charles Marie Dony.
Howard Ecker.
Stanley James Featherston.
Malcolm Sinclair Gaskill.
William Edward Gibbs, D.Sc.
Norman Hamer, Assoc.M.C.T.
Ernest Hartshorne, B.Sc.Tech.
Arthur Harvey.
Charles Richard Hennings, Ph.D.
James Hindle.
Noel Waterman Vere Jones.
Frank William Linch, M.Sc., F.I.C.
Charles Lipshaw.
Thomas Moore, B.Sc.
Ivor Gray Nixon.
Vincent Joseph Occleshaw, M.Sc., A.I.C.
Ernest Charles Padgham.
James Arthur Prescott, M.Sc., A.I.C.
John Monteath Robertson, B.Sc., A.I.C.
Leon Rubenstein, B.Sc.
Malik Karam Singh, B.Sc.
Alexander Smith.
Norman Heath Smith, B.Sc.Tech.
Alec Thomas Streather, B.Sc., A.I.C.
John Thurgood, B.Sc.
Violet Corona Gwynne Trew.
Shojiro Uchida.
John Henry Walker, A.R.T.C., A.I.C.
Ernest Henry Warren, B.A.
James Watt.
William John Willis.

The following papers were read :

" Investigations on the dependence of rotatory power on chemical constitution. Part XXVII. Some esters of *p*-toluene-sulphonic and sulphinic acids." By H. PHILLIPS.

" The enhanced reactivity of newly formed molecules. Part I. The conversion of cyclols into ketones." By F. R. Goss and C. K. INGOLD.

" Constituents of *Myoporum lætum*, Forst (' The Ngaio '). Part I." By F. H. McDOWALL.

" A synthesis of datiscetin." By J. KALFF and R. ROBINSON.

" The relative directive powers of groups of the forms RO– and RR'N– in aromatic substitutions. Part IV. A discussion of the observations recorded in Parts I, II, and III." By J. ALLAN, A. E. OXFORD, R. ROBINSON, and J. C. SMITH.

" A new aspect of the photochemical union of hydrogen and chlorine, and a quantitative study of the induction period." By R. G. W. NORRISH.

The Council has made the following Grants from the Research Fund :

	£	*s.*	*d.*
Bromination products of caronic acid. R. G. Atkinson. ...	12	0	0
Mechanism of tautomeric change. J. W. Baker	15	0	0
Photographic investigation of explosion waves. C. Campbell ...	5	0	0
Chemistry of the aminotriazole derivatives (*contd.*). P. K. Dutt.	5	0	0
Chemistry of the acridine molecule (*contd.*). P. K. Dutt ...	5	0	0
Ring-chain tautomerism. S. Dutt	10	0	0
Investigation and synthesis of ten-membered rings of the cryptopine type. G. A. Edwards	10	0	0
Contact electrification. F. Fairbrother	7	0	0
Oxidation of 5 : 6-benzo-1 : 1'-diethylcarbocyanine bromide. E. H. St. C. Flack	10	0	0
Oxidation of sesquiterpenes. D. T. Gibson	5	0	0
Action of thionyl chloride on hydroxybenzenes. A. Green ...	5	0	0
Structure of alkaloids and related compounds. J. M. Gulland...	10	0	0
Derivatives of methyl quinolines (*contd.*). D. Ll. Hammick ...	10	0	0
Some polarity effects in substituted stilbenes and tolanes. H. A. Harrison	10	0	0
Synthesis of alkaloids and allied compounds. R. D. Haworth ...	15	0	0
Investigation of the structure of Ciba Yellow (*contd.*). E. Hope	10	0	0
Experiments on the tetrahedral theory to S–N rings. R. F. Hunter	5	0	0
Action of aldehydes on aldehyde cyanohydrins in solution. B. H. Ingham	5	0	0
Reactivity of bivalent carbon. Mrs. E. H. Ingold	10	0	0
Correlation of additive reactions with tautomeric change (*contd.*). Mrs. E. H. Ingold	5	0	0
Mobility of the $\alpha\beta$-$\beta\gamma$ change in unsaturated acids and unsaturated ketones. J. D. Johnson	15	0	0

THE LIBRARY.

The Library will be closed for Stocktaking from Monday, August 3rd, until Saturday, August 15th, 1925 (inclusive). During the

following four weeks (August 17th to September 12th), the Library will close daily at 5 p.m.

LIST OF FELLOWS, 1925.

The List of Fellows for 1925 is now in active preparation and will be supplied to those Fellows who make application to the Assistant Secretary by the 31st July, 1925. In order that the new List may be as complete as possible, Fellows are invited to notify any change of address, or other alteration, before that date.

BERICHTE, 1915–1924.

Sets of the Berichte from 1915 to 1924 (10 years) are now offered to Fellows of the Society at £22, carriage extra. Application should be made to Mr. S. E. Carr.

List of papers, or Abstracts thereof, received between May 22nd and June 18th, 1925. (This List does not include the titles of papers which have been read at a Scientific Meeting or which have appeared in the Journal.)

"A low voltage standard cell." By H. MASTIN.

"Hydrogen and oxygen electrode titrations of some dibasic acids and of dextrose." By H. T. S. BRITTON.

"Sulphur sesquioxide." By I. VOGEL and J. R. PARTINGTON.

"The relation of homogeneous to catalysed reactions. The catalytic decomposition of hydrogen iodide on the surface of gold." By C. N. HINSHELWOOD and C. R. PRICHARD.

"The decomposition of carbon monoxide in the corona due to alternating electric fields. Part I." By M. CRESPI and R. W. LUNT.

"The formation and stability of spiro-compounds. Part XII. Further evidence for the multiplanar configuration of the *cyclo*heptane ring." By J. W. BAKER.

"The condensed ternary system phenol–water–salicylic acid." By C. R. BAILEY.

"The hydration of strong electrolytes and some properties of salt solutions." By J. N. SUGDEN.

"The action of sulphur on amines. Part III. *o*-, *m*-, and *p*-Chloroanilines." By H. H. HODGSON and J. H. WILSON.

"The system sodium sulphite–sodium hydroxide–water." By D. L. HAMMICK and J. A. CURRIE.

"Synthetical experiments in the *iso*quinoline group. Part V. Synthesis of substances allied to oxyberberine." By R. D. HAWORTH, W. H. PERKIN, and H. S. PINK.

"Amino benzothiazoles. Part II. The naphthylamino naphthiazoles and their bromo derivatives." By R. F. HUNTER.

"Negative adsorption: the surface tensions and activities of some aqueous salt solutions." By A. K. GOARD.

"The structure of α-campholytic acid. A correction." By J. P. C. CHANDRASENA, C. K. INGOLD, and J. F. THORPE.

"The interaction of carbon dioxide and hydrogen on the surface of tungsten." By C. N. HINSHELWOOD and C. R. PRICHARD.

"Note on potassium antimonoxalate." By L. H. A. HOLMES and E. E. TURNER.

"Studies on the Walden inversion. Part IX. The influence of the solvent on the sign of the product in the conversion of β-bromo-β-phenylpropionic acids to β-hydroxy-β-phenylpropionamides." By G. SENTER and A. M. WARD.

"'Co-ordination' and the periodic table." By I. AUCKEN.

"Anode phenomena in the electrolysis of potassium ethyl malonate." By J. B. ROBERTSON.

"The isomerism of the styryl alkyl ketones. Part II. The isomerism of the homologues of 2-hydroxystyryl, and of 3-methoxy-, and 4-hydroxy-styryl methyl ketones." By A. MCGOOKIN and D. J. SINCLAIR.

"Hydrogen electrode studies of the precipitation of hydroxides. Part I. Magnesium, manganous, ferrous, cobalt, nickel, and thorium." By H. T. S. BRITTON.

"Stereoisomeric azo-dyes." By G. T. MORGAN and D. G. SKINNER.

"4- and 4'-Methoxybenzoylbenzoin." By H. GREENE.

"The relative rates of conversion of phenoxyphenyldichloroarsine and its chloro-derivatives into chlorophenoxarsines." By E. ROBERTS and E. E. TURNER.

"Chemistry of petroleum. Part II. The action of sodium hypochlorite on types of sulphur compounds found in petroleum distillates." By S. F. BIRCH and W. S. G. P. NORRIS.

"Derivatives of δ-*o*-aminobenzoylvaleric acid." By M. J. PATERSON and S. G. P. PLANT.

"The action of formic acid on certain sesquiterpenes." By J. M. ROBERTSON, C. A. KERR, and G. G. HENDERSON.

"Syntheses of disulphoxides." By D. T. GIBSON, C. J. MILLER, and S. SMILES.

"The effect of gum arabic and other emulsifiers on the acid hydrolysis of esters in heterogeneous systems." By R. C. SMITH.

"Lithium arc spectrum for polarimetric use." By P. C. AUSTIN.

"Bismuth dihydride." By E. J. WEEKS and J. G. F. DRUCE.

"Reduction product of the hydroxyanthraquinones. Part VI." By A. G. PERKIN and G. YODA.

"A wandering of the acetyl group during methylation." By O. KUBOTA and A. G. PERKIN.

"The supposed formation of 1 : 2 : 4-oxadi-imine rings from nitroso-compounds and methylenearylamines." By G. N. BURKHARDT, A. LAPWORTH, and E. B. ROBINSON.

"The reaction of bromine with aliphatic acids. Catalytic effect of acyl halides." By H. B. WATSON.

ADDITIONS TO THE LIBRARY.

I. *Donations.*

CLARKE, FRANK WIGGLESWORTH. The data of geochemistry. 5th edition. Washington 1924. pp. 842. (*Recd.* 26/5/25.)
From the Author.

DANIELS, GEORGE WILLIAM. Refrigeration in the chemical industry. London 1925. pp. x + 141. ill. (*Recd.* 29/5/25.)
From the Publisher: Mr. A. J. Rayment.

EASTMAN KODAK COMPANY. Abridged scientific publications from the Research Laboratories. Vol. VIII, 1924. Rochester, N.Y. 1925. pp. 156 + vi. ill. (*Reference.*)
From the Eastman Kodak Company.

IMPERIAL COLLEGE CHEMICAL SOCIETY. Journal. Vol. IV, containing the papers read during the session 1924—1925. London 1925. pp. 54. ill. (*Reference.*) From the Society.

KLAR, M. The technology of wood distillation with special reference to the methods of obtaining the intermediate and finished products from the primary distillate. Translated [from the 2nd German edition] by ALEXANDER RULE. With an additional chapter by the translator. London 1925. pp. xvi + 496. ill. 25*s.* net. (*Recd.* 8/6/25.)
From the Publishers: Messrs. Chapman & Hall.

MORRICE, ALEXANDER. A treatise on brewing: wherein is exhibited the whole process of the art and mystery of brewing the various sorts of malt liquor; with practical examples upon each species. Together with the manner of using the thermometer and saccharometer; elucidated by examples, and rendered easy to any capacity, in brewing London porter [etc.]. London 1802. pp. [xii] + v to 180 + [xii]. ill. (*Reference.*)
From Dr. Alexander Scott.

NATIONAL BENZOLE ASSOCIATION and UNIVERSITY OF LEEDS. *Joint Benzole Research Committee.* Second report. London 1925. pp. 246. ill. (*Recd.* 18/5/25.)

From the National Benzole Association.

ORGANIC SYNTHESES: an annual publication of satisfactory methods for the preparation of organic chemicals. Vol. IV. Edited by OLIVER KAMM [and others]. New York 1925. pp. viii + 90. 7*s.* 6*d.* net. (*Recd.* 22/5/25.)

From the London Publishers: Messrs. Chapman & Hall.

TIBA. Revue Générale de Teinture Impression Blanchiment Apprêt et de Chimie Textile et Tinctoriale et Revue de la Soie Artificielle. Year II, etc. Paris 1924 +. (*Reference.*)

From the Publishers.

PROCEEDINGS

OF THE

CHEMICAL SOCIETY.

Ordinary Scientific Meeting, Thursday, October 15th, 1925, at 8 p.m., Dr. ARTHUR W. CROSSLEY, C.M.G., C.B.E., D.Sc., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through death, of the following Fellows :

	Elected.	*Died.*
Richard Burtles	May 3rd, 1923.	July 3rd.
Charles Frederick Chandler	Feb. 1st, 1872.	Aug. 25th.
William Henry Deering	April 1st, 1869.	Sept. 5th.
William Joseph Dibdin	April 15th, 1880.	June 8th.
Samuel Jackson	Dec. 15th, 1892.	July 27th.
Francis Robert Japp	Feb. 6th, 1879.	Aug. 1st.
Reginald A. Joyner	Dec. 6th, 1917.	Oct. 8th.
Daniel Rankin Steuart	Dec. 15th, 1881.	Aug. 1st.
Leonard E. Vlies	Feb. 21st, 1918.	July 26th.

The PRESIDENT announced that :

1. The first of the two Informal Lectures to be held this Session will be delivered in the Rooms of the Society on Thursday, November 26th, 1925, by Professor R. Robinson, D.Sc., F.R.S., who has chosen as his subject :

> "Recent Researches on the Structural Relationships of Some Plant Products."

Special attention is drawn to the fact that the lecture will be delivered at 6 *o'clock* instead of at 8 *o'clock* as stated on the meeting card.

2. Following the innovation made in October, 1923, it has been decided to hold next month a united dinner for British Chemists. The dinner, to be called "British Chemistry Dinner" is under the auspices of the Chemical Society, the Institute of Chemistry, the Society of Chemical Industry, the Association of British Chemical Manufacturers, the Institution of Petroleum Technologists, the Society of Public Analysts, the Bio-Chemical Society, the Oil and Colour Chemists' Association, and the Chemical Industry Club,

and will be held at the Connaught Rooms, Great Queen Street, W.C. 2, on Friday, November 13th, 1925, at 6.30 for 7 p.m. Dr. W. R. Ormandy, Chairman of the Chemical Industry Club, will preside.

The price of the tickets is 15*s*. each (not including wine) for lady or gentleman, and as the accommodation is limited to about 400, early application is advisable.

Besides the Loyal Toasts, there will be only two other Toasts, namely, "The Profession and Industry of Chemistry" and "The Guests." After dinner, there will be dancing and musical items.

Application for tickets (15*s*. each), with remittance, should be sent to the Secretary of the Chemical Industry Club, 2, Whitehall Court, S.W. 1.

3. The Selection Committee of the Harrison Memorial Prize will meet shortly to consider the award of the Harrison Prize.

The Prize, of the value of about £150, is to be awarded to the chemist of either sex being a natural born British subject and not at the time over thirty years of age, who, in the opinion of the Selection Committee, during the previous five years has conducted the most meritorious and promising original investigations in any branch of pure or applied chemistry and published the results of those investigations in a scientific periodical or periodicals.

Provided that in the opinion of the Selection Committee there is a candidate of sufficient distinction to warrant an award of the Prize, the award is to be made in December, 1925.

The Selection Committee is prepared to receive applications, nominations or information as to candidates eligible for the Prize. Any such information must be received by The President, The Chemical Society, Burlington House, Piccadilly, W. 1, not later than Tuesday, December 1st, 1925.

4. As Fellows are already aware, the Council has approved the proposals of the Bureau of Chemical Abstracts (see Procs. for June, 1925), aiming at the unification of abstracts of chemical papers in this Country. As a consequence of the arrangements made, "British Chemical Abstracts" will appear as from January, 1926, in two sections, namely, A (Pure Chemistry) and B (Applied Chemistry), and will be in the same format and type, without overlap, and with one common index at the end of the year. The format adopted is that at present employed for the "B" Abstracts; beginning, therefore, with January, 1926, Fellows will receive the Abstracts in Pure Chemistry in quarto double-column size. This clearly means a break with the past, so far as the Chemical Society is concerned, but the Council trusts that in the interests of co-operation the Fellows will accept these changes with loyalty.

5. The price of the Annual Reports for 1925, Vol. XXII, will be the same as for Vol. XXI, namely 5*s*. 6*d*. post free to those Fellows who apply by Christmas Day, 1925. Application should be made to the Assistant Secretary, and must be accompanied by a remittance for 5*s*. 6*d*.

6. Volume I of the Memorial Lectures has been reproduced by a photographic process, and is now on sale at the Publishers, Messrs. Gurney & Jackson, 33, Paternoster Row, E.C. 4, price to Fellows 9*s*. post free.

7. Sets of the Berichte from 1915–1924 (10 years) can be obtained on application to the Assistant Secretary at the reduced price of £22, plus carriage.

8. In continuance of the arrangement made with the American Chemical Society, the *Journal of the American Chemical Society*, *Industrial and Engineering Chemistry*, and *Chemical Abstracts*, can be obtained by Fellows at the following reduced rates:

Price for any one journal $7.25, post free,
Price for any three journals $17.50, post free,

while *Chemical Reviews* is offered to Fellows at $4.50, post free. Applications should be made as soon as possible to Dr. Charles L. Parsons, Secretary, American Chemical Society, 1709, G. Street N.W., Washington, D.C., U.S.A.

The *Journal of Physical Chemistry* is obtainable by Fellows at $8.00 post free, published at $10.00. Application should be made to the *Journal of Physical Chemistry*, Ithaca, N.Y., U.S.A.

9. A meeting of the Research Fund Committee will be held in December next. Applications for Grants, to be made on forms obtainable from the Assistant Secretary, must be received on or before Tuesday, December 1st, 1925. Applications from Fellows will receive prior consideration.

All persons who received Grants in December, 1924, or in December of any previous year, whose accounts have not been closed by the Council, are reminded that Reports must be returned by December 1st.

The following were formally admitted Fellows of the Chemical Society: G. M. Bullick, C. G. Trew, I. C. P. Smith, W. G. Corderoy, E. H. Warren, I. A. Smith, C. F. Flint, R. R. Garran, N. M. Bligh, and E. C. Padgham.

Certificates were read for the first time in favour of:

Robert Leslie Andrew, Dominion Laboratory, Wellington, New Zealand.
Louis Baissac, Curepipe Road, Mauritius.
William Francis Barker, Ph.D., Rhodes University College, Grahamstown, S. Africa.
Ralph Basden, The Technical College, Newcastle, N.S.W.

Frank Bell, 11, Edwy Parade, Gloucester.
Arthur Neville Copnall Bennett, B.Sc., 27, Dale Road, Luton.
John Cecil Bird, B.Sc., A.I.C., 72, Dyne Road, Kilburn, N.W. 6.
Lionel Christopher William Birkett, B.Sc., Moor House, North Road, Spennymoor.
James Boyd, F.I.C., P.O. Box 1162, Johannesburg.
Frank Symonds Bradhurst, c/o Messrs. Holbrooks, Ltd., Danks Street, Waterloo, Sydney.
John Hildred George Carlile, B.Sc., A.R.C.S., 29, Orlando Road, Clapham, S.W. 4.
Leslie James Chalk, B.Sc., 14, Shrubbery Road, Southall.
Rama Charan, B.Sc., B.Sc.Tech., 12, Bank Road, Allahabad.
Edward Mortimer Crowther, D.Sc., F.I.C., Rothamsted Experimental Station, Harpenden, Herts.
Frank Edwin Dickinson, Research Establishment, Sutton Oak, St. Helens.
William Donovan, M.Sc., Dominion Laboratory, Wellington, New Zealand.
John Stanley Dunn, M.A., Ph.D., A.I.C., 39, Victoria Park, Cambridge.
Edwin Francis Edwards, c/o Messrs. Holbrooks, Ltd., Waterloo, Sydney.
John Moelwyn Edwards, 92, Jamaica Road, Rotherhithe, S.E. 16.
James Walter Shanks Gemmell, B.Sc., Helen's Villa, Fleming Place, St. Andrews.
Francis Reginald Glover, 98/100, St. Peters Street, Nottingham.
Felix John Theodore Grigg, M.Sc., A.I.C., Government Buildings, Christchurch, New Zealand.
John Hall, M.Sc., A.I.C., 202, Burton Road, Derby.
Herbert Sim Hirst, B.Sc., Trinity College, Cambridge.
Toru Iwadare, c/o Banyu Pharmaceutical Co., Ltd., 174, Shimomeguro, Tokyo, Japan.
David Christopher Mendis Jayewardene, Fern Bank, Moratuwa, Ceylon.
Charles Benjamin Johnson, 134, Preston New Road, Blackburn.
Walter Idris Jones, Ph.D., B.Sc., 7, Manor Street, Cambridge.
Charles King, 141, Bath Street, Glasgow.
Frederick Karl Victor Koch, B.Sc., A.R.C.S., 9, Crossfield Road, Hampstead, N.W. 3.
Charles Dudley Langford, B.Sc., A.R.C.S., 43, Ashbourne Avenue, Temple Fortune, N.W. 11.
Henry Guinness de Laszlo, B.A., Ph.D., 3, Fitzjohn's Avenue, Hampstead, N.W. 3.
Sam Lenher, B.A., 15, Gordon Street, W.C. 1.
William Macartney, c/o Messrs. Grattan & Co., Ltd., Belfast.
William Francis Martin, F.I.C., 27, Shandon Crescent, Edinburgh.
Arthur Moore, Highfield, Oakworth, Keighley.
John Blackburn Murgatroyd, 90, St. George's Square, S.W. 1.
Chitsukhlal Hiralal Nanavati, 80, Esplanade Road, Fort, Bombay.
Anna Maria O'Mara, 83, Elsham Road, Holland Park, W. 14.
Norman Frederick Parker, B.A., A.I.C., 45, Sellons Avenue, Harlesden, N.W. 10.
Marjorie Ellen Pring, B.Sc., 66, St. Augustine's Avenue, S. Croydon.
Herbert Charles Roberts, 15, Estcourt Terrace, Headingley, Leeds.
George Baty Scott, 37, Woodbridge Road, Knowle, Bristol.
Rupert Boswood Scammell, B.Sc., c/o Messrs. F. H. Faulding & Co., Ltd., Castlereagh Street, Redfern, Sydney.
Tpo Shin, Agricultural Farm, Mandalay.

Dalip Singh, Ph.D., near Tehsil P.O., Lahore.
William Veale Thorpe, B.A., 270, Balham High Road, S.W. 12.
William Milburn Towler, B.Sc., 28, Denton Avenue, Roundhay, Leeds.
David Traill, B.Sc., 58, Chalmers Street, Dunfermline.
Donald Morrison Turner, 40–42, Lexington Street, W. 1.
Geoffrey Turner, B.Sc., 85, Winchester Avenue, Leicester.
Frederick Henry Webb, St. Malo, Jameson Road, Harpenden, Herts.
Hugh Amphlett Williams, 249, Kennington Road, S.E. 11.
Robert Harding Williams, 131, Anlaby Road, Hull.
John James Benjamin Wolfe, 24, Greyhound Road, Hammersmith, W. 6.
John Frederick Zimmermann, 17, Stile Hall Gardens, Chiswick, W. 4.

The following papers were read:

"The effect of ultra-violet light on dried hydrogen and oxygen." By H. B. BAKER and M. CARLTON.

"A new per-oxide of barium." By M. CARLTON.

"The production of oxide-films on copper at ordinary temperatures." By U. R. EVANS.

"The structural isomerism of the oximes. Part III. The benzilmonoximes." By A. H. ATACK and F. W. ATACK.

List of papers, or abstracts thereof, received between June 18th and October 15th, 1925. (This list does not include the titles of papers which have been read at an Ordinary Scientific Meeting, or which have appeared in the Journal.)

"The action of sulphuretted hydrogen on a neutral solution of potassium permanganate." By H. B. DUNNICLIFF and S. DAYAL.

"Note on the preparation of thiocarbanilide." By S. J. C. SNEDKER.

"Studies with the microbalance. Part II. The photochemical decomposition of silver chloride." By E. J. HARTUNG.

"Preparation, hydrolysis and reduction of the isomeric fluorobenzyl bromides." By J. B. SHOESMITH and R. H. SLATER.

"The action of silica on electrolytes. Part II." By A. F. JOSEPH and H. B. OAKLEY.

"The formation and growth of silver nuclei in the decomposition of silver oxalate." By J. Y. MACDONALD and C. N. HINSHELWOOD.

"Researches in the menthone series. Part I." By J. READ and A. M. R. COOK.

"Studies in adsorption by the application of optical methods. Fixation by dispersoids of methylene-blue within the disperse phase." By A. FODOR and R. RIWLIN.

"The physical chemistry of the metal–ammonium complexes. Part I. The blue of the copper–ammonium complexes." By S. S. BHATNAGAR, M. PRASAD and D. NATH.

"The correlation of absorption spectra with ionisation in violuric acid." By R. A. MORTON and A. H. TIPPING.

"Absorption spectra and lactam-lactim tautomerism." By R. A. MORTON and E. ROGERS.

"The heat of combustion of salicylic acid." By E. BERNER.

"An electrometric and phase rule study of some basic salts of copper." By H. T. S. Britton.

"The distribution of pyridine between water and benzene." By R. M. Woodman and A. S. Corbet.

"The velocity of decomposition of oxalic acid in solution." By D. L. Watson.

"The absorption of gases in colloidal solutions." By A. Gatterer.

"A circulation apparatus for gases." By N. G. Chatterji and G. I. Finch.

"2 : 4-Dinitrophenylhydrazine as a reagent for aldehydes and ketones." By O. L. Brady and G. V. Elsmie.

"The methylation of the oximes of benzil." By O. L. Brady and H. M. Perry.

"The alkaline oxidation of some carbohydrates by means of dyestuffs, considered quantitatively." By E. Knecht and E. Hibbert.

"Unstable states of solutions of sodium behenate." By M. E. Laing and collaborators.

"Note on the preparation of *p*-nitrophenylhydrazine." By H. H. Hodgson and H. G. Beard.

"The preparation of 2-nitro-1-halogen naphthalenes and of β-nitronaphthalene." By H. H. Hodgson and E. Kilner.

"The swelling and dispersion of some colloidal substances in ether–alcohol mixtures." By E. W. J. Mardles.

"The relationship of salts in dilute aqueous solution as determined by their influence on the critical solution temperature of the system phenol–water." By J. H. Carrington, L. R. Hickson, and W. H. Patterson.

"The colorimetric dissociation constants of dinitrocatechol and dinitroresorcinol." By F. C. Laxton, E. B. R. Prideaux, and W. H. Radford.

"The cyanine dyes. Part IX. The mechanism of the condensations of quinaldine alkiodides in presence of bases." By W. H. Mills and R. Raper.

"Dibenzylquinaldine." By W. H. Mills and A. T. Akers.

"The action of nitrous acid upon amides and other 'amino' compounds." By R. H. A. Plimmer.

"Olefinic terpene ketones from the volatile oil of flowering *Tagetes glandulifera*. Part I." By T. G. H. Jones and F. B. Smith.

"On the interaction between copper and sulphuric acid." By C. W. Rogers.

"Trypanocidal action and chemical constitution. Part II. Arylamides of 4-aminophenyl-arsinic acid." By H. King and W. O. Murch.

"The butyl esters of the simpler amino-acids. Part I." By W. T. J. Morgan.

"The influence of salts in ethyl alcohol solution on the mutual miscibility temperature of the system ethyl alcohol–paraffin." By E. J. Howard and W. H. Patterson.

"Condensations of the sodium derivatives of trimethylene glycol and glycerol." By A. Fairbourne and G. E. Foster.

"An investigation of the effect of differential aëration on corrosion by means of electrode potential measurements." By A. L. McAulay and F. P. Bowden.

"The recognition of allotropy in metals." By D. Stockdale.

"Solubility influences. Part I. The effect of some salts, sugars, and temperature on the solubility of ethyl acetate in water." By S. Glasstone and A. Pound.

"Experiments on the synthesis of apofenchocamphoric acid. Preparation of αα-dimethyl-β'-carboxyadipic acid." By K. C. Roberts.

"Electrometric study of the reactions between alkalis and silver nitrate solutions." By H. T. S. Britton.

"Electrometric separation of the iodide, bromide and chloride of silver." By H. T. S. Britton.

"Reduction products of the hydroxyanthraquinones. Part VII." By W. B. Miller and A. G. Perkin.

"Chloro-derivatives of *m*-hydroxybenzaldehyde." By H. H. Hodgson and H. G. Beard.

"The nitration of *m*-bromophenol." By H. H. Hodgson and F. H. Moore.

"The reduction of arsenic compounds by sodium hyposulphite. The production of subsulphides of arsenic." By W. Farmer and J. B. Firth.

"The electrical conductivities of hydrochloric acid and potassium chloride in water and acetone–water mixtures." By T. K. Brownson and F. M. Cray.

"Metallocyclic compounds. Part I. Compounds of tellurium." By H. D. K. Drew.

"The action of hydrogen fluoride on compounds of selenium and tellurium. Part I. Selenium dioxide." By E. B. R. Prideaux and J. O'N. Millott.

"The resolution of an asymmetric arsenic compound into its optically active forms." By W. H. Mills and R. Raper.

"The electrical conductivity of phosphorus pentachloride." By G. W. F. Holroyd, H. Chadwick, and J. Mitchell.

"Hydrogen electrode studies of the precipitation of basic chromates, borates and carbonates." By H. T. S. Britton.

"The relation between chemical constitution and pungency in acid amides." By E. C. S. Jones and F. L. Pyman.

"The rate of reaction of bromine with aqueous formic acid." By D. L. Hammick, W. K. Hutchison and F. R. Snell.

"The quaternary salts of benzoxazoles." By L. M. Clark.

"$\gamma\gamma'$-Dichloropropyl sulphide." By G. M. Bennett and A. L. Hock.

"Synthesis in the thianthren series. Part II." By M. Sen and J. N. Rây.

"Some lactonic esters derived from phenacyl bromide by condensation with ethyl sodiomalonate and analogous substances." By R. M. Rây and J. N. Rây.

"The velocity of decomposition of heterocyclic diazonium salts. Part I. Diazonium salts of the pyrazole and pyrazolone series." By J. Reilly and D. Madden.

"Orientating effects in the diphenyl series." By H. G. Dennett and E. E. Turner.

"The relative directive influence of polar and steric effects on ring closure." By R. W. J. Smith and E. E. Turner.

"The configuration of the ammonium ion." By W. H. Mills and E. H. Warren.

"Symmetrical substitution derivatives of trimethylene bromide and pentamethylene bromide." By W. H. Mills and L. Bains.

"Further studies on a new chlorinating agent preparation of polychloro-derivatives of toluene." By O. Silberrad.

"The equilibrium in the systems aluminium sulphate–copper sulphate–water and aluminium sulphate–ferrous sulphate–water at 25°." By V. J. Occleshaw.

"Reactions of the meso-hydroxyanthrones." By M. A. Matthews.

"The influence of different nuclei on the absorption spectra of substances." By J. E. PURVIS.

"The occurrence of sylvestrene." By B. S. RAO and J. L. SIMONSEN.

"The partial formaldehyde vapour pressures of aqueous solutions of formaldehyde. Part II." By W. LEDBURY and E. W. BLAIR.

"Trypanocidal action and chemical constitution. Part III. Arsinic acids containing the glyoxaline nucleus." By I. E. BALABAN and H. KING.

"The preparation of tertiary arsines by the Friedel-Crafts reaction." By A. F. HUNT and E. E. TURNER.

"Equilibrium in the system : $CH_3COOCH_3+H_2O \rightleftharpoons CH_3OH+CH_3COOH$." By G. J. BURROWS.

"The parachor and chemical constitution. Part III. Orientation isomerism in aromatic compounds." By S. SUGDEN and H. WILKINS.

"The aluminioxalates of some optically active bases." By T. B. CHILD, E. ROBERTS, and E. E. TURNER.

"On the equilibrium between methylformate, methanol and hydrogen, and some related equilibria." By J. A. CHRISTIANSEN.

"Hydrogen electrode studies of the reactions between solutions of salts of weak metallic bases and the acetate, oxalate and tartrate of sodium, with a note on the effect of dextrose on zirconium chloride solution." By H. T. S. BRITTON.

"The conversion of *r*-phenyl-α-naphthyl-glycollic acid into ketones." By A. MCKENZIE and H. J. TATTERSALL.

"Studies of equilibrium in systems of the type $Al_2(SO_4)_3$–$M''SO_4$–H_2O. Part II. Aluminium sulphate–nickel sulphate–water at 30°." By R. M. CAVEN and T. C. MITCHELL.

"The system silver sulphate–aluminium sulphate–water at 30°." By R. M. CAVEN and T. C. MITCHELL.

"Change of crystal habit of some salts when crystallised from silicic acid gel." By H. A. FELLS and J. B. FIRTH.

"The ionic activity product of water in glycerol–water mixtures." By J. COLVIN.

"2-*m*-Xylidino-5-ethoxy-4 : 5-dihydrothiazole." By V. K. NIMKAR and F. L. PYMAN.

"The change in the absorption spectra of aromatic nitro-compounds in liquid ammonia with time." By W. E. GARNER and H. F. GILLBE.

"Nitrosyl sulphuric acid. Part I." By G. A. ELLIOTT, L. L. KLEIST, and H. W. WEBB.

"The action of acetylenetetrabromide on organic bases." By J. D. FULTON.

"Production of *cyclo*telluripentanedionedichlorides." By G. T. MORGAN (with F. J. CORBY, O. C. ELVINS, E. JONES, R. E. KELLETT, and C. J. A. TAYLOR).

"Interactions of tellurium tetrachloride and monoketones." By G. T. MORGAN and O. C. ELVINS.

"A note on the sulphonation of 4-chloro-phenol." By J. M. GAUNTLETT and S. SMILES.

"Some analogues of adrenalone. Part I." By F. MATTHEWS.

"The relationship between the optical rotatory powers and the relative configurations of optically active compounds. Part II. The relative configurations of the optically active mandelic acids and β-phenyl-lactic acids." By G. W. CLOUGH.

"Synthesis of 2 : 3 : 5-trimethyl glucose." By J. C. IRVINE and J. W. H. OLDHAM.

"The oxidation of certain sesquiterpenes with chromyl chloride and chromic acid." By D. T. GIBSON, J. M. ROBERTSON, and J. SWORD.
"Tesla-luminescence spectra. Part VI. Some amino-derivatives." By W. H. MCVICKER, J. K. MARSH, and A. W. STEWART.
"Glyceryl glucoside." By H. S. GILCHRIST and C. B. PURVES.
"A comparison of methods of measuring the polarity of surfaces." By N. K. ADAM, R. S. MORRELL, and R. G. W. NORRISH.
"cyclo*Hexane*spirocyclo*hexane*." By W. S. G. P. NORRIS.
"The effect of heat on chloral hydrate." By J. D. MOUNFIELD and J. K. WOOD.
"The solubilities of sodium, potassium and calcium ferrocyanides. Part I." By M. P. APPLEBEY and M. FARROW.
"Isomeric change of aromatic compounds. Part I. The conversion of diacylanilides into acylaminoketones." By A. W. CHAPMAN.
"Nitrosyl sulphuric acid." By F. J. WILSON and H. W. WEBB.
"The constitution of the metallic ozonides." By E. C. C. BALY and R. W. RIDING.
"The influence of substituents on the stability of Schiff's bases. Part I. Hydrolysis of nitro- and methoxy-benzylidene anilines." By E. M. LANGMAN, W. HEALEY, and P. K. DUTT.

PROCEEDINGS

OF THE

CHEMICAL SOCIETY.

Ordinary Scientific Meeting, Thursday, November 5th, 1925, at 8 p.m., Dr. ARTHUR W. CROSSLEY, C.M.G., C.B.E., D.Sc., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through death, of the following Fellows :

	Elected.	Died.
John Young Buchanan	June 21st, 1877.	Oct. 16th.
Harold James Cross	Feb. 15th, 1917.	Oct. 17th.
Francis Jones.....	Dec. 4th, 1873.	Oct. 22nd.
Charles Etty Potter	Dec. 5th, 1912.	Sept. 13th.

The PRESIDENT announced that Professors C. S. Gibson, G. T. Morgan, J. F. Thorpe, and W. P. Wynne, have been appointed by the Council to represent the Society on the Bureau of Chemical Abstracts, and that Professors T. M. Lowry, J. W. McBain, and J. C. Phillip will represent the Society on the Editorial Board of the Journal of Physical Chemistry, together with Professor F. G Donnan, appointed by the Faraday Society.

Certificates were read for the first time in favour of :

Harold Frederic Betts, B.Sc., 17, The Broadway, Broadstairs.
Edward Britnell, B.Sc., 9, Osterley Avenue, Isleworth.
Reginald John Bromfield, 141, Constantine Road, N.W. 3.
Francis Hereward Burstall, B.Sc., 12, Adelaide Road, Teddington.
Archer John William Butterfield, 163, Northumberland Park, N. 17.
John William Corran, B.Sc., Ph.D., A.I.C., Research Laboratory, Carrow Works, Norwich.
John Harold Cottier, 52, Aspen Grove, Lodge Lane, Liverpool.
John Horsfall Dyde, 18, Dean Road, Scarborough.
George Malcolm Dyson, B.A., B.Sc., Ph.D., 36, Hillsborough Road, E. Dulwich, S.E. 22.
Alfred Eccles, B.Sc., 18, Cambrian Terrace, Holbeck, Leeds.
George Albert Elliott, M.Sc., 263, Kennington Road, S.E. 11.
Eric Bertram Evans, B.Sc., 2, Boxmoor Terrace, Southchurch, Southend.
Elinor Katharine Ewbank, B.A., 22, Park Crescent, Oxford.

Elizabeth Monica Openshaw Farrow, M.A., 37, Chalfont Road, Oxford.
Oliver Free, B.A., The Lodge, Mansfield College, Oxford.
William Marshall Freeman, 1, Temple Gardens, Temple, E.C. 4.
Eva Florence Gee, The Station, L.N.E.R., Howsham, Lincoln.
George Vincent Hall, B.Sc., 6, Borough Road, Bridlington.
William Rowan Hare, 220, Eastfield, Peterborough.
Walter Healey, 28, Gooder Lane, Brighouse.
Thomas Henderson, M.C., M.A., B.Sc., Guildford Grammar School, West Australia.
Syed Husain, M.Sc., 112, Gower Street, W.C. 1.
Gilbert Jessop, M.Sc., Ph.D., 453, Glossop Road, Sheffield.
Brian Charles Lavers Kemp, B.A., Wellington College, Berks.
Banarsi Das Laroia, B.A., B.Sc., 3, Oxford Road, Teddington.
John Joseph Lennon, M.Sc., 6, Bartlemas Road, Oxford.
Ivan Roy McHaffie, B.A., M.Sc., 37, King Henry's Road, N.W. 3.
Neil McLean, M.A., B.Sc., 127, Blenheim Place, Aberdeen.
Leslie George Manchester, B.Sc., 557, Green Lanes, Hornsey, N. 8.
William Alfred Nottage Markwell, 26, Huntsmoor Road, S.W. 18.
Charles Henry Lawrence Miller, 50, Rowden Road, Beckenham.
Horace Winston Palmer, B.Sc., 15, Hollingdean Terrace, Brighton.
Austin McDowell Patterson, Antioch College, Yellow Springs, Ohio, U.S.A.
Ernest Phillis, B.Sc., 22, Fairford Terrace, Dewsbury Road, Leeds.
Jonathan Pollitt, B.A., 17, Caversham Avenue, Palmers Green, N. 13.
Charles Raymond Porter, M.Sc., A.I.C., 126, Linden Road, Bournville, Birmingham.
Evan Emrys Price, B.Sc., Rock House, Heathfield, Swansea.
Rose Rachel Sass, B.Sc., Newnham College, Cambridge.
Albert Sciver, B.Sc., A.I.C., 84, Vineyard Hill, Wimbledon Park, S.W. 19.
Frederick Francis Percival Smith, B.A., B.Sc., Peterhouse, Cambridge.
Robert Frederick Smith, 254, Higham Hill Road, Walthamstow, E. 17.
William Ernest Soper, B.Sc., 50, Aislibie Road, Lee, S.E. 12.
Herbert Kenneth Southern, B.Sc., Government Laboratory, Strand, W.C. 2.
Frank Harland Swire, 152, Queen's Road, Halifax.
Harold James Tattersall, B.Sc., Ph.D., 141, Thorold Road, Ilford.
Elvera Annie Tricker, 319, Norwich Road, Ipswich.
Norman Leopold Tyler, 9, St. Paul's Gardens, Spennymoor.
Herbert Ward Vernon, B.Sc. 245, Albert Road, N. 22.
Ewart Harrod Williams, B.Sc., A.I.C., 31, Thornsbeach Road, Catford, S.E. 6.
Gwyn Williams, B.Sc., Cae Ffynnon, Llandudno Junction.
John Laurence Wiltshire, B.Sc., 36, Fordel Road, Catford, S.E. 6.
Wilfred Fisher Wyatt, M.Sc., North Anston, Nr. Sheffield.

The following were formally admitted Fellows of the Chemical Society: W. J. V. Ward, H. F. Halliwell, R. J. W. Le Fèvre, I. J. Faulkner, J. Thurgood, and T. W. Jones.

The following papers were read:

"Further studies on a new chlorinating agent. Preparation of polychloro-derivatives of toluene." By O. Silberrad.

"The configuration of the ammonium ion." By W. H. Mills and E. H. Warren.

The following paper was taken as read :

" Ring-chain tautomerism. Part XV. The phenol-succineins and -glutareins." By S. DUTT.

Ordinary Scientific Meeting, Thursday, November 19th, 1925 at 8 p.m., Professor W. P. WYNNE, D.Sc., F.R.S., Vice-President in the Chair.

The CHAIRMAN referred to the loss sustained by the Society, through death, of the following Fellows :

	Elected.	Died.
John Lloyd T. Jones	Feb. 7th, 1901.	Nov. 12th.
Frank George Pope	Feb. 18th, 1909.	Oct. 29th.
Robert Llewellyn Taylor	Jan. 15th, 1874.	Nov. 8th.

The CHAIRMAN announced that :

1. The Council has decided that the next Annual General Meeting and Dinner to take place on Thursday, March 25th, 1926, shall be held in Manchester. A local Sub-Committee has been appointed to make arrangements and full particulars will be announced later.

2. An Informal Meeting will be held in the Rooms of the Society on Thursday, December 17th, immediately after the conclusion of the formal business of the Ordinary Scientific Meeting at 8 p.m. Light refreshments will be provided, and smoking will be permitted, except on the Library Floor. The Council will welcome assistance from Fellows who can add to the interest of the Meeting by showing experiments or exhibiting apparatus, and those able to do so are requested to communicate with the Assistant Secretary not later than Monday, December 7th.

The following were formally admitted Fellows of the Chemical Society : Cyril C. Harris, John S. Carter, and T. H. Clare.

Certificates were read for the first time in favour of :

William Blakey, jun., B.A., 14, Marshall Road, Cambridge.
Herbert Clayton, M.A., B.Sc., The Dyson Perrins Laboratory, South Parks Road, Oxford.
John Charles Forsyth, 62, Worcester Street, Christchurch, New Zealand.
Ankarath Sankunni Mannadi Nayar, M.B., B.S., Ph.D., The Medical College, Madras.
William Bennett Price, B.Sc., The Laurels, Woolwich Road, Belvedere.
Madhavlal Sukhlal Shah, M.Sc., 22, Oxford Road, Putney, S.W. 15.
George Ernest Thompson, 7, Campbell Road, Bow, E. 3.
Bernard William Town, B.Sc., A.R.C.S., 79, The Grove, Hammersmith, W. 6.
Victor Martin Trikojus, B.Sc., Queen's College, Oxford.
Henry Woolf, P.O. Box 14, Broken Hill, Northern Rhodesia.

The following Certificate has been authorised by the Council for presentation to ballot under Bye-Law I (2):

Edgar Calvin Le Roy Miller, M.D., Medical College of Virginia, Richmond Va., U.S.A.

The following papers were read:

"The constitution of the metallic ozonides." By E. C. C. Baly and R. W. Riding.

"Studies of dynamic isomerism. Part XX. Amphoteric solvents as catalysts for the mutarotation of the sugars." By T. M. Lowry and I. J. Faulkner.

"Studies of valency. Part V. Absorption spectra of halogen and sulphonic derivatives of camphor. Origin of the ketonic absorption band." By T. M. Lowry and G. Owen.

"Studies of valency. Part VI. General and selective absorption of halogen derivatives of methane. The origin of general absorption." By T. M. Lowry and R. R. Sass.

The following paper was taken as read:

"Studies of valency. Part VII. Surface polarity and the reaction of ethylene and chlorine. The effect of the adsorbed water layer." By R. G. W. Norrish and G. G. Jones.

List of papers, or abstracts thereof, received between October 16th and November 19th, 1925. (This list does not include the titles of papers which have been read at an Ordinary Scientific Meeting, or which have appeared in the Journal.)

"Polymerisation of β-glucosan. The constitution of synthetic dextrins." By J. C. Irvine and J. W. H. Oldham.

"The action of mercurous nitrate on chloroauric acid." By W. B. Pollard.

"The freezing of inorganic hydrogels." By J. R. I. Hepburn.

"The bromination of some 5-substituted 1-phenylbenzthiazoles." By R. F. Hunter.

"Studies on the dependence of optical rotatory power on chemical constitution. Part VI. Rotatory powers of phenyl, *o*-, *m*-, *p*-tolyl and β-naphthyl derivatives of *d*-camphorimide and *d*-camphoramic acid." By B. K. Singh and A. N. Puri.

"Transformations of the sugar nitrates." By J. W. H. Oldham.

"Studies in colour and constitution. Part I. The positional bathochromic influence of the methylthiol group, alone, and in conjunction with the methoxy-group." By H. H. Hodgson and F. W. Handley.

"The photochemical oxidation of hydriodic acid in ultra-violet light. Part I." By T. MOORE.

"Ring-chain tautomerism. Part XVII. Instances showing how glutaric derivatives can simulate succinic compounds." By S. DUTT.

"A theory of colour on the basis of molecular strain. The effect of chromophoric superposition." By S. DUTT.

"The influence of the intensity of illumination on the velocity of photochemical changes." By F. BRIERS, D. L. CHAPMAN, and E. WALTERS.

"The salting-out effect. The influence of electrolytes on the solubility of iodine in water." J. S. CARTER.

"Germanium. Part II. Germanium tetrachloride and its ammonia compounds." By W. PUGH and J. S. THOMAS.

"The action of alcoholic soda and potash upon chloronitrobenzene." By D. H. RICHARDSON.

"The partial pressures of aqueous ethyl alcohol." By H. J. E. DOBSON.

"A comparison of some of the physical properties of the alkali cyanates and azides." By J. A. CRANSTON and A. Y. LIVINGSTONE.

"Reactions for nitrites." By B. C. MCEWEN.

"Lead dihydride and lead tetrahydride." By E. J. WEEKS.

"Some reactions of organic thiosulphates." By H. B. FOOTNER and S. SMILES.

"Air oxidation of titanous and vanadous sulphates." By A. S. RUSSELL.

"Complex formation in lead nitrate solutions. Part II. The quaternary system potassium nitrate–lead nitrate–barium nitrate–water." By S. GLASSTONE and E. J. RIGGS.

"Polymerisation of acetone by calcium carbide." By T. HOPKINS.

"Action of zinc alkyl halides on nitric esters." By T. HOPKINS.

"Observations on the Claisen reaction." By G. T. MORGAN and E. HOLMES.

"The specific heats of hydrocyanic acid. A reply." By E. H. INGOLD.

"The relation of homogeneous to catalysed reactions. The catalytic decomposition of hydrogen iodide on the surface of platinum." By C. N. HINSHELWOOD and R. E. BURK.

"The action of hydrogen fluoride on compounds of selenium and tellurium. Part II. Tellurium dioxide." By E. B. R. PRIDEAUX and J. O'N. MILLOTT.

"Halogenation of 2 : 6-dimethylbenzbisthiazole and of 2 : 4-diphenyl-3 : 5-diphenyliminotetrahydro-1 : 2 : 4-thiodiazole." By R. F. HUNTER.

"The reaction between hydroxylamine and ferric chloride." By A. D. MITCHELL.

"The equilibria underlying the soap-boiling processes. The system potassium oleate–potassium chloride–water." By J. W. MCBAIN and W. J. ELFORD.

"The solubility of sodium iodide in ethyl alcohol." By F. E. KING and J. R. PARTINGTON.

"Iodination in the carbazole series." By S. H. TUCKER.

"The chemistry of the caryophyllene series. Part I." G. G. HENDERSON, J. M. ROBERTSON, and (in part) C. A. KERR.

"On the Budde effect in bromine. Part I. The photoactive constituent in wet bromine." By B. LEWIS and E. K. RIDEAL.

"On the Budde effect in bromine. Part II. The kinetics of the reaction and the light absorption of wet and dry bromine." By B. LEWIS and E. K. RIDEAL.

"The constitution of the benzene nucleus." By B. C. MCEWEN.

"Keto-enol isomerism of ethylenebisacetylacetone." By G. T. MORGAN and C. J. A. TAYLOR.

"A buffer mixture for the alkaline range of hydrogen-ion concentration determinations." By W. R. G. ATKINS and C. F. A. PANTIN.

"The influence of carbon rings on the velocity of reactions involving their side-chains. Part I. The hydrolysis of cyclic and open-chain malonic esters." By R. GANE and C. K. INGOLD.

"The condensations of 3-bromo-, and 3-nitro-*p*-dimethylaminobenzaldehydes with ethyl acetoacetate and ammonia." By L. E. HINKEL and W. R. MADEL.

"The replacement of calcium carbonate by iron pyrites in nature." By C. O. HARVEY.

"A revision of the structural formula of glucose." By W. CHARLTON, W. N. HAWORTH, and S. PEAT.

CERTIFICATES OF CANDIDATES FOR ELECTION AT THE BALLOT TO BE HELD AT THE ORDINARY SCIENTIFIC MEETING ON THURSDAY, DECEMBER 3RD, 1925.

ANDREW, ROBERT LESLIE, Dominion Laboratory, Wellington, New Zealand. British (by birth). Analyst. Nineteen years' experience in Dominion Laboratory, N.Z., now senior assistant in charge of Food and Drugs work. Published work: "The Colorimetric Estimation of Lead in Cream of Tartar," *Analyst*, 1924, p. 129. "The Cryoscopic Method for the Detection of Added Water in Milk" (appendix to 50th Annual Report, Dominion Laboratory). (*Signed by*) J. S. Maclaurin, P. W. Robertson, K. M. Griffin.

BAISSAC, LOUIS, Curepipe Road, Mauritius (Indian Ocean). British. Sugar Technologist, Department of Agriculture, Réduit, Mauritius. Lecturer

in Sugar Technology, College of Agriculture, Réduit, Mauritius. (*Signed by*) James P. Ogilvie, H. Tempany, W. H. Edwards.

BARKER, WILLIAM FRANCIS, Rhodes University College, Grahamstown, S. Africa. Professor of Chemistry. Ph.D. (Liverpool). (*Signed by*) I. M. Heilbron, E. C. C. Baly, R. A. Morton.

BASDEN, RALPH, 11, Ada St., Hamilton, Newcastle, N.S.W. Teacher of Chemistry. I have been engaged for four years as Teacher of Science at Sydney Grammar School; two years Teacher of Organic and Physical Chemistry at Newcastle Technical College, and four years in Manufacturing and Analytical Chemistry. (*Signed by*) A. R. Penfold, Robt. Grant, Fred J. Berry, Richard W. Challinor.

BELL, FRANK, 11, Edwy Parade, Gloucester. British. Student. Research student at Battersea Polytechnic. (*Signed by*) J. Kenyon, F. C. Ray, Henry Phillips, A. Houssa, Harold Hunter, P. W. B. Harrison, S. Greenberg.

BENNETT, ARTHUR NEVILLE COPNALL, 27, Dale Rd., Luton. British. Research Chemist to B. Laporte, Ltd., Luton. B.Sc. (Hons.) London. Have done research under Prof. Donnan at University College, and hope to publish shortly. (*Signed by*) W. E. Garner, D. McKie, Thomas Iredale.

BETTS, HAROLD FREDERICK, 17, The Broadway, Broadstairs, Kent. British. Research Student, East London College (Univ. of London). B.Sc. (Lond.), 2nd Class Hons. Chemistry. (*Signed by*) J. R. Partington, D. C. Jones, E. E. Turner.

BIRD, JOHN CECIL, 72, Dyne Rd., Kilburn, London, N.W. 6. British. Research and Works Chemist. B.Sc. (London), A.I.C., Associate of Univ. College of Nottingham. Science Master, Grammar School, Daventry. Chemist to Messrs. L. B. Holliday & Co., Ltd., Huddersfield. Chief Chemist and Works Manager to J. W. Drysdale & Co., London. Chemist to Messrs. Intermediates and Explosives, Ltd. (Bolckow, Vaughan & Co.), Co. Durham. Chemist to Messrs. Crookes Laboratories (British Colloids, Ltd., London). Investigation with Prof. H. H. Hodgson, M.A., into Absorption Spectra of Standard Dyestuffs (Huddersfield). (*Signed by*) Herbert Henry Hodgson, F. S. Kipping, E. R. Trotman.

BIRKETT, LIONEL CHRISTOPHER WILLIAM, Moor House, North Rd., Spennymoor, Co. Durham. British. Analytical Chemist on Coke Oven and Bye-products Plant. 5½ years' experience in Ironworks and Coke Oven laboratories. B.Sc. (3rd Class Hons.) after 3 years' study at Armstrong College, Newcastle-on-Tyne. (*Signed by*) W. N. Haworth, G. C. Leitch, H. V. A. Briscoe.

BOYD, JAMES, P.O. Box 1162, Johannesburg, S. Africa. British. Chief Examiner of Mine Air, Chamber of Mines, Johannesburg (and Assistant to General Manager, Chamber of Mines). F.I.C., A.R.T.C. (Glasgow). Assistant to Professor of Chemistry, Royal Technical College, Glasgow, 1908–11. Chemist, Goldfields Lab., Transvaal, 1912–13. Chief Examiner of Mine Air, Chamber of Mines, Johannesburg, 1914 to date. Author of various reports on Dust in Mine Air and Methods of investigating same (published in "Chamber of Mines Annual Reports," and for circulation to the mines of the Rand). Student, Royal Technical College, Glasgow, 1904–08. (*Signed by*) G. G. Henderson, Thomas Gray, F. J. Wilson.

BRADHURST, FRANK SYMONDS, Bondi, Sydney, and c/o Holbrooks Ltd., Danks St., Waterloo, Sydney. Chief Chemist and Factory Manager. Matriculated from Sydney High School at Leaving Certificate Examination; obtained Scholarship available at the Sydney Technical College. Here I obtained the Honours Diploma with College Medal for year in Organic Chemistry, thereby becoming an Associate of the Sydney Technical College (A.S.T.C. Chem.).

Associate of the Australian Chemical Institute (A.A.C.I.). Chemist at Stedman-Hendersons, Ltd., Sweet Manufacturers, for 2½ years, then at Holbrooks (Australasia), Ltd., of Sydney, for 3 years, where I now hold the above position. I desire admission to the Chemical Society in order to keep in touch with modern research in the field of Food Analysis, and Food Manufacture. (*Signed by*) Richard W. Challinor, Fred J. Berry, Robert Grant, Arthur R. Penfold, S. E. Sibley.

BRITNELL, EDWARD, 9, Osterley Av., Isleworth, Middlesex. English. Chemist. B.Sc. (Honours Chemistry), London, July 1925. Assistant for 3 years to G. N. Huntly, 325, Kennington Rd., S.E. Assistant for 1½ years to G. T. Holloway & Co., 13, Emmett St., Limehouse. (*Signed by*) William G. Wagner, G. Nevill Huntly, Herbert F. Stephenson.

BROMFIELD, REGINALD JOHN, 141, Constantine Rd., Hampstead, N.W. 3. English. Assistant to Biochemist, The Hospital for Sick Children, Great Ormond St., W.C. For three years laboratory assistant at University College, London, under Prof. F. G. Donnan and Prof. N. Collie. For one year Acting Biochemist to Children's Hospital, Gt. Ormond St. For past two years Biochemical assistant, Hospital for Sick Children, Great Ormond St. Desire to become a member in order to receive the Journal and to keep in touch with current chemical literature, together with access to Library. (*Signed by*) J. N. Collie, Henry Terrey, Fred J. Kettel, J. Wicliffe Peck.

BURSTALL, FRANCIS HEREWARD, 12, Adelaide Road, Teddington, Middlesex. British. Research Chemist. D.S.I.R. Chemical Research Laboratory, Teddington. 1st Class Honours B.Sc., Birmingham University. (*Signed by*) G. T. Morgan, E. Holmes, C. E. Wood.

BUTTERFIELD, ARCHER JOHN WILLIAM, 163, Northumberland Park, Tottenham, N. 17. English. Articled Pupil in Engineering. Is desirous of keeping in touch with progress in the Science of Chemistry by attending the meetings and receiving the publications of the Society. (*Signed by*) W. J. A. Butterfield, Ernest M. Hawkins, E. R. Bolton.

CARLILE, JOHN HILDRED GEORGE, 29, Orlando Rd., Clapham, S.W. 4. British. Chemical Research Student, Royal College of Science. A.R.C.Sc., B.Sc. (*Signed by*) H. J. T. Ellingham, James C. Philip, H. F. Harwood.

CHALK, LESLIE JAMES, 14, Shrubbery Rd., Southall, Middx. Student (East London College). B.Sc., 1st Class Hons. in Chemistry. J. R. Partington, E. E. Turner, Elwyn Roberts.

CHARAN, RAMA, Allahabad, India. Indian (British). Glass Technologist, Govt. of India State Technical Scholar, B.Sc. from Allahabad University, 1922. Subjects: Maths., Physics, Chemistry, and English. B.Sc. Tech. from Sheffield University, 1924. Subjects: Glass Technology, Fuel, Refractory Materials, Geology and Mineralogy of Glassmaking Materials. For one year after graduation did research work on glasses containing more than one alkaline oxide and silica-lime. (*Signed by*) W. E. S. Turner, C. J. Peddle, F. G. Tryhorn.

CORRAN, JOHN WILLIAM, Research Laboratory, Carrow Works, Norwich. British. Physical and Biochemist. B.Sc. (Liv.), 1st Class Hons. Chem., 1921; Ph.D. (Liv.), 1923; A.I.C. Two years Research Physical Chemistry under Prof. W. C. M. Lewis; two years as physical and biochemist to Liverpool Cancer Research Committee. Publications: *J. Amer. Chem. Soc.*, 1922, **44**, 1673; 1923, **45**, 1627. *Biochem. J.*, 1924, **18**, 1358, 1364. (*Signed by*) W. C. M. Lewis, E. C. C. Baly, E. Morrison, Leslie J. Harris.

COTTIER, JOHN HAROLD, 52, Aspen Grove, Lodge Lane, Liverpool. British. Certificated School-teacher; formerly a student of Sheffield University. I

wish to obtain the Fellowship of the Society in order to receive the Journal and Abstracts, and thus keep in touch with advances in Chemistry. (*Signed by*) W. P. Wynne, F. G. Tryhorn, E. G. Turner, D. M. Bennett.

CROWTHER, EDWARD MORTIMER, Rothamsted Exptl. Station, and Bourtree, 24, Clarence Road, Harpenden, Herts. British. Assistant Physical Chemist and "Empire Cotton Growing Corporation," Soil Physicist, Rothamsted Exptl. Station. D.Sc. (Leeds), F.I.C., A.Inst.P. Publications on Physical Chemistry of Soils. *Journ. Agric. Sci.*, 1925, **15**, 201–255, 300–302, 303–306; *Trans. Faraday Soc.*, 1922, **17**, 317–321. Conjointly: *Journ. Agric. Sci.*, 1924, **14**, 221–231; 1925, **15**, 68–88; *Proc. Royal Soc.*, 1925, **106A**, 33–51, 215–222, 233–242; *Annals of Applied Biology*, 1925, **12**, 152–190. (*Signed by*) E. J. Russell, H. J. Page, C. T. Gimingham.

DICKINSON, FRANK EDWIN, Research Establishment, Sutton Oak, St. Helens, Lancs. British. A/g Superintendent, The Research Establishment, Sutton Oak, St. Helens, Lancs. Actively engaged in Chemical Industry as Analytical and Research Chemist and as Assistant Manager and Manager of Chemical Works for past fourteen years. Educated at King Edward's School, Stratford-on-Avon, and University of Birmingham. No papers published as all work of secret nature or commercial value. (*Signed by*) J. Davidson Pratt, E. Wheeler, Francis H. Carr.

DOLPHIN, JOSEPH RAYMOND, Chemical Department, University Rd., Edgbaston, Birmingham. British. Research Student. Pass B.Sc. Birmingham, 1st Class, 1923; Honours B.Sc. Birmingham, 1st Class, 1924. Research Student under Professor Morgan, O.B.E., D.Sc., F.R.S., from 1924–25 to become Research Chemist at J. A. Crabtree & Co., Ltd., Walsall, in Sept. 1925. (*Signed by*) G. T. Morgan, C. E. Wood, E. Ashley Cooper.

DONOVAN, WILLIAM, Dominion Laboratory, Wellington, New Zealand. British. Analyst, Dominion Laboratory, N.Z. M.Sc. (New Zealand University). Twenty years' experience in analytical work; now Assistant Dominion Analyst. Published work includes "Corrosion of Muntz Metal in Sea Water," *J.S.C.I.*, XLIII, 13, 72T; "Estimation of Nitrogen in Coal," *The Analyst*, Feb. 1924. (*Signed by*) J. S. Maclaurin, P. W. Robertson, K. M. Griffin.

DUNN, JOHN STANLEY, 39, Victoria Park, Cambridge. British. Chemist. M.A. (Cantab.), Ph.D. (London), A.I.C. Late Research Chemist, Calico Printers Assocn., Manchester; now Research Chemist, British Non-Ferrous Metals Res. Assocn. With Dr. E. K. Rideal: *T.*, 1923, **123**, 1242; *T.*, 1924, **125**, 676. (*Signed by*) R. G. W. Norrish, Eric K. Rideal, H. McCombie.

DYDE, JOHN HORSFALL, 18, Dean Rd., Scarborough. British. Student at the University, Leeds, who intends to pursue post-graduate work in Biochemistry. Final year B.Sc. (Honours Chemistry). (*Signed by*) C. K. Ingold, B. Topley, H. M. Dawson.

DYSON, GEORGE MALCOLM, 36, Hillsborough Road, E. Dulwich, London, S.E. 22. British. Research Chemist. B.A. (Oxon.), B.Sc., Ph.D. (London). Research in Organic Chemistry, including work on the Reactions of Thiocarbonyl Chloride with Amino-compounds, Phenols, etc. *J.C.S.*, Trans., Sept., 1924, **125**, 1702; "The Reactions of Thiocarbonyl Chloride. Pt. I." (*Signed by*) D. L. Chapman, H. J. George, L. Rubenstein.

ECCLES, ALFRED, 18, Cambrian Terrace, Holbeck, Leeds. British. Research Student (University of Leeds). B.Sc., 1st Class Hons. (Pure Chemistry), 1925. (*Signed by*) C. K. Ingold, P. K. Dutt, W. A. Wightman, J. W. Baker.

EDWARDS, EDWIN FRANCIS, Kogarah, Sydney, N.S.W., c/o Holbrooks (Australasia), Limited, Waterloo, Sydney. Works Chemist and Assistant

Factory Manager. Matriculated from High School at Leaving Certificate Examination, and gained Scholarship to Sydney Technical College. Attended the above College for five years—thereby completing the Diploma Course—and was subsequently granted the Associateship of the College, and the Diploma in Organic Chemistry. I am also an Associate of the Australian Chemical Institute. I was Assistant Chemist at the Woolwich Chemical Co., Sydney, for a period of two years, and Analyst at H.M. Customs, Sydney, for twelve months. At present I hold the above-mentioned position on the Staff of Holbrooks (Australasia), Limited, of Sydney. I desire admission to the Chemical Society in order to keep in touch with modern chemical literature and progress. (*Signed by*) Richard W. Challinor, Fred J. Berry, Robert Grant, Arthur R. Penfold, S. E. Sibley.

EDWARDS, JOHN MOELWYN, 92, Jamaica Rd., Rotherhithe, S.E. 16. British. Chemist and Pharmacist and Optician. (1) Early education at the Meirioneth County Grammar School. (2) Three years student of Chemistry at the Festiniog Higher Grade School. (3) Studied Analytical Chemistry and Physics under Mr. J. Thomas, B.Sc., at Muter's School of Chemistry. (4) Passed the Qualifying Examination of the Pharmaceutical Society of Great Britain in 1905. (5) Four years Sight Testing Optician with Mr. Hugh Jones, F.S.M.C., D.B.O.A. Am particularly anxious to keep in touch with Analytical work. (*Signed by*) Frank B. Arnold, John J. Laws, Percy Barrs.

ELLIOTT, GEORGE ALBERT, 263, Kennington Road, London, S.E. 11. British. Ramsay Memorial Fellow. M.Sc. (Lond.). (*Signed by*) L. F. Gilbert, S. Barratt, W. E. Garner.

EVANS, ERIC BERTRAM, 2, Boxmoor Terrace, Southchurch, Southend, Essex. English. Student. For two years a student at East London College; at present engaged in research there. Awarded 2nd Class in B.Sc. Hons. Lond., 1925. (*Signed by*) J. R. Partington, E. E. Turner, Elwyn Roberts.

EWBANK, (Miss) ELINOR KATHARINE, 22, Park Crescent, Oxford. British. Engaged in original research. Took 1st Class in Honours, School of Chemistry, Oxford, 1903. E. C. C. Baly and E. K. E., **87**, 1347; **87**, 1355. N. V. Sidgwick and E. K. E., **119**, 486; **121**, 1844; **125**, 2268. (*Signed by*) W. H. Perkin, N. V. Sidgwick, D. Ll. Hammick.

FARROW, (Miss) ELIZABETH MONICA OPENSHAW, 37, Chalfont Rd., Oxford. British. Demonstrator in Old Chemistry Dept., Oxford. Lecturer in Chemistry to 5 Women's Societies. M.A. (Oxon.) (*Signed by*) W. H. Perkin, N. V. Sidgwick, B. Lambert, M. P. Applebey, Allan F. Walden, E. G. J. Hartley, Frederick Soddy, J. Masson Gulland, S. G. P. Plant.

FREE, OLIVER, The Lodge, Mansfield College, Oxford. British. Demonstrator of Inorganic Chemistry. B.A., 2nd Class Honours. Research Student in Physical Chemistry (Radioactivity). (*Signed by*) M. P. Applebey, Frederick Soddy, B. Lambert, N. V. Sidgwick, A. F. Walden.

FREEMAN, WILLIAM MARSHALL, 16, Oakwood Avenue, Beckenham, Kent. British. Of the Honourable Society of the Middle Temple, Barrister-at-Law, Recorder of Stamford, and formerly Member of the Pharmaceutical Society of Gt. Britain. Author of "The Patents and Designs Act 1907, with Appendix on Chemical Patents." Occasional contributor to legal and other journals on Food and Drugs legislation, etc. Interested particularly in the promotion of the study of chemico-legal science especially with reference to the administration of the criminal law. (*Signed by*) Ernest C. Bennison, H. Berry, Harry Silvester.

GEE, EVA FLORENCE, The Station, L.N.E.R., Howsham, Lincoln. British.

Student of Chemistry at Bedford College. (*Signed by*) J. F. Spencer, H. Crompton, J. Stewart.

GEMMELL, JAMES WALTER SHANKS, Helen's Villa, Fleming Place, St. Andrews. British. Research Chemist. B.Sc. (Hons.) St. Andrews; now employed in Research Dept., Jute Industries, Ltd., Dundee, and desirous of keeping in touch with recent developments in chemical science. (*Signed by*) A. Killen Macbeth, James Craik, John Pryde.

GLOVER, FRANCIS REGINALD, 98/100, St. Peter's Street, Nottingham. British. Managing Director, Cooke & Glover, Engineers, Ltd., Engineers and Consulting Chemists, Nottingham, M.I.H.V.E., A.M.I.S.E. (*Signed by*) E. B. R. Prideaux, J. B. Firth, B. D. Shaw.

GOUDIELOCK, WILLIAM BOUCH O'BRIEN, 28, Fairfield Lane, Barrow-in-Furness. British. Chief Analyst, Vickers Ltd., Barrow-in-Furness. Full Technological Certificate, City and Guilds Institute, in Chemistry, Metallurgy, and Iron and Steel. Pupil in Vickers' Lab. under H. B. Weeks, F.I.C., for 5 years. Chief Laboratory Assistant for 8 years. Chief Analyst ever since. Lecturer for 2 years to Vickers' Engineering Apprentices on Chemical and Metallurgical Subjects in Connection with Firm's Scheme for Higher Education of Apprentices. Lecturer to Barrow Engineer's Assoc., Jan. 1920 and Jan. 1923. I am desirous of keeping in close touch with modern developments in Scientific Chemistry. (*Signed by*) H. B. Weeks, A. H. Mundey, W. J. Davison.

GRIGG, FELIX JOHN THEODORE, Christchurch (N.Z.). British. Government Analyst, Government Buildings, Christchurch, N.Z. M.Sc. (N.Z.) with Honours in Chemistry. A.I.C. (Great Britain). Seven years' experience in analytical work. Now Government Analyst at Christchurch (N.Z.). Published work: "Geochemistry of the Thermal Lakes, North Island, N.Z." (*N.Z. Journal of Science and Technology*, 1922, Volume 5, page 156). (*Signed by*) J. S. Maclaurin, P. W. Robertson, K. M. Griffin.

HALL, GEORGE VINCENT, 6, Borough Road, Bridlington, Yorks. British. Student. Bachelor of Science, University of Leeds, June 1925. (*Signed by*) C. K. Ingold, H. M. Dawson, W. Lowson, P. K. Dutt.

HALL, JOHN, 202, Burton Rd., Derby. British. Chemist. M.Sc. (Leeds), A.I.C. Three years in Lab. of Sir W. G. Armstrong-Whitworth & Co.; two years in Lab. Dyehouse and Colour Plant of British Celanese. *J.C.S.*, **123**, 2029–2037. (*Signed by*) A. G. Perkin, G. Reeves, W. P. Skertchly.

HARE, WILLIAM ROWAN, 220, Eastfield, Peterborough. British. Student of Chemistry in the University of Oxford. Desirous of receiving literature (*Signed by*) D. Ll. Hammick, S. G. P. Plant, E. Hope.

HEALEY, WALTER, 28, Gooder Lane, Brighouse. English. Student, University of Leeds. Chemical Student who hopes to take up research. (*Signed by*) C. K. Ingold, P. K. Dutt, W. A. Wightman.

HENDERSON, THOMAS, M.C., M.A., B.Sc., Toronhill Schoolhouse, Dunfermline. Scottish. Demonstrator in Chemistry (Inorganic), University of Leeds. M.A., B.Sc., St. Andrews, 1921. Holding a grant from the Dept. of Scientific and Industrial Research, carried on research work at St. Andrews University, under direction of Sir James C. Irvine, and have held the appointment noted above since October 1922. Vol. **121**, 1922, Trans., p. 892; Vol. **123**, 1923, Trans., p. 1130. (*Signed by*) R. Whytlaw-Gray, H. S. Patterson, B. Topley, W. Lowson, J. C. Irvine, Ettie S. Steele.

HIRST, HERBERT SIM, Trinity College, Cambridge. British. Research Assistant to Dr. E. K. Rideal, under Department of Scientific and Industrial Research Regulations. First class honours graduate in Physics and Chemistry

of St. Andrews University, with two years' research experience in Cambridge. "The Thermal Decomposition of Nitrogen Pentoxide," 1925, **127**, 657. (*Signed by*) Eric K. Rideal, W. H. Mills, Ulick R. Evans.

HUSAIN, SYED, 112, Gower St., London, W.C. 1. Indian. Student. M.Sc. (Aligarh Muslim University, India). (*Signed by*) J. R. Partington, E. E. Turner, Elwyn Roberts.

IWADARE, TORU, c/o Banyu Pharmaceutical Co., Ltd., 174, Shimomeguro, Tokyo, Japan. Japanese Proper. Became Chief Chemist and Managing Director of Banyu Pharmaceutical Co., Ltd., in September 1915. Have two years' experience as Assistant of the Chemical Dept. of the Tokyo Imperial University, and ten years' experience as Chief Chemist and Managing Director of Banyu Pharmaceutical Co., Ltd. Graduate, College of Science (Chemistry), Tokyo Imperial University, 1913. (*Signed by*) Joji Sakurai, T. Takamatsu, Y. Asahina.

JAYEWARDENE, DAVID CHRISTOPHER MENDIS, Fern Bank, Moratuwa, Ceylon. Sinhalese, British. Science Master, Prince of Wales' College, Moratuwa. (1) Science Master, St. John's College, Panadura, Ceylon (1918 and 1919). (2) Asst. Chemist, Butter Substitutes Supplies, Ltd., Colombo (1920). (3) Science Master, Prince of Wales' College, Moratuwa (since 1921). (*Signed by*) W. N. Rae, J. P. C. Chandrasena, K. V. Rau.

JESSOP, GILBERT, 453, Glossop Rd., Sheffield. British. Research Chemist. M.Sc., Ph.D. (Sheffield). Three years' Research in Physical Chemistry. Papers in the *Proc. Roy. Soc.*, 1925, **98B**, 206 (with Mr. N. K. Adam), and in the *J.C.S.* (with Mr. F. G. Tryhorn), 1925, **127**, 1320; (with Mr. N. K. Adam), 1925, **127**, 1863. (*Signed by*) W. P. Wynne, F. G. Tryhorn, N. K. Adam.

JOHNSON, CHARLES BENJAMIN, 134, Preston New Road, Blackburn. British. Minister of Religion (Fellow of Royal Astronomical Society). I desire to keep abreast, by means of the Society's Publications, of advance in General and Physical Chemistry. (*Signed by*) G. W. F. Holroyd, J. Hindle, Robert H. Pickard.

JONES, WALTER IDRIS, 7, Manor Street, Cambridge. Welsh. Research Student. Gonville and Caius College, Cambridge. Ph.D. (Cantab.), B.Sc. (Wales), etc. *Trans. Chem. Soc.*, 1923, **123**, 2688; 1924, **125**, 2590. (*Signed by*) Hamilton McCombie, John Dexter, Harold A. Scarborough.

KEENAN, HENRY WILFRID, 80, Upper Richmond Road, East Sheen, S.W. 14. British. Works Chemist. Practical experience in various branches of Analytical and Manufacturing Chemistry founded on a three years' Systematic Apprenticeship (with evening studies) under Dr. Julius Holzapfel and Dr. P. E. Bowles, F.I.C., by whom indentures are signed. Invented processes (including design and erection of plant for large scale production) dealing with (*a*) Paint and Varnish Industry, (*b*) Celluloid Industry, (*c*) Oils, and operated successfully. (*Signed by*) Charles Dorée, Francis Arnall, J. C. Crocker.

KEMP, BRIAN CHARLES LAVERS, Wellington College, Berks. British. Schoolmaster. Chemistry Master (VIth Form) at Wellington College; B.A. (Oxon.). 1922–23, research work on derivatives of Dianisoyl Methane. (*Signed by*) G. Watson Gray, D. Ll. Hammick, B. Lambert.

KING, CHARLES, F.S.A. (Scot.), 21, Newton Place, Glasgow. British. Electro-therapeutist. Fellow of the Society of Science, Lond. Applicant is in practice as Electro-therapeutist, and is desirous of keeping in touch with current chemical progress. (*Signed by*) G. G. Henderson, J. Roberts, Archd. N. Currie.

KOCH, FREDERICK KARL VICTOR, 9, Crossfield Road, Hampstead, N.W. 3.

English. Research in Physical Chemistry, Imperial College of Science and Technology. B.Sc. (1st Class), A.R.C.S. (2nd Class). (*Signed by*) James C. Philip, H. J. T. Ellingham, H. F. Harwood.

LANGFORD, CHARLES DUDLEY, 43, Ashbourne Av., Temple Fortune, London, N.W. 11. British. Research Student (Organic Chemistry), Royal College of Science. A.R.C.S., B.Sc. Honours (passed 1925, to be awarded 1926 owing to regulations). (*Signed by*) G. A. R. Kon, R. W. West, E. H. Farmer.

LAROIA, BANARSI DAS, Pindi Street, Ludhiana, Punjab, India. Indian. Student. B.Sc. (Hons.) Punjab University (India), B.A. (Hons.) Oxford University. At present student of Imperial College of Science and Technology (for Ph.D.). (*Signed by*) E. H. Farmer, G. A. R. Kon, M. A. Whiteley.

LASZLO, HENRY GUINNESS DE, 3, Fitzjohn's Avenue, Hampstead, N.W. 3. British. Research Chemist. B.A. Hons. (Cantab.), Ph.D. (Zurich). (*Signed by*) M. A. Whiteley, G. Ingle Finch, Samuel Smiles.

LEATHERBARROW, BERTRAM GREY, Hill Crest, Station Rd., Brimington, Chesterfield. British. Senior Assistant Teacher, Brimington Central School. Intermediate B.Sc. Two years subsequent graduation courses. Headmaster, Brimington Central Evening School, teaching all the Technical Courses. Student, Liverpool University 1919–1923. (*Signed by*) E. C. C. Baly, W. C. McC. Lewis, I. M. Heilbron, H. J. Stern.

LENHER, SAM, 15, Gordon Street, London, W.C. 1. American. Research Student at the Ramsay Laboratory, University College, London. Graduate of the University of Wisconsin (B.A. Degree), 1924. Internal student for the Ph.D. degree, University College, London, one year. McHaffie and Lenher, *J.C.S.*, 1925, **127**, 1559—1572. (*Signed by*) F. G. Donnan, W. E. Garner, J. A. Currie.

LENNON, JOHN JOSEPH, 6, Bartlemas Road, Oxford. Irish. Research Student. M.Sc., National University of Ireland, 1924, 1851 Scholar. Paper in collaboration with Hugh Ryan, D.Sc., *Proc. Royal Irish Acad.*, xxxvii, B, p. 27. (*Signed by*) W. H. Perkin, Francis Lions, R. D. Haworth, John Rankin.

MACARTNEY, WILLIAM, c/o Grattan & Co., Ltd., Belfast. British. Pharmaceutical Chemist. Chief Chemist of Messrs. Grattan & Co., Ltd., Wholesale Manufacturing Chemists and Aerated Water Manufacturers. Member of the Pharmaceutical Society of Ireland. Vice-President North Irish Pharmaceutical Society, Vice-President Ulster Drug Trade Association. No published papers in the *Journal of the Chemical Society*. In order to keep in touch with current advances in Chemistry. (*Signed by*) Henry Wren, Chas. J. Still, A. W. Stewart, Theo. Harper.

MCHAFFIE, IVAN ROY, 37, King Henry's Rd., London, N.W. 3. Canadian. Research Student, University College, London. B.A., M.Sc. University of Manitoba, Canada. "The Adsorption of Water from the Gas Phase on Plane Surfaces of Glass and Platinum," *J.C.S.*, 1925, **127**, 1559–1572. (*Signed by*) F. G. Donnan, W. E. Garner, S. Barratt.

MCLEAN, NEIL, M.A., B.Sc., 127, Blenheim Place, Aberdeen. British. Station Director of the British Broadcasting Station at Aberdeen. Applicant is a Master of Arts and Bachelor of Science of Glasgow University, and is much interested in chemical science and desirous of having the best available literature on this subject for the purposes of his work. (*Signed by*) J. F. Tocher, G. G. Henderson, Archd. N. Currie.

MANCHESTER, LESLIE GEORGE, 557, Green Lanes, Hornsey, N. 8. British. Student. Two years a student at East London College; now engaged in

research work at same college; awarded 2nd Class in B.Sc. Hons. Lond. 1925. (*Signed by*) J. R. Partington, E. E. Turner, R. J. W. Le Fèvre.

MARKWELL, WILLIAM ALFRED NOTTAGE, 26, Huntsmoor Road, S.W. 18. English. Chemist. Desire to receive the *Journal* and to keep in touch with the progress of Chemical Science. (*Signed by*) E. W. Lucas, S. Greenberg, F. C. Ray, J. L. White, Henry Phillips.

MARTIN, WILLIAM FRANCIS, 27, Shandon Crescent, Edinburgh. British. Work's Chemist, in the employment of Messrs. T. & H. Smith, Ltd., Blandfield Chemical Works, Edinburgh. Fellow of Institute of Chemistry (F.I.C.), Member of Pharmaceutical Soc. of Gt. Britain (M.P.S.). (*Signed by*) James Walker, Alexander J. Dey, James Watt.

MILLER, CHARLES HENRY LAWRENCE, 50, Rowden Rd., Beckenham, Kent. British. Student (B.Sc. Honours Chemistry) at East London College. At present doing research work. Desirous of keeping in touch with modern Chemical Research. (*Signed by*) J. R. Partington, E. E. Turner, D. C. Jones, W. H. Patterson.

MOORE, ARTHUR, Highfield, Oakworth, Keighley, Yorks. British. Student (Chemistry). 3rd Year (final) Hons. Chemistry, Royal Coll. of Science, London, S.W. 7. (*Signed by*) H. L. Riley, H. F. Harwood, H. D. Murray.

MORRISON, ALEXANDER JOHN, Sydney, N.S.W. Assistant Superintendent of Testing and Inspection, Public Works Dept., Sydney. *Training:* Student for 3 years (night course) in the Chemical and Assay Laboratory of the late William Grosse, Mining Engineer and Metallurgist. *Sydney Technical College:* 4 years' course practical chemistry; 3 years' course theoretical chemistry; 2 years' course organic chemistry. Engaged on special investigation in connection with fixed oils and alloys. *Original Papers:* (With F. R. Morrison), "Examination of the fixed oil of the Queensland Nut," read before the Sydney Technical College Chemical Society (Vol. 1, pages 84—88). "Testing of Sand for Use in Portland Cement Mixtures," Paper read before the Sydney Technical College Chemical Society 1914 (Vol. 1, pages 17—26). "Permeability of Concrete" (with the late B. J. Smart, B.Sc. (London), Paper read before the Engineering Association of New South Wales (Vol. xxxiii, Part 2, page 1). Have been engaged in the chemical and mechanical testing of all classes of structural materials in the Testing Laboratory, Public Works Department, New South Wales, for the past 27 years. These materials include Portland cement, steel, alloys, asphaltum, tars, paints, oils, etc. Representative of the Australian Chem. Institute on the Engineering Standardisation Committee dealing with the drawing up of a Standard Specification for Portland Cement for the Commonwealth of Australia. (*Signed by*) A. R. Penfold, R. Grant, Richard W. Challinor, Fred J. Berry, George Z. Du Pain.

MORRISON, FRANK RICHARD, Brae Street, Waverley, Sydney, N.S.W. Australia. Asst. Economic Chemist, Technological Museum, Sydney. Diploma in Chemistry of Sydney Technical College, 1921. Associate of Australian Chemical Institute since 1920. Member of Royal Society of N.S.W. since 1921. Member of Sydney Technical College Chemical Society since 1913, and Joint Hon. Secretary since 1921. *Positions held:* One year in laboratory of Sydney Technical College; three years in laboratory of Metropolitan Board of Water Supply and Sewerage, Sydney; nine years in present position at Technological Museum, Sydney. *Original papers:* "The Occurrence of Rutin in the leaves of the *Boronia* (N. O. Rutaceæ)" (read before the Royal Society of N.S.W., 2nd November, 1921); "The

essential oil of *Kunzea corifolia*" (read before the Royal Society of N.S.W., 1st November, 1922); "A Chemical examination of the seeds of the 'Bunya Bunya' (*Araucaria Bidwilli*, Hooker)" (read before the Royal Society of N.S.W., 3rd December, 1924). *Conjointly with Mr. A. R. Penfold, F.A.C.I., F.C.S.* "Preliminary note on a new stearoptene (probably a phenol ether) occurring in some essential oils of the Myrtaceæ" (read before the Royal Society of N.S.W., 5th July, 1922); "The essential oil of *Eriostemon Crowei* (*Crowea saligna*) and the presence of a new phenol ether" (read before the Royal Society of N.S.W., 6th December, 1922); "Preliminary note on the electrolytic reduction of Piperitone" (read before the Royal Society of N.S.W., 5th September, 1923); "Notes on *Eucalyptus piperita* and its essential oils, with special reference to their Piperitone content" (read before the Royal Society of N.S.W., 2nd July, 1924). *Conjointly with Mr. A. Morrison:* "The chemical examination of the fixed oil of the Queensland Nut (*Macadamia ternifolia*)" (read before the Sydney Technical College Chemical Society, 24th June, 1923). (*Signed by*) A. R. Penfold, R. Grant, Richard W. Challinor, Fred J. Berry, George Z. Du Pain.

MURGATROYD, JOHN BLACKBURN, 90, St. George's Square, Westminster, S.W. 1. British. Demonstrator, Imperial College of Science and Technology, South Kensington. Taking up Research at the above College. (*Signed by*) H. B. Baker, J. N. Sugden, Leslie S. Theobald.

NANAVATI, CHITSUKHLAL HIRALAL, 80, Esplanade Road, Fort, Bombay. Hindoo. L.T.C., Analytical Chemist. Graduate of The Victoria Jubilee Technical Institute, Bombay; in Chemistry with special subject of Foods, Drugs and General Analysis; in Second Class with the title of Licentiate of Technical Chemistry, of the year 1921. Worked as Analytical Chemist with Messrs. Hughes & Davies and Messrs. Killick, Nixon & Co.; at present practising as Analytical Chemist. (*Signed by*) S. J. Shàh, Kapilram H. Vakil, R. G. Saraiya.

NICHOLSON, HENRY, "Aberlady," Osborne Rd., Stockton-on-Tees. English. Chemistry Master in Boys Secondary School, Stockton-on-Tees, since Nov. 1905. B.Sc. Durham University, 1904. M.Sc. for Research on the influence of the acetyl group as a protective agent in the oxidation of α-acetylnaphthylamine, 1907. (*Signed by*) J. G. Taylor, J. A. Smythe, W. M. Madgin.

O'MEARA, ANNA MARIA, 83, Elsham Road, Holland Park, Kensington, W. 14. Irish. Pharmacist. M.P.S. (London). Was for 4 years trained under John Armstedt Ray, M.A., Ph.C., Trinity Coll., Dublin, at his Laboratory in 23, Nassau Street, but never took any Analytical Examination. Was 3 years Pharmacist at Bolingbroke Hospital, Wandsworth Common, S.W. 11; was 1 year at Willesden General Hospital as Pharmacist, and occasionally have worked at the M.A.B. Homerton and Park Royal, Hither Green. At present am pharmacist at the Women's Hospital, Soho Sq., and I take Students for both the qualifying and Apothecaries' Hall Exam. and train them for same. (*Signed by*) H. Lucas, A. Thomas, S. Greenberg.

PALMER, HORACE WINSTON, 15, Hollingdean Terrace, Brighton. British. Research Student, East London College. B.Sc. London, Hons. I, Chemistry. (*Signed by*) J. R. Partington, D. C. Jones, W. H. Patterson.

PARKER, NORMAN FREDERICK, 45, Sellons Avenue, Harlesden, N.W. 10. British (English). Chemical Engineer. B.A. Cambridge; Associate of Institute of Chemistry; 1st Class, Natural Science Tripos, Part II (Chemistry), 1923. (*Signed by*) W. J. Pope, C. T. Heycock, W. H. Mills.

PATTERSON, AUSTIN MCDOWELL, Antioch College, Yellow Springs, Ohio,

U.S.A. United States. Professor of Chemistry, Antioch College, U.S.A. Formerly Editor of *Chemical Abstracts*. (*Signed by*) C. S. Gibson, T. Slater Price, John Greenaway.

PHILLIS, ERNEST, 22, Fairford Terrace, Dewsbury Rd., Leeds. British. Research Student, Leeds University. B.Sc., 1st Class Hons. in Pure Chemistry, 1925. (*Signed by*) J. B. Cohen, C. K. Ingold, P. K. Dutt, J. W. Baker.

POLLITT, JONATHAN, 17, Caversham Avenue, Palmers Green, N. 13. English. Chemistry Master, Hornsey County School, 1905– . B.A. (N.U.I.) Chemistry, Physics, Maths. Student (Chemistry) Birkbeck College since 1908. (*Signed by*) George Senter, Samuel Sugden, B. R. Heasman, F. J. Thorneycroft, A. M. Ward, Wm. W. Myddleton.

PORTER, CHARLES RAYMOND, 126, Linden Road, Bournville, Birmingham. English. Chemistry research assistant. M.Sc., A.I.C. Three years research assistant in Chemistry Department, University of Birmingham; part author of *Berichte*, 1925, **58**, 333, and *J.C.S.*, 1924, **125**, 731 and 1269. (*Signed by*) J. D. Main Smith, W. J. Hickinbottom, W. N. Haworth.

PRICE, EVAN EMRYS, Rock House, Heathfield, Swansea, Glam. British. Science Teacher, The College, Penarth, S. Wales. Graduate in Chemistry of University of Wales. Studied at University College, Swansea, 1920—1924. (*Signed by*) J. E. Coates, Leonard E. Hinkel, E. Stanley Hiscocks.

PRING, MARJORIE ELLEN, 66, St. Augustine's Avenue, S. Croydon, Surrey. British. Research Student at Bedford College for Women, Regent's Park. B.Sc., 1st Class Hons. in Chemistry, London University. (*Signed by*) J. F. Spencer, H. Crompton, M. S. Crewdson.

RÂY, JNANENDRA NATH, Calcutta. Indian. Lecturer, Calcutta University, M.Sc. (Cal.). Research Student, Manchester Univ. "Synthesis of oxyberberine" (joint author), *J.*, 1925, **127**, 740; "Synthesis in the Thianthren series," *J.*, 1921, **119**, 1959; "Catalytic action of Iodine in sulphonation," *J.*, 1920, **117**, 1405; joint author, "Modification and extension of Friedel & Crafts' reaction," *J.*, 1920, **117**, 1335. (*Signed by*) Robert Robinson, Arthur Lapworth, Henry Stephen, Wilson Baker.

ROBERTS, HERBERT CHARLES, 15, Estcourt Terrace, Headingley, Leeds. British. Chemist Director, Taylor's Drug Co., Ltd., P.O. Box 141, Burley Hill, Leeds. 20 years Analytical Chemist to above Co. Since 1908 Chemist Director and Superintendent under the Pharmacy Act to above Co. (*Signed by*) John Rennie, F. C. Savage, F. Pilkington Sargeant.

SANDERSON, PHYLLIS MARY, 7, Cresswell Place, S.W. 10. British. Research (Biochemical). I desire to become a member of this Society for the purpose of keeping in touch with current scientific investigations. (*Signed by*) F. G. Donnan, W. E. Garner, Henry Terrey.

SASS, ROSE RACHEL, Newnham College, Cambridge. British. Research Student. B.Sc. Hons. of the University of the Witwatersrand, Johannesburg, S. Africa. Demonstrator for 3 years. Now a research student in the Laboratory of Physical Chemistry, Cambridge University. (*Signed by*) T. M. Lowry, Eric K. Rideal, I. J. Faulkner.

SAXON, ROBERT, Westfield Terrace, Baildon, Yorks. British. Schoolmaster. Teacher of Chemistry at the Belle Vue Secondary School for 17 years. Teacher of Steam and Heat Engines, which included the Thermal Chemistry of Carbon and Hydrogen combustion and tests for SH_2, NH_3, etc., in Coal and Producer Gas for 15 years in the Belle Vue Technical School (evening). Eleven years Head Master present School, The Forster School for Boys, Bradford, under the Bradford Authority; entrance to school only by

Scholarship Examination. Bachelor of Science, Victoria Univ., Manchester, 1896. Studies under Prof. Tilden, Royal Coll. of Science, London, 1900, and Prof. Watts, Geology, 1901 (Vacation Course). (*Signed by*) Barker North, Robt. D. Abell, T. W. Price.

SCIVER, ALBERT, 84, Vineyard Hill, Wimbledon Park, S.W. 19. English. Analytical and Consulting Chemist and Bacteriologist. B.Sc. (First Class Honours, University College, London), A.I.C. Assistant to Drs. S. and E. K. Rideal, 28, Victoria St., S.W. 1. Lecturer on Bacteriology applied to Chemistry at Battersea Polytechnic. (*Signed by*) F. G. Donnan, Eric K. Rideal, W. E. Garner.

SCOTT, GEORGE BATY, 37, Woodbridge Road, Knowle, Bristol. British. Organic and Inorganic Chemistry Student for two years at Central Polytechnic Institute, after passing the Qualifying Examination of Pharmaceutical Society, 1896. For some years have been closely associated with British Fine Chemicals, embracing Dye Intermediates, Research Chemicals, Saccharin and by-products. Wishful to have access to Society's Library and Publications, thus keeping up to date with the latest advances in Chemistry. (*Signed by*) J. Wicliffe Peck, D. Hughes, T. O. Kent, W. D. Wallace, Archibald Macpherson.

SCAMMELL, RUPERT BOSWOOD, c/o F. H. Faulding & Co., Ltd., Castlereagh St., Redfern, Sydney, N.S.W. British. Manufacturing Chemist. Bachelor of Science (Sydney). Six years' experience in Manufacturing Chemistry with the above firm. I desire to keep in touch with modern chemical literature for research purposes. (*Signed by*) J. Kenner, George Harker, J. C. Earl.

SHIN, UPO, B.A.S., Agricultural Farm, Mandalay. Burman. Officiating Agricultural Chemist, Burma, Mandalay. Published as Memoirs of the Department of Agriculture in India on "The Phosphate Requirements of some Lower Burma Paddy Soils." (*Signed by*) Maung Ba, Maung Ba San, Maung Tun Tin.

SINGH, DALIP, near Tehsil, P.O. Lahore, India. Indian. Research Student, Cambridge University. Ph.D. Cambridge. (*Signed by*) W. J. Pope, W. H. Mills, Eric K. Rideal.

SMITH, FREDERICK FRANCIS PERCIVAL, Peterhouse, Cambridge. British. Research Student in the Cambridge Univ. Laboratories. 1st Class Nat. Sci. Tripos, Parts I and II. 1st Class London Ext. B.Sc. Hons. (in Chemistry). (*Signed by*) Hamilton McCombie, Harold A. Scarborough, W. A. Waters.

SMITH, ROBERT FREDERICK, 254, Higham Hill Road, Walthamstow, E. 17. British. Student of Chemistry at East London College. Desirous of keeping in touch with Modern Research. (*Signed by*) J. R. Partington, E. E. Turner, Elwyn Roberts.

SOPER, WILLIAM ERNEST, 50, Aislibie Road, Lee, London, S.E. 12. British. Research Student at East London College. B.Sc. (Lond.). (*Signed by*) J. R. Partington, E. E. Turner, Elwyn Roberts.

SOUTHERN, HERBERT KENNETH, Glenariff, Whaley Bridge, Nr. Stockport, Cheshire, also Government Laboratory, Strand, W.C. 2. British. Temporary Assistant Chemist, Government Laboratory. B.Sc. (Hons. Chem.) after 3 years and M.Sc. after a further year's research work in physical chemistry at Manchester University. Assistant Demonstrator in chemistry for 1 year at Manchester University. Six months as chemist with paint and enamel firm; 4 months at Government Laboratory. (*Signed by*) Robert Robertson, J. J. Fox, Geo. Stubbs, T. W. Harrison.

SPEIGHT, ERIC ALFRED, 61, Arthur Road, Wimbledon Park, S.W. 19.

British. Research worker in Organic Chemistry. Associateship of the Royal College of Science. B.Sc. (Lond.), Diploma of Imperial College, all in Chemistry. Have been engaged in study of Chemistry for 6 years, the last two being research. Published paper in Oct. 1924 *J.C.S.* on formation of Hydrindone derivatives. (*Signed by*) Jocelyn Thorpe, G. A. R. Kon, Arnold Stevenson.

SWIRE, FRANK HARLAND, 152, Queen's Road, Halifax, Yorks. British. Pharmacist. "Minor" Qualification of the Pharmaceutical Society. Member of the Pharmaceutical Society of Gt. Britain. Late Student in Chemistry at the Halifax Technical College and at The School of Pharmacy, Bloomsbury Sq., London, W.C. 1. (*Signed by*) T. E. Wallis, F. Browne, W. J. Stansfield.

TATTERSALL, HAROLD JAMES, B.Sc., Ph.D., 141, Thorold Road, Ilford, London, E. British. Research Chemist. Graduate of St. Andrews University. B.Sc., Ph.D. Research work carried out at University College, Dundee. Presently engaged in research photographic chemistry. Publishing under authorship McKenzie and Tattersall, probably in November 1925. (*Signed by*) Alex. McKenzie, O. Rhys Howell, R. Roger, John Foggie.

THORPE, WILLIAM VEALE, 270, Balham High Road, London, S.W. British. Research Student, Medical Research Council, Mount Vernon, Hampstead, N.W. 3. B.A. (Cambridge Natural Science Tripos, Parts I and II). One year's research at Mount Vernon. (*Signed by*) W. J. Pope, Jocelyn Thorpe, Hamilton McCombie, W. H. Mills.

TOWLER, WILLIAM MILBURN, 28, Denton Ave., Roundhay, Leeds. British. Student. B.Sc. Hons. Chemistry, Leeds University. (*Signed by*) H. M. Dawson, P. K. Dutt, H. Holness.

TRAILL, DAVID, 58, Chalmers St., Dunfermline, Scottish. Research Student. B.Sc. (1st Cl. Hons. Chemistry, St. Andrews), 1923. Research in Organic Chemistry, 1923–1925. Macbeth and Traill, *T.*, 1925, **127**, 892; and 1118. (*Signed by*) A. Killen Macbeth, Irvine Masson, James Craik.

TRICKER, ELVERA ANNIE, 319, Norwich Rd., Ipswich. British. Student of Chemistry at Bedford College. (*Signed by*) J. F. Spencer, H. Crompton, J. Stewart.

TURNER, DONALD MORRISON, 40–42, Lexington St., W. 1. British. Representative of Mead Johnson & Co., Food Specialists. M.Am.Chem.Soc. Ten years Asst. Analyst, Govt. Laboratory, Newfoundland. Desire to receive the publications of the Society and keep in touch with modern work. (*Signed by*) D. James Davies, G. S. W. Marlow, F. S. Aumonier.

TURNER, GEOFFREY, 85, Winchester Avenue, Leicester. English. Research Student, attending Loughborough College, Leics. B.Sc. (2nd Class Honours, London); Diploma of Loughborough College (Honours). (*Signed by*) A. Bramley, A. T. Eggington, G. Lawton.

TYLER, NORMAN LEOPOLD, 9, St. Paul's Gardens, Spennymoor, Co. Durham. British. Chief Chemist and Manager of Messrs. Intermediates and Explosives, Ltd., Dean and Chapter Colliery, Ferryhill, Co. Durham. City and Guilds and South Kensington Examinations, Inorganic and Organic. South Staffs. Scholarship Metallurgy., Iron and Steel. Secretary of N.E. Section of the British Association of Chemists. Fourteen years with Messrs. Chance and Hunt, Ltd., Oldbury and Wednesbury. Chemist in Charge of several plants for eight years. (*Signed by*) S. I. Levy, L. R. B. Pearce, W. A. S. Calder.

VERNON, HERBERT WARD, 245, Albert Rd., London, N. 22. British. Research Chemist. B.Sc. in Hons. Chemistry of Victoria University, Manchester. Held post as Research Chemist for last nine years. (*Signed by*) Percy C. C. Isherwood, B. H. Bowles, R. E. Brett.

WEBB, FREDERICK HENRY, "St. Malo," Jameson Road, Harpenden. British. Manufacturing Chemist and Optician. (1) Early Education at the Dunstable Grammar School. (2) Studied Analytical Chemistry under J. B. Hoblyn, B.Sc., F.I.C. (3) Studied Chemistry and Physics at the London School of Chemistry under Henry Wootton, B.Sc. (4) Passed the Qualifying Examination of the Pharmaceutical Society in 1910. (5) Passed the Qualifying Examination as a Fellow of the National Association of Opticians in 1923. Particularly interested in Analytical and Scientific work. (*Signed by*) Frank B. Arnold, J. J. Laws, Percy Barrs.

WILLIAMS, EWART HARROD, 31, Thornsbeach Road, Catford, S.E. 6. British. Chemist, Government Laboratory, Clement's Inn Passage, W.C. B.Sc. (Hons. Lond.), A.C.G.F.C., A.I.C. Research work at Finsbury Technical College with Prof. A. J. Hale, and at the Government Laboratory with Dr. J. J. Fox. I desire to keep in touch with modern developments in Pure and Applied Chemistry, through the Society's Journal, and by attending the Scientific Meetings of the Society. (*Signed by*) Robert Robertson, Geo. Stubbs, J. J. Fox, A. G. Francis.

WILLIAMS, GWYN, Cae Ffynnon, Llandudno Junction, North Wales. Welsh. Research Student in Chemistry at University College of North Wales, Bangor. 1924, B.Sc. (Wales) with 1st Class Hons. in Chemistry. 1924–5, Research Student at University College, Bangor. (*Signed by*) Kennedy Orton, F. G. Soper, H. B. Watson.

WILLIAMS, HUGH AMPHLETT, 249, Kennington Rd., S.E. 11. English. Student. Student of the Institute of Chemistry, desiring the use of the Library and the Periodicals. (*Signed by*) George A. Stokes, Ernest W. Wright, A. J. Hale, H. M. Atkinson.

WILLIAMS, ROBERT HARDING, 131, Anlaby Road, Hull. British. Chemist (Pharmaceutical), practising as a Chemist at above address. (Leeds University Matric.). Two years at Swansea Municipal College (3rd year Medical Student). M.P.S. (1907). One year Hull Technical College. Was 2 years as Chemist in Middlesbro' (Analytical), and have been in business at above address nearly 4 years. Have been doing analytical work for a number of years. (*Signed by*) Harry Thompson, Thos. A. Nightscales, Edward Chapman.

WILTSHIRE, JOHN LAURENCE, 36, Fordel Road, Catford, London, S.E. 6. English. Assistant Works Chemist to Messrs. Burt, Boulton, and Haywood, Coal Tar Distillers, London. B.Sc. London, 2nd Class Honours in Chemistry (1925). Three years' experience with consulting analyst (Mr. F. W. Harbord). Now occupied as above and in pure chemical research under Mr. E. de B. Barnett at the Sir John Cass Technical Institute, London. (*Signed by*) E. de Barry Barnett, Marcus A. Matthews, James W. Cook.

WOLFE, JOHN JAMES BENJAMIN, 24, Greyhound Road, Hammersmith, W. 6. English. Student (Research), East London College. (*Signed by*) J. R. Partington, Elwyn Roberts, D. C. Jones.

WRIGHT, GORDON MITCHELL, University Chemical Labs., Cambridge. British. Research Chemist. M.A. (Cantab.), B.Sc. (Glasgow). (*Signed by*) Hamilton McCombie, A. C. P. Lunn, Harold A. Scarborough.

WYATT, WILFRED FISHER, North Anston, Nr. Sheffield. British. Demonstrator in Chemistry, the University of Sheffield. B.Sc. Hons. Chemistry, 1923, Sheffield University; M.Sc., 1924, Sheffield University. (*Signed by*) W. P. Wynne, F. G. Tryhorn, G. M. Bennett, Arthur W. Chapman.

ZIMMERMANN, JOHN FREDERICK, 17, Stile Hall Gardens, Chiswick, W. 4. British. Research Chemist. Diploma of Engineer Chemist, Zurich Poly-

technicum. 2½ Years as Assistant to Dr. Tcherniac. (*Signed by*) J. Tcherniac, A. G. Bloxam, C. S. Gibson.

The following Certificates have been authorised by the Council for presentation to ballot under Bye-Law I (2).

CUTHBERT, BERTRAM, c/o The British Australian Cotton Assocn., Oil Mills, Brisbane, Australia. British. Oil Mills Manager. 1906–1912, Analytical Chemist, The Hull Oil Manuf. Co., Ltd., Hull, Eng. 1912–1914, Research Chemist, The Hull Oil Manuf. Co., Ltd., Hull, Eng. 1914–1919, Research Chemist and Refinery Manager for the Hull Oil Manuf. Co., Ltd. 1920–1923, Assistant Works Manager and Soap Works Manager for the Hull Oil Manuf. Co., Ltd. 1923 to present time, Oil Mills Manager for the British Aust. Cotton Assocn., Ltd., Brisbane, Queensland, Australia. (*Signed by*) Geo. H. Appleyard, H. W. Potts.

MILLER, EDGAR CALVIN LE ROY, c/o Medical College of Virginia, Richmond, Va., U.S.A. English. Teacher in Medical College of Virginia. Professor of Biological Chemistry and Bacteriology. M.D. (University of Michigan). Secretary of the Virginia Academy of Science. Past secretary and past chairman of the Virginia Section of the American Chemical Society. (*Signed by*) F. P. Dunnington.

SIGOT, ALBERT LOUIS AUGUSTE, Institut de chimie, 2, Rue Goethe, Strasbourg. Français. Licencié ès Sciences, préparateur à la Faculté des Sciences de l'Université de Strasbourg. Chargé des travaux pratiques de Chimie Physique. (*Signed by*) Louis Hackspill, Georges Baume.

ADDITIONS TO THE LIBRARY.

I. *Donations.*

PROCEEDINGS

OF THE

CHEMICAL SOCIETY.

Informal Lecture, Thursday, November 26th, 1925, at 6 p.m., Dr. N. V. SIDGWICK, M.A., F.R.S., Vice-President, in the Chair.

The CHAIRMAN mentioned that this was the first of the Informal Lectures to be given by the Society, and then called upon Professor R. Robinson, D.Sc., F.R.S., to deliver his Lecture entitled: "Recent Research on the Structural Relationships of some Plant Products."

At the conclusion of the Lecture a Vote of Thanks to the Lecturer was proposed by Professor T. M. Lowry, seconded by Dr. R. H. Pichard, and carried with acclamation, Professor Robinson making due acknowledgment.

Ordinary Scientific Meeting, Thursday, December 3rd, 1925, at 8 p.m., Dr. ARTHUR W. CROSSLEY, C.M.G., C.B.E., LL.D., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through death, of the following Fellows:

	Elected.	Died.
James Kerr Erskine	Dec. 5th, 1889.	April, 1925.
Robert Walter Oddy	May 15th, 1890.	Nov. 24th, 1925.
William Robert Lang	March 4th, 1897.	Nov. 20th, 1925.

Certificates were read for the first time in favour of:

Dattatraya Vishwanath Bal, Rothamsted Experimental Station, Harpenden.
Bernard Meredith Brown, B.Sc., F.I.C., Hill Close, Croham Manor Road, S. Croydon.
Frederick Leslie Clark, 170, Barnsley Road, Sheffield.
Reginald Clifford Fawcett, B.Sc., The Cottage, Pentre, Wrexham.
Ko Ko Gyi, Agricultural College, Mandalay.
Tom Heap, B.Sc., Birch Mount, Church Road, New Mills, Stockport.
Stanley Barker Johnson, c/o Colombo Gas & Water Co., Ltd., Colombo, Ceylon.
Leonard George Jupp, B.Sc., A.R.C.S., 6, Chesham Road, Kemp Town, Brighton.
Horace Alfred Mayes, B.Sc., The Cottage, Sewage Works, Vicarage Lane, East Ham, E. 6.

Henry Geoffrey Ordish, B.A., Chilcombe, Milton Road, Harpenden.
Arnold Piukus, 238, Amhurst Road, Stoke Newington, N. 16.
Clifford Burrough Purves, B.Sc., Edenbank, Cupar.
Suresh Chandra Ray, P.O. Alambazar, Ray Villa, Calcutta.
Edna Clark Smith, B.Sc., 9, Gilston Road, S.W. 10.
Sidney David Sutton, 2, Glasshouse Street, W. 1.
Raymond Taylor, M.A., B.Sc., St. Brelades, Woodside Road, Parkstone.
Richard Victor Thomas, B.A., 17, Pretoria Road, Cambridge.
Henry Wilkins, B.Sc., 13, Kinfauns Road, Goodmayes.
Reginald Frank Wright, A.R.C.S., Fairhazel, Avondale Road, Hove.

Messrs. E. Horton and W. B. Saville were elected Scrutators, and a ballot for the election of Fellows was held. The following were subsequently declared elected as Fellows:

Robert Leslie Andrew.
Louis Baissac.
William Francis Barker, Ph.D.
Ralph Basden.
Frank Bell.
Arthur Neville Copnall Bennett, B.Sc.
Harold Frederick Betts, B.Sc.
John Cecil Bird, B.Sc., A.I.C.
Lionel Christopher William Birkett, B.Sc.
James Boyd, F.I.C.
Frank Symonds Bradhurst.
Edward Britnell, B.Sc.
Reginald John Bromfield.
Francis Hereward Burstall, B.Sc.
Archer John William Butterfield.
John Hildred George Carlile, B.Sc., A.R.C.S.
Leslie James Chalk, B.Sc.
Rama Charan, B.Sc., B.Sc.Tech.
John William Corran, B.Sc., Ph.D., A.I.C.
John Harold Cottier.
Edward Mortimer Crowther, D.Sc., F.I.C.
Bertram Cuthbert.
Frank Edwin Dickinson.
Joseph Raymond Dolphin, B.Sc.
William Donovan, M.Sc.
John Stanley Dunn, M.A., Ph.D., A.I.C.
John Horsfall Dyde.
George Malcolm Dyson, B.A., B.Sc., Ph.D.
Alfred Eccles, B.Sc.
Edwin Francis Edwards.
John Moelwyn Edwards.
George Albert Elliott, M.Sc.
Eric Bertram Evans, B.Sc.
Elinor Katharine Ewbank, B.A.
Elizabeth Monica Openshaw Farrow, M.A.
Oliver Free, B.A.
William Marshall Freeman.
Eva Florence Gee.
James Walter Shanks Gemmell, B.Sc.
Francis Reginald Glover.
William Bouch O'Brien Goudielock.
Felix John Theodore Grigg, M.Sc., A.I.C.
George Vincent Hall, B.Sc.
John Hall, M.Sc., A.I.C.
William Rowan Hare.
Walter Healey.
Thomas Henderson, M.C., M.A., B.Sc.
Herbert Sim Hirst.
Syed Husain, M.Sc.
Toru Iwadare.
David Christopher Mendis Jayewardene.
Gilbert Jessop, M.Sc., Ph.D.
Charles Benjamin Johnson.
Walter Idris Jones, B.Sc., Ph.D.
Henry Wilfrid Keenan.
Brian Charles Lavers Kemp, B.A.
Charles King.
Frederick Karl Victor Koch, B.Sc., A.R.C.S.
Charles Dudley Langford, B.Sc., A.R.C.S.
Banarsi Das Laroia, B.A., B.Sc.
Henry Guinness de Laszlo, B.A., Ph.D.
Bertram Grey Leatherbarrow.
Sam Lenher, B.A.
John Joseph Lennon, M.Sc.

William Macartney.
Ivan Roy McHaffie, B.A., M.Sc.
Neil McLean, M.A., B.Sc.
Leslie George Manchester, B.Sc.
William Alfred Nottage Markwell.
William Francis Martin, F.I.C.
Charles Henry Lawrence Miller, B.Sc.
Edgar Calvin le Roy Miller, M.D.
Arthur Moore.
Alexander John Morrison.
Frank Richard Morrison.
John Blackburn Murgatroyd.
Chitsukhlal Hiralal Nanavati.
Henry Nicholson, M.Sc.
Anna Maria O'Meara.
Horace Winston Palmer, B.Sc.
Norman Frederick Parker, B.A., A.I.C.
Austin McDowell Patterson.
Ernest Phillis, B.Sc.
Jonathan Pollitt, B.A.
Charles Raymond Porter, M.Sc., A.I.C.
Evan Emrys Price, B.Sc.
Marjorie Ellen Pring, B.Sc.
Jnanendra Nath Rây, M.Sc.
Herbert Charles Roberts.
Phyllis Mary Sanderson.
Rose Rachel Sass, B.Sc.
Robert Saxon, B.Sc.
Rupert Boswood Scammell, B.Sc.
Albert Sciver, B.Sc., A.I.C.
George Baty Scott.
Upo Shin.
Albert Louis Auguste Sigot.
Dalip Singh, Ph.D.
Frederick Francis Percival Smith, B.A., B.Sc.
Robert Frederick Smith.
William Ernest Soper, B.Sc.
Herbert Kenneth Southern, M.Sc.
Eric Alfred Speight, B.Sc.
Frank Harland Swire.
Harold James Tattersall, B.Sc., Ph.D.
William Veale Thorpe, B.A.
William Milburn Towler, B.Sc.
David, Traill, B.Sc.
Elvera Annie Tricker.
Donald Morrison Turner.
Geoffrey Turner, B.Sc.
Norman Leopold Tyler.
Herbert Ward Vernon, B.Sc.
Frederick Henry Webb.
Ewart Harrod Williams, B.Sc., A.I.C.
Gwyn Williams, B.Sc.
Hugh Amphlett Williams.
Robert Harding Williams.
John Laurence Wiltshire, B.Sc.
John James Benjamin Wolfe.
Gordon Mitchell Wright, M.A., B.Sc.
Wilfred Fisher Wyatt, M.Sc.
John Frederick Zimmermann.

The following papers were read:

"On the Budde effect in bromine. Part I. The photoactive constituent in wet bromine." By B. Lewis and E. K. Rideal.

"On the Budde effect in bromine. Part II. The kinetics of the reaction and the light absorption of wet and dry bromine." By B. Lewis and E. K. Rideal.

"The influence of carbon rings on the velocity of reactions involving their side-chains. Part I. The hydrolysis of cyclic and open-chain malonic esters." By R. Gane and C. K. Ingold.

"The density of boric oxide glass and the suspected variation in the atomic weight of boron." By H. V. A. Briscoe, P. L. Robinson, and G. E. Stephenson.

Ordinary Scientific Meeting, Thursday, December 17th, 1925, at 8 p.m., Dr. ARTHUR W. CROSSLEY, C.M.G., C.B.E., LL.D., F.R.S., President, in the Chair.

The PRESIDENT referred to the loss sustained by the Society, through death, of the following Fellows:

	Elected.	*Died.*
George Frederick William Blackburn	May 15th, 1913.	Nov. 23rd.
Edmund Knecht	Dec. 1st, 1910.	Dec. 8th.
James Grant	Feb. 6th, 1890	Dec. 7th.

The PRESIDENT announced that:

1. A Special Lecture will be delivered by Professor J. Barcroft, F.R.S., entitled "Hæmoglobin" on Thursday, February 11th, 1926, at 8 p.m. The Lecture will be held in the Chemistry Theatre of the University College, Gower Street, W.C. 1, by the kind permission of the College Authorities.

2. British Chemical Abstracts "A," Pure Chemistry for 1926, printed on one side of the paper only, and gummed or ungummed, will be obtainable by Fellows at the price of £3 0*s*. 0*d*., post free. Application should be made to the Assistant Secretary, Mr. S. E. Carr, as soon as possible.

The following were formally admitted Fellows of the Chemical Society: Thomas M. Sharp, Arthur Moor, Cecil J. May, J. F. Zimmermann, F. Bell, C. D. Langford,and J. M. Edwards.

Certificates were read for the first time in favour of:

Edwin Melhuish Bailey, Almond Hill, Pumpherston, Midcalder.
Carl Howard Collie, B.A., New College, Oxford.
William Eric Downey, Ph.D., Imperial College of Science and Technology, S. Kensington, S.W. 7.
Andor Fodor, Ph.D., Hebrew University, Jerusalem.
Herbert Harris, B.Sc., Ph.D., A.R.C.S., 1, Royal York Villas, Clifton, Bristol.
Ralph Harry Klein, A.I.C., 11, Park Place Villas, Maida Hill, W. 2.
Montague Alexander Phillips, A.I.C., 31, Cator Street, S.E. 15.
Devasikhamani Sunderavelu Pillai, 37, Hill Street, Stoke-on-Trent.
Charles Aylmore Ray, B.A., 47, Somerford Grove, Tottenham, N. 17.
Ivy Winifred Elizabeth Rogers, 8, St. Lawrence Road, W. 10.
Ronald Stanley Russell, B.A., 47, Redington Road, Hampstead, N.W. 3.
Robert John Schaffer, B.A., B.Sc., 3, Hambalt Road, S.W. 4.
Charles Richard Noël Strouts, B.A., B.Sc., A.I.C., Westminster Bank, Kew Gardens, Surrey.
Frank Sherwood Taylor, M.A., B.Sc., 21, Shortlands Road, Shortlands, Kent.
Claude Stanley Watson-Will, Musgrave Road, Indooroopilly, Brisbane.
Idris Williams, B.A., 19, Silver Street, Cambridge.

The meeting was then adjourned, and the Informal Meeting declared open.

The Council has made the following Grants from the Research Fund:

	£	s.	d.
Preparation and investigation of rare earth carbides. N. L. Anfilogoff	10	0	0
Preparation of phenanthrenes from stilbenes. J. N. Ashley ...	5	0	0
Investigation of certain binary and ternary systems. C. R. Bailey	5	0	0
Synthesis of genistein. W. Baker	15	0	0
Studies in the anthracene series (*contd.*). E. de B. Barnett ...	5	0	0
(*a*) Studies in aliphatic and cyclic sulphides			
(*b*) Reactivity of some quinoxaline bases. G. M. Bennett ...	5	0	0
Study of the mutual solubility relations of certain binary liquid systems. H. F. Betts	3	0	0
The dynamic isomerism of menthyl–cotarnine and of assymmetrical xanthydrols. B. C. Chatterjee	12	0	0
Thiocyano- and selenocyano-groups in the aromatic nucleus. F. Challenger	5	0	0
Preparation and study of certain polyhydroxy derivatives of diphenic acid. G. H. Christie	5	0	0
Synthesis of substituted tri- and tetra-methylene ring derivatives from compounds obtained by condensation of malonic ester with aldehydes. H. Clayton	5	0	0
Anthranyl ketones. J. W. Cook	5	0	0
Addition of bivalent carbon compounds to bodies of the diazomethane class. K. Cooper	5	0	0
Stability of Schiff's bases. P. K. Dutt	5	0	0
Conversion of asymmetric bromo compounds into the corresponding sulphonic acids. E. B. Evans	5	0	0
Influence of the benzoyl group on the mobility of the three-carbon tautomeric system. M. D. Farrow	10	0	0
Studies in the catalytic activity of charcoal. J. B. Firth ...	10	0	0
Solubility relationships of alums and pseudo alums. S. Glasstone	3	0	0
Study of alkylene thiosulphates and of alkylene disulphonic acids. J. Goodspeed	5	0	0
Quasi-aromatic structure (*contd.*). F. R. Goss	5	0	0
Properties of conjugated compounds. A. T. Healey	6	0	0
Periodic chemical reactions. E. S. Hedges	15	0	0
Substitution in the aromatic nucleus. W. J. Hickinbottom ...	4	0	0
Photochemical combination of hydrogen with other gases. H. S. Hirst	7	0	0
(*a*) Synthetical experiments in the anthocyanidin series ...			
(*b*) Synthesis of indole derivatives. H. R. Ing	10	0	0
Conditions of equilibrium between alkali and alkaline earth halides and the alcohols (*contd.*). W. J. Jones	8	0	0
The chemistry of the three-carbon system. L. G. Jupp ...	8	0	0
(*a*) Reaction with ammonia of various unsaturated cyano esters (*b*) Methylation and ethylation products of various unsaturated cyano amides. (Miss) W. Kilroy	5	0	0
Lactone formation from the $\alpha\alpha'$- $\beta\beta'$-dibromo adipic acids. C. D. Langford	6	0	0
Properties of conjugated compounds. B. D. Laroia	6	0	0
Substituted diphenyl compounds. R. J. W. Le Fèvre	5	0	0

	£	s.	d.
Condition of formation and stability of carbon rings. J. J. Lennon	8	0	0
Action of nitric acid on unsaturated hydrocarbons. (Miss) P. V. McKie	10	0	0
Synthesis of (*a*) Degradation product of brucine, and (*b*) Harmaline and some of its derivatives. R. H. F. Manske ...	10	0	0
The effect of bulky groups on the mobility of the 3-carbon system. C. J. May	5	0	0
Researches on thallium compounds (*contd.*). R. C. Menzies ...	8	0	0
Three carbon tautomerism. B. T. Narayanan	6	0	0
Kinetics of the induction period of the hydrogen-chlorine reaction with ultra-violet light. R. G. W. Norrish	10	0	0
Action of ozone on dry iodine. H. W. Palmer	5	0	0
Nitration of substituted phthalides. J. N. Rây	7	0	0
Reactions between 1 : 3-diketones and amino and amido bodies. E. Roberts	5	0	0
Investigation of certain sesquiterpenes. J. M. Robertson ...	5	0	0
Properties of unsaturated cyclic ketones. J. Ross	5	0	0
The direct introduction of substituents into a mono-substituted diphenyl. H. A. Scarborough	5	0	0
Preparation and properties of various types of halogenated naphthalene derivatives. J. B. Shoesmith	10	0	0
Researches on sulphuryl chloride and chlorination. O. Silberrad	5	0	0
Influence of substituents on the stability of certain spiro and associated ring systems. S. S. G. Sircar	6	0	0
The basic salts, salts of mixed acids, and complex salts of metals of the 3rd and 8th periodic groups. J. D. Main Smith ...	12	0	0
Nitration studies of tertiary aromatic amines. J. M. Smith ...	5	0	0
Condensation reactions with certain β-halogenated acids. M. G. Thomson	5	0	0
Introduction of the methylene-dioxy group and of similar groups into the aromatic nucleus. V. M. Trikojus	8	0	0
Conversion of substituted aromatic amines into quinolines. E. E. Turner	5	0	0
Effect of polar substituents on the Walden inversion among benzene derivatives. E. E. Turner	5	0	0
The chemistry of molybdenum. W. Wardlaw	5	0	0
Reaction of halogens with aliphatic acids, anhydrides, and allied substances. H. B. Watson	5	0	0
(*a*) Spatial structure of *cyclo*paraffins			
(*b*) Constitution of the mono-chloro- and mono-bromo-methyl succinic acids. W. A. Wightman	5	0	0
(*a*) The migratory aptitudes of methoxy-phenyl groups			
(*b*) Experiments upon phthalophenone derivatives, etc. E. W. Wignall	10	0	0
Structural mobility in dihydromuconic systems. R. F. Wright .	5	0	0
Total	£388	0	0

List of papers, or abstracts thereof, received between November 20th and December 17th, 1925. (This list does not include titles of papers which have been read at an Ordinary Scientific Meeting, or which have appeared in the Journal.)

"The mechanism of the formation of *o*- and *m*-hydroxybenzaldehydes from the nitration product of benzaldehyde." By H. H. HODGSON and H. G. BEARD.

"The constitution of the normal monosaccharides. Part III. Rhamnose." By E. L. HIRST and A. K. MACBETH.

"Resolution of *dl*-dicentrine." By R. D. HAWORTH, W. H. PERKIN, and J. RANKIN.

"Synthetical experiments in the *iso*quinoline group. Part VI. A synthesis of derivatives of paraberine." By R. CAMPBELL, R. D. HAWORTH, and W. H. PERKIN.

"The action of alkaline arsenites on some halogenated organic compounds." By I. E. BALABAN.

"The equivalent conductivity of solutions of sodium hydroxide and the mobility of the hydroxyl ion." By H. R. RAIKES, A. F. YORKE, and F. K. EWART.

"An investigation of the zirconium in Colorado pitchblende." By O. FREE.

"Some products from the resins of *Xanthorrhœa, Hastilis, X. Arborea*, and *X. Reflexa*." By H.H. FINLAYSON.

"The nitration of β-naphthoic acid and some new amino- and nitronaphthoic acids." By H. A. HARRISON and F. A. ROYLE.

"Preparation of *p*-bromophenylhydroxylamine by the emulsification process. A modification." By R. D. HAWORTH and A. LAPWORTH.

"Optical activity and the polarity of substituent groups. Part III. Menthyl acetophenone-*o*-carboxylate." By H. G. RULE and J. SMITH.

"The crystal structure of catechol." By W. A. CASPARI.

"The chlorination and bromination of 4-aminodiphenyl." By H. A. SCARBOROUGH and W. A. WATERS.

"Studies of dynamic isomerism. Part XXI. The velocity of mutarotation of glucose and of tetramethylglucose in aqueous alcohols." By E. M. RICHARDS and T. M. LOWRY.

"Studies of dynamic isomerism. Part XXII. The velocity of mutarotation of glucose and of tetra-acetylglucose in aqueous acetone." By G. G. JONES and T. M. LOWRY.

"Some unsymmetrically substituted dinitro and diamino derivatives in the stilbene and tolane series. Part I. The fission of hydrogen chloride from 3 : 4′-dinitrostilbene dichloride." By H. A. HARRISON and H. WOOD.

"The mercuration of aromatic substances. Part II. Orthonitrotoluene." By S. COFFEY.

"*N*-Alkylated amidines." By M. SEN and J. N. RAY.

"The equilibrium between ethyl alcohol and the alkali and alkaline earth salts. Part I." By D. G. R. BONNELL and W. J. JONES.

"The dissociation pressures of alcoholates. Part I." By D. G. R. BONNELL and W. J. JONES.

"Ethyl hydrogen sulphate. Part II." By M. A. HAMID, K. SINGH, and H. B. DUNNICLIFF.

"Heterogeneous equilibria between the sulphates and nitrates of sodium and potassium and their aqueous solutions. Part I. The ternary systems." By M. A. HAMID.

"Heterogeneous equilibria between the sulphates and nitrates of sodium and potassium and their aqueous solutions. Part II. The quaternary system H_2O–Na_2SO_4–$NaNO_3$–K_2SO_4–KNO_3." By M. A. HAMID.

"A new reaction of certain diazosulphonates derived from β-naphthol-1-sulphonic acid. Part I. The preparation of phthalazine, phthalazone, and phthalimidine derivatives from 4′-nitrobenzene-2-naphthol-1-diazosulphonate." By F. M. ROWE, E. LEVIN, A. C. BURNS, J. S. H. DAVIES, and W. TEPPER.

"Substituted dihydropentazines—a new series of cyclic nitrogen compounds." By F. D. CHATTAWAY and G. D. PARKES.

"Dvi-manganese." By J. G. F. DRUCE and F. H. LORING.

"Preparation, hydrolysis, and reduction of the fluoro-, chloro-, and bromo-benzyl bromides." By J. B. SHOESMITH and R. H. SLATER.

"Absorption spectra of condensed nuclear hydrocarbons." By N. S. CAPPER and J. K. MARSH.

"The melting points of the normal saturated dibasic acids." By D. A. FAIRWEATHER.

"Tautomerism in the thyroxin molecule." By C. S. HICKS.

"The structure of the normal monosaccharides. Part IV. Glucose." By E. L. HIRST.

"An investigation of the hydrated fluoride of zirconium and the preparation of a hydrofluozirconic acid." By E. B. R. PRIDEAUX and E. C. ROPER.

"3 : 4- and 2 : 5-Dimethoxyphenylhydrazine." By W. H. PERKIN and L. RUBENSTEIN.

"Condensations involving active methyl groups in heterocyclic bases." By J. E. HUMPHRIES.

"The system ferrous oxide–phosphoric acid–water and some of its oxidation products." By S. R. CARTER and N. H. HARTSHORNE.

"Absorption spectra and tautomerism. Part I. Keto-enol tautomerism." By R. A. MORTON and W. C. V. ROSNEY.

"Absorption spectra and tautomerism. Part II." By R. A. MORTON and E. ROGERS.

"Absorption spectra of mesityl oxide." By R. A. MORTON.

"The decomposition of substituted carbamyl chlorides by hydroxy-compounds. Part II. The influence of the constitution of the hydroxy-compound." By T. W. PRICE.

"Substitution in vicinal trisubstituted benzene derivatives. Part IV." By L. RUBENSTEIN.

"The complex salts of ββ′β″-triaminotriethylamine with nickel and palladium." By F. G. MANN and W. J. POPE.

"γγ′γ″-Triaminotripropylamine and its complex compounds with nickel." By F. G. MANN and W. J. POPE.

"Preparation and reduction of methyleneanthrone." By E. de B. BARNETT and M. A. MATTHEWS.
